Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determining and confirming parameters and context of tasks, personal responsibilities, team and support personnel relations, chain of responsibility, WHS, regulatory requirements, risk management and organisational procedures; - reviewing sustainability implications, functions and features of fluid, thermodynamic and vacuum devices, machines and systems; - assessing and applying fluid, thermodynamic and vacuum principles and software skills and techniques; - ensuring clear and logical process of specification development and compatibility of units in calculations, and; - reporting and documenting results of investigation, evaluation and application, calculations, diagrams, programs and files. Students will also be expected to demonstrate the following knowledge: - definition of fluid mechanics and thermodynamics and recognition of applications; - analytical, graphical, semi-graphical and software

assisted techniques for applications for fluid and thermodynamic principles in engineering; - energy and sustainability concepts relevant to fluid and thermodynamic applications; - principles of turbines and heat engines; - basic properties and concepts common to fluids and thermodynamics; - energy types and concepts; - heat transfer processes; - concepts and properties of gases; - energy transfer in closed and open systems; - fluid mechanics; - fluid system components; - fluid statics; - fluid dynamics; - fluid power; - vacuum technology; - methods of lowering pressure; - barometric pressure; - quantity of gas; - types of vacuum pumps for evacuating volumes; - description of typical vacuum vessels, features and functions, and; - applications of vacuum technology in industry.

MEM23007A Apply calculus to engineering tasks

Locations: Industry, Sunshine.

Prerequisites: MEM23004A - Apply technical mathematics

Description: This unit of competency covers the application of calculus, including differentiation and integration techniques to engineering applications. It includes the use and application of standard differentiation and integration rules, finding maximum and minimum values of curves, application to rates of change and slope, finding definite integrals, using method of substitution, using trigonometric identities and finding areas under curves.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analysing engineering applications to determine relevant calculus techniques; - applying relevant differentiation and integration concepts and tools to engineering applications; - using appropriate software and/or scientific calculators to generate solutions to statistical and probability-related engineering problems; - using differentiation to find rates of change; - applying special calculus techniques to solve more complex integrals; - identifying and solving simple first and second order differential equations; - identifying key points to find constants of integration; - finding integrals of algebraic, trigonometric and exponential functions; - establishing appropriate procedures for checking and validating solutions; - logical layout and presentation of data developed using calculus, and; - reporting and effectively communicating the results of calculus-based analysis. Students will also be expected to demonstrate the following knowledge: - identifying appropriate limits and applying to engineering problems being solved with calculus techniques; - differentiation rules and techniques; - partial differentiation; - relationship between differentiation and attributes of mathematical curves and graphs; - optimisation of variables based on maximum and minimum values of mathematical curves and graphs; - integration as the reverse of differentiation; - integration rules and techniques, and; - the definite integral.

MEM23109A Apply engineering mechanics principles

Locations: Industry, Sunshine.

Prerequisites: MEM23004A - Apply technical mathematics

Description: This unit of competency covers the application of mechanics and strength of materials principles to devices, machines and systems and their components in order to identify key mechanical properties. It includes a range of basic analyses of static and dynamic loads and moments, stresses and deflections, velocities and accelerations.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying parameters and context of tasks, chain of responsibility, WHS and regulatory requirements, risk management and organisational procedures; - confirming personal functions and responsibilities, team and support functional group interdependencies and communications, appropriate qualifications and delegations, and appropriate support; - reviewing sustainability implications, functions and features of devices, machines and systems; - assessing and applying mechanics principles, software basic analysis and graphics skills and techniques to mechanical devices and systems; - employing techniques to ensure clear and logical process of analysis and compatibility of units in calculations, and; - reporting and documenting results of investigation, evaluation and application, calculations, diagrams, programs and files. Students will also be expected to demonstrate the following knowledge: - mathematical techniques, including arithmetic, algebra, trigonometry, geometry and differential calculus; - definition of typical applications of mechanics, statics, dynamics, kinematics, kinetics and strength of materials; - analytical, graphical, semi-graphical and software-assisted techniques for all tasks; - physical quantities and dimensions, including international system of units (SI) and fundamental dimensions and units; - basic principles of statics applicable to mechanical devices and systems; - application of force systems applied to bodies, frames and beams; - friction laws and applications in mechanical devices and systems; - stress and strain; - bending of beams; - dynamics applicable to mechanical devices and systems; - the law of a machine; - work, energy and power, and; - specifications for engineering hardware applicable to mechanical devices and systems.

MEM23111A Select electrical equipment and components for engineering applications

Locations:Industry, Sunshine.

Prerequisites:MEM23004A - Apply technical mathematics

Description:This unit of competency covers the identification and matching of electrical supply and electrical system equipment and components to mechanical, manufacturing and mechatronic engineering applications. It includes electrical principles and laws, inductive and capacitive effects on AC supplies, control system power supply fundamentals, electrical safety and earthing systems, electrical motors and motor controls.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - evaluating relevance of WHS, regulatory requirements, standards and codes of practice; - evaluating multiple solutions against design criteria, risk, sustainability and cost factors; - applying life cycle design and sustainability parameters to identification of task; - solving problems

and making decisions with systems thinking approach for contingencies and constraints and continuous improvement; - reviewing sustainability implications, functions and features of devices, machines and systems employing electricity and electrical principles; - integrating electrical evaluation techniques with overall engineering application requirements, including mechanical; fluid power; electronic; heating, ventilation, air conditioning and refrigeration (HVAC/R); and controller and networking; - assessing and applying basic electrical principles and techniques, software basic analysis and graphics skills and techniques to engineering tasks; - ensuring safe electrical working practice; - ensuring compatibility of units in calculations, and; - reporting and documenting results of investigation, evaluation and application, calculations, diagrams, programs and files. Students will also be expected to demonstrate the following knowledge: - energy source options, sustainability implications of electricity generation, distribution and use; - sustainable sources of energy; - features and function of electrical systems in a range of engineering applications WHS and regulatory requirements with particular emphasis on automation safety, codes of practice, standards, risk management and registration requirements; - the effects of electricity on humans, including dangerous high currents and voltages related to extra low, low and high voltage applications and relating these to engineering applications; - licensed technical and professional assistance; - electrical laws and theorems; - electrical circuit components; - AC and DC electrical supply systems; - circuit protection devices, such as fuses, thermal relays, circuit breakers and residual current devices; - basic electrical circuits and applications for lighting, motors, controllers, heaters and coolers; - graphical symbols and diagrammatic representation of basic circuits and power supply fundamentals; - electrical power consumption, and; - electrical measurements and techniques.

MEM23138A Evaluate suitability of materials for engineering-related applications

Locations:Sunshine.

Prerequisites:MEM23004A - Apply technical mathematics

Description:This unit of competency covers the evaluation of materials for their suitability in engineering-related projects or processes. It requires consideration of materials in regards to design requirements, sustainability, product manufacturability, facilities, services, plant and tooling requirements, and safe use.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determining context, specification and performance requirements of materials in manufacturing and engineering-related applications; - investigating sustainability implications of materials in the context of their manufacturing and engineering-related use; - identifying materials processing principles, techniques and requirements, including associated facilities, services, plant, tooling and software; - identifying WHS, regulatory and risk management compliance; - identifying materials and material use and processing for integration with: lean manufacturing systems and techniques; manufacturing control software, such as system control and data acquisition (SCADA) software; - applying systems thinking, continuous improvement, and constraint and contingency management to evaluation of materials in manufacturing and engineering applications, and; - reporting and documenting results of evaluation. Students will

also be expected to demonstrate the following knowledge: - sources of technical and professional assistance; - sustainability implications of materials and related manufacturing and engineering-related products and processes; - WHS and regulatory compliance requirements and risk management practices related to materials, including use of material safety data sheets (MSDS); - software options for materials and process analysis; - common materials, properties and structures in manufacturing and engineering; - cold working of metals; - metal heat treatment; - processes for working, shaping and joining of materials; - systems thinking, continuous improvement, problem solving and decision making, and constraint and contingency management principles and techniques, and; - reporting and documentation requirements.

MEM234024A Apply advanced mathematics in technology problems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency covers the application of advanced mathematics in an engineering or related application. It includes a range of mathematical techniques and covers both the application of theory in simple calculations and the use of relevant software packages for more complex situations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and defining problems; - collecting and analysing data; - reporting and presenting data and quantitative information, and; - communicating effectively with stakeholders on problem resolution. Students will also be expected to demonstrate the following knowledge: - exponential, trigonometric and hyperbolic functions, and; - series, vectors, analytical geometry, graphing techniques, complex numbers and linear algebra. .

MEM30007A Select common engineering materials

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit covers recognising common materials used in engineering, assisting in the selection of a material for a specific application, and using test results to evaluate the properties of materials.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaking research; - selecting/carrying out tests appropriate to the material; - communicating; - documenting; - planning and sequencing operations, and; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents. Students will also be expected to demonstrate the following knowledge: -

classification of materials; - structure of materials; - physical properties of materials; - magnetic properties; - optical properties; - mechanical properties; - chemical properties; - materials testing methods; - destructive testing and applications; - engineering materials; - engineering applications of ferrous metals; - engineering applications of non-ferrous metals; - engineering applications of polymers; - effects of mechanical and thermal processes on the properties of materials; - hazards and control measure associated with selecting common engineering materials, including housekeeping, and; - safe work practices and procedures.

MEM30010A Set up basic hydraulic circuits

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers setting up and selecting components associated with single linear hydraulic systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting simple hydraulic circuit drawings; - testing operation of simple hydraulic circuits; - assessing performance; - documenting circuit specifications and test results; - applying fluid power principles. Students will also be expected to demonstrate the following knowledge: - awareness of different components; - linear actuators; - control valves (hydraulic and pneumatic), and; - circuit design and analysis (single linear actuator).

MEM30011A Set up basic pneumatic circuits

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers setting up and selecting components associated with single linear pneumatic systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: drawing pneumatic circuits; - testing operation of pneumatic circuits; - assessing performance; - calculating circuit requirements; - documenting circuit specifications and test results, and; - applying fluid power principles. Students will also be expected to demonstrate the following knowledge: - fluid power; - awareness of different components, and; - circuit design and analysis (single linear actuator).

MEM30012A Apply mathematical techniques in a manufacturing engineering or related environment

Locations: Footscray Park, Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers applies the concepts of mathematics to appropriate and simple engineering situations within the individual's area of engineering expertise.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - using and applying mathematical formulas: - logical thinking; - problem solving; - calculating; - applying statistics; - using computer numerical methods, and; - drawing. Students will also be expected to demonstrate the following knowledge: - transposing and evaluating formulae; - polynomials; - straight line coordinate geometry; - introduction to indices; - introduction to trigonometry; - circular functions; - trigonometry of oblique triangles; - trigonometric identities, and; - introduction to functions and their graphs.

MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers the skills and knowledge required to apply functions of computer-aided design (CAD) software programs that are typically used in the production of detail drawings.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills sufficient to read instructions for drawings work; - using computer technologies and navigating software; - numeracy skills sufficient to interpret technical information and determine scaling and layout issues, and; - navigating software. Students will also be expected to demonstrate the following knowledge: - awareness of copyright and intellectual property issues and legislation in relation to drawing; - environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing; - quality assurance procedures, and; - CAD program capabilities and processes.

MEM30032A Produce basic engineering drawings

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers producing drawings or similar graphical representations where the critical dimensions and associated tolerances and design specifications are predetermined.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - correctly using and maintaining equipment, including CAD; - manual drafting, filing and printing; - reading and interpreting specifications; - communicating with supervisor to confirm work requirements and outcomes; - visualising components; - preparing a drawing in plane orthogonal, isometric projection or equivalent; - determining drawing protocols required to complete drawing to industry standard; - selecting and locating text to support presentation; - establishing datums and dimensions for drawings, and; - drawing sections through an engineering component incorporating correct use of cutting plane symbols and conventions. Students will also be expected to demonstrate the following knowledge: - drafting media, including cartridge paper, tracing paper, drafting film and plain printing paper; - layout conventions; - effective use of blank space, location of notes and symbols; - sectioning; - overview of graphical techniques; - assembly drawings and explosion drawings; - schematics/line drawings, graphs and pictorials; - standard engineering drawing symbols, references and terminology; - application of surface finish symbols to drawings; - uses of different scales in industry applications; - uses and types of line weights; - uses and types of drawing sheets, and; - type of information provided with drawings.

MEM30033A Use computer-aided design (CAD) to create and display 3D models

Locations:Industry, Sunshine.

Prerequisites:MEM30031A - Operate computer-aided design (CAD) system to produce basic drawing elements

Description:This unit of competency covers using a computer-aided design (CAD) program to produce and plot basic 3-D view drawings.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and interpreting engineering specifications; - organising information; - using computer and peripherals; - using CAD program; - saving 3-D models in various file formats, and; - preparing drawings in plane orthogonal, isometric projection or equivalent. Students will also be expected to demonstrate the following knowledge: - region modelling techniques; - solid modelling techniques; - development of sectioned models; - use of cutting plane; - use of cross hatching; - use of pre-drawn library files and primitives to produce a 3-D model; - use of third level software to produce 3-D models; - how to extract mass and area properties; - how to extract area properties from region models, and; - application of basic rendering techniques to a 3-D model.

MEMPE006A Undertake a basic engineering project

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency is intended to provide the learner with the opportunity to plan and undertake an engineering project which can be completed in an institutional environment. Included in this unit is the opportunity to use a basic computer-aided drafting (CAD) system to produce engineering type drawings. The drawings produced have to be fit for purpose but do not necessarily need to conform to drawing standard, such as AS 1100.101-1992 Technical drawing - General principles. This unit is also intended to provide the learner with the opportunity to incorporate the skills available in other units to produce a functional engineering

product in an institutional environment. Skills such as welding and machining do not need to be pre-developed but can be developed in an integrated way as required throughout the project progress.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - working safely; - selecting engineering materials for a project; - selecting engineering components for a project; - determining appropriate joining methods for engineering materials and components; - researching and evaluating engineering projects for their appropriateness in an educational institution; - producing drawings of an assembled project and its components; - planning the manufacture of an engineering project, including all necessary calculations; - producing components following created drawings; - assembling project; - tidying/cleaning work area as appropriate; - returning tools, equipment and project items to designated storage areas and/or conditions, and; - using and applying personal protective equipment Students will also be expected to demonstrate the following knowledge: - safe working practices in an engineering workshop; - sources of information on engineering materials and components; - sources of information on engineering projects; - engineering drawing practices; - methods of joining metals, and; - the need for drawings that others can follow.

MSAENV272B Participate in environmentally sustainable work practices

Locations: Industry, Sunshine, Online.

Prerequisites: Nil.

Description:This competency covers the outcomes required to effectively measure current resource use and carry out improvements including those reducing negative environmental impacts of work practices. This unit is based on the sustainability guideline standard GCSSUS01A Participate in environmentally sustainable work practices.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - report as required by procedures; - follow procedures and instructions and respond to change, and; - ask questions and seek clarifications relating to work requirements. Students will also be expected to demonstrate the following knowledge: - have a basic understanding of sustainability; - know the environmental hazards/risks, resource use and inefficiencies associated with own workplace (at an appropriate level); - know the relevant environmental and resource efficiency systems and procedures for own work area, and; - know the impact of laws and regulations to a level relevant to the work context.

MSAPMSUP201A Receive or despatch goods

Locations: Industry, Sunshine.

Prerequisites: Nil.

583

Description:This competency covers the handling of materials by an operator as an adjunct to the job of making product. It applies to a limited range of materials. It is NOT intended to be an alternative warehousing competency. This competency is typically performed by operators working either independently or as part of a work team.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - product/material knowledge; - inventory and ordering systems; - transport requirements and restrictions for products/materials; - correct OHS procedures; - storage/handling principles and procedures; - material hazard properties and their implications for safe handling and storage; - significance of material to customers; transport requirements and restrictions for materials; - plan own work, including predicting consequences and identifying improvements; - identify and describe own role and role of others involved directly in the processing of orders and despatching of products; - use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task, and; - distinguish between causes of problems such as product requirements and job priority as relevant to the practical completion of the job.

MSAPMSUP400A Develop and monitor quality systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description:This competency covers the establishment, maintenance and evaluation of quality systems for a complete production area and/or plant.

Required Reading:Refer to Learning and Assessment Plan

Assessment:It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to: - effectively maintain and evaluate quality systems carried out - implement relevant staff training programs - produce adequate quality documentation including policies and procedures. Consistent performance should be demonstrated. For example, look to see that: - the development, implementation and evaluation of the quality system runs smoothly - all safety procedures are always followed.

MSFFF2001 Use furniture finishing sector hand and power tools

Locations: Sunshine.

Prerequisites: Nil.

Description:This unit of competency covers using hand and power tools, and basic static machines, in applications relating to the furniture finishing sector of the furnishing industry.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order

and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes; - minimise the risk of injury to self or others; - prevent damage to goods, equipment and products; - maintain required production output and product quality; - select, safely use, clean and maintain the suite of hand and power tools, and static machines used in furniture finishing; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses, limitations and maintenance requirements of hand tools commonly used in furniture finishing operations; - types, characteristics, uses, limitations and maintenance requirements of power tools and basic static machines commonly used in furniture finishing operations; - WHS requirements and legislation, and; - work flow within the workplace.

MSFFF2002 Dismantle and reassemble furniture

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers the competency to dismantle and re-assemble furniture and/or fittings for the purposes of coating, repair, restoration, producing patterns, templates or for samples.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes; - minimise the risk of injury to self or others; - prevent damage to goods, equipment and products; - maintain required production output and product quality; - dismantle and re-assemble at least three (3) different items, including: one (1) assembled with knockdown fittings; one (1) with glued joints; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity; Students will also be expected to demonstrate the following knowledge: - types and characteristics of materials used in furniture and/or fitting construction; - construction techniques and processes; - identification of equipment, processes and procedures, and; - work flow in relation to dismantling and re-assembling furniture and/or fittings.

MSFFF2003 Remove surface coatings

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers safely removing surface coatings by hand or chemical means in preparation for the application of new surface coatings.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes; - minimise the risk of injury to self or others; - prevent damage to goods, equipment and products; - maintain required production output and product quality; - remove surface coating from timber and metal surfaces and apply appropriate techniques to remove coatings from flat, vertical, carved and curved surfaces, using a minimum of four (4) different removal techniques and materials; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - work flow in relation to the removal of surface coatings; - types, properties and characteristics of coatings; - coating removal techniques, materials, applications and limitations, and; - material safety management systems.

MSFFF2004 Prepare surfaces for finishing

Locations:Industry, Sunshine, Learning Links Geelong.

Prerequisites:Nil.

Description:This unit of competency covers preparing a range of furniture surfaces for the application of surface coatings by hand or machine.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - minimise the risk of injury to self or others; - prevent damage to goods, equipment and products; - maintain required production output and product quality; - prepare furniture surfaces on a minimum of four (4) occasions, including a: horizontal surface; vertical surface; internal surface;

curved surface (moulding). Surfaces are to include: solid hardwood; solid softwood; veneered board; metal; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, properties and characteristics of coatings; - surface preparation techniques and equipment/materials; - hazardous substances and materials used in surface preparation, and; - work flow in relation to the application and removal of surface coatings.

MSFFF2005 Maintain spray equipment and booth

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers stripping, cleaning, restoring and servicing spray equipment and booths.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes; - minimise the risk of injury to self or others; - prevent damage to goods, equipment and products; - maintain required production output and product quality; - disassemble, maintain and re-assemble at least two (2) different spray systems; - maintain a booth and booth services on at least two (2) occasions; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity; Students will also be expected to demonstrate the following knowledge: - identification of spray system equipment, processes and procedures; - types, characteristics and maintenance requirements for spray booth services, including at a minimum, ventilation, lighting, water and electrical reticulation; - characteristics of spray coatings and base materials in terms of toxicity, reactivity and flammability; - types, characteristics, uses and limitations of cleaning solvents and agents; - effects of fumes, heat and other radiations on surface coatings, and; - material safety management systems.

MSFFF2006 Apply surface coatings by spray gun

Locations:Industry, Sunshine, Learning Links Geelong.

Prerequisites:Nil.

Description:This unit of competency covers applying surface coatings by a handheld

spray gun.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes; - minimise the risk of injury to self or others; - prevent damage to goods, equipment and products; - maintain required production output and product quality; - select and apply surface coatings, including the adjustment of spray equipment, to effect required spray pattern for a minimum of three (3) different surface types and shapes; - maintain spray equipment and work area, including spray booth; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - identification of spray equipment, processes and procedures; - characteristics of the coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and recoatability; - effects of fumes, heat and other radiations on surface coatings; - methods to prevent contamination of surfaces during and after surface coating, and; - work flow in relation to spraying operations.

MSFFF2007 Apply stains, fillers and bleach

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers the competency to apply stains, fillers and bleach to timber surfaces.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes; - minimise the risk of injury to self or others; - prevent damage to goods, equipment and products; - maintain required production output and product quality; - select appropriate stains, fillers and bleach for the surfaces to be treated; - apply stains, fillers and bleach to at least two (2) surfaces, monitor drying, and assess and rectify any quality issues; - remove surface coating from timber and metal surfaces and apply appropriate techniques to remove coatings

from flat, vertical, carved and curved surfaces, using a minimum of four (4) different removal techniques and materials; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - identification of application techniques; - characteristics of stains, fillers and bleaches in terms of toxicity, reactivity, flammability, viscosity; - methods to prevent contamination of surfaces during and after processing, and; - work flow in relation to the application stains, fillers and bleach.

MSFFF2008 Apply surface coatings by hand

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers applying brushable coatings to surfaces by hand.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes; - minimise the risk of injury to self or others; - prevent damage to goods, equipment and products; - maintain required production output and product quality; - prepare for and apply coatings by hand on a minimum of five (5) occasions covering: one (1) solid timber surface; one (1) manufactured board surface; one (1) metal surface; using four (4) different coatings (one-pot polyurethane, acrylic, enamel and polish); - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - identification of hand application techniques; - characteristics of coatings, waxes and oils in terms of toxicity, reactivity, flammability and required viscosity; - methods to prevent contamination of surfaces during and after finishing, and; - work flow in relation to the application of finishing material.

MSFFF3001 Match and make up colours

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers matching and making up colours for surfaces which have previously been coated or polished, or for new work which must match existing work or a specified sample.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes; - accurately colour match using pigments and/or stains on a minimum of five (5) occasions; - record colour formulae for production situations; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics and degradation patterns of coatings and stains; - properties of coated and stained surface materials and the impact of these on colouring; - types, characteristics, uses and limitations of colouring agents; - types, uses and limitations of matching aids; - product catalogues and other information systems, and; - material safety management systems and related safety requirements.

MSFFM2001 Use furniture making sector hand and power tools

Locations:Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites:Nil.

Description:This unit of competency covers using hand and power tools in applications relating to furniture making.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - locate and apply relevant information related to hand power tools; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - adopt and carry out correct procedures prior to and during use of the range of hand and power tools stipulated in the Range of Conditions; - carry out operator maintenance on hand and power tools, including the grinding and sharpening of: chisels; hand plane blades or irons; drill bits; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of

resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses, limitations and maintenance requirements of hand tools commonly used in furniture production; - types, characteristics, uses, limitations and maintenance requirements of power tools commonly used in furniture production; - workplace safety requirements and WHS legislation, and; - work flow in relation to the application and removal of surface coatings.

MSFFM2002 Assemble furnishing components

Locations: Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers assembling of timber components to produce furniture frames or furniture.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - assemble at least four (4) furnishing components from the list in the Range Statement; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of common furnishing components; - interpretation of basic furniture plans; - identification of hand and/or power tools, materials, equipment, processes and procedures, and; - work flow in relation to furniture production.

MSFFM2003 Select and apply hardware

Locations: Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers selecting and applying hardware to new and refurbished furniture.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - select and apply/fit six (6) different items of hardware; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of hardware; - interpretation of plan representation of furniture design; - preparation of drawings/set-outs; - identification of hand and/or power tools, materials, equipment, processes and procedures, and; - work flow in relation to furniture production.

MSFFM2004 Apply sheet laminates by hand

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency covers preparing, laying out, applying and finalising processes for applying sheet laminates by hand.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - apply and finish laminates to at least three (3) different surfaces, including at least two (2) requiring laminate edging and with at least two (2) laminate joints in one or more surfaces; - apply adhesive using three (3) different methods - spray, brush and scraper; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of laminates; - interpretation of plan representation of furniture design; - preparation of drawings/set-outs; - identification of hand and/or power tools, materials, equipment, processes and procedures, and; - work flow in relation to furniture production.

MSFFM2005 Join solid timber

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers joining solid timber required for the manufacture of solid timber flat surfaces.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - join at least four (4) solid timber tops of a minimum of three (3) sections and using a minimum of four (4) different edge joining methods; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics (including cupping, expansion, twisting, bowing, spring and grain direction), uses and limitations of timbers; - interpretation of plan representation of furniture design; - joining techniques and their effect on timbers; - types of sawing methods, including back sawn and quarter sawn, and the impact of these on joining; - preparation of drawings/set-outs; - identification of hand and/or power tools, materials, equipment, processes and procedures, and; - work flow in relation to furniture production.

MSFFM2006 Hand make timber joints

Locations: Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers joining timber by constructing joints using hand and portable power tools.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain

required production output and product quality; - select appropriate joint types for the furniture item and utilise at least three (3) different adhesive types; - produce a minimum of four (4) different joint types in accordance with industry standards on tolerances with at least two (2) produced substantially by hand operations; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - characteristics, properties and selection criteria of adhesives used; - capabilities and limitations of tools used; - matching requirements of adhesives and fasteners to timbers/materials used, and; - work flow in relation to the furniture items being made or repaired.

MSFFM2007 Follow plans to assemble production furniture

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency covers assembling production furniture using modular construction methods and components to a given plan.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - assemble at least two (2) items of production furniture, one (1) of manufactured board and one (1) of solid timber construction, with each featuring: a door; a drawer; shelving; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - interpretation of plan representation of furniture design; - preparation of drawings/set-outs; - identification of hand and/or power tools, materials, equipment, processes and procedures, and; - work flow in relation to furniture production.

MSFFM2010 Set up and operate basic static machines

Locations: Industry, Footscray Nicholson, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers operating and maintaining basic static machines used for sawing, planing, sanding and drilling in the production of furniture.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - read and interpret cutting lists and job specifications to prepare for work; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - identify, set up, operate and monitor the machines and complete the tasks identified in the Range of Conditions; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - range, characteristics, uses and limitations of basic static machines; - characteristics of materials and uses of products produced; - workplace: quality standards and procedures; guidelines regarding acceptable tolerance levels; safety policies and procedures, and; - procedures for reporting machinery faults and material defects.

MSFFM2011 Apply manufactured board conversion techniques

Locations:Industry, Sunshine, Learning Links Geelong.

Prerequisites:Nil.

Description:This unit of competency covers setting out and cutting manufactured board to produce component parts of flat panel furniture and manufactured board panel doors applying manufactured board conversion techniques.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - read and interpret cutting lists and job specifications to prepare for work; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - apply at least five (5) different conversion operations using different operations/methods, including the: preparation of cutting plans to minimise waste; selection of the correct materials; cutting at least one (1) surfaced board requiring the use of a panel saw using a scoring blade; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to

enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - range, characteristics, uses and limitations of panel saw (with and without a scoring blade), NC beam saw and wall saw; - workplace: quality standards and procedures; guidelines regarding acceptable tolerance levels; safety policies and procedures, and; - procedures for reporting machinery faults and material defects.

MSFFM2012 Set up, operate and maintain pressure and clamping machines

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers setting up, operating and maintaining pressure and clamping machines using their full potential and capacities in the production of furniture.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - read and interpret cutting lists and job specifications to prepare for work; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - identify, set up, operate and maintain at least one (1) pneumatically/hydraulically operated pressure and clamping machine to perform a significant production function covering three (3) different set-ups; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of pressure and clamping machines; - pressure and clamping processes and techniques; - characteristics of materials and uses of products produced; - workplace safety policies and procedures, and; - procedures for reporting machinery faults and material defects.

MSFFM3002 Construct furniture using leg and rail method

Locations:Industry, Sunshine, Learning Links Geelong.

Prerequisites:Nil.

Description:This unit of competency covers following plans to construct and assemble furniture using leg and rail construction.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - construct a minimum of two (2) furniture products, using mortise and tenon, mitre, dowel and bridle, which are to include: a table with a drawer; a chair with shaped and angled components; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - interpretation of plan representation of furniture design - preparation of drawings/set-outs/rods; - types, characteristics, properties and limitations of timber used in furniture construction - material selection and structural standards; - application of ergonomic principles and guidelines to furniture construction; - identification of hand and/or power tools, materials, equipment, processes and procedures, and; - work flow in relation to furniture production.

MSFFM3003 Produce angled and curved furniture using manufactured board

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers constructing and assembling manufactured board furniture using angled and curved construction methods.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment or products; maintain required production output and product quality; - produce a minimum of two (2) significant manufactured board products which must include one (1) curved cabinet with rails and one (1) cabinet with glass shelves, panels and doors; - conduct operator maintenance on machines and related tools and equipment; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; -

minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of manufactured board; - interpretation of plan representation of furniture design; - preparation of drawings and set-outs; - identification of hand and/or power tools, materials, equipment, processes and procedures, and; - work flow in relation to furniture production.

MSFFM3004 Produce angled and curved furniture using solid timber

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers constructing and assembling solid timber furniture using angular construction methods.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment or products; maintain required production output and product quality; - produce a minimum of two (2) significant timber products which must include: one (1) curved cabinet with rails; one (1) item involving oval design using traditional construction methods and jointing; - conduct operator maintenance on machines and related tools and equipment; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of solid timbers most common to furniture production; - interpretation of plan representation of furniture design; - preparation of drawings/set-outs/rods and geometrical concepts; - identification of hand and/or power tools, materials, equipment, processes and procedures, and; - work flow in relation to furniture production.

MSFFM3005 Fabricate custom furniture

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers planning, constructing and assembling custom furniture in response to specific orders and job requests.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling practices for equipment, products and materials; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - produce one (1) significant furniture item to customer specifications in terms of dimensions, materials, function and aesthetics using: custom-developed machining processes and outcomes; custom development and completion of assembly techniques and processes; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of materials most common to furniture production; - interpretation of plan representation of furniture design; - preparation of drawings/set-outs/rods; - identification of hand and/or power tools, materials, equipment, processes and procedures, and; - work flow in relation to furniture production.

MSFFM3006 Install furnishing products

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers the installation of furnishing products to a given plan.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - install four (4) different and significant furnishing products, including at least: one (1) floor mounted; one (1) wall mounted; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - interpretation of plan representation of furniture design; - preparation of drawings/set-outs; - work flow in relation to furniture production, and; - identification of hand and/or power tools, materials, equipment, processes and procedures.

591

MSFFM3007 Prepare and apply decorative surfaces for furniture

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers preparing, constructing and applying veneers and inlays to furniture components.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection practices to: minimise the risk of injury to self or others; prevent damage to goods, tools, equipment or products; maintain required production output and product quality; - prepare and apply a minimum of three (3) different decorative surfaces to various substrates; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of decorative surfaces; - interpretation of plan representation of furniture design; - preparation of drawings/set-outs; - identification of hand and/or power tools, materials, equipment, processes and procedures, and; - work flow in relation to furniture production.

MSFFM3008 Select timbers for furniture production

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers selecting suitable timbers for use in production by applying knowledge of timber technology.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection practices to: prevent damage to goods, equipment and products; maintain required production output and product quality; minimise the risk of injury to self and others; - from a range of ten (10) common furniture species samples, identify the species correctly, match it to a specified application and justify the choice; - correctly identify natural and seasoning

faults in selected timbers; - use a moisture meter to measure the moisture content in a minimum of three (3) samples, including one (1) hard and one (1) soft timber; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - characteristics and uses of a range of available indigenous and overseas timber; - commonly used complementary materials and their compatibility when used in conjunction with others; - impact of climate and workshop conditions on timbers; - timber seasoning methods, techniques and faults, and; - solid timber conversion techniques.

MSFFM3009 Produce manual and computer-aided production drawings

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers producing manual and computer-aided production drawings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - identify the factors and criteria relevant to the drawings; - apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment; - prepare production drawings of furniture/furnishings: covering a scope of at least three (3) products; applying both manual and computer-aided techniques and processes; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - furniture design and planning criteria; - structural geometry; - measurement techniques and equipment/tools; - theory and practice of calculations (addition, subtraction, multiplication and division); - types, techniques and processes of manual production drawing; - types of computer-aided drawing equipment, software, techniques and processes; - conventional signs and markings for drawings.

MSFFM3010 Prepare cutting list from plans and job specifications

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers reading plans and job specifications to prepare cutting lists and providing data for subsequent processing operations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - locate, interpret and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials and tools used in the work process; - follow work instructions, operating procedures and manufacturers' instructions to: minimise the risk of injury to self and others; prevent damage to goods, equipment and products; maintain optimum production output and product quality; - interpret production plans and prepare cutting lists on a minimum of four (4) occasions with lists each having at least ten (10) different components and, overall, the lists incorporating four (4) different types of material; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - characteristics of materials and tooling used and use of products programmed; - identification of equipment, processes and procedures, and; - pattern techniques for optimising materials.

MSFFM3011 Measure and draw site layout for manufactured furniture products

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers measuring and recording site layout details to provide an accurate basis for both manufacture and installation of furniture products.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - identify the factors relevant to the measurements and drawings; - communicate effectively to enable accurate calculations, measurements and drawings; - accurately measure and record particulars for required sector sites and materials; - draw accurate, scaled plans and elevations relevant to the site using manual or computer-aided methods; - identify and communicate on measurements and dimensions which may impact on manufacture and/or installation; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures, and; - minimise wastage of resources, including materials, time and money. Students will also be expected to demonstrate the following knowledge: - furniture design and planning criteria; - drawing techniques, technologies and processes; - furniture installation methods, criteria and techniques; - measurement techniques and equipment/tools; - theory

and practice of calculations (addition, subtraction, multiplication and division), and; - conventional signs and markings for plans and drawings.

MSFFM3012 Set up, operate and maintain sawing machines

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers setting up, operating and maintaining sawing machines using their full technical potential and capacities. It encompasses and builds on the machines and tasks covered in unit MSFFM2010 Set up, operate and maintain basic static machines.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - read and interpret cutting lists and job specifications to prepare for work; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: - minimise the risk of injury to self or others; - prevent damage to goods, equipment and products; - maintain required production output and product quality; - identify, set up, operate and maintain at least four (4) different types of saws, using safety cut-outs and guards; - conduct operator maintenance on the machines and related equipment; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of sawing machines; - sawing processes and techniques; - characteristics of materials and uses of products produced; - workplace guidelines regarding acceptable tolerance levels; - workplace safety policies and procedures, and; - procedures for reporting machinery faults and material defects.

MSFFM3013 Set up, operate and maintain drilling machines

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers setting up, operating and maintaining drilling machines using their full technical potential and capacities. It encompasses and builds on the drilling machines and tasks covered in unit MSFFM2010 Set up, operate and maintain basic static machines.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - read and interpret cutting lists and job specifications to prepare for work; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - identify, set up and operate at least the two (2) different types of drills, including the use of safety cut-outs and guards; - conduct operator maintenance on the machines and associated equipment; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of drilling machines; - drilling processes and techniques; - characteristics of materials and uses of products produced; - workplace guidelines regarding acceptable tolerance levels; - workplace safety policies and procedures, and; - procedures for reporting machinery faults and material defects.

