Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to design a steel structure on more than one occasion and in different contexts.

VU21136 Produce reinforced concrete drawings

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to

produce typical drawings for the detailing of reinforced concrete elements of buildings, in accordance with standard practice in AS1100.501 and AS3600.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to produce drawings of simple reinforced concrete elements on more than one occasion and in different contexts.

VU211 37 Produce advanced engineering drawings for a reinforced concrete structure

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to complete advanced reinforced concrete drawings, in accordance with accepted practice as outlined in AS1100.501 and AS3600.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to produce advanced structural reinforced concrete drawings on more than one occasion and in different contexts.

VU211 38 Produce structural steel drawings

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to provide the skills and principles necessary to produce drawings for structural steel elements, in accordance with accepted practice as outlined in AS4100 and Australian Institute of Steel Construction (AISC) manuals.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required

knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to produce structural steel drawings one more than one occasion and in different contexts.

VU211 39 Produce advanced engineering drawings for a steel structure

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to complete typical structural steel drawings in accordance with accepted practice as outlined in AS1100.501 and AS4100.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to produce structural steel drawings on more than one occasion and in different contexts.

VU211 40 Produce structural steel shop drawings

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to provide the skills and principles necessary to produce structural steel shop drawings dealing with welded and bolted joint connections, in accordance with accepted practice as outlined in AS4100 and Australian Institute of Steel Construction (AISC) manuals.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to produce structural steel shop drawings on more than one occasion and in different contexts.

VU211 41 Produce engineering drawings for a rural road

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to complete typical road drawings required in the geometrical layout of rural roads, to the standards of AS1100.401.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and

consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range- Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to produce drawings for the geometrical layout of typical rural roads on more than one occasion and in different contexts.

VU211 42 Produce drawings to enable urban road construction

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to complete typical road drawings required in the construction of urban roads, to the standards of AS 1100.401.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range- Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to produce urban road project drawings on more than one occasion and in different contexts.

VU211 43 Produce engineering drawings for a stormwater reticulation scheme

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to complete engineering drawings for a stormwater reticulation scheme, in accordance with AS1100.401 and relevant drainage standards.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range- Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to produce drawings for a stormwater reticulation scheme on more than one occasion and in different contexts. - Compile document and present results

VU211 44 Apply surveying computations to civil engineering projects

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply computational concepts and methods that are common to civil engineering and surveying projects. This includes the conversion of survey measurements and data into surveying and mapping coordinates and computational set out data to facilitate the construction of an engineering project. This does not include the use of calculus.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range- Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to apply mathematical concepts to engineering problems in familiar and unfamiliar situations and in different contexts. - Verify results

VU211 45 Analyse piping designs

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to analyse piping designs with respect to equipment, materials, and fittings to meet design specifications, safety and economic parameters for a specific installation.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range- Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and Demonstrate the analysis of piping design on more than one occasion and in different contexts. This includes: - preparation of P&ID and line lists; - application of technical standards or codes of practice; - analysis and consequent design adjustments of material and equipment configurations within a given set of parameters using CAD systems.

VU211 49 Design timber structures

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to complete an engineering project brief, including the analysis and design of simple timber structures from first principles, using appropriate design aids.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated

performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate design of structural timber members in a timber structure from first principles using appropriate design aids on more than one occasion and in different contexts.

VU21153 Produce basic engineering sketches and drawings

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required in the identification, selection and interpretation of a drawing or sketch, and the preparation of sketches and drawings. License to practice The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and traineeships

Required Reading: Refer to Learning and Assessment Plan

Assessment: To be considered competent in this unit the participant must be able to demonstrate the achievement of all of the elements of competency to the level defined by their associated performance criteria and incorporating the required skills and knowledge. Specifically they must be able to: - perform each element on at least two occasions - implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement - demonstrate application of the Required Skills and Knowledge at a level and within timeframes appropriate to the workplace.

VU21154 Generate design solutions

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to create sound design solutions in an industry context. Sound design solutions are those which are economically viable, environmentally conscious, ergonomically appropriate and equitable for those producing the product as well as the end user. The starting point may be an open or closed brief, spontaneous idea, modification of existing product, process, or system or a point in an ongoing design process. The unit includes research and analysis of ideas and resources, plus the development of innovative concepts. It also includes a requirement for critical and informed collaboration with others about one's own work.

Required Reading: Refer to Learning and Assessment Plan

Assessment: To be considered competent in this unit the participant must be able to demonstrate the achievement of all of the elements of competency to the level defined by their associated performance criteria and incorporating the required skills and knowledge. Specifically they must be able to: - develop the design concept through a process of selecting and critically examining source material and then refining the design concept - demonstrate effective collaboration about the design concept which shows a command of relevant references, terminologies and ideas - source industry information

VU21155 Implement design solutions

Locations: Industry, Sunshine.

Prerequisites: VU21154 - Generate design solutions

Description: This unit describes the skills and knowledge required to apply techniques for the design of products, prototypes, systems or models in the implementation of design solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research skills; - literacy skills sufficient to collaborate about the design; - numeracy skills sufficient to calculate sizes, costs etc; - communication skills to request advice, receive feedback and work with a range of people; - personal and professional presentation, and; - project management. Students will also be expected to demonstrate the following knowledge: - a wide range of sources of information pertaining to the development of the design; - appropriate communication methods to encourage collaboration about the concept for own work; - the theoretical and philosophical context for design development; - other design practitioners and their development of concepts for own work; - the elements and principles of design and how they may be used in the development of the concept for own work; - copyright, moral rights and intellectual property issues and legislation which assist the development and critical discourse of the concept for own work, and; - literacy skills sufficient to research and evaluate a wide range of source materials for the development of the concept for own work.

VU21156 Use computer aided drafting systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply computer aided drafting (CAD) using 2D techniques for engineering applications. This includes complex and advanced applications of CAD systems.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Use computer aided drawing techniques to produce complex 2D drawings for a range of engineering applications. Drawings should include the applications of a representative range of drawing and modelling skills such as: o a wide range of geometric shapes; o efficient use of library files; o application of the appropriate drawing standards; o selection of most relevant drawing techniques; o hard copies of drawing.

VU211 57 Use advanced 2D and 3D computer aided drafting techniques

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to create 2D and 3D wireframe and surface models and their representation on working drawings for engineering applications.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Use computer aided drawing techniques to draw a range of complex 2D and 3D engineering applications. Drawings should include the applications of a representative range of drawing and modelling skills such as: o editing; o manipulations of shapes; o creation of views; o movement through space; o region and solid modelling techniques; o rendering; o producing hard copy output.

VU211 58 Design and prototype components and/or small structures using engineering design principles

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to design and prototype engineering components or small structures in an engineering context. This involves preparation of concept proposals, drawings, plans and models.

Required Reading: Refer to Learning and Assessment Plan

Assessment: To be considered competent in this unit the participant must be able to demonstrate the achievement of all of the elements of competency to the level defined by their associated performance criteria and incorporating the required skills and knowledge. Specifically they must be able to: - Perform each element on at least two occasions - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and - Demonstrate the required knowledge and skills as described in this unit; and - Demonstrate an appropriate level of skills enabling employment

VU211 59 Apply computer based solid modelling techniques

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply modelling techniques to three-dimensional drawings to create models of solid objects for computer processing and presentation purposes. This includes applications in CAD, computer graphics and animation, rapid prototyping, medical testing, and visualisation of scientific research.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required skills and knowledge, and to be capable of applying the competency in new

and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to create models of solid objects for computer processing and presentation purposes on more than one occasion and in different contexts.

VU211 60 Use extended features of CAD

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to coordinate CAD operations in the use customisation techniques to CAD applications to suit a particular context. This includes the use of extended features in the CAD applications software.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate a variety of customisation and implementation techniques on more than one occasion and in different contexts in relation to styling features, CAD language programming, macros/icon files, configuration of CAD peripherals, and the creation of complex CAD menus.

VU211 61 Manage CAD systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to establish, maintain and review CAD management systems as an integral part of the planning process within an engineering business.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the establishment, maintenance and review of CAD management systems. This includes development of all relevant policies and procedures applicable to a specific engineering work site, development of a CAD system implementation plan, maintenance of local standards, user support and establishment of ongoing review processes. This also may include a

feasibility study for the implementation of a CAD system into an organisation for the first time.

VU211 62 Manage CAD in a business

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to translate the business plan into operational strategies to deliver CAD services. These strategies may involve managing CAD equipment, materials, premises and physical and human resources and the development of operational procedures.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the implementation of a CAD business plan to deliver CAD services to clients on a for profit basis. The candidate must investigate and analyse a range of CAD business opportunities, ascertain their viability and produce a business plan. From the business plan operational and human resource strategies are derived and implemented. - Candidates must also demonstrate good financial management skills and operate the CAD business within current legislative and regulative settings.

VU21200 Apply fluid mechanic principles in mechanical engineering

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply fluid mechanic principles in mechanical engineering. This includes the principles and applications of fluids, fluid components, fluid status, fluid flow, fluid power, and forces developed by flow in fluids. To perform calculations to determine changes, forces etc. fluid flow and headloss in pipes and through open channels, to determine operational aspects of a pump in a system and to describe the basic types of fluid machinery.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the application of fluid mechanics principles to the solution of engineering on more than one occasion and in different contexts.

VU21201 Set up fluid power controlled engineering systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to develop the knowledge and skills to set up fluid power controlled systems. This includes the maintenance and repair of single and multi actuator fluid power circuits

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to develop the knowledge and skills to set up fluid power controlled systems on more than one occasion and in different contexts. This should also include maintenance and repair.

VU21202 Design fluid power controlled engineering systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to design, construct and commission fluid power controlled engineering systems. This includes a selection of components, component testing and troubleshooting, mechanical calculations, construction and commissioning of project models.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to design, construct and commission fluid power controlled engineering systems on more than one occasion and in different contexts. This includes: o selecting fluid power components o designing fluid power controlled engineering systems o installing and commission fluid power controlled engineering systems.

VU21203 Apply hydraulic principles in engineering

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply hydraulic principles in engineering. It involves the operation, maintenance and construction of hydraulic system and machine control circuitry.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of

applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to apply hydraulic principles to plan, conduct, or complete engineering tasks on more than one occasion and in different contexts.

VU21204 Apply pneumatic principles in engineering

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply pneumatic principles in engineering. It involves the operation, maintenance and construction of pneumatic system and machine control circuitry.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to apply pneumatic principles to plan, conduct, or complete engineering tasks on more than one occasion and in different contexts.

VU21210 Set up manufacturing processes for engineering applications

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers the skills and knowledge required to select and set up principal methods of manufacturing in the manufacturing industry, including metal forming operations, fabrication, powder metallurgy, machine tools and CNC.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to select and set up principal methods of manufacturing in the manufacturing industry on more than one occasion and in different contexts. This includes: o identifying and discussing engineering methods, processes and construction techniques suitable for continuous, mass, batch or jobbing shop production, work cell or sequential manufacture and assembly; and o selecting and implement engineering processes for specified

manufacturing applications based on functional specifications and other factors affecting the selection decision.

VU21217 Implement basic materials science principles to engineering applications

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply basic principles of materials science to engineering problems applications. It involves testing of materials to evaluate the engineering properties of materials and includes the recognition of common materials used in engineering, the classification of materials, the properties of materials and the factors that influence those properties.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to successfully apply basic principles of materials science to engineering applications on more than one occasion and in different contexts.

VU21218 Implement advanced materials science principles to engineering applications

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply advanced principles of materials science to engineering problems applications. This includes the identification and description of structure and properties of materials, metallography, heat treatment processes for metals, strengthening mechanisms, surface engineering and failure mechanisms.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to successfully apply basic principles of materials science to engineering applications on more than one occasion and in different contexts.

VU21219 Set up mechatronics engineering systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to plan and construct a mechatronics engineering system and interface it with a standard industrial programmable controller for a complete operating system. It includes all wiring and programming to achieve automation together with commissioning and troubleshooting requirements.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to construct and set up a mechatronics system on more than one occasion and in different contexts. This includes interfacing it with a standard industrial programmable controller for a complete operating system; and program and commission the system.

VU21220 Interface and program mechatronics engineering systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to interface and program mechatronics systems with solid-state hardware sequencing devices and personal computer interfacing. This includes building a dedicated solid-state hardware controller for selected sequencing operations. It also covers the skills and knowledge required when adding at least 2 analog inputs and 1 analog output using a PC interface to assist in computing dependant output/input conditions.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to interface and program mechatronics systems with solid-state hardware sequencing devices and personal computer interfacing on more than one occasion and in different contexts.

VU21221 Manage the development, implementation and review of strategic business plans

Locations: Industry.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to design and manage the implementation, monitoring and evaluation of strategic business plans that are based on a comprehensive analysis of the competitive market and that meet overall enterprise or organisational strategic goals and directions.

Required Reading: Refer to Learning and Assessment Plan

Assessment: A person who demonstrates competency in this unit must provide

evidence of: - developing a strategic business plan that aligns with organisational overall strategic planning - generating performance indicators to meet determined objectives and to measure progress and efficacy of strategic business plan - overseeing the implementation of the strategic business plan including monitoring, review and evaluation - knowledge of critical elements of current and emerging strategic business planning and management theories, models and practice - knowledge of relevant Australian national, state and local government legislation, regulations, standards and provisions

VU21222 Lead creative thinking and innovation practices in an organisational environment

Locations: Industry.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to research and practice innovation and creative thinking in order to lead, support and maintain a culture of innovative thinking and practice that will further organisational strategic planning for sustainable business across a range of organisational contexts.

Required Reading: Refer to Learning and Assessment Plan

Assessment: A person who demonstrates competency in this unit must provide evidence of: - developing and implementing strategies and mechanisms that foster an integrated culture of creative thinking and innovation practices across a range of organisational contexts - developing and overseeing: monitoring; review; risk management, and continuous improvement strategies for organisational creative thinking and innovation practices - knowledge of current theories, techniques and tools for fostering an integrated organisational culture of creative thinking and innovation practices - knowledge of relevant legal, social, political, economic and technological developments that influence organisational capacity for creative thinking and innovation practices

VU21223 Manage multiple projects

Locations: Industry.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to undertake the strategic responsibility, accountability and decision making for overall management of multiple projects within an organisational context, through identifying the project scopes within a strategic context, managing the establishment and integration of project activities, and, finalising and reviewing project processes and outcomes.

Required Reading: Refer to Learning and Assessment Plan

Assessment: A person who demonstrates competency in this unit must provide evidence of: - developing, implementing and reviewing a framework, applicable across a range of organisational contexts, for establishing, managing and monitoring multiple projects - knowledge of relevant Federal, State and local government legislation, standards and regulations - knowledge of project management systems - knowledge of critical aspects of models and methodologies for managing multiple projects

VU21224 Manage legal, regulatory and ethical compliance requirements in an organisational environment

Locations: Industry.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop and implement a compliance management system that meets legal, regulatory and ethical compliance requirements relevant to a specific organisational context.

Required Reading: Refer to Learning and Assessment Plan

Assessment: A person who demonstrates competency in this unit must provide

evidence of: - Developing and implementing policies, procedures and support systems to meet compliance requirements for a specific organisational context - Developing and implementing auditing, reporting and continuous improvement systems for a specific organisational context - knowledge of compliance management auditing and reporting strategies and systems - knowledge of relevant International, Australian Federal, State and local government legislation, standards, regulations and ethical requirements

VU21225 Develop and manage risk management strategy

Locations: Industry.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop, and oversee the implementation and review of a risk management strategy for a particular organisational context.

Required Reading: Refer to Learning and Assessment Plan

Assessment: A person who demonstrates competency in this unit must provide evidence of: - developing, managing the implementation and evaluation of a risk management strategy based on the analysis of risk management requirements of a particular organisational context - developing and managing the implementation of monitoring and review processes for continuous improvement of the risk management plan - knowledge of key principles and practices of risk management knowledge of relevant international, Australian national, state and local government legislation, regulations, standards and provisions

VU21226 Manage people in an organisational environment

Locations: Industry.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop and manage the motivation and engagement of people, within an organisational context, in order to achieve what the organisation has set out to do. This is achieved through analysis of organisational context and stakeholder capability and the development of appropriate people management strategies: communication; collaboration; reflective practice, and motivational approaches.

Required Reading: Refer to Learning and Assessment Plan

Assessment: A person who demonstrates competency in this unit must provide evidence of: - developing, implementing and reviewing a range of people management strategies, based on assessment organisational context, in order to achieve organisational goals and objectives - knowledge of people management concepts, terms, principles, theories and models and their potential application across a range of organisational structures and contexts - knowledge of relevant international, Federal, State and local government legislation, standards and regulations

VU21244 Apply principles of hydraulics to pipe and channel flow

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply principles of hydraulics to pipe and channel flow in civil engineering. It provides an understanding of the processes required to collect data accurately, interpret data, verify data and apply theoretical techniques to produce flow data essential to performance.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of

applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate, in accordance with standard organisational and industry procedures, the ability to use a range of methods to: - calculate energy in pipe flows - calculate hydraulic and energy gradient for pipelines - calculate flow in open channels - calculate flows through notches and weirs - calculate proportions for an economic section.

VU21245 Design a water reticulation scheme

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply principles of design for an engineering water reticulation scheme using appropriate design standards.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Design water reticulation systems including: - identifying, analysing and defining water reticulation system design requirements, conditions and constraints - identifying and interpreting legislative, environmental, business and project management requirements - analysing a range of factors to determine hydraulic and system design components - evaluating and clarifying system plans and options for system design - managing and securing documentation to support and report project management. - evaluating design process and outcomes - managing recording, reporting and information management.

VU21246 Plan sewerage reticulation systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency describes the outcomes required to plan sewerage reticulation systems.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work

function and industrial environment; and - Plan wastewater and sewage collection/reticulation systems including: - identifying, analysing and defining wastewater collection system planning requirements, conditions and constraints - identifying and interpreting legislative, environmental, business and project management requirements - developing scenario options for future needs and conditions - analysing a range of factors to determine catchment impacts - planning, preparing and selecting options for system design - managing and securing documentation to support and report project management. - evaluating, and consulting on proposals to gauge impact and support - making recommendations on the planning and design requirements for wastewater collection systems.

VU21247 Plan water reticulation systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency describes the outcomes required to plan water reticulation systems.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Plan either water collection or distribution systems including: - identifying, analysing and defining water distribution and reticulation system planning requirements, conditions and constraints - identifying and interpreting legislative, environmental, business and project management requirements - developing scenario options for future needs and conditions - analysing a range of factors to determine catchment and supply impacts - planning, preparing and selecting options for system design - managing and securing documentation to support and report project management - evaluating, and consulting on proposals to gauge impact and support - making recommendations on the planning and design requirements for water distribution and reticulation systems.

VU21248 Design pressure sewerage systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply principles of design for a pressure sewerage system using appropriate design standards.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work

function and industrial environment; and - Design pressure sewerage systems, including: - identifying, analysing and defining wastewater collections systems and conditions and constraints; - identifying and interpreting legislative, environmental, business and project management requirements; - identifying and interpreting standards, codes and specifications; - analysing a range of factors to determine hydraulic and system design components; - evaluating and clarifying system plans and options for system design; - managing and securing documentation to support and report project management; - evaluating design process and outcomes; - managing, recording, reporting and information management.

VU21249 Design sewerage pumping station systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply principles of design for a sewerage pumping station system, using appropriate design standards.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Design sewerage pumping station systems, including: - identifying, analysing and defining sewerage pumping station design requirements, conditions and constraints; - identifying and interpreting legislative, environmental, business and project management requirements; - developing scenario options for future needs and conditions; - analysing a range of factors to determine catchment impacts; - planning, preparing and selecting options for system design; - managing and securing documentation to support and report project management; - evaluating, and consulting on proposals to gauge impact and support; - making recommendations on the planning and design requirements for sewerage pumping station systems.

VU21250 Manage assets in a water utility

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to manage the hydraulic assets in a water utility including the monitoring, maintenance, repair, replacement, valuation and recording of assets.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work

function and industrial environment; and - Manage assets in a water utility, including: - determining the condition of an asset based on field evidence and an analysis of its history; - determining the need for and specifying the maintenance of an asset and checking the maintenance has been carried out and recorded; - determining the need for and specifying the repair of an asset and checking the repair has been carried out and recorded; - determining the need for and specifying the replacement of an asset and checking the replacement has been carried out and recorded; - recording an asset in an asset management system; - determining the residual value of an asset.

VU21251 Manage drinking water quality information

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to manage drinking water quality information. It provides an understanding of key biological and chemical processes required to design a monitoring program, formulate and manage a water quality database, and assess water quality data.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Use water quality management knowledge and information to: - apply the principles of water quality science to monitoring program design - apply the principles of water science to water quality data analysis and interpretation - design and operate a water quality data base - take action if there are water quality issues.

VU21252 Manage the construction of pipeline systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency describes the outcomes required to manage construction of pipeline systems.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Manage pipeline construction including: - interpreting design drawings, project documentation and relevant national, WSAA and water agency codes, supplements, specifications and product lists; - applying quality principles to pipeline construction; - ensuring the safety of people; - applying environmental management principles to pipeline construction; - installing pipes and service connections; - installing appurtenances and maintenance structures; -

installing pipe embedment and support; - installing trench fill; - acceptance testing; - disinfecting water supply pipelines.

VU21253 Analyse and select advanced welding processes

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge, skills and applications required for all welding processes that comply with the Australian Standard AS 1796. It also includes the selection of a variety of welding processes that apply to various industrial applications.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to analyse a variety of different welding processes, proficient application of welding principles and use of different materials and consumables on more than one occasion and in different contexts.

VU21254 Write and qualify welding procedures for fabrication requirements

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to write and qualify welding procedures for fabrication principles and the validation of the conformity of relevant codes, especially AS1796, AS2214, AS1554, and AS3998 plus the international codes e.g. ASME ix, etc.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to write and qualify welded fabrication requirements by documenting and evaluating testing and approval processes on more than one occasion and in different contexts.

VU21255 Design welded and fabricated structures

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge, skills and applications required for the design of fabricated and welded structures. This includes structures with static, dynamic and thermodynamic loading, lightweight structures, as well as compliance with all relevant codes and standards.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to design welded and fabricated structures on more than one occasion and in different contexts.

VU21256 Apply destructive & non-destructive weld testing principles

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required for applying principles of testing of welds and the validation of the conformity of relevant codes.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to apply testing principles to a variety of welds using different materials and testing methods on more than one occasion and in different contexts. This should include evidence of the application of destructive and non-destructive testing methods.

VU21257 Implement non-destructive weld testing

Locations: Industry, Sunshine.

Prerequisites: VU21256 - Apply destructive & non-destructive weld testing principles

Description: This unit of competency sets out the knowledge and skills required for implementation of non-destructive tests of welds in conformity relevant codes and standards.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and following relevant OH&S procedures; - reading and interpreting texts, drawings, specifications, standards and other applicable reference documents; - analysing job requirements; - selecting appropriate metrology processes; - solving problems that arise from unexpected situations; - recording results; - communicating verbally and in writing

effectively; - working effectively with others assessing risks when preparing weld test; - interpreting and following procedures; - identifying inspection areas; - filling out proformas and workplace forms; - using personal protective equipment correctly, and; - following safe working practices and procedures. Students will also be expected to demonstrate the following knowledge: - metallurgy principles; - property of materials (ferrous and non-ferrous); - welding procedures; - welding inspections; - identification of stress points; - surface preparation; - joints between metals and metal alloys; - non-destructive testing methods; - types of test equipment; - operation of test equipment; - relevant Australian and international standards, and; - regulatory codes and code of practice.

VU21258 Implement destructive weld testing

Locations: Industry, Sunshine.

Prerequisites: VU21256 - Apply destructive & non-destructive weld testing principles

Description: This unit of competency sets out the knowledge and skills required for implementation of destructive tests of welds in conformity relevant codes and standards.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and following relevant OH&S procedures; - reading and interpreting texts, drawings, specifications, standards and other applicable reference documents; - analysing job requirements; - selecting appropriate metrology processes; - solving problems that arise from unexpected situations; - recording results; - communicating verbally and in writing effectively; - working effectively with others; - assessing risks when preparing weld test; - interpreting and following procedures; - identifying inspection areas; - filling out proformas and workplace forms; - using personal protective equipment correctly, and; - following safe working practices and procedures. Students will also be expected to demonstrate the following knowledge: - metallurgy principles; - property of materials (ferrous and non-ferrous); - welding procedures; - welding inspections; - identification of stress points; - surface preparation; - joints between metals and metal alloys; - destructive testing methods; - types of test equipment; - operation of test equipment; - relevant Australian and international standards, and; - regulatory codes and code of practice.

VU21259 Evaluate and interpret boiler and pressure vessel codes and specifications

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to interpret and evaluate the rules set out in Australian Standards AS1210, AS1228 Boiler and Pressure vessel and other relevant Australian codes as set out in AS 2214 and AS1796.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial

environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to evaluate and interpret structural codes and specifications for a variety of boiler and pressure vessel fabrication processes and document and manage these processes on more than one occasion and in different contexts.

VU21260 Identify and interpret pipeline fabrication requirements

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to identify and apply pipeline fabrication principles and the validation of the conformity of relevant codes, especially AS1796, AS2214, AS2885, and AS4041.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and Demonstrate the ability to identify and interpret pipeline fabrication requirements by documenting and evaluating testing and approval processes on more than one occasion and in different contexts.

VU21261 Compile a technical report for fabrication

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to write a technical report on issues relating to fabrication, including welding. The report can contain some analyses and evaluation.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to apply write technical reports on fabrication welding on more than one occasion and for different purposes. At least one of these reports should be detailed containing most of the elements and content outlined in the range statement.

VU21262 Design fabricated structures and pressure vessels using non-ferrous metals

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge, skills and applications required for the design of fabricated structures and pressure vessels using non-ferrous metals. This includes structures and pressure equipment with all types of non-ferrous metals, lightweight structures, as well as compliance with all relevant codes and standards.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the complete design of fabricated and welded structures and pressure vessels on more than one occasion and in different contexts

VU21263 Design fabricated structures and pressure vessels using low and high alloy steels

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge, skills and applications required to design fabricated structures and pressure vessels using low and high alloy steels. This includes welds, structures and pressure equipment with all types of low and high alloy steels, lightweight structures as well as compliance with all relevant codes and standards.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the design of fabricated and welded structures and pressure vessels on more than one occasion and in different contexts.

VU21285 Engage with short simple texts for employment purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to engage with short, simple print based and digital texts related to employment environments. The required outcomes described in this unit relate directly to the Australian Core Skills Framework (ACSF), (© Commonwealth of Australia, 2012). They contribute to the achievement of ACSF indicators of competence at Level One (Reading): 1.03, 1.04.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: 1. problem solving skills to: - use cues from context, personal experience and document lay-out to identify highly familiar words, phrases, symbols, visuals, numbers to recognise text types relevant to employment needs;- use a limited range of reading strategies including ability to draw on a small bank of sight vocabulary of personally relevant words/ phrases and use elementary word attack skills to create meaning from text, and; - follow non-linear orientation of digital text to enable simple navigation; 2. communication skills to convey and discuss information about texts, and; 3. technology skills to navigate screen based digital text to locate simple information. Students will also be expected to demonstrate the following knowledge: - different text types relevant to employment purposes;- basic reading strategies to engage with printed and digital texts;- reasons for accessing texts for employment purposes, and; - the different ways in which digital information may be organised, such as linear and non-linear.

VU21289 Create short simple texts for employment purposes

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to use initial writing skills to create short simple texts for employment purposes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - construct short written text of one or two phrases / sentences with support, and; - locate simple information in text and use it to construct simple text. Students will also be expected to demonstrate the following knowledge: - spatial arrangement, word separation and alignment of written text, and; - a small bank of employment related words and phrases to enable the preparation of content.

VU21292 Recognise, give and follow simple and familiar oral directions

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge that enable learners to develop the basic skills and confidence to perform very simple and highly familiar numeracy tasks involving the recognition, giving and following of simple and highly familiar oral directions. These directions are part of the learners' normal routines to do with orienting oneself in familiar contexts such as near their homes, in workplace buildings or classrooms. Learners will mainly communicate these mathematical ideas using spoken rather than written responses.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read relevant, short texts and diagrams, and; - recognise simple diagrams and maps of highly familiar locations. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in signs, diagrams and maps, and; - informal oral language of position and location to give and follow simple and familiar oral directions.

VU21293 Recognise measurements in simple, highly familiar situations

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to enable learners to develop the basic skills and confidence to perform very simple and highly familiar numeracy tasks involving the recognition and comparison of simple and familiar measurements which are part of the learners' normal routines. This would typically relate to activities such as shopping, cooking, work related measures and telling the time. Learners will mainly communicate these mathematical ideas using spoken rather than written responses. The required outcomes described in this unit relate directly to the Australian Core Skills Framework (ACSF), (© Commonwealth of Australia, 2012). They contribute to the achievement of ACSF indicators of competence at Level One Numeracy, 1.09, 1.10, 1.11.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills to read and say whole numbers, simple fractions and basic words associated with measurement and time. Students will also be expected to demonstrate the following knowledge: - signs, prints and symbols represent meaning in measurement contexts and materials such as on tools and packaging; - common units of metric measurement and their appropriate use, and; - abbreviations associated with highly familiar measurement and time.

VU21297 Develop and document a learning plan and portfolio with guidance

Locations:Industry, Footscray Nicholson, St Albans, Werribee, Sunshine, Sunbury Learning Links.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to identify and document current skills and plan future skills development with the guidance of an appropriate support person, and to develop and maintain a portfolio. The learning plan documents an agreed program that the learner will undertake during the course to plan, document and monitor progress towards achieving learning goals.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to participate in planning process; - literacy skills to follow a written model or complete a simple template; - planning and organising skills to follow a model to organise a portfolio; - problem solving skills to draw on current skills to identify learning goals, and; - oral communication skills to discuss potential issues in the achievement of learning goals. Students will also be expected to demonstrate the following knowledge: - purpose of a learning plan and the process to develop and monitor it; - different types of goals such as personal and work, and; - difference between long and short term goals.

VU21300 Engage with simple texts for learning purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to engage with simple and familiar print and digital texts for learning purposes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - critically read texts which have predictable structure and familiar vocabulary to make meaning; - get the gist of texts which have more unfamiliar elements to interpret information; - use a range of reading strategies to draw on bank of key vocabulary of personally relevant words/phrases and use of word attack skills; - make connections between own knowledge and experience and the purpose and structure of texts; - follow non-linear digital texts to gain information; - communication skills to discuss and convey information about key content in texts, and; - technology skills to navigate screen based digital text to locate simple information. Students will also be expected to demonstrate the following knowledge: - how basic punctuation impacts on meaning, and; - reading strategies to engage with printed and digital texts.

VU21301 Engage with simple texts for employment purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites: Nil.

Description: This unit develops the skills and knowledge to engage with simple and familiar paper based and digital texts for employment purposes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - critically read texts which have predictable structure and familiar vocabulary to make meaning; - get the gist of texts which have more unfamiliar elements to interpret information; - use a range of reading strategies to draw on bank of key vocabulary of personally relevant words/phrases and use of word attack skills; - make connections between own knowledge and experience and the purpose and structure of texts; - follow simple non-linear digital texts to gain information; - communication skills to discuss and convey information about key content in texts, and; - technology skills to navigate screen based digital text to locate simple information. Students will also be expected to demonstrate the following knowledge: - how basic punctuation impacts on meaning; - reading strategies to engage with printed and digital texts, and; - different sources of employment texts.

VU21304 Create simple texts for learning purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to enable the development of writing skills to create simple paper based and digital texts for learning purposes and for communication with others.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - beginning ability to structure text; - consistent use of upper and lower case letters; - developing ability to link ideas using simple conjunctive devices such as "and" and "but"; - grammatically correct simple sentence structure, and; - problem solving skills to identify audience and purpose of paper based and digital texts and use appropriate language. Students will also be expected to demonstrate the following knowledge: - stages or processes of writing including planning, drafting and editing, and; - punctuation conventions of sentence writing.

VU21305 Create simple texts for employment purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to enable the development of writing skills to create simple paper based and digital texts related to employment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - beginning ability to structure text; - consistent use of upper and lower case letters; - developing ability to link ideas

using simple conjunctive devices such as "and" and "but"; - grammatically correct simple sentence structure, and; - problem solving skills to identify audience and purpose of paper based and digital texts and use appropriate language. Students will also be expected to demonstrate the following knowledge: - stages or processes of writing including planning, drafting and editing, and; - punctuation conventions of sentence writing.

VU21307 Work with numbers and money in simple familiar situations

Locations:Footscray Park, Footscray Nicholson, St Albans.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to enable learners to develop the basic skills and confidence to perform simple and familiar numeracy tasks involving the recognition, comparison and simple one-step calculations with money, whole numbers and simple everyday fractions, decimals and percentages which are part of the learners' normal routines and activities such as shopping, recreational activities and routine work related calculations or purchases. Learners will communicate these mathematical ideas using mainly spoken responses with some written responses.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy and communication skills to read, write and say whole numbers, simple fractions and familiar words associated with numbers and money, and; - numeracy skills to identify and use the value of coins and notes. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning; - place value of whole numbers into the thousands; - techniques used to make estimations and check results of calculations, and; - understanding of operations of addition (+), subtraction (-), simple multiplication (\times) or simple division (\div) and the words and symbols associated with them.

VU21309 Work with measurements in simple, familiar situations

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to enable learners to develop the basic skills and confidence to perform simple and familiar numeracy tasks involving measurement estimations and measurements which are part of the learners' normal routines and activities such as shopping, cooking, work related measures and reading and telling the time. Learners will communicate these mathematical ideas using mainly spoken responses with some written responses.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy

skills to read familiar texts containing common measurements such as a simple recipe, and; - ability to use simple measuring tools and time devices. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in measurement contexts and materials such as on tools and packaging; - whole numbers, simple fractions and the language associated with measurement and time; - abbreviations associated with measurement and time, and; - common units of metric measurement and time and their appropriate use.

VU21311 Work with and interpret simple numerical information in familiar texts

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to enable learners to develop the basic skills and confidence to locate and recognise whole numbers and simple everyday fractions, decimals and percentages which are part of numerical information partially embedded in simple familiar texts. Learners can then use those numbers to perform simple one-step calculations when reading documents such as newspaper articles, sports results, prices in advertisements and utility bills. Learners will communicate these mathematical ideas using mainly spoken responses with some written responses.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read relevant, familiar texts and documents, and; - read, write and say whole numbers, simple fractions and familiar words associated with numbers. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in texts and documents; - place value of whole numbers into the thousands; - operations of addition (+), subtraction (-), simple multiplication (\times) or simple division (\div) and the words and symbols associated with them, and; - techniques used to make estimations and check results of calculations.

VU21317 Communicate with others in familiar and predictable contexts

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites:Nil.

Description:This unit develops the skills and knowledge to communicate verbally with others in familiar and predictable contexts.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - provide and respond to key information; - formulate questions to seek clarification of information; - simple grammatical structures and tenses such as openings and closings and adjectives; -

stress and intonation to communicate verbally; - non-verbal communication to convey meaning, and; - own personal experiences to verbally communicate information. Students will also be expected to demonstrate the following knowledge: - simple vocabulary related to personal details and other areas of personal interest; - interactional strategies to participate in verbal communication exchanges such as requesting repetition, using nonverbal communication techniques and turn-taking, and; - different reasons for communicating verbally.

VU21323 Develop and document a learning plan and portfolio

Locations: Industry, Footscray Nicholson, St Albans, Werribee, Sunshine, Sunbury Learning Links.

Prerequisites: Nil.

Description: This unit develops the skills and knowledge to identify and document current skills and plan future skills development to achieve individual learner objectives with the advice of an appropriate support person. This unit also develops the skills and knowledge to develop and maintain a portfolio.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in the planning process to develop a learning plan; - discuss aspects of the learning plan such as purpose and preferred learning styles to support development of the plan; - read and interpret a range of information related to own goals; - gather and use information to support development of the plan; - draw on previous experiences to inform development of the plan; - identify, select and organise evidence for portfolio using an established model, and; - compare own skills to learning goals to identify achievable steps. Students will also be expected to demonstrate the following knowledge: - importance of documenting learning to support progress; - factors which can support or hinder progress in learning, and; - different learning strategies and how they contribute to learning.

VU21326 Engage with texts of limited complexity for learning purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to engage with a range of everyday and less familiar print and digital texts, of limited complexity to participate in learning. The unit provides the learner with the skills and knowledge necessary to read, interpret and evaluate everyday texts of limited complexity for learning purposes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret basic structural conventions of text such as sequencing of information, identification followed by

description; - draw on a range of de-coding and meaning-making strategies to make sense of text; - draw on prior knowledge to make sense of text; - oral communication skills to convey information about text including an opinion about its effectiveness, and; - technology skills to access and navigate screen based digital text to locate information of limited complexity. Students will also be expected to demonstrate the following knowledge: - texts represent the author's experiences, purposes, opinions; - relationship between source of text and validity of information; - texts have different audiences and different purposes, and; - information can be accessed and represented in a number of ways including digitally.

VU21327 Engage with texts of limited complexity for employment purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites: Nil.

Description: This unit develops the skills and knowledge to read, interpret and evaluate a range of everyday and less familiar paper based and digital text types of limited complexity, for employment purposes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: Problem solving skills to: - interpret basic structural conventions of text such as sequencing of information in flowcharts and work procedures, identification followed by description; - draw on a range of de-coding and meaning-making strategies to make sense of text; - draw on prior knowledge to make sense of text; - distinguish fact from opinion; - oral communication skills to convey information about work related texts including an opinion about effectiveness, and; - technology skills to access and navigate screen based digital text to locate and interpret work related information of limited complexity. Students will also be expected to demonstrate the following knowledge: - strategies used to analyse texts to identify their usefulness; - strategies used in texts to achieve purpose and convey information and opinion; - relationship between source of text and validity of information; - texts have different audiences and different purposes, and; - information can be accessed and represented in a number of ways including digitally.

VU21331 Create texts of limited complexity to participate in the workplace

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to create a range of everyday paper based and digital texts of limited complexity related to employment purposes, which may include some unfamiliar aspects.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - ability to structure and sequence writing to produce text; - use of punctuation devices such as full stops and commas, capitalisation of letters; - ability to use grammatical forms for different purposes such as giving explanations"; - ability to use dependent clauses with simple connectives such as when, if, and; - problem solving skills to identify audience and purpose of paper based and digital texts and use appropriate language. Students will also be expected to demonstrate the following knowledge: - stages or processes of writing including planning, drafting and editing; - punctuation conventions of sentence writing such as full stops, commas and question marks, and; - technical vocabulary and acronyms relevant to the workplace. .

VU21337 Work with and interpret numerical information in familiar and routine texts

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online, Sunbury Learning Links.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to enable learners to develop numeracy skills related to locating and recognising a range of whole numbers, decimals, routine fractions and percentages which are part of numerical information partly embedded in routine texts. Learners can then use those numbers to perform simple multi-step calculations which are part of the learners' familiar and routine situations in their personal, public, work or education and training lives. Learners will communicate these mathematical ideas using a combination of written and spoken responses.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills to read relevant, familiar texts and identify decimals, common fractions and percentages when partly embedded in texts. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in texts and materials; - place value to read, write and interpret decimals and large whole numbers; - decimals, common fractions and percentages and their common equivalent forms; - informal and formal language of number to compare and interpret decimals, common fractions and percentages, and; - techniques used to make initial estimations and check results of calculations in relation to the context.

VU21353 Research pathways and produce a learning plan and portfolio

Locations: Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, VU Learning Links - Sunbury Neighbourhood and Altona Meadows Library..

Prerequisites: Nil.

Description: This unit develops the skills and knowledge to investigate pathway options and plan skills development, in discussion with an appropriate support person. The learner will develop and maintain a portfolio of evidence over time.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in the planning process to develop a learning plan; - discuss aspects of the learning plan such as purpose and preferred learning styles to support development of the plan; - read and interpret a range of information about potential options; - apply research skills to locate information relevant to own goals and options; - gather and use information to support development of the plan; - draw on previous experiences to inform development of the plan; - identify, select and organise evidence for the portfolio - compare own skills to learning goals and options to identify achievable steps - determine own preferred learning style, and; - evaluate own skills and knowledge to identify gaps. Students will also be expected to demonstrate the following knowledge: - importance of documenting learning, monitoring and reviewing learning goals, and; - potential barriers to learning to enable current and future barriers to be recognised.

VU21356 Engage with a range of complex texts for learning purposes

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to interpret a range of structurally intricate paper based and digital texts which are relevant to learning purposes and which may include some specialisation and non routine contexts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and apply reading strategies to interpret and analyse texts; - apply critical analysis skills to interpret and compare texts; - assess relevance of texts to own purposes and needs; - assess the validity of online information; - oral communication skills to discuss features and content of texts to establish relevance and effectiveness, and; - technology skills to access and navigate screen based digital text to locate information of some complexity. Students will also be expected to demonstrate the following knowledge: - knowledge of a range of vocabulary related to learning including some specialised vocabulary to support comprehension; - knowledge of techniques used by writers to convey meaning and achieve purpose; - understanding that a text reflects an author's culture, experiences and value system, and; - understanding that paper based and digital information may be represented differently.

VU21360 Create a range of complex texts for learning purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online, VU Learning Links - Sunbury Neighbourhood and Altona Meadows Library..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to enable the development of writing skills to create a broad range of complex paper based and digital texts which are relevant to the learning environment. At this level the learner works across a range of contexts including some that are unfamiliar and/or unpredictable and include some specialisation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks

and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to relay complex relationships between ideas; - literacy skills to write texts which include a number of examples, opinions, facts, or arguments with supporting evidence; - organisational skills to gather and order information required to create texts, and; - problem solving skills to select and apply appropriate register according to context. Students will also be expected to demonstrate the following knowledge: - a range of styles of writing and presenting information to a range of audiences; - knowledge of register to enable appropriate selection and application to context; - a broad vocabulary and a range of grammatical structures, and; - how to structure a range of texts.

VU21383 Analyse and evaluate numerical and statistical information

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to analyse and evaluate numerical information in texts and analyse and create statistical data, tables and graphs. The required outcomes described in this unit relate directly to the Australian Core Skills Framework (ACSF), (© Commonwealth of Australia, 2012). They contribute to the achievement of ACSF indicators of competence at Level Five Numeracy: 5.09, 5.10, 5.11. At this level the learner is autonomous and accesses and evaluates support from a broad range of sources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - techniques used to make initial estimations and check results of calculations in relation to the context; - measures of central tendency including mean, median and mode or modal class; - common measures of spread including range, interquartile range, common percentiles and standard deviation; - communication skills to use a wide range of oral and written informal and formal language and representation including symbols, diagrams and charts to communicate mathematically, and; - problem solving skills to: interpret, select and investigate appropriate mathematical information and relationships highly embedded in an activity, item or text; analyse and evaluate the appropriateness, interpretations and wider implications of all aspects of a mathematical activity; select and apply a wide range of mathematical strategies flexibly to generate solutions to problems across a broad range of contexts. Students will also be expected to demonstrate the following knowledge: - techniques used to make initial estimations and check results of calculations in relation to the context; - measures of central tendency including mean, median and mode or modal class, and; - common measures of spread including range, interquartile range, common percentiles and standard deviation.

VU21389 Design and review a project

Locations: Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to design, conduct and critically examine a project's processes and outcomes. The unit is intended to be delivered over sufficient time to enable learners to develop and demonstrate all outcomes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to support successful project planning and completion such as negotiation and conflict resolution; - literacy and numeracy skills to source, interpret and synthesise information required to develop, implement and review a project action plan, and; - problem solving skills to: assess the feasibility of a project proposal, and; recognise and address issues affecting the successful. Students will also be expected to demonstrate the following knowledge: - features of project action plans to enable a plan to be developed; - criteria used to assess the outcomes of projects such as costs, time frames, customer satisfaction, and; - the place of legislative requirements such as OHS / WHS, environmental protection and licensing in project planning and implementation.

VU21400 Apply scientific principles to engineering problems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply scientific principles to solve problems common to all engineering fields. This includes quantities and units, vector and scalar quantities, kinematics dynamics, heat and temperature, constitution of matter and error and uncertainty.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to apply scientific principles to solve engineering problems on at least two occasions researching from each of the following areas respectively: Basic chemistry Gas laws Linear and circular motion Work energy and power Simple machines Momentum Heat and temperature Error and uncertainty in measurement

VU21434 Read and write short basic messages and forms

Locations: Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the reading and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language who have little or no formal education to read and write short, basic digital and/or paper based messages and to understand and complete basic forms for immediate personal

needs.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

VU21489 Read and write straightforward texts for employment

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the describes reading and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language to read and write a range of straightforward digital and/or print texts relevant to employment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary

and expressions for a range of straight forward texts related to employment; - common collocations; - sentence structures for simple, compound and conditional sentences; - question forms e.g. to request information; - paragraph structure in formal communications; - definite and indefinite article; - a variety of adjectives and adverbs used in workplace documents; - a range of adverbial phrases, prepositions and prepositional phrases; - a range of tense and aspect forms; - reported speech used in communications and other work related texts; - a range of phrasal verbs; - a range of modals and modal forms, including negative form of need to and have to; - a range of discourse markers and cohesive devices to structure text; - reported speech; - reading strategies; - reading skills to use EAL supporting texts; - a limited range of idiomatic expressions and colloquialisms; - variation of register in workplace communications; - language and conventions appropriate for social communication purposes; - use model texts to guide production of written texts; - recognition of some inferred meaning by using a range of cues; - awareness of tone and intention of writer; - detect and express opinions and attitudes in texts, and; - plan, draft, proof read and redraft written texts.

VU21492 Present and listen to complex oral presentations in an employment or professional context

Locations:St Abans, City Flinders.

Prerequisites:Nil.

Description:This unit describes the speaking and listening performance outcomes, skills and knowledge required by adult learners of English as an additional language. The focus of this unit is on presenting and listening to complex oral presentations in English relevant to an employment context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required knowledge and skills: - vocabulary and expressions for a wide range of topics related to employment interests; - a wide range of common collocations; - simple, compound and complex sentences with a range of subordinate clauses; - a wide range of verb tenses and verb forms; - most modal forms; - a wide range of phrasal verbs which include a number of particles; - a wide range of adjectives, adverbs, adverbial phrases and prepositional phrases to describe and convey information and expand on ideas; - a wide range of discourse markers to develop ideas and their relationship to each other, to interpret and convey meaning, signal intention e.g. accordingly, subsequently, consequently; - a wide range of conjunctions; - uses intelligible pronunciation; - demonstrates generally appropriate flow of speech though may have occasional repetition, hesitation or self-correction; - use tone, intonation and stress to influence meaning in spoken language; - a range of registers, styles and conventions used in oral presentations in an employment or professional context; - a wide range of common idioms and colloquial expressions as they relate to spoken texts relevant to presentations in an employment or professional context; - an awareness of English varieties; - a range of verbal and paralinguistic strategies; - recognition of a range of cues for inferred meaning, and; - distinguish fact and opinion, irony, understatement, exaggeration in oral texts.

VU21494 Read and write complex texts for employment

Locations:St Abans, City Flinders.

861

Prerequisites:Nil.

Description:This unit describes the reading and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language. The focus of this unit is on reading and writing skills in English to read complex instructions, informal messages and formal communications, which may be in printed and/or digital format, in an employment context, and to write an informal message.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required knowledge and skills: - varied vocabulary and terminology; - understanding of a wide range of collocations; - a range of formal and informal texts for employment purposes containing simple, compound and complex sentences with a range of subordinate clauses; - a wide range of verb tenses and verb forms, including active and passive; - reported speech with a range of reporting verbs and verb forms; - most modals and modal forms; - definite and indefinite article; - a wide range of phrasal verbs; - a wide range of adjectives, adverbs, and adverbial phrases; - a wide range of conjunctions e.g. conjunctions of time; - a wide range of discourse markers to sequence and structure text; - a wide range of adverbial phrases, prepositions and prepositional phrases; - understands that different sources will present different perspectives, and recognises how text, language and structure influence the reader to adopt particular views and positions; - a wide range of linguistic features and conventions in a range of genres; - a wide range of registers and style relevant to an employment context; - recognition of a range of cues for inferred meaning; - ways of detecting the writer's tone, intention and attitude; - distinguish fact and opinion, irony, understatement, exaggeration in texts; - a range of common idiomatic and colloquial expressions relevant to the employment context, and; - level of formality requirements for conveying a message in electronic and print forms for a wide variety of purposes related to employment.

VU21495 Critically read and write formal letters and complex prose texts for professional purposes

Locations:St Abans, City Flinders.

Prerequisites:Nil.

Description:This unit describes the reading and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language. The focus of this unit is on reading and writing skills in English to critically read and write formal letters and complex prose texts in a professional context. Texts may be in printed and/or digital format.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required knowledge and skills: - varied vocabulary and terminology including jargon for a wide range of topics related to

professional interests; - understanding of a wide range of common collocations; - a wide range of simple, compound and complex sentences with a range of subordinate clauses; - a wide range of verb tenses and verb forms; - reported speech (questions/instructions) with a range of reporting verbs and verb forms; - a wide range of conditionals and modals; - definite and indefinite article; - a wide range of phrasal verbs, adjectives, adverbs, adverbial phrases and adjectives; - a wide range of conjunctions; - a wide range of discourse linkers to develop ideas and their relationship to each other, to interpret and convey meaning, signal intention; - understands that different sources will present different perspectives, and recognises how text, language and structure influence the reader to adopt particular views and positions; - principal conventions of formal letters and complex prose texts; - a wide range of registers and style appropriate to a professional context; - recognition of a range of cues for inferred meaning; - ways of detecting the writer's tone, intention and attitude; - distinguish fact and opinion, irony, understatement, exaggeration in texts; - idioms and colloquialisms relevant to the professional context, and; - formality requirements for formal letters and complex prose texts in electronic and print forms for a wide variety of purposes related to professional purposes.

VU21496 Critically read, write and edit complex descriptive texts in a professional context

Locations: St Albans, City Flinders.

Prerequisites: Nil.

Description: This unit describes the reading and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language. The focus of this unit is on reading and writing skills in English to critically read and write complex descriptive texts, apply knowledge of discourse and language use, and edit a written text in a professional context. Texts may be in printed or digital format.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required knowledge and skills: - varied vocabulary and terminology including jargon for a wide range of topics related to employment and/or professional interests; - understanding of a wide range of common collocations; - a wide range of simple, compound and complex sentences with a range of subordinate clauses; - a wide range of verb tenses and verb forms; - reported speech (questions/instructions) with a range of reporting verbs and verb forms; - a wide range of conditionals and modals; - definite and indefinite article; - a wide range of phrasal verbs, adjectives, adverbs, adverbial phrases and adjectives; - a wide range of conjunctions; - a wide range of discourse linkers to develop ideas and their relationship to each other, to interpret and convey meaning, signal intention; - understands that different sources will present different perspectives; - principal conventions of descriptive texts; - a wide range of registers and styles appropriate to a professional context; - recognition of a range of cues for inferred meaning; - ways of detecting the writer's tone, intention and attitude; - distinguish fact and opinion, irony, understatement, exaggeration in texts; - idioms and colloquialisms relevant to the professional context; - formality requirements for complex descriptive texts in electronic and print forms for a wide variety of purposes related to a professional context, and; - recognise, select and interpret mathematical information embedded in descriptive texts used in a professional context.

VU21499 Give straightforward oral presentations for further study

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the speaking and listening performance outcomes, skills and knowledge required in further study by adult learners of English as an additional language. The focus of this unit is on listening and speaking skills in English to participate in further study contexts that involve the presentation and discussion of ideas and information in straightforward formal presentations and group discussions. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Speaking and Listening. They contribute directly to the achievement of Speaking 2+ / 3 and Listening 2+ / 3 and the Australian Core Skills Framework (ACSF). They contribute directly to the achievement of ACSF indicators of competence in Oral Communication at Level 3.

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use straightforward conventions and apply linguistic knowledge to: - plan for and participate in a verbal group interaction for study purposes - plan, present and adjust oral presentations using relevant research information, supports and resources appropriate to the topic, purpose and audience - review own performance in group and individual performance and seek and respond to feedback to make improvements to performance

VU21500 Participate in a range of straightforward interactions for further study

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the speaking and listening performance outcomes, skills and knowledge required in further study by adult learners of English as an additional language. The focus of this unit is on listening and speaking skills in English to participate in further study contexts that involve making straightforward verbal requests and suggestions, relating and responding to verbal instructions, and participating in group work and informal group discussions. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Speaking and Listening. They contribute directly to the achievement of Speaking 2+ / 3 and Listening 2+ / 3 and the Australian Core Skills Framework (ACSF). They contribute directly to the achievement of ACSF indicators of competence in Oral Communication at Level 3.

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use straightforward conventions and apply linguistic knowledge to: - make requests and suggestions with supporting evidence - respond to and give instructions in a study context - prepare for group work in a further study context - participate in informal discussions in a study context which are of sufficient duration to allow learners to demonstrate consistency of performance and use a range of discourse strategies

VU21501 Read and write straightforward texts for research purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the reading and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language for further study purposes. The focus of this unit is on developing reading, note-taking and writing skills to produce straightforward texts based on research relevant to

study needs. Texts may be in printed and/or digital format. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Reading and Writing. They contribute directly to the achievement of ISLPR Reading 2+ / 3 and Writing 2+ / 3 and the Australian Core Skills Framework (ACSF) They contribute directly to the achievement of ACSF indicators of competence for Reading and Writing at Level 3

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use straightforward conventions and apply linguistic knowledge to: - locate and access a range of study texts - select and evaluate information from written sources relevant to the study task - write notes from written texts for further study purposes using appropriate methods and conventions - organise written notes according to conventions - utilise information from research and notes to produce a sequenced paragraph - review texts and seek and respond to feedback to improve written text

VU21502 Analyse and produce straightforward texts relevant to further study

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the reading and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language for further study purposes. The focus of this unit is on developing reading and writing skills in English for a range of straightforward text types related to study needs. Texts may be in printed and/or digital format. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Reading and Writing. They contribute directly to the achievement of ISLPR Reading 2+ / 3 and Writing 2+ / 3 and the Australian Core Skills Framework (ACSF) They contribute directly to the achievement of ACSF indicators of competence for Reading and Writing at Level 3

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use straightforward conventions and apply linguistic knowledge to: - analyse the structure and discourse style / register and purpose of a range of texts relevant to further study - compose a range of straightforward texts relevant to further study using conventions to meet the purposes - review and refine texts

VU21503 Listen and take notes for research

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the listening and writing performance outcomes, skills and knowledge required in further study by adult learners of English as an additional language. The focus of this unit is on developing listening and note-taking skills from straightforward aural texts relevant to study needs. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Speaking and Listening. They contribute directly to the achievement of Speaking 2+ / 3 and Listening 2+ / 3 and the Australian Core Skills Framework (ACSF). They contribute directly to the achievement of ACSF indicators of competence in Oral Communication at Level 3.

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use straightforward conventions and apply linguistic knowledge to: - assess a range of straightforward aural texts for study purposes - evaluate information from aural sources for relevance to the study

task - take notes from aural sources for further study purposes - review notes and seek and respond to feedback to improve written notes

VU21504 Use language learning strategies and study skills

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the language analysis performance outcomes, skills and knowledge required by adult learners of English as an additional language. The focus of this unit is on language analysis and application of these skills for the completion of study tasks. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Speaking and Listening, Reading and Writing. They contribute directly to the achievement of ISLPR Speaking 2+, Listening 2+, Reading 2+ / 3 and Writing 2+ / 3 and the Australian Core Skills Framework (ACSF) They contribute directly to the achievement of ACSF indicators of competence for Reading and Writing and Oral Communication at Level 3

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use straightforward conventions and apply linguistic knowledge to: - use grammatical terms to discuss features of spoken and written language use - use knowledge of language organisation and function to locate information about language in reference material - edit and refine language use in a range of written and spoken texts - utilise knowledge of grammar and language discourse to complete study tasks

VU21508 Give complex presentations for further study

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the speaking and listening performance outcomes, skills and knowledge required by adult learners of English as an additional language. The focus of this unit is on advanced listening and speaking skills in English to participate in further study contexts which involve the presentation and discussion of ideas and information in complex formal presentations and group discussions. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Speaking and Listening. They contribute directly to the achievement of ISLPR Speaking 3 / 3+ and Listening 3 / 3+ and the Australian Core Skills Framework (ACSF). They contribute directly to the achievement of Indicators of Competence in Oral Communication at Level 4

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use appropriate conventions and apply linguistic knowledge to: - participate in a sustained verbal group interaction for study purposes - plan, present and evaluate complex oral presentations suitable to the topic, purpose and audience - select and use resources to enhance presentation medium and meaning - review own performance in group and individual performance and seek and respond to feedback to make improvements to performance

VU21509 Analyse and participate in complex spoken discourse for further study

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the speaking and listening performance outcomes, skills and knowledge required by adult learners of English as an additional language. The focus of this unit is on advanced listening and speaking skills in English to participate in further study contexts, focusing on responding to a wide range of

complex verbal instructions, interpreting and discussing ideas and opinions with others in informal contexts, and negotiating a complex exchange. The unit also requires learners to reflect on the effectiveness of their interaction. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Speaking and Listening. They contribute directly to the achievement of ISLPR Speaking 3 / 3+ and Listening 3 / 3+ and the Australian Core Skills Framework (ACSF). They contribute directly to the achievement of Indicators of competence in Oral Communication at Level 4

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use appropriate conventions and apply linguistic knowledge to: - respond to complex verbal instructions or questions in a study context - participate in a sustained informal interaction in a group - present a proposal or argue a case in a study context

VU21510 Take notes from complex aural texts for further study

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the listening and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language. The focus of this unit is on advanced listening skills in English to participate in further study contexts, focusing on taking notes from complex and extended aural texts. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Speaking and Listening. They contribute directly to the achievement of Speaking 3/3+ and Listening 3/3+ and the Australian Core Skills Framework (ACSF). They contribute directly to the achievement of ACSF indicators of competence in Oral Communication at Level 4.

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use appropriate conventions and apply linguistic knowledge to: - select and evaluate information from complex aural texts for relevance to the study task - write notes from aural sources for further study purposes using appropriate strategies - review notes

VU21511 Read and write complex texts for research purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the reading and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language for further study purposes. The focus of this unit is on reading, note-taking and research writing skills in English and producing a wide range of complex research-based texts relevant to study needs and the field of study. Texts may be in printed or digital format. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Reading and Writing. They contribute directly to the achievement of ISLPR Reading 3/3+ and Writing 3/3+ and the Australian Core Skills Framework (ACSF). They contribute directly to the achievement of ACSF indicators of competence for Reading and Writing at Level 4

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use appropriate conventions and apply linguistic knowledge to: - identify, read and evaluate a range of complex written research relevant to the research purpose - extract, write and organise written notes from a range of complex texts - synthesise information from research and notes to write a wide range of complex texts for research purposes which include complex sentences and coherently linked paragraphs, and which communicate

complex relationships between ideas - include references using appropriate referencing format - use a wide range of techniques to review own writing

VU21512 Read and write complex texts for further study

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the reading and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language for further study purposes. The focus of this unit is on analysing a wide range of complex texts, which may be in printed or digital format, as models for own writing and creating a range of complex texts for further study purposes. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Reading and Writing. They contribute directly to the achievement of ISLPR Reading 3/3+ and Writing 3/3+ and the Australian Core Skills Framework (ACSF). They contribute directly to the achievement of ACSF indicators of competence for Reading and Writing at Level 4

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use appropriate conventions and apply linguistic knowledge to: - analyse the features of a wide range of complex texts as models for own writing for further study purposes - critically analyse and respond to a range of texts found in further study contexts. - create a range of complex texts using conventions appropriate to context and purpose relevant to further study - use a wide range of techniques to review own writing

VU21513 Use critical reading and writing skills for further study

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the reading and writing performance outcomes, skills and knowledge required by adult learners of English as an additional language for further study purposes. The focus of this unit is on using critical analysis skills for a range of study tasks, and using and creating non-continuous formatted texts e.g. for collecting and presenting data in further study contexts. The outcomes described in this unit relate to: - The ISLPR (International Second Language Proficiency Ratings) descriptors for Reading and Writing. They contribute directly to the achievement of ISLPR Reading 3/3+ and Writing 3/3+, and; - the Australian Core Skills Framework (ACSF). They contribute directly to the achievement of ACSF indicators of competence for Reading and Writing at Level 4.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - recognize and use specific registers related to further study; - different roles required of the author in further study texts e.g. the author's direct involvement or impersonal style; - ways of detecting the writer's tone, intention and attitude; - recognition of a range of cues for inferred meaning, e.g. logical, contextual and visual; - distinguish fact and opinion, irony, understatement, exaggeration in texts; - referencing conventions and formats for relevant study fields, and; - a range of mathematical terms and concepts relevant to data in formatted texts e.g. percentages in graphs. Students will also be expected to demonstrate the following knowledge: - vocabulary and expressions including

jargon and some specialist terminology for a range of topics related to vocational or study needs; - linguistic structures and features of a range of instructional, advisory and non-continuous texts used in further study; - a wide range of texts for further study purposes which include simple, compound and complex sentences with a range of subordinate clauses and which communicate complex relationships between ideas; - a wide range of verb tenses and forms, conditionals and modals which are used in advisory or instructional texts e.g. Answers should contain at least three examples; - reported speech, questions and instructions using a range of verbs required to report on information and data from formatted texts; - a wide range of phrasal verbs, (e.g. do not leave out any sections) adverbs, adverbial phrases and adjectives used in advisory, instructional texts relevant to further study; - a wide range of discourse markers, connectives, pronouns and cohesive devices to link ideas and concepts, add information or contrast ideas, e.g. in spite of the fact that, and; - a wide range of common collocations.

VU21514 Use language analysis skills to review own texts

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the language analysis performance outcomes, skills and knowledge required by adult learners of English as an additional language. The focus of this unit is on language analysis and application of these skills to review own texts for further study purposes. The outcomes described in this unit relate to: The ISLPR (International Second Language Proficiency Ratings) descriptors for Speaking and Listening, Reading and Writing. They contribute directly to the achievement of ISLPR Speaking 3 / 3+ and Listening 3 / 3+, Reading 3/3+ and Writing 3/3+ and the Australian Core Skills Framework (ACSF) They contribute directly to the achievement of ACSF indicators of competence for Reading and Writing and Oral Communication at Level 4

Required Reading: Refer to learning and assessment plan

Assessment: Assessment must confirm the ability to: - use appropriate conventions and apply linguistic knowledge to: - use a wide range of grammatical terms to discuss features of spoken and written language use - use a wide range of available resources to locate information about language relevant to own language use in the study context - apply grammatical knowledge to edit and refine own language use in a range of written and spoken study tasks - maintain own records of relevant grammatical information for future study purposes

VU21533 Perform energy sector installations of extra low voltage (ELV) single path circuits

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit provides the skills and knowledge required to wire extra-low voltage (ELV) single path circuits and terminate associated accessories in a simulated workplace environment. This includes ELV powered devices, security, controls, integrated systems and audio/visual systems. It encompasses safe working practices and following work processes that satisfy electrical principles for safety and functionality. Practice in this unit is subject to regulations directly related to occupational health and safety and electrical regulatory requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - installing cables in single path ELV circuits in a simulated workplace training environment; - terminating cables and accessories to manufacturer's specifications and requirements; - applying cable support and protection methods; - following safe work practices; - cleaning the worksite, and; - applying sustainability principles and practices. Students will also be expected to demonstrate the following knowledge: - relevant workplace health and safety regulations risk control measures; - safe working practices for wiring/cabling and terminating accessories for single path extra-low voltage circuits; - cable protection and support methods and accessories; - types of cables used in the electrotechnology industry and their application; - basic cable and conductor terminations; - technical standards, regulations and codes related to extra-low voltage work; - sustainability principles and practices, and; - environmental and heritage regulations affecting electrotechnology work.

VU21544 Install a sustainable extra low voltage energy power system

Locations: Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to plan to install, install and commission a sustainable energy power system. This unit of competency applies in domestic, industrial or commercial environments, where appropriate sustainable energy systems are employed.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use tools and equipment correctly; - follow enterprise relevant OH&S procedures; - read and interpret equipment manuals; - complete workplace documentation relating to the work; - make decisions within a limited range of options; - use diagnostic tools to problem solve; - plan a process for installing the sustainable energy power source; - use assembling and dismantling techniques; - test for functionality of the sustainable energy power source; - troubleshoot installation, and; - work as a member of a team. Students will also be expected to demonstrate the following knowledge: - causes/consequences of the greenhouse effect; - energy usage in Australia including types/methods, contribution to the greenhouse effect & greenhouse gases other than CO₂; - opportunities for reducing greenhouse emissions including domestic/commercial/industrial strategies & trade related technologies and methods; - overview of sustainable energy technologies including photovoltaic, solar, micro-hydro and wind energy conversion; - economic benefits of sustainable energy initiatives; - major categories of energy storage methods; - basic characteristics of energy storage methods; - operating low voltage DC appliances including low voltage tapping from a battery of cells, separate cells, sealed nickel-cadmium cells, low voltage adapter and DC to DC converters; - power inverters including types, output waveforms and efficiency; - controllers including blocking diode, low voltage disconnect, charge regulators, over-voltage shunt and connections; - photovoltaic terminology, units/conversions and symbols; - photovoltaic modules including types, efficiency and applications; - photovoltaic fundamentals including IV curves, irradiance/temperature effects, blocking/bypass diodes, wiring diagrams/configurations and specifications; - solar radiation fundamentals including

terminology, units/conversions, symbols, sun position, sun path diagrams, solar radiation on fixed/tracking collectors and specifications; - micro-hydro fundamentals including terminology, units/conversions, symbols, flow rates, heads and assessment, turbines, operating characteristic, control requirements and specifications, and; - wind energy conversion fundamentals including terminology, units/conversions, symbols, wind patterns, local terrain, wind speed, direction, turbulence/wind power, maps, data sheets/measuring instruments, characteristics, applications and specifications.

VU21587 Undertake site survey and analysis to inform design process

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to undertake a site survey and a site analysis for residential and commercial building projects. It includes the use of basic surveying equipment, recording and interpretation of data, and evaluation of, and compliance with relevant legislation.

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - comply with organisational policies and procedures, including OHS - undertake a basic site survey and a detailed site analysis for residential building and/or commercial building projects, in compliance with the applicable local government authority and relevant legislation - produce measured drawings and other documentation detailing site information and building elements as determined by the project brief, organisational procedures and in compliance with the applicable local government authority.

VU21588 Apply structural and construction technology to the design of residential buildings

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to apply structural and construction technology to the design of residential buildings. It requires compliance with state legislation and the provisions for Building Code of Australia (BCA) Classes 1 and 10 and relevant Australian Standards as they apply to the structural and construction components of a residential building.

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - Comply with legislative requirements applicable to the design of residential buildings. - Apply the principles of structural and construction to the design of residential buildings in compliance with the applicable local government authority, relevant legislation and the BCA. - Develop specifications for structural components of a residential building and the requirements for safe and healthy use of the building.

VU21589 Apply structural and construction technology to the design of commercial buildings

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies the outcomes required to apply structural and construction technology to the design of commercial buildings. It requires compliance with state legislation and the provisions for Building Code of Australia (BCA) Classes 2 to 9 and relevant Australian Standards as they apply to the structural and construction components of a commercial building.

866

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - Comply with legislative requirements applicable to the design of commercial buildings. - Apply the principles of structural and construction to the design of commercial buildings in compliance with the applicable local government authority, relevant legislation and the BCA. - Develop specifications for structural components of a commercial building.

VU21590 Comply with relevant legislation in the design of residential buildings

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies the outcomes required to access, interpret and apply relevant legislation to the design of residential buildings. It includes the ability to apply a range of design solutions for residential buildings (Building Code of Australia (BCA) Classes 1 and 10), in compliance with the BCA and make recommendations for alternative solutions as required. It requires thorough knowledge of the purpose and content of the BCA.

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - Apply organisational policies and procedures, including quality assurance requirements where applicable. - Interpret the building hierarchy of legislation and the associated compliance requirements. - Access, interpret and apply codes and standards to the design of a specific residential building project. - Recommend alternative solutions to a design or construction problem in accordance with relevant legislation.

VU21591 Comply with relevant legislation in the design of commercial buildings

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies the outcomes required to access, interpret and apply relevant legislation to the design of commercial buildings. It includes the ability to apply a range of design solutions to the construction or design of a commercial building (Building Code of Australia (BCA) Classes 2 to 9), in compliance with the BCA and make recommendations for alternative solutions as required. It requires thorough knowledge of the purpose and content of the BCA.

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - Apply organisational policies and procedures, including OHS and quality assurance requirements where applicable. - Interpret the building hierarchy of legislation and the associated compliance requirements. - Access, interpret and apply relevant legislation to the design of a specific commercial building project. - Recommend alternative solutions to a design or construction problem in accordance with relevant legislation.

VU21592 Design safe buildings

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies the outcomes required to apply safe design principles to control occupational health and safety (OHS) risk during the life of a building. It includes the ability to identify and comply with legal responsibilities

and obligations and evaluate OHS hazards associated with the design, construction and use of a building during its life cycle. Applying safe design principles requires consultation with stakeholders and specialist advisors and the ability to make recommendations for alternative design solutions and incorporate risk controls into the building design and end use.

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - Comply with legal responsibilities and obligations and organisational policies and procedures, including OHS. - Implement risk management processes for the identification of OHS hazards and selection of suitable controls. - Consult with relevant stakeholders to determine safety requirements in the life cycle stages of a building. - Design a safe building which complies with current legislative requirements for the design, construction and use of a building.

VU21593 Design sustainable buildings

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to apply the principles of sustainability to building design. It includes the application of sustainable practices to minimise negative impacts of the construction process and land use on the environment, incorporate passive design, sustainable water use and energy efficiency into a building design and select suitable materials for the construction of the building. It requires compliance with relevant legislation, Australian Standards and the Building Code of Australia (BCA).

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - Apply the principles of sustainable building design in accordance with current legislation and government policies. - Evaluate and recommend sustainable materials suitable for the construction of a specific building design in accordance with client brief and specifications. - Research, evaluate and report on data and findings, make recommendations and develop strategies for the design of sustainable buildings for at least one building development project that complies with the applicable local government authority, relevant legislation and the BCA.

VU21594 Integrate services layout into design documentation

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to integrate the layout of services and connections into building design documentation for residential (Building Code of Australia (BCA) Classes 1 and 10) and commercial (BCA Classes 2 to 9) buildings. It includes the knowledge and application of current sustainable and energy efficient practices and appliances and involves consultation with other professionals to obtain agreement on service layout details and specifications. It requires compliance with relevant legislation, Australian Standards and the BCA.

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - Develop documentation which integrates services layout into the design of a residential or commercial building. - Consult with other professionals to negotiate details of services layout. - Interpret and comply with relevant legislation.

VU21596 Produce preliminary and working drawings for residential buildings

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies outcomes required to produce two and three-dimensional drawings in accordance with standard industry practice and to a level suitable for building permit approval applications. It includes the ability to read and interpret plans and specifications and to produce preliminary and working drawings for residential buildings (Building Code of Australia (BCA) Classes 1 and 10).

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - Comply with occupational health and safety (OHS) regulations applicable to workplace operations. - Apply organisational policies and procedures, including quality assurance requirements where applicable. - Produce two and three-dimensional drawings for residential building projects. - Complete working drawings to industry best practice and as determined by the project brief.

VU21597 Produce working drawings for commercial buildings

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies outcomes required to produce two and three-dimensional drawings in accordance with standard industry practice and to a level suitable for building permit approval applications. It includes the ability to read and interpret plans and specifications and to produce working drawings for commercial buildings (Building Code of Australia Classes 2 to 9).

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - Comply with OHS regulations applicable to workplace operations. - Apply organisational policies and procedures, including quality assurance requirements where applicable. - Produce two and three-dimensional drawings for commercial buildings (BCA Classes 2 to 9). - Complete working drawings to industry best practice and as determined by the project brief.

VU21598 Select construction materials for building projects

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies the outcomes required to evaluate and select a range of suitable construction materials for building projects, taking into account a range of criteria including physical attributes, cost and sustainability. It includes the ability to analyse properties and characteristics to determine their suitability for application in the construction of a building. It requires selection of materials that comply with relevant legislation, Australian Standards and the Building Code of Australia (BCA).

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to: - Identify, analyse and evaluate the characteristics of construction materials for their application and sustainability. - Comply with the requirements of the relevant legislation with regard to the thermal acoustic and fire resistant qualities of construction materials. - Make recommendations for suitable materials to satisfy construction requirements, aesthetics, cost effectiveness, client brief and the requirements of the relevant legislation.

VU21599 Provide design solutions for residential and commercial buildings

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies the outcomes required to apply the theories and principles of design to the design of buildings. It can be applied to both residential buildings (Building Code of Australia (BCA) Classes 1 and 10) and commercial buildings (BCA Classes 2 to 9). It requires the ability to research, analyse and evaluate information on the history and elements of architecture and their influence on current practice. It includes developing a design response, which meets the requirements of a project brief, and communicating a final design solution to relevant stakeholders.

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- Research and apply knowledge of global architecture, architects and designers and their influences on modern design theories.
- Apply architectural concepts to a built form.
- Develop a design solution which meets the requirements of the project brief.
- Communicate design solutions to stakeholders using a range of media.

VU21600 Integrate digital applications into architectural workflows

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies the outcomes required to use a range of digital applications in architectural workflows. It includes the ability to determine the appropriate digital applications required for specific project outputs and the application of architectural standards and conventions to produce and manage the project. Work is likely to be undertaken with limited supervision and in consultation with team members and external consultants.

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- Apply organisational policies and procedures, including OHS and quality assurance requirements, where applicable.
- Comply with copyright and trade practices legislation and organisational privacy and security policies and procedures.
- Produce digitally generated information for an architectural project.
- Collaborate and consult with team members and outside agencies.
- Meet the criteria of the project brief to the required standard and within allocated timelines.

VU21601 Present architectural designs

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies the outcomes required to present a design concept for an architectural project. The design could be for a residential (Building Code of Australia (BCA) Classes 1 and 10) or commercial (BCA Classes 2 to 9) building. It includes reviewing the project brief, developing presentation materials and presenting the final design concept to relevant stakeholders. Materials for presentation could include preliminary drawings, computer generated drawings/images, or models. It requires the ability to effectively clarify or communicate ideas and the design concept to stakeholders.

Required Reading: Nil text required, however, the Lecturer will provide reading and learning materials as required.

Assessment: A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- Liaise with client and external stakeholders in the

development of a design presentation. - Prepare and facilitate a design presentation to industry standard. - Communicate design ideas and solutions with sketches and images.

VU21602 Manage architectural project administration

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies the outcomes required to manage architectural administration and the development of project documentation. It requires the knowledge of the legislation pertaining to project administration and the ability to comply with the organisational requirements for quality assurance. Work is expected to be undertaken in consultation with both internal personnel and external consultants and with limited supervision.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills:

- enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel, where required;
- read and interpret complex documents including: relevant legislation, codes and standards, National Construction Code, planning permit application requirements and other relevant documentation;
- use language and concepts appropriate to industry conventions;
- prepare project documentation;
- correspond with external personnel;
- numeracy skills to calculate basic cost indicators for a building project;
- determine appropriate contract to suit an architectural project;
- determine the limitations of standard specifications and justify their selection;
- prepare documentation in readiness for approval stages;
- manage project documentation processes;
- coordinate work with external personnel and agencies, as required;
- identify impacts of quality assurance standards and procedures;
- identify legal principles of copyright;
- self management skills to meet timelines and project schedule;
- teamwork skills when working with internal and external personnel;
- technological skills to use computers and other office equipment, and;
- work safely in a design drafting working environment and on a site, according to legislation and workplace procedures and policies.

Students will also be expected to demonstrate the following knowledge:

- common terminology, definitions, methods, process and procedures used in relation to a design drafting office;
- occupational health and safety (OHS) requirements associated with a design drafting office;
- basic understanding of legislation and how it relates to architectural services and the building industry;
- professional associations and regulatory bodies;
- legal liabilities of parties involved in the execution of a building project;
- basic cost indicators for a building project;
- standard architectural/building contracts and their essential components;
- contract documentation process including order of precedence and relationships between the documents;
- tender process;
- legal liabilities of each party within the terms of the contract conditions under which a contract can be deemed valid/invalid;
- agencies and the means available in the process of contract enforcement;
- means for the resolution of disputes;
- the principles of project management;
- use and implication of specification notes on drawings and the difference between a specification;
- file transmittal, revision and management of project file, and;
- project management software, where applicable.

VU21603 Undertake complex architectural projects

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit specifies the outcomes required to undertake complex architectural projects for residential (Building Code of Australia (BCA) Classes 1 and 10) and/or commercial (BCA Classes 2 to 9) buildings. It includes consultation with a client to prepare a project brief and the development and presentation of a design concept that meets the requirements of the brief and relevant legislative requirements and codes and standards. It requires the preparation of all necessary documentation and the development of a critical path management diagram. It requires thorough knowledge of the BCA, relevant Australian Standards and local authority regulatory requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel where required; - read and interpret: relevant legislation, Australian Standards, relevant sections of the National Construction Code; - use language, terminology and concepts appropriate to industry conventions; - communicate design concept to client and other stakeholders; - sketch preliminary design solutions and presentation drawings using a variety of media and different techniques, as required; - prepare documentation to an accepted industry standard; - ascertain local regulatory requirements; - identify key stages of design and construction process; - coordinate work from consultants into architectural documentation; - compare tender processes; - develop design solutions that meet client requirements; - negotiate amendments to the client brief; - coordinate the team members in the development of documentation; - liaise with client and stakeholders throughout the project; - complete work within accepted time frames; - produce presentation materials and contract documentation using a variety of computer software; - operate presentation equipment; - coordinate team members and their work output; - coordinate work from other consultants, and; - working safely in a design drafting working environment and on a building site, according to legislation and workplace procedures and policies. Students will also be expected to demonstrate the following knowledge: - relevant legislation; - workplace procedures and documentation requirements for building project administration, and; - digital software used in the production of presentation materials and documentation.

VU21604 Conduct a bushfire attack level (BAL) assessment

Locations: Industry, Sunshine.

Prerequisites: Nil

Description: This unit of competency specifies the outcomes required to conduct Bushfire Attack Level (BAL) assessments. This includes relevant theoretical knowledge of fire, understanding of the regulatory framework, assessing a location and education of and consultation with clients about the benefits of achieving the required fire resistance.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for undertaking a BAL assessment; - identify problems and demonstrate appropriate response procedures; - use appropriate communication and interpersonal techniques with colleagues and others, and; - accurately record and report workplace information, and maintain documentation. Students will also be expected to demonstrate the following knowledge: - applicable Commonwealth, state or territory licensing, legislative, regulatory or certification requirements and codes of practice relevant to the full range of processes for evaluating fire potential and prevention; - organisational and site standards, requirements, policies and procedures for undertaking a BAL assessment; - principles of cultural diversity and access and equity; - environmental protection requirements; - established communication channels and protocols; - problem identification and resolution; - environmental risks and hazard prevention; - procedures for recording, reporting and maintaining workplace records and information, and; - appropriate mathematical procedures for estimation and measurement.

VU21605 Apply bushfire attack level (bal) assessment to the design and construction process

Locations: Industry, Sunshine.

Prerequisites: VU21604 - Conduct a bushfire attack level (BAL) assessment

Description: This unit of competency specifies the outcomes required to access, interpret and apply Bushfire Attack Level (BAL) assessments to the design and construction of buildings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - comply with legislation, Regulations, standards, codes of practice and established safe practices and procedures for applying a BAL assessment to the design and construction process; - identify problems and demonstrate appropriate response procedures; - use appropriate communication and interpersonal techniques with colleagues and others, and; - accurately record and report workplace information, and maintain documentation. Students will also be expected to demonstrate the following knowledge: - applicable Commonwealth, state or territory licensing, legislative, regulatory or certification requirements and codes of practice relevant to the full range of processes for evaluating fire potential and prevention; - organisational and site standards, requirements, policies and procedures for applying a BAL assessment to the design and construction process; - principles of cultural diversity and access and equity; - environmental protection requirements; - established communication channels and protocols; - problem identification and resolution; - environmental risks and hazard prevention; - procedures for recording, reporting and maintaining workplace records and information, and; - appropriate mathematical procedures for estimation and measurement.

VU21631 Investigate and apply legal process

Locations:Footscray Nicholson, City Queen.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to analyse and evaluate institutions within the Australian legal system, to investigate and classify sources of Australian Law, and, to assess concepts underlying the application of law in order to support the work of a legal office, practice or associated context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research and analytical skills to identify and debate a wide range of legal processes; - research, analytical and organisational skills to identify and evaluate sources of legal information; - research and analytical skills to determine relevance of particular legal processes to particular circumstances and contexts; - analytical and problem-solving skills to determine appropriate dispute resolution procedures, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant international, Federal, State and local government legislative and statutory requirements and provisions; - legal research methodologies to effectively source primary and secondary sources of law; - sources of Australian Law; - Australian governmental system and structure; - Australian legal system and processes, and; - dispute resolution within the Australian legal system.

VU21632 Research and evaluate legal research method

Locations:Footscray Nicholson, City Queen.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to source, correctly cite and document legal and legislative information relevant to a wide range of areas of legal interest in order to support the work of a legal office, practice or associated context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - critical thinking and analysing skills to identify research questions and the legal categories to which they belong; - research and analytical skills to identify, and source a wide range of legal information; - research, analytical and organisational skills to identify and evaluate sources of legal information and interpret that information in order to apply to a wide range of legal subjects/categories; - research and analytical skills to determine currency of

information, such as amendments and/or reprints of legislation, and; - analytical, literacy and technical writing skills to correctly cite sources of legal information and prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant international, Federal, State and local government legislative and statutory requirements and provisions, and; - legal research methodologies and techniques to effectively source secondary sources of legal information.

VU21633 Analyse and apply law of contract

Locations:Footscray Nicholson, City Queen.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to apply a detailed knowledge of contract law in order to support the work of a legal office, practice or associated context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research and analytical skills to identify and debate a wide range of contracts and contract conditions; - research, analytical and organisational skills to identify and evaluate application of principles of law of contract; - research and analytical skills to determine relevance of particular contract processes to particular circumstances and contexts; - analytical and problem-solving skills to determine appropriate application of principles of contract and to research appropriate remedies for breach of contract; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports, and; - computer software technology skills to contract electronically. Students will also be expected to demonstrate the following knowledge: - relevant international, Federal, State and local government legislative and statutory requirements and provisions pertaining to contracts; - the terms, nature and conditions of contracts, and; - legal, ethical and technological principles and processes for contracting electronically.

VU21634 Analyse and apply law of torts

Locations:Footscray Nicholson, City Queen.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to apply the Law of Torts in order to support the work of a legal office, practice or associated context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research, critical analysis and organisational skills to investigate the nature and principles of the law of torts and its application across a

wide range of relevant circumstances; - research, analytical and problem-solving skills to identify and evaluate legislation and statutory schemes related to law of torts; - analytical, communication and problem-solving skills to research and debate appropriate remedies available for a range of types of torts, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant Federal and State legislative and statutory provisions pertaining to law of torts, and; - principles, aims and circumstances of tort law.

VU21635 Define and evaluate law of evidence

Locations: Footscray Nicholson, City Queen.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to employ rules of evidence and procedure as they apply to civil and criminal trials, and to analyse and evaluate evidence available in connection with the preparation of a case for trial, in order to support the work of a legal office, practice or associated context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research to identify and source legislation and provisions relevant to the law of evidence; - analytical and organisational skills to determine types and relevance of evidence; - critical analysis skills to research and evaluate the history and development of relevant legislation and provisions, such as the Uniform Evidence Act including the Evidence Act 2008 (Vic); - research, critical analysis and organisational skills to investigate the nature and principles of the law of evidence and its application across a wide range of relevant circumstances, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant Federal and State and local government legislative and statutory provisions pertaining to law of evidence, and; - principles, aims and provisions of law of evidence.

VU21636 Determine appropriate aspects of commercial law

Locations: Footscray Nicholson, City Queen.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to appropriately apply aspects of commercial law, including partnerships, bankruptcy, business names, franchises and trusts, in order to support the work of a legal office, practice or associated context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work

with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research to identify and source legislation and provisions relevant to commercial law; - critical analysis skills to research and evaluate the impact of legal provisions on aspects of commercial law; - research, critical analysis and organisational skills to investigate the nature and principles of the types of commercial law, rights and obligations of the parties and their application across a wide range of relevant circumstances, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant Federal and State and local government legislative and statutory provisions pertaining to commercial law, and; - key features and aspects of commercial law.

VU21637 Employ property law principles and concepts

Locations: Footscray Nicholson, City Queen.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to employ property law concepts and applications, including analysis of estates and interests, mortgages, easements, and covenants, tenancies, and adverse possession, in order to support the work of a legal office, practice or associated context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research to identify and source legislation and provisions relevant to property law; - critical analysis skills to research and evaluate the history and development of relevant legislation and provisions such as Torrens title systems and Transfer of Land Act; - research, critical analysis and organisational skills to investigate the nature and principles of the property law and its application across a wide range of relevant circumstances, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant Federal and State and local government legislative and statutory provisions pertaining to property law, and; - principles, aims and circumstances property law.

VU21638 Apply conveyancing process

Locations: Footscray Nicholson, City Queen.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to employ land contract law through a comprehensive knowledge of relevant legislation and the procedures and documentation associated with conveyancing transactions for the sale and purchase of Victorian land, in order to support the work of a legal office, practice or associated context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research and analytical skills to identify and debate a range of conveyancing contexts; - research, analytical and organisational skills to identify and evaluate application of rules and provisions under the Sale of Land Act; - research and analytical skills to determine application of specific conveyancing processes and procedures to particular circumstances and contexts; - analytical and problem-solving skills to determine appropriate application of rules, processes and principles for addressing breaches of contract, sale of illegal structures, unethical auction practices and other disputes; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports, and; - technological skills to operate office equipment and legal and/or conveyancing-related software. Students will also be expected to demonstrate the following knowledge: - relevant international, Federal, State and local government legislative and statutory requirements, regulations and provisions pertaining to sale of land contracts and conveyancing; - general principles of the law of contract as relevant to sale of land transactions, and; - dispute resolution strategies and formal agencies for resolution of disputes.

VU21639 Explore and apply wills, probate and administration procedures

Locations: Footscray Nicholson, City Queen.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to apply the rules and provisions for areas of wills and deceased estates in order to provide specialised support of the work of a legal office, practice or associated context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research, analytical and organisational skills to identify and evaluate the application of rules and provisions pertaining to wills, probate and administration law; - research and analytical skills to determine and respond to the functions and effects of powers and duties of executors and trustees; - diagnostic and critical thinking skills to analyse drafting errors in a will and codicil and generate ideas for correcting and removing them; - team skills to use of conceptual drafting skills in a small group environment; - analytical and problem-solving skills to determine appropriate procedures and processes for handling objections to the validity of a will and codicil; - technical writing and organisational skills to use the correct documentation and procedures to draft wills and codicils and obtain a grant of probate, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant international, Federal, State and local government legislative and statutory requirements, regulations and provisions pertaining to family law, and; - general principles of law relating to wills.

VU21640 Analyse and apply civil procedure

Locations: Footscray Nicholson, City Queen.

Prerequisites: Nil.

872

Description: This unit describes the skills and knowledge required to employ legal principles in the area of litigation and civil procedures including the civil jurisdiction, structure, procedure and operation of the courts in Victoria, in order to support the work of a legal office, practice or associated context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research and analytical skills to determine and respond to the civil jurisdiction, structure, procedure and operation of the courts in Victoria; - research, analytical and organisational skills to identify and evaluate the application of procedural rules, practice directions, processes and operations relating to areas of litigation and civil procedures in Victoria; - analytical and problem-solving skills to determine appropriate procedures and processes for each possible and probable stage of litigation; - diagnostic and critical thinking skills to evaluate, determine and utilise non-litigious methods and avenues of dispute resolution, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant international, Federal, State and local government legislative and statutory requirements, regulations and provisions pertaining to civil procedure, and; - aspects of civil procedure.