MSFFM3014 Set up, operate and maintain joining machines

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers setting up, operating and maintaining joining machines using their full potential and capacities in the production of furniture.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - read and interpret cutting lists and job specifications to prepare for work; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage and wastage of goods, equipment and products; maintain required production output and product quality; - identify, set up, operate to their full capacities at least two (2) different types of joining machines (mortise and tenoner and dovetailer), including the use of safety cut-outs and guards and their application of the machines to a variety of materials; - conduct operator maintenance on the machines and related equipment; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and

using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of joining machines; - joining processes and techniques; - characteristics of materials and uses of products produced; - workplace guidelines regarding acceptable tolerance levels; - workplace safety policies and procedures, and; - procedures for reporting machinery faults and material defects.

MSFFM3015 Set up, operate and maintain planing and finishing machines

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers setting up, operating and maintaining planing and finishing machines using their full potential and capacities in the production of furniture. It encompasses and builds on the machines and tasks covered in unit MSFFM2010, Set up, operate and maintain basic static machines.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - read and interpret cutting lists and job specifications to prepare for work; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage and wastage of goods, equipment and products; maintain required production output and product quality; - identify, set up and operate to their full capabilities, at least three (3) different types of planing and finishing machines which are to include: a surface planer; a panel planer; a wide belt sander; - conduct operator maintenance on machines and related equipment and materials; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of planing and finishing machines; - planing and finishing processes and techniques; - characteristics of materials and uses of products produced; - workplace guidelines regarding acceptable tolerance levels; - workplace safety policies and procedures, and; - procedures for reporting machinery faults and material defects.

MSFFM3017 Set up, operate and maintain routing and shaping machines

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers setting up, operating and maintaining routing and shaping machines using their full potential and capacities in the production of furniture.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - read and interpret cutting lists and job specifications to prepare for work; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage and wastage of goods, equipment and products; maintain required production output and product quality; - identify, set up and operate to their full capabilities, at least two (2) different types of routing and shaping machines, including the use of safety cut-outs and guards; - conduct operator maintenance on the machines and related equipment; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of routing and shaping machines; - routing and shaping processes and techniques; - characteristics of materials and uses of products produced; - workplace guidelines regarding acceptable tolerance levels; - workplace safety policies and procedures, and; - procedures for reporting machinery faults and material defects.

MSFFM3018 Set up, operate and maintain mechanical wood-turning lathes

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers setting up, operating and maintaining mechanical wood-turning lathes used in the production of furniture.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - read and interpret cutting lists and job specifications to prepare for work; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - identify, set up, operate and maintain at least two (2) different lathes, including the use of safety cut-outs and guards, to complete the following: off-hand grind a range of cutters; manufacture and apply a template; complete a minimum of two (2) detailed turnings which are to include fillets, beads, covers and square shoulder; - conduct operator maintenance on the lathes; - use mathematical ideas and techniques to correctly complete measurements, calculate area and

estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money. and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of lathes; - characteristics of materials and uses of products produced; - workplace guidelines regarding acceptable tolerance levels; - workplace safety policies and procedures, and; - procedures for reporting machinery faults and material defects.

MSFFM3019 Set up, operate and maintain automated edge banding machines

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers setting up, operating and maintaining edge banding machines which use automated processes to apply and finish edge treatments.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - read and interpret cutting lists and job specifications to prepare for work; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - identify, set up and operate an automated (not fully automatic) edging machine to complete the following: the set up and application of at least three (3) different edge treatment materials; the identification and correction of at least two (2) real or simulated machining faults; - conduct operator maintenance on the machines and equipment; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of machines; - characteristics, uses and limitations of board products, edging products and adhesives; - workplace guidelines regarding acceptable tolerance levels; - workplace safety policies and procedures, and; - procedures for reporting machinery faults and material defects.

MSFFM3021 Set up, operate and maintain computer numerically controlled (CNC) sizing machines

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers setting up, operating and maintaining CNC sizing machines to produce furniture or components.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - locate, interpret and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection practices to: minimise the risk of injury to self or others; prevent damage to goods, equipment or products; maintain required production output and product quality; - identify, set up and operate CNC sizing equipment, including the use of safety cut-outs and guards, to produce a range of complex cutting patterns; - conduct operator maintenance on the machine and related equipment; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of CNC sizing machines; - CNC theory, practices and techniques; - characteristics of materials used and uses of products produced; - work flow processes, and; - procedures for reporting materials, product or equipment faults.

MSFFM3022 Set up, operate and maintain computer numerically controlled (CNC) machining and processing centres

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers setting up, operating and maintaining CNC machining and processing centres to produce furniture or components.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - locate, interpret and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection practices to: minimise the risk of injury to self or others; prevent damage to goods, equipment or products; maintain required production output and product quality; - identify, set up and operate CNC machining and processing centre equipment to complete detailed profiling, including: development and application of sub-program; development and application of parametric program, and; application of CAD/CAM

functions; - conduct operator maintenance on the machining and processing centre equipment; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of CNC machining and processing centres; - CNC theory, practices and techniques; - characteristics of materials used and uses of products produced; - work flow processes, and; - procedures for reporting materials, product or equipment faults.

MSFFM3024 Construct jigs and fixtures

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers preparing and constructing jigs and fixtures to produce furniture components.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection practices to: minimise the risk of injury to self or others; prevent damage to goods, tools, equipment or products; maintain required production output and product quality; - select materials and construct a minimum of three (3) different types of jigs/fixtures, including one (1) for a shaping machine and one (1) which is adjustable; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - types, characteristics, uses and limitations of jigs and fixtures; - criteria for selecting material for use in jigs and fixtures; - requirements for cutting, shaping and joining materials; - identification of equipment, processes and procedures, and; - work flow in relation to the use of jigs and fixtures.

MSFFT4001 Coordinate on-site installation of furnishing products

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers coordinating tradespersons who provide services involved in the installation, refurbishment, restoration or repair of furnishing products, primarily in a kitchen, bathroom or laundry setting.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - coordinate a site involving at least three (3) tradespeople on three (3) separate occasions; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices; - avoid backtracking, work flow interruptions or wastage, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - tasks, functions, responsibilities and regulatory requirements for tradespeople involved in water supply and drainage, supply of power and lighting, ceiling and wall linings, tiling and waterproofing, flooring and painting; - relevant building codes, regulations and codes of practice; - plan interpretation techniques and standards; - workplace coordination and communication techniques, and; - conflict resolution techniques.

MSFFT4008 Interpret and use workplace information

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers locating, using, interpreting and manipulating workplace information and statistics in support of development or production activities within the furnishing industry. Statistic access and manipulation can be computer-assisted, either integrated into the enterprise processes, or stand-alone.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - use general and statistical data

representations to explain work processes and/or outcomes; - identify and read graphs, charts, tables and statistical results and interpret general and statistical data accurately; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices; - avoid backtracking, work flow interruptions or wastage, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - contemporary business information and statistical reporting, forecasting and presentation techniques; - mathematical calculations, including: addition; subtraction; multiplication; division; percentages; - company business policies and plans, including procedures for reports, and; - company quality systems and business equipment.

MSFT4009 Match furnishing style and materials to customer requirements

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers assessing customer requirements, analysing all available and practical options to match furnishing styles and materials to those requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - match furnishing style/materials to meet customer requirements on two (2) occasions involving different products, and: evaluate design and design requirements; evaluate furnishing styles and materials and compare them to customer requirements; identify the impact of commercial, environmental and safety risks; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures, and; - avoid backtracking, work flow interruptions or wastage. Students will also be expected to demonstrate the following knowledge: - range of company products, market, work systems and equipment - relevant furnishing styles and materials - company business policies and plans, including procedures for product modification and product development - legislative requirements of the work activities.

MSFGN2001 Make measurements and calculations

Locations: Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

597

Description: This unit of competency covers taking measurements and making calculations for furnishing tasks undertaken in a variety of sites and locations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work documents correctly; - plan and organise activities, including selecting and checking appropriate measuring equipment; - use mathematical ideas and techniques to correctly complete measurements, calculate material quantities and spatial size; - use a range of measuring, calculating and recording devices; - record results accurately; - perform calculations accurately and check results; - work from specific project plans or briefs, determine and cost the material quantities for a minimum of three (3) different furnishing projects; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - purpose and techniques for using measuring and calculating equipment; - mathematical principles for making basic calculations; - work documentation for instructions and recording; - requirements for minimising damage to materials and completed products while undertaking measurement, and; - requirements of working with others in a team.

MSFGN3001 Read and interpret work documents

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers interpreting work documents, including cutting lists, standards, drawings and specifications, to produce or repair furnishings and to install floor coverings, glass and other furnishing items.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - collect, organise and understand information related to the range of work documents relevant to the sector; - communicate ideas and information to enable confirmation of work requirements and specifications; - plan and organise activities to minimise wastage of resources, including materials, time and money; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise information management; - use mathematical ideas and techniques to correctly interpret the content of work documents; - identify alternative methods of accessing and sources of work information, including using workplace technology related to work documentation, its access and storage; - recognise and explain the meanings of symbols, technical terms and conventions of specifications and plans; - check accuracy of copied specifications; - maintain condition of documentation, and; - locate, read and interpret a minimum of ten (10) selected/specified work

documents which must include: Australian Standards relevant to the sector; manufacturer technical instructions and specifications; real or simulated local work documents, including: work plans; material safety data sheets (MSDS); relevant building codes; job procedures; safe work instructions or equivalent. Students will also be expected to demonstrate the following knowledge: - different types of work documents used in the furnishing industry and their function; - conventions and symbols of plans, drawings and specifications, and; - workplace procedures for maintenance of documentation.

MSFGN3002 Estimate and cost job

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers estimating materials, labour and time requirements to establish costs for provision of furnishing services or products. Estimation and job costing is that undertaken by a tradesperson in relation to a sector product for a single client or customer.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - collect, organise and understand information related to work orders, costs and government charges; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems; - complete an outline plan of activities, including the preparation and layout of the worksite, the obtaining of equipment and materials, and the avoidance of backtracking, work flow interruptions or wastage; - estimate and cost three (3) varied jobs, including: estimate quantities of material required; determine the types and amount of labour required to complete the work; estimate time required to complete the work; estimate overheads associated with the job; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity; - use mathematical ideas and techniques to correctly complete measurements, estimate material, labour and overhead requirements and accurately cost the product/service; - use checking techniques to anticipate and overcome costing problems, and; - use workplace technology related to the estimation and validation of job costs. Students will also be expected to demonstrate the following knowledge: - range of products and services offered by the enterprise; - enterprise or equivalent costing procedures; - components of overheads costs; - components of labour costs; - labour rates and approximate costs of products and materials, and; - basic mathematical processes.

MSFKB2001 Prepare for cabinet installation

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers preparing a site and confirming completeness of cabinets and components required for installation. It requires checking of job information and identifying quality issues.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - prepare the installation site for cabinet installation and use mathematical ideas and techniques to correctly complete measurements and calculate areas for cabinetry; - assemble all necessary tools, equipment and cabinetry components for the installation; - conduct quality checks on components prior to installation and report readiness of the site for the installation work; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - avoid backtracking, work flow interruptions or wastage, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - safe work practices; - documentation procedures; - quality checking procedures; - symbols and terminology on plans and drawings, and; - features of cabinets and components.

MSFKB2002 Provide assistance in cabinet installation

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency covers assisting in the on-site installation of cabinets for kitchens or bathrooms. It includes assembling cabinets, fitting components, and fixing cabinets to wall and floor surfaces, and making a limited range of adjustments in the installation of new or renovated kitchens and bathrooms.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - Interpret work order and locate and apply relevant information; - Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - Identify materials used in the work process; - Follow work instructions, operating procedures and inspection processes to: - minimise the risk of injury to self or others; - prevent damage to goods, equipment and products; - maintain required production output and product quality; - Prepare the installation site for cabinet installation by checking measurements and laying out carcasses to fit; - Effectively and safely interpret and implement work instructions to assemble and install cabinets that are level, correctly located and meet specifications; - Efficiently and safely use required hand and power tools to assist in installation of cabinet components; - Clean up installation site and installed components after completing work; - Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - Avoid

backtracking, work flow interruptions or wastage; - Follow instruction of supervisor and work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - Assembly processes for cabinets; - Safe work practices; - Documentation procedures; - Quality checking procedures; - Symbols and terminology on plans and drawings; - Features of cabinet components.

MSFKB3001 Identify processes in kitchen and bathroom projects

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers identifying the processes used in new and renovated kitchen and bathroom projects. Identification includes key stages, service providers and quality elements that typically characterise a project concerned with the development of kitchens and bathrooms.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret new and renovation kitchen and bathroom project design project briefs, including establishing the correct sequence of manufacture and installation operations; - determine the processes involved in kitchen and bathroom renovation or new manufacture and installation, including the services required from relevant key trades in the kitchen and bathroom industry; - determine quality cabinet and other component requirements to meet project design brief outcomes and establish sources of suitable components and services to undertake the work; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - avoid backtracking, work flow interruptions or wastage, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - roles of trades in the kitchen and bathroom industry; - roles of other service providers to the kitchen and bathroom industries; - planning processes relevant to the kitchen and bathroom industries; - processes used for the construction of cabinets; - features of cabinets and components used in kitchen and bathroom projects; - supply chains for kitchen and bathroom components and materials; - market and industry standards, and; - qualities of renovation and new work projects.

MSFKB3002 Determine requirements for installation of cabinets

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers assessing a site, including walls, floors, appliances, services and other structural components, to determine implications and modifications required for location and installation of cabinets. Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - conduct a site assessment and identify all issues that will impact on the installation of cabinets and appliances including floor and wall construction and other structural elements of the site and availability and location of required services; - identify limitations of cabinet construction and implications for design, including compliance issues for work and levelling required; - complete detailed documentation to inform installation, including site conditions, sequence of component installation and quality standards that apply; - apply quality standards, Australian Standards and resource information appropriate to cabinet construction and installation on site, including accessing and apply appropriate requirements set out in the Building Code of Australia (BCA); - use mathematical ideas and techniques to correctly complete measurements; - communicate ideas and information; interpret basic plans and follow safety procedures, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - roles of trades in the kitchen and bathroom industry; - planning processes; - processes used for the construction of cabinets; - features of cabinets and components used in kitchen and bathroom projects; - state or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for assessing a site; - organisational and site standards, requirements, policies and procedures for assessing a site; - the role of Australian Standards and the BCA; - characteristics of materials, products and defects; - procedures for documenting workplace records and information; - appropriate mathematical procedures for estimation and measurement; - environmental protection requirements; - established communication channels and protocols; - relevant problem identification and resolution techniques; - basic building and architectural terminology; - common structural and non-structural components of a residential building; - materials and methods involved in interior refurbishment; - local regulations/councils; - construction techniques/technologies, and; - statutory planning regulations affecting kitchens and bathrooms.

MSFKB3003 Check and measure fit of cabinets

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers taking measurements on-site and checking cabinetry to ensure accurate fit. It requires assessment of levels and squareness of walls and floors and other structural components to determine adjustments required on cabinets to ensure exact fit. Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - identify and accurately measure and record structural aspects that impact on cabinet construction and installation identifying any inconsistencies in measurements; - mark up the installation site according to confirmed measurements to correctly inform installers on cabinet location and fit; - complete detailed documentation on measurements, cabinet location and installation sequence to inform installation; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - avoid backtracking, work flow interruptions or wastage, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - processes used for the construction of cabinets; - features of cabinets and components used in kitchen and bathroom projects - state or territory WHS legislation, regulations, standards and codes of practice relevant to on-site work; - the role of Australian standards and the Building Code of Australia (BCA); - characteristics of materials, products and defects; - procedures for documenting workplace records and information; - appropriate mathematical procedures for estimation and measurement; - relevant problem identification and resolution techniques; - basic building and architectural terminology, and; - common structural and non-structural components of a residential building.

MSFKB3004 Conduct on-site adjustments to cabinets and components

Locations:Industry, Sunshine, Learning Links Geelong.

Prerequisites:Nil.

Description:This unit of competency covers determining required cabinet adjustments, selecting appropriate techniques, and making and checking the adjustments to pre-made cabinets in order to achieve accurate fit at site of installation. Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - interpret work order and locate and apply relevant information; - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - identify materials used in the work process; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - take and record accurate measurements of installed cabinets and apply appropriate problem-solving techniques to determine the necessary adjustment required for on site cabinetry; - complete operations to adjust cabinets using hand and power tools safely and efficiently using identified techniques that do not damage the cabinetry or site structure; - conduct quality checks on adjusted cabinets to ensure they meet specifications; - use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - avoid backtracking, work flow interruptions or wastage, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - processes used for the construction and modification of cabinets; - features of cabinets and components; - state or territory WHS legislation, regulations, standards and codes of practice relevant to on-site work; - characteristics of materials, products and defects; - procedures for documenting workplace records and information; - appropriate mathematical procedures for estimation and measurement, and; - relevant problem identification and resolution techniques.

MSFKB3005 Fabricate cabinets for the built-in environment

Locations:Industry, Sunshine, Learning Links Geelong.

Prerequisites:Nil.

Description:This unit of competency covers planning production processes, and constructing and assembling components to fabricate cabinets that meet predetermined specifications in a manufacturing workshop environment. It includes operating computer numerically controlled (CNC) and static machines.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - interpret and apply information from plans and drawings to inform the materials required, sequence of operations and assembly techniques for fabrication of cabinets; - identify and source materials and components used in cabinets for kitchens, bathrooms and other residential settings specified in the design plan and specifications; - plan fabrication process for cutting, forming and finishing cabinet components and construct and assemble cabinets using hand and power tools safely and efficiently to meet the design specifications; - determine that fabricated cabinets meet specified

quality outcomes, complete housekeeping and reporting requirements; - use mathematical ideas and techniques to correctly complete measurements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - minimise wastage of resources, including materials, time and money, and; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity. Students will also be expected to demonstrate the following knowledge: - processes used for the construction of cabinets; - features of cabinets and components used in kitchen and bathroom and other residential projects; - state or territory WHS legislation, regulations, standards and codes of practice relevant to work; - characteristics of materials, products and defects; - procedures for documenting workplace records and information; - appropriate mathematical procedures for measurement, and; - relevant problem identification and resolution techniques.

MSFKB3006 Install fitted cabinets and components

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers installing cabinets in residential and commercial environments according to specifications and design plans, including the application of selected components to achieve a quality finish. It includes accessing and applying information and instructions for the use of components and cabinet products. Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following skills: - apply safe handling requirements for equipment, products and materials, including use of personal protective equipment; - follow work instructions, operating procedures and inspection processes to: minimise the risk of injury to self or others; prevent damage to goods, equipment and products; maintain required production output and product quality; - access and apply information on installation requirements of cabinet components including component specifications, materials to be used and site conditions; - determine correct installation techniques to be applied and any issues that would impact on the installation process; - complete all operations to install cabinets using hand and power tools safely and efficiently and install cabinets in at least (1) one kitchen, one (1) bathroom and laundry, including one (1) residential and one (1) commercial environment; - conduct quality checks on all installed components to ensure they meet specifications and complete housekeeping and required records of the work conducted; - use mathematical ideas and techniques to correctly complete measurements; - communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures; - avoid backtracking, work flow interruptions or wastage; - work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and

productivity. Students will also be expected to demonstrate the following knowledge: - Processes used for the installation of cabinets; - Features of cabinets and components; - State or territory WHS legislation, regulations, standards and codes of practice relevant to on site work; - Characteristics of materials, products and defects; - Cabinet installation processes; - Procedures for documenting workplace records and information; - Appropriate mathematical procedures for estimation and measurement; - Relevant problem identification and resolution techniques.

MSMENV272 Participate in environmentally sustainable work practices

Locations: Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to effectively find out current resource use and carry out improvements, in own work area, including those that reduce the negative environmental impacts of work practices. This unit of competency applies to operators/team members who are required to follow procedures to work in an environmentally sustainable manner. This maximises the environmental performance of the process and the organisation, ensures regulatory compliance, and aims to minimise environmental risks and impacts. This unit of competency applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office and warehouse. This unit will need to be contextualised for the industry sector, organisation and section. This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - find out resources used in own job, including one or more of: - making simple measurements, consistent with the job; - counting the number of items entering/leaving a work area; - reading indicators in the work area; - obtaining relevant information from support personnel; - follow environmental policies and identify potential breaches of environmental regulations, and; - suggest improvements within the limit of own authority. Students will also be expected to demonstrate the following knowledge: - sustainability; - the contribution to climate change and other macro threats that can arise from materials and work processes used; - the environmental hazards/risks, resource use and inefficiencies associated with own workplace and job; - the relevant environmental and resource efficiency policies and procedures for own work area, and; - the impact of laws and regulations at a level relevant to the work context.

MSMSUP102 Communicate in the workplace

Locations: Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to receive, relay and record written and oral messages and to provide relevant information in response to requests within timelines. This unit of competency applies to personnel who are required to communicate clearly and accurately to record messages, seek clarification, access needed information, relay information to other people and complete workplace documentation. This unit of competency applies to all work environments.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - listen attentively; - formulate questions to clarify work requirements or instructions; - read and interpret workplace information; - complete workplace forms; - write legibly and/or use electronic keyboard; - record and interpret numbers, codes and symbols, and; - use clear and concise language in verbal and written communication. Students will also be expected to demonstrate the following knowledge: - organisation procedures, including: telephone and communications protocols and/or procedures; documentation and record keeping; safety, emergency and hazard control; - types and meaning of workplace codes, numbers, symbols, signs and colours typically used in the job/work environment; - types, purpose and importance of workplace documentation; - workplace expectations for acceptable language and tone (swearing, level of formality, courteousness, respect for diversity, and so on); - challenges in communicating with people from culturally and linguistically diverse (CALD) backgrounds in the workplace and possible strategies.

MSMSUP106 Work in a team

Locations: Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites:Nil.

Description:This unit of competency covers the skills and knowledge required to organise own activities within a team to fit with work schedules and to meet operational guidelines. This unit of competency applies to team members who are required to use interpersonal and communication skills to plan, organise and complete their work activities according to instructions and with limited discretionary powers. This unit of competency applies to all work environments.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify own tasks within team requirements; - identify components of tasks; - plan, prioritise and organise activities in accordance with instructions; - use communication and interpersonal skills with team members, team leaders and supervisors, and; - complete workplace records. Students will also be expected to demonstrate the following knowledge: - organisation procedures, including: relevant procedures; record keeping requirements; - own role in team and meeting team requirements and the role of other team members, team leaders and supervisors; - company work standards and how the team contributes to them, and; - interpersonal/communication techniques that promote effective teamwork.

MSMSUP240 Undertake minor maintenance

Locations: Industry, Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers the skills and knowledge required to

undertake minor maintenance and solve routine problems to procedures. It does not cover activities normally requiring traditional trade training.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use available data and records to recognise fault and no-fault conditions in standard and non-standard situations; - apply operational guidelines and known solutions to correct variations/irregularities; - apply approved hazard control, work permit and safety procedures in relation to handling materials, equipment operation and clean up; - identify the need for work permits and select the appropriate permit, and; - apply maintenance procedures according to plant data and maintenance schedules. Students will also be expected to demonstrate the following knowledge: - principles of operation of the equipment to be maintained; - function and troubleshooting of major internal components and their problems; - appropriate testing procedures and use of equipment for a range of equipment faults; - typical causes of equipment failures and the service conditions which may increase maintenance; - types and nature of maintenance (preventative, predictive, corrective) uses, benefits and limitations, and; - factors that may affect product quality or production output and appropriate remedies.

MSMSUP273 Handle goods

Locations: Industry, Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers the skills and knowledge required to receive and despatch products and/or materials from either internal or external sources as an adjunct to the job of making product. It applies to operators who are required to receive and process orders, maintain records, identify and select goods to be despatched and ensure they are despatched to the correct location.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and select goods to be moved in accordance with documentation; - apply known solutions to routine problems; - prepare and organise goods to be moved to fit with schedules; - select and use handling equipment; - read and interpret product specifications, job sheets, procedures, material labels and safety information; - complete documentation and records, and; - apply appropriate safety precautions and procedures. Students will also be expected to demonstrate the following knowledge: - organisation procedures, including: - safety, emergency and hazard control; - inventory and ordering systems; - types and application of handling equipment and any licensing requirements; - manual handling techniques and ergonomics; - safe storage of dangerous goods and hazardous materials; - transport requirements and restrictions for products/materials, and; - production workflow requirements.

MSMSUP390 Use structured problem-solving tools

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to use structured process improvement tools to solve process and other problems. This unit of competency applies to experienced operators, team leaders, supervisors or people in similar roles who are required to identify improvements and/or solve problems beyond those associated directly with the process unit/equipment. A 'problem' in this context should be interpreted as 'an opportunity for improvement', not just something causing faulty product, product faults or process irregularities/breakdowns. This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate. Problem-solving techniques are often applied as group processes. Where the competency is achieved in a group context the individual being assessed must meet all aspects of the competency. This competency does NOT cover the planning and facilitation of group problem-solving activities. Other units of competency, including MSMOPS units, may include a problem-solving element where problems specific to that competency are to be resolved. However, this unit of competency requires structured problem-solving techniques to be applied more broadly and/or with greater depth and rigour than is implied by the problem-solving element of the other units. This unit of competency applies to all work environments and sectors within the industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify at least one (1) problem; - analyse problem using at least one (1) analysis tool drawn from each of two (2) different groups of tools (basic, visual, process, business and organisation specific); - select the preferred solution; - develop and use an implementation plan; - communicate effectively with other personnel. Students will also be expected to demonstrate the following knowledge: - relevant organisation procedures; - risks, risk assessment and controls relevant to problem being analysed; - targets and measures for output and quality; - types and application of problem-solving tools/analytical techniques; - relevant equipment and operational processes.

MSMWS100 Follow WHS procedures

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to recognise hazards commonly occurring at the workplace and follow work health and safety (WHS) instructions and procedures. It covers recognising known hazards, such as those identified in procedures or training, and identifying the underlying causes of these identified hazards. This unit of competency applies to people on-site who are required to follow WHS instructions and procedures relating to the activity being undertaken. They will be aware of the importance of maintaining their own health and safety and the health and safety of others in the workplace and will also be capable of dealing with incidents and emergencies within their own scope of responsibility and under the direction of their supervisor for the site activity. While the instructions and procedures must be derived from the relevant organisation WHS

policies, the person is not required to understand or interpret these policies. This interpretation should be undertaken by their supervisor for the site activity when informing them of the WHS requirements. This unit of competency applies to an individual who will be accompanied or directly supervised while on-site.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - recognise hazards; - use required personal protective equipment (PPE); - take the action specified in the procedures, and; - report the situation as specified in the procedures. Students will also be expected to demonstrate the following knowledge: - the rights and responsibilities of personnel under the WHS legislation; - hazard and emergency signs, labels and alarms; - hazards that may arise in the job/work environment, including: their possible causes; potential consequences; appropriate risk controls; - types and application of PPE; - procedures for reporting WSE problems and taking action, and; - emergency procedures.

MSMWS200 Work safely

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to apply workplace policies and procedures to maintain a safe work environment for self and others. The unit of competency covers identifying work health and safety (WHS) hazards, assessing risk and following safety procedures in the workplace with minimal supervision. Compliance with legislative requirements and duty of care are embedded in this unit through workplace instructions and procedures. Workers will be provided with clear directions, information, instruction, training and appropriate supervision regarding the relevant state/territory WHS legislation, codes of practice, relevant industry standards, workplace procedures and work instructions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify hazards; - assess risks associated with the hazards; - identify and apply standard controls; - check that controls are in place and operational; - select and use personal protective equipment (PPE); - identify and interpret signs and symbols, including emergency alarms; - correctly handle and store items/materials relevant to job, and; - interpret and apply relevant material safety data sheets (MSDS). Students will also be expected to demonstrate the following knowledge: - organisational work health and safety (WHS) procedures, including procedures for reporting WHS problems and taking action; - rights and responsibilities of employees and employers under the relevant WHS legislation; - hazards that may arise in the job/work environment; - types and application of PPE; - hazard and emergency signs, labels and alarms, and; - appropriate responses to non-standard situations.

MSMWHS216 Operate breathing apparatus

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to operate and maintain breathing apparatus and equipment in an irrespirable atmosphere, as defined by the Australian Standard AS/NZS 1715:2009 Selection, use and maintenance of respiratory protective equipment. This unit of competency applies to operators who are required to wear breathing apparatus because they are working: in a confined space; with hazardous gases/vapours; in an oxygen deficient atmosphere, and; in other situations requiring the wearing of breathing apparatus. Operators may also be required to wear breathing apparatus in emergency situations, however, this is not the prime focus of this unit. This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conduct pre-donning tests on breathing apparatus; - correctly don and operate breathing apparatus; - identify hazards and apply control measures according to procedures; - communicate while using breathing apparatus; - determine the available working time from a breathing apparatus set; - correctly close down, remove and clean breathing apparatus, and; - report faults and/or damage to breathing apparatus. Students will also be expected to demonstrate the following knowledge: - the effects of irrespirable atmospheres on the body and the need for protective equipment; - characteristics, component parts, operation of compressed air breathing apparatus; - operational testing, standard operating procedures (SOPs) and safe work practices when wearing breathing apparatus; - use of procedures, personal lines and tallies; - pre-use tests and checks; - breathing apparatus control; - entrapment procedures, and; - communications while wearing breathing apparatus.

MSS402001 Apply competitive manufacturing practices

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to implement basic improvement practices within an organisation using competitive systems and practices. The unit focuses on bringing together the basic concepts and the holistic application of these basic concepts and processes to operations. It would typically be carried out working as part of a team.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify own place in the value chain relevant to their job; - use competitive systems and practices tools and

thinking, and; - recommend improvements in product and/or process. Students will also be expected to demonstrate the following knowledge: - customer requirements and their role in fulfilling them; - the value chain for products they make and their place in it, and; - identification of muda (waste) and its reduction.

MSS402051 Apply quality standards

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to apply quality standards to work operations in an organisation. The unit is designed to complement competitive systems and practices units. This unit applies to an individual who is expected to take responsibility for the quality of their own work, and to take actions specified in the procedures and within the scope of their job and authority to ensure that quality standards are met. This unit requires the application of skills associated with interpreting and applying workplace standards and identifying and addressing problems that interfere with quality outcomes. The unit requires initiative, enterprise and self-management to ensure quality standards are achieved.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - check and measure relevant quality parameters; - interpret results of quality checks in terms of specifications, patterns and work standards; - take required action where standards of materials, component parts, final product or work processes are found to be unacceptable, and; - maintain accurate records. Students will also be expected to demonstrate the following knowledge: - relevant quality standards, policies and procedures; - relevant production processes, materials and products; - relevant measurement techniques and quality checking procedures, and; - reporting procedures.

MTMPS5603B Develop, manage and maintain quality systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers the skills and knowledge required to establish, maintain and control an enterprise quality system. It also covers the skills and knowledge needed to lead people, manage systems and build quality into all enterprise systems and operations. The development and management of quality systems affects the ability of the enterprise to operate in specific markets and influences customer and consumer confidence in enterprise products.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Competency must be demonstrated through sustained performance over time, at an appropriate level of responsibility and authority under typical operating and production conditions for the enterprise.

NUM011 Numeracy Skills Foundation

Locations: Footscray Nicholson, Sunshine, Harvester Technical College..

Prerequisites: Nil.

Description: The purpose of this unit is to enable students to develop the confidence and skills to perform simple and familiar numeracy tasks and to develop the ability to make sense of mathematics in their daily personal lives. The mathematics involved

includes measurement, shape, numbers, and graphs that are part of the students' normal routines to do with shopping, travelling, cooking, interpreting public information, telling the time etc. On successful completion of this unit students will be able to perform everyday mathematical tasks which involve a single mathematical step or process. Their communication about mathematical ideas would mainly be spoken rather than written responses.

Required Reading: There are no required texts for this unit. The teacher will provide teaching and learning material as required.

Assessment: A range of assessment options will be used according to the needs of the student group and the learning situation. A folio of evidence will be collected through a combination of the following: - records of teacher observations of students' activities, discussions and practical tasks - occasional samples of students' written work - pictures, diagrams, models, etc. created by students.

NUM021 Numeracy Skills Intermediate – Unit 1

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to enable students to develop everyday numeracy to make sense of their daily personal and public lives. The mathematics involved includes measurement, shape, numbers, and graphs applied to tasks which are part of the students' normal routine but also extending to applications outside their immediate personal environment such as the workplace and the community, whether first hand or portrayed by the media. At the end of the unit students would be able to attempt a series of operations or tasks with some confidence, be able to select the appropriate method or approach required, and would be able to communicate their ideas both verbally and in written form. They would be at ease with straightforward calculations either manually and/or using a calculator.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

NUM022 Numeracy Skills Intermediate – Unit 2

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to enable students to develop, refine, extend and apply numeracy knowledge and skills through an investigation in a familiar industry area linked to the VET units in their VCAL program or employment. The numeracy involved focuses on Number, Measurement, Financial Numeracy, and Probability and Statistics. This unit seeks to extend students' understanding of how numerical knowledge and skills can be transferred to an industry area. The key processes involve identifying mathematics, applying it and communicating the results. Students develop an understanding of the practical components of planning and undertaking an in-depth numeracy-based project, linked to a familiar industry area. Students will also develop key project management skills in a numeracy context, such as stating key aims, setting specific tasks, establishing timelines and milestones, identifying and managing risk, and communicating results. Students will be encouraged to develop and apply their skills of creative and critical thinking in the planning and completion of the numeracy-based project that will be negotiated with their teacher/trainer. At this level, students also share their knowledge and work independently and in teams. On completion of this unit, students should be more

confident in their ability to explore, develop and apply numeracy related to employment in an industry area.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

NUM031 Numeracy Skills Senior – Unit 1

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to enable students to explore mathematics beyond its familiar and everyday use to its application in wider, less personal contexts such as newspapers and other media reports, workplace documents and procedures, and specific projects at home or in the community. At the end of the unit students will have the capacity to interpret and analyse how mathematics is represented and used. They can recognise and use some of the conventions and symbolism of formal mathematics. The mathematics involved would include measurement, graphs and simple statistics, use of maps and directions and an introductory understanding of the use of formulae and problem-solving strategies.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

NUM033 Numeracy Skills Senior – Unit 2

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to enable students to develop, refine, extend and apply numeracy knowledge and skills through an investigation in an unfamiliar industry area in which they have an interest and may seek future employment. The numeracy involved focuses on Number, Measurement, Financial Numeracy, and Probability and Statistics. This unit seeks to extend students' understanding of how numerical knowledge and skills can be transferred to an industry area. The key processes involve identifying mathematics, applying it and communicating the results. Students develop an understanding of the practical components of planning and undertaking an in-depth numeracy-based project, linked to an unfamiliar industry area. Students will also develop key project management skills in a numeracy context, such as stating key aims, setting specific tasks, establishing timelines and milestones, identifying and managing risk, and communicating results. Students will be encouraged to develop and apply their skills of creative and critical thinking in the planning and completion of the numeracy-based project that will be negotiated with their teacher/trainer. At this level, students also share their knowledge and work independently and in teams. On completion of this unit, students should be more confident in their ability to explore, develop and apply numeracy related to employment in an industry area.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

PDS011 Personal Development Skills Foundation Unit 1

Locations: Footscray Nicholson, Sunshine, Havester Technical College..