VU21641 Analyse and evaluate concepts and principles of criminal law

Locations: Footscray Nicholson, City Queen.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to employ legal principles and aspects of criminal law, including criminal procedure, substantive aspects of criminal offences as defined in legislation and at common law, and, to evaluate the impact of law reform issues, in order to support the work of a legal office or associated context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research, analytical and critical thinking skills to identify, evaluate and debate a wide range of aspects and elements of criminal law; - research and analytical skills to determine relevance of particular sections of the Crime Act to particular offences, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant international, Federal, State and local government legislative and statutory requirements, regulations and provisions pertaining to criminal law; - general concepts, procedures and elements of criminal law; - the concept of crime and purposes of criminal law in society; - criminal

procedures in a criminal matter and possible penalties for a criminal offence; - key elements of criminal offences of murder and manslaughter; - assault and sexual offences; - defences to particular offences; - criminal offences of theft; - property offences, and; - strict liability offences.

VU21642 Practise in a legal environment

Locations: Footscray Nicholson, City Queen.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to support the work of a legal office, practice or associated context, by operating according to legislative protocols and organisational policies and procedures in order to: initiate client files; take instructions and provide required legislative information; consult with internal/external specialist/s, and prepare, develop and manage legal documents to ensure that all necessary information is obtained and that documentation accurately reflects the clients' needs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpersonal communication skills to work with a wide range of internal and external professionals, barristers and solicitors, legal executive officers, and relevant specialist personnel and clients, under direction, independently or within a team; - written and interpersonal communications skills to build and manage relationships with clients and their representatives; - identifying and evaluating business opportunities; - research and analysis skills in relation to working in an area of legal interest; - general financial and accounting skills to recognise legislative and management issues in relation to trust accounts; - information and budget management skills to manage workflow progress and issues; - technological skills to operate office equipment and legal-related software; - business, analytical and presentation skills to identify, communicate and evaluate business opportunities and develop promotional strategies; - professional skills to adhere to legal industry code of conduct related to ethics, integrity, professionalism, confidentiality and risk management; - team leadership skills to motivate team members; - negotiation and organisational skills to negotiate and manage settlements, and; - analytical, literacy, organisational and technical writing skills to interpret information, prepare documents and reports, keep and maintain hard- and softcopy records and files. Students will also be expected to demonstrate the following knowledge: - organisational vision/mission and culture; - knowledge in the areas of Law of Torts, Contract Law, Evidence and Legal Processes and/or other area(s) of legal interest, and legal ethics; - knowledge of the theory and practice related to legal ethics and area/s of legal interest; - relevant Federal and State and local government legislative and statutory provisions; - interpersonal communication and customer service strategies that allow for customers' needs to be assessed and responded to in legal situations; - relevant organisational technology to produce legal documents; - organisational file management systems including file storage and retrieval; - procedures and timelines in relation to appropriate legal actions; - understanding of roles, responsibilities and powers of senior law clerks; - products and services offered by the organisation, and fees attached; - development and application of the professional code of conduct across the legal industry; - legal and administrative requirements for managing a business, including WorkCover,

superannuation and group tax, and; - OH&S policies and guidelines for workers with supervisory responsibilities, relevant to the organisation.

VU21644 Examine and apply land contract law

Locations: Footscray Nicholson, City Queen.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to apply particulars of land contract law, including conveyancing duties of care; investigation of title; parties and procedures; small business transactions, and, subdivision rules, in order to support the work of a legal office, or associated context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research and analytical skills to identify and debate a wide range of land contracts and land contract conditions; - research, analytical and organisational skills to identify and evaluate the duties and responsibilities of a conveyancer in applying the principles and processes of land contract law; - analytical and problem-solving skills to determine appropriate application of principles of land contract law and to determine appropriate remedies for breach of contract; - analytical, literacy and technical writing skills to interpret information, correctly prepare and format documents, contracts and reports, and; - computer software technology skills to contract electronically. Students will also be expected to demonstrate the following knowledge: - relevant international, Federal, State and local government legislative and statutory requirements and provisions pertaining to land contracts; - the terms, conditions and procedures of land contracts; - duties of care owed by the conveyance and real estate agent; - appropriate contracts for the sale of different land interests; - investigation of the vendor's title; - Land Registry Office and local council procedures; - dealing with specific parties to contracts for the sale of land; - subdivisions and body corporate, and; - sale of small businesses.

VU21647 Research the application of administrative law

Locations: Footscray Nicholson, City Queen.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to research the major areas of administrative law including the structure of government in Australia, the legal restraints on the use of governmental power, methods of review of government decisions and access to government information in order to support the work of a legal office, government department or agency, or organization having dealings with government departments or agencies.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work

with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research and analytical skills to identify and debate a wide range of administrative law provisions and issues; - research, analytical and organisational skills to identify and evaluate sources of legal information; - research and analytical skills to determine appropriate processes and actions particular to a range of administrative law circumstances and contexts; - analytical and problem-solving skills to determine appropriate remedies and avenues of review, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - Federal, State and local government legislative and statutory requirements and provisions pertaining to administrative law; - Australian governmental system and structure; - historical development of the organs of government in Australia; - constitutional and legal framework; - subordinate legislation and delegation of legislative power; - judicial and merits review of administrative decisions; - Ombudsman functions and duties; - access to reasons for administrative decisions, and; - access to Freedom of Information.

VU21649 Define and research the application of corporations law

Locations:Footscray Nicholson, City Queen.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to apply areas of company and associations law in order to support relevant operations of a legal office, financial institution, accounting office, government department or authority or corporate section.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research and analytical skills to investigate and discuss the development of company law; - research and analytical skills to identify and discuss a wide range of corporation law issues; - analytical and critical thinking skills to determine appropriate application of regulations and provisions to a wide range of companies, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant international, Federal, State and local government legislative and statutory requirements and provisions pertaining to corporation law; - nature and regulations of a range of corporation law issues; - types of companies and development of company law; - companies and alternative business structures; - regulation of companies; - company promoters and pre-registration contracts; - company constitution/replaceable rules; - corporate governance; - a company's dealings with outsiders; - registration of a company; - corporate liability and the corporate veil; - membership- rights, obligations and remedies; - capital raising by a company; - nature and regulation of company management; - regulation of company takeovers; - external administration of a company; - liquidation and winding up of a company, and; - legal nature of incorporated associations.

VU21651 Evaluate the concepts and principles of family law

Locations:Footscray Nicholson, City Queen.

874

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to assist in the application of family law concepts and provisions including those relating to de facto relationships, enforcement of family court orders and other relevant matters, in order to support the work of a legal office, practice or associated context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with clients, colleagues, management, relevant specialist personnel under direction, independently or within a team; - research, analytical and organisational skills to identify and evaluate the application of rules and provisions under the Family Law Act and other relevant legislation; - research and analytical skills to determine relevance of particular aspects of family law to wide range of particular circumstances and contexts, including child welfare; - analytical and problem-solving skills and ethics to determine appropriate procedures and processes for a range of family law matters, such as: divorce; property distribution and maintenance; accessing help and support for relationships under stress, and appeals against orders, and; - analytical, literacy and technical writing skills to interpret information, prepare documents and reports. Students will also be expected to demonstrate the following knowledge: - relevant international, Federal, State and local government legislative and statutory requirements, regulations and provisions pertaining to family law; - general principles of family law; - legal definition of marriage; - Family Law Act and Family Court; - dissolving of a marriage; - custody and guardianship; - spousal maintenance; - child support; - property distribution; - Family Law Act and Family Violence Protection Act in relation to orders; - adoption act; - organisations which help parties in a relationship under stress, and; - appeals against judges' decisions.

VU21652 Apply knowledge of the health system for clinical coding purposes

Locations:Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to work effectively in the clinical coding field by applying knowledge of the health system to inform coding practices.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analytical skills to identify the impact of stakeholder roles and responsibilities, funding models and patient journeys on the work of clinical coding. Students will also be expected to demonstrate the following knowledge: - the purposes of Activity Based Funding (ABF) and the current Commonwealth and State forms of ABF to enable analysis of the relationship between clinical coding work and hospital funding, and; - the different pathways for management of patients through non-admitted, emergency, admitted, sub-acute and

post discharge services across the various clinical disciplines to enable analysis of their impact on clinical coding work.

VU21653 Prepare for clinical coding

Locations:Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to identify the roles and responsibilities of a clinical coder, current clinical coding classifications and the ways in which coding data is used.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determine the impact of national and jurisdictional policies on clinical coding work; - understand the impact of incorrect, incomplete and outdated coding on the ways in which clinical coding is primarily used; - literacy skills to read and comprehend current International Statistical Classification of Diseases and Related Health Problems, Australian Classifications of Health Interventions and Australian Coding Standards, and; - digital literacy and technology skills to access and identify the legislative and regulatory framework. Students will also be expected to demonstrate the following knowledge: - privacy and confidentiality legislation to enable analysis of its impact on clinical coding and the use of patient information.

VU21654 Analyse clinical documentation

Locations:Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to correctly interpret information in clinical documentation to support accurate clinical coding. This unit applies to those with responsibility for interpreting and extracting patient clinical information for the purposes of clinical coding. Work may be performed as an individual or as part of team under limited supervision.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analytical skills to determine the relationship between clinical documentation and the accurate coding of medical information, and; - literacy skills to read and synthesise information from clinical documentation to identify the interrelationships that impact on accurate clinical coding. Students will also be expected to demonstrate the following knowledge: - organisational protocols for: the storage, access and use of medical records and patient data; clarifying issues affecting clarity and accuracy of clinical documentation; - structure of normal functioning body systems to enable accurate identification of clinical information for coding; - concepts underpinning human anatomy and physiology to enable accurate identification of clinical information for coding; - common and medical anatomical terminology to enable interpretation of clinical

documentation and clear communication with clinical health professionals, and; - methods of referencing information in current medical dictionary used for clinical coding.

VU21655 Abstract clinical information to support clinical coding

Locations:Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to abstract clinical information from medical records to identify and extract clinical data required for clinical coding. This unit applies to those with responsibility for the coding of health service clinical data. Work may be performed as an individual or as part of team under limited supervision.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - establish that the clinical information sourced relates to the correct episode of care being assessed; - identify ambiguous, absent or incomplete documentation and/or data; - identify principal diagnosis, additional diagnoses and interventions; - identify sequencing of diagnoses and interventions; - identify and interpret information presented in a range of formats in clinical documentation; - navigate and identify accurate information from additional resources such as medical dictionary and Monthly Index of Medical Specialties (MIMS); - writing skills to compose clear and concise paper based and/or electronic communications to clinical health professionals or other coding staff to clarify coding issues; - oral communication skills to make and respond to verbal inquiries and negotiate conversations with peers and clinical health professionals; - self management skills to access and organise relevant references, and; - digital technology skills to store and retrieve information in digital format. Students will also be expected to demonstrate the following knowledge: - enable appropriate written and oral communications with clinical health professionals to clarify coding queries; - refer unresolved issues; - correct interpretation of clinical documentation; - clear and accurate communication with clinical health professionals to clarify coding queries, including the meaning of Latin roots, suffixes and prefixes; - structure of normal functioning body systems to enable accurate interpretation of clinical information for coding; - concepts underpinning human anatomy and physiology to enable accurate interpretation of clinical information for coding; - levels of structural organisation of body systems; - human life processes, and; - homeostasis and the relationship between homeostatic imbalance and disease.

VU21656 Assign codes to an episode of care

Locations:Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to assign clinical classification codes to an admitted episode of care using patient and clinical data from medical records of moderately complex episodes of care. This unit applies to those with responsibility for interpreting and extracting patient clinical information for the purposes of clinical coding. Work may be performed as an individual or as part of team under limited supervision.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - digital technology skills to access and use relevant computer programs; - digital literacy skills to navigate computer based programs to enable information to be entered accurately; - numeracy skills to apply and assess requirements for speed and accuracy; - self management skills to: access and organise references; maintain and update own knowledge and skills to ensure that amendments are addressed as required; make amendments to clinical coding activities according to organisational requirements, and; - analytical skills to determine appropriate codes relevant to the episode of care. Students will also be expected to demonstrate the following knowledge: - organisational procedures and protocols for: accessing medical records and maintaining the security of patient data; identifying timeframes and accuracy rates for coding admitted episodes; - relevant classification standards and conventions to enable accurate codes to be assigned, and; - guidelines in current condition onset flags and jurisdictional additions to enable the correct assignment of condition onset flags to codes.

VU21657 Participate in clinical coding audits

Locations: Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to participate actively in internal and external audits of clinical coding to evaluate, validate and correct own work and contribute to audit review processes. This unit applies to those with responsibility for interpreting and extracting patient clinical information for the purposes of clinical coding. Work may be performed as an individual or as part of team under limited supervision.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analytical skills to: evaluate the appropriateness of the assigned AR-DRG; recognise and seek clarification of audit issues; - communication skills to: participate in formal and informal meetings; provide feedback to managers/supervisors on issues such as the completeness of clinical documentation; numeracy skills to quantify the impact of classification errors including the calculation of % error rate; - self management skills to: perform work according to organisational procedures and protocols; participate actively and responsively in internal and external audits; act on audit results and feedback; digital technology skills to access and use relevant computer programs, and; - digital literacy skills to navigate computer based programs. Students will also be expected to demonstrate the following knowledge: - factors that impact on classification allocation including the impact of specific diagnosis and/or intervention codes to enable participation in audits; - purposes of internal and external audits to enable appropriate participation; - organisational procedures and protocols for: accessing, using, securing and releasing data; resolving coding issues, and; communicating with colleagues and clinicians.

VU21663 Develop personal effectiveness

Locations: Footscray Nicholson, Werribee, City King St, Sunshine, Geelong Learning Links.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop strategies that enhance the interpersonal and communication skills and self-confidence that support personal effectiveness for a range of purposes. It focuses on helping participants build their self-esteem and confidence, develop group cohesiveness and identify personal goals.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - contribute and clarify ideas within a group; - seek and provide feedback and use verbal and non verbal communication techniques appropriate to group interaction; - discuss personal goals; - literacy skills to access and use resources and information related to personal goals; - improve personal effectiveness; - identify and address potential barriers; - self management skills to monitor and review goals; - co-operate with others as part of a group, and; - contribute to discussions. Students will also be expected to demonstrate the following knowledge: - the relationship between different aspects of personal effectiveness and constructive life/work outcomes, and; - the role of personal goals in improving personal effectiveness.

VU21664 Prepare for employment

Locations: Footscray Park, Footscray Nicholson, St Abans, Geelong Learning Links.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to prepare for employment. It focuses on developing knowledge of Australian workplaces, their work practices and requirements and potential employment opportunities to assist participants in making decisions about possible career paths.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - seek information from various sources about employment opportunities; - work with support persons to identify and prepare for employment opportunities; - access, interpret and evaluate employment information about different industries and workplaces; - write a personal action plan; - digital literacy skills to access and navigate digital information sources to research workplaces and employment opportunities; - numeracy skills to identify basic industrial conditions such as rates of pay, hours of work and leave entitlements, and; - problem solving and self management skills to identify and address employment related self development needs. Students will also be expected to demonstrate the following knowledge: - sources of information to locate information about a range of industries and workplace operations; - basic workplace

policies and procedures to identify operating requirements, and; - resources to identify employment opportunities.

VU21665 Develop an action plan for career planning

Locations:Footscray Nicholson, Werribee, City King St, Sunshine, Geelong Learning Links.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to undertake basic career planning activities. It focuses on identifying pathways to employment or further education and training through the preparation of an individual action plan.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - seek and respond to feedback on action plan; - participate in interactions to determine and assess skills and clarify information collected; - literacy skills to access, gather and interpret employment and training information and organize and document information in an action plan; - numeracy skills to identify appropriate time frames for completion of activities in action plan; - problem solving skills to identify and assess skills, match them to potential jobs and develop a personal action plan towards an employment pathway, and; - self management skills to seek feedback and monitor and adjust action plan. Students will also be expected to demonstrate the following knowledge: - purpose of a personal action plan in identifying career pathways; - sources of information about jobs and education and training programs, and; - difference between a personal action plan and a portfolio of skills.

VU21666 Participate in job seeking activities

Locations:Footscray Nicholson, Werribee, City King St, Sunshine, Geelong Learning Links.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required by participants to research, evaluate and apply for suitable employment. It focuses on participating in the job seeking process and evaluating the outcomes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read, interpret and evaluate information from a range of employment sources; - write a job application using conventional language and spelling; - make inquiries concisely, clearly and at the appropriate time; - make timely and appropriate telephone contact using clear and concise language; - participate in a job interview using appropriate communication techniques to answer questions, clarify information and seek information; - numeracy skills to identify date, time, location of job interviews and to meet application requirements such as closing date for application and length of resumé; - digital literacy skills to access information about job opportunities and to prepare an

electronic resumé and job application; - select and apply personal presentation style appropriate to the position; - evaluate information on job opportunities, select relevant information to match strengths and organisational needs and match own skills to selection criteria; - follow up work information through a variety of means; - access and organise documentation required to support a job application; - seek and respond to feedback on job application, and; - evaluate own performance in order to make improvements. Students will also be expected to demonstrate the following knowledge: - key steps in the job seeking process to enable effective participation in the process; - language and conventions of writing job applications to enable these to be developed effectively; - different approaches in obtaining information about jobs to enable understanding of suitable modes of contact, and; - strategies for different types of interviews to enable effective preparation.

VU21771 Develop an individual vocational plan with support

Locations:Footscray Park, Footscray Nicholson, St Abans.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop an individualised plan to identify vocational goals and develop and implement a vocational plan.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - respond to simple questions; - ask questions to clarify vocational goals; - contribute to a discussion relevant to own vocational goals and needs; - identify skills gained formally and informally; - identify how existing skills could transfer to different situations; - identify own vocational goals and develop a personal action plan towards employment; - language and literacy skills to access and gather information about the course and document information in an action plan; - self management skills to seek feedback and monitor and adjust action plan and to identify personal needs to participate in the course; - planning and organising skills to develop a and regularly review a vocational plan with a support person, and; - team work skills to work with others to achieve goals. Students will also be expected to demonstrate the following knowledge: - features of a simple action plan such as actions, responsibilities and timeframes.

VU21772 Develop personal management skills for work

Locations:Footscray Park, Footscray Nicholson, St Abans.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to identify, develop and apply personal management skills to be able to prepare for participation in work settings and in the broader community.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and discuss strategies to increase personal independence and self confidence; - communicate with support

workers and seek feedback on own skills; - increase independence and self confidence; - develop good personal health routines; - make decisions; - self management skills to seek assistance when required, and; - planning and organisations skills to manage daily routines. Students will also be expected to demonstrate the following knowledge: - sources of information and assistance for self development, and; - the link between personal management skills and preparation for work.

VU21773 Participate in vocational activities

Locations: Footscray Park, Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to prepare for and participate in vocational tasks to develop vocational skills related to employment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with support person; - confirm and follow instructions; - report problems; - areas of vocational interest relevant to own interests, abilities and needs; - barriers and possible solutions to participate in selected vocational activities; - future actions required to improve employment prospects; - literacy skills to gather and interpret information on relevant vocational areas of interest and activities, and; - self management skills to participate in vocational activities according to workplace requirements. Students will also be expected to demonstrate the following knowledge: - workplace procedures required to safely participate in vocational activities.

VU21774 Participate in practical placement with support

Locations: Footscray Park, Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to select, negotiate and participate in a practical placement in a workplace or community setting. Learners may work independently where appropriate or as part of a team or under close supervision as required.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with a support person to plan, organise and review a practical placement; - negotiate workplace induction and placement; - meet with workplace personnel and clarify information about work activities and responsibilities; - complete required documentation; - read and understand workplace documents/signs/procedures; - identify commonly used workplace terms; - self management skills to evaluate own performance and identify other personal needs, and; - teamwork skills to cooperate with others. Students will also be expected to demonstrate the following knowledge: - work environments and expectations, and; - requirements of a typical workplace.

VU21775 Develop interpersonal communication skills for the workplace

Locations: Footscray Park, Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to interact and communicate with others in employment settings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - problem solving skills to identify and select appropriate communication strategies for different audiences and different situations; - language and literacy skills to participate in conversations and clarify communication requirements, and; - self management skills to identify and seek out sources of support for own communication needs. Students will also be expected to demonstrate the following knowledge: - methods for giving and receiving verbal and non verbal messages; - elements of communication, such as social distance, body language, eye contact and voice monitoring, and; - strategies to interact with others such as acknowledgements and turn taking.

VU21776 Develop and document a learning plan with support

Locations: Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop and document a learning plan and to identify and monitor personal and learning goals with support.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to participate in planning process to identify goals and participate in interactions to determine sources of support; - problem solving skills to identify own goals and strategies to achieve them; - self management skills to seek feedback and monitor and adjust learning plan; - planning and organisation skills to meet with a support person to develop an Individual Learning Plan and review regularly, and; - teamwork skills to work with others to develop and review Individual Learning Plan. Students will also be expected to demonstrate the following knowledge: - purpose of an Individual Learning Plan, and; - sources of information for disability support services.

VU21777 Enhance self development

Locations: Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop strategies to enhance own self development to participate effectively in the community.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to work with a support person and to access information and advice; - self management skills to develop personal goals for independent living and seek support to achieve these; - problem solving skills to make decisions about areas for own self development, identify potential barriers, seek support and apply strategies to maintain personal safety and resolve conflicts within relationships, and; - interpersonal skills to participate responsibly in different relationships. Students will also be expected to demonstrate the following knowledge: - features of socially responsible and protective behaviours to support respectful relationships; - sources of information and support for personal needs; - types of accommodation and their features, and; - importance of personal safety within relationships.

VU21778 Participate in travel activities

Locations: Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to participate in independent travel activities and access the most appropriate modes of travel.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to interpret travel information, ask questions, read timetables, destination names and maps and to listen for specific travel information; - problem solving skills to select best travel options and implement strategies to resolve problems that may arise and apply personal safety strategies when undertaking travel; - self management skills to allow sufficient time to undertake planned travel and to monitor and adjust a plan as appropriate; - planning and organisation skills to plan and undertake travel; - recognise money, and calculate fares, and; - recognise time, and calculate time taken to travel. Students will also be expected to demonstrate the following knowledge: - advantages and disadvantages of different forms of transport to select most appropriate option; - purpose of a travel plan, and; - personal safety strategies to travel safely.

VU21779 Investigate future options for further training, work or community activities

Locations: Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to explore suitable options for future involvement in further training, work or community activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to participate in planning process to investigate options, contribute to a discussion relevant to own needs and participate in interactions to determine suitability of options; - problem solving skills to identify potential options and select most suitable; - self management skills to monitor and adjust action plan, and; - planning and organisation skills to meet with a support person to develop an action plan for the selected option. Students will also be expected to demonstrate the following knowledge: - sources of information to access information about options, and; - purpose of an action plan to assist investigation of options.

VU21780 Participate in the community

Locations: Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to participate effectively in the local community by accessing information about a range of services and facilities to meet own needs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to access and interpret information about: services and facilities; rights and responsibilities as a community member; consumer rights, and; - problem solving skills to identify and select services and facilities to meet identified needs. Students will also be expected to demonstrate the following knowledge: - benefits in participating in the local community; - sources of information about rights and responsibilities of community members; - sources of information about consumer rights, and; - personal safety strategies to safely participate in the community.

VU21781 Use technology for a range of purposes

Locations: Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to use technology for everyday purposes. It focuses on helping participants to clarify the use of technology and use it to meet individual needs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to participate in electronic communication and interactions; - literacy skills to follow instructions and procedures for the use of the technology; - problem solving skills to identify technology suitable for identified needs, and; - self management skills to use the technology responsibly. Students will also be expected to demonstrate the following knowledge: - benefits and risks in using technology; - sources of

information and support about different types of technology and applications, and; - safety considerations and responsibilities when using technology.

VU21785 Participate in recreational activities

Locations: Footscray Park, Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to plan and participate in one or more recreational options appropriate to own budget and interests.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to participate in planning process to participate in recreation activity; - literacy skills to access and use information about local recreational activities; - problem solving skills to match own interests to appropriate recreation activities; - self management skills to identify personal requirements to participate in selected recreation activities, and; - planning and organisation skills to plan and participate in activities in recreation activities. Students will also be expected to demonstrate the following knowledge: - the importance of recreation activities for well being, and; - sources of information about recreational activities.

VU21786 Participate in creative activities

Locations: Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by learners to plan and participate in one or more creative options appropriate to personal interests. It focuses on exploring, accessing and participating in creative activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to participate in planning process to participate in creative activity; - literacy skills to access and use information about local creative activities; - problem solving skills to match own interests to appropriate creative activities; - self management skills to identify personal requirements to participate in selected creative activities, and; - planning and organisation skills to plan and participate in creative activities. Students will also be expected to demonstrate the following knowledge: - the importance of creative activities for well being, and; - sources of information about creative activities.

VU21787 Apply communication for a range of purposes

Locations: Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to apply communication skills to meet every day needs in the community.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to participate in interactions with others; - problem solving skills to identify and select appropriate communication strategies for different audiences and different situations, and; - language and literacy skills to clarify communication requirements, interpret texts and complete forms. Students will also be expected to demonstrate the following knowledge: - different communication strategies to suit different purposes and audiences; - elements of communication, such as social distance, body language, eye contact and tone, and; - the importance of nonverbal communication.

VU21788 Apply numeracy for a range of purposes

Locations: Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to use functional numeracy in everyday familiar situations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to convey and follow directions; - literacy skills to use diagrams and maps; - numeracy skills to use numbers related to money, time and measurement, and; - problem solving skills to perform calculations with money, time and measurement. Students will also be expected to demonstrate the following knowledge: - numbers to undertake familiar activities related to money, time and measurement; - common representations of monetary amounts: symbols used to represent dollars and cents, and; written form of dollars and cents; - limited range of strategies to assist in using money, time and measurement such as: using size, shape and colour, and; using prior knowledge of money, time and measurement; - simple fractions such as half and quarter; - mathematical symbols for addition and subtraction to perform simple calculations, and; - language of position to convey information about directions.

VU21789 Apply basic sheet metal practices

Locations: Werribee, Sunshine.

Prerequisites: PCCOHS1001A - Work safely in the construction industry

Description: This unit specifies the competency required to cut, join and bend sheet metal products for a range of simple plumbing jobs in accordance with job, organisational and legal requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate effectively; - reading and interpreting documents, drawings and specifications; - use numbers effectively to calculate, measure and mark out; - solve problems when calculating and marking out materials, checking tools and equipment for serviceability and selecting suitable tools for the task; - plan and organise work including to obtain work instructions and sequence tasks; - use technology to operate hand tools to cut and join sheet metal, assemble component parts, bend and fold sheet metal, and maintain tools and equipment effectively and safely, and; - work cooperatively as a team member. Students will also be expected to demonstrate the following knowledge: - sheet metal practices apply to the plumbing industry; - properties and characteristics of sheet metal; - correct terminology associated with sheet metal products and practices; - workplace safety requirements and OHS legislation; - relevant legislation and regulations relating to basic sheet metal practices including Australian standards and plumbing codes, and for occupational health and safety; - basic mathematical calculations, and; - principles of sustainability.

VU21790 Cut and penetrate building materials and structures

Locations:Werribee, Sunshine.

Prerequisites:CPCCOHS1001A - Work safely in the construction industry

Description:This unit specifies the competency required identify the properties of building materials and structures to facilitate cutting and penetration for a range of simple plumbing jobs and in accordance with job, organisational and legal requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - speaking and listening, including when preparing to and cutting and penetrating building materials and structures as well as when receiving and confirming task instructions and requirements; - reading and interpreting documents, drawings and specifications; - use numbers effectively to measure and mark out; - marking out and checking for obstructions; - securing materials appropriately; - plan and organise work including to obtain work instructions and sequence tasks; - use technology to use and maintain tools and equipment effectively and safely, and; - work cooperatively as a team member. Students will also be expected to demonstrate the following knowledge: - purpose of cutting or penetrating building structures; - correct terminology associated with cutting or penetrating building structures; - workplace safety requirements and OHS legislation, and; - methods of cutting and penetrating building materials and structures in the plumbing industry.

VU21791 Fabricate simple plumbing pipe systems

Locations:Werribee, Sunshine.

Prerequisites:CPCCOHS1001A - Work safely in the construction industry

Description:This unit specifies the competency required distinguish, select and fabricate drainage, water and gas tubing and pipes for a range of simple plumbing jobs and in accordance with job, organisational and legal requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - speaking and listening, including when fabricating simple plumbing pipe systems as well as when receiving and confirming task instructions and requirements; - reading and interpreting documents, drawings and specifications; - solve problems to ensure installations are compliant with plumbing regulations; - plan and organise work including to obtain work instructions and sequence tasks, and to test plumbing tube and pipe systems for compliance; - use technology to use and maintain tools and equipment effectively and safely, and; - work cooperatively as a team member. Students will also be expected to demonstrate the following knowledge: - purpose of fabricating simple plumbing pipe systems; - correct terminology used when fabricating simple plumbing pipe systems; - workplace safety requirements and OHS legislation; - methods of fabricating simple plumbing pipe systems in the plumbing industry, and; - relevant legislation and regulations relating to fabricating simple plumbing pipe systems including Australian standards and plumbing codes, and for occupational health and safety.

VU21792 Identify career pathways in the plumbing industry

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit specifies the competency required to distinguish and determine opportunities and pathways of employment in the plumbing industry.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - speaking and listening when identifying career pathways in the plumbing industry as well as when receiving and confirming requirements; - reading and writing to identifying career pathways in the plumbing industry, including when completing written reports and other documents and when identifying and using research and resource information; - solve problems to identify resources to seek employment; - plan and organise work to collect and catalogue information; - use computers to search the internet, find web-based resources, store and organise information and write and present basic documents, and; - work cooperatively as a team member. Students will also be expected to demonstrate the following knowledge: - how to present basic documents; - highlights in the history of plumbing; - plumbing industry sectors and the types of jobs in each; - how to use search engines on the internet; - how to save electronic information, and; - how to organise information chronologically and sequentially.

VU21793 Perform basic oxy-acetylene welding and cutting

Locations:Werribee, Sunshine.

Prerequisites:CPCCOHS1001A - Work safely in the construction industry

Description:This unit specifies the competency required to use oxy-acetylene equipment to make welds and cuts, and to rectify any defects and distortions as part of a variety of plumbing jobs and in accordance with job, organisational and legal

requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - questioning, speaking and listening, including when performing basic oxy-acetylene welding and cutting and when receiving and confirming task instructions and requirements; - accessing, reading and interpreting documents, drawings and specifications; - secure and brace materials; - identify distortions and defects; - manage materials in a sustainable manner; - plan and organise work to obtain work instructions and sequence tasks; - use and maintain tools and equipment effectively and safely; - commission equipment in accordance with manufacturers' instructions, and; - work cooperatively with others. Students will also be expected to demonstrate the following knowledge: - purpose and function of oxy-acetylene tools and equipment; - correct terminology associated with oxy-acetylene welding and cutting; - workplace safety requirements and OHS legislation; - methods of performing basic oxy-acetylene welding and cutting in the plumbing industry, and; - relevant legislation and regulations relating to performing basic oxy-acetylene welding and cutting including Australian standards and plumbing codes, and for occupational health and safety.

VU21794 Prepare to work in the plumbing industry

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit specifies the competency required to develop a general awareness and knowledge of the plumbing industry and the ability to work as part of a team.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - speaking and listening, including when obtaining plumbing industry information; - reading and writing, including accessing and reading documents, drawings and specifications; - use numbers to locate information in plumbing legislation; - solve problems as they arise in the course of work; - plan and organise work; - use technology to locate key stakeholders information from the internet, and; - work cooperatively as a team member. Students will also be expected to demonstrate the following knowledge: - types of regulatory information accessible and relevant to plumbers, and; - team dynamics.

VU21795 Use and apply basic levelling equipment for plumbing

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit specifies the competency required to select, set up and use suitable basic levelling equipment; and take, record and mark levels and heights, including with gradients, for a range of simple plumbing jobs and in accordance with

job, organisational and legal requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - speaking and listening, including when preparing to and transferring a level and when receiving and confirming instructions about the plumbing job or task; - reading and interpreting documents, drawings and specifications; - solve problems; - plan and organise work including to obtain work instructions and sequence tasks; - use technology to use and maintain tools and equipment effectively and safely, and; - work cooperatively as a team member. Students will also be expected to demonstrate the following knowledge: - purpose and function of levelling equipment; - correct terminology associated with levelling equipment; - workplace safety requirements and OHS legislation, and; - basic mathematical calculations.

VU21796 Use basic electric welding equipment and techniques

Locations:Werribee, Sunshine.

Prerequisites:CPCCOHS1001A - Work safely in the construction industry

Description:This unit specifies the competency required to use a range of electric welding tools and techniques as part of a variety of plumbing jobs and in accordance with job, organisational and legal requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - speaking and listening, including when using basic electric welding equipment and techniques and when receiving and confirming task instructions and requirements; - reading and interpreting documents, drawings and specifications; - secure and brace materials; - identify distortions and defects; - clean welds and cuts; - plan and organise work including to obtain work instructions and sequence tasks; - use and maintain tools and equipment effectively and safely; - commission equipment in accordance with manufacturers' instructions; - power up and shut down equipment, and; - work cooperatively as a team member. Students will also be expected to demonstrate the following knowledge: - purpose and function of a range of electric welding tools and techniques; - correct terminology when using basic electric welding tools and equipment; - workplace safety requirements and OHS legislation; - methods of using basic electric welding equipment and techniques in the plumbing industry; - relevant legislation and regulations relating to electric welding including Australian standards and plumbing codes, and for occupational health and safety, and; - principles of sustainability.

VU21797 Use basic plumbing hand tools

Locations:Werribee, Sunshine.

Prerequisites:CPCCOHS1001A - Work safely in the construction industry

Description:This unit specifies the competency required to use basic hand tools for a

range of simple plumbing tasks.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - speaking and listening, including requesting and using basic plumbing hand tools and when receiving and confirming task instructions and requirements; - reading and interpreting documents, drawings and specifications; - solve problems to use tools in the sequence of the task; - plan and organise work including to obtain work instructions and sequence tasks; - use technology to use and maintain tools and equipment effectively and safely, and; - work cooperatively as a team member. Students will also be expected to demonstrate the following knowledge: - purpose and function of hand tools; - correct terminology when using basic plumbing hand tools; - workplace safety requirements and OHS legislation; - methods of using basic plumbing hand tools in the plumbing industry, and; - relevant legislation and regulations relating to using basic plumbing hand tools including Australian standards and plumbing codes, and for occupational health and safety.

VU21798 Use basic power tools

Locations:Werribee, Sunshine.

Prerequisites:CPCCOHS1001A - Work safely in the construction industry

Description:This unit specifies the competency required to identify, select, use and store basic power tools associated with simple plumbing tasks.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - speaking and listening, including when reporting faults, using basic power tools and when receiving and confirming task instructions and requirements; - reading and interpreting documents, drawings and specifications; - identify appropriate power sources and cables; - secure and brace materials; - plan and organise work including to select power tool consistent with the task and sequence tasks; - use technology to use and maintain tools and equipment effectively and safely, and; - work cooperatively as a team member. Students will also be expected to demonstrate the following knowledge: - purpose and function of basic power tools; - power sources and types; - correct terminology associated with using basic power tools; - workplace safety requirements and OHS legislation; - methods of using basic power tools in the plumbing industry, and; - relevant legislation and regulations relating to using basic power tools including Australian standards and plumbing codes, and for occupational health and safety.

VU21799 Use plumbing pipes, fittings and fixtures to simulate plumbing installations

Locations:Werribee, Sunshine.

Prerequisites:CPCCOHS1001A - Work safely in the construction industry

Description:This unit specifies the competency required to identify plumbing pipes, plumbing fittings and plumbing fixtures, including fastening, as part of a variety of simulated plumbing jobs (that is, jobs that will not actually have water or gas connected) and in accordance with job, organisational and legal requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - speaking and listening, including when using plumbing pipes, fittings and fixtures to simulate plumbing installations as well as when receiving and confirming task instructions and requirements; - reading and interpreting documents, drawings and specifications; - solve problems to secure components; - plan and organise work including to obtain work instructions and sequence tasks; - use technology to use and maintain tools and equipment effectively and safely, including to assemble component parts, and; - work cooperatively as a team member. Students will also be expected to demonstrate the following knowledge: - purpose, characteristics and application of a range of plumbing pipes, plumbing fittings and plumbing fixtures; - correct terminology for using plumbing pipes, fittings and fixtures to simulate plumbing installations; - environmental Protection Authority (EPA) legislation; - workplace safety requirements and OHS legislation; - methods of using plumbing pipes, fittings and fixtures to simulate plumbing installations, and; - relevant legislation and regulations relating to using plumbing pipes, fittings and fixtures to simulate plumbing installations including Australian standards and plumbing codes, and for safety and sustainability.

VU21864 Set study goals and plan education pathway

Locations:Footscray Park, Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the required skills and knowledge to research, plan and review a study pathway for tertiary study. This unit applies to persons who are seeking to enter tertiary study through alternative pathways and who need to familiarise themselves with the range of options and requirements for further study in order to make appropriate choices.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locate and interpret study information and entry requirements in online and paper based texts; - interpret and respond to information about course application processes; - access and interpret information about transition to tertiary study; - access online transition and study information; - record and manage information online such as pathway diagrams, e-portfolios; - summarise ideas and information; - collect and organise information; - design a study pathway plan; - meet deadlines and obligations; - locate and select relevant study information; - locate and approach relevant personnel such as careers

advisors; - prepare documentation according to course application requirements; - match course outcomes to long term goals for future employment or study pathways; - seek feedback and review study plan; - access support services; - self-management skills to plan an individual study pathway and establish and manage study priorities, and; - team work skills to collaborate on review. Students will also be expected to demonstrate the following knowledge: - features of relevant higher education institutions including course and entry requirements, general course application procedures and support for student transition; - sources of information to support student transition; - purpose of and key areas covered in transition activities; - benefits of participating in transition activities; - personally relevant tertiary education course outcomes; - Tertiary Admissions Centres, such as Victorian Tertiary Admissions Centre (VTAC); - Special Entry Access Schemes (SEAS), and; - potential vocational pathways to preferred higher education courses. .

VU21865 Prepare for tertiary reading and writing

Locations:Footscray Park, Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to prepare to undertake entry level study at a tertiary level. It addresses the basic skills of tertiary study in analysis and critical thinking, research, and academic writing.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - effectively analyse questions; - understand assessment requirements; - reason from evidence; - determine reliability of information; - provide evidence to support ideas; - take effective notes from lectures; - ask and answer questions about topics; - request clarification and advice from lecturers; - conduct research and take effective notes; - synthesise notes and paraphrase; - analyse questions; - construct written responses using conventions of academic writing; - edit and proof read; - integrate sources effectively; - numeracy skills to inform tertiary writing; - negotiate and manage academic activities; - answer complex questions; - determine purpose and audience; - sort notes and ideas from sources; - devise strategies to research and understand a topic; - follow up resources; - use models to support learning; - meet presentation requirements in academic context; - identify and evaluate problems in the study task; - seek assistance/request feedback; - select and apply strategies to develop independent learning skills; - planning/organising skills to manage tasks, workload and deadlines; - access library data bases; - word process essays/reports; - manage resources; - format a reference list, and; - use email to communicate with lecturers. Students will also be expected to demonstrate the following knowledge: - strategies for time and task management to manage academic tasks; - strategies to develop independent learning skills; - sources of academic support to complete academic tasks; - analysis of academic questions; - academic texts - purpose, types and genre/discourse patterns for the relevant discipline; - how to revise and edit text; - commonly used referencing systems and their application to a range of academic sources, and; - what constitutes plagiarism and the consequences of submitting plagiarised work.

VU21866 Communicate verbally in a further study context

Locations:Footscray Park, Footscray Nicholson.

Prerequisites:Nil.

884

Description:This unit describes the skills and knowledge to develop the verbal communication skills required to participate in a tertiary study context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - negotiate requirements in academic tasks and activities; - present a point of view and listen and respond to others; - participate in tutorials using appropriate etiquette for example, disagreeing politely; - participate in review and evaluation of activities; - formally present in an academic context; - ask questions and elicit feedback; - literacy skills to prepare tutorial papers, research information, prepare presentation material; - analyse task requirements including time and task management; - determine structure and response to academic tasks; - find models; - deal with communication breakdowns; - manage collaborative tasks; - develop contingency plans; - seek assistance when needed; - evaluate effectiveness of activities undertaken; - select and apply strategies to develop independent learning; - team work skills to allocate tasks and conduct peer evaluation activities, and; - planning and organising skills to prioritise and manage tasks. Students will also be expected to demonstrate the following knowledge: - academic communication skills to participate in tutorials and projects and make presentations; - protocols for academic tutorials; - privacy requirements in relation to telephone and interviews for academic research purposes; - what constitutes plagiarism and the consequences of submitting plagiarised work, and; - language and style of academic presentations to plan and make presentations. .

VU21867 Participate in collaborative learning

Locations:Footscray Park, Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to participate in collaborative learning environments as part of tertiary study. It addresses the skills to participate in group activities, peer evaluation and discussion.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in group activities; - develop planning tools; - ask for and give feedback verbally; - respond in discussion; - prepare questions and answers for group activities; - develop strategies and tasks in collaborative activities; - respond to group tasks; - use reflective processes to evaluate learning; - determine appropriate language to use to meet the purpose; - deal with possible break downs in group activity; - seek assistance as required, and; - prioritise activities and work to agreed timelines. Students will also be expected to demonstrate the following knowledge: - planning tools to complete a task; - peer evaluation protocols to conduct peer evaluation, and; - privacy principles related to group tasks.

VU21868 Conduct online research for further study

Locations:Footscray Park, Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to gather, critically analyse, organise and present information from online research as part of further study tasks.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - critical thinking skills to analyse relevant websites; - technology skills to access, manage and store information for research purposes; - problem solving skills to deal with information that is contradictory, ambiguous, inadequate and to find alternative sources of information in further searches; - communication skills to access support and advice when required, and; - self management skills to manage volume of information and prioritise reading. Students will also be expected to demonstrate the following knowledge: - online search techniques to access online information; - search engines and data bases for specific disciplines; - boolean operators to locate relevant information; - organisational protocols for computer use, and; - citation of internet sources. .

VU21873 Establish and manage a myotherapy practice

Locations:Footscray Park, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to establish and manage a myotherapy practice. It includes business skills, legal compliance and interacting with the health care system/other health professionals.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and analysis skills to identify: business vision; mission; objectives and goals; potential clients; legal and regulatory requirements; financial targets; management arrangements; record requirements, and; risks; - communication skills to: identify and consult with key stakeholders to set up and maintain a viable myotherapy practice, and; liaise effectively with relevant health care workers throughout the health system; - writing skills to develop a business plan; - select appropriate records management systems that incorporates suitable security and access requirements for a myotherapy practice; - implement a business plan that includes ensuring that skilled labour is available and that training is provided, where necessary; - establish quality control procedures to address the business needs and to ensure high quality outcomes; - apply sound financial management principles in setting up and running a viable myotherapy practice, including interpreting financial information and maintaining effective budget control; - research, maintain and promote compliance with the legal and ethical responsibilities of a myotherapy practice, and; - apply effective evaluation

processes on an ongoing basis to maximise the business performance. Students will also be expected to demonstrate the following knowledge: - processes for developing effective business plans; - key stakeholders in setting up and operating a myotherapy practice; - National Code of Conduct for Unregistered Health Workers; - records systems required for a myotherapy practice including those for tax requirements, human resource management, financial control, stock control and client records; - strategies and procedures for continuous improvement, as well as for records access and security; - financial management processes and taxation requirements, including budgeting processes and auditing procedures; - structure, function and interrelationships of the Australian health system; - how health care professionals and allied health services interrelate and their relationship to a myotherapy practice; - health system funding and financial structures and their implications to the myotherapy practice and its' clients; - client referral procedures and accompanying evidence required; - legal and ethical requirements for a myotherapy practice and the implications of non-compliance, and; - evaluation processes to monitor business performance.