Prerequisites: Nil.

Description: The purpose of this unit is to focus on the development of organisation and planning skills, knowledge, practical skills, problem solving and interpersonal skills through participation in experiences of a practical nature. The focus of the learning program for Foundation Unit 1 includes: subject specific knowledge applicable to a relevant personal, social, educational and/or community goal skills applicable to a relevant personal, social, educational and/or community goal development of an understanding of social issues and civic responsibility introduction to problem-solving skills introduction to skills for planning, organising and working in teams.

Required Reading: There are no required texts for this unit. The teacher will provide teaching and learning material as required.

Assessment: Evidence of successful performance of the learning outcomes may include, but is not restricted to: - a portfolio of accumulated evidence, for example photos, timelines, logbooks, peer evaluations - teacher observation and/or checklists - evidence accumulated through project or program participation - awards from recognised programs - self-assessment inventories - oral or written reports - application of information and communications technology, including Internet usage.

PDS012 Personal Development Skills Foundation Unit 2

Locations: Footscray Nicholson, Sunshine, Havester Technical College..

Prerequisites: Nil.

Description: The purpose of this unit is to focus on the development of organisation and planning skills, knowledge, practical skills, problem solving and interpersonal skills through participation in experiences of a practical nature. The focus of the learning program for Foundation Unit 1 includes: subject specific knowledge applicable to a relevant personal, social, educational and/or community goal skills applicable to a relevant personal, social, educational and/or community goal development of an understanding of social issues and civic responsibility introduction to problem-solving skills introduction to skills for planning, organising and working in teams.

Required Reading: There are no required texts for this unit. The teacher will provide teaching and learning material as required.

Assessment: Evidence of successful performance of the learning outcomes may include, but is not restricted to: - a portfolio of accumulated evidence, for example photos, timelines, logbooks, peer evaluations - teacher observation and/or checklists - evidence accumulated through project or program participation - awards from recognised programs - self-assessment inventories - oral or written reports - evidence of information and communications technology, including Internet usage.

PDS021 Personal Development Skills Intermediate Unit 1

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to focus on the development of organisation and planning skills, knowledge, practical skills, problem solving and interpersonal skills through participation in experiences of a practical nature.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

PDS022 Personal Development Skills Intermediate Unit 2

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to focus on the development of organisation and planning skills, knowledge, practical skills, problem solving and interpersonal skills through participation in experiences of a practical nature.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

PDS031 Personal Development Skills Senior Unit 1

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to focus on the development of organisation and planning skills, knowledge, practical skills, problem solving and interpersonal skills through participation in experiences of a practical nature.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

PDS032 Personal Development Skills Senior Unit 2

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to focus on the development of organisation and planning skills, knowledge, practical skills, problem solving and interpersonal skills through participation in experiences of a practical nature.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

PE01 Physical Education 1

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: In this unit students explore how the body systems work together to produce movement and analyse this motion using biomechanical principles. Through practical activities students explore the relationships between the body systems and physical activity. They are introduced to the aerobic and anaerobic pathways utilised to provide the muscles with the energy required for movement and the basic characteristics of each pathway.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use correct anatomical terminology to identify bones, individual muscles (for example, rectus abdominus), joints and joint actions used in human movement; - perform, observe and analyse a variety of movements used in physical activity and identify the bones, muscles, joints and joint actions responsible for movement; - accurately describe the process of reciprocal inhibition; - use correct terminology to identify muscle fibre types and muscular contractions required to perform a variety of activities at different intensities; - describe the relationship between motor unit recruitment and muscular contractions; - perform, measure and report on changes to the cardiovascular, respiratory and muscular systems at rest compared to exercise; - identify the dominant energy pathway utilised in a variety of aerobic or anaerobic activities determined by the intensity and duration of the activity, and; - collect, analyse and report on primary data related to responses to exercise and anaerobic and aerobic pathways. Students will also be expected to demonstrate the following knowledge: the musculoskeletal system working together to produce movement in physical activity: bones of the human body, major muscles and muscle structure, classification of joints and joint action; - characteristics and functions of muscle fibres including fibre arrangement and type; - types of muscular contraction (isotonic, isometric and isokinetic); - agonists, antagonists and stabilisers and the concept of reciprocal inhibition; - control of muscles including the recruitment of motor units, voluntary and involuntary muscular contractions; - the cardiovascular and respiratory systems, including the structure and function of the heart and lungs, mechanics of breathing, gaseous exchange, blood vessels, blood flow around the body at rest and during exercise, and; - introduction to the characteristics of aerobic and anaerobic pathways (with or without oxygen) and their contribution to movement and dominant fibre type associated with each pathway. In VCE, the assessment is made up of two components. - Satisfactory Completion - Levels of Achievement Satisfactory Completion Units 1, 2, 3 and 4 The award of satisfactory completion for a unit is based on a decision that the student has demonstrated achievement of the set of outcomes specified for the unit. This decision will be based on the teacher's assessment of the student's performance on assessment tasks designated for the unit. Levels of achievement Units 1 and 2 Procedures for the assessment of levels of achievement in Units 1 and 2 are a matter for school decision/teacher. .

PE02 Physical Education 2

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit explores a range of coaching practices and their contribution to

effective coaching and improved performance of an athlete. The way in which a coach influences an athlete can have a significant effect on performance. The approach a coach uses, the methods applied and the skills used will have an impact on the degree of improvement experienced by an athlete. By studying various approaches and applying this knowledge to a practical session, students gain a practical insight into coaching.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - create a safe and inclusive learning environment when coaching; - demonstrate a range of coaching practices a coach may use to improve performance; - evaluate coaching methods and justify their appropriateness in a variety of settings; - apply principles of learning to practical situations; - identify factors that influence coaching and learning at different stages of learning, and; - adopt the role of the coach in a variety of practical sessions and reflect, evaluate and report on the personal experience of taking on the role of a coach. Students will also be expected to demonstrate the following knowledge: - roles and responsibilities of the coach; - skills and behaviours of an exemplary coach; - effective and appropriate relationships between coach and the individual or group, understanding group dynamics, leadership skills, conflict resolution, communication and the setting of boundaries; - rationale for the development of codes of conduct; - coaching methods applied in different contexts; - coaching techniques, strategies and practices used by coaches to develop and improve skills; - coaching pathways and accreditation for coaches; - skill learning principles such as stages of learning (cognitive, associative and autonomous), skill learning processes and the role of feedback in skill learning; - open and closed skill and sport continuum; comparing environmental stability and instability, and; - types of practice and transfer of practice. In VCE, the assessment is made up of two components. - Satisfactory Completion - Levels of Achievement Satisfactory Completion Units 1, 2, 3 and 4 The award of satisfactory completion for a unit is based on a decision that the student has demonstrated achievement of the set of outcomes specified for the unit. This decision will be based on the teacher's assessment of the student's performance on assessment tasks designated for the unit. Levels of achievement Units 1 and 2 Procedures for the assessment of levels of achievement in Units 1 and 2 are a matter for school decision/teacher. .

PE03 Physical Education 3

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit introduces students to an understanding of physical activity and sedentary behaviour from a participatory and physiological perspective. Students apply various methods to assess physical activity and sedentary levels, and analyse the data in relation to adherence to Australia's Physical Activity and Sedentary Behaviour Guidelines. Students study and apply the social-ecological model to identify a range of Australian strategies that are effective in promoting participation in some form of regular activity.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements,

including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - describe, using correct terminology, the interplay and relative contribution of the energy systems in different sporting activities; - participate in physical activities to collect and analyse data relating to the range of acute effects that physical activity has on the cardiovascular, respiratory and muscular systems of the body; - perform, observe, analyse and report on laboratory exercises designed to explore the relationship between the energy systems during physical activity; - explain the role the energy systems play in enabling activities to occur as well as their contribution to active and passive recovery; - explain the multi-factorial mechanisms associated with fatigue during physical activity and sporting events resulting from the use of the three energy systems under varying conditions, and; - compare and contrast suitable recovery strategies used to counteract fatigue and promote optimal performance levels. Students will also be expected to demonstrate the following knowledge: - the mechanisms responsible for the acute responses to exercise in the cardiovascular, respiratory and muscular systems; - characteristics and interplay of the three energy systems (ATP - CP, anaerobic glycolysis, aerobic system) for physical activity, including rate of ATP production, the capacity of each energy system and the contribution of each energy system; - fuels (both chemical and food) required for resynthesis of ATP during physical activity and the utilisation of food for energy; - relative contribution of the energy systems and fuels used to produce ATP in relation to the exercise intensity, duration and type; - oxygen uptake at rest, during exercise and recovery, including oxygen deficit, steady state, and excess post-exercise oxygen consumption; - the multi-factorial mechanisms (including fuel depletion, metabolic by-products and thermoregulation) associated with muscular fatigue as a result of varied exercise intensities and durations, and; - passive and active recovery methods to assist in returning the body to pre-exercise levels. In VCE, the assessment is made up of two components. - Satisfactory Completion - Levels of Achievement Satisfactory Completion Units 1, 2, 3 and 4 The award of satisfactory completion for a unit is based on a decision that the student has demonstrated achievement of the set of outcomes specified for the unit. This decision will be based on the teacher's assessment of the student's performance on assessment tasks designated for the unit. Levels of achievement Units 1 and 2 Procedures for the assessment of levels of achievement in Units 1 and 2 are a matter for school decision/teacher.

PE034 Physical Education 4

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit explores improvements in performance, in particular fitness, depend on the ability of the individual or coach to gain, apply and evaluate knowledge and understanding of training. Students undertake an activity analysis. Using the results of the analysis, they then investigate the required fitness components and participate in a training program designed to improve or maintain selected components. Athletes and coaches aim to continually improve and use nutritional, physiological and psychological strategies to gain advantage over the competition. Students learn to critically evaluate different techniques and practices that can be used to enhance performance, and look at the rationale for the banning or inclusion of various practices from sporting competition.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to

provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - explain fitness assessment aims, methods, risks, safeguards, informed consent and confidentiality; - use appropriate technology to perform an activity analysis to collect and analyse primary data to determine major fitness components and energy systems used in sporting events and physical activities; - perform, observe, analyse and report on laboratory exercises designed to explore the assessment of fitness pre and post training; - justify the selected fitness tests in relation to the strengths and weaknesses of the testing methodology; - explain how chronic adaptations to the cardiovascular, respiratory and muscular systems lead to an improved performance, and; - design, participate in, and evaluate a six-week training program that demonstrates the correct application of training. Students will also be expected to demonstrate the following knowledge: - fitness components: definitions and factors affecting the health-related fitness components, including aerobic capacity, anaerobic capacity, muscular strength and endurance, flexibility, body composition, and the skill-related components, including muscular power, speed, agility, coordination, balance and reaction time; - data collection activity analysis, including skill analysis, movement patterns and work to rest ratios; - assessment of fitness, including aims, protocols (informed consent and fitness testing), and methods and outcomes of at least two standardised, recognised tests for each fitness component; - fitness training principles, including intensity, duration, frequency, overload, specificity, individuality, diminishing returns, variety, maintenance and detraining; - fitness training methods, including continuous, interval, fartlek, circuit, weight/resistance, flexibility, plyometrics, speed, swiss ball and core strength training to improve aerobic capacity, anaerobic capacity, muscular strength and endurance, speed, flexibility and muscular power, and; - chronic adaptations of the cardiovascular, respiratory and muscular systems to training. In VCE, the assessment is made up of two components. - Satisfactory Completion - Levels of Achievement Satisfactory Completion Units 1, 2, 3 and 4 The award of satisfactory completion for a unit is based on a decision that the student has demonstrated achievement of the set of outcomes specified for the unit. This decision will be based on the teacher's assessment of the student's performance on assessment tasks designated for the unit. Levels of achievement Units 1 and 2 Procedures for the assessment of levels of achievement in Units 1 and 2 are a matter for school decision/teacher.

PH011 Physics 1

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Ideas in physics are dynamic. As physicists explore concepts, theories evolve. Often this requires the detection, description and explanation of things that cannot be seen. In this unit students explore how physics explains phenomena, at various scales, which are not always visible to the unaided human eye. They examine some of the fundamental ideas and models used by physicists in an attempt to understand and explain the world. Students consider thermal concepts by investigating heat, probe common analogies used to explain electricity and consider the origins and formation of matter. Students use thermodynamic principles to explain phenomena related to changes in thermal energy. They apply thermal laws when investigating energy transfers within and between systems, and assess the impact of human use of energy on the environment. Students examine the motion of electrons and explain how it can be manipulated and utilised. They explore current scientifically accepted theories that explain how matter and energy have changed since the origins of the Universe. This unit is delivered in Year 11.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to apply thermodynamic principles to analyse, interpret and explain changes in thermal energy in selected contexts, and describe the environmental impact of human activities with reference to thermal effects and climate science concepts. Outcome 2 On completion of this unit the student should be able to investigate and apply a basic DC circuit model to simple battery-operated devices and household electrical systems, apply mathematical models to analyse circuits, and describe the safe and effective use of electricity by individuals and the community. Outcome 3 On completion of this unit the student should be able explain the origins of atoms, the nature of subatomic particles and how energy can be produced by atoms. Assessment will follow the requirements set out in the VCE Physics Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of three outcomes. As a set these outcomes encompass all areas of study in the unit. Practical work is a central component of learning and assessment. As a guide, between 3½ and 5 hours of class time should be devoted to student practical work and investigations for each of Areas of Study 1 and 2 and to investigations in Area of Study 3 involving the use of secondary data and/or modelling.

PH022 Physics 2

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: In this unit students explore the power of experiments in developing models and theories. They investigate a variety of phenomena by making their own observations and generating questions, which in turn lead to experiments. Students make direct observations of physics phenomena and examine the ways in which phenomena that may not be directly observable can be explored through indirect observations. In the core component of this unit students investigate the ways in which forces are involved both in moving objects and in keeping objects stationary. Students choose one of twelve options related to astrophysics, bioelectricity, biomechanics, electronics, flight, medical physics, nuclear energy, nuclear physics, optics, sound and sports science. The option enables students to pursue an area of interest by investigating a selected question. This unit is delivered in Year 11.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 The student should be able to investigate, analyse and mathematically model the motion of particles and bodies. Outcome 2 (assessed against one option only) 2.1 The student should be able to apply concepts of light

and nuclear physics to describe and explain the genesis and life cycle of stars, and describe the methods used to gather this information. 2.2 The student should be able to apply concepts of light and atomic physics to describe and analyse the search for life beyond Earth's Solar System. 2.3 The student should be able to analyse the physical properties of organic materials including bone, tendons and muscle, and explain the uses and effects of forces and loads on the human body. 2.4 The student should be able to construct, test and analyse circuits that change AC voltage to a regulated DC power supply, and explain the use of transducers to transfer energy. 2.5 The student should be able to apply concepts of flight to investigate and explain the motion of objects through fluids. 2.6 The student should be able to apply the concepts of nuclear physics to describe and analyse nuclear energy as a power source. 2.7 The student should be able to use nuclear physics concepts to describe and analyse applications of electromagnetic radiation and particle radiation in medical diagnosis and treatment. 2.8 The student should be able to apply the principles related to the behaviour of charged particles in the presence of electric and magnetic fields to describe and analyse the use of accelerator technologies in high energy physics. 2.9 The student should be able to apply a ray model of light and the concepts of reflection and refraction to explain the operation of optical instruments and the human eye, and describe how human vision can be enhanced. 2.10 The student should be able to apply a wave model to describe and analyse the production of sound in musical instruments, and explain why particular combinations of sounds are more pleasing to the human ear than others. 2.11 The student should be able to apply concepts of linear, rotational and fluid mechanics to explain movement in ball sports. 2.12 The student should be able to explain the electrical behaviour of the human body and apply electricity concepts to biological contexts. Outcome 3 The student should be able to design and undertake an investigation of a physics question related to the scientific inquiry processes of data collection and analysis, and draw conclusions based on evidence from collected data. Assessment will follow the requirements set out in the VCE Physics Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of three outcomes. As a set these outcomes encompass all areas of study in the unit. Practical work is a central component of learning and assessment. As a guide, between 3½-5 hours of class time should be devoted to student practical work and investigations for each of Areas of Study 1 and 2. For Area of Study 3, between 7-10 hours of class time should be devoted.

PH033 Physics 3

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: In this unit students explore the importance of energy in explaining and describing the physical world. They examine the production of electricity and its delivery to homes. Students consider the field model as a construct that has enabled an understanding of why objects move when they are not apparently in contact with other objects. Applications of concepts related to fields include the transmission of electricity over large distances and the design and operation of particle accelerators. They explore the interactions, effects and applications of gravitational, electric and magnetic fields. Students use Newton's laws to investigate motion in one and two dimensions, and are introduced to Einstein's theories to

explain the motion of very fast objects. They consider how developing technologies can challenge existing explanations of the physical world, requiring a review of conceptual models and theories. Students design and undertake investigations involving at least two continuous independent variables. This unit is delivered in Year 12.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to analyse gravitational, electric and magnetic fields, and use these to explain the operation of motors and particle accelerators and the orbits of satellites. Outcome 2 On completion of this unit the student should be able to analyse and evaluate an electricity generation and distribution system. Outcome 3 On completion of this unit the student should be able to investigate motion and related energy transformations experimentally, analyse motion using Newton's laws of motion in one and two dimensions, and explain the motion of objects moving at very large speeds using Einstein's theory of special relativity. Assessment will follow the requirements set out in the VCE Physics Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 3 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 21 per cent to the study score. SAC for Unit 4 will contribute 19 per cent to the study score (PH034 Physics 4). Practical work is a central component of learning and assessment. As a guide, between 3½ and 5 hours of class time should be devoted to student practical work and investigations for each of Areas of Study 1, 2 and 3. EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 60 per cent to the study score.

PH034 Physics 4

Locations:Footscray Nicholson.

Prerequisites:PH033 - Physics 3

Description:A complex interplay exists between theory and experiment in generating models to explain natural phenomena including light. Wave theory has classically been used to explain phenomena related to light; however, continued exploration of light and matter has revealed the particle-like properties of light. On very small scales, light and matter - which initially seem to be quite different - have been observed as having similar properties. In this unit, students explore the use of wave and particle theories to model the properties of light and matter. They examine how the concept of the wave is used to explain the nature of light and explore its limitations in describing light behaviour. Students further investigate light by using a particle model to explain its behaviour. A wave model is also used to explain the behaviour of matter which enables students to consider the relationship between light and matter. Students learn to think beyond the concepts experienced in everyday life to study the physical world from a new perspective. Students design and undertake investigations involving at least two continuous independent variables. This unit is delivered in Year 12.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to apply wave concepts to analyse, interpret and explain the behaviour of light. Outcome 2 On completion of this unit the student should be able to provide evidence for the nature of light and matter, and analyse the data from experiments that supports this evidence. Outcome 3 On completion of this unit the student should be able to design and undertake a practical investigation related to waves or fields or motion, and present methodologies, findings and conclusions in a scientific poster. Assessment will follow the requirements set out in the VCE Physics Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 4 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 21 per cent to the study score (PH033 Physics 3). SAC for Unit 4 will contribute 19 per cent to the study score. Practical work is a central component of learning and assessment. As a guide, between 3½ and 5 hours of class time should be devoted to student practical work and investigations for each of Areas of Study 1, 2 and 3. EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 60 per cent to the study score.

PMAOPS201B Operate fluid flow equipment

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This competency covers the operation of the range of pumps and valves typically encountered in the fluid flow system of a processing plant. It includes identifying, operating, monitoring and troubleshooting these items.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - efficient and effective operation of plant/equipment; - hazard analysis; - completing plant records; - communication, and; - problem solving. Students will also be expected to demonstrate the following knowledge: - principles of operation of plant/equipment; - physics and chemistry relevant to the process unit; - process parameters and limits eg temperature, pressure, flow, pH; - duty of care obligations; - hierarchy of control; - communication protocols eg radio, phone, computer, paper, permissions/authorities; - routine problems, faults and their resolution; - relevant alarms and actions; - plant process idiosyncrasies; - all items on a schematic of the fluid flow system and the function of each; - correct methods of starting, stopping, operating and controlling

flow; - causes of head loss in piping systems (including comparison of fittings using Le/d concept, fluid and pipe material properties, flow geometry, etc); - corrective action appropriate to the problem cause; - function and troubleshooting of major internal components and their problems (such as impellers, seals or bearings), and; - types and causes of fluid flow problems within operator's scope of skill level and responsibility.

PSPGEN046 Undertake research and analysis

Locations: Industry.

Prerequisites: Nil.

Description: This unit describes the skills required to undertake research and analysis. It includes identifying and analysing information, applying the results and maintaining and compiling reports from information systems. This unit applies to those working in generalist and specialist roles within the public sector.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - accessing and using information ethically and legally; - using manual and computerised techniques for information management; - applying computer technology to data storage, security, retrieval and presentation; - undertaking statistical analysis; - using critical analysis techniques; - communicating with colleagues and supervisors; - presenting information in different ways, and; - applying problem solving and referring problems as required. Students will also be expected to demonstrate the following knowledge: - public sector legislation including WHS and environment, policies, procedures and guidelines relating to information handling in the public sector, including confidentiality, privacy, security, freedom of information - data collection and management procedures; - organisational information handling and storage procedures; - cultural aspects of information and meaning; - sources of public sector work-related information; - economic, legal and social issues surrounding the use of information; - public sector standards; - standard reporting procedures; - electronic and manual filing systems, and; - databases and data storage systems. .

PUAFIR207B Operate breathing apparatus open circuit

Locations: Industry, Werribee, Sunshine.

Prerequisites: PUAFIR215 - Prevent injury

Description: This unit covers the competency required to select, don, operate and maintain breathing apparatus equipment in an irrespirable atmosphere.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - implement emergency procedures; - inspect, don, operate, remove, clean and maintain breathing apparatus, and; - return breathing apparatus to operational status. Students will also be expected to demonstrate the following knowledge: - characteristics, component

parts, operation of compressed air breathing apparatus; - operating breathing apparatus; - operational testing, standard operating procedures and safe work practices when wearing breathing apparatus; - organisational entrapment procedures; - personal protective equipment; - relevant Australian Standards (AS); - respiratory system, effects of irrespirable atmospheres on the body and how breathing apparatus supports personal protection; - types of irrespirable atmospheres (heated, smoke or other suspended particles); - use of procedures, personal lines and tallies; - use of the Distress Signal Unit, and; - use of the breathing apparatus control equipment.

PUAFIR215 Prevent injury

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers the competency required to identify and avoid workplace hazards and risks, to maintain personal safety and to report identified issues to supervisors and team members.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply safe work practices in accordance with organisational work health and safety policies and procedures; - identify typical hazards and risks in the workplace, and apply control measures; - select equipment pertinent to incidents, prescribed burning and/or operational aspects of emergency management, and; - select personal protective clothing. Students will also be expected to demonstrate the following knowledge: - basic principles of risk assessment; - methods of hazard and risk control and reporting, and debriefings; - occupational hazards and risks encountered in the workplace; - organisational health and fitness guidelines; - personal protective clothing and equipment requirements; - risk control measure such as eliminate, isolate and substitute; - signs of fatigue, heat related illness, dehydration, fatigue and stress; - situational awareness, and; - welfare management, such as signs of occupational stress, limiting stress, dealing with stress and seeking assistance. .

PUAFIR316 Identify, detect and monitor hazardous materials at an incident

Locations: Industry, Werribee, Sunshine.

Prerequisites: PUAFIR207B - Operate breathing apparatus open circuit

Description: This unit covers the competency required to use specific equipment to detect airborne contaminants, liquids and solids.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse and communicate detection results; - don, operate in, decontaminate and remove personal protective clothing and equipment; - interpret safety and hazard information, and; - use detection equipment. Students will also be expected to demonstrate the following knowledge: - asphyxiants, which may include simple and chemical, flammable gases

and liquids, corrosive gases and liquids; - conditions under which atmospheres become hazardous; - dynamics of toxicity, corrosivity, flammability; - flammable range, upper and lower flammable limits; - legislation relevant to the organisation; - odour threshold, exposure standards (time weighted average, short term exposure limits, peak limitation values), immediately dangerous to life and health (IDLH), and may include acute exposure guideline levels (AEGl); - organisational policies and procedures; - physical chemistry concepts; - roles and responsibilities of agencies involved; - toxic effects on humans exposed to commonly encountered atmospheric contaminants such as reaction products or combustion products or variable oxygen concentrations, and; - units of measurement used to express concentration of atmospheric contaminants (mg/cubic m, ppm, %, v/v).

PUASAR022A Participate in a rescue operation

Locations: Industry, Werribee, Sunshine.

Prerequisites:PUAEME001B Provide emergency care, OR HLTFA211A Provide basic emergency life support.

Description:This unit covers the competency required to participate in rescue operations as a member of a rescue team. This unit underpins specialist rescue operations.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and monitor hazards; - identify and use rescue equipment, and; - wear PPE in accordance with organisational requirements. Students will also be expected to demonstrate the following knowledge: - capabilities and limitations of rescue equipment; - casualty handling techniques; - environmental hazards; - manual handling techniques; - organisational policies and procedures (such as relevant legislation; operational, corporate and strategic plans; operational performance standards; operational policies and procedures; organisational personnel and occupational health and safety practices and guidelines; organisational quality standards; organisation's approach to environmental management and sustainability); - personal hygiene; - procedures for reporting injuries and accidents; - relevant legislative and regulatory requirements; - ropes and knots, and; - safety precautions.

PUASAR025A Undertake confined space rescue

Locations: Industry, Werribee, Sunshine.

Prerequisites:PUASAR022A - Participate in a rescue operationPUAFIR316 - Identify, detect and monitor hazardous materials at an incident

Description:This unit covers the competency required to undertake rescue in confined spaces, as defined in AS 2865-2009 Confined spaces, as a member of a single agency or multi-disciplinary team.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - operate atmospheric monitoring equipment; - operate isolation systems; - operate lifting equipment; - operate lowering and hauling systems; - operate self contained breathing apparatus and airline equipment, and; - operate ventilation equipment. Students will also be expected to demonstrate the following knowledge: - Australian Standard (AS) 2865-2009 Confined spaces; - lock, tag out and isolation procedures; - organisational procedures for cleaning and discarding equipment in terms of environmental management and sustainability; - potential occupational hazards and control measures; - procedures for atmospheric monitoring; - purging and ventilation in accordance with national standards; - selection, use and maintenance of respiratory devices, and; - use of ropes and knots for accessing confined space.

PUATEA001B Work in a team

Locations: Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, VU Learning Links - Sunbury Neighbourhood and Altona Meadows Library as part of 22237VIC Certificate II in General Education for Adults..

Prerequisites:Nil.

Description:This unit covers competency in working with others and making a positive contribution to the effectiveness and efficiency of a team in a work environment when predominantly under direct supervision. Limited responsibility towards others is required.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - encouraging others/team members; - following instructions; - interpersonal skills; - listening and using a variety of communication skills; - providing suggestions and information, and; - reporting information. Students will also be expected to demonstrate the following knowledge: - composition of workplace teams and roles and responsibilities of team members; - non-operational and operational communication processes; - techniques for giving and receiving feedback in a constructive manner, and; - techniques for supporting others.

PUAWER004B Respond to workplace emergencies

Locations: Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit covers the competency required to recognise emergencies in the workplace, to report emergencies and to take appropriate action. For this unit, workplace is defined as the area encompassed by an individual's responsibilities. This unit: applies to all personnel within an organisation; has been developed to cover the broad range of emergencies and workplaces as considered in Australian Standard 37452002; is part of a suite of eleven workplace emergency response units of competency that has three streams, and; is part of the workplace evacuation stream.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate effectively in an emergency situation as outlined in the workplace emergency procedures, and; - identify an emergency/potential emergency. Students will also be expected to demonstrate the following knowledge: - circumstances where evacuation may need to be modified; - emergency reporting systems and procedures used on site; - emergency warning system, signals and instructions used on site; - evacuation alarms and workplace emergency procedures used at the workplace; - location of assembly areas and post-evacuation actions; - location of emergency equipment in the workplace; - procedures for reporting emergencies; - roles, responsibilities and authority of emergency personnel, emergency control organisation and emergency response team, and; - types of emergencies, the hazards and the evacuation actions associated with each one.

PUAWER005B Operate as part of an emergency control organisation

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers the competency required to implement the emergency response specified in the workplace emergency procedures or specified by a person at a higher level in the emergency control organisation. People who undertake this work will be working within the command, control and coordinate structure of the emergency control organisation. This unit has been developed to cover the broad range of emergencies and workplaces as considered in Australian Standard 3745-2010.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - ability to relate to a range of people from a range of cultural, linguistic, social and ethnic backgrounds, and a range of physical and intellectual abilities; - apply methods of accounting for people; - assist people who need assistance; - carry out a search pattern within an area; - communicate clearly by the means specified in the workplace emergency procedures; - contribute to emergency management planning; - exercise leadership within a workplace emergency context, and; - use equipment assigned to assist with implementing the workplace emergency procedures. Students will also be expected to demonstrate the following knowledge: - arrangements for evacuating people who need support; - assessing and anticipating the progress of emergencies that might reasonably be expected in the workplace; - command, control and coordinate function of the emergency control organisation; - context of own role within the workplace emergency procedures; - emergency assessment and reporting procedures; - emergency reporting signals, alarms, warnings and procedures; - emergency response and operating procedures; - members of the emergency control organisation and their roles and responsibilities; - evacuation priorities; - hazard identification; - precautions to be taken during emergencies and during an evacuation; - methods of accounting for people during and after emergencies; - methods of summoning first aid to occupants or visitor injured during an emergency evacuation; - need to keep the relevant person informed of the developing situation; - post initial response emergency activities; - responses to meet the various situations, and; - workplace procedures.

PUAWER008B Confine small workplace emergencies

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers the competency required to confine small workplace emergencies. Small workplace emergencies may include such incidents as a small fire that can be controlled using a nearby fire extinguisher; or a chemical spill that can be controlled using workplace personal protective clothing and equipment, and a small spill kit; or a workplace vehicle accident where there is no significant injury or damage. All aspects of the unit must be undertaken in line with legislative requirements, workplace policies and procedures, and accepted safe practices. This unit has been developed to cover the broad range of emergencies and workplaces as considered in Australian Standard 3745-2010.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate in an effective manner; - give and follow instructions; - implement workplace procedures; - re-stow initial response equipment; - risk management; - use initial response equipment, and; - manage a small workplace emergency. Students will also be expected to demonstrate the following knowledge: - actions to be followed when initial response action is not safe; - appropriate initial response equipment; - facilities that may be used to confine emergencies; - hazards involved with initial response action; - implications of the incorrect use of equipment; - limitations of initial response equipment; - limitations of use of emergency control equipment or facilities; - methods of extinguishment; - safe use of initial response equipment; - situations that must not be responded to because of the risk; - types of emergencies, and; - workplace procedures.

PY011 Psychology 1

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Human development involves changes in thoughts, feelings and behaviours. In this unit students investigate the structure and functioning of the human brain and the role it plays in the overall functioning of the human nervous system. Students explore brain plasticity and the influence that brain damage may have on a person's psychological functioning. They consider the complex nature of psychological development, including situations where psychological development may not occur as expected. Students examine the contribution that classical and contemporary studies have made to an understanding of the human brain and its functions, and to the development of different psychological models and theories used to predict and explain the development of thoughts, feelings and behaviours. This unit is delivered in Year 11.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the

following knowledge: Outcome 1 On completion of this unit the student should be able to describe how understanding of brain structure and function has changed over time, explain how different areas of the brain coordinate different functions, and explain how brain plasticity and brain damage can change psychological functioning. Outcome 2 On completion of this unit the student should be able to identify the varying influences of nature and nurture on a person's psychological development, and explain different factors that may lead to typical or atypical psychological development. Outcome 3 On completion of this unit the student should be able to investigate and communicate a substantiated response to a question related to brain function and/or development, including reference to at least two contemporary psychological studies and/or research techniques. Assessment will follow the requirements set out in the VCE Psychology Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of three outcomes. As a set these outcomes encompass all areas of study in the unit. Practical work is a central component of learning and assessment. As a guide, between 3½ and 5 hours of class time should be devoted to student practical work and investigations for each of Areas of Study 1 and 2. For Area of Study 3, between 6 and 8 hours of class time should be devoted to undertaking the investigation and communicating findings.

PY022 Psychology 2

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:A person's thoughts, feelings and behaviours are influenced by a variety of biological, psychological and social factors. In this unit students investigate how perception of stimuli enables a person to interact with the world around them and how their perception of stimuli can be distorted. They evaluate the role social cognition plays in a person's attitudes, perception of themselves and relationships with others. Students explore a variety of factors and contexts that can influence the behaviour of an individual and groups. They examine the contribution that classical and contemporary research has made to the understanding of human perception and why individuals and groups behave in specific ways. This unit is delivered in Year 11.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to compare the sensations and perceptions of vision and taste, and analyse factors that may lead to the occurrence of perceptual distortions. Outcome 2 On completion of this unit the student should be able to identify factors that influence individuals to behave in specific ways, and analyse ways in which others can influence individuals to behave differently. Outcome 3 On completion of this unit the student should be able to design and undertake a practical investigation related to external influences on behaviour, and draw conclusions based on evidence from collected data. Assessment will follow the requirements set out in the VCE Psychology Study Guide: The award of satisfactory completion for a unit is based on

whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of three outcomes. As a set these outcomes encompass all areas of study in the unit. Practical work is a central component of learning and assessment. As a guide, between 3½ and 5 hours of class time should be devoted to student practical work and investigations for each of Areas of Study 1 and 2. For Area of Study 3, between 6 and 8 hours of class time should be devoted to undertaking the investigation and communicating findings.

PY033 Psychology 3

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:The nervous system influences behaviour and the way people experience the world. In this unit students examine both macro-level and micro-level functioning of the nervous system to explain how the human nervous system enables a person to interact with the world around them. They explore how stress may affect a person's psychological functioning and consider the causes and management of stress. Students investigate how mechanisms of memory and learning lead to the acquisition of knowledge, the development of new capacities and changed behaviours. They consider the limitations and fallibility of memory and how memory can be improved. Students examine the contribution that classical and contemporary research has made to the understanding of the structure and function of the nervous system, and to the understanding of biological, psychological and social factors that influence learning and memory. This unit is delivered in Year 12.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to explain how the structure and function of the human nervous system enables a person to interact with the external world and analyse the different ways in which stress can affect nervous system functioning. Outcome 2 On completion of this unit the student should be able to apply biological and psychological explanations for how new information can be learnt and stored in memory, and provide biological, psychological and social explanations of a person's inability to remember information. Assessment will follow the requirements set out in the VCE Psychology Study Guide: **SCHOOL-BASED ASSESSMENT 1.** Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 3 will be determined by School-Assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 16 per cent to the study score. SAC for Unit 4 will contribute 24 per cent to the study score (PY034 Psychology 4). Practical work is a central component of learning and assessment. As a guide, between 3½ and 5 hours of class time should be devoted to student practical work and investigations for each of Areas of

Study 1 and 2. EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 60 per cent to the study score.

PY034 Psychology 4

Locations:Footscray Nicholson.