VU21874 Manage health risks in a myotherapy environment

Locations:Footscray Park, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to manage health risks within a myotherapy environment. It includes aspects of health risk analysis, personal and premises hygiene, as well as infection prevention and control. It also covers special infection prevention and control for treatments involving dry needling.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify relevant Commonwealth and State legislation, industry codes of practice and Australian standards relating to infection prevention and control; - establish infection prevention and control procedures for the clinic and advise others; - follow established myotherapy infection prevention and control procedures; - resolve issues relating to infection risks through consultation; - monitor adherence to the myotherapy practice's infection prevention and control procedures; - apply appropriate infection prevention and control procedures for dry needling, and; - conduct a health risk assessment of a myotherapy practice. Students will also be expected to demonstrate the following knowledge: - types of health hazards in the workplace; - chain of infection; - basis of infection; - key modes of disease transmission; - NHMRC Guidelines for Prevention and Control of Infection in Healthcare; - risk management in relation to infection control; - established guidelines for the prevention and control of infection, including: cleaning, disinfection and sterilising procedures; personal and hand hygiene; use and scope of personal protective equipment; surface cleaning; managing body fluid spills; sharps handling and disposal techniques; reprocessing procedures for equipment; - additional precautions required for dry needling treatments; - needle stick or sharps injury procedures for notification and response; - local Council requirements for businesses offering skin penetration treatments; - impact of premises layout and workflow arrangements on infection control risks; - infection risks and control measures specific to myotherapy; - factors that increase susceptibility to infection; - management and work processes used to control infection, and; - hierarchy of risk

control measures, most to least preferred: elimination; engineering controls; administrative control; personal protective equipment.

VU21875 Work within a myotherapy framework

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to work effectively within a myotherapy framework.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying ethical issues; - communicating effectively in one-to-one and group settings; - selecting appropriate intervention to specifically address identified dysfunction/s, and; - evaluating and re-evaluating the effects of myotherapy treatment intervention in relation to achieving optimal function of the human body and minimising dysfunction. Students will also be expected to demonstrate the following knowledge: - relevant State and Federal legislation and regulations; - philosophical tradition of science/Western medicine; - sociology of health and the health care system; - ethical issues in natural medicine; - OHS requirements in the workplace; - child, youth and family legislation; - current political context of health care; - dynamic interchange between the physical, mental, social, environmental and spiritual landscape; - rationalistic, analytical approach to an understanding of disease; - vitalistic, empirical approach to health; - philosophy, principles and practices of other complementary therapies; - principles of myotherapy practice; - how myotherapy works with the conventional medical model; - ethical issues in management; - management issues and responsibilities; - industry standards; - team development issues; - physiological and psychological effects of all myotherapy treatment modalities; - biomechanics, neural physiology, pharmacology and nutrition to a level required by myotherapists; - corrective exercises, and; - underpinning values, philosophies, practices and principles of the myotherapy framework.

VU21876 Perform myotherapy clinical assessments

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to assess a client's condition in order to provide myotherapy treatment. It focuses on being able to effectively gather and interpret information during an examination and to make an accurate appraisal for myotherapy treatment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - gathering, interpreting and differentiating information from client using tactile senses (observation skills and palpatory skills); - applying advanced assessment techniques;

- identifying physical alterations and deformations to the somatic system; - identifying treatment options and establishing treatment regimes; - considering the impact on client vitality of selected treatments; - providing post-treatment advice; - managing time throughout consultation and treatment; - using equipment and resources competently and safely; - communicating and negotiating effectively with client and other health practitioners; - recognising and adjusting to contraindications for treatment; - reading medical reports and comprehend medical terminology; - accessing and interpreting up-to-date information, and; - ensure clinical assessment incorporates the underpinning values, philosophies, practices and principles of the myotherapy framework. Students will also be expected to demonstrate the following knowledge: - relevant State and Federal legislation and regulations; - treatments and modalities used to treat particular conditions; - modalities must include but are not limited to: dry needling; myofascial mobilisation techniques; corrective exercises; joint mobilisation; muscle energy technique; position release technique; neural muscular technique; electro modalities, and; neurodynamic treatment; - pathology, medical pathology, biomechanics, arthrokinematics, neurology, pharmacology, physiology, exercise physiology and nutrition to a level required by myotherapists; - anatomy and physiology relevant to pathology and recovery; - signs and symptoms of disease; - legal and ethical considerations of confidentiality when treating clients; - lifestyle factors relevant to treatment of specific conditions and diseases; - possible obstacles to rehabilitation; - community resources and support services, and; - underpinning values, philosophies, practices and principles of the myotherapy framework.

VU21877 Plan myotherapy treatment strategy

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to prepare and plan for myotherapy treatment. This includes negotiating the treatment plan with the client.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying treatment options and establish treatment regimes; - preparing treatment plans; - providing treatment; - reading and interpreting medical reports and other data relevant to the case; - identifying clinical signs of musculoskeletal dysfunction; - communicating and negotiating skills; - negotiating strategies to overcome any obstacles to treatment, and; - ensure the treatment strategy incorporates the underpinning values, philosophies, practices and principles of the myotherapy framework. Students will also be expected to demonstrate the following knowledge: - relevant State and Federal legislation and regulations; - appropriate methods of administration of myotherapy techniques; - various disease and injury processes; - anatomy and physiology to a level required of a myotherapist; - pathophysiology and aetiology of disease; - biomechanics, neural physiology, pharmacology and nutrition to a level required by myotherapists; - corrective exercises; - lifestyle factors relevant to treatment of specific conditions and diseases; - community resources and support services, and; - underpinning values, philosophies, practices and principles of the myotherapy framework.

VU21878 Provide myotherapy treatment

Locations:Footscray Park, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to administer myotherapy treatment according to the techniques and practices of a myotherapy framework.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - myotherapy and remedial massage techniques; - ensure the treatment incorporates the underpinning values, philosophies, practices and principles of the myotherapy framework; - applying established myotherapy clinical practices; - referring to another health care professional as required; - composing a treatment plan; - maintaining stock and equipment according to legislation and guidelines; - using equipment correctly; - explaining any perceived risks and possible responses to the myotherapy treatment; - identifying and analysing responses to previous myotherapy treatments; - negotiating strategies to overcome any obstacles to treatment; - identifying potential life threatening and emergency conditions, and; - assessing the need for other treatment. Students will also be expected to demonstrate the following knowledge: - relevant State and Federal legislation and regulations; - human anatomy and physiology of commonly occurring trigger points and their structural and functional relationships to other body systems, underlying organs and related tissues; - clinical approaches to assessment and treatment strategies with the myotherapy framework; - underpinning values, philosophies, practices and principles of the myotherapy framework; - biomechanics, neural physiology, pharmacology and nutrition to a level required by myotherapists; - corrective exercises to improve strength, endurance, mobility and functional capacity in activities of daily living, and occupational and sporting performance to recover from, manage or prevent common musculoskeletal conditions; - treatment of a range of conditions/disease states; - contraindications to all myotherapy treatment modalities and related issues; - equipment specifications and manufacturers guidelines; - relevant organisational policies and procedures; - role of other health care professionals and support services, and; - code of ethics for myotherapy.

VU21879 Provide myofascial dry needling treatment

Locations:Footscray Park, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to administer myofascial dry needling treatment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - clinical application guidelines

for the practice of myofascial dry needling: client selection; need for informed client consent; treatment according to stage of condition; client positioning; trigger point palpation, and; work flow process and guidelines; - clinical application of the practice of myofascial dry needling to specific health conditions in the following regions of the body: lower leg and foot muscles; posterior, anterior and medial thigh muscles; hip and pelvis muscles; posterior spinal muscles; pectoral girdle, glenohumeral and forearm muscles, and; cervical spine muscles; - clinical application of the practice of dermatomal dry needling, and; - ensure the treatment incorporates the underpinning values, philosophies, practices and principles of myofascial dry needling practice. Students will also be expected to demonstrate the following knowledge: - relevant State and Federal legislation and regulations; - description of a myofascial trigger point and pain; - neurophysiological basis of myofascial pain syndrome; - central principles of pain physiology are specified; - factors that affect the client's perception of pain and responses to treatment; - neurophysiological basis of: muscle trigger points; referred pain, and; sensitisation mechanisms of trigger points; - pathophysiology of myofascial pain; - mechanisms and effects of myofascial dry needling; - safety guidelines with myofascial dry needling; - hygiene relevant to skin penetration, including Victorian Government hygiene guidelines for skin penetration; - client skin preparation; - needle & medical waste disposal; - prevention of needle stick injury; - absolute and relative contraindications for myofascial dry needling (MDN); - anatomical considerations for needle insertion; - management of adverse reactions post treatment: pain; bruising; fainting, and; pneumothorax; - OHS requirements in the workplace, and; - underpinning values, philosophies, practices and principles of myofascial dry needling practice.

VU21880 Conduct research relating to myotherapy clinical practice

Locations:Footscray Park, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to source and evaluate relevant research information and apply their findings to a myotherapy clinical practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access and critically evaluate reference materials; - identify information needs and plan efficient information gathering strategies; - access and interpret up-to-date information; - record details of research findings; - critically evaluate research data gathered; - identify and access a range of scholarly, non-scholarly, new and established information sources; - interpret common terminology used in statistical analysis; - prioritise usefulness of information to the treatment of individual cases, and; - incorporate relevant research information within myotherapy clinical practice. Students will also be expected to demonstrate the following knowledge: - National Health & Medical Research Council (NHMRC) hierarchy of research evidence; - relevant reference works and information sources; - research issues and their uses, and; - research methodologies commonly used in medical, allied health and complementary medicine research.

VU21881 Apply essential further study skills

Locations:Footscray Nicholson, St Albans, City Flinders, Geelong Learning Links..

Prerequisites:Nil.

Description: This unit describes the skills and knowledge required to study and participate effectively in a tertiary learning environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - negotiate and communicate verbally in collaborative learning relationships; - communicate complex ideas and relationships in writing; - read and interpret complex texts; - analyse the relevance of information and information sources; - adapt familiar learning strategies to new contexts; - planning and organising skills to plan, research and organise academic writing pieces; - use a range of research strategies appropriate to an academic context, and; - accept new learning challenges. Students will also be expected to demonstrate the following knowledge: - text structure, usage and syntax used to interpret text meaning; - the role of context in the interpretation of text meaning; - academic referencing, including commonly used referencing styles and citations, and; - academic standards and protocols related to plagiarism and collusion.

VU21882 Research fields of study and enquiry

Locations: Footscray Nicholson, St Albans, City Flinders.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to research a field of study in a tertiary learning environment and present findings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to present findings and respond to questioning; - technology skills to access and navigate online research resources; - extract relevant information; - analyse academic information for reliability, authenticity and relevance, and; - planning and organising skills to structure an academic presentation. Students will also be expected to demonstrate the following knowledge: - the place and function of theory and research in tertiary study; - commonly used academic presentation formats and any particular relevance to different fields of study to enable selection of a presentation format, appropriate to the selected field of study, and; - the purpose and process of peer review to enable effective analysis of academic information.

VU21883 Examine approaches to citizenship and public life

Locations: Footscray Nicholson, St Albans, City Flinders.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to analyse democracy as a major political tradition and examine its role and value in contemporary society.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to read and synthesise information from a range of sources, and; - critical thinking skills to analyse differing ideologies and political traditions and their impact on modern society. Students will also be expected to demonstrate the following knowledge: - the conventions of argument in public debate; - a sufficient range of ideologies and political traditions to enable comparisons to be made, and; - a sufficient range of critiques from advocates and critics of modern democracy to enable comparisons to be made.

VU21884 Analyse stories/narratives within cultures

Locations: Footscray Nicholson, St Albans, City Flinders.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to explore and analyse the significance of stories or narratives told within and across cultures and their impact on cultural and cross cultural identities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read and interpret textual information; - synthesise and summarise information; - analyse relationships between stories and their cultural context, and; - analyse different versions of a story. Students will also be expected to demonstrate the following knowledge: - theories related to narrative and narrative structure; - the nature of culture and acculturation, and; - primary stories told in major cultures. .

VU21885 Analyse human transformations of nature

Locations: Footscray Nicholson, St Albans, City Flinders.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to analyse the way in which nature is viewed and represented within different cultures and how these views impact on responses to contemporary environmental issues.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read and interpret textual information; - synthesise and summarise the main ideas in information; - problem solving skills to analyse different viewpoints on nature; - arrange disparate points of view on the issue into specific schools of thought, and; - present a reasoned viewpoint on a contemporary environmental issue. Students will also be expected to demonstrate the following knowledge: - scientific views of nature to enable their cultural impact to be determined; - attitudes and practices to nature to enable their

impact on environmental practice to be analysed, and; - socio-economic significance of environmental practices to support analysis of meaning and practice in relation to views on nature.

VU21886 Examine approaches to economy and society

Locations: Footscray Nicholson, St Albans, City Flinders.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to analyse modern economic issues and their impact on contemporary local, national and global concerns.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read and interpret textual information; - synthesise and summarise information, and; - problem solving skills to compare and analyse a range of information related to the economy and society. Students will also be expected to demonstrate the following knowledge: - economic traditions to enable their key concerns to be identified; - theories on the historical emergence of capitalism to enable their analysis; - a range of views on the consequences of economic globalisation to enable their comparison, and; - responses to economic globalisation to enable their analysis. .

VU21887 Analyse texts in their cultural context

Locations: Footscray Nicholson, St Albans, City Flinders.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to analyse the meaning in a range of texts and to relate texts to their cultural context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify appropriate texts; - read and interpret texts, and; - problem solving skills to identify, compare and analyse relevant information. Students will also be expected to demonstrate the following knowledge: - cultural values that can underlie different representations of the same event; - terminology of textual and cultural criticism such as: - traditional literary terms; - postmodern analysis; - semiotic terms; - psychoanalytic terms, and; - system relationships.

VU21988 Utilise basic network concepts and protocols required in cyber security

Locations: Footscray Nicholson, St Albans, Sunshine.

Prerequisites: Nil.

Description: This unit provides a cyber security practitioner with an introduction to the skills and knowledge required to comprehend how data travels around the internet and the function and operation of protocols such as the Transmission Control Protocol/Internet Protocol (TCP/IP) suite and devices that facilitate this data

transfer. The exposure to these protocols is at an introductory level in this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - articulating issues arising from the operation of a network; - applying numeracy skills to perform calculations in binary and hexadecimal number systems; - base level problem solving to implement provided scripts for a switch and a router; - reading and accurately interpreting documents and reports; - operating a personal computer; - basic level ability in network cabling, and; - communicating with others to address cyber security network concepts and protocols. Students will also be expected to demonstrate the following knowledge: - OSI layered communication model; - TCP/IP layered communication model; - Media Access Layer (MAC) addresses; - binary number system; - hexadecimal number system; - Transmission Control Protocol (TCP) protocol; - User Datagram Protocol (UDP); - IPV4 addressing; - basics of IPV6 addressing; - routers, switches, firewall fundamentals & wireless access points; - end to end test commands eg Ping, Traceroute; - fundamentals of cyber security tools Wireshark, Kali, Netstumbler & Netstat; - fundamental DOS & DDOS attack mechanisms; - fundamental ransomware attack mechanisms; - wireless LANs and their use and vulnerabilities; - virtual images and their construction, and; - fundamentals of a scripting language eg Python.

VU21989 Test concepts and procedures for cyber security

Locations: Footscray Nicholson, St Albans, Sunshine.

Prerequisites: Nil.

Description: This unit provides introductory skills and knowledge required to implement testing procedures for systems in an organisation. These involve application layer testing tools as defined by the Open Web Application Security Project (OWASP), network testing and monitoring tools. The unit examines common threats, ethical hacking principles and introduction to penetration testing, social engineering security issues, enumeration, port scanning, sniffers, footprinting, traffic sniffers and wireless LAN vulnerabilities and contains a solid treatment of intrusions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - using networking security testing methodologies, tools and commands; - configuring lab testing environment; - installing and configuring software packages for an outcome; - interpreting results from software packages, and; - communicating and contributing as a team member to solve networking problems. Students will also be expected to demonstrate the following knowledge: - layer 3 test command: Ping and Traceroute; - testing tools include (but not exhaustive). Other tools will be utilised to adapt to new technologies as required: Wireshark; Kali; Netstumbler and Netstat; - ethical hacking; - penetration testing; - footprinting; - enumeration; - port scanning; - system hacking;

- trojans, virus's and worms; - sniffing tools; - DOS & DDOS attacks methodology; - DNS attack methodologies; - wireless LANs, and; - scripting languages eg Python.

VU21990 Recognise the need for cyber security in an organisation

Locations: Footscray Nicholson, St Albans, Sunshine.

Prerequisites: Nil.

Description: This unit provides introductory knowledge and skills to recognize threats, risks and vulnerabilities to cyber security in an organisation. It includes the threats an organisation encompasses such as networks, machines, applications, data, users and infrastructure. The unit also covers an introduction to common cyber security attack mechanisms and an introduction to identity and threat management as well as security issues surrounding Internet of Things (IoT) devices. Finally, the unit introduces the implementation of tools and systems an organisation can use to protect from cyber-attacks.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - using a PC or Laptop computer and software tools; - implementing methods to protect personal data and privacy; - communicating and working in a team environment; - problem solving threats and vulnerabilities; - interpreting and following documented material and procedures, and; - evaluating an organisation's security policy document. Students will also be expected to demonstrate the following knowledge: - an enterprise security framework; - current types of security vulnerabilities and malware; - methods of cyber security attacks; - methods to protect your own data and privacy; - methods and tools used to protect an organisation's data; - Internet of Things (IoT) devices; - access management techniques; - access controls; - overview of the responsibilities and resources that standards and organisation bodies provide for an enterprise, and; - cyber security risk.

VU21991 Implement network security infrastructure for an organisation

Locations: Footscray Nicholson, St Albans, Sunshine.

Prerequisites: VU21988 - Utilise basic network concepts and protocols required in cyber security VU21990 - Recognise the need for cyber security in an organisation

Description: This unit provides a sound working knowledge of the key features which make up the network security for an organisation. The unit includes a detailed investigation of threats and mitigation techniques, network security architectures, introduction to firewall setup and configuration, intrusion prevention system (IPS) setup and operation as well as internetworking operating system (IOS) software features to harden routers and switches. The unit also investigates proxy server vulnerabilities, Wireless Lan (WLAN) security vulnerabilities and the application of Virtual Private Networks (VPN's) and cryptography fundamentals.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - communicate and contribute as a member of a team; - problem solve network security infrastructure; - interpret and follow documented material and procedures; - use a laptop or a workstation; - install and demonstrate the application of software packages; - perform basic mathematical calculations; - connecting networked devices; - configuring a firewall; - implementing IPS; - plan and apply foundational troubleshooting of network security infrastructure, and; - drive testing software packages. Students will also be expected to demonstrate the following knowledge: - testing methodologies; - using networking devices; - new firewall technologies; - CLI to configure a network device; - handle and use network devices; - WLAN operation and architectures; - WLAN vulnerabilities; - encryption, hashes and digital signatures; - encryption algorithms; - public key encryption; - basic cryptography; - VPN's, and; - IPsec.

VU21992 Develop a cyber security industry project

Locations: Footscray Nicholson, St Albans, Sunshine.

Prerequisites: ICTPRG407 - Write script for software applications VU21988 - Utilise basic network concepts and protocols required in cyber security VU21989 - Test concepts and procedures for cyber security VU21990 - Recognise the need for cyber security in an organisation

Description: The purpose of this unit is to undertake a project that simulates a real cyber security environment. The project may include using a Cyber Security Operations Centre (CSOC) sandbox or equivalent laboratory environment. This environment allows the participant to demonstrate configuring and testing of firewalls, implementing Intrusion Detection System (IDS) and evaluating and identifying any traffic anomalies. The use of Red & Blue teaming exercises to identify security breaches and apply mitigation strategies to minimise further risk should be included as part of the exercise.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assembling, participating in and coordinating a work team; - communicating and problem solving within a team environment; - evaluating the performance of a work team; - developing a project implementation plan including realistic timelines and allocation of tasks for team members; - establishing project risk assessment; - gathering, testing and allocating project resources; - testing concepts and procedures for cyber security; - using procedures to identify data traffic anomalies; - installing and using software packages; - connecting cyber security equipment and networked devices; - using basic Linux commands; - interpret and writing basic scripts; - preparing technical documentation, and; - making presentation to clients. Students will also be expected to demonstrate the following knowledge: - working in a team; - testing methodologies; - implementing provided designs; - operating software testing packages; - interconnecting virtual images; - operating systems (Windows or Linux); - virtualisation operation and structure; - creating and configuring virtualised images; - using networking devices; - configuring firewalls; - implementing Intrusion Detection Systems (IDS) features to examine data for anomalies for a potential security threat; - implement Intrusion Prevention Systems (IPS) to monitor data traffic; - introductory red and blue teaming exercises; - support the development of an implementation plan; - contribute to the team performance evaluation; - support the process of risk assessment, and; - business implications of cyber security breaches.

VU21993 Secure a networked personal computer

Locations:Footscray Nicholson, St Albans, Sunshine.

Prerequisites:Nil.

Description:This unit provides base level skills and knowledge to configure an operating system on a personal computer, adding security, setting user level passwords and privileges to limit and identify user access - all required to increase protection of the end point from cyber security attacks. The unit also provides an overview of internet of things (IOT) devices, an introduction to computer networking virtualisation and base level Linux commands - deemed to be invaluable in using cyber security tools.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying the components and explain the operation of a personal computer; - operating a personal computer; - performing preventive maintenance and troubleshooting on personal computers; - installing Windows operation systems; - performing management and maintenance of Windows operating systems; - programing networking devices from provided scripts; - reading and comprehending computer technology reports; - securing user level access for a personal computer, and; - identifying and using networking devices. Students will also be expected to demonstrate the following knowledge: - hardware components of a personal computer; - virtualisation concepts; - PC peripherals; - PC input output devices; - Internet of Things (IOT) devices; - communication protocols for IOT devices; - security issues relating to IOT devices; - operating systems (Windows or Linux); - virtualization operation and structure; - creating and configuring virtualised images; - linux base level commands, and; - networked device connections. .

VU21994 Perform basic cyber security data analysis

Locations:Footscray Nicholson, St Albans, Sunshine.

Prerequisites:Nil.

Description:This unit provides the knowledge and skills necessary for a cyber security practitioner to detect and recognize discrepancies in data by performing analysis. The unit covers the collection of data on a scenario and performing basic analysis and includes the process of breaking down the scenario to a set of subtasks which are examined for their effectiveness. The unit includes an introduction of databases as a repository for data and the vulnerabilities that exist and an introduction to software tools to supporting pattern recognition.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - recognising patterns of data; - using data recognition software tools; - working as a team member to problem solve database vulnerabilities; - reading and comprehending documented material and procedures; - using a laptop or a workstation; - installing and using software

packages; - foundational troubleshooting; - planning and organizing tasks and subtasks; - evaluating effectiveness of processes, and; - affecting change to processes. Students will also be expected to demonstrate the following knowledge: - sources of data; - security and event management systems (SIEM); - database concepts; - inputting data to a database; - accessing data from a database; - database security vulnerabilities; - mitigation strategies to minimise database security vulnerabilities; - big data concepts only, and; - splunk as an example of software used in data analysis.

VU21995 Manage the security infrastructure for the organisation

Locations:Footscray Nicholson, St Albans, Sunshine.

Prerequisites:Nil.

Description:The unit provides the basic knowledge and skills required to manage the implementation of the security infrastructure for an organisation. It includes assessing risk, implementing appropriate controls, monitoring their effectiveness, following organisation policy to store relevant data and compiled reports for future audit purposes. The practitioner will monitor and evaluate the physical security infrastructure of the organisation, and implement a regular security infrastructure maintenance program. It is likely that the practitioner will need to obtain relevant security clearance to handle this data.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate and contribute as a member of a team; - problem solve an organisation security system; - interpret and follow documented material and procedures; - use a laptop or a workstation; - install and demonstrate the application of software packages; - contribute to the evaluation of the organisation's security plan; - contribute to the planning and development of an organisation's security policy; - perform risk assessment for cyber security for an organisation; - interpret risk assessment data from appropriate standards bodies (ISO 27001 or NIST); - implement cyber hygiene processes for an organisation; - document incident processes, and; - communicate incident report succinctly and effectively. Students will also be expected to demonstrate the following knowledge: - methods of cyber security attacks; - methods and tools used to protect an organisation's data; - cyber security risk management plans and policies; - requirements of cyber hygiene processes; - best practices in cyber hygiene processes; - maintenance procedures; - malware scanners; - virus scanners, and; - diagnostic tools.

VU21996 Evaluate and test an incident response plan for an enterprise

Locations:Footscray Nicholson, St Albans, Sunshine.

Prerequisites:Nil.

Description:This unit provides the basic knowledge and skills for a cyber security practitioner to examine, as part of a team, an organisation's existing incident response plan (IRP) and expand it as necessary to more thoroughly deal with incidents. The unit includes forming the team, clarifying roles, interpreting an incident response plan (IRP), using red and blue teams to test the IRP, implementing an incident, evaluating the IRP for its effectiveness and developing improvement.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate and contribute as a member of a team; - problem solve network security infrastructure; - interpret and follow documented material and procedures; - use a laptop or a workstation; - install and demonstrate the application of software packages; - perform basic mathematical calculations; - plan and develop an Incident Response Plan (IRP) for the enterprise; - plan and develop attack exercises to test a security system for vulnerabilities; - plan and develop mitigation strategy to defend a security system from attacks, and; - evaluating IRP effectiveness and implementing new strategies. Students will also be expected to demonstrate the following knowledge: - methods to protect your own data and privacy; - basic level penetration testing of the security system for an enterprise; - tools used to test a network for vulnerabilities For example: Kali Linux, Metasploit; - methods and tools used to protect an organisation's data; - the concept of red, blue and purple teaming, and; - discussing better IRP strategies.

VU21997 Expose website security vulnerabilities

Locations: Footscray Nicholson, St Albans, Sunshine.

Prerequisites: Nil.

Description: This unit provides the knowledge and skills required to ensure and maintain the security of an organisation's website by utilizing the outcomes of the Open Web Application Security Project (OWASP). Current penetration testing tools are also utilised to determine the vulnerabilities of a web site. Vulnerabilities are assessed and reported to appropriate personnel to minimize risk.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate and contribute as a member of a team; - solve problems related to an organisation's website security vulnerabilities; - ability to read and comprehend technical procedures and documents; - use a laptop or a workstation; - install and interpret software test packages; - plan and present proposed solutions to a client, and; - contribute to writing reports. Students will also be expected to demonstrate the following knowledge: - website development functionality and operation; - website vulnerabilities; - basic level penetration testing of the website for an enterprise; - website servers; - server scripting; - firewall features and operation; - existing frameworks of reported software vulnerabilities; - HTTP structure; - testing tools for website vulnerabilities (penetration testing (PEN testing)), and; - Open Web Application Security Project (OWASP) top 10 Web based vulnerabilities.

VU22014 Prepare for work in the building and construction industry

Locations: Industry, Footscray Nicholson, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency describes the outcomes required to prepare to work in the building and construction industries. It requires the ability to determine

opportunities and pathways, take responsibility for own workplace learning and skill development and apply for work in the building and construction industries. This unit supports learners to develop basic skills and knowledge to prepare them for the working environment in the building and construction industries.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - writing skills; - reading skills to interpret basic documents such as written instructions, basic research and resource information; - oral communication skills; - learning skills; - teamwork skills; - planning and organising skills, and; - technology skills. Students will also be expected to demonstrate the following knowledge: - financial incentives that are available to apprentices and trainees; - personal learning styles; - relationship between roles within the building and construction industries; - industry and company specific policies and procedures regarding training and employment, and; - industry services, facilities and activities.

VU22015 Interpret and apply basic plans and drawings

Locations: Industry, Footscray Nicholson, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to read, interpret and produce basic plans and drawings used for building construction. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret drawings, documentation and specifications; - writing skills to complete basic documentation, drawings and plans; - oral communication skills to use building and construction terminology for interpreting and developing basic plans and drawings; - numeracy skills to calculate labour and material quantities; - planning and organising skills to plan and complete tasks from plans and drawing in appropriate sequence; - self-management skills to manage workspace, and; - technology skills to use tools and equipment for developing basic plans and drawings. Students will also be expected to demonstrate the following knowledge: - types, purposes and characteristics of plans and drawings; - commonly used symbols and abbreviations used in plans and drawings; - terminology used for interpreting and applying plans and drawings; - components of building structures, including footing, flooring, wall and roofing structures; - relevant Australian Standards and the National Construction

Code in relation to work to be undertaken; - major construction activities and sequencing; - drawing techniques, and; - tools and equipment used for drawings.

VU22016 Erect and safely use working platforms

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to erect and safely use restricted height working platforms, that includes trestles and planks, step and extension ladders and mobile and modular scaffolds of up to four metres. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills to complete measurements and calculations to check for height requirements; - when erecting and using working platforms; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to use the appropriate tools and equipment for erecting working platforms. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used for erecting working platforms; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to erect and safely use working platforms, including the required personal protective equipment (PPE); - relevant Australian Standards in relation to restricted height working platforms; - principles of sustainability relevant to erecting working platforms; - terminology used for erecting and using working platforms; - function, purpose and types of working platforms, and tools and equipment used to erect them, and; - processes and techniques used for erecting working platforms, including manufacturers' specifications.

VU22017 Identify and handle bricklaying tools and equipment

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to identify and safely handle bricklaying hand and power tools and plant and equipment. It does not include the maintenance of tools and equipment. It includes the ability to plan for, prepare and handle tools and equipment, clean up after use, and report on faulty tools and equipment. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safely check and handle tools and equipment. Students will also be expected to demonstrate the following knowledge: - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to handling bricklaying tools and equipment, including the required personal protective equipment (PPE) and safety requirement for power supplies; - relevant Australian Standards in relation to handling bricklaying tools and equipment; - principles of sustainability relevant to preparing and handling bricklaying tools and equipment; - terminology used for bricklaying tools and equipment; - characteristics and functions of bricklaying tools and equipment; - types of pre-occupational checks required prior to using bricklaying tools and equipment, and; - safe handling and maintenance checks of bricklaying tools and equipment, including reporting procedures. .

VU22018 Apply basic bricklaying techniques

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to apply bricklaying techniques for basic brickwork construction. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the bricklaying industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safely use and maintain bricklaying tools and equipment. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used in brickwork construction; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to brickwork construction, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to brickwork construction; - principles of sustainability relevant to brickwork construction; - terminology used for basic brickwork construction; - characteristics and purposes of bricklaying materials; - common processes for calculating size and quantity of materials required; - components, characteristics, and functions of mortar,

including mixing and curing processes; - function, purpose and safe handling of bricklaying tools and equipment; - purpose of an accurate set out for brickwork construction; - set out techniques and processes for brickwork construction; - use of spirit levelling devices for setting out, and; - bricklaying techniques for basic brickwork construction.

VU22019 Apply brick veneer construction techniques

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to apply brick veneer construction techniques to basic brickwork construction. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the bricklaying industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safety use and maintain tools and equipment. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used for brick veneer; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to brick veneer construction, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to veneer brick construction; - terminology used for brick veneer construction; - principles of sustainability relevant to brick veneer construction; - characteristics and purposes of materials used for brick veneer construction; - common processes for calculating size and quantity of materials required; - function, purpose and safe handling of bricklaying tools and equipment; - purpose of an accurate set out for brick veneer construction; - set out techniques and processes for brick veneer construction; - methods of base brickwork including slab on ground and strip footing construction, and; - bricklaying techniques for brick veneer construction.

VU22020 Apply cavity brick construction techniques

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to apply cavity brick construction techniques to basic brickwork construction. It does not include the construction of brickwork or block bases. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the bricklaying industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safety use and maintain tools and equipment. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used cavity brick construction; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to cavity brick construction, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to cavity brick construction; - terminology used for cavity brick construction; - principles of sustainability relevant to cavity brick construction; - characteristics and purposes of bricklaying materials used in cavity brick construction; - common processes for calculating size and quantity of materials required for cavity brick construction; - function, purpose and safe handling of bricklaying tools and equipment used for cavity brick construction; - purpose of an accurate set out for cavity brick construction; - set out techniques and processes for cavity brick construction; - characteristics and functions of base brickwork; - methods of base brickwork including slab on ground and strip footing construction, and; - bricklaying techniques for cavity brick construction.

VU22021 Apply masonry blockwork techniques

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to apply masonry blockwork techniques to basic masonry blockwork construction. It does not include the construction of the brickwork or block base. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the bricklaying industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safety use and maintain tools and equipment. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used in bricklaying construction; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation

to masonry blockwork construction, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to masonry blockwork construction; - principles of sustainability relevant to masonry blockwork construction; - terminology used for masonry blockwork construction; - characteristics and purposes of masonry blockwork materials; - common processes for calculating size and quantity of materials required; - components, characteristics, and functions of mortar, including mixing and curing processes; - function, purpose and safe handling of masonry blockwork tools and equipment; - purpose of an accurate set out for masonry blockwork construction; - set out techniques and processes for masonry blockwork construction; - use of spirit levelling devices for setting out blockwork, and; - masonry blockwork techniques used for basic masonry blockwork construction.

VU22022 Identify and handle carpentry tools and equipment

Locations: Industry, Footscray Nicholson, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to identify and safely handle carpentry hand and power tools and plant and equipment. It does not include the maintenance of tools and equipment. It includes the ability to plan for, prepare and handle tools and equipment, clean up after use, and report on faulty tools and equipment. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safely check and handle tools and equipment. Students will also be expected to demonstrate the following knowledge: - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to handling carpentry tools and equipment, including the required personal protective equipment (PPE) and safety requirement for power supplies; - relevant Australian Standards in relation to handling carpentry tools and equipment; - principles of sustainability relevant to preparing and handling carpentry tools and equipment; - terminology used for carpentry tools and equipment; - characteristics and functions of carpentry tools and equipment; - types of pre-occupational checks required prior to using carpentry tools and equipment, and; - safe handling and maintenance checks of carpentry tools and equipment, including reporting procedures.

VU22023 Perform basic setting out

Locations: Industry, Footscray Nicholson, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to carry out basic setting out for a building site. This unit supports pre-apprentices who under close

supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills, and; - self-management skills. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used in the building and construction industry; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to carpentry, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to setting out sites; - principles of sustainability relevant to setting out sites; - terminology used for setting out sites; - characteristics and purposes of materials used for setting out sites; - common processes for calculating size and quantity of materials required; - function, purpose and safe handling of setting out tools and equipment; - use and types of levelling devices for setting out, including spirit, automatic and laser levels, and; - setting out processes and techniques used for building sites.

VU22024 Construct basic sub-floor

Locations: Industry, Footscray Nicholson, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to apply basic sub-floor framing skills for a rectangular shaped building. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safely use and maintain tools and equipment. Students will also be expected to demonstrate the following knowledge:

- plans, drawings and specifications used in sub-floor framing; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to sub-floor framing, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to sub-floor framing; - principles of sustainability relevant to sub-floor framing; - Use terminology for sub-floor framing; - characteristics and purposes of materials used for sub-floor framing; - common processes for calculating size and quantity of materials required; - function, purpose and safe handling of sub-floor framing tools and equipment; - Use sub-floor framing processes and techniques for buildings; - bearer and joist joining techniques including butt, halving and splayed, and; - joist straightening techniques.

VU22025 Construct basic wall frames

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to construct basic wall frames for a building. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills, and; - self-management skills. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used in wall framing; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to wall framing, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to wall framing; - principles of sustainability relevant to wall framing; - terminology used for wall framing; - characteristics and purposes of materials used for wall framing; - common processes for calculating size and quantity of materials required; - function, purpose and safe handling of wall framing tools and equipment, and; - wall framing processes and techniques used for building sites.

VU22026 Construct a basic roof frame

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to construct a basic hip and gable end roof frame. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills, and; - self-management skills. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used in roof framing; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to roof framing, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to roof framing; - principles of sustainability relevant to roof framing; - terminology used for roof framing; - types of roof structures; - characteristics and purposes of materials used for roof framing; - common processes for calculating size and quantity of materials required; - common process for developing roof bevels and calculating member lengths; - function, purpose and safe handling of roof framing tools and equipment; - processes for setting out a pattern rafter, and; - roof framing processes and techniques used for building sites.

VU22027 Install basic external cladding

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to install basic timber or manufactured external cladding. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safely use and maintain tools and equipment. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used in external cladding; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to external cladding, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to external cladding; - principles of sustainability relevant to external cladding; - terminology used for external cladding; - characteristics and purposes of materials used for external cladding; - common processes for calculating size and quantity of materials required;

- function, purpose and safe handling of external cladding tools and equipment, and;
- external cladding processes and techniques used for building sites, including processes for preserving and protecting cut surfaces.

VU22028 Install basic window and door frames

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to install basic windows and door frames to parts of a building. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safely use and maintain tools and equipment. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used in window and door frame installation; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to window and door frame installation, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to window and door frame installation; - principles of sustainability relevant to window and door frame installation; - terminology used for window and door frame installation; - characteristics and purposes of materials used for window and door frame installation; - common processes for calculating size and quantity of materials required; - function, purpose and safe handling of window and door frame installation tools and equipment, and; - window and door frame installation processes and techniques.

VU22029 Install interior fixings

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to prepare, cut and install standard interior fixings. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safely use and maintain tools and equipment. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used in interior fixing; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to interior fixing, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to interior fixing; - principles of sustainability relevant to interior fixing; - terminology used for interior fixing; - characteristics and purposes of materials used for interior fixing; - common processes for calculating size and quantity of materials required; - function, purpose and safe handling of interior fixing tools and equipment, and; - interior fixing processes and techniques.

VU22030 Carry out basic demolition of timber structures

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to prepare and carry out basic demolition of timber structures. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safely use and maintain tools and equipment. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used in basic demolition; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to basic demolition, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to basic demolition; - principles of sustainability relevant to basic demolition; - terminology used for basic demolition; - common processes for calculating size and quantity of materials required; - function, purpose and safe handling of basic demolition tools and equipment, and; - basic demolition processes and techniques.

VU22031 Construct basic formwork for concreting

Locations: Industry, Footscray Nicholson, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to construct basic formwork for concreting. This unit supports pre-apprentices who under close supervision and guidance, develop a defined and limited range of skills and knowledge in preparing them for entering the working environment within the building and construction industry. They use little judgement and follow instructions specified by the supervisor. On entering the industry, it is intended that further training will be required for this specific skill to ensure trade level standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading skills to interpret documentation, drawings, specifications and instructions; - writing skills to complete basic documentation; - oral communication skills; - numeracy skills; - teamwork skills to ensure a safe working environment; - planning and organising skills; - self-management skills, and; - technology skills to safely use and maintain tools and equipment. Students will also be expected to demonstrate the following knowledge: - plans, drawings and specifications used for the construction of formwork for concrete; - workplace safety requirements and Occupational Health and Safety (OHS) legislation in relation to concrete footings and formwork, including the required personal protective equipment (PPE); - relevant Australian Standards and building codes in relation to the construction of formwork for concrete; - principles of sustainability relevant to the construction of formwork for concrete; - terminology used for the construction of formwork for concrete; - characteristics, purposes and functions of materials used for concrete slabs and formwork; - basic principles and components of concrete, including mixing ratios; - common processes for calculating size and quantity of materials required; - function, purpose and safe handling of tools and equipment used for the construction of formwork for concrete; - set out and construction of formwork for concrete processes and techniques, and; - sequence of concrete placement and curing.

VU22074 Use a range of techniques to solve mathematical problems

Locations: Footscray Park, Werribee, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to use a range of specialist techniques and concepts to solve mathematical problems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - numeracy skills to perform a range of calculations including: fractions and mixed numbers, and; decimals and directed numbers; - problem solving skills to: round a decimal to a given number of decimal places; use geometry to determine angles in triangles (including non-right angled); convert unit quantities to units with a different prefix; write a number correct to a given number of significant figures; calculate systematic, random and percentage errors; describe the general shape of a given or plotted scatter diagram;

identify and determine dimensions of general shapes; estimate to check calculations and reasonableness of outcomes, and; use a range of mathematical symbolism, charts, diagrams and graphs to represent mathematical thinking and processing; - literacy skills to: read and interpret values in a table, chart or graph, and; locate embedded information necessary to solve a problem or analyse quantitative information; - technology skills to use scientific calculator functions including statistical functions, and; - planning and organising skills to collect and organise mathematical data. Students will also be expected to demonstrate the following knowledge: - use of Pythagoras Theorem in trigonometry; - principles of algebra; - techniques to solve algebraic problems; - major characteristics of linear and simple non-linear graphs, and; - graphical techniques to draw graphs.

VU22093 Develop study skills

Locations: Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to establish a range of study strategies and develop study skills.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - organisational skills to identify and apply effective study strategies; - literacy skills to take accurate notes, and; - problem solving skills to manage time and prioritise tasks and information. Students will also be expected to demonstrate the following knowledge: - sources of information on effective study strategies.

VU22094 Explore your story

Locations: Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to investigate, collate, record and present information on the history of an Aboriginal or Torres Strait Islander clan/mob relevant to the learner.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - gather information from community members using appropriate protocols; - make clear oral presentations; - seek feedback from peers; - written and /or visual literacy skills to present information, and; - organisational skills to sequence information for a presentation. Students will also be expected to demonstrate the following knowledge: - appropriate processes for determining protocols for interacting with Aboriginal and/or Torres Strait Islander communities; - cultural considerations related to the use of imagery; - oral presentation techniques, and; - appropriate sources of information on Aboriginal and/or Torres Strait Islander history and language.

VU22096 Participate in Aboriginal and/or Torres Strait Islander events of significance

Locations:Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to participate in an Aboriginal and/or Torres Strait Islander event with others.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to record own participation in activities; - problem solving skills to analyse event information and select an appropriate event; - organisational skills to plan activities, and; - team work skills to plan, participate in and evaluate activities with others. Students will also be expected to demonstrate the following knowledge: - cultural protocols related to participation in the selected event.

VU22099 Recognise and interpret safety signs and symbols

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to recognise and interpret safety signs and symbols commonly found in workplace and community settings.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to identify and interpret key words regularly used in common safety signs and symbols; - numeracy skills to recognise and interpret the meaning of shapes in safety signage, and; - problem solving skills to distinguish between different types of commonly used safety signs and symbols using shapes, colours and words. Students will also be expected to demonstrate the following knowledge: - navigation skills and reading strategies to enable recognition and interpretation of commonly used safety signs and symbols; - high frequency words used in safety signage, and; - colours and shapes used in the main categories of safety signage.

VU22100 Investigate language acquisition

Locations:Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to investigate opportunities to develop Aboriginal and/or Torres Strait Islander language/s.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to interpret information; - evaluate information for its relevance to own needs, and; - identify barriers and potential solutions. Students will also be expected to demonstrate the following knowledge: - sources of information on Aboriginal and/or Torres Strait Islander languages. .

VU22101 Use basic measuring and calculating skills

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to measure quantities in standard units and carry out basic calculations involving these quantities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: problem solving skills to: interpret the measurement requirements; apply the appropriate mathematical method to make required calculations; check the accuracy of calculations. Students will also be expected to demonstrate the following knowledge: - measurements of quantities such as time, length, volume, using common measuring instruments- mathematical processes; - basic functions of calculators, and; - basic measuring instruments.

VU22103 Participate in a practical placement with support

Locations:Industry, Footscray Nicholson, City King St, Sunshine, Geelong Learning Links.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to select, negotiate and participate in a practical work or community placement.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - negotiate placement; - participate in a work placement; - complete required documentation; - read and interpret workplace documents/signage and procedures relevant to work performed, and; - personal management skills to assess personal strengths and weaknesses. Students will also be expected to demonstrate the following knowledge: - sources of information on placement options.

VU22110 Develop a learning pathway

Locations:Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge necessary to investigate options and plan for further education and training to support employment and/or community participation. It includes the skills to conduct and document a self audit of current skills.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to document a learning action plan; - self management skills to reflect on own experiences and identify potential barriers and current skills, and; - communication. Students will also be expected to demonstrate the following knowledge: - education and training options, and; - support schemes including those for Australian Aboriginal and Torres Strait Islander Peoples.

VU221 11 Work with Aboriginal and/or Torres Strait Islander community members to develop mentoring skills

Locations:Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop as a mentor, with the support of Aboriginal and/or Torres Strait Islander community members/ elders.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to provide mentoring support to others and respond to feedback on own activities; - self management skills to model positive behaviours, and; - literacy skills to maintain records, which may include written, visual and/or digital literacy. Students will also be expected to demonstrate the following knowledge: - mentoring features and benefits of being a mentor; - characteristics of mentoring programs; - community support resources; - the importance of maintaining the confidentiality of others personal information, and; - methods of maintaining a record of activities such as written and digital methods.

VU221 12 Support others to complete a small scale community project

Locations:Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop as a mentor, with the support of Aboriginal and/or Torres Strait Islander community members/ elders.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to contribute to project planning, implementation, monitoring and review such as: offering suggestions and responding to feedback, seeking assistance and recording assistance when required; - planning and organising skills to manage own time to complete tasks according to project plan requirements, and; - problem solving skills to: recognise conflict within the team, identify issues affecting the successful completion of project. Students will also be expected to demonstrate the following knowledge: - features of small scale project plans to enable contribution to the development of a draft plan; - conflict resolution techniques to enable appropriate responses to conflicts within the team, and; - time management strategies, such as prioritising work and seeing assistance to enable timely completion of own tasks.

VU221 13 Investigate the influence of Aboriginal and/or Torres Strait Islander history

Locations:Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to gather information on Aboriginal and/or Torres Strait Islander and related history and analyse its impact on current events and attitudes impacting on the Aboriginal and/or Torres Strait Islander community.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to access relevant information; - problem solving skills to analyse information and determine its influence on current events and attitudes impacting on the Aboriginal and/or Torres Strait Islander community, and; - literacy skills to access information from written and/or digital sources. Students will also be expected to demonstrate the following knowledge: - sources of information on Aboriginal and/or Torres Strait Islander and related history to enable information to be gathered and analysed; - cultural considerations related to the use of imagery, and; - different presentation formats to enable the most appropriate format to be used.

VU221 14 Investigate and present on features of Aboriginal and/or Torres Strait Islander culture

Locations:Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to identify and compare features of Aboriginal and/or Torres Strait Islander and other cultures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - communication skills to gather and interpret information from Elders and Aboriginal and/or Torres Strait Islander community members; - problem solving skills to analyse information and determine its impact on day to day life, and; - literacy skills to access and interpret information from written and/or digital sources. Students will also be expected to demonstrate the following knowledge: - sources of information on Australian Aboriginal and/or Torres Strait Islander and other cultures to enable information to be gathered and analysed; - cultural considerations related to the use of imagery, and; - different presentation formats to enable the most appropriate format to be used.

VU221 16 Develop written job application skills

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to produce a written job application in response to an advertised position, which can relate to advertised positions in employment, community or volunteering settings or further study programs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to interpret and address requirements of written job applications, and; - planning and organisational skills to complete and submit applications in required time and format. Students will also be expected to demonstrate the following knowledge: - elements of written job applications to enable accurate and relevant information to be supplied, and; - conventions of written job applications.

VU221 17 Develop job interview skills

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to prepare for and participate in job interviews.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to access and interpret information and prepare required documentation; - personal management skills to attend interviews punctually, and; - communication skills to participate effectively in interviews and seek feedback. Students will also be expected to demonstrate the following knowledge: - sources of information on job interviews, and; - features of references and resumes.

VU2225 Manage the development, implementation and review of strategic business plans

Locations: Industry, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to design and manage the implementation, monitoring and evaluation of strategic business plans that are based on a comprehensive analysis of the competitive market and that meet overall enterprise or organisational strategic goals and directions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpersonal and communication skills to work collaboratively with clients, colleagues, management and stakeholders; - organisational skills to develop and implement business planning framework; - leadership skills to manage strategic business planning; - research, analytical and numeracy skills; - leadership and problem solving skills to manage strategic business plan; - literacy and technical writing skills, and; - research, analytical and evaluation skills. Students will also be expected to demonstrate the following knowledge: - principles, practices and methodologies of sustainable strategic business planning; - current debates, theories and bodies of knowledge surrounding: principles and practices of strategic business planning, and; consultative and participative management approaches; - relevant international, national and local legislative, regulatory and ethical requirements; - market trends and developments analysis methodologies; - risk management strategies; - performance measuring and monitoring systems; - quality management and continuous improvement concepts and practice; - human and business capacity building methodologies; - organisational strategic and operational planning; - change management principles; - implementation methodologies, and; - monitoring and review methods.

VU2226 Lead creative thinking and innovation practices in an organisational environment

Locations: Industry, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to research and practice innovation and creative thinking in order to lead, support and maintain a culture of innovative thinking and practice that will further organisational strategic planning for sustainable business practices across a range of organisational contexts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpersonal, communication and team building skills; - research methodology and critical analysis skills; - self-management, learning and reflective practice skills to evaluate and advance personal effectiveness in modelling and leading creative thinking and innovation practices

across a range of organisational contexts; - communication, consultation and negotiation and team building skills to promote, model, lead and sustain a culture of ongoing learning and development within organisational contexts; - planning and organisational skills to develop, implement and sustain practical strategies and mechanisms that support creative thinking and innovation practices within organisational settings, and; - leadership and problem-solving skills to assess challenges and risks at a strategic level and to develop appropriate responses. Students will also be expected to demonstrate the following knowledge: - relevant research and current literature on theories and bodies of knowledge about sustainable creative thinking and innovation practices within organisations; - relevant research, and current literature about the influence various styles and models of leadership and management have on creative thinking and innovation practices across a range of organisational contexts; - relevant international, national and local legislation, regulations, standards and ethical requirements; - relevant critical analyses of social, political, economic and technological developments that determine the broad context for innovation across a range of organisational contexts; - relationship between theory and practice in creative thinking and innovation practices within organisations; - risk assessment and change management strategies relevant to innovation and creative thinking within organisations; - change management theory and practice; - disruptive thinking methodologies, and; - human and business capacity building methodologies.

VU22227 Manage multiple projects

Locations: Industry, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to undertake the strategic responsibility, accountability and decision making for overall management of multiple projects within an organisational context, through identifying the project scopes within a strategic context, managing the establishment and integration of project activities, and, finalising and reviewing project processes and outcomes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpersonal and communication skills to: negotiate, consult and deal effectively with colleagues, clients, stakeholders and other relevant professionals; manage organisational diversity; - maintain commitment of stakeholders and project teams; - manage performance; - plan contingency management when necessary; - achieve project outcomes; - determine multiple projects management framework, optimum project opportunities, project plans and structures; - evaluate processes of multiple projects across a range of organisational contexts; - source and interpret relevant legal documents, legislation and regulations to meet compliance and ethical requirements; - organisational, business and outcome management skills to plan for and administer multiple project management outcomes across a range of organisational contexts, and; - strategic planning skills to administer targets, timelines, roles and responsibilities written communication skills to prepare and design project documentation that incorporates: project requirements; risk assessments; project progress reports; project monitoring and quality assurance processes; project reviews and recommendations. Students will also be expected to demonstrate the following knowledge: - relevant international, national and state legislative, regulatory and

ethical requirements; - current models and methodologies for the practice of managing multiple projects in organisational contexts; - project management methodologies; - strategic business planning; - overall organisational strategic and operational planning; - creative thinking and innovation practices in relation to managing multiple projects; - financial management strategies; - risk management strategies; - general principles and practices of environmental sustainability; - performance measuring and monitoring systems for multiple project management, and; - quality management and continuous improvement concepts and practice.

VU22228 Manage legal, regulatory and ethical compliance requirements in an organisational environment

Locations: Industry, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop and implement a compliance management system that meets legal, regulatory and ethical compliance requirements relevant to a specific organisational context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpersonal skills to work with local and international clients, colleagues, management, and/or external stakeholders across a range of organisational contexts; - reading and comprehension skills to understand legislation, regulations and industry standards documents and reports; - communication skills to relay compliance requirements and corollary, organisational policies and procedures; - problem-solving skills to address continuous improvement in compliance; - assess models and trends in compliance management for optimum application to specific organisational contexts; - assess organisational compliance systems, policies and procedures; - address existing and potential non-compliant and unethical activity, and; - organisational and time management skills to implement compliance, liaison, auditing and reporting activities across a range of organisational contexts. Students will also be expected to demonstrate the following knowledge: - relevant international, national and state legislative, regulatory and ethical requirements; - current models and trends in compliance management systems and practices; - ethical and legal requirements for organisational research, information management and approaches; - economic, social and environmental sustainability goals, initiatives, reporting and protocols; - governance principles and responsibilities in relation to compliance; - strategies for developing a positive compliance culture within the organisation; - compliance risk assessment and management strategies; - continuous improvement processes for compliance including monitoring, evaluation and review; - compliance auditing and reporting procedures and practices; - breach of compliance reporting and procedures; - project management, and; - safe work practices.

VU22229 Develop and implement a risk management strategy

Locations: Industry, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop and manage the implementation and review of a risk management strategy for a particular organisational context.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - negotiate, consult and deal effectively with colleagues, clients, stakeholders and other relevant professionals; - manage organisational diversity; - manage changing initiatives; - achieve consensus and strategic outcomes; - achieve commitment to organisational risk management policies; - resolve conflicts; - manage performance; - plan contingency management when necessary; - source and interpret relevant codes, standards and protocols for risk management requirements; - assess existing and potential risks; - identify, prioritise risk mitigation opportunities; - planning skills to develop a risk management strategy and appropriate supporting policies and procedures; - writing and reporting skills to develop formal and informal reports, monitoring and progress reports and implementation plans, and; - analytical and evaluation skills to assess risk management strategy and use results to inform future practice. Students will also be expected to demonstrate the following knowledge: - general principles, practices and methodologies of risk management; - risk management strategic planning; - strategic business planning; - overall organisational strategic and operational planning; - relevant international, national and state government legislation, regulations, standards and provisions; - economic, social and environmental sustainability goals, initiatives, reporting and protocols; - creative thinking and innovation practices in relation to managing risk; - people and change management methodologies, and; - performance measuring and monitoring systems.

VU22230 Manage people in an organisational environment

Locations: Industry, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop and manage the motivation and engagement of people, within a broad organisational context, in order to achieve what the organisation has set out to do. This is achieved through analysis of organisational context and stakeholder capability and the development of appropriate people management strategies: communication; collaboration; reflective practice, and motivational approaches.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpersonal and communication skills to work collaboratively with clients, colleagues, management and stakeholders; - research methodology and critical analysis skills; - identify, source, document, evaluate and debate theories, practices and discourses relevant to managing human behaviour in organisations and relate concepts, ideas and examples to a range of organisational contexts; - address different cultural mores, culturally-specific business practices and culturally diverse workplace practices; - interpret organisational objectives, assess challenges and requirements; - develop appropriate global people management responses; - assess people management strategies and use results to inform future practice; - lead a culture of collaboration

903

and motivation within global organisational contexts; - manage changing initiatives; - determine relevant organisational strategies; - filter and assimilate relevant external information into organisational strategies; - implement strategies; - resolve conflicts and problems; - manage performance globally; - plan contingency management when necessary; - build teams, consult and negotiate; - manage people in remote locations when required; - self-management, learning and reflective practice skills to evaluate personal effectiveness in managing people within organisational contexts, and; - literacy and writing skills to prepare and present reports; strategic plans; progress monitoring records, and evaluation data. Students will also be expected to demonstrate the following knowledge: - relevant research on theories and bodies of knowledge about understanding and managing people and behaviour within organisations; - relevant research and current literature about the influence organisational structure and design, culture and conditions have on approaches to people management across a range of organisations; - relationship between theory and practice of managing people and human behaviour within organisations; - performance measuring and monitoring systems; - human and business capacity building methodologies; - strategic business planning; - overall organisational strategic and operational planning, and; - creative thinking and innovation practices in relation to people management.

VU22234 Oversee the management of financial resources in an organisation

Locations: Industry, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to review the financial performance of an organisation and to oversee the relationship between financial and budgetary decision making and the current and future achievement of overall organisational strategic goals and objectives.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpersonal and communication skills to work and consult with clients, colleagues and management; - develop and promulgate budgets; - record, gather and classify financial information; - interpret financial reports for current and future financial and strategic planning; - forecast expenditure requirements; - develop and promulgate budgets; - analyse and use budget systems and reporting processes; - strategic management and critical analysis to research, select and apply financial analysis methods, budgetary controls and financial management implementation strategies; - oversee the determination, implementation and monitoring of financial resource management and decision making to ensure alignment with strategic business plan/s and overall organisational goals, objectives and strategic planning; - monitor reporting requirements; - solve financial resourcing related problems; - assess financial resource management methods and use results to inform future practice, and; - assess and address existing and potential risk, non-compliance and unethical activity. Students will also be expected to demonstrate the following knowledge: - general principles of financial management; - financial terminology, concepts and data analysis and interpretation methodologies; - principles of financial and budgetary risk management; - financial management performance measuring and monitoring systems; - relevant international, national and state legislative, regulatory and ethical requirements; - strategic business planning; - organisational strategic planning; - financial risk

assessment and management strategies; - quality management and continuous improvement concepts and practice; - economic, social and environmental sustainability goals, initiatives, reporting and protocols, and; - available financial and budgetary management software.

VU22235 Develop and manage an integrated marketing strategy

Locations: Industry, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop, implement, monitor and evaluate a marketing strategy that meets requirements of the organisational general marketing operations whilst being aligned to the organisational strategic business plans and overall strategic direction.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - work collaboratively with clients, colleagues, management and stakeholders; - lead debate so as to select the most effective marketing strategy and technology; - manage the implementation, monitoring and evaluation of marketing strategies; - assess and manage strategies to promote organisational cultural acceptance and commitment to selected marketing strategy; - solve marketing strategy problems and implement contingency strategies; - identify potential barriers to projected outcomes; - identify and assess marketing methodologies and approaches for application to a range of organisational contexts; - identify digital marketing technologies and determine opportunities for their application within marketing strategies; - analyse risks and establish contingencies, and; - evaluate the effectiveness of implemented marketing strategies and use results to inform future practice. Students will also be expected to demonstrate the following knowledge: - fundamental principles of marketing; - marketing strategic planning and management; - aligning marketing strategy with organisational objectives; - general principles and practices of digital marketing; - strategic business planning; - relevant international, national and state legislative, regulatory and ethical requirements; - relevant ethics and codes of practice; - economic, social and environmental sustainability goals, initiatives, reporting and protocols; - innovative thinking and creative practice for integrating marketing strategies within organisational business and strategic planning; - performance measuring and monitoring systems; - continuous improvement concepts and practice, and; - risk management strategies.

VU22271 Develop academic skills for the tertiary learning environment

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to support the transition to tertiary study by developing knowledge of the tertiary learning environment, collaborative learning and academic literacy skills.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: negotiate and agree communication protocols for a collaborative group; apply collaborative group protocols, and; participate in an oral group presentation; - literacy skills to: document collaborative group protocols and learnings, and; apply the features of academic discourse to produce a piece of academic writing; - team work skills to: contribute to a collaborative learning experience; support others in a collaborative learning experience, and; contribute to an oral group presentation; - self-management skills to: develop strategies to address factors impacting on transition to tertiary study; identify own needs in relation to transition for academic success, and; apply collaborative group protocols; - problem solving skills to analyse the features, benefits and disadvantages of different learning strategies as they relate to different learning contexts; - planning and organising skills to: plan, manage and evaluate activities in relation to own level of involvement and responsibility in a collaborative learning experience; collect, organise and evaluate information, and; contribute to the preparation of an oral group presentation, and; - learning skills to determine effective personal learning strategies. Students will also be expected to demonstrate the following knowledge: - sources of information that can support transition to tertiary study; - a range of learning strategies to support development of appropriate personal strategies; - features of respectful communication and behaviour to support positive group interactions; - features of effective oral presentations such as using body language, clarity of expression, speaking clearly and audibly; - elements of academic discourse to support the production of a piece of academic writing, and; - commonly used referencing systems and their application to a range of academic sources.

VU22272 Investigate the education system

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to investigate the education system. This includes examining the links between key national and state government policies and the requirements to work as a teacher.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to: source, interpret and analyse information about the education sector; summarise ideas and information, and; collect and organise information; - problem solving skills to establish and analyse the relationship between education frameworks and student learning; - technology skills to: access online information about the education sector, and; manage online information, and; - planning and organising skills to collect and use information to investigate the education system. Students will also be expected to demonstrate the following knowledge: - sources of information about different aspects of the education system; - registration requirements and processes for teachers, and; - factors affecting teacher demand.

VU22273 Examine approaches to learning

Locations: Footscray Park.

Prerequisites: Nil.

Description:This unit describes the skills and knowledge to examine a range of learning theories, their relationship to learning approaches and implications for teaching. It also includes examination of and reflection on approaches that enhanced own learning experiences.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to: source, interpret and analyse information about learning theories and their application; summarise ideas and information; collect and organise information, and; compare different views of learning. - problem solving skills to identify and analyse the link between learning theories and teaching approaches; - technology skills to access information about learning theories, and; - learning skills to reflect on own learning experiences and assess potential influence on own teaching practice. Students will also be expected to demonstrate the following knowledge: - relationship between a minimum of two learning theories and practice; - purpose and principles that inform a minimum of two learning theories; - factors that impact on learning, and; - different views of how learning occurs.

VU22274 Investigate contemporary issues in teaching

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to investigate the teaching environment and contemporary issues that impact on teaching and teachers.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to read and interpret a range of information; - problem solving skills to: analyse the reliability of information sources; critically examine changing views of teaching and teachers; analyse the internal expectations of teachers, and; analyse the impact of key legislation and policy on teaching and teachers, and; - self-management skills to: develop strategies for dealing with situations likely to be encountered in the school environment, and; reflect on the way in which own views may influence teaching practice. Students will also be expected to demonstrate the following knowledge: - reliable sources of information on relevant legislation and educational policy; - changing family demographics; - common cultural stereotypes; - factors that contribute to socio economic disadvantage; - key effects of educational disadvantage, and; - workforce trends. .

VU22275 Investigate the digital education environment

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to investigate the ways in which digital learning can support educational outcomes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - digital literacy skills to navigate and interpret information; - self-management skills to: reflect on own level of digital learning knowledge and skill, and; identify opportunities to improve own digital learning knowledge and skill, and; - problem solving skills to: examine the strengths and weaknesses of a range of commonly used educational technologies; examine common issues encountered in digital learning, and; analyse the risks to student outcomes of using inappropriate pedagogy / technology combinations. Students will also be expected to demonstrate the following knowledge: - reliable sources of relevant information, and; - key digital pedagogies. .

VU22276 Apply safe work practices involving machines using technology teaching

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit describes the knowledge and skills required by secondary school technology teachers using wood and/or metal working machinery in a classroom environment in order to: source Work, Health and Safety/ Occupational, Health and Safety (WHS/OHS) legislation and Victorian Department of Education and Training (DET)/school policies and relevant information for technology teaching; apply WHS/OHS to group based learning; assess and control risks; identify hazards; respond to emergencies, and; identify WHS/OHS roles of key school personnel.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying WHS/OHS legislative requirements and DET/school policies in a technology teaching environment; - identifying and controlling risks and hazards to provide a safe learning environment; - exercising duty of care in a technology teaching environment; - reporting on WHS/OHS hazards and incidents, and; - communicating and working with others to reduce risks and improve safety in a technology teaching environment. Students will also be expected to demonstrate the following knowledge: - WHS/OHS requirements in legislation; - DET/school policies and guidelines relevant to technology teaching; - WHS/OHS roles and responsibilities of technology teachers; - WHS/OHS roles and responsibilities of school management; - sources of WHS/OHS information and advice; - hazards and risks in a technology teaching environment; - risk controls relevant to technology teaching; - workplace and equipment safety requirements, and; - types of wood and/or metal working machines and their purpose.

VU22277 Perform safe work operations involving metal working machines used in technology teaching

Locations: Industry, Sunshine.

Prerequisites: VU22276 - Apply safe work practices involving machines using technology teaching

Description: This unit describes the knowledge and skills required to apply safe work practices to operations using a range of metal working machines used for technology teaching in secondary schools. It includes the application of the relevant Work, Health and Safety/Occupational, Health and Safety (WHS/OHS) and Victorian Department of Education and Training (DET)/school policies and guideline requirements for the work.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and controlling risks and hazards to ensure a safe learning environment; - exercising duty of care/due diligence in a technology teaching environment; - reporting on WHS/OHS hazards and incidents; - working with others to reduce risks and improve safety in a technology teaching environment; - selecting and using appropriate personal protective equipment (PPE); - operating metal working machines safely; - setting up metal working machines; - measuring materials and components to specified sizes/tolerances; - identifying and reporting machine faults; - communicating effectively with others in an educational setting; - producing materials to a required specification using metal working machines; - applying safe operating procedures when using metal working machines; - identifying and using a range of metal cutting tools and associated accessories; - identifying and using tools and equipment relevant to setting up metal working machines, and; - handling materials under machine operation; - identifying machine and equipment faults. Students will also be expected to demonstrate the following knowledge: - WHS/OHS requirements in legislation; - DET/school policies and guidelines relevant to technology teaching; - WHS/OHS roles and responsibilities of technology teachers; - WHS/OHS roles and responsibilities of school management; - sources of WHS/OHS information and advice; - hazards and risks in a technology teaching environment; - risk controls relevant to technology teaching; - workplace and equipment safety requirements; - maintenance processes of metal working machines; - types of metal working machines and their operation, and; - personal protective equipment (PPE).

VU22278 Perform safe work operations involving wood working machines used in technology teaching

Locations: Industry, Sunshine.

Prerequisites: VU22276 - Apply safe work practices involving machines using technology teaching

Description: This unit describes the knowledge and skills required to apply safe work practices to operations using a range of wood working machines used for technology teaching in secondary schools. It includes the application of the relevant Work, Health and Safety/Occupational, Health and Safety (WHS/OHS) and Victorian Department of Education and Training (DET)/school policies and guideline requirements for the work.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying WHS/OHS legislative requirements and DET/school policies in a technology teaching environment; - identifying any controlling risks and hazards to ensure a safe learning environment; - exercising duty of care/due diligence in a technology teaching environment; - reporting on WHS/OHS hazards and incidents; - working with others to reduce risks and improve safety in a technology teaching environment; - selecting and using appropriate personal protective equipment (PPE); - operating wood working machines safely; - setting up wood working machines; - measuring materials and components to specified sizes/tolerances; - identifying and reporting machine faults; - communicating effectively with others in an educational setting, and; - producing materials to a required specification using wood working machines. Students will also be expected to demonstrate the following knowledge: - WHS/OHS requirements in legislation; - DET/school policies and guidelines relevant to technology teaching; - WHS/OHS roles and responsibilities of technology teachers; - WHS/OHS roles and responsibilities of school management; - sources of WHS/OHS information and advice; - hazards and risks in a technology teaching environment; - risk controls relevant to technology teaching; - workplace and equipment safety requirements; - maintenance processes of wood working machines; - types of wood working machines and their operation; - safety considerations for operating wood working machines; - cutters, blades and associated accessories; - tools and equipment relevant to setting up wood working machines; - materials under machine operation; - fault identification; - personal protective equipment (PPE), and; - guarding and machine protective equipment.

VU22329 Report on a range of sectors in the manufacturing, engineering and related industries

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit describes the knowledge and skills required to locate information and report on the breadth of coverage and degree of diversity found in the manufacturing, engineering and related industries. The information includes the identification of the major sectors of the industry, products produced and manufacturing processes including advanced manufacturing processes. The range of occupations found in the major sectors of the industry and career opportunities are also included.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and interpreting documentation including diagrams, flow charts, graphs and related data; - using various gather techniques to access and gather information for a given topic; - planning, assembling and organising information and data for a report; - using a personal computer and software package to format and prepare a report on a given topic, and; - completing a set task in a given timeframe. Students will also be

expected to demonstrate the following knowledge: - sources of information on the manufacturing, engineering and related industries; - advanced manufacturing technologies; - diversity of the manufacturing, engineering and related industries including key sectors and structure; - roles, occupations and employment opportunities in the manufacturing, engineering and related industries; - qualifications/courses (VET and university) and training pathways available for manufacturing, engineering and related industries, and; - personnel computer operations and software for producing written reports.

VU22330 Select and interpret drawings and prepare three dimensional (3D) sketches and drawings

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to select and interpret drawings to plan and complete an engineering task. The unit also includes the knowledge and skills required to prepare three dimensional (3D) sketches and drawings of simple engineering components for communication requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and communicating information from engineering drawings and sketches, and; - applying sketching skills to produce detail drawing in 3rd angle orthogonal and isometric projection. Students will also be expected to demonstrate the following knowledge: - types and functions of technical drawings; - engineering drawing conventions and symbols; - drafting methods for preparing original drawings, and; - drawing standards and conventions (e.g. AS1100).

VU22331 Perform basic machining processes

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to perform basic machining operations. The unit includes setting up and machining components using various machinery such as; lathes, milling machines, cut off saws, pedestal grinders and fixed position drilling machines. This unit also includes performing basic computations related to machining processes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - setting up and safely performing a range of basic machining tasks to meet job requirements; - planning and sequencing machining operations; - marking out of materials using appropriate marking medium and tools; - selecting and applying clamping devices for holding work; - mounting and positioning cutting tools; - adjusting machine settings; -

selecting and using lubricants; - cutting and grinding a range of materials; - identifying worn or damaged cutting tools; - reshaping, sharpening cutting tools; - using common abrasives; - loading and glazing a grinding wheel; - selecting drill bits and drilling speeds; - setting-up and operating a pedestal drill; - following enterprise environmental requirements for the disposal of waste materials; - performing calculations involving additions, subtractions, multiplication and divisions; - expressing numerical information in the form of fractions, decimal format or percentages; - selecting appropriate formula for calculating length, perimeter, area, volume and angles; - checking calculated answers for accuracy, and; - rounding off estimated answers. Students will also be expected to demonstrate the following knowledge: - safe practices and procedures in an engineering workshop environment; - machine types as listed in the range statement and the operations relevant to those machines; - safe operation of individual machines as listed in the range statement; - common materials used in the manufacturer of engineering components; - types of grinding wheel dressers and procedures for wheel dressing; - methods of clamping and securing work during machining operation; - techniques and tools for measuring and marking out materials for machining operations; - environmental consideration and disposal of engineering workshop waste; - formula applicable to the determination of perimeter, area and volume of simple geometric shapes; - procedures and techniques for rounding off figures when estimating approximate answers, and; - application and conversion of mixed numbers, decimals, fractions and whole numbers.

VU22332 Apply basic fabrication techniques

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to perform basic fabrication tasks. The unit includes setting up and operating machinery used for fabrication processes and assembly techniques. This unit also includes carrying out basic computations and marking out skills related to fabrication techniques.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - setting up and safely performing a range of fabrication tasks to meet job requirements; - interpreting drawings for fabrication tasks; - performing calculations and marking out materials for fabrication tasks according to job instructions; - planning and sequencing fabrication tasks; - selecting appropriate tools and equipment for fabrication tasks; - carrying out fabrication tasks inline with job specifications; - following enterprise environmental requirements for the disposal of waste materials; - performing calculations involving additions, subtractions, multiplication and divisions; - expressing numerical information in the form of fractions, decimal format or percentages; - selecting appropriate formula for calculating length, perimeter, area, volume and angles; - checking calculated answers for accuracy, and; - rounding off estimated answers. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures in an engineering workshop environment; - fabrication tools and machinery in common use; - purpose and function of machinery safety guards; - basic fabrication processes and techniques; - common materials used for fabrication tasks; - workshop cleaning and engineering materials waste disposal requirements; - formula applicable to the determination of perimeter, area and

volume of simple geometric shapes; - procedures and techniques for rounding off figures when estimating approximate answers, and; - application and conversion of mixed numbers, decimals, fractions and whole numbers.

VU22333 Perform intermediate engineering computations

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the skills and knowledge required to prepare and apply intermediate level engineering computations. It includes the use of trigonometry, the application of sine and cosine rules, formulae and geometric principles relevant to the engineering and the calculation of areas and volumes of common engineering shapes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures; - obtaining and interpreting data from specifications, drawings, job sheets or work instructions to establish required outcomes; - determining the appropriate calculation method to suit the application; - performing calculations using trigonometric ratios, sine and cosine rules, pythagoras theorem and geometric formulae; - manipulating of formulae to change the subject, and; - checking answers using estimations. Students will also be expected to demonstrate the following knowledge: - formulae applicable to the determination of perimeter, area and volume of simple geometric shapes; - the reasons for ensuring calculations are carried out using the same units of measurement; - nomenclature used in trigonometry, pythagoras' theorem and geometry; - mathematical principles and order of operations; - techniques and procedures for rounding off figures when estimating approximate answers, and; - applications of geometric calculations in manufacturing and engineering situations.

VU22334 Produce basic engineering components and products using fabrication and machining operations

Locations:Sunshine.

Prerequisites:VU22331 - Perform basic machining processes VU22332 - Apply basic fabrication techniques

Description:This unit of competency describes the knowledge and skills required to produce a range of basic engineering components and products using basic fabrication and machining techniques. This involves identifying the required manufacturing methods, planning the operations, preparing materials and tooling, producing components and assembling components. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning and sequencing the

manufacturing of a component using basic machining operations and fabrication techniques; - safely setting up, operating and shutting down various machines commonly used in an engineering workshop; - safely handling various engineering materials; - marking out materials using appropriate marking medium and tools; - applying techniques for holding and clamping work when undertaking machining and fabricating operations; - performing cutting operation of a range of materials; - identifying worn or damaged cutting tools; - reshaping and/or sharpening cutting tools; - using common abrasives, and; - selecting and applying appropriate lubricants when undertaking machining and fabrication operations. Students will also be expected to demonstrate the following knowledge: - safe working practices and procedures in an engineering workshop environment; - environment considerations and disposal of engineering workshop waste; - marking out techniques for a range of fabrication tasks; - engineering computation for machining operations; - marking tools and measuring equipment for fabrication tasks; - types and basic properties of materials used for fabrication tasks and machining operations; - safe use and care of hand tools and hand held power tools; - operation and maintenance of machinery used for cutting, grinding, drilling, turning and milling, and; - techniques and clamping methods for securing work during machining and fabrication operations.

VU22335 Perform metal machining operations

Locations:Sunshine.

Prerequisites:VU22331 - Perform basic machining processes

Description:This unit of competency describes the knowledge and skills required to produce basic engineering components and products by metal machining operations such as cutting, grinding, turning and drilling. The unit includes identifying the required manufacturing methods, planning and sequencing the operations, preparing materials and equipment, producing components and assembling components.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning and sequencing cutting, grinding, turning and drilling operations to meeting job requirements; - completing calculations to meet specified dimensions and tolerances within job specifications; - selecting and preparing machines and accessories for use; - setting-up and operating cutting machines, grinding machines, turning lathes and drilling machines; - cutting, grinding, turning and drilling materials to specified dimensions and tolerances; - securing and clamping work for cutting, grinding or turning; - cleaning and maintaining cutting machines, grinding machines and lathes; - calculating work speeds and feed rates; - applying recommend tool angles from charts/tables for different material types; - applying quality procedures; - reading and interpreting routine job information such job instructions and specifications, work procedures, charts, lists, technical drawings; - following oral instructions and standard operating procedures; - checking and clarifying job related information; - checking conformance to job specifications and managing non-conformance, and; - measuring to specified tolerances and dimensions. Students will also be expected to demonstrate the following knowledge: - major parts and components of machinery used for cutting, grinding, drilling and turning; - capabilities and safe operating parameters for cutting machines, grinding machines, drilling machines and centre lathes; - factors influencing feeds and speeds and depth of cut or material removal

when operating a centre lathe; - principles of chip formation and control for centre lathe operation; - cutting fluids and coolants and their application for machining operations; - basic maintenance requirements of cutting, grinding, drilling machines and centre lathes; - hand tools and hand held power tools use in conjunction with machining operations, and; - safe work practices and procedures including hazards and risk control measure applicable to an engineering workshop environment.

VU22336 Perform metal fabrication operations

Locations:Sunshine.

Prerequisites:VU22332- Apply basic fabrication techniques

Description:This unit of competency describes the knowledge and skills required to perform various fabrication operations such as cutting, forming, bending and shaping to produce components and products. This involves identifying the required manufacturing methods, planning the operations, preparing materials and equipment, producing and assembling components.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and interpreting routine information such as job instructions, specifications and standard operating procedures, technical drawings for a fabrication operations; - following and responding to oral instructions in a workshop environment; - preparing a work plan and task sequencing for a fabrication operation; - preparing calculations and marking out materials for cutting, forming, bending and shaping operations; - securing and clamping work for cutting and forming operations; - setting up and operating cutting, forming, bending and shaping equipment; - applying metal joining methods; - applying quality compliance checks and procedures, and; - checking conformance of work to job specifications. Students will also be expected to demonstrate the following knowledge: - metal fabrication equipment, techniques and processes such as cutting, forming, bending and shaping; - marking out medium and tools for fabrication processes; - calculations for fabrication processes; - bend allowance/neutral axis; - sequence of fabrication operations; - hand tools and measuring equipment use in fabrication operations; - assembly techniques and processes, and; - metal joining methods.

VU22339 Create engineering drawings using computer aided systems

Locations:Sunshine.

Prerequisites:VU22330- Select and interpret drawings and prepare three dimensional (3D) sketches and drawings

Description:This unit of competency describes the knowledge and skills required to produce engineering drawings using a computer aided drafting (CAD) system. The unit includes the use of CAD software commands to generate drawing elements used in the development of a detailed drawing and familiarisation with the use of macros, menus, default settings and file management functions. The unit covers the development of simple two dimensional (2D) drawings and simple three dimensional (3D) drawings consistent with the conventions and general requirements of Australian Standard AS1100.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

909

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - starting up and shutting down a CAD system; - using menus and accessing files; - setting basic parameters and selecting commands; - setting system default functions; - saving, transferring and printing drawing files to a specified drive or directory; - developing basic macros; - creating, editing and modifying simple 2D and 3D drawings using basic drawing features of the software system; - hatching or filling areas for visual affect, and; - applying the conventions and requirements of AS1100 to drawing presentations. Students will also be expected to demonstrate the following knowledge: - functions and features of CAD software system; - screen display areas and their functions; - reasons for basic parameters; - drawing scales; - basic system variables and their customisation, and; - basic drafting standards/procedures including AS1100.

VU22340 Use 3D printing to create products

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to utilise a three dimensional (3D) printer to produce basic products. It encompasses the use of current 3D printing software applications, manipulation of hardware and software features, managing files and directories, file storage requirements and relevant safety procedures. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - manipulating industry-current 3D digital printing hardware and software application to create and produce a product; - managing 3D digital printing files and directories by applying standard naming conventions and version control protocols; - making back-up copies of files and storing them appropriately; - interpreting and clarifying written or verbal instructions for the production of a 3D digital printed product; - seeking expert assistance to address problems and responding constructively to feedback, and; - using relevant materials/resources to assist with the development and visualisation of a 3D digital printed product. Students will also be expected to demonstrate the following knowledge: - 3D digital printing techniques; - functions and features of a range of delivery platforms; - stages in the production process from initial design through to finished product; - issues and challenges in the context of creating 3D digital printed products; - WHS/OHS standards and procedures relevant to 3D digital printing operations; - resources useful for the development and creation of 3D digital printed products, and; - quality assurance considerations relevant to creation of 3D digital printed products.

VU22345 Engage with short simple texts for employment purposes

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description: This unit describes the skills and knowledge to engage with short, simple, highly familiar paper based and web based text types for employment purposes.

Learners at this level may require support through prompting and advice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use cues from context, personal experience and document lay-out to identify highly familiar words, phrases, symbols, visuals, numbers to recognise text types relevant to employment needs; - use a limited range of reading strategies including ability to draw on a small bank of sight vocabulary of personally relevant words/phrases and use elementary word attack skills to create meaning from text; - follow non-linear orientation of web based text to enable simple navigation, and; - technology skills to navigate web based text to locate simple information. Students will also be expected to demonstrate the following knowledge: - different text types relevant to employment purposes; - basic reading strategies to engage with paper based and web based texts; - purpose of a limited range of employment related texts, and; - the different ways in which web based information may be organised, such as linear and non linear.

VU22350 Create short simple texts for employment purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop initial writing skills to create short simple highly familiar text types for employment purposes. It can include handwritten and/or digitally based text types. Learners at this level may require support through prompting and advice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - construct a short hand written or digital text of one or two phrases/sentences with support; - locate simple information in text and use it to construct simple text, and; - problem solving skills to recognise different formatting conventions of text. Students will also be expected to demonstrate the following knowledge: - spatial arrangement, word separation and alignment of written text, and; - a small bank of employment related words and phrases to enable the preparation of content.

VU22352 Recognise numbers and money in simple, highly familiar situations

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge that enable learners to develop the basic skills and confidence to perform very simple and highly familiar

numeracy tasks involving the recognition, comparison and use of simple whole numbers and money which are part of the learners' normal routines and activities. Learners will mainly communicate these mathematical ideas using spoken rather than written responses. Learners at this level may require support through prompting and advice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read and say whole numbers and basic words associated with money; - recognise simple fractions ($\frac{1}{2}$); - write whole numbers as numerals and some in words; - recognise and compare the value of coins and notes, and; - recognise the simple operations of addition and subtraction and the words and symbols associated with them. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in simple texts; - place value of whole numbers into the hundreds, and; - techniques used to make rough estimations.

VU22353 Recognise, give and follow simple and familiar directions

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge that enable learners to develop the basic skills and confidence to perform very simple and highly familiar numeracy tasks involving the recognition, giving and following of simple and highly familiar directions. These directions are part of the learners' normal routines to do with orienting oneself in familiar contexts such as near their homes, in workplace buildings or classrooms. Learners will mainly communicate these mathematical ideas using spoken or simple written responses. Learners at this level may require support through prompting and advice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills to: read relevant, short texts and diagrams; recognise simple diagrams and maps of highly familiar locations. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in signs, diagrams and maps, and; - informal language of position and location to give and follow short, simple directions in highly familiar situations.

VU22354 Recognise measurements in simple, highly familiar situations

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to enable learners to develop the basic skills and confidence to perform very simple and highly familiar numeracy

tasks involving the recognition and comparison of simple and familiar measurements which are part of the learners' normal routines. This would typically relate to activities such as shopping, cooking, work related measures and telling the time. Learners will mainly communicate these mathematical ideas using spoken rather than written responses. Learners at this level may require support through prompting and advice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills to read and say whole numbers, simple fractions ($\frac{1}{2}$) and basic words associated with measurement and time. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in measurement contexts and materials such as on tools and packaging; - common units of metric measurement and their appropriate use, and; - abbreviations associated with highly familiar measurement and time.

VU22356 Recognise and locate simple numerical information in short, simple highly familiar texts

Locations:Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to enable learners to develop the basic skills and confidence to locate and recognise simple whole numbers which are part of numerical information in short, simple highly familiar texts. Learners can then use those numbers to perform very simple one-step calculations when reading documents such as short and simple newspaper articles, sports results, prices in advertisements and utility bills. Learners will mainly communicate these mathematical ideas using spoken rather than written responses. Learners at this level may require support through prompting and advice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read relevant, short texts; - write whole numbers as numerals and some in words; - read and say whole numbers and basic words associated with numbers; - recognise simple fractions ($\frac{1}{2}$), and; - cognitive skills to understand simple operations of addition and subtraction. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in simple texts such as in popular newspapers, advertising materials, bills and notices; - that numerical information can be represented in different forms; - techniques used to make rough estimations, and; - place value of whole numbers into the hundreds.

VU22358 Develop learning goals

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Geelong 911

Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to identify current skills, plan future skills development with the guidance of an appropriate support person and maintain a record of progress toward goals.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - take turns to maintain simple discussion about learning goals and potential issues in achieving them; - ask and respond to questions about learning goals; - discuss implementation of a learning plan; - follow simple instructions to complete a simple written template; - use sentences of one or two clauses to document own achievement of learning goals; - use key words related to own learning, and; - problem solving skills to draw on own experiences to identify current skills and learning goals. Students will also be expected to demonstrate the following knowledge: - different types of goals such as personal and work; - difference between long and short term goals, and; - source of additional support.

VU22359 Conduct a project with guidance

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to establish a simple proposal for a project, plan the project, carry out the project and review the outcome under the guidance of an appropriate support person. The unit also provides an opportunity for learners to develop personal skills such as working collaboratively with others, planning and organising self and others, problem solving, and using technology. Learners at this level may request support and begin to develop their own support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - discuss, plan and review a project; - discuss roles of participants and expected project outcomes; - convey information about the project; - ask and respond to questions and take turns to maintain discussion; - gather required resources; - locate information; - complete tasks according to agreed plan, and; - use simple sentences of one or two clauses and key vocabulary to document simple project plan. Students will also be expected to demonstrate the following knowledge: - benefits of the project in relation to own learning and development, and; - potential factors which contribute to the success or otherwise of the project.

VU22360 Engage with simple texts for personal purposes

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description: This unit describes the skills and knowledge to engage with simple, familiar and predictable paper and web based text types for personal purposes. Learners at this level may request support and begin to develop their own support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - critically read texts which have predictable structure and familiar vocabulary to make meaning; - get the gist of texts which have more unfamiliar elements to interpret information; - use a range of reading strategies to draw on bank of key vocabulary of personally relevant words/phrases and use word attack skills; - make connections between own knowledge and experience and the purpose and structure of texts; - follow non-linear digital texts to gain information; - use decoding strategies such as phonic and visual letter patterns to identify unknown words, and; - technology skills to navigate web based text to locate simple information. Students will also be expected to demonstrate the following knowledge: - how basic punctuation impacts on meaning, and; - reading strategies to engage with paper based and web based texts for different purposes or texts.

VU22361 Engage with simple texts for learning purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to engage with simple, familiar and predictable paper and web based text types for learning purposes. Learners at this level may request support and begin to develop their own support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - critically read texts which have predictable structure and familiar vocabulary to make meaning; - get the gist of texts which have more unfamiliar elements to interpret information; - use a range of reading strategies to draw on bank of key vocabulary of personally relevant words/phrases and use of word attack skills; - make connections between own knowledge and experience and the purpose and structure of texts; - use decoding strategies such as phonic and visual letter patterns to identify unknown words; - follow non-linear web based texts to gain information, and; - technology skills to navigate web based text to locate simple information. Students will also be expected to demonstrate the following knowledge: - how basic punctuation impacts on meaning; - reading strategies to engage with paper based and web based texts, and; - different purposes of text types.

VU22362 Engage with simple texts for employment purposes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to engage with simple, familiar and predictable paper and web based text types for employment purposes. Learners at this level may request support and begin to develop their own support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - critically read texts which have predictable structure and familiar vocabulary to make meaning; - get the gist of texts which have more unfamiliar elements to interpret information; - use a range of reading strategies to draw on bank of key vocabulary of personally relevant words/phrases and use word attack skills; - make connections between own knowledge and experience and the purpose and structure of texts; - use decoding strategies such as phonic and visual letter patterns to identify unknown words; - follow simple non-linear digital texts to gain information, and; - technology skills to navigate web based text to locate simple information. Students will also be expected to demonstrate the following knowledge: - how basic punctuation impacts on meaning; - reading strategies to engage with printed and digital texts; - different sources of employment texts, and; - different purposes or texts.

VU22363 Engage with simple texts to participate in the community

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to engage with simple, familiar and predictable paper and web based text types for community participation purposes. Learners at this level may request support and begin to develop their own support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - critically read texts which have predictable structure and familiar vocabulary to make meaning; - get the gist of texts which have more unfamiliar elements to interpret information; - use a range of reading strategies to draw on bank of key vocabulary of personally relevant words/phrases and use word attack skills; - make connections between own knowledge and experience and the purpose and structure of texts; - use decoding strategies such as phonic and visual letter patterns to identify unknown words; - follow non-linear web based texts to gain information, and; - technology skills to navigate screen based digital text to locate simple information. Students will also be expected to demonstrate the following knowledge: - how basic punctuation impacts

on meaning; - reading strategies to engage with paper based and web based texts, and; - different purposes or texts.