Prerequisites:PY033 - Psychology 3

Description:Consciousness and mental health are two of many psychological constructs that can be explored by studying the relationship between the mind, brain and behaviour. In this unit students examine the nature of consciousness and how changes in levels of consciousness can affect mental processes and behaviour. They consider the role of sleep and the impact that sleep disturbances may have on a person's functioning. Students explore the concept of a mental health continuum and apply a biopsychosocial approach, as a scientific model, to analyse mental health and disorder. They use specific phobia to illustrate how the development and management of a mental disorder can be considered as an interaction between biological, psychological and social factors. Students examine the contribution that classical and contemporary research has made to the understanding of consciousness, including sleep, and the development of an individual's mental functioning and wellbeing. This unit is delivered in Year 12.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to explain consciousness as a continuum, compare theories about the purpose and nature of sleep, and elaborate on the effects of sleep disruption on a person's functioning. Outcome 2 On completion of this unit the student should be able to explain the concepts of mental health and mental illness including influences of risk and protective factors, apply a biopsychosocial approach to explain the development and management of specific phobia, and explain the psychological basis of strategies that contribute to mental wellbeing. Outcome 3 On completion of this unit the student should be able to design and undertake a practical investigation related to mental processes and psychological functioning, and present methodologies, findings and conclusions in a scientific poster. Assessment will follow the requirements set out in the VCE Psychology Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 4 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 16 per cent to the study score (PY033 Psychology 3). SAC for Unit 4 will contribute 24 per cent to the study score. Practical work is a central component of learning and assessment. As a guide, between 2 and 4 hours of class time should be devoted to student practical work and investigations for each of Areas of Study 1 and 2. For Unit 3, between 7 and 10 hours of class time should be devoted to the investigation to be undertaken in either Unit 3 or Unit 4, or across both Units 3 and 4, including the writing of the sections of the scientific poster. EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 60 per cent to the study score.

RIIBEF201D Plan and organise work

Locations:Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes a participant's skills and knowledge required to plan and organise work in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - works effectively with others to undertake and complete the planning and organisation of work that meets all of the required outcomes, and; - demonstrates completion of planning and organising work that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - basic work planning processes, and; - operational safety requirements, such as: equipment characteristics; technical capabilities and limitations; operational procedures, and; safety data sheet (SDS).

RIICBM301D Maintain concrete bridges

Locations:Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes a participant's skills and knowledge required to apply maintain concrete bridges in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures for maintaining concrete bridges; - works effectively with others to undertake and complete the maintenance of concrete bridges that meets all of the required outcomes, and; - demonstrates completion of maintaining concrete bridges that safely, effectively and efficiently meets all of the required outcomes. Students will also be expected to demonstrate the following knowledge: - applying legislative, organisation and site requirements; - civil construction terminology; - bridge components; - bridge faults and repair methods; - interpreting engineering drawings; - equipment types, characteristics, technical capabilities and limitations; - safety data sheets and materials handling methods, and; - JSA/JSEA/safe work method statements.

RIICBS202D Hand spread asphalt

Locations:Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description: This unit describes a participant's skills and knowledge required to hand spread asphalt in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient hand spreading of asphalt; - works effectively with others to undertake and complete the hand spreading of asphalt that meets all of the required outcomes, and; - demonstrates completion of hand spreading asphalt that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - applying legislative, organisational and site requirements and procedures; - equipment types, characteristics and limitations; - applying operational and maintenance procedures; - applying site isolation and traffic control responsibilities and authorities; - AAPA code of practice for working with SBS modified binders; - safety data sheets and materials handling methods, and; - implementing JSAs/JSEA/safe work method statements.

RIICBS304D Compact asphalt with rollers

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to compact asphalt with rollers in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient compacting of asphalt with rollers; - works effectively with others to undertake and complete the compacting of asphalt with rollers that meets all of the required outcomes, and; - demonstrates completion of compacting asphalt with rollers that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - applying legislative, organisational and site requirements and procedures; - equipment types, characteristics, technical capabilities and limitations; - applying and monitoring operational, maintenance and basic diagnostic procedures; - applying site isolation

and traffic control responsibilities and authorities; - applying processes for the calculation of material uniformity and travel speed; - safety data sheets and materials handling methods; - monitoring project quality requirements, and; - preparing and/or implementing JSAs/JSEA/safe work method statements.

RIICBS310D Conduct patching operations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to conduct patching operations in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of patching operations; - works effectively with others to undertake and conduct patching operations that meet all of the required outcomes, and; - demonstrates completion of conducting patching operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying legislative, organisation and site requirements and procedures; - applying project quality requirements; - complying with the site and equipment safety requirements; - using bituminous materials and understanding their characteristics; - understanding aggregate properties and conformance; - understanding equipment types, characteristics, technical capabilities and limitations; - complying with the operational, maintenance and basic diagnostic procedures; - complying with site isolation and traffic control responsibilities and authorities; - understanding the processes for the calculation of material requirements and application rates; - safety data sheets and materials handling methods, and; - preparing and/or implementing JSAs/JSEA/safe work method statements.

RIICCM201D Carry out measurements and calculations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to carry out measurements and calculations in Civil Construction. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable

documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient carrying out of measurements and calculations; - works effectively with others to undertake and complete measurements and calculations that meet all of the required outcomes, and; - demonstrates completion of measurements and calculations that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - conversion of different metric values e.g. metres to millimetres; - understanding tolerances; - completing measuring, calculating, geometry and determination of quantities; - caring for measuring equipment, and; - working with civil construction terminology.

RIICCM202D Identify, locate and protect underground services

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to identify, locate and protect underground services in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of the identification, location and protection of underground services; - works effectively with others to undertake and complete the identification, location and protection of underground services in a way that meets all of the required outcomes: using a range of communications techniques and equipment, and; complying with written and verbal reporting requirements and procedures, and; - demonstrates completion of identifying, locating and protecting underground services that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - planning and organising work activities; - working with civil construction terminology; - identifying types of services/utilities and providers; - using construction principles; - identifying equipment types, characteristics, technical capabilities and limitations; - using safety data sheet and materials handling methods, and; - carrying out operational, maintenance and basic diagnostic procedures.

RIICCM203D Read and interpret plans and specifications

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to read and interpret plans and specifications in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry

sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of the reading and interpreting of plans and specifications; - works effectively with others to undertake and complete the reading and interpreting of plans and specifications that meet all of the required outcomes, and; - demonstrates completion of reading and interpreting plans and specifications that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - planning and organising work activities; - working with civil construction terminology; - identifying types of services/utilities and providers; - using construction principles; - carrying out basic calculations of heights, areas, volumes and grades; - interpreting features of plans and elevations including direction, scale, key, contours, symbols and abbreviations; - interpreting commonly used civil construction symbols and abbreviations; - application of scales in plan preparation and interpretation; - identifying key features of formal job specifications, and; - complying with drawing conventions.

RIICCM205E Carry out manual excavation

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to carry out manual excavation in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of manual excavation; - works effectively with others to undertake and complete the manual excavation in a way that meets all of the required outcomes, and; - demonstrates completion of manual excavation that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - organisation and site requirements and procedures for: using job safety analyses/safe work methods; achieving project quality outcomes, and; identifying and reporting on hazards related to the worksite and work activity; - organisation of work activities; - relevant tools and equipment safely; - types, uses,

limitations and maintenance requirements of manual excavation tools; - basic principles of soil technology for civil works; - basic trench collapse prevention techniques including benching and battering; - site isolation and traffic control responsibilities and authorities; - Civil construction terminology, and; - housekeeping activities.

RIICCM206D Support plant operations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to support plant operations in Civil construction. This unit is appropriate for those working in an assistant role. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of plant operations support; - works effectively with others to undertake and complete the plant operations support in a way that meets all of the required outcomes including: using a range of communications techniques and equipment to convey information to others, and; complying with written and verbal reporting requirements and procedures, and; - demonstrates completion of support plant operations that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - organising work activities; - using relevant tools and equipment safely; - identifying types, uses, limitations and maintenance requirements of plant/equipment; - applying basic principles of soil technology for civil works; - identifying site isolation and traffic control responsibilities and authorities; - using civil construction terminology, and; - completing housekeeping activities. .

RIICCM207D Spread and compact materials manually

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to spread and compact materials manually in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of the manual spreading and compacting of materials; - works effectively with others to undertake and complete the manual spreading and compacting of materials that meets all of the required outcomes including: using a range of communications techniques and equipment to convey information to others, and; complying with written and verbal reporting requirements and procedures, and; - demonstrates completion of manually spreading and compacting materials that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedure; - organising work activities; - using relevant tools and equipment safely; - identifying hand operated mechanical compaction machine types, characteristics, technical capabilities and limitations; - applying basic principles of soil technology for civil works; - identifying basic soil compaction theory including the effects of moisture and mechanical interlock; - identifying site isolation and traffic control responsibilities and authorities; - using civil construction terminology, and; - completing housekeeping activities. .

RIICCM208D Carry out basic levelling

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to carry out basic levelling in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of basic levelling; - works effectively with others to undertake and complete the basic levelling in a way that meets all of the required outcomes, and; - demonstrates completion of carrying out basic levelling that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedure; - organising work activities; - using relevant tools and equipment safely; - identifying levelling devices, characteristics, technical capabilities and limitations; - read, interpret and applying civil construction plan, symbols and construction terminology; - identifying site isolation and traffic control responsibilities and authorities, and; - completing housekeeping activities.

RIICCM209D Carry out concrete work

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to carry out concrete work in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that

apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures;- implements the requirements, procedures and techniques for the safe, effective and efficient completion of concrete work; - works effectively with others to undertake and complete concrete work that meets all required outcomes, and; - demonstrates completion of carrying out concrete work that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - organising work activities; - using relevant tools and equipment safely; - identifying equipment types, characteristics, technical capabilities and limitations; - identifying site isolation and traffic control responsibilities and authorities; - identifying concrete characteristics and properties; - using concreting principles; - using structural technology; - using civil construction terminology, and; - completing housekeeping activities.

RIICCM210A Install trench support

Locations:Werribee, Learning Links Geelong.

Prerequisites:Nil.

Description:This unit covers the installation of trench support in the civil construction industry. It includes planning and preparing, installing trench shoring, removing trench shoring, and cleaning up.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply legislative, organisation and site requirements and procedures for installing trench shoring; - organise work activities;- select and use relevant tools and equipment safely; - identify and report on hazards related to the worksite and work activity, and; - communicate effectively to receive and clarify work instructions. Students will also be expected to demonstrate the following knowledge: - site and equipment safety requirements; - excavation techniques; - shoring methods and systems; - working in confined spaces; - construction techniques; - equipment types, characteristics, technical capabilities and limitations; - operational, maintenance and basic diagnostic procedures; - site isolation and traffic control responsibilities and authorities; - materials safety data sheets and materials handling methods; - project quality requirements; - civil construction terminology, and; - JSAs/safe work method statement.

RIICCM210D Install trench support

Locations:Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites:Nil.

Description:This unit describes a participant's skills and knowledge required to install trench support in Civil construction. This unit is appropriate for those working in operational roles.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of trench support installation;- selecting and using relevant tools/equipment; - using shoring methods and systems; - working in confined spaces; - communicating effectively to confirm work requirements; - works effectively with others to undertake and complete the installation of trench support in a way that meets all of the required outcomes; - using a range of communications techniques and equipment to convey information to others; - complying with written and verbal reporting requirements and procedures;- demonstrates completion of installing trench support that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion, and; - installation of trench support in trenches deeper than 1.5 metres requiring the trench support to be installed, moved along or within the trench, and removed from the trench. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures for: using JSAs/JSEA/safe work methods; achieving project quality outcomes; identifying and reporting on hazards related to the worksite and work activity; applying materials handling methods and using safety data sheets; - organising work activities; - using relevant tools and equipment safely;- equipment types, characteristics, technical capabilities and limitations; - excavation techniques; - construction techniques; - site isolation and traffic control responsibilities and authorities; - using civil construction terminology, and; - completing housekeeping activities.

RIICCM211D Erect and dismantle temporary fencing and gates

Locations:Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes a participant's skills and knowledge required to erect and dismantle temporary fencing and gates in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures;- implements the requirements, procedures

and techniques for the safe, effective and efficient completion of the erection and dismantling of temporary fencing and gates; - works effectively with others to undertake and complete the erection and dismantling of temporary fences and gates in a way that meets all of the required outcomes, and; - demonstrates completion of erecting and dismantling temporary fencing and gates that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - organising work activities; - using relevant tools and equipment safely; - equipment types, characteristics, technical capabilities and limitations; - site safety and security isolation techniques; - site isolation and traffic control responsibilities and authorities; - using civil construction terminology; - different fencing and anchoring systems, and; - completing housekeeping activities.

RIICCM301D Construct and dismantle fences and gates

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to construct and dismantle fences and gates in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of the construction and dismantling of fences and gates; - works effectively with others to undertake and complete the construction and dismantling of fences and gates in a way that meets all of the required outcomes, and; - demonstrates completion of constructing and dismantling fences and gates that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - organising work activities; - using relevant tools and equipment safely; - equipment types, characteristics, technical capabilities and limitations; - site safety and security isolation techniques; - site isolation and traffic control responsibilities and authorities; - using civil construction terminology; - different fencing and anchoring systems, and; - completing housekeeping activities.

RIICCR401D Develop and maintain positive community relations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop and maintain positive community relations in the resources and infrastructure industries. It is appropriate for those working in supervisory roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to

application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - demonstrates completion of development and maintenance of positive community relations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - working with others to undertake and complete the development and maintenance of positive community relations; - provision of clear and timely instruction and supervision of those involved in developing and maintaining positive community relations; - liaising effectively with a variety of stakeholders; - producing high quality easy to understand written communications; - delivering clear and concise presentations; - networking and forming relationships with a variety of stakeholders; - planning and managing own work priorities and community relations activities; - selecting appropriate community relationship strategies; - overcoming difficulties arising from community relations; - engaging with people from diverse groups, and; - consistent successful positive community relations. Students will also be expected to demonstrate the following knowledge: - planning, preparing and conducting positive community relations; - verbal and written communication; - building and maintaining relationships and networks; - time management; - analysis, evaluation and problem solving; - using technology; - providing leadership; - applying legislation; - applying the organisation's position on current issues; - identifying community activities that could be used to promote the organisation; - applying the organisation's policies, plans and procedures; - applying presentation techniques; - identifying and managing risk; - complying with documentation, reporting and record keeping requirements, and; - identifying related organisations, agencies and networks.

RIICFW302D Install temporary and permanent rock anchors

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to install temporary and permanent rock anchors in Civil Construction. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient installation of temporary and permanent rock anchors; - works effectively with others to undertake and complete the installation of temporary and permanent rock anchors tasks that meets all the required outcomes, and; - demonstrates completion of installing

temporary and permanent rock anchors that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - applying organisation, site requirements and procedures; - using construction principles; - interpreting engineering drawings; - identifying soil, sand, rock, clay, shale, gravel and silt types and characteristics; - identifying equipment types, characteristics, technical capabilities and limitations; - applying and monitoring operational, maintenance and basic diagnostic procedures; - interpreting and complying with safety data sheets and materials handling methods; - monitoring project quality requirements; - using civil construction terminology, and; - preparing and/or implementing JSA/JSEA/safe work method statements.

RIICFW303D Install primary ground support

Locations: Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to install primary ground support in Civil Construction. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of primary ground support installation; - works effectively with others to undertake and complete the installation of primary ground support that meets all of the required outcomes, and; - demonstrates completion of installing primary ground support that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - applying organisation, site requirements and procedures; - selecting and using relevant tools and equipment safely; - describing primary ground support systems and their installation techniques; - describing scaffolding and work platform installation; - interpreting engineering drawings; - identifying soil, sand, rock, clay, shale, gravel and silt types and characteristics; - identifying equipment types, characteristics, technical capabilities and limitations; - applying and monitoring operational, maintenance and basic diagnostic procedures; - applying site isolation and traffic control responsibilities and authorities; - interpreting and complying with materials safety data sheets and materials handling methods; - project quality requirements; - civil construction terminology, and; - preparing and/or implementing JSA/JSEA/safe work method statements.

RIICOM201D Communicate in the workplace

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to communicate in the workplace within the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures, and; - demonstrates completion of communicating in the work place that safely, effectively and efficiently meets required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - relevant standards and site procedures; - worksite communication system components, applications and limitations; - procedures and safety requirements of communication equipment and systems; - common faults in communication equipment/systems; - emergency communication procedures, and; - record maintenance.

RIICOM301D Communicate information

Locations: Industry, Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to communicate in the workplace within the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - demonstrates completion of communicating information that safely, effectively and efficiently meets all of the required outcomes; - applying technical literacy and communication skills sufficient to interpret and apply common Industry terminology, and interpret work procedures and processes; - identifying barriers to communication and strategies to reduce barriers; - speaking and communicating verbally with supervisors and other employees to provide information and confirm meaning; - questioning and actively listening to others, for example when obtaining information on technical working practices; - conducting/chairing and preparing including setting the agenda for one (1) meeting, reviewing previous minutes, determining action on agenda items, involving and engaging others in the communication throughout the meeting, assigning responsibilities for agenda items, preparing minutes of the meeting, following up on actions; - participating in one (1) meeting including asking questions and providing responses; - making one (1) formal presentation of meaningful information to others, and; - writing one (1) negotiation strategy plan, participating in a negotiation meeting and documenting negotiation outcomes. Students will also be expected to demonstrate the following knowledge: - relevant Industry based communication requirements and systems; - topic or subject area which is the target for the communication; - knowledge of the factors for effective oral communication; - site conventions and requirements for written communications including report writing; - meeting procedures and follow-up requirements; - conducting a presentation, and; - basic negotiating techniques and their application.

RIICPL301D Install water mains pipelines

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to install water mains pipelines in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient installation of water mains pipelines including: applying problem solving and troubleshooting techniques, and applying diagnostic techniques; - works effectively with others to undertake and complete the installation of water mains pipelines that meets all of the required outcomes including: communicating clearly and concisely with others to receive and clarify work instructions, and using a range of communications techniques and equipment to convey information to others; - demonstrates completion of installation of water mains pipelines that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - determining the location, alignment direction, level and grade of mains pipe system; - installing the support mechanism; - installing a minimum of hundred (100) metres of water mains pipeline; - completing pipe joins to specifications; - performing pressurisation, functionality and serviceability test to specifications, and; - maintaining written and verbal reporting requirements and procedures. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the legislative, organisation and site requirements and procedures for hazard identification, risk assessment and response, using JSA/JSEA/safe work method statements, project quality measures, using tools/equipment, maintaining excavation/trench safety, confined space entry, and site dewatering; - using safety data sheets and materials handling methods; - using civil construction terminology; - using mains pipe systems and installation procedures; - identifying mains pipe and utility services; - using concrete and concrete fabrication; - using sedimentation and erosion controls; - reading and interpreting engineering drawings; - identifying equipment types, characteristics, technical capabilities and limitations; - managing site mains water pressure; - identifying valves and flow control devices; - construction of water reticulation; - calculating pipeline grades and percentages; - identifying site isolation and traffic control responsibilities and authorities.

RIICPL302D Install stormwater systems

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to install stormwater systems in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of installation of stormwater systems including applying problem solving and troubleshooting techniques, and applying diagnostic techniques; - works effectively with others to undertake and complete the installation of stormwater systems that meets all of the required outcomes including communicating to confirm work/plans/specifications, and using a range of communications techniques and equipment to convey information to others; - demonstrates completion of installing stormwater systems that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - determining location, alignment direction level and grade of stormwater system; - installing stormwater system bedding; - installing a minimum of 100 metres of stormwater pipe; - completing pipe joins; - performing test procedures, establishing functionality and serviceability, and; - maintaining written and verbal reporting requirements and procedures. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the legislative, organisation and site requirements and procedures for hazard identification, risk assessment and response, using JSA/JSEA/safe work method statements, project quality measures, using tools/equipment, maintaining excavation/trench safety, confined space entry, and site dewatering; - using safety data sheets and materials handling methods; - using civil construction terminology; - using pipe systems and installation procedures; - identifying mains pipe and utility services; - using concrete and concrete fabrication; - using sedimentation and erosion controls; - reading and interpreting engineering drawings; - identifying equipment types, characteristics, technical capabilities and limitations; - identifying valves and flow control devices; - construction of water reticulation; - calculating pipeline grades and percentages, and; - identifying site isolation and traffic control responsibilities and authorities.

RIICPL303D Install sewer pipelines

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to install sewer pipelines in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of installation of sewer pipelines including applying problem solving and troubleshooting techniques, and applying diagnostic techniques; - works effectively with others to

undertake and complete the installation of sewer pipelines that meets all of the required outcomes including communicating clearly and concisely with others to confirm work/plans/specifications, and using a range of communications techniques and equipment to convey information to others; - demonstrates completion of installing sewer pipelines that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - determining location, alignment direction, level and grade of sewer pipeline; - installing sewer pipeline bedding; - installing a minimum of 100 metres of sewer pipe; - constructing manholes, inspection and valve chambers, minor structures and thrust blocks; - completing pipe joins; - performing test procedures, establishing functionality and serviceability, and; - maintaining written and verbal reporting requirements and procedures. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the legislative, organisation and site requirements and procedures for hazard identification, risk assessment and response, using JSA/JSEA/safe work method statements, project quality measures, using tools/equipment, maintaining excavation/trench safety, confined space entry, and site dewatering; - using safety data sheets and materials handling methods; - using civil construction terminology; - using sewer pipe systems and installation procedures; - identifying mains pipe and utility services; - using concrete and concrete fabrication; - using sedimentation and erosion controls; - reading and interpreting engineering drawings; - identifying equipment types, characteristics, technical capabilities and limitations; - identifying valves and flow control devices; - construction of water reticulation; - calculating pipeline grades and percentages, and; - identifying site isolation and traffic control responsibilities and authorities.

RIICPL304D Install pre-cast gully pits

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to install pre-cast gully pits in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of installation of pre-cast gully pits including applying problem solving and troubleshooting techniques, and applying diagnostic techniques; - works effectively with others to undertake and complete the installation of pre-cast gully pits that meets all of the required outcomes including communicating clearly and concisely with others to confirm work/plans/specifications, and using a range of communications techniques and equipment to convey information to others; - demonstrates completion of installing pre-cast gully pits that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - determining location and positioning of gully pits; - installing gully pits for stormwater systems, and; - maintaining written and verbal reporting requirements and procedures. Students will also be expected to demonstrate the following

knowledge: - accessing, interpreting and applying the legislative, organisation and site requirements and procedures for hazard identification, risk assessment and response, using JSA/JSEA/safe work method statements, project quality measures, using tools/equipment, maintaining excavation/trench safety, confined space entry, and site dewatering; - using safety data sheets and materials handling methods; - using civil construction terminology; - using gully pit systems and installation procedures; - identifying mains pipe and utility services; - using concrete and concrete fabrication; - using sedimentation and erosion controls; - working with storm-water systems; - reading and interpreting engineering drawings; - identifying equipment types, characteristics, technical capabilities and limitations, and; - identifying site isolation and traffic control responsibilities and authorities.

RIICPL305D Install pre-cast access chambers

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to install pre-cast access chambers in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of installation of pre-cast access chambers including applying problem solving and troubleshooting techniques, and applying diagnostic techniques; - works effectively with others to undertake and complete the installation of pre-cast access chambers that meets all of the required outcomes including communicating clearly and concisely with others to confirm work/plans/specifications, and using a range of communications techniques and equipment to convey information to others; - demonstrates completion of installing pre-cast access chambers that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - determining location and positioning of access chamber, and; - installing access chambers. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the legislative, organisation and site requirements and procedures for hazard identification, risk assessment and response, using JSA/JSEA/safe work method statements, project quality measures, using tools/equipment, maintaining excavation/trench safety, confined space entry, and site dewatering; - using safety data sheets and materials handling methods; - using civil construction terminology; - using pre-cast access chambers systems and installation procedures; - identifying mains pipe and utility services; - using concrete and concrete fabrication; - using sedimentation and erosion controls; - working with storm-water systems; - working with sewerage systems; - reading and interpreting engineering drawings; - identifying equipment types, characteristics, technical capabilities and limitations, and; - identifying site isolation and traffic control responsibilities and authorities.

RIICPL401D Apply the principles for the installation of underground service using open excavation

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to apply the principles for the installation of underground service using open excavation in Civil construction. This unit is appropriate for those working in supervisory or technical specialist roles. No licensing or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - implements appropriate procedures and techniques for the safe, effective and efficient supervision of installation of underground service using open excavation tasks including identifying and interpreting relevant information and data; - calculating quantities for the execution of tasks, including: volumes, grades, percentages, areas and resource consumption figures, including required supply rates; - works effectively with others to plan, prepare and conduct for the installation of underground service using open excavation tasks including providing clear and timely instruction and supervision using a range of communication techniques to those involved, preparing for and conducting briefings, toolbox and site meeting and maintaining clear and legible written records and reporting systems, and; - demonstrates completion of the principles for the installation of underground service using open excavation that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including supervising others in the installation of underground service using open excavation tasks, organising availability of necessary resources, monitoring required outcomes and identifying performance gaps and recommending changes to improve the execution of tasks. Students will also be expected to demonstrate the following knowledge: - applying organisation, site requirements and procedures for: risk assessment and management, statutory compliance, work health and safety, environmental management, shoring and slope management, quality management, work zone traffic management, and contract management; - managing open excavation underground service installation; - plant and equipment capabilities and application; - implementing plant, equipment and tools maintenance requirements and procedures; - assessing operational techniques; - assessing resource requirements and procedures; - scheduling tasks/activities; - scheduling materials delivery requirements and procedures; - implementing workplace relationship requirements and procedures; - managing client and site operational requirements; - identifying relationship between various areas of civil works; - using team leadership techniques; - using works planning techniques; - identifying engineering survey principles; - using estimating principles; - using civil works construction sequencing and terminology, and; - identifying related underground services and utilities.

RIICRC201D Repair potholes

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to repair

potholes in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of pothole repairs; - identifying and applying relevant drawings and job specifications to all work activities; - identifying, obtaining, confirming and positioning required signage; - selecting and checking tools and equipment to meet requirements of the job; - works effectively with others to undertake and complete pothole repair tasks that meet all requirements, and; - demonstrates completion of the repair of potholes that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - identifying and managing risks; - selection of appropriate tools and materials; - carrying out work to specifications, and; - applying effective pothole repair techniques.

RIICRC202D Install signs

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to install signs in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable, documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of installing signs; - works effectively with others to undertake and complete the installation of signs in a way that meets all required outcomes, and; - demonstrates completion of installing signs that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying, organisation and site requirements and procedures; - selecting and checking for faults, tools and equipment to carry out tasks carrying out work to specifications, and; - applying effective sign installation techniques.

RIICRC203D Install sub-soil drainage

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to install sub-soil drainage in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of sub-soil drainage installation; - works effectively with others to undertake and complete the installation of sub-soil drainage in a way that meets all of the required outcomes, and; - demonstrates completion of installing sub-soil drainage that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying, organisation and site requirements and procedures.

RIICRC204D Install and maintain roadside fixtures

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to install and maintain roadside fixtures in Civil Construction. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient installation and maintenance of roadside fixtures; - works effectively with others to undertake and complete the installation and maintenance of roadside fixtures in a way that meets all of the required outcomes, and; - demonstrates completion of installing and maintaining roadside fixtures that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - selecting and checking for faults, tools and equipment to carry out tasks; - carrying out work to specifications, and; - applying effective installation and maintenance techniques.

RIICRC208D Lay pipes

Locations: Industry, Werribee, Sunshine.

625

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to lay pipes in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of pipe laying; - works effectively with others to undertake and complete the laying of pipes to the required outcomes, and; - demonstrates completion of laying pipes that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures for laying pipes; - selecting and checking for faults, tools and equipment to carry out tasks; - carrying out work to drawings and specifications, and; - applying effective pipe laying techniques.

RIICRC301D Maintain drainage systems

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to maintain drainage systems in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for safe, effective and efficient drainage system maintenance; - works effectively with others to undertake and complete the maintenance of drainage systems that meets all of the required outcomes, and; - demonstrates completion of maintaining drainage systems that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying organisation and site requirements and procedures.

RIICRC302D Place and form concrete kerb, channel and fixtures

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to place and form concrete kerb, channel and fixtures in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of placing and forming concrete kerbs, channels and fixtures; - works effectively with others to undertake and complete the placing and forming of concrete kerbs, channels and fixtures that meets all of the required outcomes, and; - demonstrates completion of place and form concrete kerb, channel and fixtures that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - applying organisation and site requirements and procedures.

RIICRC304D Maintain sealed roads

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to maintain sealed roads in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of sealed road maintenance; - works effectively with others to undertake and complete the maintenance of sealed roads that meets all requirements, and; - demonstrates completion of maintaining sealed roads that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying organisation and site requirements and procedures in maintaining sealed roads.

RIICRC306D Conduct earthworks

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to

conduct earthworks in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of earthworks; - works effectively with others to undertake and complete the conduct of earthworks that meets all requirements including: - preparing for and organising work activities to meet all task requirements; - communicating clearly and concisely with others to receive and clarify work instructions; - using a range of communication techniques and aids to advise others of work activity and exclusion zones, and; - monitoring movements and hazards and identifying and communicating changes to the work environment during the work process; - demonstrates completion of conducting earthworks that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - setting out sub-grade to plan; - forming earthworks by informing plant operators of job requirements; - assessing earthworks in progress; - monitoring thickness and moisture content; - monitoring stabilisation of existing material; - removing surface area protrusions and placing geo-synthetic material; - placing and compacting sub-grade replacement materials correctly; - clearing work area and disposing of, recycling or storing materials; - cleaning, checking, maintaining and storing plant, tools and equipment, and; - carry out specified earthworks to required procedures and standards. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying organisation and site requirements and procedures for: - identifying and managing risks; - identifying, addressing and reporting environmental issues; - setting up work activity; - site isolation, signage, erecting barriers and traffic control; - work health and safety; - managing waste; - selecting and checking for faults, tools and equipment to carry out tasks; - compaction standards and testing requirements; - general plant operations and capabilities; - carrying out work to specifications, and; - applying effective techniques for conducting earthworks.

RIICRC307D Conduct road pavement construction

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to conduct road pavement construction in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of road pavement construction; - identifying, addressing and reporting environmental issues and ground conditions works effectively with others to undertake and complete the road pavement construction that meets all of the required outcomes; - demonstrates completion of conducting road pavement construction that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - construction of a road pavement to drawing and specifications; - setting out sub-base/base to requirements; - placing and spreading materials by determining layer depth for spreading materials; - informing plant operators accordingly; - providing directions to trucks specifying method of dispatching for load placement; - checking moisture content of materials and adjusting uniformly; - assessing road pavement laying to ensure specified heights and the overall dimensions are achieved compacting materials correctly; - clearing work area and disposing of, recycling or storing materials, and; - cleaning, checking, maintaining and storing plant, tools and equipment. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying organisation and site requirements and procedures for: - identifying and managing risks; - identifying, addressing and reporting environmental issues; - setting up work activity; - site isolation, signage, erecting barriers and traffic control; - work health and safety; - managing waste; - selecting and checking for faults, tools and equipment to carry out tasks; - compaction standards and testing requirements; - general plant operations and capabilities; - carrying out work to specifications, and; - applying effective techniques for road pavement construction.

RIICRC315D Use concreting materials and equipment

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to use concreting materials and equipment in Civil Construction. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient use of concrete materials and equipment; - works effectively with others to undertake and complete the use of concrete materials and equipment in a way that meets all required outcomes; - demonstrates completion of the use of concrete materials and equipment that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion; - using relevant tools appropriate to the task and materials; - identifying, selecting and using and maintaining plant and equipment, and; - clearing work area and disposing of, recycling or storing materials cleaning, checking, maintaining and storing plant, tools and equipment. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures.

RIICRM201D Escort mobile road marking operations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to escort mobile road marking operations in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements requirements, procedures and techniques for the safe, effective and efficient escorting of mobile road marking operations; - works effectively with others to undertake and complete the escorting of mobile road marking operations that meets all required outcomes, and; - demonstrates completion of escorting mobile road making operations that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - applying organization and site requirements and procedures; - identifying equipment types, characteristics, technical capabilities and limitations; - conducting calculation of travel speed; - complying with project quality requirements; - identifying and using civil construction terminology; - site isolation and traffic control responsibilities and authorities, and; - project traffic management plans.

RIICRM201E Escort mobile works

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to escort mobile works in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - implements requirements, procedures and techniques for the safe, effective and efficient escorting of mobile works; - works effectively with others to undertake and complete the escorting of mobile works that meets all of the required outcomes, and; - demonstrates completion of escorting mobile works that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - organisation and site requirements and

procedures; - equipment types, characteristics, technical capabilities and limitations; - calculation of travel speed; - project quality requirements; - Civil construction terminology; - site isolation and traffic control responsibilities and authorities, and; - project traffic management plans.

RIICRM204D Prepare surface for road marking

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to prepare surface for road marking in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable documentation, policies and procedures; - works effectively with others to undertake and complete the preparation of surface for road marking that meets all of the required outcomes, and; - demonstrates completion of preparation of surface for road marking that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - applying legislative, organisation and site requirements and procedures; - equipment types, characteristics, technical capabilities and limitations; - complying with project quality requirements; - identifying and using civil construction terminology; - site isolation and traffic control responsibilities and authorities; - interpreting road markings; - identifying and using road marking materials; - applying processes for the calculation of material requirements, application rates and curing times; - applying substrate preparation techniques and processes; - using redundant marking removal materials and primers; - complying with safety data sheets and materials handling methods, and; - being prepared for fire/accident/emergency;.

RIICSG405D Carry out inspections of civil structures

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to carry out inspections of civil structures in Civil Construction. It is appropriate for those working in supervisory or technical roles. No licensing, legislation or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - implements appropriate procedures and techniques for the safe, effective and efficient inspections of civil

structures; - works effectively with others to plan, prepare and conduct inspections of civil structures, and; - demonstrates completion of inspections of civil structures that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - organisational, client and site operational requirements; - relationship between various areas of civil works; - team leadership techniques; - works planning techniques; - civil structures inspection monitoring methods; - engineering survey principles; - materials quality and delivery requirements and procedures; - mentoring techniques; - estimating principles; - civil works construction sequencing; - civil structures inspection and related activities' terminology; - set out requirements and procedures; - works planning techniques, and; - monitoring methods.

RIICSG406D Apply principles of maintenance of civil structures

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to apply principles of maintenance of Civil construction. It is appropriate for those working in supervisory or technical specialists roles. No licensing, legislation or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - implements appropriate procedures and techniques for the safe, effective and efficient supervision of civil structures maintenance tasks including: - calculate quantities for the execution of tasks, and; - interpret civil concrete structures construction materials properties and test results; - works effectively with others to plan, prepare and conduct civil structure maintenance tasks; - provides clear and timely instruction and supervision using a range of communication techniques to those involved in maintenance tasks civil structures; - prepares for and conducts briefings, toolbox and site meeting; - maintains clear and legible written records and the reporting systems including: - preparing and presenting job reports; - preparing and maintaining of log books and diaries; - demonstrates completion of principles of maintenance of civil structures that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - provide recommendations for the improvement of the safe, effective and efficient execution of civil structures maintenance tasks including: - interpreting project contract specification requirements; - applying procedures to problem solve; - making decisions for activity, and; - carrying out continuous improvement in meeting task outcomes. Students will also be expected to demonstrate the following knowledge: - organisational, client and site operational requirements; - relationship between various areas of civil works; - team leadership techniques; - works planning techniques; - carrying out civil structures maintenance monitoring methods; - engineering survey principles; - materials quality and delivery requirements and procedures; - mentoring techniques; - estimating principles; - civil works construction sequencing; - civil structures maintenance and related activities terminology; - set out requirements and procedures; - pavement drainage requirements; - works planning techniques, and; - monitoring methods.