VU22365 Create simple texts for personal purposes

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop writing skills to create simple, familiar and predictable handwritten and digital text types for personal purposes. Learners at this level may request support and begin to develop their own support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - grammatically correct simple sentence structure; - upper and lower case letters consistently; - beginning ability to structure text; - use developing ability to link ideas using simple conjunctive devices such as "and" and "but"; - familiar letter patterns for spelling, and; - problem solving skills to identify audience and purpose of texts and use appropriate language. Students will also be expected to demonstrate the following knowledge: - stages or processes of writing including planning, drafting and editing, and; - knowledge of punctuation conventions of sentence writing.

VU22366 Create simple texts for learning purposes

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop writing skills to create simple, familiar and predictable handwritten and digital text types for learning purposes. Learners at this level may request support and begin to develop their own support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - beginning ability to structure text; - consistent use of upper and lower case letters; - developing ability to link ideas using simple conjunctive devices such as "and" and "but"; - grammatically correct simple sentence structure; - use of familiar letter patterns for spelling, and; - problem solving skills to identify audience and purpose of hand written and digital texts and use appropriate language. Students will also be expected to demonstrate the following knowledge: - stages or processes of writing including planning, drafting and editing, and; - punctuation conventions of sentence writing.

VU22367 Create simple texts for employment purposes

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

913

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop writing skills to create simple, familiar and predictable handwritten and digital text types for employment purposes. Learners at this level may request support and begin to develop their own support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to demonstrate: beginning ability to structure text; consistent use of upper and lower case letters; developing ability to link ideas using simple conjunctive devices such as "and" and "but"; grammatically correct simple sentence structure; use of familiar letter patterns for spelling, and; - problem solving skills to identify audience and purpose of paper based and digital texts and use appropriate language. Students will also be expected to demonstrate the following knowledge: - stages or processes of writing including planning, drafting and editing, and; - punctuation conventions of sentence writing.

VU22368 Create simple texts to participate in the community

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop writing skills to create simple, familiar and predictable handwritten and digital text types for community participation purposes. Learners at this level may request support and begin to develop their own support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - beginning ability to structure text; - consistent use of upper and lower case letters; - developing ability to link ideas using simple conjunctive devices such as "and" and "but"; - grammatically correct simple sentence structure; - use of familiar letter patterns for spelling, and; - problem solving skills to identify audience and purpose of paper based and digital texts and use appropriate language. Students will also be expected to demonstrate the following knowledge: - stages or processes of writing including planning, drafting and editing, and; - punctuation conventions of sentence writing.

VU22369 Work with simple numbers and money in familiar situations

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to enable learners to develop the basic skills and confidence to perform simple and familiar numeracy tasks. This involves the recognition, comparison and simple one-step calculations with money, whole numbers and simple everyday fractions, decimals and percentages which are part of the learners' normal routines and activities such as shopping, recreational

activities and routine work related calculations or purchases. Learners will communicate these mathematical ideas using mainly spoken responses with some written responses. Learners at this level may request support and begin to develop their own support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy and oracy skills to read, write and say whole numbers, simple fractions and familiar words associated with numbers and money, and; - numeracy skills to identify and use the value of coins and notes. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning; - place value of whole numbers into the thousands; - techniques used to make estimations and check results of calculations, and; - understanding of operations of addition (+), subtraction (-), simple multiplication (×) or simple division (÷) and the words and symbols associated with them.

VU22370 Work with simple measurements in familiar situations

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to enable learners to develop the basic skills and confidence to perform very simple and highly familiar numeracy tasks involving the recognition and comparison of simple and familiar measurements which are part of the learners' normal routines. This would typically relate to activities such as shopping, cooking, work related measures and telling the time. Learners will mainly communicate these mathematical ideas using spoken rather than written responses. Learners at this level may request support and begin to develop their own support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - oracy and literacy skills to read and say whole numbers, simple fractions ($\frac{1}{2}$) and basic words associated with measurement and time. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in measurement contexts and materials such as on tools and packaging; - common units of metric measurement and their appropriate use, and; - abbreviations associated with highly familiar measurement and time.

VU22371 Work with simple design and shape in familiar situations

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop the basic skills

and confidence to perform simple and familiar numeracy tasks involving the identification, comparison and sketching of simple and familiar two-dimensional and three-dimensional shapes and designs which are part of the learners' normal routines to do with familiar buildings, furniture, signs, or common household or workplace objects. Learners will communicate these mathematical ideas using mainly spoken responses with some written responses. Learners at this level may request support and begin to develop their own support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to read relevant, familiar materials and illustrations, diagrams and signs; - oracy skills to describe simple shapes and designs, and; - ability to use simple measuring and drawing tools to draw sketches of common two-dimensional shapes. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in relation to shapes and designs, and; - the characteristics of common two-dimensional and three-dimensional shapes and the informal and some formal language of shape and design.

VU22375 Apply basic computer skills to language learning

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to use the fundamental features and language of personal computers or other devices to perform a simple function and to access language learning activities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to seek and respond to instructions and clarifications; - problem solving skills to identify and address common computer problems, and; - planning and organising skills to follow sequential instructions. Students will also be expected to demonstrate the following knowledge: - OHS/WHS procedures for safe computer usage.

VU22376 Access the internet for language learning

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to identify and use the fundamental features of the internet to develop language skills.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to read and compose simple emails; - planning and organisational skills to sequence simple information, and; - technology skills to use computers to access the internet. Students will also be expected to demonstrate the following knowledge: - basic keyboard functions such as location of letters, shift key, symbols and enter key to enable internet and email addresses to be typed.

VU22378 Communicate with others in familiar and predictable contexts

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit develops the skills and knowledge to communicate verbally with others in familiar and predictable contexts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - provide and respond to key information; - formulate questions to seek clarification of information; - simple grammatical structures and tenses such as openings and closings and adjectives; - stress and intonation to communicate verbally; - non-verbal communication to convey meaning, and; - own personal experiences to verbally communicate information. Students will also be expected to demonstrate the following knowledge: - simple vocabulary related to personal details and other areas of personal interest; - interactional strategies to participate in verbal communication exchanges such as requesting repetition, using nonverbal communication techniques and turn-taking, and; - different reasons for communicating verbally.

VU22379 Identify community options

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to identify key aspects of the local environment to support everyday life.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to access and interpret information on local community services and recreation options; - read a public transport timetable, and; - identify the opening and closing times of a recreation activity. Students will also be expected to demonstrate the following knowledge: - reading strategies to engage with simple printed and/or digital texts about community services.

VU22383 Identify common digital media

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to become familiar with a limited range of digital media relevant to everyday life, such as automated teller machines (ATM), electronic card readers and electronic funds transfer point of sale (EFTPOS) equipment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify the purpose and functions of a range of personally relevant digital equipment; - select the appropriate digital equipment for specific tasks, and; - identify assistance options. Students will also be expected to demonstrate the following knowledge: - common usage of digital equipment in everyday life.

VU22384 Develop and document a learning plan and portfolio

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to identify long and short term goals, review current skills and plan future skills development and develop a learning plan to achieve goals. This unit also describes the skills and knowledge to develop and maintain a portfolio. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in the planning process to develop a learning plan; - read and interpret a range of information related to own goals; - discuss preparation of portfolio; - gather and use information to support development of the plan; - draw on previous experiences to inform development of the plan; - identify, select and organise evidence for portfolio using an established model; - compare own skills to identified goals, and; - identify steps to achieve goals. Students will also be expected to demonstrate the following knowledge: - importance of a learning plan to support achievement of goals; - factors which can support or hinder progress in achievement of goals, and; - different strategies to address barriers and difficulties.

VU22385 Plan and undertake a project

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to plan, carry out and review the final outcome of a project based activity focusing on an identified area of interest

or need. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read and interpret a range of information requirements related to the project; - record information related to the progress and completion of the project; - discuss resource requirements and progress of the project with those involved; - gather information to undertake the project; - follow an action plan to complete the project according to identified time frames and processes; - problem solving skills to identify contingencies to deal with unplanned obstacles related to the project such as notifying relevant staff of a problem; - learning skills to apply own knowledge and interests to selection of project activity, and; - personal management skills to manage own activities within the project. Students will also be expected to demonstrate the following knowledge: - methods to present and record information for the project; - potential barriers to completing a project and strategies to manage these, and; - different approaches to undertake a project.

VU22386 Engage with texts of limited complexity for personal purposes

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to engage with a range of familiar and less familiar paper and web based text types of limited complexity for personal purposes. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret basic structural conventions of texts such as chronological sequencing of events, identification followed by description; - draw on a range of de-coding and meaning-making strategies to make sense of texts, and; - technology skills to access and navigate web based text to locate information of limited complexity. Students will also be expected to demonstrate the following knowledge: - representation of an author's experiences, purposes, opinions in texts; - different audiences and purposes of text types; - different representation of paper based and web based information, and; - ways in which information can be accessed and used including in digital mode.

VU22387 Engage with texts of limited complexity for learning purposes

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to engage with a range of familiar and less familiar paper and web based text types of limited complexity for

learning purposes. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret basic structural conventions of text such as sequencing of information, identification followed by description; - draw on a range of decoding and meaning-making strategies to make sense of text; - draw on prior knowledge to make sense of text, and; - technology skills to access and navigate web based texts of limited complexity. Students will also be expected to demonstrate the following knowledge: - representation of an the author's experiences, purposes, opinions in texts; - relationship between source of text and validity of information; - different audiences and purposes of text types, and; - ways in which information can be accessed and represented in a number of ways including in digital mode.

VU22388 Engage with texts of limited complexity for employment purposes

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to engage with a range of familiar and less familiar paper and web based text types of limited complexity for employment purposes. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret basic structural conventions of text such as sequencing of information in flowcharts and work procedures, identification followed by description; - draw on a range of de-coding and meaning-making strategies to make sense of text; - draw on prior knowledge to make sense of text; - distinguish fact from opinion, and; - technology skills to access and navigate web based texts of limited complexity. Students will also be expected to demonstrate the following knowledge: - strategies used to interpret texts to identify their usefulness; - strategies and language used in texts to achieve purpose and convey information and opinion; - relationship between source of text and validity of information; - different audiences and purposes of text types, and; - ways in which information can be accessed and represented in a number of ways including in digital mode.

VU22389 Engage with texts of limited complexity to participate in the community

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to engage with a range of

familiar and less familiar paper and web based text types of limited complexity to participate in the community. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret basic structural conventions of texts such as sequencing of information in flowcharts, identification followed by description; - draw on a range of de-coding and meaning-making strategies to make sense of texts; - draw on prior knowledge to make sense of text; - distinguish fact from opinion, and; - technology skills to access and navigate screen based digital text. Students will also be expected to demonstrate the following knowledge: - strategies used to interpret texts to identify their usefulness; - strategies used in texts to achieve purpose and convey information and opinion; - relationship between source of text and validity of information; - text types have different audiences and different purposes, and; - ways in which information can be accessed and represented in a number of ways including in digital mode.

VU22391 Create texts of limited complexity for personal purposes

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop writing skills to create a range of familiar and some less familiar handwritten and digital text types of limited complexity for personal purposes. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locate information for texts to be created; - identify and match a range of audiences and purposes to text types; - connect ideas and information related to topic of text; - use a range of strategies to spell unfamiliar words, and; - use grammatical forms for different purposes such as giving explanations. Students will also be expected to demonstrate the following knowledge: - the major differences between public and private writing; - difference between formal and informal registers; - layout related to specific text types; - generic grammatical forms including personal pronouns and a range of tenses, and; - process of planning, drafting and proofreading. .

VU22392 Create texts of limited complexity for learning purposes

Locations:Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop writing skills to create a range of familiar and some less familiar handwritten and digital text types of limited complexity for learning purposes. Learners at this level work

independently and continue to build and use their own familiar support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locate information for texts to be created; - identify and match a range of audiences and purposes to text types; - connect ideas and information related to topic of text; - use a range of strategies to spell unfamiliar words, and; - use grammatical forms for different purposes such as giving explanations. Students will also be expected to demonstrate the following knowledge: - the major differences between public and private writing; - difference between formal and informal registers; - layout related to specific text types; - generic grammatical forms including personal pronouns and a range of tenses, and; - process of planning, drafting and proofreading. .

VU22393 Create texts of limited complexity to participate in the workplace

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop writing skills to create a range of familiar and some less familiar handwritten and digital text types of limited complexity for learning purposes. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - structure and sequence writing to produce text; - use punctuation devices such as full stops and commas, capitalisation of letters; - use grammatical forms for different purposes such as giving explanations"; - use dependent clauses with simple connectives such as when, if; - use a range of strategies to spell unfamiliar words, and; - identify audience and purpose of hand written and digital texts and use appropriate language. Students will also be expected to demonstrate the following knowledge: - stages or processes of writing including planning, drafting and editing; - punctuation conventions of sentence writing such as full stops, commas and question marks; - technical vocabulary and acronyms relevant to the workplace, and; - difference between formal and informal registers.

VU22394 Create texts of limited complexity to participate in the community

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop writing skills to create a range of familiar and some less familiar handwritten and digital text types of limited complexity to participate in the community. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locate information for texts to be created; - identify and match a range of audiences and purposes to text types; - connect ideas and information related to topic of text; - use a range of strategies to spell unfamiliar words, and; - use grammatical forms for different purposes such as giving explanations. Students will also be expected to demonstrate the following knowledge: - the major differences between public and private writing; - difference between formal and informal registers; - layout related to specific text types; - generic grammatical forms including personal pronouns and a range of tenses; - process of planning, drafting and proofreading, and; - generic grammatical forms including personal pronouns and temporal links.

VU22395 Work with a range of numbers and money in familiar and routine situations

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop numeracy skills related to interpreting, using and calculating with a range of whole numbers, decimals, routine fractions and percentages and money in familiar and routine situations in their personal, public, work or education and training lives. Learners will communicate these mathematical ideas using a combination of written and spoken responses.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills to read and interpret relevant, familiar texts and diagrams. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in texts and materials; - place value to read, write and interpret decimals and large whole numbers; - decimals, common fractions and percentages and their common equivalent forms; - informal and formal language of numbers to compare and interpret decimals, common fractions and percentages, and; - techniques used to make initial estimations and check results of calculations in relation to the context.

VU22396 Work with and interpret directions in familiar and routine situations

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop numeracy skills related to the interpretation and use of familiar maps or street directories and giving and following directions which are part of the learners' familiar and routine situations

in their personal, public, work or education and training lives. Their communication about these mathematical ideas will be a combination of spoken and written responses. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to read relevant, familiar written instructions and diagrams, including maps and street directories, and; - communication skills to use the formal and informal language of position. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in diagrams, maps and street directories; - key features and conventions such as distance, directions, simple scales, labels, symbols and keys on maps and plans; - informal and formal oral and written mathematical language of position and location, and; - position and location to give and follow directions.

VU22397 Work with measurement in familiar and routine situations

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop numeracy skills related to estimating, measuring and calculating everyday quantities including with time and dates, which are part of the learners' routine and less familiar situations in their personal, public, work or education and training lives. Learners will communicate these mathematical ideas using a combination of written and spoken responses.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills to read relevant, familiar texts and diagrams and communicate results of calculations, and; - problem solving skills to estimate, measure and calculate with everyday quantities and time using familiar measuring instruments including time measuring and/or recording devices. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in measurement contexts, materials and diagrams; - routine units of metric measurement and conversions between metric units; - units of time and their representation; - knowledge of decimals and common fractions in relation to measurement and time; - informal and formal language of numbers in relation to measurement and time, and; - knowledge of abbreviations associated with measurement and time.

VU22398 Work with and interpret statistical information in familiar and routine texts

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop numeracy skills related to interpreting and comprehending familiar chance statements and working with, constructing and interpreting statistical tables and graphs related to learners' familiar and routine situations in their personal, public, work or education and training lives. Learners will communicate these mathematical ideas using a combination of written and spoken responses. Learners at this level work independently and continue to build and use their own familiar support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills to read relevant, familiar texts that incorporate tables and graphs; - problem solving skills to interpret tables and graphs to identify appropriate numerical and statistical information, and; - planning and organising skills to collect data and create tables and graphs. Students will also be expected to demonstrate the following knowledge: - signs / prints/ symbols represent meaning in texts such as in newspapers, online, on utility bills and in notices and documents; - key features and conventions of tables and graphs, and; - informal and formal language of number and data to read, write and communicate about statistical results and information.

VU22400 Work with and interpret numerical information in familiar and routine texts

Locations: Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Sunbury Learning Links.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop numeracy skills related to locating and recognising a range of whole numbers, decimals, routine fractions and percentages which are part of numerical information partly embedded in routine texts. Learners can then use those numbers to perform simple multi-step calculations which are part of their' familiar personal, public, work or education and training lives. Learners will communicate these mathematical ideas using a combination of written and spoken responses. Learners at this level, work independently and continue to build and use their own familiar support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills to read relevant, familiar texts and identify decimals, common fractions and percentages when partly embedded in texts. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in texts and materials; - place value to read, write and interpret decimals and large whole numbers; - decimals, common fractions and percentages and their common equivalent forms; - informal and formal language of number to compare and interpret

decimals, common fractions and percentages, and; - techniques used to make initial estimations and check results of calculations in relation to the context.

VU22401 Undertake a simple investigation of science in the community

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to undertake a simple research project on a scientific issue and its impact on an individual or the community.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning and organising skills to develop and follow a plan; - identify the main idea and key supporting information in texts related to the issue; - record findings of investigation; - develop a plan and identify appropriate investigation methods with a relevant person, and; - discuss and convey information about the impact of the scientific issue under investigation. Students will also be expected to demonstrate the following knowledge: - meaning making strategies, and; - scientific terminology to enable information and ideas to be expressed verbally and in writing.

VU22402 Undertake a simple investigation of health and well being

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to undertake a simple research project on an issue related to health and well being.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning and organising skills to develop and follow a plan; - identify the main idea and key supporting information in texts; - record findings; - develop a plan and identify appropriate investigation methods with a relevant person, and; - discuss the impact of the health and well being issue under investigation. Students will also be expected to demonstrate the following knowledge: - meaning making strategies, and; - scientific terminology to enable information and ideas to be expressed verbally and in writing.

VU22411 Research pathways and produce a learning plan and portfolio

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online, Geelong Learning Links.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to investigate pathway options and plan skills development, in discussion with an appropriate support person. The learner will develop and maintain a portfolio of evidence over time. Learners at this level work independently and initiate and use support from a range

of established resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - oral communication skills to participate in interactions to discuss and clarify aspects of the learning plan such as purpose and processes to support development of the plan; - read and interpret a range of information about potential options; - apply research skills to locate information relevant to own goals and options; - gather and use information to support development of the plan; - draw on previous experiences to inform development of the plan; - identify, select and organise evidence for the portfolio; - compare own skills to learning goals and options to identify achievable steps; - determine own learning approaches, and; - evaluate own skills and knowledge to identify gaps. Students will also be expected to demonstrate the following knowledge: - purpose and benefit of documenting learning and monitoring and reviewing learning goals, and; - potential barriers and potential solutions to achieving learning goals.

VU22412 Implement and review a project

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop a project proposal, design and plan the project, carry out the project and evaluate the outcome. It encompasses selection of an activity, developing a plan, and preparing the required resources. Learners at this level work independently and initiate and use support from a range of established resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in interactions to discuss project proposals and own interests and skills; - initiate interaction to seek feedback and clarification related to the project; - use vocabulary specific to the project; - gather and analyse information from a variety of sources; - read and interpret a range of information; - record information related to the progress and completion of the project; - identify and address issues and barriers which arise; - make adjustments to the project plan to enable successful completion; - identify and obtain resources required for the project; - follow and monitor an action plan and related activities; - determine own skills and interests and match these to a suitable project proposal, and; - work within an identified time frame. Students will also be expected to demonstrate the following knowledge: - basic project methodology to complete the project, and; - potential barriers and strategies to address these.

VU22414 Engage with a range of complex texts for learning purposes

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to interpret a range of structurally intricate paper based and web based texts which are relevant to learning purposes and which may include some specialisation and non-routine contexts. Learners at this level work independently and initiate and use support from a range of established resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and apply reading strategies to interpret and analyse texts; - apply critical analysis skills to interpret and compare texts; - assess relevance of texts to own purposes and needs; - assess the validity of online information; - apply a range of decoding strategies to identify unfamiliar words, and; - technology skills to access and navigate screen based digital text to locate information of some complexity. Students will also be expected to demonstrate the following knowledge: - a range of vocabulary related to learning including some specialised vocabulary to support comprehension; - techniques used by writers to convey meaning and achieve purpose; - factors that influence a text such as an author's culture, experiences and value system, and; - different representations of paper based and digital information.

VU22415 Engage with a range of complex texts for employment purposes

Locations:Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites:Nil.

Description:This unit develops the skills and knowledge to interpret a range of structurally intricate paper based and web based text types which are relevant to employment purposes and which may include some specialisation and non-routine contexts. Learners at this level work independently and initiate and use support from a range of established resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and apply reading strategies to interpret and analyse texts; - apply critical analysis skills to interpret and compare texts; - assess relevance of texts to own purposes and needs; - assess the validity of online information; - apply a range of decoding strategies to identify unfamiliar words, and; - technology skills to access and navigate complex web based text. Students will also be expected to demonstrate the following knowledge: - a range of vocabulary related to employment including some specialised vocabulary to support comprehension; - techniques used by writers to convey meaning and achieve purpose; - factors that influence a text such as an author's culture, experiences and value system, and; - differences in how paper based and web based information is represented.

VU22416 Engage with a range of complex texts to participate in the community

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites: Nil.

Description: This unit develops the skills and knowledge to engage with a range of complex paper based and web based text types which are relevant to participation in the community and which may include some specialisation and non-routine contexts. Learners at this level work independently and initiate and use support from a range of established resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and apply reading strategies to interpret and analyse texts; - apply critical analysis skills to interpret and compare texts; - assess relevance of texts to own purposes and needs; - assess the validity of online information; - apply a range of decoding strategies to identify unfamiliar words, and; - technology skills to access and navigate complex web based texts. Students will also be expected to demonstrate the following knowledge: - a range of vocabulary related to community including some specialised vocabulary to support comprehension; - techniques used by writers to convey meaning and achieve purpose; - factors that influence a text such as an author's culture, experiences and value system, and; - differences in how paper based and web based information is represented.

VU22419 Create a range of complex texts for learning purposes

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to support the development of writing skills to create a range of complex text types which are relevant to the learning environment. At this level the learner works across a range of contexts including some that are unfamiliar and/or unpredictable and include some specialisation. Learners at this level work independently and initiate and use support from a range of established resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - convey complex relationships between ideas; - write texts which include a number of examples, opinions, facts, or arguments with supporting evidence; - gather and order information required to create texts; - apply spelling strategies such as using visual and phonic patterns, and; - problem solving skills to select and apply appropriate register according to context. Students will also be expected to demonstrate the following knowledge: - a range of styles of writing and presenting information to a range of audiences; - knowledge of register to enable appropriate selection and application to context; - a broad vocabulary and a range of grammatical structures, and; - how to structure a range of texts.

VU22420 Create a range of complex texts to participate in the workplace

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to support the development of written communication in the workplace. It includes extracting meaning from written information for workplace purposes and preparing complex written materials. At this level the learner works independently across a range of contexts including some that are unfamiliar and/or unpredictable and include some specialisation. Learners at this level work independently and initiate and use support from a range of established resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - link ideas in written material through selection and use of words, language structures and punctuation appropriate to the purpose; - gather and order information required to create texts; - use structurally complex sentences; - use spelling strategies such as visual and phonic patterns, and; - problem solving skills to select and apply appropriate register according to context. Students will also be expected to demonstrate the following knowledge: - knowledge of organisational protocols / requirements related to written workplace material such as information security, email protocols and use of appropriate language; - differences between requirements for written as opposed to spoken English; - a range of styles of writing and presenting information to a range of audiences; - knowledge of register to enable appropriate selection and application to context, and; - a broad vocabulary related to the workplace and a range of grammatical structures.

VU22421 Create a range of complex texts to participate in the community

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to support the development of writing skills to create a range of complex texts which are relevant to community participation. At this level the learner works across a range of contexts including some that are unfamiliar and/or unpredictable and including some specialisation. Learners at this level work independently and initiate and use support from a range of established resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - convey complex relationships between ideas; - write texts which include a number of examples, opinions, facts, or arguments with supporting evidence; - gather and order information required to create texts; - apply spelling strategies such as using visual and phonic patterns, and; - problem solving skills to select and apply appropriate register according to context.

Students will also be expected to demonstrate the following knowledge: - a range of styles of writing and presenting information to a range of audiences; - knowledge of register to enable appropriate selection and application to context; - a broad vocabulary and a range of grammatical structures, and; - structural features of a range of text types.

VU22422 Investigate and interpret shapes and measurements and related formulae

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to investigate two-dimensional and three-dimensional shapes and their representation. It includes estimating, measuring and calculating quantities and using formulae related to personal, public, work or education and training. At this level the learner works independently across a range of contexts including some that are unfamiliar and/or unpredictable and include some specialisation. Learners at this level work independently and initiate and use support from a range of established resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to read relevant illustrations, diagrams, signs, instructions including relevant tools and machinery; - interpret plans and draw and assemble three-dimensional models; - estimate, measure and calculate a range of metric quantities, and; - estimate, measure and draw accurate scale plans and diagrams of two-dimensional and three-dimensional shapes using drawing and measuring instruments. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in relation to shapes and designs and in measurement contexts and materials such as on tools, packaging, recipes, designs, diagrams; - simple measurement formulae in familiar and routine contexts; - the characteristics and convention of plans and drawings of two-dimensional and three-dimensional shapes, and; - knowledge of a combination of informal and formal language of shape.

VU22423 Investigate numerical and statistical information

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to investigate and interpret numerical information embedded in a range of texts. It also includes creating, investigating and interpreting statistical data, tables and graphs related to personal, public, work or education and training needs. At this level the learner works independently across a range of contexts including some that are unfamiliar and/or unpredictable and which include some specialisation. Learners at this level work independently and initiate and use support from a range of established resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read relevant texts incorporating numerical and statistical information in tables and graphs; - use both informal and formal language of number and data to investigate and interpret a range of numerical and statistical information; - read, understand and interpret numerical information embedded in texts; - problem solving skills to calculate with different types of numbers and mathematical procedures, and; - numeracy skills to collect data and create tables and statistical graphs. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in texts and materials; - decimals, fractions and percentages and their equivalent forms; - key features and conventions of tables and graphs; - techniques used to make initial estimations and check results of calculations in relation to the context, and; - measures of central tendency and simple measures of spread.

VU22424 Investigate and use simple mathematical formulae and problem solving techniques

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop and use simple formulae to describe and represent relationships between variables in a range of real life contexts. It involves using simple mathematical problem solving techniques to interpret and solve straight forward mathematical problems related to personal, public, work or education and training needs. At this level the learner works independently across a range of contexts including some that are unfamiliar and/or unpredictable and which include some specialisation. Learners at this level work independently and initiate and use support from a range of established resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to read relevant texts and diagrams; - understand and use simple mathematical formulae, and; - interpret, use and calculate with a range of types of numbers. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in relation to the writing and representation of algebraic expressions, and; - the use and the purpose of formulae and that they represent relationships between variables in real life tasks and situations.

VU22434 Evaluate pathway options, design a learning plan and compile a portfolio

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to establish learning goals, critically evaluate pathway options, design, implement and monitor a learning plan; and compile a portfolio of evidence. Learners at this level work autonomously and use and evaluate a broad range of support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in the planning process to develop a learning plan; - discuss aspects of the learning plan such as purpose and relationship to goals to support development of the plan; - source analyse and critically evaluate a range of information about potential options; - develop and document a learning plan according to identified processes; - gather and synthesise information to support development of the plan; - draw on previous experiences to inform development of the plan; - identify, select and evaluate evidence for the portfolio; - critically compare own skills to learning goals and compare options to identify achievable steps; - evaluate own skills and knowledge to match to appropriate options, and; - monitor and adjust own progress against documented learning plan. Students will also be expected to demonstrate the following knowledge: - benefits of documenting learning, monitoring and reviewing learning goals, and; - potential barriers to learning and strategies to manage them.

VU22436 Engage with a range of highly complex texts for learning purposes

Locations: Footscray Park, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to interpret and critically evaluate and synthesise a range of highly complex paper based and web based text types for learning purposes. These include intricate, dense and extended texts across a broad range of contexts including specialised contexts. Students at this level work autonomously and use and evaluate a broad range of support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply a repertoire of strategies to interpret and critically evaluate structurally complex texts; - assess relevance of texts to own purposes and needs; - assess the validity and credibility of paper and web based texts, integrate complex concepts across different texts; - technology skills to access and navigate web based digital text to locate and assess highly complex texts, and; - planning and organising skills to gather, select and synthesise information in texts for own specific purposes/needs by defining and reviewing own information requirements both before and during research. Students will also be expected to demonstrate the following knowledge: - ways in which language is used to make hypotheses and convey implicit meaning to influence others; - broad vocabulary including idiom, colloquialisms, and cultural references, and specialised vocabulary as appropriate, to support comprehension; - devices used by writers to convey and influence meaning and achieve purpose; - differences in presentation between paper based and web based texts, and; - register and its influence on expression and meaning in text types.

VU22438 Engage with a range of highly complex texts to participate in the community

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

923

Description: This unit describes the skills and knowledge to interpret and critically evaluate and synthesise a range of highly complex paper and web based text types to participate in the community. These include intricate, dense and extended texts including specialised contexts. Students at this level work autonomously and use and evaluate a broad range of support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply a repertoire of reading strategies to interpret and critically evaluate structurally complex texts; - assess relevance of texts to own purposes and needs; - assess the validity of online information; - technology skills to access and navigate web based digital text to locate and assess highly complex texts, and; - planning and organising skills to gather, select and synthesise information effectively for own specific purposes/needs by defining information requirements both before and during research. Students will also be expected to demonstrate the following knowledge: - the ways in which language is used to make hypotheses and convey implicit meaning to influence others; - broad or specialised vocabulary related to community participation to support comprehension including cultural references as appropriate; - devices used by writers to convey and influence meaning and achieve purpose; - differences in presentation between paper based and web based texts, and; - register and its influence on expression and meaning in text types.

VU22440 Create a range of highly complex texts for learning purposes

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop writing skills to create highly complex text types for learning purposes across a range of contexts including specialised contexts. Learners at this level work autonomously and use and evaluate a broad range of support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - create highly complex relationships between ideas and purposes; - critically evaluate and extend writing; - apply drafting and revision processes; - gather organise and synthesise content, and; - review texts to enhance meaning and effectiveness. Students will also be expected to demonstrate the following knowledge: - conventions and importance of note taking in a learning context; - genres and styles of writing related to learning; - registers and how they influence expression, meaning, and relationships; - a broad and/or specialised vocabulary to accurately express content; - complex grammatical structures to accurately and effectively express content, and; - style conventions of academic writing such as referencing and footnotes.

VU22441 Create a range of highly complex texts to participate in the community

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to develop writing skills to create highly complex text types for personal purposes across a range of contexts including specialised contexts. Learners at this level work autonomously and use and evaluate a broad range of support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - create highly complex relationships between ideas and purposes; - critically evaluate and extend writing; - apply drafting and revision processes; - evaluate feedback and critically discriminate the value and relevance of feedback in order to improve writing; - gather, organise and synthesise content, and; - review writing to enhance meaning and effectiveness. Students will also be expected to demonstrate the following knowledge: - a broad vocabulary including idiom, colloquialisms and cultural references to express content; - a variety of complex grammatical structures and stylistic devices to support meaning; - a range of genres and styles of writing; - registers and how they influence expression, meaning, and relationships, and; - organisational structures of writing for community participation.

VU22442 Analyse and evaluate numerical and statistical information

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to analyse and evaluate highly complex numerical information in texts and analyse and create statistical data, tables and graphs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to use a wide range of oral and written informal and formal language and representation including symbols, diagrams and charts to communicate mathematically; - interpret, select and investigate appropriate mathematical information and relationships highly embedded in an activity, item or text; - analyse and evaluate the appropriateness, interpretations and wider implications of all aspects of a mathematical activity, and; - select and apply a wide range of mathematical strategies flexibly to generate solutions to problems across a broad range of contexts. Students will also be expected to demonstrate the following knowledge: - techniques used to make initial estimations and check results of calculations in relation to the context; - measures of central tendency including mean, median and mode or modal class, and; - common

measures of spread including range, interquartile range, common percentiles and standard deviation.

VU22443 Use algebraic techniques to analyse mathematical problems

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to use algebraic techniques to investigate and solve mathematical problems and develop and use formulae and graphs to describe and represent relationships between variables.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to use a wide range of oral and written informal and formal language and representation including symbols, diagrams and charts to communicate mathematically; - interpret, select and investigate appropriate mathematical information and relationships highly embedded in an activity, item or text; - analyse and evaluate the appropriateness, interpretations and wider implications of all aspects of a mathematical activity, and; - select and apply a wide range of mathematical strategies flexibly to generate solutions to problems across a broad range of contexts. Students will also be expected to demonstrate the following knowledge: - algebraic techniques such as same operation on both sides, backtracking and factorising.

VU22444 Use formal mathematical concepts and techniques to analyse and solve problems

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to use formal mathematical concepts and techniques and mathematical problem solving techniques to analyse and solve problems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to provide oral and written explanations of problem solving and mathematical techniques and outcomes; - interpret, select and investigate appropriate mathematical information and relationships highly embedded in an activity, item or text; - analyse and evaluate the appropriateness, interpretations and wider implications of all aspects of a mathematical activity, and; - select and apply a wide range of mathematical strategies flexibly to generate solutions to problems across a broad range of contexts. Students will also be expected to demonstrate the following knowledge: - specialised calculator functions such as trigonometric, statistical, algebraic, power, graphical functions to support mathematical problem solving, and; - problem solving techniques such as guess and check, elimination, using patterns, rules, relationships and algebra to interpret and extract information.

VU22448 Work effectively with a national disability insurance scheme participant

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers the skills and knowledge required to work effectively with a national disability insurance scheme (NDIS) participant. It includes supporting the NDIS participant to achieve stated goals, using a human rights framework to ensure NDIS participant personal safety, working safely, completing and processing documentation, and working effectively with others.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - adopt a flexible and resourceful approach when supporting an NDIS participant; - behave ethically when working with an NDIS participant; - build effective relationships with an NDIS participant; - fill in forms/templates correctly and file completed forms/templates; - follow NDIS principles and values with the participant at the forefront of service delivery and leading the way where possible; - follow organisational/employer policies and procedures; - meet organisational/employer expectations of workers who provide direct support to an NDIS participant; - negotiate and work collaboratively with NDIS participant and relevant others when supporting an NDIS participant to achieve stated goals; - present disability positively when working with other community members, volunteers and stakeholders; - protect own health when working with an NDIS participant; - read and comprehend a participant's day-to-day support plans; - recognise and deal with crises and unresolved issues that may occur when supporting an NDIS participant to achieve stated goals, in consultation with relevant personnel; - recognise the scope of own competence and expertise when working with an NDIS participant who has complex support needs; - take responsibility for own effectiveness, and; - write sentences that are clear and easy to understand, and that adequately reflect the situation referred to in the sentence. Students will also be expected to demonstrate the following knowledge: - diversity in terms of an NDIS participant's: - gender and cultural inequality, and drivers of abuse and violence; - risk assessment in relation to abuse, neglect and violence; - range of people who may perpetrate abuse, neglect and violence; - what it means when an NDIS participant's home is one's workplace; - meanings of relevant NDIS terminology; - NDIS Code of Conduct; - NDIS structure as it relates to own work; - NDIS values; - roles of the following in the NDIS planning process; - roles of relevant authorities under the NDIS, and; - what an inclusive and accessible community looks like.

VU22450 Work with and interpret simple directions in familiar situations

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to support learners to develop the basic skills and confidence to perform simple and familiar numeracy tasks involving the interpretation of simple everyday maps or street directories. It includes giving and following simple and familiar directions which are part of the learners' normal routines to do with directions and locations in familiar contexts, such as near their homes, shopping centres, in workplace buildings or education

institutions. Learners will communicate these mathematical ideas using mainly spoken responses with some written responses. Learners at this level may request support and begin to develop their own support resources.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - oracy skills to describe the relative location of two or more objects and to follow simple oral directions, and; - literacy skills to read relevant, familiar maps and street directories. Students will also be expected to demonstrate the following knowledge: - signs/prints/symbols represent meaning in signs, diagrams and maps; - the key features of simple diagrams, maps and street directories of familiar locations, and; - mainly informal and some formal oral mathematical language of position and location to give and follow directions.

VU22451 Investigate advanced technology applications in the manufacturing industry

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit describes the knowledge and skills required to learner to investigate advanced manufacturing technologies that have been recognised as innovative and/or cutting edge and have significantly improved production processes, products and/or services and present the findings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - recognising the application of advanced technologies in the manufacturing and related industries and improvements to a processes, products and services; - undertaking research in an manufacturing environment and using various methods to gather technical information and data; - communicating with technical personnel in an manufacturing environment; - planning and presenting technical information to an audience, and; - completing a research project in a given timeframe. Students will also be expected to demonstrate the following knowledge: - current advanced manufacturing technologies which impact on both process and/or products; - advanced manufacturing technologies nomenclature such as Industry 4.0/5.0; - sources of information on the manufacturing, engineering and related industries; - diversity of the manufacturing, engineering and related industries including key sectors and structure, and; - presentation techniques and resources.

VU22452 Use communication network concepts and practices in manufacturing and engineering applications

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge in communication network concepts and practices that are used in manufacturing and engineering applications. Specifically, the unit covers the manner in which data traverses, networks, protocols, networking and communication devices, Internet Protocol (IP) addressing, routing protocols, Virtual Local Area Networks (VLANs), troubleshooting logs and networking monitoring tools.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - using basic numeracy skills to perform calculations in binary and hexadecimal number systems; - using base level problem solving skills to implement provided scripts for a switch and a router; - reading and accurately interpreting documents and reports; - installing and configuring a basic network; - configuring protocols, models and IP addressing systems; - operating a personal computer; - identifying network cable types, and; - interpreting network testing information. Students will also be expected to demonstrate the following knowledge: - OSI layered communication model; - TCP/IP layered communication model; - Media Access Layer (MAC) addresses; - packet encapsulation and decapsulation concepts and operation; - binary number system; - hexadecimal number system; - Transmission Control Protocol (TCP) protocol; - User Datagram Protocol (UDP); - function and operation of application layer protocols; - VLANs; - network monitoring tools e.g. Wireshark; - log files generated from networking devices e.g. Interlocking device, switches, operating system; - IPV4 addressing and subnetting; - IPV6 addressing and subnetting; - network cabling; - network devices; - end to end test commands e.g. Ping, Traceroute; - switch and router IOS commands examples, and; - emerging network technologies.

VU22454 Undertake site survey and analysis to inform design process

Locations: Werribee, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit specifies the outcomes required to undertake a site survey and a site analysis for residential and commercial building projects. It includes the use of basic surveying equipment, recording and interpretation of data, and evaluation of, and compliance with relevant legislation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel; - read and interpret: field data/geo digital databases; reports; site plan; land title; specifications; working drawings; project requirements; organisational procedures; use language and concepts

appropriate to industry conventions; - accurately record and interpret site measurements and other data to industry standards; - produce field sketches; - numeracy skills to apply measurements and calculations; - problem solving skills to interpret reports, working drawings and specifications; - planning and organisational skills; - collect, organise and analyse information for site analysis; - prepare equipment for site survey, and; - technological skills to complete documentation and calculations and use basic survey equipment; - work safely in a design drafting working environment and on a site according to relevant legislation and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - specifications and capabilities of basic surveying equipment and application; - Australian Drawing Standards/other industry standards related to the production of measured drawings; - process for the administration and preparation of working drawings, specifications and other relevant documentation, and; - workplace OHS/WHS procedures and documentation.

VU22455 Apply structural and construction technology to the design of residential buildings

Locations: Werribee, Sunshine, Learning Links Geelong..

Prerequisites: Nil.

Description: This unit specifies the outcomes required to apply structural and construction technology to the design of residential buildings. It requires compliance with state legislation and the provisions for Building Code of Australia (BCA) Classes 1 and 10 and relevant Australian Standards as they apply to the structural and construction components of a residential building. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear, direct communication, using questioning to identify, confirm requirements and share information with internal/external personnel; - interpret construction drawings and specifications; state regulatory authority requirements; Australian Standards; relevant sections of the BCA and relevant legislation; - use language, terminology and concepts appropriate to industry conventions; - prepare and document construction specifications to an industry standard to mitigate project risks; - numeracy skills to apply measurements and calculations to construction systems; - interpret relevant legislation for the design/construction of a residential building; - apply construction techniques and methodologies to the intent of the design; - specify requirements for construction standards and practices; - select structural members according to project/specification requirements; - combine materials into workable construction systems; - analyse site conditions to establish specifications; - resolve construction and design issues with regard to structural systems; - technological skills to complete documentation and calculations; - enable construction specifications to be completed within designated time frame; - teamwork skills during consultation with, and coordination of internal and external personnel, and; - work safely in a design drafting working environment and on a site according to legislation and workplace policies and procedures. Students will also be expected to demonstrate the following

knowledge: - structural components and construction methodologies and related terminology; - the application of the principles of construction of residential buildings; - the characteristics, performance and application of construction materials; - working drawings and specifications for the design of residential buildings; - effects of legislative requirements for residential buildings on the design approval process; - integration of services in a residential building design; - statutory requirements for fire separation, and; - specifications for a residential building providing optimum safety, health and amenity for users.

VU22456 Apply structural and construction technology to the design of commercial buildings

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description:This unit specifies the outcomes required to apply structural and construction technology to the design of commercial buildings. It requires compliance with state legislation and the provisions for Building Code of Australia (BCA) Classes 2 to 9 and relevant Australian Standards as they apply to the structural and construction components of a commercial building. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel, where required - read and interpret: construction drawings and specifications; state regulatory authority requirements; Australian Standards; relevant sections of the BCA; other relevant legislation and reports prepared by specialised personnel; - use language, terminology and concepts appropriate to industry conventions; - accurately document construction specifications to mitigate project risks; - prepare documentation to an accepted industry standard; - numeracy skills to apply measurements and calculations to construction systems; - interpret relevant legislation for the design and construction of a commercial building; - apply construction techniques and methodologies to the intent of the design; - specify requirements for construction standards and practices; - select structural members according to project or specification requirements; - combine materials into workable construction systems; - analyse site conditions to establish specifications; - resolve construction and design issues with regard to structural systems; - technological skills to complete documentation and calculations; - teamwork skills during consultation with, and coordination of, internal and external personnel, and; - work safely in a design drafting working environment and on a site according to legislation and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - structural components and construction methodologies and related terminology; - the principles of construction of commercial buildings; - the characteristics, performance and application of construction materials; - working drawings and specifications for the design of commercial buildings; - effects of legislative requirements on the design approval process; - integration of services in a building design; - statutory requirements for fire separation for commercial

buildings, and; - specifications for a commercial building providing optimum safety, health and amenity for users.

VU22457 Comply with relevant legislation in the design of residential buildings

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description:This unit specifies the outcomes required to access, interpret and apply relevant legislation to the design of residential buildings. It includes the ability to apply a range of design solutions for residential buildings (Building Code of Australia (BCA) Classes 1 and 10), in compliance with the BCA and make recommendations for alternative solutions, as required. It requires thorough knowledge of the purpose and content of the BCA. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel; - read and interpret complex documents, including: relevant legislation; site plans; the BCA; specifications and working drawings; - use language and concepts appropriate to industry conventions; - written skills to document design solutions and other workplace documentation; - numeracy skills to apply measurements and calculations; - problem solving skills to design concepts and principles in accordance with the BCA, namely BCA Classes 1 and 10; - planning and organisational skills to collect, organise and analyse information from relevant legislation; - teamwork skills when working with internal and external personnel; - technological skills to complete documentation and calculations; - maintain professional currency, memberships and networks; - source current information regarding materials performance and its application, and; - work safely in a design drafting working environment and on a site according to legislation and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - legal responsibilities and obligations of building designers; - basic design principles and the behaviour of structures under stress, strain, compression, bending or combined actions; - BCA performance hierarchy; - definitions and common technical terms or usage specified under general provisions of the BCA; - understanding of the BCA in relation to BCA Classes 1 and 10; - understanding of the BCA in relation to building types, applications and limitations; - general nature of materials and the effects of performance; - relevant Australian Standards and guidelines, and; - relevant legislative and occupational health and safety (OHS)/work health and safety (WHS) requirements, codes and practices.