RIICTC301D Install tunnelling constructions services

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to line tunnels in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant, legislation documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of installation of tunnelling constructions services; - works effectively with others to undertake and complete the installation of tunnelling constructions services that meets all of the required outcomes, and; - demonstrates completion of installing tunnelling constructions services that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - applying construction principles; - identifying equipment types, characteristics, technical capabilities and limitations; - complying with project quality requirements; - identifying and using civil construction terminology; - complying with site isolation and traffic control responsibilities and authorities; - complying with safety data sheets and materials handling methods, and; - being prepared for fire/accident/emergency.

RIICTC302D Line tunnel

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to line tunnels in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures - implements the requirements, procedures and techniques for the safe, effective and efficient completion of lining tunnels - works effectively with others to undertake and complete the lining of tunnels that meets all of the required outcomes, and; - demonstrates completion of line tunnelling that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following

knowledge: - identifying materials used in tunnel lining; - applying construction principles; - identifying equipment types, characteristics, technical capabilities and limitations; - complying with project quality requirements; - identifying and using civil construction terminology; - complying with site isolation and traffic control responsibilities and authorities; - complying with safety data sheets and materials handling methods, and; - being prepared for fire/accident/emergency.

RIICTC303D Excavate tunnel by machine

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to excavate tunnel by machine in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of excavate tunnel by machine; - works effectively with others to undertake and complete the tunnel excavation by machine that meets all of the required outcomes, and; - demonstrates completion of excavating tunnels by machines that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - applying construction principles; - identifying equipment types, characteristics, technical capabilities and limitations; - complying with project quality requirements; - identifying and using civil construction terminology; - complying with site isolation and traffic control responsibilities and authorities; - complying with safety data sheets and materials handling methods, and; - being prepared for fire/accident/emergency.

RIICTC304D Muck out tunnel earthworks

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to muck out tunnel earthworks in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - implements the requirements,

procedures and techniques for the safe, effective and efficient completion of mucking out of tunnel earthworks; - works effectively with others to undertake and complete the mucking out of tunnel earthworks that meets all of the required outcomes, and; - demonstrates completion of mucking out tunnel earthworks that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - soil and rock type characteristics; - construction principles; - equipment types, characteristics, technical capabilities and limitations; - project quality requirements; - civil construction terminology; - site isolation and traffic control responsibilities and authorities; - safety data sheets and materials handling methods, and; - prepared for fire/accident/emergency.

RIITC305D Construct portals

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to construct portals in Civil Construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of constructing portals; - works effectively with others to undertake and complete the constructing of portals that meets all of the required outcomes, and; - demonstrates completion of constructing portals that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - basic principles of soil technology for civil works; - types and purposes of portals; - principles of ground support; - types, functions, characteristics and limitations of excavation ground support systems; - types, functions, characteristics and limitations of finishing ground support systems; - ground support systems installation techniques; - construction principles; - equipment types, characteristics, technical capabilities and limitations; - project quality requirements; - civil construction terminology; - site isolation and traffic control responsibilities and authorities; - safety data sheets and materials handling methods, and; - prepared for fire/accident/emergency.

RIICWM401D Supervise civil works

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to supervise civil works in Civil construction. This unit is appropriate for those working in supervisory or technical specialist roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies applicable legislation, documentation, policies and procedures; - working effectively with others to plan, prepare and conduct civil works tasks that meets all required outcomes, and; - demonstrates completion of supervising civil works that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - relevant legislative, organisation and site requirements and procedures; - relationship between various areas of civil works; - civil works plant and equipment capabilities and limitations; - team leadership techniques; - works planning techniques; - civil works monitoring methods; - engineering survey principles; - estimating principles; - civil works construction sequencing; - set out requirements and procedures; - road geometry, and; - drainage requirements.

RIICWM402D Supervise civil works contractors

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to supervise civil works contractors in Civil construction. This unit is appropriate for those working in supervisory roles, or in technical specialist roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - implements appropriate procedures and techniques for the safe, effective and efficient supervision of civil works contractors; - works effectively with others to supervise civil works contractors that meets all the required outcomes, and; - demonstrates completion of supervising civil works construction that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying legislative, organisation and site requirements and procedures; - the relationship between various areas of civil works; - civil works plant and equipment capabilities and limitations; - using team leadership techniques; - works planning techniques; - civil works monitoring methods; - engineering survey principles; - mentoring techniques; - civil works construction sequencing; - set out requirements and procedures; - road geometry, and; - drainage requirements.

RIIENV402D Implement and monitor environmental policies

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to implement and monitor environmental policies in the Resources and Infrastructure Industries. This unit is appropriate for those working in supervisory and technical specialist roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - works effectively with others to undertake and complete effective implementation and monitoring of environmental policies to meet all required outcomes, and; - demonstrates completion of implementing and monitoring environmental policies that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - application of legislation from all levels of government that affects business operation, especially in regard to work health and safety, environmental and energy efficiency issues, equal opportunity, industrial relations and anti-discrimination; - knowledge of environmental and energy efficiency issues, especially in regard to recycling and wastewater treatment, catchments, air, noise, ecosystems, habitat, and waste minimization; - application of environmental and energy efficiency management systems, policies and procedures; - implementing best practice approaches; - carrying out quality assurance systems; - engaging in the supply chain procedures, and; - employing strategies to maximise opportunities and minimize impacts.

RIIGOV401D Apply, monitor and report on compliance systems

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to apply, monitor and report on compliance systems in the Resources and Infrastructure Industries. This unit is appropriate for those working in a supervisory role where compliance needs to be managed.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures, and; - demonstrates completion of applying, monitoring and reporting on compliance systems that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - relevant taxation and related legislative requirements and legal rights and responsibilities related to the business; - bookkeeping and record keeping procedures to meet minimum financial and legal requirements; - industrial law relevant to performance management, recruitment and dismissal of employees; - creation and termination of relevant legal contracts; - duty of care imposed by the Law of Torts, and; - work procedure/instruction writing in compliance with legal requirements and company policy.

RIIHAN301D Operate elevating work platform

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to

operate an elevating work platform in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of operating elevating work platforms; - works effectively with others to undertake and complete the operation of elevating work platforms that meet all required outcomes, and; - demonstrates completion of operating elevating work platforms that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - the appropriate National Certification Standards; - site and equipment safety requirements; - equipment characteristics, technical capabilities and limitations; - elevating work platform operational procedures; - basic geological and survey data related to elevating work platforms, and; - site environmental requirements and constraints related to elevating work platforms.

RIIHAN301E Operate elevating work platform

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to operate an elevating work platform at any height. This unit applies to those working in operational roles. The work required in this unit relates to the National Standard for High Risk Work but this unit does not provide the licence. Licensing, legislative, regulatory or certification requirements that may apply to this unit can vary between states, territories and industry sectors, and must be sourced prior to applying this unit. This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIIHAN308F Load and Unload Plant or equivalent.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning and preparing for operating elevating work platforms; - selecting and using the required plant, tools and equipment to perform work activity; - identifying site requirements for emergencies at heights; - stabilising or positioning elevating work platform; - using manufacturer approved safety devices fitted to the machine; - moving the elevating work platform to and from work site; - inspecting work platform and identifying

faults; - reviewing machine maintenance logbook records, and; - checking, cleaning, maintaining and storing elevating work platform, tools and equipment. Students will also be expected to demonstrate the following knowledge: - National Standard for high risk work; - safe work practices; - operating manuals for elevating work platform; - site personnel and operational safety requirements; - elevating work platform operational procedures; - hazard, incident and emergency identification and implementation of control measures, including the risk of overhead crushes, and distance from power lines, and; - disposal of hazardous materials.

RIIHAN308E Load and unload plant

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to load and unload plant in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of loading and unloading plant; - works effectively with others to undertake and complete the loading and unloading plant that meets all of the required outcomes, and; - demonstrates completion of loading and unloading plant that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - National Standard for high risk work; - site and equipment safety requirements; - understanding of required hand signals; - techniques and processes for preparing plant for transportation; - basic motion and restraint theory related to heavy plant on floats or trailers; - basic centre of gravity and balance theory related to heavy plant on floats or trailers; - types, operation, uses and imitations of load securing equipment; - site isolation and traffic control responsibilities and authorities; - materials safety data sheet; - levelling techniques, and; - job safety analyses/safe work method statement.

RIIHAN308F Load and unload plant

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to load and unload plant. This unit applies to those working in site-based roles. Prior to performing this activity, skills and knowledge should be developed for the individual plant. This can be achieved through completing the equivalent operator unit or being assisted by someone who has this knowledge. Refer to the Implementation Guide for further details. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors, and must be sourced from state jurisdictions prior to applying this unit.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - displaying signage and erecting barriers to isolate work site; - calculating volume and weight of loads; - placing and securing loading and unloading aids; - moving plant onto and off trailer or float, halting at designated position; - securing plant to trailer or float; - slackening securing devices and removing in a safe sequence, and; - stowing loading aids. Students will also be expected to demonstrate the following knowledge: - National Standard for high risk work; - site and equipment safety; - techniques and processes for preparing plant for transportation; - environmental requirements; - work health safety, and; - chain of responsibility for loading and unloading of equipment.

RIIMG301D Maintain site records

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to maintain site records in the Resources and Infrastructure Industries. This unit is appropriate for those working in supervisory roles where risk needs to be managed.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - works effectively with others to undertake and complete the maintaining of site records that meets all of the required outcomes, and; - demonstrates completion of maintaining site records that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - basic records management systems and processes (both manual and computer aided); - following records filing and retrieval systems and processes; - using registered document control systems; - complying with quality control administration; - project quality requirements; - using resources and infrastructure Industry terminology, and; - preparing and carrying out JSEA/JSA/Safe work method statement.

RIIMPO315D Conduct tractor operations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to conduct tractor operations in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of tractor operations; - works effectively with others to undertake and complete tractor operations that meet all of the required outcomes; - demonstrates completion of conducting tractor operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion, and; - fitting and removing at least three (3) attachments selected from the following: a front blade; forklift; slasher; mower; auger; drag broom; power broom; loading platform; rotary hoe; concrete mixer; spraying equipment; disc plough. Students will also be expected to demonstrate the following knowledge: - identifying, interpreting ground conditions; - communicating and performing isolation procedures; - identifying equipment processes, technical capability and limitations; - being prepared for fire/accident/emergency; - identifying signs of operator fatigue and how it should be managed; - interpreting drawings and sketches; - identifying site isolation and traffic control responsibilities and authorities; - using civil construction terminology; - complying with project quality requirements; - applying operational, maintenance and basic diagnostics, and; - completing housekeeping activities.

RIIMPO315E Conduct tractor operations

Locations: Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to operate tractors and use attachments. This unit applies to those working in site-based roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conducting pre-start checks prior to commencing operations and shutdown procedures on completion of operations; - driving and operating the equipment, and adjusting techniques to site conditions; - completing a variety of tractor operations during the two occasions; - fitting, using and removing at least two different attachments (i.e. minimum of one attachment per occasion), which must be certified and approved in line with workplace procedures, and; - parking and securing equipment. Students will also be expected to demonstrate the following knowledge: - isolation requirements; - fires, accidents and emergencies; - work health and safety, including signs of operator fatigue and how it should be managed; - civil construction terminology; - traffic control responsibilities and authorities; - project quality requirements; - apply operational, maintenance and basic diagnostics; - personal protective equipment; - recyclable materials, and; - housekeeping activities.

RIIMPO317E Conduct roller operations

Locations: Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to conduct roller operations in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of roller operations in the civil construction industry; - works effectively with others to undertake and complete roller operations in the civil construction industry that meet all of the required outcomes, and; - demonstrates completion of conducting roller operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - ground conditions; - isolation procedures; - equipment processes, technical capability and limitations; - preparation for fire/accident/emergency; - signs of operator fatigue and how it should be managed; - drawings and sketches; - site isolation and traffic control responsibilities and authorities; - civil construction terminology; - project quality requirements; - basic principles of soil technology and soil compaction for civil works; - basic earthworks calculations; - civil construction activity sequences of road construction, earthworks and drainage; - operational, maintenance and basic diagnostics, and; - housekeeping activities.

RIIMPO317F Conduct roller operations

Locations: Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to operate a roller to compact material. This unit applies to those working in site based roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit. This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIHAN308F Load and Unload Plant or equivalent.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate completion of roller operations that safely, effectively and efficiently follow workplace procedures to carry out work activity on at least 2

occasions, and include: - conducting prestart checks prior to commencing/shutdown procedures; - driving & operating the equipment, and adjusting techniques to suit site conditions; - completion of operations using at least two different material types and include the mandatory tasks of compacting materials to pattern & density, sealing & finishing and adjusting at least two of the following: interchangeable drums, spray bars, scraper bars, wheel/drum brooms, drag brooms and blades; - assisting with loading/unloading skid steer loader from float/trailer, and; - parking & securing of equipment. Students must also: - locate & apply relevant documentation, policies and procedures; - select & wear personal protective equipment required; - carry out refuelling requirements and procedures; - apply safe work practices, identifying & reporting all potential hazards, risks and environmental issues; - apply problem solving & troubleshooting techniques when operating equipment; - monitor & manage equipment performance using indicators and alarms; - identify common equipment faults; - apply operating techniques for levelling and compacting; - select & use the required tools and equipment; - use a range of communication techniques & equipment; - meet written & verbal reporting requirements & procedures associated with equipment operations, and; - organise work activities. Students will also be expected to demonstrate the following knowledge: Key policies and procedures, legislation and established requirements for roller operations, including those relating to: - isolation requirements; - fires, accidents and emergencies; - work health and safety, including signs of operator fatigue and how it should be managed; - site isolation and traffic control responsibilities and authorities; - operational, maintenance and basic diagnostics; - project quality requirements; - chain of responsibility for loading and unloading of equipment; - personal protective equipment; - recyclable materials; - housekeeping activities, and; - machine guidance systems. Key factors affecting work activities described in performance evidence above, including: - equipment processes, technical capability and limitations; - drawings and sketches; - ground conditions, and; - materials characteristics, including density and viscosity. Key features associated with civil construction works, including: - civil construction terminology; - basic principles of material technology and material compaction for civil works; - basic earthworks calculations, and; - civil construction activity sequences of road construction, earthworks and drainage.

RIIMPO318E Conduct civil construction skid steer loader operations

Locations: Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to conduct civil construction skid steer loader operations in civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of civil construction skid steer loader operations; - works effectively with others to undertake and complete civil construction skid steer loader operations that meet all of the required

outcomes; - demonstrates completion of conducting civil construction skid steer loader operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion, and; - selecting, fitting, testing, using and removing a minimum of one (1) of the following attachments: multipurpose bucket; forks; dozer blade; backhoe; auger; chain digger; power broom; profiler; tiller/mixer; rotary hoe; hammer; asphalt cutter/saw; concrete cutter/saw; rake. Students will also be expected to demonstrate the following knowledge: - ground conditions; - isolation procedures; - equipment processes, technical capability and limitations; - preparation for fire/accident/emergency; - signs of operator fatigue and how it should be managed; - interpretation of drawings and sketches; - site isolation and traffic control responsibilities and authorities; - civil construction terminology; - project quality requirements; - basic principles of soil technology and soil compaction for civil works; - basic earthworks calculations; - civil construction activity sequences of road construction, earthworks and drainage; - methods for calculating safe working loads; - operational, maintenance and basic diagnostics; - housekeeping activities, and; - vehicle refuelling requirements and procedures.

RIIMPO318F Conduct civil construction skid steer loader operations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required operate a skid steer loader to load, haul and distribute materials. This unit applies to those working in site based roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit. This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIHAN308F Load and Unload Plant or equivalent.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conducting pre-start checks prior to commencing operations and shutdown procedures on completion of operations; - driving and operating the equipment to site conditions; - completion of operations to specification using at least two different material types (i.e. one different material per occasion); - selecting, fitting, testing, using and removing attachments on at least two occasions (i.e. one attachment per occasion), the attachment must be certified and approved in line with workplace procedures; - assisting with loading and unloading skid steer loader from float/trailer, and; - safely parking and securing equipment. Students will also be expected to demonstrate the following knowledge: - isolation requirements for skid steer loader; - fires, accidents and emergencies; - work health and safety, including signs of operator fatigue and how it should be managed; - traffic control responsibilities and authorities; - project quality requirements; - chain of responsibility for loading and unloading of equipment; - operational, maintenance and basic diagnostics; - personal protective equipment; - recyclable materials, and; - housekeeping activities. .

RIIMPO319D Conduct backhoe/loader operations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to conduct backhoe/loader operations in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of backhoe/loader operations; - works effectively with others to undertake and complete backhoe/loader operations that meet all of the required outcomes, and; - demonstrates completion of conducting backhoe/loader operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - identifying, interpreting ground conditions; - communicating and performing isolation procedures; - identifying equipment processes, technical capability and limitations; - being prepared for fire/accident/emergency; - identifying signs of operator fatigue and how it should be managed; - interpreting drawings and sketches; - identifying site isolation and traffic control responsibilities and authorities; - using civil construction terminology; - complying with project quality requirements; - applying basic principles of soil technology and soil compaction for civil works; - using basic earthworks calculations; - using civil construction activity sequences of road construction, earthworks and drainage; - applying levelling techniques; - using methods for calculating safe working loads; - applying operational, maintenance and basic diagnostics, and; - completing housekeeping activities.

RIIMPO319E Conduct backhoe/loader operations

Locations: Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to operate a backhoe/loader to load, distribute and place materials. This unit applies to those working in site based roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations; - driving and operating the equipment, and adjusting techniques to suit site conditions; - completion of operations to specification using at least two different material types (i.e. one different material type per occasion); - selecting, fitting,

testing, using and removing at least two attachments (i.e. one attachment per occasion), which must be certified and approved in line with workplace procedures, and; - parking and securing of equipment. Students will also be expected to demonstrate the following knowledge: - isolation requirements; - fires, accidents and emergencies; - work health and safety, including signs of operator fatigue and how it should be managed; - site isolation and traffic control responsibilities and authorities; - project quality requirements; - operational, maintenance and basic diagnostics; - personal protective equipment; - recyclable materials, and; - housekeeping activities.

RIIMPO320E Conduct civil construction excavator operations

Locations: Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to conduct civil construction excavator operations in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of excavator operations; - works effectively with others to undertake and complete excavator operations that meet all of the required outcomes; - using a range of communications techniques and equipment to convey information to others; - maintaining written and verbal reporting requirements and procedures; - organising work activities to meet all task requirements; - communicating clearly and concisely with others to receive and clarify work instructions; - demonstrates completion of conducting civil construction excavator operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion; - completing operations to specification using a variety of material types and activities, and; - fitting and removal of a variety of attachments: tilt bucket; buckets; lifting device; vibrating compaction wheel; ripper/tyne; compaction plate; compaction wheel; rock breaker, and; auger. Students will also be expected to demonstrate the following knowledge: - ground conditions; - isolation procedures; - equipment processes, technical capability and limitations; - preparation for fire/accident/emergency; - signs of operator fatigue and how it should be managed; - drawings and sketches; - site isolation and traffic control responsibilities and authorities; - civil construction terminology; - project quality requirements; - basic principles of soil technology and soil compaction for civil works; - basic earthworks calculations; - Civil construction activity sequences of road construction, earthworks and drainage; - vehicle refuelling requirements and procedures; - using methods for calculating safe working loads; - operational, maintenance and basic diagnostics, and; - housekeeping activities.

RIIMPO320F Conduct civil construction excavator operations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to operate excavator

operations to lift carry and place materials. This unit applies to those working in site based roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit. This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIHAN308F Load and Unload Plant or equivalent.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conducting pre-start checks prior to commencing operations and shutdown procedures on completion of operations; - driving and operating the equipment, and adjusting techniques to site conditions; - completing operations to specification using at least two different material types and activities; - selecting, fitting, testing, using and removing at least two attachments, the attachment must be certified and approved in line with workplace procedures; - assisting with loading and unloading skid steer loader from float/trailer, and; - parking and securing equipment. Students will also be expected to demonstrate the following knowledge: - isolation requirements; - fires, accidents and emergencies; - work health and safety, including signs of operator fatigue and how it should be managed; - site isolation and traffic control responsibilities and authorities; - project quality requirements; - chain of responsibility for loading and unloading of equipment; - operational, maintenance and basic diagnostics; - personal protective equipment; - recyclable materials, and; - housekeeping activities.

RIIMPO321E Conduct civil construction wheeled front end loader operations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description:This unit describes the skills and knowledge required to conduct civil construction wheeled front end loader operations. This unit is appropriate for those working in operational roles. Where equipment being assessed requires the fitting and removal of attachments to be demonstrated an integrated tool carrier unit should be used. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of civil construction wheeled front end loader operations; - works effectively with others to undertake and complete civil construction wheeled front end loader operations that meet all of the required outcomes, and; - demonstrates completion of civil construction wheeled

front end loader operations that safely, effectively and efficiently meets all of the required outcomes on at least one (1) occasion. Students will also be expected to demonstrate the following knowledge: - ground conditions; - isolation procedures; - equipment processes, technical capability and limitations; - preparation for fire/accident/emergency; - signs of operator fatigue and how it should be managed; - drawings and sketches; - site isolation and traffic control responsibilities and authorities; - civil construction terminology; - project quality requirements; - basic principles of soil technology and soil compaction for civil works; - basic earthworks calculations; - civil construction activity sequences of road construction, earthworks and drainage; - vehicle refuelling requirements and procedures; - methods for calculating safe working loads; - operational, maintenance and basic diagnostics, and; - housekeeping activities.

RIIMPO321F Conduct civil construction wheeled front end loader operations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description:This unit describes the skills and knowledge required to conduct wheeled front end loader operations. This unit applies to those working in site-based roles. Where equipment being assessed requires the fitting and removal of attachments to be demonstrated an integrated tool carrier unit should be used. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit. This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIHAN308F Load and Unload Plant or equivalent.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations; - driving and operating the equipment, and adjusting techniques to suit site conditions; - completion of operations to specification using at least two different material types; - lifting and carrying materials; - site clean-up on; - assisting with loading and unloading skid steer loader from float/trailer, and; - parking and securing equipment. Students will also be expected to demonstrate the following knowledge: - isolation requirements; - fires, accidents and emergencies; - work health and safety, including signs of operator fatigue and how it should be managed; - site isolation and traffic control responsibilities and authorities; - project quality requirements; - chain of responsibility for loading and unloading of equipment; - operational, maintenance and basic diagnostics; - personal protective equipment; - recyclable materials, and; - housekeeping activities.

RIIMPO323D Conduct civil construction dozer operations

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description:This unit describes a participant's skills and knowledge required to conduct civil construction dozer operations in Civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states,

territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures;- implements the requirements, procedures and techniques for the safe, effective and efficient completion of conduct dozer operations;- works effectively with others to undertake and complete the conduct dozer operations that meet all of the required outcomes, and;- demonstrates completion of civil construction dozer operations that safely, effectively and efficiently meets all of the required outcomes. Students will also be expected to demonstrate the following knowledge: - identifying, interpreting ground conditions;- communicating and performing isolation procedures;- identifying equipment processes, technical capability and limitations;- being prepared for fire/accident/emergency;- identifying signs of operator fatigue and how it should be managed;- interpreting drawings and sketches;- identifying site isolation and traffic control responsibilities and authorities;- using civil construction terminology;- complying with project quality requirements;- applying basic principles of soil technology and soil compaction for civil works;- using basic earthworks calculations;- using civil construction activity sequences of road construction, earthworks and drainage;- using methods for calculating safe working loads;- applying operational, maintenance and basic diagnostics, and;- completing housekeeping activities.

RIIMPO323E Conduct civil construction dozer operations

Locations:Industry, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to conduct dozer operations. This unit applies to those working in site based roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit. This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIIHAN308F Load and Unload Plant or equivalent.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations;- driving and operating the equipment, and adjusting techniques to suit site conditions;- completion of operations to specification in at least two different material types on at least three occasions;- selecting, fitting, testing, using and removing a minimum of three attachments, which must be certified and approved in

line with workplace procedures;- assisting with loading and unloading skid steer loader from float/trailer, and;- parking and securing of equipment. Students will also be expected to demonstrate the following knowledge: - isolation requirements;- fires, accidents and emergencies;- work health and safety, including signs of operator fatigue and how it should be managed;- site isolation and traffic control responsibilities and authorities;- project quality requirements;- chain of responsibility for loading and unloading of equipment;- operational, maintenance and basic diagnostics;- personal protective equipment;- recyclable materials;- housekeeping activities, and;- machine guidance systems.

RIIMPO324E Conduct civil construction grader operations

Locations:Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes a participant's skills and knowledge required to conduct civil construction grader operations in civil construction. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures;- implements the requirements, procedures and techniques for the safe, effective and efficient completion of grader operations;- works effectively with others to undertake and complete grader operations that meet all of the required outcomes, and;- demonstrates completion of civil construction grader operations that safely, effectively and efficiently meet all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - identifying, interpreting ground conditions;- communicating and performing isolation procedures;- identifying equipment processes, technical capability and limitations;- being prepared for fire/accident/emergency;- identifying signs of operator fatigue and how it should be managed;- interpreting drawings and sketches;- identifying site isolation and traffic control responsibilities and authorities;- using civil construction terminology;- complying with project quality requirements;- applying basic principles of soil technology and soil compaction for civil works;- using basic earthworks calculations;- using civil construction activity sequences of road construction, earthworks and drainage;- using methods for calculating safe working loads;- applying operational, maintenance and basic diagnostics;- completing housekeeping activities, and;- use machine guidance system and laser levelling equipment.

RIIMPO324F Conduct civil construction grader operations

Locations:Industry, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to conduct grader operations. This unit applies to those working in site based roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit. This unit alone does not provide sufficient skill

to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIHAN308F Load and Unload Plant or equivalent.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conducting pre-start checks prior to commencing operations and shutdown procedures on completion of operations; - driving and operating the equipment to site conditions; - completion of operations to specification using at least two different material types; - selecting, fitting, testing, using and removing at least two attachments, the attachment must be certified and approved in line with workplace procedures; - assisting with loading and unloading skid steer loader from float/trailer, and; - parking and securing of equipment. Students will also be expected to demonstrate the following knowledge: - isolation requirements; - fires, accidents and emergencies; - work health and safety, including signs of operator fatigue and how it should be managed; - site isolation and traffic control responsibilities and authorities; - project quality requirements; - chain of responsibility for loading and unloading of equipment; - operational, maintenance and basic diagnostics; - personal protective equipment; - recyclable materials; - housekeeping activities, and; - machine guidance systems and laser levelling equipment.

RIIMPO402D Apply the principles of earthworks construction

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description:This unit develops a participant's skills and knowledge required to apply the principles of earthworks construction in Civil construction. This unit is appropriate for those working in supervisory or technical specialist roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates & applies relevant legislation/documentation/policies/procedures; - implements appropriate procedures/techniques for the safe, effective/efficient application of principles of civil earthworks construction including: - developing & implementing the job plan; - interpreting project site soil/rock & geological data; - identifying & addressing drainage issues; - implementing performance monitoring skills; - applying set out requirements/procedure; - identifying training requirements; - application of required tools/devices; - contributing to the continual improvement of systems, and; - providing team leadership; - works effectively with others to plan/prepare/apply the principles of civil earthworks construction including: - using a range of communications techniques & equipment to convey information to others; -

maintaining clear & legible written records & the reporting systems; - managing workplace & relationships; - managing client relationships, and; - preparing for & conducting briefings, toolbox & site meetings; - demonstrates completion of applying the principles of earthwork construction that safely, effectively and efficiently meets all of the required outcomes on more than one occasion including successful completion of earthworks construction project/tasks: - issuing & clarifying job plan; - setting out & allocating tasks; - monitoring task performance & implementing adjustments, and; - identifying & recommending changes to improve safety, efficiency/effectiveness. Students will also be expected to demonstrate the following knowledge: - managing civil construction plant and equipment capabilities and application; - monitoring of plant, equipment and tools maintenance; - execution of civil construction tasks; - identifying and allocating task resource requirements; - ensuring work plans are understood and implemented effectively; - implementing work monitoring and continual improvement methods; - using engineering survey principles; - applying estimating principles; - implementing civil works construction sequencing; - using earthworks and related activities terminology; - managing set out requirements and procedures; - identifying ground surface treatment requirements and procedures e.g. proof rolling; - interpreting project site hydrological data; - interpreting project engineering survey information; - interpret project plans and drawings; - interpreting project specifications; - establishing construction offsets; - implementing inspection system; - calculating quantities for the execution of tasks, including: volumes, grades, percentages, areas and resource consumption and supply rates, and; - interpreting earthworks construction materials properties and test results, including: compaction test results, soil density/moisture relationship, plasticity index and particle size distribution.

RIQUA401D Apply a quality management system on site

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description:This unit describes a participant's skills and knowledge required to apply a quality management system on site in the Resources and Infrastructure Industry. This unit is appropriate for those working in supervisory and technical specialist roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - works effectively with others to undertake and complete effective application of a quality management system to meet all required outcomes, and; - demonstrates completion of the application of a quality management systems that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - key aspects of the organisation's quality system; - quality management plan procedures and requirements; - human resource management principles; - continuous quality

improvement processes, and; - quality management plan monitoring and review procedures and processes.

RIIRA1402D Apply and monitor site plant and resource management plan

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to apply and monitor site plant and resource management plan in Coal and Metalliferous mining and Extractive. It is appropriate for those working in supervisory or technical specialist roles. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - implements appropriate procedures and techniques for the safe, effective and efficient applying and monitoring of site plant and resource management plans including: - providing team leadership; - identify training needs and implementing training plans; - selection of operational techniques; - selection and assignment of plant and equipment; - work planning, development and administration; - works effectively with others to plan, prepare, apply and monitor site plant and resource management plans including: - providing clear and timely instruction and supervision using a range of communication techniques to those involved; - preparing for and conducting briefings, toolbox and site meetings; - maintaining clear and legible written records and the reporting systems; - consulting with stakeholders; - demonstrates completion of applying and monitoring of site plant and resource management plans that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - identifying and recommending improvements to the plans; - implementing adjustments to work programs to achieve planned outcomes; - implementation and successful development of action plans, and; - contributing to audit and review process. Students will also be expected to demonstrate the following knowledge: - team leadership techniques; - operational techniques required for execution of the plan; - plant and equipment capabilities and limitations, and; - work monitoring methods.

RIIRIS201D Conduct local risk control

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to conduct local risk control in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - locate and apply relevant documentation, policies and procedures; - works effectively with others to undertake and complete conducting of local risk control, and; - demonstrates completion of conducting local risk control that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying the organisation and site requirements and procedures; - identifying and assessing hazards, risks, acceptability of risks and controls, and; - reading, preparing and using worksite safety systems information.

RIIRIS202D Respond to site based spills

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to respond to minor site based spills for both land and water based environments in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtains and applies relevant documentation, policies and procedures; - works effectively with others to undertake and complete responding to site based spills that meets all of the required outcomes, and; - demonstrates completion of the application of the site risk management system that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - relevant site procedures for minor, medium and major spills; - worksite communication, reporting and recording procedures identifying the characteristics of a spill; - spill types; - spill kit usage; - safety data sheet information, and; - potential risk of site based storage.

RIIRIS301D Apply risk management processes

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to apply risk management processes in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational or supervisory roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtains and applies relevant documentation, policies and procedures; - implements the requirements, procedures

and techniques for the safe, effective and efficient completion of risk management processes; - works effectively with others to undertake and complete the application of risk management processes that meets all required outcomes, and; - demonstrates completion of the application of risk management processes that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - WHS legislation and regulations; - appropriate resources and infrastructure context and language; - topics or subject areas which are target for assessment and treatment; - site risk management systems and their application; - conventions and requirements for written communications including report writing, and; - problem solving techniques.

RIIRS401D Apply site risk management system

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to apply the site risk management system in the Resources and Infrastructure Industries. This unit is appropriate for those working in supervisory roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtain and applies relevant legislation, documentation, policies and procedures, and; - demonstrates completion of the application of the site risk management system that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - key component of the sites risk management system; - responsibilities for applying site risk management system; - work instructions and processes; - using communication skills, including questioning and active listening skills with supervisors and other employees, and; - writing reports to communicate procedural activity, breach or inadequacies to procedure and review process.

RIIRM203D Work as a safety observer/spotter

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to work safely as a safety observer/spotter in the Civil construction industry. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation, documentation, policies and procedures; - implements the requirements,

procedures and techniques for the safe, effective and efficient completion of working as a safety observer/spotter; - works effectively with others to undertake and complete the operation of working as a safety observer/spotter that meets all of the required outcomes, and; - demonstrates completion of work as a safety observer/spotter that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - legislative, organisation and site requirements and procedures; - verbal and written communication requirements; - Australian and other relevant standards; - site and equipment safety requirements; - mobile traffic control requirements; - risk assessment and management; - vehicle movements; - plant shadows/blind spots; - underground service and overhead services; - statutory compliance; - traffic management plans/diagrams; - operational and maintenance procedures; - emergency procedures; - environmental protection; - communication device operations; - equipment types, characteristics, technical capabilities and limitations, and; - basic diagnostic procedures.

RIISAM201D Handle resources and infrastructure materials and safely dispose of nontoxic materials

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to handle resources and infrastructure materials and safely dispose of nontoxic materials in the Resources and Infrastructure Industry. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of handling resources and infrastructure materials and safely disposing of nontoxic material, and; - demonstrates completion of handling resources and infrastructure materials and safely disposing of nontoxic materials that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - identifying the most commonly encountered waste materials on worksites; - applying systems for packing and securing materials for movement; - applying systems and equipment or materials for the short term protection of stacked/stored materials; - applying methods of dust suppression; - identify site isolation and traffic control responsibilities and authorities, and; - identify and apply Industry and worksite terminology.

RIISAM203D Use hand and power tools

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to use hand and power tools in the Resources and Infrastructure Industry. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant legislation documentation, policies and procedures, and; - demonstrates completion of using hand and power tools that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - identifying hand tools and their application; - identifying portable power tools and their application; - identifying energy/power sources; - identifying and applying materials associated with use; - identifying equipment types, characteristics, technical capabilities and limitations; - interpreting safety data sheets (SDS) and materials handling methods, and; - interpreting and applying Industry and worksite terminology.

RIISAM204D Operate small plant and equipment

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to operate small plant and equipment in the Resources and Infrastructure Industry. This unit is appropriate for those working in operational roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures, and; - demonstrates completion of the operation of small plant and equipment that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - identifying small plant and equipment types, characteristics, technical capabilities and limitations; - identifying basic soil types and characteristics; - applying small plant and equipment operating techniques related to essential tasks; - interpreting and applying safety data sheets (SDS) and materials handling methods, and; - interpreting and applying industry and site specific terminology.

RIIUND310D Apply shotcrete underground

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to apply shotcrete underground in Civil Construction and Metalliferous Mining. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures, and; - demonstrates completion of the application of shotcrete underground that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - dewatering procedures and characteristics; - environmental procedures; - equipment safety requirements; - ground control characteristics and applications; - explosive identification, and; - shot-creting techniques.

RIIWS201D Work safely and follow WHS policies and procedures

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to work safely and follow WHS policies and procedures in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures, and; - demonstrates completion of working safely and following WHS policies and procedures that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - determining equipment safety requirements; - identifying personal protective equipment; - follows hazardous substances procedures and handling techniques; - location of safety data sheets (SDS) information and their application; - adhering to isolation procedures; - identifying lifting techniques, including for both manual and automated lifting; - locating and complying with WHS procedures; - application of site safety requirements and procedures; - participating in procedures for workplace management of others (e.g. consultation, safety representatives, committees, dispute resolution); - determining potential of biological effects (e.g. circadian rhythms, sleep, alertness, fatigue, stress, effects of heat stress and hypothermia); - details of site drug and alcohol policy, and; - locating and using emergency equipment.

RIIWS202D Enter and work in confined spaces

Locations: Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit describes a participant's skills and knowledge required to enter and work in confined spaces in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles undertaking work in confined spaces. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit. Note: The terms

Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - demonstrates completion of entering and working in confined spaces that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion; - obtain appropriate entry permit and instructions for performing work in confined space; - interpreting and applying safe work method statements; - apply tagging and lock out; - selecting, wearing and caring for personal protective equipment applicable to all tasks and environment identified; - entering the confined space; - using atmospheric monitoring devices prior to entering the confined space; - working in the confined space; - using atmospheric monitoring devices during confined space activity; - applying safe materials handling methods; - exiting the confined space, and; - remove tagging and lock out. Students will also be expected to demonstrate the following knowledge: - identifying areas that constitute confined spaces; - complying with site and equipment safety requirements; - complying with the entry and exit procedures, risks and regulations; - types of air contaminants and toxic gases; - identifying the limitations of breathing apparatus; - identifying equipment types, characteristics, technical capabilities and limitations; - complying with site isolation and site control responsibilities and authorities; - locations of safety data sheets (SDS) information and application, and; - using confined space and Industry terminology.

RIIWS204D Work safely at heights

Locations:Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes a participant's skills and knowledge required to work safely at heights in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles where they are required to perform work at heights. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures, and; - demonstrates completion of working safely at heights that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion. Students will also be expected to

demonstrate the following knowledge: - names and functions of equipment, components and materials; - complying with equipment manufacturer's instructions and specifications; - safe shifting and handling of tools and materials; - adhering to statutory and regulatory authority requirements; - the nature of work undertaken at heights; - complying with heights safety systems; - the processes of providing for safe working practices; - using safety equipment/systems and considerations to facilitate working safely at heights, and; - complying with safe work methods.

RIIWS205D Control traffic with stop-slow bat

Locations:Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes a participant's skills and knowledge required to control traffic with stop-slow bat in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures, and; - demonstrates completion of controlling traffic with a stop-slow bat that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - site and equipment safety requirements; - traffic controlling requirements and procedures; - complying with traffic management plans; - erecting traffic control signage and barricades; - communication device operations; - determine equipment types, characteristics, technical capabilities and limitations; - operational and maintenance procedures for equipment; - detailing site isolation and traffic control responsibilities and authorities; - describing the effects of travel speed and vehicle mass on stopping distances, and; - interpreting and implementing safe work method statement.

RIIWS302D Implement traffic management plan

Locations:Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit develops a participant's skills and knowledge required to implement a traffic management plan in Civil construction. This unit is appropriate for those working in supervisory roles. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - works effectively with others to undertake and complete the traffic management plans that meet all required outcomes, and; - demonstrates completion of implementing traffic management plans that safely, effectively and efficiently meets all required outcomes on more than one (1) occasion. Students will also be expected to demonstrate the following knowledge: - accessing, interpreting and applying legislative, organization and site requirements and procedures; - identifying equipment types, characteristics, technical capabilities and limitations; - identifying site isolation and traffic control responsibilities and authorities; - identifying quality requirements, and; - applying civil construction terminology.

RIIWMG203D Drain and dewater civil construction site

Locations: Industry, Werribee, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit develops a participant's skills and knowledge required to drain and dewater civil construction sites in Civil construction. This unit is appropriate for those working in operational roles. No licensing, legislation or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locates and applies relevant documentation, policies and procedures; - implements the requirements, procedures and techniques for the safe, effective and efficient completion of the draining and dewatering of a civil construction site: - selecting and using the required tools and equipment; - interpreting and applying work instructions; - draining surface water; - constructing sumps and wells and removing water; - works effectively with others to undertake and complete the draining and dewatering of civil construction sites that meets all of the required outcomes; - using a range of communication techniques to convey information to others; - maintaining written and verbal reporting requirements and procedures; - demonstrates completion of draining and dewatering civil construction sites that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including: - dewatering a trench or pit using at least one type of pump; - establishing sedimentation controls; - constructing a sump; - installing surface or submersible pumps; - pumping and dispersing water, and; - draining surface water from a site using surface drains. Students will also be expected to demonstrate the following knowledge: - identifying and applying operational, maintenance and basic diagnostic procedures; - identifying and complying with construction principles; - interpreting engineering drawings; - identifying equipment types, characteristics, technical capabilities and limitations; - identifying and complying with site isolation and traffic control responsibilities, and; - using and interpreting civil construction terminology.

SFS301 Skills for further study (senior)

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: The purpose of this unit is to enable students to develop knowledge and skills for further study that will prepare and assist them to pursue diverse and higher level education and training pathways in a range of settings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

SHBBBOS001 Apply cosmetic tanning products

Locations: Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to select and apply cosmetic tanning products. It requires the ability to consult with clients about tanning products and colour choice, select products and equipment to prepare the skin and apply tanning products using a spray tanning gun. The application of cosmetic tanning products can be an individual service, or form part of a series of services. It applies to beauticians and beauty therapists who work in beauty salons and spas. In this environment they make routine service decisions within known procedures but work under limited supervision and guidance from others.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust service plan to provide safe and appropriate spray tanning services for at least five clients of differing height, weight, age and cosmetic tanning preference; - maintain client records for the above clients detailing: aftercare advice; adverse reactions; contraindications; follow up advice; service outcomes; procedure followed; products used, and; spray gun setting; - provide spray tanning services for each client; - clean, maintain, and reassemble spray tanning equipment; - recognise skin reactions to patch test; - present self, according to organisational policy, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to applying cosmetic tanning products; - organisational policies and procedures relevant to applying cosmetic tanning products; - legal and insurance liabilities and responsibilities regarding tanning services; - scope of practice in regard to: when to refer clients to other practitioners, and; role of complementary therapist and medical practitioner; - ingredients of tanning products, exfoliators and moisturisers and their effects on skin; - advantages and disadvantages of types of tanning products available; - product selection for different skin colours and type; - use and effect of tanning enhancers; - how and when to use tanning correctors; - cleaning, maintenance and reassembling of cosmetic tanning equipment and accessories; - typical problems that occur with equipment and how to fix according to manufacturer instructions; - risks associated with the use of pressurised cosmetic tanning equipment; - importance of using equipment with a pressure gauge; - age at which a person is classed as a minor and why minors can only be treated with informed parent or guardian consent; - contraindications that prevent or restrict service or may require referral to a medical

professional and their relationship to cosmetic tanning treatment; - adverse reaction appearance and management in relation to cosmetic tanning services; - pigmentation disorders that affect cosmetic tanning application; - importance of pre and post-service advice; - aftercare advice, products and services in maintaining tanning service; - sustainable operating procedures for the conservation of product, water and power, and; - environmentally sound disposal methods for cosmetic tanning service waste.

SHBBBOS002 Provide body massages

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to provide full body relaxation massages. It requires the ability to establish priorities with clients, synthesise knowledge of anatomy and physiology and lifestyle factors to design body massage routines, and provide advice on body products and protection from environmental damage. Body massage can be a single treatment or form part of a series of treatments.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - provide six appropriate and safe body massages to clients of differing height, weight and age suitable for the established client treatment plan; - explain to client effects and benefits of body massage on anatomy and physiology of the following body systems: articular and skeletal; circulatory and lymphatic; endocrine; integumentary; muscular and nervous; respiratory; - provide massage to treat each of the following areas as appropriate to the above clients: abdomen; arms; back; décolletage; feet; hands; legs; neck; - design and provide treatment routines that demonstrate appropriate selection, application and combination of the following massage movements: effleurage; friction; petrissage; tapotement; vibration; - gentle, passive movement and appropriate massage techniques; - design, record and update treatment plans using correct anatomy and physiology terminology; - design a series of four progressive treatments for three of the clients to address ongoing needs of each client; - identify major bones and superficial muscles by light palpation; - recognise contraindications, skin diseases and disorders relevant to body massage; - present self, according to organisational policy; - comply with health and hygiene regulations and requirements, and; - clean, prepare and maintain treatment area according to organisational policy. Students will also be expected to demonstrate the following knowledge: - state, territory, and local health and hygiene regulations and requirements relevant to providing body massages; - organisational policies and procedures relevant to providing body massages; - legal and insurance liabilities and responsibilities regarding treatments; - scope of practice; - effects, benefits and application of each type of massage movement and technique; - effects and benefits of massage on body systems; - anatomical position terminology in relation to body massage; - interdependence of body systems and their relationship to massage; - classification of joints and types and ranges of motion; - position of major bones; - position and action of superficial muscles in relation to body massage; - common disorders of the following body systems and their relationship to body massage; - gross skin anatomy and physiology and differences in skin depending on body

location; - skin as a sense organ; - contraindications that prevent treatment or require clearance from a medical professional to proceed and relationship to body massage; - contraindications that restrict treatment and appropriate modifications to massage; - appearance and limitations of body massage in skin disorders and diseases; - physiology of adverse reactions to body massage and appropriate remedial action; - lifestyle factors and benefits of lifestyle changes; - sustainable operating procedures for the conservation of product, water and power, and; - effects and benefits of aftercare advice, products and treatments relevant to body massages.

SHBBBOS003 Provide body treatments

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to provide body treatments incorporating body massage techniques, electrical currents, body scrubs and wraps. It requires the ability to establish priorities with clients, synthesise knowledge of anatomy, physiology and skin, and operate specialised equipment with allied cosmetic products to design and provide body treatments addressing relaxation requirements. Body treatments can be a single treatment or form part of a series of treatments.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust treatment plan to provide six safe and appropriate body treatments to clients of differing age and weight; - recognise contraindications, skin diseases and disorders relevant to each device listed in Assessment Conditions and to allied body products; - provide treatments to each of the following areas as appropriate to the above clients: abdomen; arms; back; décolletage; legs; neck; - design a sequence of four treatments and product recommendations for three of the above clients to address priorities of each client; - demonstrate safe and appropriate application of each of the following: direct current (galvanic) machine to infuse products into the epidermis; high frequency machine; steamer or infra-red or hydrotherapy or G5 mechanical massager to stimulate circulation; - design, record and update treatment plans and records for each of the above clients; - treat clients effectively and minimise skin reactions; - identify risk situations that cause short or overboded circuits and take remedial action; - present self, according to organisational policy; - comply with health and hygiene regulations and requirements, and; - clean, prepare and maintain treatment area according to organisational policy. Students will also be expected to demonstrate the following knowledge: - state or territory and local health, hygiene and skin penetration regulations and requirements relevant to providing body treatments; - organisational policies and procedures relevant to providing body treatments; - manufacturer instructions for the use of electrical equipment in body treatments; - legal and insurance liabilities and responsibilities regarding treatments; - scope of practice; - factors likely to affect suitability of body treatments for client; - effects and benefits of professional body ranges and their relationship to each device or treatment step; - effects and benefits on the physical structure of the skin and on body systems; - anatomical position terminology in relation to body treatments; - structural layers of the human body; - anatomy and physiology of cells, tissues, organs; - interdependence of body systems and their relationship to a healthy body

and skin; - position of major bones; - position and action of superficial muscles; - postural and skeletal abnormalities; - common disorders of body systems and their relationship to body treatments; - normal and abnormal function of skin glands and skin gland secretions; - Fitzpatrick skin types; - skin as a sense organ and relationship to each device used; - the role of endocrine glands and hormones as they relate to the sebaceous and sweat glands; - function, formation and behaviour of major skin chemicals; - normal skin responses to irritation and trauma; - ingredients in treatment products, effects and benefits to skin, potential adverse effects and those contraindicated for specific clients; - chemical formulations of body treatment products; - contraindications to specific formulations and ingredients identified in product information, and; - principles and properties of electrical currents and the technology used in body treatments.

SHBBBOS004 Provide aromatherapy massages

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to provide aromatherapy massages using blended aromatic plant oils. It requires the ability to establish priorities with clients, and synthesise knowledge of anatomy and physiology, skin science and lifestyle factors to select aromatic oils and massage techniques to meet client needs. Aromatherapy massage can be a single treatment, or form part of a series of treatments. This unit applies to beauty and spa therapists who work in beauty salons, massage clinics and spas. In this environment they work as part of a team but make independent treatment decisions. They have knowledge across a range of aromatherapy massage techniques and blended oils.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - provide six safe and appropriate aromatherapy massages to different clients that meet one or more of the following established client objectives; - explain to clients effects and benefits of blended oils listed in knowledge evidence and recommended aromatherapy treatment on body systems; - design, record and update treatment plans and records for each of the above clients using correct anatomical terminology; - design and provide treatment routines that demonstrate appropriate selection, application and combination of the following aromatherapy massage movements: effleurage; friction; petrissage; - provide aromatherapy massage treatments that demonstrate appropriate variation in rhythm and repetition of movements; - design a series of four treatments for three of the above clients to address ongoing needs of each client; - present self, according to organisational policy; - comply with health and hygiene regulations and requirements, and; - clean, prepare and maintain treatment areas according to organisational policy. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to aromatherapy massages; - organisational policies and procedures relevant to aromatherapy massage; - legal and insurance liabilities and responsibilities regarding treatments; - scope of practice; - factors likely to affect suitability of treatments for client needs; - effects and benefits of: each type of massage movement and technique; blended oils, and; massage on body systems; - effects of aromatherapy treatments on body systems; - anatomical position

terminology in relation to aromatherapy massage; - common disorders of body systems and their relationship to aromatherapy treatments; - anatomy and physiology of skin structures as it relates to aromatherapy massage; - care, handling and storage of oils; - ingredients in mixed oils and their effect on skin and possible contraindications in combining oils with other products; - contraindications that prevent treatment or require clearance from a medical professional to proceed; - contraindications that restrict treatment and appropriate modifications to treatment and use of oils; - appearance and limitations of aromatherapy treatments in skin disorders and diseases, and; - reactions to aromatherapy massage and appropriate remedial action.

SHBBCCS001 Advise on beauty products and services

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to advise clients on a range of professional beauty products and services. It requires the ability to investigate products and services, interpret information, identify client beauty needs and explain available beauty products and services. This unit applies to workers in nail, make-up, and beauty salons. In these environments, they work in a team but have responsibility for maintaining their own product and treatment knowledge.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - present information on a new product or service demonstrating knowledge of: features and benefits; availability; typical clients that will benefit, and; - advise and sell six products and services to clients with differing product and service requirements demonstrating: ability to identify client needs and constraints; selection of suitable products or treatments; presentation of features and benefits; demonstration of products; responses to client questions. Students will also be expected to demonstrate the following knowledge: - legal requirements relevant to advice and sale of beauty products and services; - organisational policies and procedures relevant to the sale of products and services; - effects and benefits of professional product ranges for: nail care; make-up; skin care; - effects, benefits and contraindications to the following treatments: manicure and pedicure; facial services; body services; hair reduction services; - factors that affect suitability of organisational services and products to client needs, and; - specialised product knowledge.

SHBBCCS002 Prepare personalised aromatic plant oil blends for beauty treatments

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to select and blend aromatic plant oils for use in face and body treatments to meet specific client needs. It requires the ability to establish priorities with the client, synthesise knowledge of aromatic plant oil chemistry and the therapeutic profiles of aromatic oils, and to select and blend aromatic plant oils. The unit applies to beauty and spa therapists who work in beauty salons, massage clinics and spas. In this environment they work as part of a team but make independent treatment

decisions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust four treatment plans to provide safe, appropriate and personalised treatments to different clients using aromatic plant oil blends; - design a second treatment aromatic oil blend for three of these clients to address ongoing client needs; - design, record and update treatment plans and records; - explain the effects and benefits of aromatic plant oils; - prepare profiles and plant information for selected aromatic plant oils; - prepare and apply two aromatic plant oil preparations chosen for two treatments; - comply with health and hygiene regulations and requirements, and; - clean, prepare and maintain treatment area according to organisational policy. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to preparing personalised aromatic plant oil blends for beauty treatments; - federal regulations of cosmetics and preparations; - organisational policies and procedures; - legal and insurance liabilities and responsibilities regarding aromatic oils and preparation of blends; - scope of practice; - factors likely to affect suitability of treatments for client needs; - effects and benefits of aromatic plant oil application methods; - properties, profiles, plant family, botanical and common names, effects and benefits, toxic effects and contraindications of aromatic plant oils; - anatomy and physiology of skin and skin structures; - olfactory sense in regard to aromatic plant oils; - organic chemistry of aromatic plant oils; - organic chemistry of carrier oils and additives and interactions with aromatic plant oil chemistry; - contraindications that prevent treatment or require clearance from a medical professional to proceed; - contraindications that restrict treatment and appropriate modifications to treatment and choice of oils; - adverse and beneficial interactions of aromatic plant oils when blended; - client reactions to application of blended aromatic plant oils and required remedial action; - olfactory sense in regard to aromatic plant oil; - care, handling and storage of blended aromatic plant oils; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice, products and future treatments to maintain client treatment objectives.

SHBBFAS001 Provide lash and brow services

Locations:Footscray Nicholson, City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to provide lash and brow services that include shaping and colouring. It requires the ability to consult with clients, and select suitable products and equipment required to perform lash and brow services. Lash and brow services can be an individual treatment or form part of a series of treatments. This unit applies to beauticians and beauty therapists who work in beauty salons and spas. In this environment they make routine decisions within a defined range guided by manufacturer information and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust treatment plan to provide eight lash and brow treatments to clients suitable for the established client treatment objectives including two or more of the following services: eyebrow shape, eyebrow tint, eyelash tint; - design, record and maintain treatment plan and records for each of these clients specifying the details of: adverse effects, contraindications, eyebrow shape; - skin sensitivity; - service outcomes; - safe and suitable use of the following products: wax, eyelash and brow tints; - present self, according to organisational policy; - comply with health and hygiene regulations and requirements, and; - clean, prepare and maintain treatment area according to organisational policy. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to lash and brow services; - organisational policies and procedures relevant to lash and brow services; - difference between cleaning, disinfection and sterilisation; - benefits of chemical and physical disinfection; - methods of cleaning, disinfection and sterilisation; - infection control procedures relevant to lash and brow services; - difference between cleaning, disinfection and sterilisation; - benefits of chemical and physical disinfection; - methods of cleaning, disinfection and sterilisation; - when to sterilise tweezers; - infection control procedures and application of standard precautions as they apply to providing lash and brow services; - scope of practice of when to refer client to other practitioners; - organisational policies and procedures; - client record management; - equipment use and maintenance; - incident reporting; - linen use and laundry procedures; - personal hygiene and presentation; - presentation of treatment area; - waste disposal, work health and safety; - simplified cross section of skin; - hair structure and growth; - hair growth cycle and relationship to hair removal; - hair types; - factors effecting hair growth; - features and safe use of lash and brow products; - appearance, causes and required action steps for the following skin reactions to: lash and brow services, eye inflammation, infections of eye or surrounding area, spotting on skin, hive like reactions, ingrown hair, infection of hair follicle; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice, products and future treatments to maintain client treatment objectives.

SHBBFAS002 Provide facial treatments and skin care recommendations

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to provide facial treatments to meet client needs. It requires the ability to establish priorities with clients, synthesise knowledge of anatomy and physiology, skin science, cosmetic chemistry and nutrition, and to design and provide facial routines and advice on products and protection of facial skin. Facials can be a single treatment or form part of a series of treatments. The unit applies to beauty therapists who work in beauty salons and spas. In this environment they are part of a team but make independent treatment decisions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust treatment plans to provide six safe and appropriate facial treatments to clients with certain skin types and conditions; - design a series of four treatments and product recommendations for three of these clients to address client priorities; - recognise contraindications, skin diseases and disorders relevant to facials and products; - explain to each client as appropriate the development of skin conditions and the benefits and limitations of facial treatments; - provide facial treatments; - design and provide facial treatments; - vary repetition, rhythm and variation of massage movements to adapt to client needs; - design, record and maintain treatment plans and records for each client; - present self, according to organisational policy; - comply with health and hygiene regulations and requirements, and; - clean, prepare and maintain treatment area according to organisational policy. Students will also be expected to demonstrate the following knowledge: - federal, state or territory and local health, hygiene and skin penetration regulations and requirements relevant to facial treatments; - organisational policies and procedures relevant to facial treatments; - legal and insurance liabilities and responsibilities regarding treatments; - scope of practice; - factors likely to affect suitability of treatment for client; - effects and benefits of two comprehensive and professional skin care ranges; - effects and benefits of each stage of facial on the physical structure of the skin; - position and action of superficial muscles in the face, throat and chest; - interdependence of body systems and their relationship to a healthy body and skin; - basic nutrition guidelines and relationship between nutrition and healthy skin; - foods which may have an effect on the skin or are contraindicated when using specific products; - skin anatomy; - function and role of skin; - structure and distribution of skin glands; - production, composition, functions and control of skin gland secretions; - appearance and characteristics of skin types; - normal body flora; - electromagnetic spectrum and effect of light on skin; - physiological basis of skin colour; - relationship between skin type, minimal erythema dose, skin protection factor and sunscreen use; - Fitzpatrick skin types; - skin as a sense organ; - function, formation and behaviour of major skin chemicals; - growth, development, ageing and healing of human skin; - normal skin responses to irritation and trauma; - skin conditions; - trans-epidermal water loss; - differences between therapeutic, cosmetic and 'cosmeceutical' products; - concepts of cosmetic chemistry, and; - contraindications to specific cosmetic formulations and ingredients identified in product information.

SHBBFAS003 Provide specialised facial treatments

Locations: City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to provide specialised facial treatments incorporating the use of ultrasonic, direct current, high frequency and micro current devices. It requires the ability to establish priorities with clients and synthesise knowledge of skin, performance of electrical machines and allied cosmetic products, and to design and provide treatments to address specific skin types and conditions. Not all equipment is used in each specialised facial treatment. Specialised facials can be a single treatment or form part of a series of treatments. This unit applies to beauty therapists who work in beauty therapy salons. In this environment they work in a team but make independent treatment decisions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust treatment plans to provide six safe and appropriate specialised facial treatments to clients; - design a sequence of four treatments and product recommendations for three of these clients to address client priorities; - recognise contraindications, skin diseases and disorders relevant to each device listed in the Assessment conditions and to allied cosmetic products; - demonstrate correct and safe application techniques; - design, record and maintain treatment plans and records for each client; - treat clients effectively and minimise skin reactions; - identify risk situations that cause short or overloaded circuits and take remedial action; - present self, according to organisational policy; - comply with health and hygiene regulations and requirements, and; - clean, prepare and maintain treatment area according to organisational policy. Students will also be expected to demonstrate the following knowledge: - federal, state or territory and local health, hygiene and skin penetration regulations and requirements relevant to specialised facial treatments; - organisational policies and procedures relevant to specialised facial treatments; - manufacturer instructions for use of electrical equipment; - legal and insurance liabilities and responsibilities in regard to treatments and use of electrical equipment; - scope of practice; - factors likely to affect suitability of treatment for client; - effects and benefits of two comprehensive and professional skin care ranges and their relationship to each device used; - effects and benefits on the physical structure of skin; - interdependence of body systems and their relationship to a healthy body and skin; - nutritional composition of food; - nutrition guidelines and relationship between nutrition and healthy skin; - foods which may have an effect on the skin or are contraindicated when using specific products; - skin anatomy and physiology; - structure, function and distribution of skin glands; - production, composition, functions and control of skin gland secretions; - appearance and characteristics of skin types; - electromagnetic spectrum and effect of light on skin; - physiological basis of skin colour; - relationship between skin type, minimal erythema dose, skin protection factor and sunscreen use; - Fitzpatrick skin types; - skin as a sense organ and relationship to each device used; - function, formation and behaviour of major skin chemicals; - growth, development, ageing and healing of human skin; - normal skin responses to irritation and trauma; - genetics of skin disorders; - trans-epidermal water loss, and; - absorption and relationship to skin treatments and products.

SHBBHRS001 Provide waxing services

Locations: Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to provide waxing services to remove unwanted facial and body hair. It requires the ability to consult with clients to select suitable wax products to provide waxing services. The waxing service can be a single service or form part of a series of services. This unit applies to beauticians and beauty therapists who work in beauty or hair removal salons. In this environment they work as part of a team and make independent decisions within a defined range.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust treatment plans to provide six waxing services to clients for face and body; - design, record and maintain treatment plans and records for each of these clients; - provide hot and strip waxing treatments that demonstrate appropriate techniques; - present self, according to organisational policy; - comply with health and hygiene regulations and requirements, and; - clean, prepare and maintain service area according to organisational policy. Students will also be expected to demonstrate the following knowledge: - state or territory and local health, hygiene and skin penetration regulations and requirements relevant to the provision of waxing services; - infectious disease transmission routes and prevention of infection transmission as it relates to waxing services; - infection control procedures and application of standard precautions as they apply to the provision of waxing services; - organisational policies and procedures relevant to waxing services; - scope of practice; - structural and cellular features of hair and hair follicles; - hair growth cycle stages and relationship to hair removal; - hair types; - factors effecting hair growth; - alternative progressive hair removal methods; - infra-red and hair-retarding products used in conjunction with waxing procedures; - progressive permanent hair removal methods; - function and action of wax ingredients; - effects and application of wax types; - effects and application of hair removal procedures; - contraindications that prevent treatment or require clearance from a medical professional to proceed; - adverse effects from waxing treatments and appropriate actions; - function and action of after wax products; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice, products and future treatments to maintain client treatment objectives.

SHBBHRS004 Provide hair reduction treatments using electrical currents

Locations:City King St.

Prerequisites:SHBBINFO01 - Maintain infection control standards

Description:This unit describes the performance outcomes, skills and knowledge required to use electrolysis to remove unwanted hair from the face and body. It requires the ability to establish priorities with clients, synthesise knowledge of skin and hair biology and electric currents, and to design and provide effective hair removal treatments. Treatment outcomes are usually achieved over a program that involves multiple individual treatments. This unit applies to beauty therapists who work in beauty and hair removal salons. In this environment they exercise judgement in planning and providing an appropriate treatment; demonstrate maturity and confidentiality in their client interactions; and apply knowledge of a range of hair removal methods.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust treatment plans to provide four hair reduction treatments with electrical current causing minimal skin reactions for clients; - provide consecutive electrical epilation treatments for two of the clients as required to achieve treatment objectives; - treat the following hair types: terminal; vellus; blonde, gray and dark hair colours; - design, record and maintain treatment plans and records for each of these clients; -

demonstrate correct use of the following equipment in hair reduction treatments; - demonstrate the following probe insertion techniques for different follicle types; - present self, according to organisational policy; - apply health, hygiene and skin penetration regulations and requirements, and; - clean, prepare and maintain service area according to organisational policy. Students will also be expected to demonstrate the following knowledge: - state or territory and local health, hygiene and skin penetration regulations and requirements relevant to providing hair reduction treatments using electrical currents; - infectious disease transmission routes and prevention of infection transmission; - infection control procedures and application of standard precautions; - definitions and methods of cleaning, disinfection and sterilisation; - organisational policies and procedures relevant to the provision of hair reduction treatments using electrical currents; - legal and insurance liabilities and responsibilities regarding treatments; - scope of practice; - factors that affect treatment planning and client suitability for treatment; - effects, benefits, risks and indications for thermolysis, galvanic and blend methods; - pilosebaceous unit; - hair structure and growth and its relationship to hair removal treatments; - interdependence of body systems and their relationship to a healthy body and skin; - cross section of skin; - structure, function and distribution of skin glands; - production, composition, functions and control of skin gland secretions; - appearance and characteristics of skin types; - normal skin responses to irritation and trauma; - phases of skin growth, cell renewal, wound healing and factors affecting epidermal mitosis; - origin and evolution of hypertrophic, keloid scars and abnormal scar tissue; - genetics of skin disorders; - physical appearance of the following and their relationship to hair removal using electrical equipment; - typical medical treatments, medications and side effects relevant to hair reduction treatments using electrical current; - principles and properties of electrical currents and the technology used in hair reduction; - principles and processes of direct and alternating currents, and; - safe practices and management when using electrical currents.

SHBBINFO01 Maintain infection control standards

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to maintain infection control during skin penetration treatments and to review clinic compliance with the applicable state or territory and local council requirements. It requires the ability to identify, manage and control infection risks to clients, self and work colleagues. This unit applies to beauty therapists who work in beauty therapy salons, clinics or in cosmetic medical clinics. These therapists work autonomously and make independent treatment decisions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - integrate the maintenance of infection control with skin penetration technical skills that individually or in combination demonstrate: identification of potential cross contamination risks, protecting self and client from infection risks; choosing and using appropriate cleaning, disinfection and sterilising procedures for instruments, equipment and equipment attachments and work surfaces correct steriliser operation procedures, and; - provide a written review of workplace compliance with relevant state or

territory and local council laws, regulations and requirements relating to beauty treatments and skin penetration. Students will also be expected to demonstrate the following knowledge: - Australian standards AS/NZS4815 and 4187 relating to infection control in office based health care facilities; - relevant state or territory legislation and guidelines relating to infection control procedures for skin penetration treatments; - local council requirements for beauty salons offering skin penetration treatments; - organisational policy and procedures relating to infection control; - legal responsibilities in relation to infection control, sterilising, registration or business licensing, conduct of occupation, and maintenance of premises relevant to role; - standard and additional precautions as defined by the National Health and Medical Research Council (NHMRC); - industry codes of practice; - aetiology of infection; - sources of infection and means of transmission; - risk management in relation to infection control; - procedures and practices that support infection control measures and prevent infection transmission; - cleaning, disinfection and sterilising procedures; - procedures for responding to spills; - needle stick or sharps injury procedures for notification and response; - impact of premises layout and workflow on infection control risks; - manufacturer instructions in relation to cleaning, disinfecting and sterilising equipment and products; - risk management process for identifying treatment infection control risks, and; - workplace infection control risks.

SHBBMU001 Apply eyelash extensions

Locations: Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to apply eyelash extensions for added length and thickness of natural lashes to meet client needs. It requires the ability to consult with clients, select suitable products and equipment to apply, in-fill, and remove damaged eyelash extensions. Applying eyelash extensions can be an individual service or form part of a series of services. This unit applies to beauty therapists, retail assistants, and make-up freelancers who work in beauty salons, retail cosmetic outlets, and settings that provide make-up services. In this environment they make routine service decisions within a defined range.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, develop and adjust treatment plan to apply safe and appropriate eyelash extensions suitable for the following client treatment objectives: two full-set applications, each set consisting of a minimum of forty eyelash extensions per eye; two in-fill services, and; two removal services; - design and provide treatment routines that demonstrate correct: patch testing; selection and application of eyelash extensions type, and; eyelash extension application to suit client eye shape and facial features; - design, record and maintain treatment plans and records for each eyelash extension treatment for each client; - present self, according to organisational policy, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to eyelash extension services; - organisational policies and procedures relevant to eyelash extension services; - legal and insurance liabilities and responsibilities regarding eyelash extension services; - scope of practice; - the impact

of eye shapes on eyelash extensions; - effects and benefits of eyelash extensions; - natural eyelash growth rate and stages of hair growth cycle; - advantages and disadvantages of a range of eyelash extensions; - differences between different types of eyelash extension; - advantages of using different tweezers; - selection criteria and application of eyelash extension type; - benefits and effects of different types of adhesives; - contraindications that prevent or restrict eyelash services, and their relationship to the service; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice, products and future treatments to maintain eyelash extensions.

SHBBMU002 Design and apply make-up

Locations: City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to apply facial make-up products for day, evening or special occasions. It requires the ability to consult with clients, analyse face and skin, and to demonstrate and apply make-up products to suit client needs or make-up brief. This unit applies to beauty therapists, retail assistants, and make-up freelancers who work in beauty salons, retail cosmetic outlets, and settings that provide make-up services. In this environment they make routine service decisions within a defined range and have knowledge and skills of a variety of make-up products and application techniques.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, develop and adjust make-up plan to apply safe and appropriate make-up for the following client requirements: two different day events; two different evening events, and; three different skin colours or ethnic backgrounds of varying ages; - design and record make-up plan for each client specifying details of: areas requiring corrective make-up; client image and occasion; colour analysis and design; contraindications to make-up services; facial shape; highlighting and shading; products and application techniques, and; skin types and conditions; - demonstrate safe and correct use of the following make-up products: blushes; cleansers; concealers; eye shadows; eyeliners; false lashes; liquid and solid foundations; lip gloss; highlighters; lip liners; lipsticks; mascaras; pencils; powders; pre-make-up stabilisers or primers, and; skin care; - present self, according to organisational policy; - manage product quantities to avoid waste of consumables, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulatory requirements relevant to make-up services; - organisational policies and procedures relevant to make-up services; - operator's legal and insurance liabilities and responsibilities regarding application of make-up; - scope of practice; - factors which influence the application of make-up; - appearance of the following common skin types and conditions and their relationship to make-up services: oily/lipid; dry/alipid/lipid dry, and; diffused red; - contraindications that prevent or restrict make-up services and their relationship to make-up services; - common ingredients in make-up products and their effects on skin and appearance; - chemical formulations of: eyeliners; eyeshadows; facial powder; foundations; lipsticks, and; mascara; - colours in cosmetics; - effects created by application of specific make-up products and colour

application techniques; - selection, care and infection control for make-up tools and equipment; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice and products to maintain and remove make-up application.

SHBBMU003 Design and apply make-up for photography

Locations:City Flinders, City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to design and apply make-up for photographic shoots in natural and artificial light. It requires the ability to select products and tools to apply photographic make-up in response to a brief from a client or stylist engaged in a photo shoot. This unit applies to beauty therapists and make-up artists who work in beauty salons, make-up studios and photography shoot settings requiring make-up services. In this environment they work as part of the creative team, make informed creative decisions and have knowledge and skills across a range of specialised make-up products and application techniques.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust make-up plan to apply safe and appropriate make-up in three of following photography contexts: business; wedding; fashion; commercial, and; catwalk; - demonstrate make-up applications suitable for: artificial light; natural light, and; studio conditions; - provide make-up services for print outcomes; - design and record make-up plans for each client; - present self, according to organisational policy; - manage product quantities to avoid waste of consumables, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulation and requirements relevant to make-up services; - organisational policies and procedures relevant to make-up services; - legal and insurance liabilities and responsibilities regarding make-up services; - scope of practice; - contraindications and their relationship to photographic make-up services; - photographic make-up principles; - operation of production environments and settings and how to effectively and professionally work within these environments; - appearance of common skin types and conditions and their relationship to photographic make-up services; - selection, care and infection control for photographic make-up equipment, products and tools; - effect of changes created by: specific make-up products and colour application techniques, and; lighting and how make-up colours appear on screen, and; - sustainable operating procedures for the conservation of product, water and power.