VU22458 Comply with relevant legislation in the design of commercial buildings

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description: This unit specifies the outcomes required to access, interpret and apply relevant legislation to the design of commercial buildings. It includes the ability to apply a range of design solutions to the construction or design of a commercial building (Building Code of Australia (BCA) Classes 2 to 9), including Type B, in compliance with the BCA and make recommendations for alternative solutions as required. It requires thorough knowledge of the purpose and content of the BCA. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel; - read and interpret complex documents, including: relevant legislation; site plans; the BCA; specifications and working drawings; - use language and concepts appropriate to industry conventions; - written skills to document design solutions and other workplace documentation; - numeracy skills to apply measurements and calculations; - problem solving skills to design concepts and principles in accordance with the BCA, namely BCA Classes 2 to 9; - planning and organisational skills to collect, organise and analyse information from relevant legislation; - teamwork skills when working with internal and external personnel; - technological skills to complete documentation and calculations; - maintain professional currency, memberships and networks; - source current information regarding materials performance and its application, and; - work safely in a design drafting working environment and on a site according to legislation and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - legal responsibilities and obligations of building designers; - basic design principles and the behaviour of structures under stress, strain, compression, bending or combined actions; - BCA performance hierarchy; - definitions and common technical terms or usage specified under general provisions of the BCA; - understanding of the BCA in relation to BCA Classes 2 to 9; - understanding of the BCA in relation to building types, including Type B, applications and limitations; - general nature of materials and the effects of performance; - relevant Australian Standards and guidelines, and; - relevant legislative and occupational health and safety (OHS)/work health and safety (WHS) requirements, codes and practices.

VU22459 Design safe buildings

Locations: Werribee, Sunshine, Learning Links Geelong..

Prerequisites: Nil.

Description: This unit specifies the outcomes required to apply safe design principles to control occupational health and safety (OHS)/work health and safety (WHS) risk during the life of a building. It includes the ability to identify and comply with legal responsibilities and obligations and evaluate OHS/WHS hazards associated with the design, construction and use of a building during its life cycle. Applying safe design principles requires consultation with stakeholders and specialist advisors and the ability to make recommendations for alternative design solutions and incorporate risk controls into the building design and end use. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this

unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel; - read and interpret: the Building Code of Australia (BCA); relevant OHS/WHS legislation and Australian Standards; workplace documentation relating to the safe design of buildings; plans, drawing and specifications and use language and concepts appropriate to industry conventions; - produce workplace documentation; - record data and findings on historical and current information pertaining to OHS/WHS; - identify legal responsibilities and obligations regarding safe design; - analyse and evaluate data on OHS/WHS hazards, reports and compensation claims; - negotiate client expectations of OHS/WHS outcomes; - apply principles of safe design to the life cycle of a building; - planning and organisational skills to collect, organise and analyse information on safe design; - developing practical risk controls; - recommending alterations to design to improve safety; - teamwork skills when consulting specialist advisors and stakeholders; - self management skills in recognising limits of own expertise and seeking the advice of others, when required; - learning skills in maintaining up-to-date knowledge of safe design principles and changes to legislation; - technology skills to produce required documentation, and; - work safely in a design drafting working environment according to legislation and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements for OHS/WHS information, data and consultation; - principles and practices of a systematic approach to risk management; - basic principles of anthropometry; - direct and indirect influences that impact on OHS/WHS and the environment in the design and use of a building; - the hierarchy of control and considerations for deciding between different methods of control; - interdependent relationships between ergonomics and stressors, such as physiological factors, awkward posture, poor lighting and ventilation and thermal environment, and; - legislative responsibilities of building designers with regard to OHS/WHS at all stages of design, construction and end use of a building.

VU22460 Design sustainable buildings

Locations: Werribee, Sunshine, Learning Links Geelong..

Prerequisites: Nil.

Description: This unit specifies the outcomes required to apply the principles of sustainability to building design. It includes the application of sustainable practices to minimise negative impacts of the construction process and land use on the environment, incorporate passive design, sustainable water use and energy efficiency into a building design and select suitable materials for the construction of the building. It requires compliance with relevant legislation, Australian Standards and the Building Code of Australia (BCA). No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel; - read and interpret: the BCA; relevant legislation and Australian Standards and other relevant documentation; - research information on sustainable building principles; - use language and concepts appropriate to industry conventions; - develop recommendations and strategies for sustainable building design; - document data and findings to industry standards; - teamwork skills to work effectively with clients and other stakeholders; - analyse and evaluate data on construction materials and integrate sustainable and energy efficient systems into building design; - determine the potential cost versus benefit of alternative sustainable options; - planning and organisational skills to collect, organise and analyse information on sustainable building practices; - initiative and enterprise skills in interpreting information and developing sustainable design solutions; - learning skills in updating knowledge of sustainable materials and building practices; - technology skills to: complete documentation, calculations and operate computer energy rating system, and; - work safely in a design drafting working environment according to legislation and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - principles of sustainability in building design; - mandatory disclosure; - green star rating system; - building adaptation for catastrophic events responding to climate change; - indoor environmental quality (air quality, thermal comfort, acoustics); - characteristics of ecosystems; - macro and micro climates; - site topography features; - effects of fossil fuels on the atmosphere; - energy consumption relative to construction processes and building use; - greenhouse gas emissions and ozone depletion theories; - impacts of climate change; - impacts of national strategies on building design; - principles of designing buildings for durability and adaptability; - life cycle assessment principles; - basic principles of cradle-to-grave analysis; - nature of construction materials and effect on performance; - R values (overall thermal resistance) for construction material; - software used to predict building performance; - energy auditing principles; - processes for the administration and preparation of documentation; - processes for the development of documentation, such as working drawings and specifications; - the BCA Deemed-to-Satisfy (DTS) energy efficiency provisions; - occupational health and safety (OHS)/Work health and safety (WHS) workplace policies and procedures, and; - relevant federal, state or territory legislation and local government policy and procedures.

VU22461 Integrate services layout into design documentation

Locations: Werribee, Sunshine, Learning Links Geelong..

Prerequisites: Nil.

Description: This unit specifies the outcomes required to integrate the layout of services and connections into building design documentation for residential (Building Code of Australia (BCA) Classes 1 and 10) and commercial (BCA Classes 2 to 9) buildings. It includes the knowledge and application of current sustainable and energy efficient practices and appliances and involves consultation with other professionals to obtain agreement on service layout details and specifications. It requires compliance with relevant legislation, Australian Standards and the BCA. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building

designer (architectural).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to consult with other professionals and negotiate required amendments; - read and interpret: relevant documentation and legislation; the BCA; plans, working drawings and specifications; - use language and concepts appropriate to industry conventions, including industry terminology and definitions; - use and interpret non-verbal communication; - numeracy skills to apply measurements and basic calculations relating to service installations; - accurately document details and specifications of services layout; - document specifications to mitigate project risks; - prepare documentation to an accepted industry standard; - teamwork skills to work effectively with clients and other stakeholders; - interpret information from plans and drawings; - identify and resolve typical faults and problems; - evaluate mechanical ventilation and air-conditioning for energy efficiency; - apply standards to artificial lighting and light sources; - planning and organising skills to collect, organise and analyse information on services layouts; - initiative and enterprise skills to apply design concepts and principles relating to service installations; - self management skills to enable the completion of work tasks according to timelines and project schedule; - use relevant computer software; - produce documentation and calculations, and; - work safely in a design drafting working environment according to legislation and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - nature of materials and effect on performance relating to service installations; - working drawings and specifications relating to service installations; - a variety of design concepts and principles relating to service installation; - role and responsibilities of building designers relating to services layout; - service installation terminology, definitions, installation methods and hazards in relation to devices and systems using Australian Standards, the BCA and manufacturer's specifications, and; - sustainability and energy efficiency principles and practices in relation to services installation.

VU22462 Produce preliminary and working drawings for residential buildings

Locations: Werribee, Sunshine, Learning Links Geelong..

Prerequisites: Nil.

Description: This unit specifies outcomes required to produce two and three-dimensional drawings in accordance with standard industry practice and to a level suitable for building permit approval applications. It includes the ability to read and interpret plans and specifications and to produce preliminary and working drawings for residential buildings (Building Code of Australia (BCA) Classes 1 and 10). No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm client needs and share information with team members; - read and interpret: the BCA; relevant legislation and Australian Standards; plans and specifications and other relevant documentation; - use language and concepts appropriate to industry conventions; - use and interpret non-verbal communication; - written skills to produce simple preliminary drawings; - work effectively with clients and other stakeholders; - produce preliminary and working drawings within allocated responsibilities; - problem solving skills to interpret information from plans, specifications and client brief to develop required preliminary drawings; - planning and organising skills to produce preliminary and working drawings within an allocated time frame; - initiative and enterprise skills to achieve creative and innovative approaches in the production of drawing tasks; - numeracy skills to apply calculation and measuring techniques; - use computer software to enable production of working drawings; - complete documentation and calculations, and; - work safely in a design drafting working environment according to legislation and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - drafting and drawing protocols; - industry conventions and features, including direction, scale, key, contours, symbols and abbreviations; - processes for the administration and preparation of documentation; - processes for the interpretation of reports, working drawings and specifications; - research methods to locate relevant information; - structural, design and construction principles of buildings; - process for the consideration of a budget constraint; - relevant federal or state legislation and local government policy and procedures, including occupational health and safety (OHS)/work health and safety (WHS) requirements, and; - functions and operation of computer software used to produce working drawings.

VU22463 Produce preliminary and working drawings for commercial buildings

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description:This unit specifies outcomes required to produce two and three-dimensional drawings in accordance with standard industry practice and to a level suitable for building permit approval applications. It includes the ability to read and interpret plans and specifications and to produce preliminary and working drawings for commercial buildings (Building Code of Australia (BCA) Classes 2 to 9). No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm client needs and share information with team members; - read and interpret: the BCA; plans and specifications; relevant legislation and Australian Standards; other relevant

documentation and produce simple preliminary drawings; - use language and concepts appropriate to industry conventions; - use and interpret non-verbal communication; - work effectively with clients and other stakeholders; - negotiate individual work tasks with others; - problem solving skills to interpret information from plans, specifications and client brief; - planning and organising skills to produce working drawings within allocated time frame; - initiative and enterprise skills to achieve creative and innovative approaches in relevant drawing tasks; - produce drawings for commercial buildings; - apply calculation and measuring techniques; - use computer software to enable production of working drawings; - complete documentation and calculations, and; - work safely in a design drafting working environment according to organisational policies and procedures. Students will also be expected to demonstrate the following knowledge: - drafting and drawing protocols; - industry conventions for the production of working drawings; - processes for the administration and preparation of documentation; - processes for the interpretation of reports, working drawings and specifications; - relevant federal or state legislation and local government policy and procedures, including occupational health and safety (OHS)/work health and safety (WHS) requirements; - research methods to locate relevant information; - structural, design and construction principles of buildings; - process for the consideration of a budget constraint, and; - functions and operation of computer software used to produce working drawings.

VU22464 Select construction materials for building projects

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description:This unit specifies the outcomes required to evaluate and select a range of suitable construction materials for building projects, taking into account a range of criteria, including physical attributes, cost and sustainability. It includes the ability to analyse properties and characteristics to determine their suitability for application in the construction of a building. It requires selection of materials that comply with relevant legislation, Australian Standards and the Building Code of Australia (BCA). No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel; - read and interpret: the BCA; relevant legislation and Australian Standards; plans, drawings and specifications; - use language and concepts appropriate to industry conventions; - written skills to document data and findings to industry standards; - identify typical defects in construction materials; - analyse and evaluate data on construction materials; - planning and organisational skills to collect, organise and analyse information on construction materials; - selecting suitable construction materials, taking into account a range of criteria, including physical attributes, cost and sustainability; - applying selection principles relating to performance of materials according to their purpose; - technological skills to complete documentation and calculations, and; - work safely in a design drafting working environment and on a site according to legislation and

workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - manufacturing processes and their effects on the use and application of construction materials; - structural, thermal, acoustic and visual properties of materials and how these are utilised to achieve a desired outcome and meet specifications and legislative requirements; - durability, weatherability, jointing, thermal expansion, compatibility, connection systems with regard to the application of materials; - systems, processes and methodology used to incorporate materials into a structure; - substructures, jointing systems and fixings required to incorporate materials into a building; - effect of substructures on the use of materials; - effect of transport, handling and storage on materials; - principles of designing buildings for durability and adaptability; - life cycle assessment principles; - nature of construction materials, including emerging technologies, and effect on performance; - environmental impact issues relating to material selection and use; - R and U values (overall thermal resistance) for construction material; - grading process and grade markings used to categorise timber and timber products; - relevant sections of the BCA and relevant federal, state or territory legislation, and; - material safety data sheet purpose and content.

VU22465 Provide design solutions for residential and commercial buildings

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description:This unit specifies the outcomes required to apply the theories and principles of design to the design of buildings. It must be applied to both residential buildings (Building Code of Australia (BCA) Classes 1 and 10) and commercial buildings (BCA Classes 2 to 9), of Type B construction. It requires the ability to research, analyse and evaluate information on the history and elements of architecture and their influence on current practice. It includes developing a design response, which meets the requirements of a project brief, and communicating a final design solution to relevant stakeholders. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - questioning techniques to identify and confirm requirements and share information with stakeholders; - communicate a design solution; - read and interpret: design briefs; construction drawings and specifications; Australian Standards; relevant sections of the National Construction Code and research material, including architectural literature; - use language and terminology relevant to building design and architecture; - document research on the influences of global architecture and design principles; - produce freehand and enhanced sketches for the interpretation of a design or of architectural features; - apply design principles within regulatory requirements; - respond to the challenges of irregular shaped sites; - resolve construction and design issues with regard to structural systems and site context; - incorporate functionality and aesthetics into a built form; - evaluate historical and conventional design principles with modern practices and methods; - develop a design response according to the project brief requirements for stakeholder consideration; - analyse information on world architecture and its principal characteristics; the works of recognised architects

and designers and complete design response within allocated time frame; - the development of own knowledge and understanding of global architecture and design trends; - to consult with client and other stakeholders, and; - work safely in a design drafting working environment according to legislation and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - architectural terminology and semantics; - design processes; - research methods to locate relevant information; - influential architects and designers of the 20th and 21st Centuries; - global and Australian architectural styles; - architectural concepts applied to a residential and commercial design solution; - principles of structural and construction technology; - principles of universal design; - basic principles of anthropometrics and ergonomics; - material characteristics and applications; - tectonic themes; - regulatory, contextual and site constraints; - planning concepts; - principles of human behaviour, functionality and aesthetics; - historical and modern design principles; - current and emerging residential and commercial design trends, and; - modern theories of culture, politics and technology.

VU22466 Integrate digital applications into architectural workflows

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description:This unit specifies the outcomes required to use a range of digital applications for the production of outputs in architectural workflows. It includes the ability to determine the appropriate digital applications required for specific project outputs and the application of architectural standards and conventions to produce and manage the project. Work is likely to be undertaken with limited supervision and in consultation with team members and external consultants. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel; - engage and interact with digital and electronic distributed information and learning systems; - read and interpret: construction drawings and specifications; state regulatory authority requirements/relevant legislation; Australian Standards; relevant sections of the Building Code of Australia and software manuals; - use language, terminology and concepts appropriate to industry conventions; - coordinate workflows according to priorities and agreed timelines; - meet project milestone requirements; - confirm outputs meet project requirements; - teamwork skills for collaboration and consultation with both external and internal personnel; - create and/or use object data and component libraries; - analyse file structures and use them effectively; - self management skills to enable the production of documentation within allocated time frame; - learning skills in self directed approach to updating skills in software use and knowledge of emerging technologies; - technology skills to use software applications suitable for production of documentation required for the project; - numeracy skills to produce required documentation, and; - problem solving skills to determine integration of workflows. Students will also be expected to demonstrate the following knowledge: - functions, operation and management of software programs

required for the production of various stages of project documentation; - the application of standards and conventions in the production and management of architectural documentation; - Australian and International Standards for BIM data sharing; - purpose and benefits of project outputs to related contexts; - construction and materials technology in the production of architectural documentation; - principles of design and their application; - principles of designing objects and spaces in three-dimensions and their translation into computer-based design methodologies; - organisational quality requirements for the production of digital outputs; - organisational and legislative requirements for documentation in all stages of the building design project; - occupational health and safety (OHS)/work health and safety (WHS) legislation and guidelines relevant to software use; - recognition of file structures; - development and use of file structures, and; - features of file structures for BIM management.

VU22467 Present architectural designs

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description:This unit specifies the outcomes required to present a design concept for an architectural project. The design could be for a residential (Building Code of Australia (BCA) Classes 1 and 10) or commercial (BCA Classes 2 to 9) building. It includes reviewing the project brief, developing presentation materials and presenting the final design concept to relevant stakeholders. Materials for presentation could include preliminary drawings, computer generated drawings/images, or models. It requires the ability to effectively clarify or communicate ideas and the design concept to stakeholders. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel; - read and interpret project brief and architectural documentation; - use language, terminology and concepts appropriate to industry conventions; - facilitation and presentation skills to communicate design concept to stakeholders; - sketch preliminary presentation drawings using a variety of media and different techniques; - communicate design ideas and concepts in sketch format; - prepare documentation to an accepted industry standard; - identify requirements for presentation according to project brief; - liaise with stakeholders to plan presentation; - develop presentation that meets client requirements; - produce presentation materials to industry standard to assist client in understanding key features of design; - plan, prepare and facilitate a design presentation; - complete work within accepted time frames; - complete presentation materials using a variety of computer software; - operate presentation equipment; - develop presentation materials; - self management skills to coordinate own responsibilities in planning presentation within designated time frame; - teamwork skills during consultation with, and coordination of, internal and external personnel, and; - work safely in a design drafting working environment according to legislation and workplace policies and procedures. Students will also be expected to

demonstrate the following knowledge: - techniques required for sketches/drawings; colour and its applications and rendering techniques and applications; - relationship between sketching and rendering techniques and the appropriate media; - functions and operation of computer digital editing applications; - presentation methods and techniques, and; - occupational health and safety (OHS)/work health and safety (WHS) requirements in the development and facilitation of a design presentation.

VU22468 Manage architectural project administration

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description:This unit specifies the outcomes required to manage architectural administration and the development of project documentation. It requires the knowledge of the legislation pertaining to project administration and the ability to comply with the organisational requirements for quality assurance. Work is expected to be undertaken in consultation with both internal personnel and external consultants and with limited supervision. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal and external personnel; - read and interpret complex documents: relevant legislation, codes and standards; National Construction Code and planning permit application requirements and other relevant documentation; - use language and concepts appropriate to industry conventions; - prepare project documentation; - correspond with external personnel; - numeracy skills to calculate basic cost indicators for a building project; - determine appropriate contract to suit an architectural project; - determine the limitations of standard specifications and justify their selection; Students will also be expected to demonstrate the following knowledge: - prepare documentation in readiness for approval stages; - manage project documentation processes; - coordinate work with consultants, stakeholders and authorities; - identify impacts of quality assurance standards and procedures; - identify legal principles of copyright; - self management skills to meet timelines and project schedule; - teamwork skills when working with internal and external personnel; - technological skills to use computers and other office equipment, and; - work safely in a design drafting working environment and on a site according to legislation and workplace policies and procedures.

VU22469 Undertake complex architectural projects

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description:This unit specifies the outcomes required to undertake complex architectural projects for residential (Building Code of Australia (BCA) Classes 1 and 10) and/or commercial (BCA Classes 2 to 9) buildings. It includes consultation with a client to prepare a project brief and the development and presentation of a design concept that meets the requirements of the brief and relevant legislative requirements and codes and standards. It requires the preparation of all necessary

documentation and the development of a critical path management diagram. It requires thorough knowledge of the BCA, relevant Australian Standards and local authority regulatory requirements. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication. However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements and share information with internal/external personnel;- read and interpret: relevant legislation; Australian Standards and relevant sections of the National Construction Code;- use language, terminology and concepts appropriate to industry conventions; - communicate design concept to client and other stakeholders and liaise throughout project; - sketch preliminary design solutions and presentation drawings using a variety of media and different techniques; - prepare documentation to an accepted industry standard; - ascertain local regulatory requirements; - identify key stages of design and construction process; - coordinate work from consultants into architectural documentation; - compare tender processes; - develop design solutions that meet client requirements; - negotiate amendments to the client brief;- coordinate the team members in the development of documentation and their work output; - produce presentation materials and contract documentation using a variety of computer software; - coordinate own responsibilities and complete tasks according to project schedule and accepted timeframes; - coordinate work from other consultants, and; - work safely in a design drafting working environment and on a site according to legislation and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - relevant legislation, including: Building Act; Building Regulations; Planning and Environment Act; Occupational Health and Safety Act/Work Health and Safety Act; Domestic Buildings Contracts Act; Building and Construction Security of Payment Act; Environment Protection Act and Regulations; Disability Services Act; Health Act and Regulations and Heritage Regulations; - relevant sections of the BCA; - state and local regulatory requirements; - legal responsibilities of building designers; - sustainable building practices; - essential safety measures for buildings; - construction materials and finishes; - construction and structural principles; - design theories and principles; - workplace procedures and documentation requirements for building project administration, and; - digital software used in the production of presentation materials and documentation.

VU22470 Conduct, interpret and apply a Bushfire Attack Level (BAL) assessment

Locations:Werribee, Sunshine, Learning Links Geelong..

Prerequisites:Nil.

Description:This unit specifies the outcomes required to conduct, interpret and apply Bushfire Attack Level (BAL) assessments to the design and construction of buildings. This includes relevant theoretical knowledge of fire, understanding of the regulatory framework, assessing a location and education of, and consultation with, clients about the benefits of achieving the required fire resistance. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

However, this unit forms part of a minimum qualification requirement for registration with the Victorian Building Authority as a building designer (architectural).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use appropriate communication and interpersonal techniques with colleagues, clients and others; - accurately record and report workplace information, and maintain documentation; - comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for undertaking and applying a BAL assessment to the design and construction process;- analyse, interpret and integrate information;- identify problems and apply appropriate response procedures, and; - planning and organising skills to prepare resources required for site assessment. Students will also be expected to demonstrate the following knowledge: - applicable Commonwealth, state or territory licensing, legislative, regulatory or certification requirements and codes of practice relevant to the full range of processes for evaluating fire potential and prevention;- organisational and site standards, requirements, policies and procedures for undertaking and applying a BAL assessment to the design and construction process;- purpose and processes associated with undertaking a BAL assessment;- underlying principles for incorporating the outcomes from a BAL assessment into the design and construction process;- principles of cultural diversity and access and equity; - environmental protection requirements; - established communication channels and protocols; - problem solving techniques; - environmental risks and hazard prevention; - procedures for recording, reporting and maintaining workplace records and information, and;- appropriate mathematical procedures for estimation and measurement.

VU22472 Apply electrotechnology principles in an engineering work environment

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to select, set-up and use a range of test equipment to measure voltage, current and resistance. This involves testing for continuity, insulation and identifying commonly used electrical/electronic devices for the supply of power and for the control of machines and plant in an engineering environment

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - recognising and interpreting electrical symbols, diagrams and schematics; - recognising potential electrical hazard in an engineering workshop environment; - operate electrical devices and equipment commonly used in an engineering workshop; - recognising electrical protection devices commonly found in an engineering workshop, and; - isolating subsection of

an electrical circuit in a workshop environment. Students will also be expected to demonstrate the following knowledge: - basic electricity; - simple practical circuits; - series, parallel and series-parallel DC circuits; - electrical distribution in buildings and premises, and; - electrical/electronic systems.

VU22474 Apply principles of strength of materials to engineering problems

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to assess the strength of materials used in engineering applications. The unit includes an awareness of the impact of stress, strain, deformation, and properties of sections, shear force and testing.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determining material strength requirements and selecting the appropriate test regime; - seeking expert advice on test requirements where appropriate; - performing strength tests in accordance with relevant OHS/WHS requirements and workplace procedures; - discussing and dealing with unexpected situations in the testing process, and; - recording test results in accordance with workplace procedure. Students will also be expected to demonstrate the following knowledge: - stress and strain of engineering materials; - centrally loaded connections; - simple beams (point and distribute loads); - classification of materials; - properties of engineering materials; - materials testing methods of engineering materials; - engineering materials, and; - effects of mechanical and thermal processes on the properties of materials.

VU22475 Apply scientific principles to engineering problems

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to apply scientific principles to solve problems common to all engineering fields. This includes quantities and units, vector and scalar quantities, kinematics dynamics, heat and temperature, constitution of matter and error and uncertainty.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating and working with other team members; - reading skills to interpret job instruction, technical documents and OHS/WHS procedures; - clarifying engineering problems; - obtaining resources and materials; - interpreting graphs and charts; - making appropriate assumptions; - recording analysis/design results, and; - presenting a formal report. Students will also be expected to demonstrate the following knowledge: - basic chemistry; - valencies of common ions and radicals; - molecular and ionic equations; - Avogadro's Number and the mole concept; - solubility and precipitation, solution

concentration; - the Gas Laws; - chemical laboratory techniques; - electromagnetic waves; - the SI System of Units; - linear motion; - circular motion; - work, energy, power; - simple machines; - dynamics of linear motion; - momentum; - heat and temperature, and; - error and uncertainty. .

VU22476 Plan for the implementation of mechanical drive systems

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to plan for the implementation of mechanical drive systems. This includes using catalogues and drawing of components including shafts, couplings, belts, chains, gears variable speed drives, brakes, clutches, bearings, winch equipment, reciprocating drives/linear to rotational.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating and working with other team members in an engineering environment; - reading skills to interpret design brief, job instruction, technical documents, plans and OHS/WHS procedures; - preparing an implementation brief; - drawing a mechanical drive system, and; - completing documentation. Students will also be expected to demonstrate the following knowledge: - mechanical drive components, and; - drafting mechanical drive systems.

VU22478 Design and prototype components and/or small structures using engineering design

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to design and prototype engineering components or small structures in an engineering context. This involves preparation of concept proposals, drawings, plans and models.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating and working with other team members; - reading skills to interpret design brief, job instruction, technical documents, plans and OHS/WHS procedures; - setting up and producing a model or prototype according to job requirements, and; - preparing and reviewing relevant documentation. Students will also be expected to demonstrate the following knowledge: - design fundamentals; - engineering objectives in design; - detail design; - prototype production, and; - final design documentation.

VU22479 Apply fluid mechanic principles in mechanical engineering

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to apply fluid mechanic principles in mechanical engineering. This includes the principles and applications of fluids, fluid components, fluid status, fluid flow, fluid power, and forces developed by flow in fluids. To perform calculations to determine changes, forces etc. fluid flow and head loss in pipes and through open channels, to determine operational aspects of a pump in a system and to describe the basic types of fluid machinery.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating and working with other team members; - reading skills to interpret job instructions, technical documents and OHS/WHS procedures; - carrying out computations using fluid power principles; - solving engineering problems using fluid power principles, and; - preparing and reviewing relevant documentation. Students will also be expected to demonstrate the following knowledge: - basic properties of fluids; - components; - fluid statics; - fluid power; - forces developed by flowing fluids; - Reynold's Number and flow regime; - head loss in pipes and fittings; - pipe networks; - channel flow; - fluid machinery, and; - pumping systems.

VU22482 Use advanced mathematics for engineering

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit describes the knowledge and skills required to apply basic mathematics to engineering studies. This includes numbers, algebra, sequences and series, functional relationship (linear, polynomial, quadratic, exponential, logarithmic and circular), introduction to 2D vectors and introductory to differential and integral calculus of those functions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply set of numbers and algebraic skills to manipulate and process mathematical information; - identify different types of functions and mathematically analysing their behaviour and apply to solve simple engineering problems; - use the techniques of sequences and series to solve simple mathematical problems; - use the techniques of two dimensional vectors to solve mathematic and applied problems; - apply basic techniques of calculus; - identify and define problems; - collect and analyse data, and; - report and present data and quantitative information. Students will also be expected to demonstrate the following knowledge: - numbers; - algebra; - sequences and series; - functions and relations; - linear relations; - quadratic relations; - cubic polynomials; - other functions and relations; - exponential functions and logarithms; - circular functions; - introduction to 2D vectors; - differentiation, and; - kinematics applications, anti-differentiation.

VU22487 Apply surveying for civil engineering projects

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to design and establish survey control for engineering and construction purposes. This includes the measurement and calculation of survey data, drawing of sketch plans, collection and processing of topographical data for detail mapping and related computational skills.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating and working with other team members; - reading skills to interpret task related documentation, job instructions, drawings and OHS/WHS procedures; - carrying out site reconnaissance in preparation for the surveying task; - operating surveying equipment and performing the survey; - making computations and recording the results, and; - preparing a report and completing other relevant documentation. Students will also be expected to demonstrate the following knowledge: - theodolite - basic operation, testing and maintenance; - three dimensional survey control using total stations (or theodolite and EDM); - radiations in three dimensions using total stations and/or theodolite and EDM/Data recorder; - mapping of engineering/construction sites using total stations and/or theodolite and EDM/Data recorder; - computing co-ordinates and bearings and distances as related to grids and general set out works for construction works and building site set out, and; - setting out for construction works using theodolite and tapes.

VU22488 Perform measurements and layout tasks on construction site

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency sets out the knowledge and skills required to perform basic measurement and layout tasks on construction sites, including the use of levels and distance measuring techniques.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and communicating with others; - identifying and following relevant OHS/WHS procedures; - reading and understanding documentation and work requests; - planning survey activity; - carrying out construction/engineering site reconnaissance; - checking surveying equipment; - performing surveying measurements; - preparing surveying and related documentation; - constructing longitudinal/cross sections and determine associated grades and levels in typical drainage and pipeline situations; - construction site levelling and detail survey using automatic level stadia tachometry (application limited to small sites), and; - producing a scaled and orientated sketch of

engineering site annotated with features. Students will also be expected to demonstrate the following knowledge: - surveying fundamentals; - reconnaissance of construction/engineering sites; - detail measurement on a construction/engineering site; - third order levelling- two peg test; - 'rise and fall' method; - height of collimation, and; - grid contouring and volumes.

VU22489 Produce reinforced concrete drawings

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency sets out the knowledge and skills required to produce typical drawings for the detailing of reinforced concrete components of a building, in accordance with standard practice in AS1100.501 and AS3600.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and communicating with project personnel; - identifying and following relevant OHS/WHs requirements and procedures; - reading and interpreting building codes and Australian Standards 1100.501; - drafting concrete outlines using elevation, sectional views and details; - applying labelling and dimensioning of reinforcement components; - producing completed technical drawings; - using appropriate system of bar marking to identify reinforcement; - displaying bars and fabric; - preparing bar schedules and calculating steel quantities; - extracting data from AS3600 Concrete Structures Code; - determining splice and anchorage lengths; - drawing details of various types of construction and expansion joints used in reinforced concrete structures, and; - preparing and updating related documents. Students will also be expected to demonstrate the following knowledge: - AS3600 Concrete Structures Code, AS2807.1 Residential Reinforced Concrete Code, CIA Reinforced Concrete Detailing Manual and current local practice in placement of reinforcement; - drawing conventions for concrete outline using plans, sections, views and details; - labelling and dimensioning requirements of reinforcement; - drawing conventions; - systems of bar marking to identify reinforcement; - display of bars and fabric; - bar schedules and calculation of steel quantities, and; - AS3600 Concrete Structures Code to determine splice and anchorage lengths for various conditions.

VU22490 Produce structural steel drawings

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to produce drawings for structural steel elements, in accordance with accepted practice and Australian Standards. The unit includes interpreting and applying relevant sections of the Australian Standard, and Australian Institute of Steel Construction (AISC) handbook, making calculations, setting up drafting equipment and preparing the drawing/s in line with job specifications.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and communicating with other project personnel; - identifying and following relevant OHS/WHs procedures; - reading and interpreting AS4100, ASIC Handbook, relevant building codes; - specify requirements; - performing calculations to determine span, channel and beam sizes etc; - producing technical structural drawings in accordance to AS 1100 using manual or computer aided drafting equipment, and; - preparing and updating supporting documentation. Students will also be expected to demonstrate the following knowledge: - steel sections handbooks in the identification of steel members and derivation of dimensions; - relevant data from Steel Structures Code AS4100; - relevant data from AISC Standardised Structural Steel Connections Handbook; - structural steel line diagrams; - basic design information to correctly draw, label and dimension structural steel connections; - relevant: symbols; terminology; linework; lettering; - detailing: base plates; column/bearer and beam/bearer joints; trusses; gusset plates; girts, purlins and bracing; - application of: centre of gravity lines; gauge lines; edge distances; bolt pitches; hole sizes; - detailing weld types and requirements for field and site welding; - specifications of appropriate protective coatings; - member lengths, and; - member marker system.

VU22535 Apply advanced statics principles to engineering problems

Locations:Sunshine.

Prerequisites:MEM23007A - Apply calculus to engineering tasks/MEM23109A - Apply engineering mechanics principles

Description:This unit of competency describes the knowledge and skills required to apply advanced static concepts and principles to solve complex engineering problems. It includes two and three dimensional force analysis and associated diagrams for structures and mechanical componentry.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and following relevant OHS/WHs procedures; - interpreting industry codes, regulations and technical documentation; - selecting the most appropriate computational method to analyse and solve the engineering problem; - solving engineering problems involving the analysis of two dimensional force and couple systems; - representing forces and moments as three dimensional Cartesian vectors; - analysing and solving engineering problems involving basic three dimensional applications; - analysing and solving problems involving free body diagrams of two and three dimensional structures and assemblies; - constructing shear force and bending moment diagrams for structures and assemblies subjected to two and three dimensional force systems; - presenting results in graphs, charts and tables to requirements, and; - working and communicating with others project team members. Students will also be expected to demonstrate the following knowledge: - two dimensional force analysis; - three dimensional force analysis; - free body diagrams of two and three dimensional systems, and; - shear force, bending moments and torque diagrams for two and three dimensional force systems.

VU22536 Apply advanced dynamics principles to engineering problems

Locations:Sunshine.

Prerequisites:VU22475 - Apply scientific principles to engineering problems

Description:This unit of competency describes the knowledge and skills required to apply advanced dynamics to solve problems common to all engineering fields. This includes friction, centrifugal force, balancing, mechanical vibrations, impulse, momentum, impact, systems of bodies in motion, and simple, compound and epicyclic gearing.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and following relevant OHS/WHS procedures; - interpreting industry codes, regulations and technical documentation; - recognising the underlying dynamic principles to solve engineering problems; - selecting the most appropriate computational method to analyse and solve the mechanical engineering problem; - applying advanced dynamics to engineering problems; - quoting and recording assumptions made in the solution; - presenting results in graphs, charts and tables to requirements; - writing technical reports, and; - working and communicating with other project team members. Students will also be expected to demonstrate the following knowledge: - friction; - centrifugal force; - balancing; - mechanical vibrations; - impulse, momentum and impact; - systems of bodies in motion, and; - gearing.

VU22538 Design mechanical engineering systems

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to design mechanical engineering systems. This includes use of codes, catalogues and design handbooks to extract information to make appropriate calculations and/or selections. This is based on skills encompassing project management, client liaison, design options, tender documentation and technical reporting.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and communicating with project team members; - identifying and following relevant OHS/WHS procedures; - performing functional analysis; - performing calculations; - selecting components; - carrying out design tasks; - testing design, and; - preparing and completing documentation. Students will also be expected to demonstrate the following knowledge: - design principles and procedures: stress and strain; factor of safety; fits and tolerances; Australian Standards; material specifications and drawing requirements; - lever designs; - keys and splines; - couplings: types and analysis of components; - stresses including: shear; bearing and bending; - standard proportions of flanged couplings and knuckle joints; - journal bearings; - rolling contact bearings; - bolted connections; - welded connections; - helical springs (round wire); - translation screws; - design documentation, and; - design skills including: manual and/or CAD

drawing and drafting; AS 1100 parts 1 -10; design aids; interpreting reference manuals and other documentation; mechanical formulae, calculations and measurement within the scope of this unit and engineering materials. .

VU22539 Design mechanical machines

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to design rotating machines, using catalogued and standard machine component parts and assemblies.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and communicating with other team members; - identifying and following relevant OHS/WHS procedures; - performing measurements and calculations; - preparing machine design solutions in response to project brief, and; - preparing design documentation detailing component specifications. Students will also be expected to demonstrate the following knowledge: - basic principles of strength analysis; - tensile, shear/torsional and bending strength; - drive shaft materials for given conditions; - fatigue, shock, stress raisers and endurance and stress; - spline and pin sizes and formulae; - fatigue failure theory; - factor of safety; - fits and tolerances; - Australian Standards; - material specifications; - drawing requirements; - shaft types; - calculations and formulae; - design documentation, and; - design skills including: manual and/or CAD drawing and drafting; AS 1100 parts 1 -10; design aids; interpreting reference manuals and other documentation; mechanical formulae, calculations and measurement within the scope of this unit and engineering materials.

VU22540 Generate design solutions

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to create sound design solutions in an industry context which are economically viable, environmentally conscious, ergonomically appropriate and equitable for those producing the product as well as the end user. The unit begins with a general overview of industrial design and the role of the designer and includes the starting point of a design brief, research and analysis of ideas and resources, plus the development of innovative concepts. It also includes a requirement for critical and informed collaboration with others about one's own work.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - researching skills to inform the design solution; - communicating and literacy skills to collaborate with relevant

stakeholders, request advice, receive feedback and work with a range of people about the design requirements and solutions; - numeracy skills to perform, calculate, take measurements, assess sizes, determine costs; - engineering design skills to develop solutions in response to a defined need, and; - personal and professional presentation. Students will also be expected to demonstrate the following knowledge: - a wide range of sources of information pertaining to the development of the design; - appropriate communication methods to encourage collaboration about the concept for own work; - the theoretical and philosophical context for design development; - other design practitioners and their development of concepts for own work; - the elements and principles of design and how they may be used in the development of the concept for own work; - copyright, moral rights and intellectual property issues and legislation which assist the development and critical discourse of the concept for own work, and; - literacy skills sufficient to research and evaluate a wide range of source materials for the development of the concept for own work.

VU22541 Implement advanced materials science principles to engineering applications

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency sets out the knowledge and skills required to apply advanced principles of materials science to engineering problems applications. This includes the identification and description of structure and properties of materials, metallography, heat treatment processes for metals, strengthening mechanisms, surface engineering and failure mechanisms.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and communicating with others involved with the work tasks; - reading and interpreting technical information such as material data sheets; - interpreting and producing graphs and tables; - performing metallographic investigations and material testing tasks; - performing a range of computations related to material suitability for a specified application, and; - producing graphs and charts related to material performance. Students will also be expected to demonstrate the following knowledge: - structure of crystalline materials; - imperfections in crystalline materials; - microscopic examination; - diffusion: mechanisms and applications; - dislocations and strengthening mechanisms; - review of recrystallisation and grain growth; - structure and properties of ceramic materials - structure and properties of polymeric materials; - phase diagrams; - iron-carbon alloys; - heat treatment of plain carbon steels; - heat treatment of alloy carbon steels; - heat treatment of aluminium alloys; - surface engineering of metal alloys; - composite materials: fibre reinforced materials; laminate; MMC; CMC; sandwich panel and strength of materials for fibre composite structures, and; - failure of materials.

VU22542 Use advanced 2D & 3D computer aided drafting (CAD) techniques

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to use computer aided drafting (CAD techniques to prepare complex 2D and 3D

representations of products or components for engineering applications. The unit includes the creation of 2D and 3D views, solid modelling and rendering techniques, manipulations of shapes, movement through space, editing, files management and producing hardcopy output.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and coordinating drawing task with other relevant personnel; - setting up and using a CAD system; - applying the key features of a CAD program to prepare complex 2D and 3D images; - produce hardcopy of drawing images, and; - saving files in various formats to enable retrieval in other software applications. Students will also be expected to demonstrate the following knowledge: - designing applications; - areas, perimeters, volumes, angles, starting, ending, other controlling points; - using other commercial programs; - editing, file manipulation, design drafting; - inbuilt design and data handling; - spreadsheets, bill of material, data base, programming languages; - manipulation of shapes; - complex lines and arcs, splines, special single entity multiple lines, unique involute profiles, Archimedean profiles; - multiple three dimensional views; - setting up the environment on screen, top view, front and side views, three dimensional views; - movement through space; - drawing on any created views, relocating coordinate system as necessary; - creation of three dimensional complex views by manipulation of drawing planes and location of geometric shapes; - use of editing function to facilitate modification of geometric shapes in completion of a three dimensional view; - display of three dimensional view: wire line, solid face, isometric, perspective and orthographic; - use of assembly drawing file for plotting; - theory of the terminology associated with modelling; - region modelling techniques; - solid modelling techniques; - rendering types and preferences; - rendering techniques and surface finish options; - producing hard copies of 3D models, and; - saving 3D models in various formats for retrieval into CAD drawings or other application software.

VU22547 Produce an engineering design for drainage pipes and culverts

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to apply principles of design for a minor culvert for a rural road using appropriate drainage standards. This includes the application of basic concepts in engineering hydrology to estimate flood flow magnitude and basic culvert and drainage design practices.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating and working with other team members; - reading skills to interpret task related documentation, relevant data, job instructions, drawings and OHS/WHS procedures; - carrying on site

reconnaissance to gather surveying data, measurements, photographs and other required information in preparation for the culvert design and drainage task; - making computations and recording the results; - assembling gathered information and data and preparing a culvert and drainage design solution; - reviewing design in consultation with others and finalising the proposal, and; - completing required workplace documentation. Students will also be expected to demonstrate the following knowledge: - hydrological cycle; - meteorology; - rain gauging; - rain gauging results recorded and graphed over the period of duration of the module; - stream flow; - stream gauging practical project; - flood estimation; - hydraulic structures; - data collection; - development of a logical plan of action in approaching design task; - the information required to undertake design; - major and minor floods; - control measures for floods of greater magnitude; - rational method for design of peak discharge; - calculation of design discharge from single use catchment given the area, runoff coefficient and time of concentration; - weighted coefficient of runoff for a multi-use catchment; - the design discharge from multi-use catchment given areas, coefficient and time of concentration; - coefficient of run off based on percentage of impervious area; - rural catchment areas; - calculation of design discharge; - culvert design; - urban runoff and flow; - determination of flow time in gutters or channels (D.D.M. chart); - determination of time of entry; - pipe and pipe layout; - pit locations; - locate easement drainage; - catchment areas; - time of concentration; - calculate peak discharge; - pipe design, and; - review of pipeline shock losses.

VU22548 Produce an engineering design for a stormwater reticulation scheme

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to apply principles of design for a stormwater reticulation scheme using appropriate design standards. The unit includes conducting an on-site reconnaissance, data collection and analysis, application of hydrology principles, use of relevant charts from drainage design manual and other design aids.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating and working with other team members; - reading skills to interpret task related documentation, relevant data, job instructions, drawings and OHS/WHS procedures; - carrying on site reconnaissance to obtain surveying data, take measurements and photographs and gather other required information in preparation for stormwater reticulation scheme; - making computations and recording the results; - assembling gathered information and data and preparing a design solution; - setting up and using design aids; - reviewing design in consultation with others and finalising the proposal, and; - completing required workplace documentation. Students will also be expected to demonstrate the following knowledge: - data collection relevant to stormwater reticulation scheme: - urban runoff and flow - time of entry - pipe and pipe layout; - pit locations; - catchment areas; - time of concentration, and; - design aids.

VU22549 Produce an engineering design for a sewerage reticulation scheme

Locations:Sunshine.

Prerequisites:Nil.