SHBBMU004 Design and apply remedial camouflage make-up

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to apply specialised make-up products to disguise skin imperfections on the face and body. It requires the ability to consult with clients, select products and equipment, and apply camouflage make-up to disguise the appearance of blemishes, birthmarks and scars. This unit applies to beauty therapists and make-up artists who

work in beauty salons and make-up studios and as freelancers. In this environment they work as part of a team but make independent treatment decisions and have knowledge across a range of specialised make-up products and application techniques.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, develop and adjust camouflage make-up plans and apply safe and appropriate remedial camouflage make-ups for three clients with differing face and body remedial camouflage objectives design and record camouflage make-up plans for each client above specifying details of: areas and condition requiring camouflage make-up techniques; client requirements and concerns; colour analysis and design; contraindications to make-up services; products and application techniques, and; skin types and conditions; - present self, according to organisational policy; - manage product quantities to avoid waste of consumables, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to make-up services; - organisational policies and procedures relevant to make-up services; - legal and insurance liabilities and responsibilities regarding make-up services; - scope of practice; - factors which influence the application of remedial camouflage make-up; - appearance of the following that may require remedial camouflage make-up; - contraindications, that prevent or restrict make-up services, and their relationship to make-up services; - appearance of the following common skin types and conditions and their relationship to make-up services; - chemical ingredients and pigments in make-up products and their effects on skin; - effects created by application of specific make-up products and colour application techniques; - range of camouflage make-up products used to achieve remedial make-up; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice and products to maintain and remove make-up applications.

SHBBMU005 Apply airbrushed make-up

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to apply airbrushed make-up for face or body. It requires the ability to prepare the work area, consult with clients, select make-up products and equipment, and apply airbrushed make-up. This unit applies to beauticians and make-up artists who work in beauty salons and make-up studios and as freelancers. In this environment they may work as part of a team or autonomously. They have knowledge and skills across a range of airbrush make-up products, application techniques, and airbrush equipment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust make-up plan to provide safe and appropriate airbrush make-up for at least five different clients suitable for the following established client make-up objectives: day; evening; mature skin; tattoo, or bruise coverage, and; fantasy make-up for face or body; - design and record make-up plan for each client specifying details of: areas requiring corrective make-up; client image and occasion; colour analysis and design; contraindications to make-up services; facial shape; highlighting and shading; products and application techniques, and; skin types and conditions; - operate airbrush gun and compressor to demonstrate the following airbrushing techniques and precautions: free-hand and stencils; circular movements; long brush stroke; avoid splatter; avoid excess product application; increase and decrease compressor pressure for optimal and safe make-up application, and; adjust spray patterns based on distance to client's skin; - maintain airbrush gun through cleaning and maintenance according to manufacturer instructions; - manage product quantities to avoid waste of consumables; - present self, according to organisational policy, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to make-up services; - organisational policies and procedures relevant to make-up services; - legal and insurance liabilities and responsibilities regarding make-up services; - scope of practice; - benefits and uses of airbrush make-up application; - contraindications, that prevent or restrict make-up services, and their relationship to make-up services; - appearance of the following common skin types and conditions and their relationship to make-up services; - factors which influence the application of make-up; - common ingredients in airbrush make-up products and their effects on skin; - effects created by application of specific make-up products and colour application techniques; - types of airbrushing equipment; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice and products to maintain and remove make-up applications.

SHBBMU006 Design and apply creative make-up

Locations: Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to respond to a client brief to design and apply make-up for specialised looks that use creative design and application of make-up. It requires the ability to refine a brief with a client and then research, design, trial and apply a creative make-up. This unit applies to make-up artists who work in make-up studios and as freelancers. In this environment they may work as part of a team or autonomously but they make independent creative decisions. They have knowledge and skills of a range of make-up products and specialised make-up application techniques.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop a portfolio of visual images that provide creative ideas for each of the following make-up designs: fashion or catwalk, period, fantasy and entertainment; - follow client briefs to design and trial three creative make-up plans and then apply finalised make-up for three of the

following themes: avant-garde, fashion, period or decade, fantasy and entertainment; - design and record make-up plan for each client above specifying details of: make-up theme or occasion; areas requiring corrective make-up; contraindications; desired client image; colour analysis and design; contraindications to make-up services; facial shape; highlighting and shading; products and application techniques, and; skin types and conditions; - manage product quantities to avoid waste of consumables, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to make-up services; - organisational policies and procedures relevant to make-up services; - legal and insurance liabilities and responsibilities regarding make-up services; - scope of practice; - contemporary creative make-up products, equipment and application techniques; - sources of visual images to inform creative design; - the role of make-up in completing image and looks; - colour wheel theory; - colour value and tone; - skin tones and undertones; - products used for creative make-up; - light and its effects on make-up; - skin types; - facial shapes and their relationship to the make-up design; - body shapes and their relationship to make-up design; - effects created with make-up products; - contraindications to make-up services; - symptoms of allergies to products; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice and products to maintain and remove make-up applications.

SHBBNLS001 Provide manicure and pedicure services

Locations: Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to provide services and advice to clients requiring hand, foot and nail care. It requires the ability to recognise relevant contraindications and conditions, to understand the structure and function of hands, feet and nails and the effects of treatments and products, and to select and provide services and advice to meet the objectives of the client. The services and advice can be on an individual basis or form part of a series of services. This unit applies to workers in beauty and nail salons, and spas. In this environment they make routine service decisions within a defined range but are responsible for the selection and provision of services to clients.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust treatment plans to provide six safe and appropriate manicure and pedicure treatments to clients suitable for the established client treatment objective; - design, record and maintain treatment plans and records for each client; - provide manicure and pedicure treatments for each client that demonstrate appropriate selection and application of: buffing; callous removal; coloured nail varnish application; cuticle care; exfoliation; French polish application; mask; massage hands and feet using different massage movements; - recognise contraindications listed in Knowledge Evidence and list relevant practitioners for client referral; - recognise skin and nail conditions and recommend treating products and home care routines; - present self, according to organisational policy, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following

knowledge: - state or territory and local council health and hygiene regulations and requirements relevant to providing manicure and pedicure services; - organisational policies and procedures relevant to the provision of manicure and pedicure services; - scope of practice as it applies to manicure and pedicure services; - appearance and gross anatomy of skin surrounding natural nail; - anatomy and physiology of nails; - anatomy and physiology of lower arms and hands; - anatomy and physiology of lower legs and feet; - skin and nail conditions which modify treatment and their relationship to nail services; - contraindications which prevent treatment or require referral to health practitioners and relationship to manicure and pedicure services; - specialised nail products properties, chemical components, and their effects on nails and skin; - adverse reactions to nail products; - pH range of human skin, nails and manicure and pedicure treatment products; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice, products and future services to maintain hand, foot and nail care.

SHBBNLS004 Apply nail art

Locations:Footscray Nicholson, City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to apply a range of nail art designs. It requires the ability to consult with clients, select suitable products and techniques, and apply hand painted designs, decals, or jewellery for finger or toe nails. The nail art service can be an individual service or form part of a series of services. This unit applies to nail technicians and beauticians in beauty and nail salons. In this environment they make routine service decisions within a defined range and have knowledge and skills of a variety of nail art products and application techniques.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust service plans and provide six safe and appropriate quality nail services for clients that demonstrate: decals, hand painted designs, nail coverings, jewellery (diamantes, studs and charms), and marble nail art; - provide nail art maintenance service for three of these clients that includes: nail art top coat or sealant, retouching, and repair; - design and record nail art plans for each client specifying details of adverse reactions, after-care advice, areas requiring special treatment, client feedback, colours and jewellery used, contraindications, design, nails analysis, range and variety of nail art, and tools and equipment; - present self, according to organisational policy, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to nail art services; - organisational policies and procedures relevant to nail art services; - scope of practice as it applies to nail art services; - appearance and gross anatomy of skin and nails; - growth, shape, and functions of nails; - contraindications which prevent treatment or require referral to health practitioners and relationship to nail art services; - appearance of skin and nail disorders and relationship to nail art services; - effect of changes created by complementary nail shapes and nail art designs; - effects and benefits of organisation range of nail art products; - ingredients and effects of products used for nail art; - care

and cleaning requirements for nail art equipment, implements and service area; - adverse effects of nail art products; - data safety sheet requirements, location and use in salon; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice, products and future services to maintain nail art.

SHBBRES001 Research and apply beauty industry information

Locations:Footscray Nicholson, City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to access information and update knowledge of the beauty industry and relevant industry legislation. It requires the ability to research beauty industry trends, and its relationship to other industries, and how beauty therapists can use this information to enhance own work performance. This unit applies to beauticians, nail technicians, make-up artists and retail cosmetic assistants who work in beauty and nail salons and in beauty retail outlets. In this environment they make routine decisions within a defined range but are expected to be up-to-date with industry trends.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access and interpret information to update knowledge of the beauty industry from the following sources: industry associations, and; trade magazines; - source and interpret information on the following from the above sources, and share with colleagues to improve knowledge of the beauty industry, current trends and workplace requirements: career opportunities within the industry; environmental issues and requirements; industrial relations issues; industry expectations of employees; industry working conditions; relationship between other related industries; new products, technology, techniques and services, and; work ethic required to work in the industry, and; - source plain English information on federal, state or territory, or local council legislation, regulations and requirements, and ethical issues as they relate to working in the beauty industry for each of the following: consumer protection and trade practices; duty of care; hygiene, and; work health and safety. Students will also be expected to demonstrate the following knowledge: - sources of information on the beauty industry relevant to own work activities; - career pathways within the beauty industry; - relationships between the beauty industry and other related industries; - industry expected work ethic and expectations of employees in the beauty industry; - role, services and support provided by trade unions, employer groups and professional associations relevant to own work in the beauty industry; - environmental responsibilities of businesses and employees in the beauty industry in relation to own practice; - legal and ethical issues applicable to own day-to-day work activities in the beauty industry as detailed in organisational procedures and processes, and; - purpose and impact on self, colleagues, and day-to-day work activities in the beauty industry of key applicable requirements of federal, and state or territory legislation and regulations. .

SHBBSPA001 Work in a spa therapies framework

Locations:City King St.

Prerequisites:Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to promote spa treatments and create and maintain a spa services environment. It requires the ability to prepare spa work areas, recommend suitable spa therapies to clients, monitor the spa environment, complete shutdown of treatment rooms and equipment, and promote environmentally sound spa practices. This unit applies to beauty and spa therapists who work in day, destination and resort spas. In this environment they work in a team but are responsible for individual client recommendations and for maintenance of the spa area.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - integrate spa technical skills and work in a spa services environment for a minimum of six, three hour work periods that individually or in combination, demonstrate: preparing, cleaning and shut down of: steam equipment; hydro tub; Vichy shower, or wet table, or spa capsule; hot towel cabinets; wet areas; testing water and chemical levels; maintaining lighting, temperature, spa environment and spa etiquette to ensure spa ambience; monitoring environmental impacts of a spa environment and identifying opportunities for reducing environmental impacts; - select, sequence, and promote to four different clients: wet treatments; steam room; hydro tub; Vichy shower, or wet table, or spa capsule; dry treatments; body exfoliation; body wraps; massage, and; - present self according to organisational policy. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to providing spa treatments; - organisational policies and procedures relevant to providing spa therapies; - legal and insurance liabilities and responsibilities regarding spas and spa therapies; - definition of spa; - spa history and development; - detailed knowledge of the features and benefits of wet and dry room therapies; - properties of water; - characteristics of water; - chemical properties of water; - Spa behaviour of water under different conditions; - benefits of water in spa treatments; - chemicals appropriate to spa environment to maintain water hygiene; - water hygiene; - efficient and sustainable procedures for water supply; - definition of signature treatments; - management of adverse reactions to spa treatments, and; - factors that contribute to spa ambience.

SHBBSPA002 Provide spa therapies

Locations: City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to provide wet and dry spa therapies to meet client needs. It requires the ability to consult with clients, and select, provide and review hydrotherapy, wraps, herbal packs, sauna and other signature spa treatments. Spa therapies can be an individual treatment or form part of a sequenced series of treatments. This unit applies to beauty and spa therapists who work in day, destination and resort spas. In this environment they work in a team but make independent treatment decisions and have knowledge across a range of spa products and treatments.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust treatment plan to provide six safe and appropriate spa treatments for different clients selecting treatments suitable for the established client treatment objectives; - design, record and maintain treatment plans for each client specifying details of: contraindications; spa treatments; routine and sequence; outcomes of previous and current treatment; post treatment information and advice; products used, relevant medical history and medication; treatment duration and future treatment recommendations; treatment objectives; client feedback; - maintain the spa environment before, during and after each treatment; - recognise and manage contraindications and adverse effects to treatment as listed in knowledge evidence; - present self, according to organisational policy, and; - provide aftercare advice and suggest complementary products and treatments to maintain client spa treatment objectives. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to providing spa therapies; - organisation policies and procedures relevant to providing spa therapies; - legal and insurance liabilities and responsibilities regarding spa treatments; - scope of practice; - anatomy and physiology of the skin and body as they relate to spa therapies; - features, benefits and application of each type of wet and dry room spa therapies; - ingredients of organisation spa treatment products and their effect on skin; - contraindications that prevent or restrict treatment or require clearance from a medical professional to proceed and relationship to spa treatments; - adverse effects to spa treatments and products and appropriate remedial action; - basic nutrition and relationship to healthy skin and body; - mode of administration; - sustainable operating procedures for the conservation of product, water and power, and; - aftercare advice, products and future treatments relevant to spa therapies.

SHBBSPA003 Provide stone therapy massages

Locations: City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to provide full body massages with hot and cold stones. It requires the ability to establish priorities with clients, and synthesise knowledge of anatomy and physiology, skin science and lifestyle factors to select pre-heated stones, design massage and provide the treatment. Stone massage therapy can be an individual treatment or form part of a series of treatments. This unit applies to beauty and spa therapists who work in day, destination and resort spas and beauty salons. In this environment they work in a team but are responsible for individual client recommendations and treatment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust treatment plans to provide six safe and appropriate stone therapy massages for clients of differing height, weight and age; - design, record and update treatment

plans and records for each client using correct anatomical terminology; - maintain temperature of stones to suit each client's temperature tolerance; - sequence stone therapy routine to maximise benefits for each client; - adapt massage routine to stone therapy and each client needs; - present self, according to organisational policy, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to providing stone therapy massages; - organisational policies and procedures relevant to providing stone therapy massages; - legal and insurance liabilities and responsibilities regarding stone therapy massages; - scope of practice; - factors likely to affect suitability of treatments for client needs; - effects and benefits of: each type of massage movement and technique; each type of stone; variations in stone temperature; stone placement and sequencing; - effects of stone therapy on body systems; - common disorders of body systems and their relationship to stone therapy massage; - interdependence of body systems and their relationship to a healthy body and skin; - position of major bones; - position and action of superficial muscles; - postural and skeletal abnormalities; - gross skin anatomy and physiology and differences in skin depending on body location; - role of skin; - skin as a sense organ; - history of stone therapy massage; - properties of different materials for stones; - contraindications that prevent or restrict treatment or require clearance from a medical professional to proceed and relationship to stone therapy massage; - lifestyle factors and benefits of lifestyle changes; - sustainable operating procedures for the conservation of product, water and power, and; - effects and benefits of aftercare advice, products and future treatments to maintain client stone therapy massage objectives.

SHBBSPA004 Provide Indian head massages for relaxation

Locations: Footscray Park, Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to provide Indian head massage as part of a spa program. It requires the ability to consult with clients, plan massage routine and massage arms, neck, shoulders, scalp and face. Indian head massage can be an individual treatment or form part of a series of treatments. This unit applies to beauty and spa therapists who work in day, destination and resort spas and beauty salons. In this environment they operate with some level of autonomy or under limited supervision.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate, follow and adjust treatment plans to provide six safe and appropriate Indian head massages for different clients; - provide Indian head massage to treat each of the following areas as appropriate to the above clients: arms, face, neck, primary chakra areas, scalp and shoulders; - design, record and update treatment plans and records for each client using correct anatomical terminology and specifying details of: client feedback, contraindications and conditions; massage routines, outcomes of previous and current treatment; post treatment lifestyle and product advice; products used; recommended future treatments; relevant medical history and medication; treatment duration, areas treated and areas not treated; treatment objectives; - design and provide treatment routines that demonstrate appropriate selection, application and modification of the

following massage movements: effleurage; petrissage; Marma point; tapotement; vibration; - present self, according to organisational policy, and; - comply with health and hygiene regulations and requirements. Students will also be expected to demonstrate the following knowledge: - state or territory and local health and hygiene regulations and requirements relevant to providing massage treatments; - organisational policies and procedures relevant to providing massage treatments; - legal and insurance liabilities and responsibilities regarding treatments; - scope of practice; - factors likely to affect suitability of treatments for client needs; - history, origins, and traditions of Indian head massage; - features, benefits and effects of Indian head massage; - principles of body, mind and spiritual wellness; - basic aspects of Ayurveda and Ayurvedic bodywork; - Marma points application/major chakra areas as they relate to Indian head massage; - benefits of continuous treatments; - effects and benefits of Indian head massage on body systems; - common disorders of body systems and their relationship to Indian head massage; - contraindications that prevent or restrict treatment or require clearance from a Medical professional to proceed and relationship to Indian head treatments; - adverse effects to Indian Head massage and appropriate remedial action; - lifestyle factors and benefits of lifestyle changes; - sustainable operating procedures for the conservation of product, water and power, and; aftercare advice, products and future treatments to maintain client objectives.

SHHBAS001 Provide shampoo and basin services

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to complete a range of hair services provided at the basin area including pre-service shampoos and treatments, and post treatment removal of residual colour and lightening products.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - integrate health, safety and hygiene practices and procedures into day-to-day basin services work functions across four, three hour work periods; - pre-service shampoo and conditioning; - colour product removal; - bleach product removal; - foils and colour product removal; - application of post colour treatment conditioners, and; - across the work periods, cumulatively use these head massage techniques when shampooing and conditioning: effleurage; petrissage; tapotement. Students will also be expected to demonstrate the following knowledge: - visual characteristics of normal and abnormal hair and scalp conditions; - organisation's basin service products and treatments range; - product purpose; - action on the hair; - application instructions; - processing times; - role and basic content of Safety Data Sheets (SDS) or plain English workplace documents or diagrams that interpret SDS content; - basic aspects of local government, state or territory health regulations for hygiene and infection control at the basin services area; - using gown and towels to protect client clothes; - avoiding product contact with eyes; - monitoring client comfort; - preventing cross-transmission of infection between customers; - work health, safety and hygiene for providing basin services; - using correct posture to avoid fatigue and injury; - avoiding product contact with operator eyes; - preventing cross-transmission of infection during customer contact; - minimising product wastage; - water efficiency, and; - waste

disposal with particular emphasis on environmentally sound disposal methods for hazardous and other waste.

SHHBAS002 Provide head, neck and shoulder massages for relaxation

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to provide relaxing head, neck and shoulder massages prior to other hair services. It requires the ability to use a basic range of massage techniques.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow health, safety and hygiene procedures to provide head, neck and shoulder massages to four different clients ensuring services consistently meet client expectations; - choose the following massage techniques as appropriate to the head, neck or shoulder area and cumulatively use these techniques across the suite of services: effleurage; petrissage; tapotement, and; - use these products cumulatively across the suite of services: scalp treatment products; hair treatment products; massage oil. Students will also be expected to demonstrate the following knowledge: - organisation's product range of massage oils, scalp and hair treatments; - product purpose; - action on the scalp and hair; - application instructions; - key features and use of these massage techniques on the head, neck and shoulders: effleurage; friction; petrissage; tapotement; - basic aspects of local government, state or territory health regulations applicable to providing massage services; - using gown and towels to protect client clothes; - monitoring client comfort; - preventing cross-transmission of infection between customers; - work health, safety and hygiene for providing massages; - using correct posture to avoid fatigue and injury; - preventing cross-transmission of infection during customer contact; - minimising wastage of massage mediums, and; - waste disposal with particular emphasis on sound disposal methods for contaminated waste.

SHBHCLS001 Apply hair colour products

Locations: City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to apply a limited range of hair colour products including semi, demi and permanent products for full and re-growth services. This unit applies to salon assistants who work in hairdressing or barber salons under close supervision and with guidance from more experienced or senior hairdressers or barbers. They use little judgement and follow instructions specified by the hairdresser or barber who has completed the client consultation and manages the client service.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - comprehend, confirm and

follow instructions correctly from a supervisor to mix and evenly apply these types of hair colour products, and; - provide the following hair colour services cumulatively across the above suite of clients: whole head and re-growth. Students will also be expected to demonstrate the following knowledge: - physical effects, at an overview level, of semi, demi and permanent colour products on hair; - for the products being used: mixing and application instructions; role and basic content of Safety Data Sheets (SDS) or plain English workplace documents or diagrams that interpret SDS content; - basic aspects of local government, state or territory health regulations applicable to providing hair colouring services; - industry practices and organisational procedures for client comfort and safety; - work health and safety for applying hair colour products; - minimising wastage of hair colouring products, and; - waste disposal with particular emphasis on environmentally sound disposal methods for hazardous and other hairdressing waste.

SHBHCLS002 Colour and lighten hair

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge to consult with clients, analyse existing hair colour and condition and provide a range of hair colour and lightening treatments.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least nine (9) clients, each with different hair colour and lightening treatment needs, and complete the following treatments consistently to achieve outcomes to client satisfaction: demi-permanent colour for two different clients; semi-permanent colour for two different clients; permanent colour for two different clients; high lift tints for three different clients; - provide the following hair colour services cumulatively across the above suite of clients: whole head; re-growth; - for each client, complete a pre-treatment hair analysis covering the following characteristics to recommend appropriate colouring treatments: natural hair type, texture, porosity, density and elasticity; natural base colour; artificial base colour; hair colour tone; percentage of white hair; presence of lightening agents or artificial hair colour treatments on hair; existing chemical services; skin tone; length of hair; scalp condition, and; - record the following details of the colour service in the history for each client serviced: pre-service hair analysis; contraindications; reaction to skin tests or products; colour or lightening treatment products selected; brand and colour selection; application techniques, processing methods and times; colour and hair condition outcome; recommended home care products. Students will also be expected to demonstrate the following knowledge: - colour wheel and its use in colour selection to achieve warm and cool tones; - key characteristics and interrelationships of the elements and principles of hair design and use in achieving hair colouring and lightening effects; - hair biology, at an elementary level of understanding; - physical effects of chemical products and treatments on the skin; - main structure, functions and role of the skin and glands; - relationship between hair porosity, texture, condition and the success of colour and lightening treatments; - basic concepts of cosmetic chemistry applicable to effective and safe use of colour and lightening products; - elementary level of understanding of the chemical and physical effects on hair structure, texture and colour; - contraindications to using hair colour and lightening products; -

organisation's hair colour and lightening products range; - reasons for selecting different product application methods; - basic aspects of local government, state or territory health regulations applicable to providing hair colouring services, and; - industry practices and organisational procedures.

SHBHCLS003 Provide full and partial head highlighting treatments

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to consult with clients, analyse existing hair colour and condition and provide full and partial head highlighting treatments using foil techniques. It requires the ability to use single or combined colour, high lift tint or bleach products to create highlights, lightened sections of the head or multiple colours in the hair.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least eight clients, each with different hair highlighting treatment needs, and complete the treatments detailed below which consistently achieve desired outcome to client satisfaction; - for each client, complete a pre-treatment hair analysis covering the following characteristics to recommend appropriate colouring treatments: natural hair type, texture, porosity, density and elasticity; natural base colour; artificial base colour; hair colour tone; percentage of white hair; presence of lightening agents or artificial hair colour treatments on hair; existing chemical services; skin tone; length of hair; scalp condition; - use at least four of the these types foiling techniques cumulatively across the suite of treatments: coarse, medium or fine woven meshes; spliced meshes; alternated coloured and lightened woven meshes and unwoven natural hair meshes; single or multiple colours and tones; bleached meshes; whole or partial head effects; - use these types of highlighting techniques cumulatively across the suite of treatments: combing and brushing colour or bleach products onto predetermined areas of the hair; colouring and bleaching single strands or meshes; - use these colour treatment products cumulatively across the suite of treatments: bleach products; permanent colour; high lift tints, and; - record the details of the colour service in the history for each client serviced. Students will also be expected to demonstrate the following knowledge: - colour wheel and its use in colour selection to achieve warm and cool tones; - key characteristics and interrelationships of the elements and principles of hair design and their use in achieving hair colouring and lightening effects; - elements of hair design; - principles of hair design; - hair biology, at an elementary level of understanding; - relationship between hair porosity, texture, condition and the success of hair highlighting treatments; - basic concepts of cosmetic chemistry, as they apply to effective and safe use of permanent colour, high lift tints and, and bleach products; - at an elementary level of understanding, the chemical and physical effects on hair structure, texture and colour; - contraindications to using permanent colour, high lift tints and, and bleach products; - organisation's permanent colour, high lift tint and bleach products range; - levels of bleaching; - basic aspects of local government, state or territory health regulations applicable to providing hair colouring services; - industry practices and organisational procedures; - minimising wastage of permanent colour, high lift tints and, and bleach products, and; - waste disposal with particular emphasis on environmentally sound disposal methods for hazardous and other hairdressing waste.

SHBHCLS004 Neutralise unwanted colours and tones

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge to consult with clients, analyse unwanted natural or artificial hair colour and tone, and to select and apply colour correction products to neutralise or change existing base colour and tone.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least six (6) clients, each with different colour correction needs, and complete colour correction treatments which consistently achieve target colour and tone results to client satisfaction using these colour correction products cumulatively across the six services provided: colour fillers; permanent colour; porosity equalisers; semi-permanent colour; temporary colour; - for each client, complete a pre-treatment hair analysis covering the following characteristics to recommend appropriate colouring treatments: natural hair type, texture, porosity, density and elasticity; natural base colour; artificial base colour; hair colour tone; percentage of white hair; presence of lightening agents or artificial hair colour treatments on hair; existing chemical services, including metallic based products; skin tone; length of hair; scalp condition, and; - record the following details of the colour service in the history for each client serviced: pre-service hair analysis and colour problem; contraindications; reaction to skin tests or products; colour correction products selected; brand and colour selection; application techniques, processing methods and times; colour and hair condition outcome, and; recommended home care products. Students will also be expected to demonstrate the following knowledge: - colour wheel and its use in colour selection to achieve warm and cool tones; - key characteristics and interrelationships of the elements and principles of hair design and their use in achieving hair colouring effects; - hair biology, at an elementary level of understanding; - relationship between hair porosity, texture, condition and the success of colour treatments; - basic concepts of cosmetic chemistry, as they apply to effective and safe use of colour correction products; - at an elementary level of understanding, the chemical and physical effects on hair structure, texture and colour; - contraindications to using colour correction products; - organisation's colour correction products range; - reasons for selecting different application methods; - basic aspects of local government, state or territory health regulations applicable to providing hair colouring services, and; - industry practices and organisational procedures.

SHBHCLS005 Provide on scalp full head and retouch bleach treatments

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge to consult with clients, analyse existing hair colour and condition and provide on-scalp full head and retouch bleach treatments. It covers bleach treatments to untreated hair and retouch services to maintain already bleached hair.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least six (6) clients, each with different bleach treatment needs, and complete these treatments which consistently achieve desired outcomes to client satisfaction: on-scalp full head untreated hair for three different clients, using percentage of peroxide according to manufacturer's instructions; retouch for three different clients, using percentage of peroxide according to manufacturer's instructions; - for each client, complete a pre-treatment hair analysis covering the following characteristics to recommend appropriate bleach treatments: natural hair type, texture, porosity, density and elasticity; natural base colour; artificial base colour; hair colour tone; percentage of white hair; presence of lightening agents or artificial hair colour treatments on hair; existing chemical services; skin tone; length of hair; scalp condition, and; - record the following details of the bleach service in the history for each client serviced: pre-service hair analysis; contraindications; reaction to skin tests or products; bleach treatment products selected; application techniques, processing methods and times; lift, tone and hair condition outcome; recommended home care products. Students will also be expected to demonstrate the following knowledge: - colour wheel and its use in toner selection; - key characteristics and interrelationships of the elements and principles of hair design and their use in achieving hair lightening effects; - hair biology, at an elementary level of understanding; - physical effects of chemical products and treatments on the skin; - main structure, functions and role of the skin and glands; - relationship between hair porosity, texture, condition and the success of bleach treatments; - basic concepts of cosmetic chemistry, as they apply to effective and safe use of bleach products; - at an elementary level of understanding, the chemical and physical effects on hair structure, texture and colour; - contraindications to using bleach products; - organisation's bleach products range; - stages of bleaching; - reasons for selecting different product application methods; - basic aspects of local government, state or territory health regulations applicable to providing hair bleaching services, and; - industry practices and organisational procedures.

SHBHUT001 Design haircut structures

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to develop 2-D visual representations and plans for solid form, graduated and increased and uniform layered haircut structures. This enables hairdressers to visualise the components of finished haircut structures as aids to planning and completing haircuts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse and interpret finished haircuts of these types: solid form; graduated; increased layered; uniform layered; - for each of the above haircut structures, produce a simple line drawing showing straight and curved design lines and direction of lines for the finished haircut, and; -

for each of the above haircuts produce a haircut plan using a 2-D structural graphic representation showing: interior and exterior design lines; soft or hard lines; starting point of haircut; sectioning and parting patterns; angles of lift in degrees; distribution of hair. Students will also be expected to demonstrate the following knowledge: - basic principles of geometry, angles and shapes as they apply to haircutting; - angles that relate to lines in haircut structures; - meaning of the key terminology for haircuts and how these features are used in the hair cutting process; - shape and structure for these types of haircut structures; - starting point, sectioning and parting patterns and the impact on the finished result for these types of haircut structures; - design guidelines used for these types of haircut structures; - design guideline directions and when these are used; - angles of lift and distribution used for these types of haircut structures, and; - key characteristics and interrelationships of the elements and principles of hair design and their use in creating haircut structures and effects.

SHBHUT002 Create one length or solid haircut structures

Locations: Industry, City King St.

Prerequisites: SHBHUT001 - Design haircut structures

Description: This unit describes the performance outcomes, skills and knowledge required to consult with clients and analyse hair and facial characteristics to design and recommend complementary one length or solid haircuts. It requires the ability to cut hair into one length or solid hair cut structures and to finish hair to shape.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least three clients and complete a pre-service analysis covering the following characteristics to create and recommend appropriate one length or solid form hair cut designs: facial features and bone structure; natural hair type; hair texture; hair density; growth patterns; fall and movement, and; - complete one length or solid form haircuts for the above three clients to their satisfaction to include these lengths: above shoulder length; below shoulder length. Students will also be expected to demonstrate the following knowledge: - different facial shapes and one length or solid form haircut designs which best complement particular shapes; - characteristics of the following hair features, how these will impact on finished one length or solid form haircuts and appropriate designs for best outcomes: natural hair types; hair texture; hair movement; natural distribution and growth patterns of hair; - shapes, structure and texture for one length or solid form haircut structures; - starting point, sectioning and parting patterns and the impact on the finished result for one length or solid form haircut structures; - required angle of scissors to base parting to achieve one length or solid form structures; - reasons for using minimum lift and natural fall to achieve one length or solid form haircut structures; - importance of client head position and impact on finished haircut result; - cleaning techniques and uses of cleaning and disinfection products for haircutting equipment; - basic aspects of local government, state or territory health regulations for hygiene and infection control for haircutting services; - industry practices and organisational procedures; - minimising product wastage, and; - waste disposal with particular emphasis on environmentally sound disposal methods for hair waste.

SHBHUT003 Create graduated haircut structures

Locations: Industry, City King St.

Prerequisites:SHBHCU001 - Design haircut structures

Description:This unit describes the performance outcomes, skills and knowledge required to consult with clients and analyse hair and facial characteristics to design and recommend complementary graduated haircuts. It requires the ability to cut hair into graduated hair cut structures and to finish hair to shape.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least three (3) clients and complete a pre-service analysis covering the following characteristics to create and recommend appropriate graduated hair cut designs: facial features and bone structure; natural hair type; hair texture; hair density; growth patterns; fall and movement; - complete graduated haircuts for the above three clients to their satisfaction and cumulatively use these cutting techniques across the haircuts completed: blunt cutting; notching; pressure graduation. Students will also be expected to demonstrate the following knowledge: - different facial shapes and graduated haircut designs which best complement particular shapes; - characteristics of the following hair features, how these will impact on finished graduated haircuts and appropriate designs for best outcomes: natural hair types; hair texture; hair movement; natural distribution and growth patterns of hair; - shapes, structure and texture for graduated haircut structures; - starting point, sectioning and parting patterns and the impact on the finished result for graduated haircut structures; - required angle of scissors to base parting to achieve graduated haircut structures; - relationship between angle of fingers, angle of scissors and amount of pressure when using pressure graduation for graduated hair structures; - importance of client head position and impact on finished haircut result; - cleaning techniques and uses of cleaning and disinfection products for haircutting equipment; - basic aspects of local government, state or territory health regulations for hygiene and infection control for haircutting services, and; - industry practices and organisational procedures.

SHBHCU004 Create layered haircut structures

Locations:Industry, City King St.

Prerequisites:SHBHCU001 - Design haircut structures

Description:This unit describes the performance outcomes, skills and knowledge required to consult with clients and analyse hair and facial characteristics to design and recommend complementary layered haircuts. It requires the ability to cut hair into both uniform and increased layered hair cut structures and to finish hair to shape.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least three (3) clients and complete a pre-service analysis covering the following characteristics to create and recommend appropriate layered hair cut designs: facial features and bone structure; natural hair type; hair texture; hair density; growth patterns; fall and

movement; - complete layered haircuts for the above three clients to their satisfaction and cumulatively use these cutting techniques across the haircuts completed: blunt cutting; pointing; notching; end tapering with texturising scissors, and; - complete at least one uniform and one increased layered haircut across the suite of clients serviced. Students will also be expected to demonstrate the following knowledge: - different facial shapes and layered haircut designs which best complement particular shapes; - characteristics of the following hair features, how these will impact on finished layered haircuts and appropriate designs for best outcomes: natural hair types; hair texture; hair movement; natural distribution and growth patterns of hair; - shapes, structure and texture for both uniform and increased layered haircut structures; - starting point, sectioning and parting patterns and the impact on the finished result for both uniform and layered haircut structures; - required angle of scissors to base parting to achieve: uniform layering; increased layering; - importance of client head position and impact on finished haircut result; - cleaning techniques and uses of cleaning and disinfection products for haircutting equipment; - basic aspects of local government, state or territory health regulations for hygiene and infection control for haircutting services, and; - industry practices and organisational procedures.

SHBHCU005 Cut hair using over-comb techniques

Locations:Industry, City King St.

Prerequisites:SHBHCU001 - Design haircut structures

Description:This unit describes the performance outcomes, skills and knowledge required to consult with clients and analyse hair and facial characteristics to design, recommend and complete complementary tapered haircuts. It requires the ability to cut hair using scissor-over-comb and clipper-over-comb techniques, to remove bulk, to blend different structures within haircuts and to outline or blend perimeters of haircuts.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least six (6) clients and complete a pre-service analysis covering the following characteristics to design and recommend appropriate tapered haircuts: facial features and bone structure; natural hair type; hair texture; hair density; growth patterns; fall and movement; - complete haircuts for the above six clients to their satisfaction and cumulatively achieve these taper effects across the haircut completed: gradation; long; medium; short, and; - create these neckline shapes and lengths cumulatively across the tapered haircuts completed: short, medium and long tapered; square, curved, faded and blended. Students will also be expected to demonstrate the following knowledge: - different facial shapes and haircut designs which best complement particular shapes; - characteristics of the following hair features, how these will impact on finished tapered haircuts and appropriate designs for best outcomes: natural hair types; hair texture; hair movement; natural distribution and growth patterns of hair; - shapes, structure and texture for tapered and layered haircut structures; - starting point, sectioning and parting patterns and the impact on the finished result for tapered and layered haircut structures; - relationship between size of the comb and tapering effects; - maintenance requirements for clippers; when and how to clean, oil and adjust blades; - cleaning techniques and uses of cleaning and disinfection products for haircutting equipment; - basic aspects of local

government, state or territory health regulations for hygiene and infection control for haircutting services, and; - industry practices and organisational procedures.