939

Description:This unit of competency sets out the knowledge and skills required to apply principles of design for an engineering sewerage reticulation scheme using appropriate design standards. The unit includes conducting an on-site reconnaissance, data collection and analysis, application of hydrology principles, sewerage reticulation design procedures and use of relevant charts from drainage design manual.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating and working with other team members; - reading skills to interpret task related documentation, relevant data, job instructions, drawings and OHS/WHS procedures; - carrying on site reconnaissance to obtain relevant data, such as survey measurements and site photographs and other required information in preparation for sewerage reticulation scheme; - making computations and recording the results; - assembling gathered information and data and preparing a design solution; - setting up and using design aids; - reviewing design in consultation with others and finalising the proposal, and; - completing required workplace documentation. Students will also be expected to demonstrate the following knowledge: - instrumentalities; - job brief; - horizontal alignment; - sewerage authority drawings; - vertical alignment; - fixing of vertical alignment; - working drawings; - testing; - septic tanks; - package plants, and; - small treatment plants.

VU22550 Produce an engineering design for a reinforced concrete structure

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to produce a design for a flexural reinforced concrete structure consistent with requirements of a project brief. The unit includes the design principles of flexural reinforced concrete members such as suspended slabs, beams, columns and footings as well as using appropriate design aids.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and communicating with other team members involved in the design project; - identifying and following relevant OH&S procedures; - reading and interpreting a design brief and related documentation; - using design reference material; - preparing a design project plan; - producing a design for a reinforced concrete structure that meets the requirements of design brief and relevant Australian standards, and; - preparing and updating design documentation. Students will also be expected to demonstrate the following knowledge: - loads; - moments; - shear forces; - ultimate strength theory for bending using rectangular stress block; - moment capacity; - rectangular beam design from first principles; - design aids for rectangular beam design; - strength

equations; - T-beams and L-beams; - length for tension and compression reinforcement; - reinforcement; - shear, and; - shear reinforcement and appropriate design aids.

VU22551 Produce an engineering design for a steel structure

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to complete an engineering project including the analysis and design of simple steel structures from first principles using appropriate design aids. The unit includes a ranges of relevant engineering calculations and design principles for a range of steel structure components.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and communicate with others; - identifying and following relevant OHS/WHs procedures; - calculating: loads on beams and frames, geometric properties of beam sections, effective lengths of beams, effective lengths of columns with and without lateral restraints, stresses caused by biaxial bending in a beam and effective lengths of members in pin-jointed frames; - designing: column for concentric load or eccentric load, bolted, welded and flange plate connections, base plate for a simple connection or for a moment connection, structural members subjected to tensile forces, members in pin jointed frames using safe load tables, welded plate girder, load bearing stiffeners, structural member in combined tension and bending and checking for local web crushing and buckling. Students will also be expected to demonstrate the following knowledge: Loads on structures: - AS 1170 Part 1 to determine design dead and live loads; - loads on beams, where loads are transmitted through panel areas; - loads on frames where loads are transmitted through panel areas; - wind loads on buildings as per AS 1170 Part 2; Beams (plated): - geometric properties of (plated) beam sections; - plated beam bending, shear and deflection; Column design: - effective lengths of columns with and without lateral restraints; Concentric load; Eccentric load; Connections: - bolted connection for concentric load; - welded connection for concentric and eccentric loads; - flange plate connections using continuous and intermittent welds; Column base plates: - base plate for a simple connection; - base plate for a moment connection; Biaxial bending: - stresses caused by biaxial bending in a beam; Tension members: - structural members subjected to tensile forces; Pin Jointed frames: - effective lengths of members in pin-jointed frames; - members in pin jointed frames using safe load tables; Welded plate girders: - welded plate girder; - local web crushing and buckling, and; - load bearing stiffeners.

VU22552 Produce advanced engineering drawings for a reinforced concrete structure

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to produce advanced reinforced concrete drawings, in accordance with required practices and conventions as outlined in AS1100.501 and AS3600.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and communicating with other project personnel; - identifying and following relevant OHS/WHs requirements and procedures; - reading and interpreting building codes and Australian Standard 1100.50; - drafting concrete outlines using elevations and sectional views; - applying labelling and dimensioning conventions for reinforced concrete components; - specify requirements; - preparing bar schedules and calculating steel quantities; - applying the appropriate design criteria and in line with AS 3600, and; - preparing and updating related documents. Students will also be expected to demonstrate the following knowledge: - AS 3600 and CIA Reinforced Concrete Detailing Manual in the placement of reinforcement; - concrete outlines using plans, sections, elevations and details; - labelling and dimensioning conventions for reinforcement; - drawing symbols; - display of bars and fabric; - appropriate cover; - bar marking to identify reinforcement; - AS 3600 to determine, and; - construction requirements.

VU22553 Produce advanced engineering drawings for a steel structure

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to complete typical structural steel drawings in accordance with accepted practice as outlined in AS1100.501. The unit includes interpreting and applying relevant sections of AS4100 and Australian Institute of Steel Construction (AISC) Handbook, performing calculations and preparing dimensioned detailed structural drawings of steel members in accordance with job specifications.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consulting and communicating with other project personnel; - identifying and following relevant OHS/WHs procedures; - using steel section tables; - applying relevant data from AS 4100; - performing calculations to determine span, beam sizes, spacing, footing plates etc.; - extracting relevant information and data from the AISC Handbook, and; - producing structural steel drawing. Students will also be expected to demonstrate the following knowledge: - section tables; - data from AS 4100 and design capacity tables for structural steel in the selection and specification of bolts and welds; - structural steel members using plans, sections, elevations and details; - design data; - drawing standards; - detailing; - dimensioning; - weld types; - protective coatings, and; - construction requirements.

VU22559 Design timber structures

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the knowledge and skills required to analyse the requirements from a project brief and design a timber structure using

appropriate design aids.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and following relevant OHS/WHS procedures;- recognising types of construction timber;- selecting timber appropriate for design;- interpreting and applying Australian Standard AS1170;- calculating loads and stresses;- preparing a timber structure design which meets the requirements of a project brief, and;- working and communicating effectively with others team members. Students will also be expected to demonstrate the following knowledge: - design principles and types for timber structure;- timber classifications and specifications;- Australian standard AS1720;- commercial timber sizes;- loads on structures;- design of: beams, columns, connections, and;- tension members.

VU22574 Investigate job opportunities

Locations:Footscray Park, Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to identify suitable job opportunities and their requirements and employment support services.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to access and interpret relevant information;- planning and organising skills to develop a personal employment support services resource, and;- problem solving skills to: match own existing skills to those required; identify opportunities for skill development; review and adjust job selection where required. Students will also be expected to demonstrate the following knowledge: - reliable sources of information on: jobs and their requirements; available employment support services. .

VU22575 Identify workplace expectations

Locations:Footscray Park, Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to identify the attributes and behaviours sought by employers, the rights and responsibilities of employees and personal protective behaviours that support personal safety in the workplace.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - reliable sources of relevant information. Students will also be expected to demonstrate the following knowledge: - self management skills to conduct a self review of own attributes;- identify the ways in which different personal protective behaviours can be used in the workplace to support personal safety, and;- align appropriate solutions with potential workplace issues.

VU22576 Undertake a work placement

Locations:Footscray Park, Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to select and undertake a work placement to support the development of work ready skills.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in discussions with an appropriate support person;- participate in an interview if required;- ask questions to clarify information in the workplace;- report issues as required;- determine travel requirements and appropriate personal items;- review the work placement;- self management skills to review own performance, and;- numeracy skills to determine travel arrangements that support punctuality. Students will also be expected to demonstrate the following knowledge: - requirements of a typical workplace, and;- interview format, where required.

VU22577 Develop independent travel skills

Locations:Footscray Park, Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to identify and select appropriate transport options and alternative arrangements to support punctual workplace attendance.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to interpret travel information such as timetables and route maps. - numeracy skills to determine: travel times; costs if applicable; stop numbers if applicable. - planning and organising skills to develop a travel plan. - problem solving skills to: select the most appropriate travel option; determine options to respond to unplanned events, and;- self management skills to: recognise and implement appropriate responses to unplanned events; review and adjust travel experience as required. Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary to talk about familiar issues such as workplace events, weather, environment, simple current events; - simple sentence structures, such as simple and compound sentences; - forms of questioning, such as to seek clarification in conversations; - a range of common high frequency verb tenses and forms, including simple reported speech; - a range of modals and modal forms (positive and negative), such as, should, would, could, might, need to; - a range of common phrasal verbs, such as Can you finish this before you go home?; - a range of conjunctions, such as, when, but, if, although, so, When I left school, I got a job here; - a range of discourse markers and cohesive devices, such as, first, then, by the way, anyway, so, after that; - adjectives, adverbs and some adverbial phrases, such as, as soon as possible; - prepositions and prepositional phrases, such as, on the weekend, at the end of Ramadan; - paralinguistic features of conversations and transactions to support understanding and communication; - beginning awareness of how tone, stress and intonation modify meaning; - mostly intelligible pronunciation with adequate stress and intonation characterised by hesitation and circumlocution; - politeness conventions in conversation; - some awareness of register; - a range of common colloquialisms, and; - everyday numbers in familiar instructions and directions where applicable.

VU22629 Read and write simple texts for employment

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to read and write a range of simple, routine digital and print informational and instructional texts relevant to employment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary and expressions which include most aspects of everyday life; - simple sentence structures for simple, compound and complex sentences; - simple question forms to clarify meaning; - a limited range of high frequency discourse markers and cohesive devices, such as, first, then, after that; - a limited range of adjectives, adverbs; - a limited number of adverbial phrases, such as, as soon as possible; - a limited number of prepositions and prepositional phrases, such as, in, at, on, under, over; - a range of common high frequency tense and aspect forms to describe present, past and future; - reported speech found in routine digital and print workplace communications; - a limited range of common phrasal verbs used in instructional and informational texts, such as Turn off the computer; - some modals and modal forms (positive and negative), such as, should, would, could, might, need to; - a limited range of connectives, such as when, but, if, although, so, Ring the boss when you get in; - a range of high frequency discourse markers and cohesive devices, such as, after that; - reading skills to: access online and print based EAL resources, such as dictionaries, thesauruses; proofread own writing; - some high frequency idiomatic

expressions; - some understanding of register in communications, and; - some awareness of tone, intention and attitude of writer.

VU22630 Observe and report on activities in a workplace

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to plan and organise practical workplace observations, collect and record observations, report observations to others, evaluate the experience, and reflect on own learning goals for the Australian workplace. The focus of the workplace observation is on development of language skills in the context of work.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary to discuss workplace observation and to describe workplace activities; - simple sentence structures; - a range of common high frequency verb tenses and forms, including simple reported speech; - a range of modals and modal forms (positive and negative); - a range of common phrasal verbs to discuss workplace procedures; - a range of conjunctions; - a range of high frequency discourse markers and cohesive devices; - adjectives, adverbs and some adverbial phrases, such as, as soon as possible; - prepositions and prepositional phrases; - simple paralinguistic features, such as, body language, to interpret and convey meaning and acknowledge understanding; - some awareness of how tone, stress and intonation modify meaning; - mostly intelligible pronunciation with adequate stress and intonation characterised by hesitation and circumlocution; - politeness conventions in conversation; - some awareness of register, and; - use and choice of address forms.

VU22631 Prepare to work effectively in an Australian workplace

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the language skills and knowledge required by EAL learners to participate effectively in an Australian workplace.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - describe and discuss skills required in the workplace; - talk about familiar social matters, for example personal details, simple social events; - communicate about workplace; - simple sentence structures; - a range of common high frequency verb tenses and forms, including simple reported speech and imperative forms; - a range of modals and modal forms (positive and negative); - a range of common phrasal verbs, such as Can you switch on the air conditioning?; - a range of conjunctions; - a range of

high frequency discourse markers and cohesive devices; - adjectives, adverbs and some adverbial phrases; - prepositions and prepositional phrases, such as at the end of the shift; - simple paralinguistic features, such as body language, to interpret and convey meaning and acknowledge understanding; - some awareness of how tone, stress and intonation modify meaning; - use mostly intelligible pronunciation with adequate stress and intonation characterised by hesitation and circumlocution; - politeness conventions in conversation; - some awareness of register in relating to others in the workplace, such as supervisors, and; - some idiomatic expressions and colloquialisms typically used in the workplace, such as Can you grab these boxes?

VU22632 Participate in a range of straightforward interactions for employment

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to speak and listen in a range of straightforward informal and formal employment interactions involving discussion and instructions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary which is sufficiently broad to encompass straightforward employment-related needs; - a range of verb tenses and aspects; - question forms, such as to get others to clarify misunderstandings and ambiguous points; - a range of modal forms, such as including negative form of need to and have to; - a range of phrasal verbs; - a variety of adjectives, adverbs and adverbial phrases; - a range of conversation discourse markers, conjunctions; - a range of modifying words and phrases to explain and qualify ideas and express opinions and attitudes; - how tone, stress and intonation modify meaning; - generally intelligible pronunciation with effective use of stress and intonation although speaking may be characterised by hesitations and circumlocution; - register appropriate to the context; - a limited range of colloquial and idiomatic expressions; - recognition of some inferred meaning, such as logical, contextual, paralinguistic, for example use of voice for effect (intonation and emphasis), facial expressions; - detect and give opinions and attitudes in oral texts, and; - verbal communication includes meanings which are not always explicit.

VU22633 Read and write straightforward texts for employment

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to read and write a range of straightforward digital and/or print texts relevant to employment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary and expressions for a range of straightforward texts related to employment; - common collocations; - sentence structures for simple, compound and conditional sentences; - question forms, such as to request information; - paragraph structure in formal communications; - definite and indefinite article; - a variety of adjectives and adverbs used in workplace documents; - a range of adverbial phrases, prepositions and prepositional phrases; - a range of tense and aspect forms; - reported speech used in communications and other work related texts; - a range of phrasal verbs; - a range of modals and modal forms, including negative form of need to and have to; - a range of discourse markers and cohesive devices to structure text; - reported speech; - reading strategies; - reading skills; - a limited range of idiomatic expressions and colloquialisms; - variation of register in workplace communications; - language and conventions appropriate for social communication purposes; - use model texts to guide production of written texts; - recognition of some inferred meaning by using a range of cues, such as syntactic, semantic, logical, contextual; - awareness of tone and intention of writer; - detect and express opinions and attitudes in texts, and; - plan, draft, proof read and redraft written texts.

VU22634 Organise and participate in a practical placement

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to select, plan, participate in and evaluate a practical work placement. The unit focuses on an introduction to the Australian workplace, relevant terminology, and work tasks. It covers negotiation of a placement, participation in the workplace, workplace health and safety, evaluation, and record keeping.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary to talk about familiar topics, such as industry and workplace requirements, own skills, knowledge and experience in relevant industry or workplace; - vocabulary which is sufficiently broad to encompass straightforward employment-related needs; - conventions in conversation; - draw on prior knowledge together with knowledge of textual cues and text structures to predict content and meaning of information related to the workplace; - read and interpret signs and other visual texts in the workplace; - a range of modals and modal forms; - generally intelligible pronunciation with effective use of stress and intonation although speaking may be characterised by hesitations and circumlocution; - a range of registers, styles and conventions used in spoken discourse in the workplace; - a range of verbal and nonverbal strategies and conventions in conversation; - features of text organisation related to personal documentation; - aspects of Australia's culturally diverse workplaces; - common colloquialisms related to the workplace, and; - recognition of some inferred meaning.

VU22635 Present and listen to complex oral presentations in an employment or professional context

Locations:St Albans, Werribee, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required by EAL learners to present and listen to complex oral presentations in English in an employment or professional context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary and expressions relevant to employment related topics or interests; - a wide range of common collocations; - simple, compound and complex sentences with a range of subordinate clauses; - a wide range of verb tenses and verb forms, including active and passive; - most modal forms; - a wide range of phrasal verbs which include a number of particles; - a wide range of adjectives, adverbs, adverbial phrases and prepositional phrases to describe and convey information and expand on ideas; - a wide range of discourse markers to develop ideas and their relationship to each other, to interpret and convey meaning, signal intention; - a wide range of conjunctions; - use intelligible pronunciation; - demonstrates generally appropriate flow of speech though may have occasional repetition, hesitation or self-correction; - use tone, intonation and stress to influence meaning in spoken language; - a range of registers, styles and conventions used in oral presentations in an employment or professional context; - a wide range of common idioms and colloquial expressions as they relate to spoken texts relevant to presentations in an employment or professional context; - an awareness of English varieties; - a range of verbal and paralinguistic strategies; - recognition of a range of cues for inferred meaning, and; - distinguish fact and opinion, irony, understatement, exaggeration in oral texts.

VU22636 Give and follow a range of complex instructions in an employment context

Locations:St Albans, Werribee, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required by EAL learners to analyse and give complex spoken instructions in a work context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary and expressions for a wide range of topics related to employment interests; - a wide range of common collocations; - simple, compound and complex sentences with a range of subordinate clauses; - a wide range of verb tenses and verb forms; - most modal forms; - a wide range of questions and instructions using a range of verb forms; - a wide range of phrasal verbs; - a wide range of adjectives, adverbs, adverbial phrases and prepositional phrases; - a wide range of discourse markers; - a wide range of conjunctions (subordinating and coordinating); - use tone, intonation

and stress to influence meaning in spoken language; - a wide range of registers, styles and conventions used in spoken discourse; - a wide range of common idioms and colloquial expressions; - an awareness of English varieties; - recognition of a range of cues for inferred meaning, such as logical, contextual and paralinguistic (body language), and; - knowledge of aspects of Australian workplace culture which may impact on how instructions can be delivered, such as politeness forms.

VU22638 Critically read and write formal letters and complex prose texts for professional purposes

Locations:St Albans, Werribee, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required by EAL learners to critically read and write formal letters and complex prose texts in a professional context. Texts may be in printed and/or digital format.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - varied vocabulary and terminology including jargon related to professional interests; - understanding of a wide range of common collocations; - a wide range of simple, compound and complex sentences with a range of subordinate clauses; - a wide range of verb tenses and verb forms; - reported speech (questions/instructions) with a range of reporting verbs and verb forms; - a wide range of conditionals and modals; - definite and indefinite article; - a wide range of phrasal verbs, adjectives, adverbs, adverbial phrases and adjectives; - a wide range of conjunctions; - conjunctions of time; - a wide range of discourse linkers to develop ideas and their relationship to each other, to interpret and convey meaning, signal intention; - understands that different sources will present different perspectives, and recognises how text, language and structure influence the reader to adopt particular views and positions; - principal conventions of formal letters and complex prose texts; - a wide range of registers and style appropriate to a professional context; - recognition of a range of cues for inferred meaning; - ways of detecting the writer's tone, intention and attitude; - distinguish fact and opinion, irony, understatement, exaggeration in texts; - idioms and colloquialisms relevant to the professional context, and; - formality requirements for formal letters and complex prose texts in electronic and print forms for a wide variety of purposes related to professional purposes.

VU22639 Critically read, write and edit complex descriptive texts in a professional context

Locations:St Albans, Werribee, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes skills and knowledge required by EAL learners to critically read and write complex English language descriptive texts, apply knowledge of discourse and language use, and edit a written text in a professional context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - varied vocabulary and terminology including jargon related to employment and/or professional interests; - understanding of a wide range of common collocations; - a wide range of simple, compound and complex sentences with a range of subordinate clauses; - a wide range of verb tenses and verb forms; - reported speech (questions/instructions) with a range of reporting verbs and verb forms; - a wide range of conditionals and modals; - definite and indefinite article; - a wide range of phrasal verbs, adjectives, adverbs, adverbial phrases and adjectives; - a wide range of conjunctions; - a wide range of discourse linkers to develop ideas and their relationship to each other; - understands that different sources will present different perspectives' - principal conventions of descriptive texts; - a wide range of registers and styles appropriate to a professional context; - recognition of a range of cues for inferred meaning; - ways of detecting the writer's tone, intention and attitude; - distinguish fact and opinion, irony, understatement, exaggeration in texts; - idioms and colloquialisms relevant to the professional context; - formality requirements for complex descriptive texts in electronic and print forms for a wide variety of purposes related to a professional context, and; - recognise, select and interpret mathematical information embedded in descriptive texts used in a professional context where required.

VU22640 Give straightforward oral presentations for study purposes

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to participate in further study contexts that involve the presentation and discussion of ideas and information in straightforward formal presentations and formal group interactions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary for a range of straightforward topics in a study context; - a range of verb tenses and aspects; - dependent clauses introduced by words such as although, when, if, while; - a range of discourse markers and conjunctions to link ideas and concepts, add information or contrast ideas in formal presentations; - a range of modal forms; - a range of phrasal verbs, adverbs, adverbial phrases and adjectives; - generally intelligible pronunciation with effective stress and intonation, although speaking may be characterised by hesitations and circumlocution; - processes of planning, drafting and editing to prepare interactions and presentations; - register required in formal interactions and presentations in further study contexts; - conventions to participate in oral group interactions such as turn taking, rebuttals and interruptions; - a limited range of colloquial expressions and some common idioms in informal interactions; - use of tone, stress and intonation to modify meaning such as to convey emphasis on important information; - recognition of cues for inferred meaning, and; - detect and respond to opinions, attitudes in oral group interaction.

VU22641 Participate in a range of straightforward interactions for study purposes

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to participate in a range of straightforward interactions for study purposes. This involves making straightforward verbal requests and suggestions, relating and responding to verbal instructions, and participating in group work and informal group discussions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary for a range of straightforward topics in a study context; - a range of verb tenses and aspects; - a range of discourse markers and conjunctions to link ideas and concepts, add information or contrast ideas in formal interactions; - a range of modal forms; - a range of phrasal verbs, adverbs, adverbial phrases and adjectives to convey ideas, express opinions and attitudes, such as I feel really strongly about this; - reported speech; - generally intelligible pronunciation with effective stress and intonation, although speaking may be characterised by hesitations and circumlocution; - different registers required in different study contexts/fields; - a limited range of colloquial expressions and some common idioms in informal interactions; - recognition of cues for inferred meaning, such as logical, contextual and paralinguistic (pause, stress, use of silence, facial expression), and; - detect and respond to opinions, attitudes in spoken group interaction.

VU22642 Read and write straightforward texts for study purposes

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to develop reading, note-taking and writing skills to produce straightforward texts based on study needs. Texts may be in printed and/or digital format.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary for a range of straightforward topics related to study purposes; - understanding of common collocations; - sentence structures; - a range of tense and aspect forms; - a range of discourse markers, connectives and cohesive devices to link ideas and concepts, add information or contrast ideas; - a range of modal forms; - definite and indefinite article; - reported speech with present tense; - a range of adverbial phrases, prepositions and prepositional phrases to convey the relationship between ideas, time and location; - a range of phrasal verbs to create meaning in further study texts;

- paragraph structure; - commonly used registers related to further study writing; - some knowledge of aspects of the local culture as it relates to research, referencing and writing texts which draw on research for further study purposes; - a limited range of colloquial expressions and some common idioms in texts in a further study context; - recognition of cues for inferred meaning; - ways of detecting the writer's tone, intention and attitude; - conventions of a range of text-types relevant to further study such as formality requirements in electronic and/or print forms, and; - use of model texts to guide production of a range of straightforward texts relevant to further study.

VU22643 Listen and take notes for study purposes

Locations:Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required by EAL learners to develop listening and note-taking skills from straightforward spoken texts relevant to study purposes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary for a range of straightforward topics in a study context; - a range of tense and aspect forms; - a range of discourse markers, connectives and cohesive devices used in spoken English to link ideas and concepts, add information or contrast ideas; - dependent clauses introduced by words; - a range of modal forms including negative, such as with need to, have to; - a range of adverbial phrases, prepositions and prepositional phrases to convey the relationship between ideas, time and location; - understands how tone, stress and intonation modify meaning; - some knowledge of aspects of the local culture as it relates to speeches, lectures and other spoken texts relevant to further study; - a limited range of colloquial expressions and some common idioms in texts in a further study context, and; - recognition of cues for inferred meaning, such as logical, contextual and paralinguistic (pause, stress, use of silence).

VU22644 Use language analysis strategies and study skills

Locations:Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes skills and knowledge required by EAL learners to analyse language in study-related texts and develop study skills.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary, linguistic structures and features of a range of straightforward texts used in further

study including language reference texts, and; - terminology to describe lexical, semantic, grammatical features of written and spoken English texts.

VU22645 Give complex presentations for study purposes

Locations:Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required by EAL learners to participate in further study contexts which involve the presentation and discussion of ideas and information in complex formal presentations and group discussions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - varied vocabulary and terminology specific to the identified topic or further study area; - a wide range of common collocations, such as make progress, be interested in; - a wide range of simple, compound and complex sentences with a range of subordinate clauses; - a wide range of verb tenses and verb forms, active and passive; - most modal forms; - reported speech, questions and instructions using a range of verb forms; - a wide range of phrasal verbs which include a number of particles; - a wide range of adjectives, adverbs, adverbial phrases and prepositional phrases to describe and convey information and expand on ideas; - a wide range of conversational/discourse linkers to develop ideas and their relationship to each other; - a wide range of conjunctions; - uses intelligible pronunciation; - use tone, intonation and stress to influence meaning in spoken language; - a wide range of registers and style used in spoken presentations and formal interactions in further study contexts; - some knowledge of aspects of the local culture including colloquial language and irony as it relates to spoken texts relevant to further study; - an awareness of English varieties; - non-verbal strategies and paralinguistic features of speech; - recognition of a range of cues for inferred meaning, and; - distinguish fact and opinion, irony, understatement, exaggeration in spoken texts.

VU22646 Participate in complex spoken discourse for study purposes

Locations:Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required by EAL learners to respond to a wide range of complex spoken interactions and interpret and discuss ideas and opinions with others in informal study contexts.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - a wide range of vocabulary and terminology specific to the identified topic or study area; - a wide range of common collocations; - a wide range of simple, compound and complex

sentences with a range of subordinate clauses; - a wide range of verb tenses and verb forms, active and passive; - most modal forms; - reported speech, questions and instructions using a wide range of verb forms; - a wide range of phrasal verbs which include a number of particles; - a wide range of adjectives, adverbs, adverbial phrases and prepositional phrases; - a wide range of discourse markers; - a wide range of conversational/discourse linkers and conjunctions; - intelligible pronunciation; - tone, intonation and stress to influence meaning in spoken language; - a wide range of registers, styles and conventions used in spoken discourse in further study contexts; - some knowledge of aspects of the local culture; - an awareness of English varieties; - paralinguistic features including pitch, intonation and stress to; - recognition of a range of cues for inferred meaning, attitude, mood, and intentions, such as logical, contextual and paralinguistic (body language, facial expression), and; - distinguish fact and opinion, irony, understatement, exaggeration in oral texts.

VU22647 Take notes from complex spoken texts for study purposes

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to participate in further study contexts by taking notes from complex and extended spoken texts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary for a range of complex texts in a study context; - a wide range of simple, compound and complex sentences with a range of subordinate clauses within complex and sustained spoken texts; - a wide range of verb tenses and verb forms (active and passive); - most modal forms, questions and instructions using a range of verb forms; - reported speech, using a range of verb forms to relate supporting evidence, acknowledge or confirm views or arguments; - a wide range of phrasal verbs which include a number of particles, such as take part in, take apart; - a wide range of adjectives, adverbs, adverbial phrases and prepositional phrases; - a wide range of discourse markers used in lectures; - a wide range of conversational/discourse linkers to develop ideas and their relationship to each other, to interpret and convey meaning, signal intention, such as accordingly, subsequently, consequently; - how paralinguistic features of speech (tone, intonation and stress) convey meaning in complex spoken texts; - a wide range of registers and styles used in complex spoken texts in further study contexts; - some knowledge of aspects of the local culture; - an awareness of English varieties; - note-taking methods used in further study contexts, such as paraphrasing rather than noting verbatim; - recognition of a range of cues for inferred meaning, such as logical, contextual and paralinguistic, and; - distinguish fact and opinion, irony, understatement, exaggeration, sarcasm in spoken texts.

VU22648 Read and write complex texts for study purposes

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to develop reading, note-taking and writing skills in English, and to produce a range of

complex texts relevant to study purposes and the field of study.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary and expressions including jargon and some specialist terminology for a range of topics related to research study needs; - a wide range of texts for further study purposes; - a wide range of verb tenses and verb forms, active and passive; - a wide range of conditionals; - definite and indefinite article; - reported speech, using a range of verb forms to relate supporting evidence, acknowledge or confirm views or arguments; - a wide range of phrasal verbs, adverbs, adverbial phrases and adjectives to create meaning in research texts; - a wide range of adverbial phrases, prepositions and prepositional phrases; - a wide range of collocations; - a wide range of conjunctions; - a wide range of discourse markers, connectives, pronouns and cohesive devices to link ideas and concepts, add information or contrast ideas; - differences between paraphrasing, plagiarising and direct quotes in written texts; - understands that different sources will present different perspectives; - a wide range of registers related to specific fields of study; - ways of detecting the writer's tone, intention and attitude; - different roles required of the author in further study texts; - recognition of a range of cues for inferred meaning, such as logical and contextual; - distinguish fact and opinion, irony, understatement, exaggeration in texts; - formality requirements for complex texts related to further study, and; - use of appropriate referencing style.

VU22649 Use critical reading skills to analyse study tasks

Locations: Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by EAL learners to analyse written study task requirements by using critical analysis of instructional or advisory language related to the successful completion of study tasks.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - vocabulary and expressions including jargon and some specialist terminology for a range of topics related to vocational or study needs; - linguistic structures and features of instructions; - simple, compound and complex sentences with a range of subordinate clauses; - a wide range of verb tenses and forms, conditionals and modals; - a wide range of phrasal verbs, adverbs, adverbial phrases and adjectives used in advisory, instructional texts relevant to study tasks; - a wide range of discourse markers, connectives, pronouns and cohesive devices to link ideas and concepts or contrast ideas in study tasks; - a wide range of common collocations; - recognise and analyse specific registers related to description of study tasks; - recognise processes in analysing instructions for study tasks such as identifying directive words; - recognition

of a range of cues for inferred meaning, such as logical, contextual and visual, and; - conventions and formats relevant to different types of study tasks.

VU22650 Use language analysis skills to review own texts

Locations:Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required by EAL learners to use language analysis to review own written and spoken texts for further study purposes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - metalanguage to describe and discuss a wide range of lexical, semantic, grammatical features of written and spoken English texts; - metalanguage to access and use a range of EAL resources, such as dictionaries, thesaurus, and; - differences in language features between written and spoken texts.

VU22669 Perform energy sector installations of extra low voltage (ELV) single path circuits

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to wire extra low voltage (ELV) single path circuits and terminate associated accessories. This includes ELV powered devices such as security controls, integrated systems and audio/visual systems. It encompasses safe working practices and following work processes that satisfy electrical principles for safety and functionality. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - installing cables in single path ELV circuits in a simulated workplace training environment; - terminating cables and accessories to manufacturer's specifications and requirements; - applying cable support and protection methods; - following safe work practices; - applying sustainability principles and practices in the workplace, and; - cleaning up the workplace after job completion. Students will also be expected to demonstrate the following knowledge: - relevant OHS/WHS regulations; - risk control measures; - safe working practices for wiring/cabing and terminating accessories for single path extra-low voltage circuits; - cable protection and support methods and accessories; - types of cables used in the electrotechnology industry and their application; - basic cable and conductor terminations; - relevant electrical standards, regulations and

codes related to extra-low voltage work, and; - sustainability principles and practices related to electrotechnology work.

VU22670 Provide an overview of the electrotechnology industry

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to gain an overview of the electrotechnology industry including the various streams of the industry, services and products provided, employment opportunities and the training pathways for entry into the industry. The unit also examines the role and training requirements to become an electrotechnology tradesperson, preparing a personal resume and participating in a face to face job interview.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locate and interpret information on the scope and coverage of the electrotechnology industry; - recognise the application of advanced technologies in the electrotechnology industry; - define the streams/sectors of electrotechnology industry including the services/products offered and the employment opportunities in each sector; - recognise the qualification levels in the AQF including those general offered by VET providers and those general offered by universities; - map out a typical training pathway for person preparing to be a electrotechnology tradesperson; - prepare a personal resume for employment in the electrotechnology industry, and; - participate in a face to face job interview. Students will also be expected to demonstrate the following knowledge: - information gathering techniques; - diversity of the electrotechnology industry; - range of employment opportunities within the electrotechnology industry; - training pathway for the electrotechnology industry; - training focus of vocational education and training (VET) providers; - apprentice supervision guidelines; - electrical licensing (i.e. Energy Safe Victoria - ESV); - refrigerant licensing (i.e. Australian Refrigeration Council - ARC); - communication and media cabler register (i.e. Australian Communications and Media Authority - ACMA), and; - job application and interviewing techniques.

VU22671 Use test instruments in the electrotechnology industry

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to identify, safely connect and use analog and digital test instruments to test a range of extra low voltage (ELV) components and circuits.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - set up and use a range of analog and digital test instruments commonly applied in the electrotechnology

industry to test ELV components and circuits; - demonstrate safe working habits when testing ELV components and circuits; - read and interpret operating instructions for electrical testing instruments, and; - read and interpret test results to determine serviceability of ELV components and circuits. Students will also be expected to demonstrate the following knowledge: - test instruments commonly used to test ELV components and circuits; - WHS/OHS requirements applicable when working with electrical components and circuits, and; - interpretation of analog and digital scales and dials of test instruments.

VU22672 Carry out basic electrotechnology project

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to plan, carry out and finalise a basic electrotechnology project. The unit includes defining the scope of the project, developing a project action plan with timelines, preparing design sketches and working drawings, determining and accessing the required resources, carrying out the build process, demonstrating the working model and evaluating the process. It is intended this unit of competency will be achieved through participation in a small project team consisting of three to four persons.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - work cooperatively with other team members to achieve a project outcome; - develop a project action plan with timelines and budget; - plan and organise project materials and resources; - build a electrotechnology project in line project plan; - apply safe work practices in an electrotechnology environment, and; - evaluate project outcomes and identify areas for improvement. Students will also be expected to demonstrate the following knowledge: - basic electrotechnology principles and practices; - basic drawing and sketching skills; - safe work practices in an electrotechnology environment; - elements for good project planning and monitoring, and; - principles for working effectively with other to achieve a defined outcome.

VU22673 Carry out basic network cabling for extra low voltage (ELV) equipment and devices

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to run cabling for the connection of extra low voltage (ELV) networking equipment and devices. The unit includes the identification of ELV cabling, cabling skills including runs, connections and terminations, testing of circuits, use of hand tools and following work practices that satisfy electrical and telecommunication principles for safety and functionality.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply ELV cabling skills in accordance to job instructions and separation requirements; - connect network equipment and devices using standard cable termination techniques; - connect and use test equipment to test for correct operation of cable connections and terminations, and; - demonstrate work practices that satisfy electrical principles for safety and functionality. Students will also be expected to demonstrate the following knowledge: - types of ELV cables including but not limited to: structured pair, figure 8 and co-axial; - relevant WHS/OHS regulations and safe work practices in the electrotechnology industry; - cabling rules, principles and techniques; - networking equipment and devices; - procedures for dealing with unexpected situation when working with ELV cables, and; - cabling regulations.

VU22726 Respond to a range of communications

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to respond to a range of communications including written and oral texts for different exam contexts and requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to use pronunciation which does not interfere with meaning; - identify and select grammatical structures and language related to text response; - take notes to summarise main points and supporting information according to required format; - select appropriate register to respond to written and oral texts; - apply conventions to establish and maintain exchanges; - draw on a range of de-coding and meaning-making strategies to make sense of texts; - draw on prior knowledge to make sense of texts; - connect ideas and information related to topic of text; - use grammatical forms for different purposes such as giving explanations and providing opinions; - respond to cross cultural interpretations of common language concepts, and; - self management skills to identify appropriate strategies that support effective skill demonstration, such as time management, skimming and scanning, re-reading for meaning, asking questions to clarify where required. Students will also be expected to demonstrate the following knowledge: - key vocabulary related to a range of topics and issues; - differences between facts and opinions; - interactional strategies to maintain and respond to exchanges; - relationship between register, audience and purpose; - difference between formal and informal registers; - layout related to specific text types; - generic grammatical forms including personal pronouns and a range of tenses; - process of planning, drafting and proofreading; - a wide range of discourse markers, connectives, pronouns and cohesive devices to link ideas and concepts or contrast ideas, such as in spite of the fact that, and; - common cross cultural interpretations of common language concepts.

VU22727 Develop and apply numeracy skills

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop and apply

numeracy skills in exam contexts to respond to recruitment related numeracy assessment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - fractions and mixed numbers; - decimals and directed numbers; - select the mathematical process appropriate for each different calculation and to test the accuracy of results; - estimate to check calculations and reasonableness of outcomes; - use a range of mathematical symbolism to represent mathematical thinking and processing; - respond to cross cultural interpretations of common numerical concepts, and; - self management skills to identify appropriate strategies that support effective skill demonstration, such as time management, skimming and scanning and re-reading for meaning. Students will also be expected to demonstrate the following knowledge: - methodology for conducting calculations; - units of metric measurement and conversions between metric units; - units of time and their representation; - decimals and common fractions in relation to measurement and time; - abbreviations associated with measurement and time; - mathematical vocabulary such as addition/plus; subtraction/minus; multiplication/times; - common cross cultural interpretations of common numerical concepts, and; - key features, conventions and symbols of data in numerical texts such as scales and axes, columns.

VU22728 Develop swimming skills

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the knowledge and skills required to identify the ways in which swimming skills are applied in an occupational context and to use one or more swimming strokes to swim a minimum of 100 metres.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - agree and confirm own requirements; - identify safety requirements; - clarify and follow instructions; - identify own level of swimming skill; - undertake any required practice sessions agreed in program, and; - review own progress and seek assistance when required. Students will also be expected to demonstrate the following knowledge: - safety requirements when undertaking a swimming program.

VU22729 Develop and maintain personal fitness

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop and maintain personal fitness levels and to identify strategies to support personal well being.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - the impact of factors such as sleep patterns, nutrition and exercise on physical and personal well-being, and; - the potential psychological impacts of working in law enforcement or as a first responder. Students will also be expected to demonstrate the following knowledge: - discuss and agree a fitness program with a fitness instructor; - follow and clarify instructions as required; - review and adjust a maintenance plan as required, and; - self management skills to recognise potential factors affecting personal well-being.

VU22786 Develop personal effectiveness

Locations:Industry, Footscray Nicholson, City King St, Sunshine, Geelong Learning Links.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to develop strategies that enhance the interpersonal and communication skills and self-confidence that support personal effectiveness for a range of purposes. It focuses on helping participants build their self-esteem and confidence, develop group cohesiveness and identify personal goals.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - contribute and clarify ideas within a group; - seek and provide feedback and use verbal and non verbal communication techniques appropriate to group interaction; - discuss personal goals; - literacy skills to access and use resources and information related to personal goals; - improve personal effectiveness; - identify and address potential barriers; - self management skills to monitor and review goals; - co-operate with others as part of a group, and; - contribute to discussions. Students will also be expected to demonstrate the following knowledge: - the relationship between different aspects of personal effectiveness and constructive life/work outcomes, and; - the role of personal goals in improving personal effectiveness.

VU22787 Prepare for employment

Locations:Industry, Footscray Nicholson, City King St, Sunshine, Geelong Learning Links.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to prepare for employment. It focuses on developing knowledge of Australian workplaces, their work practices and requirements and potential employment opportunities to assist participants in making decisions about possible career paths.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - seek information from various sources about employment opportunities; - work with support persons to identify and prepare for employment opportunities; - access, interpret and evaluate employment information about different industries and workplaces; - write a personal action plan; - digital literacy skills to access and navigate digital information sources to research workplaces and employment opportunities; - numeracy skills to identify basic industrial conditions such as rates of pay, hours of work and leave entitlements, and; - problem solving and self management skills to identify and address employment related self development needs. Students will also be expected to demonstrate the following knowledge: - sources of information to locate information about a range of industries and workplace operations; - basic workplace policies and procedures to identify operating requirements, and; - resources to identify employment opportunities. .

VU22788 Develop an action plan for career planning

Locations: Industry, Footscray Nicholson, City King St, Sunshine, Geelong Learning Links.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to undertake basic career planning activities. It focuses on identifying pathways to employment or further education and training through the preparation of an individual action plan.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - seek and respond to feedback on action plan; - participate in interactions to determine and assess skills and clarify information collected; - literacy skills to access, gather and interpret employment and training information and organize and document information in an action plan; - numeracy skills to identify appropriate time frames for completion of activities in action plan; - problem solving skills to identify and assess skills, match them to potential jobs and develop a personal action plan towards an employment pathway, and; - self management skills to seek feedback and monitor and adjust action plan. Students will also be expected to demonstrate the following knowledge: - purpose of a personal action plan in identifying career pathways; - sources of information about jobs and education and training programs, and; - difference between a personal action plan and a portfolio of skills. .

VU22789 Participate in job seeking activities

Locations: Industry, Footscray Nicholson, City King St, Sunshine, Geelong Learning Links.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by participants to research, evaluate and apply for suitable employment. It focuses on participating in the job seeking process and evaluating the outcomes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read, interpret and evaluate information from a range of employment sources; - write a job application using conventional language and spelling; - make inquiries concisely, clearly and at the appropriate time; - make timely and appropriate telephone contact using clear and concise language; - participate in a job interview using appropriate communication techniques to answer questions, clarify information and seek information; - numeracy skills to identify date, time, location of job interviews and to meet application requirements such as closing date for application and length of resumé; - digital literacy skills to access information about job opportunities and to prepare an electronic resumé and job application; - select and apply personal presentation style appropriate to the position; - evaluate information on job opportunities, select relevant information to match strengths and organisational needs and match own skills to selection criteria; - follow up work information through a variety of means; - access and organise documentation required to support a job application; - seek and respond to feedback on job application, and; - evaluate own performance in order to make improvements. Students will also be expected to demonstrate the following knowledge: - key steps in the job seeking process to enable effective participation in the process; - language and conventions of writing job applications to enable these to be developed effectively; - different approaches in obtaining information about jobs to enable understanding of suitable modes of contact, and; - strategies for different types of interviews to enable effective preparation.

WRS011 Work Related Skills Foundation Unit 1

Locations: Footscray Nicholson, Sunshine, Harvester Technical College..

Prerequisites: Nil.

Description: The purpose of this unit is to focus on the development of appropriate skills and knowledge in order to provide the necessary OH&S preparation for the workplace.

Required Reading: There are no required texts for this unit. The teacher will provide teaching and learning material as required.

Assessment: To receive an S in this unit, students must show competence in all six learning outcomes through satisfactory demonstration of all the elements. The conditions related to the assessment of the learning outcomes may differ according to the particular learning environment, mode of delivery and content.

WRS012 Work Related Skills Foundation Unit 2

Locations: Footscray Nicholson, Sunshine, Harvester Technical College..

Prerequisites: Nil.

Description: This unit provides a focus for the development of work related and pre-vocational skills in the context of practical work related experiences, through: integrating new learning about work skills with prior knowledge and experiences enhancing the development of employability skills through work related contexts developing basic critical thinking skills that apply to problem solving in work situations developing basic planning and work related organisational skills developing transferable skills for work related contexts.

Required Reading: There are no required texts for this unit. The teacher will provide teaching and learning material as required.

Assessment: To receive an S in this unit, students must show competence in all six learning outcomes through satisfactory demonstration of all the elements. The

conditions related to the assessment of the learning outcomes may differ according to the particular learning environment, mode of delivery and content.

WRS021 Work Related Skills Intermediate Unit 1

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to provide a focus for more complex development of appropriate skills and knowledge in order to provide the necessary OH&S preparation for the workplace.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

WRS022 Work Related Skills Intermediate Unit 2

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit provides a focus for more complex development of work related and pre-vocational skills in a context appropriate to the task.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

WRS031 Work Related Skills Senior Unit 1

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to provide a focus for complex development of appropriate skills and knowledge in order to provide the necessary OH&S preparation for the workplace.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

WRS032 Work Related Skills Senior Unit 2

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit provides a focus for the development of work related and vocational skills in a workplace context or appropriate simulation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.