SHBHCU006 Create combined haircut structures

Locations: Industry, City King St.

Prerequisites: SHBHCU002 - Create one length or solid haircut structures SHBHCU003 - Create graduated haircut structures SHBHCU004 - Create layered haircut structures

Description: This unit describes the performance outcomes, skills and knowledge required to consult with clients and analyse hair and facial characteristics to design, recommend and complete a range of complementary haircuts which combine different structures. The combination may involve two or more different structures which can include solid, graduated and layered structures and those tapered haircuts created using over-comb techniques.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least six (6) clients and complete a pre-service analysis covering the following characteristics to design and recommend appropriate haircuts involving structural combinations: facial features and bone structure; natural hair type; hair texture; hair density; growth patterns; fall and movement; - complete haircuts for those six clients to their satisfaction and combine at least two of the following for each haircut completed: solid structures; graduated structures; layered structures; tapered structures; textured areas; straight lines; curved lines; soft lines; hard lines, and; - use at least six of these cutting techniques cumulatively across the haircuts completed: blunt cutting; pointing; notching; slicing; end tapering; strand tapering; scissor-over-comb; clipper-over-comb; razor bevelling, arching and rotation. Students will also be expected to demonstrate the following knowledge: - different facial shapes and combined structured haircut designs which best complement particular shapes; - characteristics of the following hair features, how these will impact on finished haircuts involving structural combinations and appropriate combined structure designs for best outcomes: natural hair types; hair texture; hair movement; natural distribution and growth patterns of hair; - shapes, structure and texture for haircuts that combine two or more haircut structures; - proportional relationships between structures; - starting point, sectioning and parting patterns and the impact on the finished result for haircuts involving structural combinations; - techniques used to create texture and blend haircut structures, and; - industry practices and organisational procedures.

SHBHCU007 Create combined traditional and classic men's haircut structures

Locations: Industry, City King St.

Prerequisites: SHBHCU002 - Create one length or solid haircut structures SHBHCU003 - Create graduated haircut structures SHBHCU004 - Create layered haircut structures SHBHCU005 - Cut hair using over-comb techniques

Description: This unit describes the performance outcomes, skills and knowledge required to consult with clients and analyse hair and facial characteristics to design, recommend and complete a range of complementary traditional and classic men's haircuts which combine different structures. The combination may involve two or more different structures which can include solid, graduated and layered structures

and those tapered haircuts created using over-comb techniques.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least six (6) clients and complete a pre-service analysis covering the following characteristics to design and recommend appropriate haircuts involving structural combinations: facial features and bone structure; natural hair type; hair texture; hair density; growth patterns; fall and movement; - complete these types of traditional and classic men's haircuts cumulatively across the six clients serviced to their satisfaction: short back and sides; medium and long tapered; medium fashion cut textured on top, and; - use at least six of these cutting techniques cumulatively across the haircuts completed: scissors over-comb tapering; clippers over-comb tapering; serrated scissors over-comb thinning; layering; blunt cutting; graduation; texturising; cutting straight lines; cutting curved lines; cutting square shapes; cutting soft and hard lines. Students will also be expected to demonstrate the following knowledge: - different facial shapes and combined structure haircut designs which best complement particular shapes; - characteristics of the following hair features, how these will impact on finished haircuts involving structural combinations for traditional and classic men's haircuts and appropriate combined structure designs for best outcomes: natural hair types; hair texture; hair movement; natural distribution and growth patterns of hair; - shapes, structure and texture for traditional and classic men's haircuts that combine two or more haircut structures; - proportional relationships between structures; - starting point, sectioning and parting patterns and the impact on the finished result for haircuts involving structural combinations; - techniques used to create texture and blend traditional and classic men's haircut structures, and; - industry practices and organisational procedures.

SHBHCU009 Cut hair using freehand clipper techniques

Locations: Industry, City King St.

Prerequisites: SHBHCU001 - Design haircut structures

Description: This unit describes the performance outcomes, skills and knowledge required to consult with clients and analyse hair and facial characteristics to design, recommend and complete complementary haircuts using freehand clipper techniques.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least six clients and complete a pre-service analysis covering the following characteristics to design and recommend appropriate clipper haircuts: facial features and bone structure; natural hair type; hair texture; hair density; growth patterns; fall and movement; - complete haircuts for the above six clients to their satisfaction and cumulatively complete these types of haircuts: flat tops; clipper cuts; style cuts; - create cuts of at least four different lengths using different sized clipper attachments across the haircuts completed, and; - create these neckline shapes cumulatively

across the haircuts completed: square; curved; faded and blended. Students will also be expected to demonstrate the following knowledge: - different facial shapes and freehand clipper haircuts which best complement particular shapes; - characteristics of the following hair features, how these will impact on finished tapered haircuts and appropriate designs for best outcomes: natural hair types; hair texture; hair movement; natural distribution and growth patterns of hair; - shapes, structure and texture for haircuts created using freehand clipper techniques; - starting point and sequencing of cutting patterns and the impact on the finished result for clipper haircuts; - relationship between size of the clipper attachment and clipper effects on hair length; - maintenance requirements for clippers; when and how to clean, oil and adjust blades; - cleaning techniques and uses of cleaning and disinfection products for haircutting equipment; - basic aspects of local government, state or territory health regulations for hygiene and infection control for haircutting services, and; - industry practices and organisational procedures.

SHBHCUT010 Create haircuts using tracks and carving

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to source or create designs for tracks and creative carvings and to incorporate those into haircuts using clippers, scissors, razors or precision trimming tools.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - source at least six different designs for hair tracks and carvings from at least three different sources and compile a portfolio for future use; - consult with at least four clients to determine design preferences and incorporate tracks and creative carvings into haircut structure to their satisfaction, and; - across the above four clients, cumulatively cover: two different track designs; two different creative carving designs. Students will also be expected to demonstrate the following knowledge: - sources of creative track and carving designs; - methods used to visually share designs with clients; - characteristics of the following hair features and how these will impact on finished hair tracks and carvings: natural hair types; hair texture; hair movement; natural distribution and growth patterns of hair; - key features of different types of tools used to create hair tracks and carvings and techniques for using each: clippers; scissors; razors; precision trimming tools; - relationship between size of the clipper or trimmer attachment and effects on hair tracks and carvings; - starting point and sequencing of carving patterns and the impact on the finished result of the design; - maintenance requirements for clippers; when and how to clean, oil and adjust blades; - cleaning techniques and uses of cleaning and disinfection products for haircutting equipment; - basic aspects of local government, state or territory health regulations, and; - industry practices and organisational procedures.

SHBHCUT011 Design and maintain beards and moustaches

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to consult with clients and analyse beard, moustache and facial

characteristics to design, recommend and complete a range of complementary styles. It also involves ongoing maintenance of styles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least five (5) clients, each with different beard and moustache maintenance needs, recommend appropriate designs and complete services which consistently achieve desired outcomes to client satisfaction; - for each client, complete a pre-service analysis covering the following characteristics to determine service requirements: facial features and bone structure; hair texture; hair density; growth patterns of facial and neck hair; blemishes or moles; - integrate the use of health, safety and hygiene practices and procedures and use these cutting techniques cumulatively across the services completed: scissor over-comb; clipper over-comb; clippers with comb guards; shaving. Students will also be expected to demonstrate the following knowledge: - key characteristics and interrelationships of the elements and principles of hair design and use in creating effects which balance and emphasise facial characteristics; - characteristics of the following beard, moustache, facial and skin features, how these will impact on the finished cut and appropriate designs for best outcomes: facial shape and bone structure; hair texture; hair density; natural distribution and growth patterns of facial and neck hair; blemishes or moles; - shapes and structure for beards and moustaches; - relationship between size of the comb and finished effect; - the effects on skin and facial hair of: pre-conditioning products and hot towels; after-shave conditioning products and cold towels; - shaving patterns and directions, in relation to hair growth, and the impact on the finished result; - cleaning techniques and uses of cleaning and disinfection products for beard and moustache cutting equipment; - basic aspects of local government, state or territory health regulations, and; - industry practices and organisational procedures.

SHBHCUT012 Shave heads and faces

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to complete face and head shaves after analysing the client's head, face and hair characteristics for impacting factors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - integrate the use of health, safety and hygiene practices and procedures to complete head and face shaving services for four clients with different head and face shaving needs which consistently produce a smooth, hair-free finish, and; - for each client, complete a pre-service analysis covering the following characteristics to determine service requirements: facial features and bone structure; hair texture; hair density; growth patterns of facial, neck and head hair; blemishes or moles; presence of contraindications to

shaving. Students will also be expected to demonstrate the following knowledge: - characteristics of the following hair and skin features, how these will impact on the choice of shaving techniques and finished shave: facial features and bone structure; hair texture; hair density; natural distribution and growth patterns of facial, neck and head hair; wrinkles; blemishes or moles; - contraindications to shaving; - the effects on skin and hair of: pre-conditioning products and hot towels; after-shave conditioning products and cold towels; - shaving patterns and directions, in relation to hair growth, and the impact on the finished result; - cleaning techniques and uses of cleaning and disinfection products for head and face shaving equipment; - basic aspects of local government, state or territory health regulations, and; - industry practices and organisational procedures.

SHBHCU013 Provide men's general grooming services

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to consult with clients and provide a range of general men's grooming services including trimming eyebrow and ear hair and shaving the neck under a beard. These enhancement services are usually offered in conjunction with haircutting services.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least five clients, recommend general grooming services and cumulatively complete the following services which consistently achieve desired outcomes to client satisfaction: trimming eyebrows; trimming moustaches; trimming ear hair; front of neck shave under beard line. Students will also be expected to demonstrate the following knowledge: - types of tools and techniques used for precision grooming of eyebrow, moustache and ear hair; - contraindications to shaving; - the effects on skin and hair of: pre-conditioning products and hot towels; after-shave conditioning products and cold towels; - shaving patterns and directions, in relation to hair growth, and the impact on the finished result; - cleaning techniques and uses of cleaning and disinfection products for grooming and shaving equipment; - basic aspects of local government, state or territory health regulations, and; - industry practices and organisational procedures.

SHBHDES001 Dry hair to shape

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to use a variety of styling tools to dry hair to shape after services completed by hairdressers or barbers in the salon team.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - follow supervisor's instructions to dry hair to shape for six different clients and consistently achieve the planned outcome; - dry hair to shape for these hair lengths, cumulatively across the suite of clients: short; shoulder length; below shoulder length, and; - achieve these types of finishes, cumulatively across the suite of clients: smooth finishes; textured finishes; volume. Students will also be expected to demonstrate the following knowledge: - key features of the organisation's styling and finishing products range; - drying techniques, equipment and products used to achieve: smooth finishes; textured finishes; volume, and; - industry practices and organisational procedures.

SHBHDES002 Braid hair

Locations: City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes skills and knowledge required to complete full or partial braiding finishes to hair as quick service designs. This unit applies to salon assistants who work in hairdressing salons under close supervision and with guidance from more experienced or senior hairdressers. They use little judgement and follow the instructions specified by the hairdresser who has completed the client consultation and manages the client service. It can also apply to more senior hairdressers completing braiding services.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow supervising hairdresser's instructions to braid hair for five different clients and consistently achieve the planned outcome using these braiding techniques: two strand for two clients; three strand for two clients; multi strand for one client and explain braiding home hair maintenance to each client at the conclusion of the service. Students will also be expected to demonstrate the following knowledge: - different facial shapes and hair braiding designs which best complement particular shapes; - different braiding techniques and the effects created; - home maintenance requirements for braided hair; - industry practices and organisational procedures for client comfort and safety, and; - work health and safety for providing hair styling services.

SHBHDES003 Create finished hair designs

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to consult with clients and analyse hair and facial characteristics to design, recommend and complete a range of complementary classic and current hair designs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least six (6) clients and complete a pre-service analysis covering the following characteristics to

design and recommend appropriate finished hair designs: facial features and bone structure; natural hair type; hair texture; growth patterns; movement; length and structure of haircut; - style and finish hair for the above six clients to their satisfaction, and cumulatively style and finish hair of these lengths and haircut structures: short; shoulder length; below shoulder length; solid form; layered; graduated; combination of structures; - use these tools and techniques, cumulatively across the suite of clients: blow drying using brushes to create curl, wave or volume; blow drying using brushes to straighten or smooth hair; using thermal tools to straighten hair; using thermal tools for curl or texture; applying rollers to set hair, and; - use these finishing techniques, cumulatively across the suite of clients: brushing; dry moulding; placing; backcombing; smoothing over backcombing; applying fixing products. Students will also be expected to demonstrate the following knowledge: - key characteristics and interrelationships of the elements and principles of hair design and use in creating finished hairstyle effects; - different facial shapes and hair designs which best complement particular shapes; - characteristics of the following hair features, how these will impact on finished hairstyles and appropriate designs for best outcomes: natural hair types; hair texture; hair movement; hair length and haircut structure; natural distribution and growth patterns of hair; - effects of thermal tools on hair condition and structure and ways to maintain the integrity of hair during styling; - effects of humidity on finished hairstyles; - key features of the organisation's styling and finishing products range, and; - industry practices and organisational procedures.

SHBHDES004 Create classic long hair up-styles

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to consult with clients and analyse hair and facial characteristics to design, recommend and complete a range of complementary up-styles for long hair. This includes braids, twists, classic rolls and chignons.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least six (6) clients and complete a pre-service analysis covering the following characteristics to design and recommend appropriate long hair up-styles: facial features and bone structure; natural hair type; hair texture; growth patterns; movement; length and structure of haircut; - style and finish hair for the above six clients to their satisfaction, and complete at least four of these long hair up-styles cumulatively across the clients: braids; classic French rolls; twists; classic chignons; donut roll with padding; vintage rolls; - use these tools and techniques, cumulatively across the suite of clients, to prepare hair for up-styling: blow drying using brushes to create curl, wave or volume; blow drying using brushes to straighten or smooth hair; applying hot rollers to set hair, and; - use these finishing techniques, cumulatively across the suite of clients: brushing; dry moulding; placing; backcombing; smoothing over backcombing; securing hair using bands or pins not visible in finished design; applying fixing products. Students will also be expected to demonstrate the following knowledge: - key characteristics and interrelationships of the elements and principles of hair design and use in creating finished long hair up-style effects; - different facial shapes and long hair up-styles which best complement particular shapes; -

662

characteristics of the following hair features, how these will impact on finished long hair up-styles and appropriate designs for best outcomes: natural hair types; hair texture; hair movement; haircut structure; natural distribution and growth patterns of hair; - effects of thermal tools on hair condition and structure and ways to maintain the integrity of hair during styling; - effects of humidity on finished long hair up-styles; - key features of the organisation's styling and finishing products range, and; - industry practices and organisational procedures.

SHBHIND001 Maintain and organise tools, equipment and work areas

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to maintain, organise and clean tools, equipment and work areas to ensure a clean and tidy client environment and the hygienic and safe provision of hair services. Complex and scheduled maintenance would be referred to specialist service technicians.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use infection control precautions, health regulations and organisational policies and procedures to maintain, clean (and disinfect, as required), and; - check electrical equipment located in each of the two chosen areas for loose wires; tag and report any faulty equipment. Students will also be expected to demonstrate the following knowledge: - the transmission routes of infectious conditions as they apply to cleaning and disinfection activities; - key features of, and reasons for, standard infection-control precautions as they apply to cleaning and disinfection activities; - key aspects of local government, state or territory health regulations applicable to hairdressing and barbering services, with particular emphasis on requirements for cleaning and disinfecting linen, tools, equipment, work surfaces and areas; - common types of cleaning and disinfection products; - safe practices for using and storing; - environmentally sound disposal methods for hazardous waste; - safe techniques for maintaining tools and equipment to avoid personal injury; - safe manual handling techniques for moving and storing hairdressing or barbering equipment; those for bending, lifting and carrying heavy equipment; - types and correct use of personal protection equipment for maintaining hairdressing or barbering equipment and completing cleaning and disinfection activities; - manufacturer's instructions and techniques for cleaning, oiling and resetting scissors and clippers, and; - industry practices and organisational policies and procedures.

SHBHIND003 Develop and expand a client base

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required by hairdressers and barbers to develop, sustain and expand a personal clientele in order to remain a viable industry employee. Building relationships with clients occurs while hairdressers and barbers are delivering a range of services in the salon in which they are employed or operate.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - proactively promote these types of hair products and services to clients; - research two new products and two new services using at least two of the following methods: reading trade, hair and fashion magazines; attending trade shows and industry product launches; reading product and service information; obtaining information from professional industry associations; discussions with colleagues, and; - share the information collected with colleagues, through informal discussions. Students will also be expected to demonstrate the following knowledge: - full details of the salon's; - role of hairdressers and barbers in maximising business performance through effective sales and promotion; - different client types and their product and service preferences; - professional ethics for promoting hair products and services; - ways of presenting and promoting products and service to meet different client communication styles; - sales techniques; - methods used to research new products and services, and; - organisational client service policies and procedures.

SHBHREF002 Straighten and relax hair with chemical treatments

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to consult with clients, analyse hair characteristics and condition and to complete chemical treatments to reduce curl or wave in the hair. Treatments can be for untreated naturally curly or wavy hair or for chemically treated hair.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least four (4) clients, each with different hair straightening needs, and cumulatively complete these treatments which consistently achieve the planned degree of hair straightening or relaxation and without hair breakage: chemical treatments on untreated natural curly or wavy hair; chemical treatments on chemically treated hair; chemical treatments on strong or resistant natural curls; - for each client, complete a pre-treatment hair analysis covering the following characteristics to recommend appropriate chemical straightening treatments: hair and scalp condition; hair texture; hair density; hair porosity; degree of curl or wave; length of hair; effects on hair of previous chemical services, and; - record the following details of the chemical straightening service in the history for each client serviced: pre-service hair analysis; contraindications; desired degree of relaxation; products, strengths and processing times used; straightening methods used; degree of relaxation achieved; recommended home care products. Students will also be expected to demonstrate the following knowledge: - key characteristics and interrelationships of the elements and principles of hair design and use in achieving hair straightening and relaxation effects; - hair biology, at an elementary level of understanding; - physical effects of chemical products and treatments on the skin; - main structure, functions and role of the skin and glands; - basic concepts of cosmetic chemistry, as they apply to effective and safe use of

chemical straightening products; - at an elementary level of understanding, the chemical and physical effects on hair structure and bonds, texture and curl or wave of: protein fillers; chemical straightening and relaxing products; post-process conditioners; neutralisers; application of heat; - key factors that influence degree of relaxation achieved; - contraindications to using chemical hair straightening products; - organisation's chemical hair straightening products range; - basic aspects of local government, state or territory health regulations applicable to providing chemical hair reformation services, and; - industry practices and organisational procedures.

SHBHREF003 Straighten and relax hair with protein treatments

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to consult with clients, analyse hair characteristics and condition and to complete protein treatments to reduce curl or wave in the hair. Treatments can be for untreated naturally curly or wavy hair or for chemically treated hair.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with at least four (4) clients, each with different hair straightening needs, and cumulatively complete these treatments which consistently achieve the planned degree of hair straightening or relaxation and without hair breakage: protein treatments on untreated natural curly or wavy hair; protein treatments on chemically treated hair; protein treatments on strong or resistant natural curls; - for each client, complete a pre-treatment hair analysis covering the following characteristics to recommend appropriate protein straightening treatments: hair and scalp condition; hair texture; hair density; hair porosity; degree of curl or wave; length of hair; effects on hair of previous chemical services, and; - record the following details of the protein straightening service in the history for each client serviced: pre-service hair analysis; contraindications; desired degree of relaxation; products and processing times used; straightening methods used; degree of relaxation achieved; recommended home care products. Students will also be expected to demonstrate the following knowledge: - key characteristics and interrelationships of the elements and principles of hair design and use in achieving hair straightening and relaxation effects; - hair biology, at an elementary level of understanding; - at an elementary level of understanding, the physical effects on hair structure and bonds, texture and curl or wave of: protein straightening and relaxing products; post-process conditioners; booster sprays; application of heat; - key factors that influence degree of relaxation achieved: hair porosity; hair condition; degree of initial curl or wave; product type; processing time; environmental humidity; smoothing methods; - contraindications to using protein hair straightening products; - organisation's protein hair straightening products range; - basic aspects of local government, state or territory health regulations applicable to providing hair reformation services, and; - industry practices and organisational procedures.

SHBHTR1001 Identify and treat hair and scalp conditions

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to recognise a range of hair and scalp conditions as part of a pre-hair service

analysis, to advise on and provide remedial treatments for minor conditions and to advise clients to seek further advice for abnormal or contagious conditions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - complete a hair and scalp analysis on five (5) different clients to determine suitable salon treatment options and products for: chemically treated hair; physically damaged hair; highly stressed hair; hair conditions that would benefit from protein and moisture treatments; - integrate the use of infection control precautions and organisational procedures to complete these types of head and scalp treatments for three different clients: protein treatments; moisture treatments; medicated treatments, and; - record the following details of the hair and scalp treatment service in the history for each client serviced: pre-treatment analysis; client symptoms; treatment and products used; outcomes achieved; recommended home care treatment and products. Students will also be expected to demonstrate the following knowledge: - skin biology, at an elementary level of understanding; - common abnormal scalp conditions, symptoms and visual signs; - visual characteristics of these hair and scalp types; - types of hair conditions that can benefit from protein and moisture treatments, when and why these would be used; - key features of the organisation's remedial hair and scalp treatment range; - types of finishing techniques and equipment that should be used post treatment to avoid further hair damage and breakage; - the transmission routes of infectious conditions; - key features of, and reasons for, standard infection-control precautions; - basic aspects of local government, state or territory health regulations applicable to hair and scalp treatments, and; - industry practices and organisational procedures.

SHBXCCS001 Conduct salon financial transactions

Locations:Industry, City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to conduct financial transactions for the sale of products and services within a personal services environment. It requires the ability to operate point-of-sale equipment, handle cash, complete sales and reconcile takings.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - operate electronic point-of-sale equipment to accurately perform each of the following transactions on at least two occasions: cash sales, non-cash sales, credit card, EFTPOS, refunds/exchanges; - demonstrate the following secure payment handling procedures for all transactions listed above: - balancing point-of-sale terminal; - calculating non-cash documents; - clearing terminal and transferring tender; - counting cash; - determining change required and denominations of change; - ensuring security of cash and non-cash

transactions; - maintaining cash float; - opening and closing of point-of-sale terminal; - recording takings; - securing cash and non-cash transactions, and; - tendering change. Students will also be expected to demonstrate the following knowledge: - cash and non-cash handling procedures; - organisational policies and procedures relevant to financial transactions; - work health and safety; - functions and procedures for operating point-of-sale equipment; - relevant federal, state or territory legislation: consumer protection; privacy; GST, and; work health and safety.

SHBXCCS002 Provide salon services to clients

Locations:Industry, City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to provide a complete customer service experience. It requires the ability to communicate with clients face-to-face or by telephone, schedule appointments, attend and respond to client complaints, and assist clients with special needs.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - integrate hairdressing or beauty technical skills, and provide service to hairdressing or beauty clients for a minimum of twelve, three hour work periods that individually or in combination demonstrate: accessing client records; appropriate verbal and non-verbal communication; correct telephone techniques; dealing with clients in a culturally appropriate manner; dealing with difficult or abusive clients; effective questioning and active listening techniques to establish client needs; face to face communication techniques; greeting and farewelling techniques; interpreting and maintaining client records; receiving clients and making appointments; resolving complaints with remedial actions, and; scheduling client appointments. Students will also be expected to demonstrate the following knowledge: - principles of quality customer service and positive communication techniques; - essential features, conventions and usage of these types of communication media; - industry expectations of hairdressing and beauty workers; - federal, state or territory legislation relevant to providing salon service to clients; - organisational policies and procedures; - possible remedial actions for resolving client complaints; - special packages of services; - special needs of client, and; - organisational processes and equipment.

SHBXCCS003 Greet and prepare clients for salon services

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to meet, greet and prepare clients for a range of beauty treatments, hairdressing or barbering services. This unit applies to assistants who work in beauty, hairdressing or barber salons under close supervision and with guidance from more experienced or senior operators. They use little judgement and follow procedures and instructions specified by the senior who will manage the client service.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow organisational procedures for meeting and greeting clients and preparing for them for service over four two hour work periods, and; - across those work periods, cumulatively prepare clients for at least four different treatments or services and consistently follow senior operator instructions. Students will also be expected to demonstrate the following knowledge: - overview of the range of treatments and services offered by the salon to prepare clients for each; - features and functions of the salon booking system to interpret details of client bookings, and; - organisational procedures for meeting and greeting clients and preparing for service.

SHBXCCS004 Recommend products and services

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to develop and update knowledge of the organisation's product and service range and to recommend products and services suited to customer needs. Products and services will vary according to the particular business type but can include any from a hair, barbering, beauty or cosmetics range.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access and correctly interpret information from two (2) different sources about four (4) different products or services from the organisational range, and; - interact with four (4) different customers, each with different product and service requirements, to recommend suitable products or services to be chosen individually or jointly from a range of: hair products and services; barbering products and services; beauty products and services; retail cosmetic products and services. Students will also be expected to demonstrate the following knowledge: - sources and format of product and service information; - details of organisational product and service range; - basic aspects of Australian Consumer Law as it applies to performance claims, guarantees and product returns, and; - organisational procedures for recommending hair, barbering, beauty or cosmetic products and services.

SHBXIND001 Comply with organisational requirements within a personal services environment

Locations: Industry, Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to work in a personal services environment by integrating knowledge of workplace rights and responsibilities and organisational policies and procedures, and by using effective team and individual work practices to plan and organise daily work activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access and interpret information about employment rights and responsibilities from these sources: employer associations; Fair Work Commission; Fair Work Ombudsman; state and territory government boards and commissions for anti-discrimination and equal employment opportunity (EEO); staff handbooks, and; trade unions; - source information on this range of employee and employer workplace rights and responsibilities; - access and interpret organisational policies and procedures that relate to general work practices, and; - integrate hairdressing or beauty technical skills (SHB service or treatment-related units), and comply with organisation requirements for a minimum of four, three hour work assessment periods that individually or in combination demonstrate: applying workplace dress, hygiene and personal presentation requirements; working effectively as a team member; planning and organising work activities. Students will also be expected to demonstrate the following knowledge: - sources of information on employment rights and responsibilities as specified in Performance Evidence; - basic aspects of employment related laws covering rights and responsibilities of employees and employers as specified in the Performance Evidence; - basic aspects of industrial awards for hairdressing and beauty employees relevant to own job role; - primary functions of trade unions for hairdressing and beauty employees relevant to own job role; - organisational policies and procedures that relate to general work practices as specified in the Performance Evidence; - typical terms and conditions of employment for hairdressing and beauty businesses relevant to own job role, and; - general role boundaries and responsibilities for key hairdressing and beauty industry staff: beauticians; nail technicians; make-up artists; hairdressers; beauty and spa therapists, and; supervisors and managers within hairdressing and beauty businesses.

SHBXIND002 Communicate as part of a salon team

Locations: Industry, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to work as part of a team in a salon or retail cosmetics environment. It requires the ability to communicate with colleagues and senior staff and actively participate in a team work environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - effectively communicate with team members and contribute to team outcomes while participating in at least three day-to-day sales and services activities, and; - participate in one team meeting to discuss a sales and service problem and actively contribute towards a resolution. Students will also be expected to demonstrate the following knowledge: - conventions and use of a range of communication methods; - communication techniques and use in a team context; - effective communication techniques with team members of diverse backgrounds; - team work principles and the role of teamwork in the achievement of workplace goals; - role of feedback in the achievement of team goals; - problem-solving strategies for use in the achievement

of team goals; - techniques for supporting team members in the achievement of required workplace outcomes, and; - standards expected of personal services industry employees in relation to team work.

SHBXWHS001 Apply safe hygiene, health and work practices

Locations: Industry, Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to follow safe practices to minimise risks to self, client and colleagues in a salon environment. It requires the ability to follow hygiene and skin penetration guidelines, clean the work area, use electricity safely, identify and report faults, use personal protection and work safely.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - integrate the use of predetermined health, safety and security policies, procedures and safe work practices into day-to-day work functions across six, three hour work, training or assessment periods which must be combined with assessment of SHB coded units; - clean general salon area; - participate in two hazard identification and associated risk assessment activities, and; - respond in line with organisational emergency procedures during one emergency evacuation. Students will also be expected to demonstrate the following knowledge: - basic aspects of the relevant state or territory Occupational Health and Safety (OHS) or Work Health and Safety (WHS) legislation; - industry and organisational procedures relevant to own job role; - format and use of template; - hierarchy of risk control; - safe work practices for own job role with particular emphasis on: safe use of tools and equipment; safe use and storage of hazardous substances and cleaning products; safe manual handling techniques for bending, lifting and shifting heavy items; potential injury and illness impacts of unsafe beauty work practices including bullying and harassment; - relevant state or territory and local legislation and guidelines relevant to own job role; - infection control procedures relevant to salon treatments and to own job role; - organisational infection control procedures; - infectious agents and their relationship to salon treatments and service; - transmission routes of infectious diseases and their relationship to personal services and treatments; - blood to blood infections; - contingency procedures for occupational exposure to blood and body fluid; - infectious contraindications and required action steps; - appropriate selection and use of personal protective equipment relevant to own job role; - immunisation protection for workers in the personal services industry; - methods of cleaning procedures used in a salon environment; - benefits of physical, thermal and chemical disinfection; - different types, dilutions and storage of chemical disinfection products; - safe use of electrical equipment and according to manufactures instructions relevant to own job role, and; - causes of static electricity and minimisation in a salon environment.

SISFFIT001 Provide health screening and fitness orientation

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to identify client fitness requirements, administer a pre-exercise health screening questionnaire and advise clients of appropriate fitness programs, services

and facilities. This involves using industry endorsed risk stratification procedures when determining the provision of suitable advice regarding services and referral requirements. This unit applies to fitness instructors who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work independently with some level of autonomy in a controlled environment. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use a risk stratification process for each client contact session for clients with differing needs, goals and preferences; - conduct calculations and measurements to adequately complete health screening procedures: waist circumference; waist to hip ratio; body mass index; - explain available programs, services and facilities to match each client's needs, goals and preferences; - prepare referral letters with supporting pre-exercise health screening documentation for at least two clients to a relevant medical or appropriate allied health professional when guidance and feedback is required regarding exercise participation; - prepare referral letter for at least one client to a more highly qualified fitness professional, such as a personal trainer, when either the: client requests personal training services, and; client's needs, goals and preferences are suited to the scope of practice of a fitness professional more highly qualified than a fitness instructor; - interact with all clients in a professional manner, and; - use appropriate communication strategies and organisational channels to collect and handle sensitive information. Students will also be expected to demonstrate the following knowledge: - legislation and regulatory requirements; - industry endorsed client pre-exercise health screening processes; - industry endorsed risk stratification procedures, exercise implications and referral requirements; - features and benefits of fitness facilities, exercise programs and services; - essential information and protocols for completion of referrals; - role of medical or allied health professionals for referral processes; - role of relevant personnel for referral processes, and; - considerations to be aware of in the following specific population client presentations.

SISFFIT002 Recognise and apply exercise considerations for specific populations

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to recognise exercise considerations common to specific population groups. It requires the ability to understand anatomical and physiological considerations and apply that understanding to client exercise participation aimed at improving health-related components of fitness. This unit applies to fitness instructors working within the industry endorsed scope of practice when providing advice regarding fitness services and referral requirements for clients from the following specific population groups: - children; - women; - older adults; - clients with a disability, and; - culturally and linguistically diverse (CALD) groups. This unit does not apply to provision of exercise to higher risk specific population clients, or inappropriate exercise prescription for moderate risk clients. This unit applies to fitness instructors who typically work independently with some level of autonomy in a controlled

environment. Work is performed according to relevant legislation including working with children and/or vulnerable people checks, and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use industry endorsed pre-exercise screening tools and risk stratification processes to identify the risk level of at least ten clients across the following specific population groups: children and adolescents; women; older adults; clients with a disability; culturally and linguistically diverse (CALD) groups; - prepare referral letters to relevant medical or appropriate allied health professionals with supporting pre-exercise health screening documentation for a client from each specific population group; - plan, document, implement and evaluate suitable exercise programs within scope of practice for specific population clients: five clients that don't require guidance or instruction provided by medical or allied health professionals; five clients in response to guidance or instruction provided by medical or allied health professionals- conduct sessions; - modify programs for clients, and; - conduct periodic ongoing evaluation of outcomes from fitness programs in accordance with the established program goals and industry best practice. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements regarding specific population exercise participation; - organisational policies and procedures in regards to specific population exercise participation; - industry endorsed client pre-exercise screening processes; - industry endorsed risk stratification procedures, exercise implications and referral requirements; - precautions to exercise relevant to the specific population in accordance with industry guidelines where applicable; - benefits versus risk of participation; - situations where cessation of exercise program is required; - signs and symptoms of poor exercise tolerance or unstable condition; - role of medical or allied health professionals for referral processes; - typical anatomical and physiological considerations for the following specific population groups; - appropriate management for signs and symptoms of intolerance or an unstable condition; - potential or actual effect of the condition on exercise behaviour, and; - exercise adherence strategies.

SISFFIT003 Instruct fitness programs

Locations:Footscray Park, Industry, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, knowledge and skills required to plan, instruct and evaluate a variety of fitness programs and circuit sessions aimed at the health-related components of fitness. It involves programming and instruction of cardiovascular, resistance and flexibility programs for low or moderate risk clients who have completed industry endorsed pre-exercise screening and risk stratification procedures. This unit applies to fitness instructors who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work independently with some level of autonomy in a controlled environment. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan, document, implement and evaluate at least five fitness programs using the principles of program design to suit the needs of clients with goals related to health-related components of fitness; - plan, document, implement and evaluate at least three circuit training sessions with interrelated components; - conduct sessions, and; - modify programs for clients. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements regarding fitness programs, sessions and circuit sessions; - organisational policies and procedures; - principles of program design; - fitness program planning for improvement of health-related components of fitness; - program design and variables relevant to health-related components of fitness and factors affecting program design; - components of a circuit training session plan; - circuit training session planning considerations and inclusions; - training methods and consideration of intensity, program types, sets and reps, circuits, matrices, super-sets, pre-fatigue and interval training; - benefits of fitness sessions and circuit sessions; - contraindications and precautions to participation in session, and suitable modification options for participants where the safety of the participant is not compromised; - exercises and programming requirements; - effects of different exercises on the major body systems; - methods of monitoring exercise intensity, techniques and progression; - manufacturer and exercise equipment specifications for safe use and techniques; - signs and symptoms of exercise intolerance, and; - motivational techniques and exercise adherence strategies.

SISFFIT004 Incorporate anatomy and physiology principles into fitness programming

Locations:Footscray Park, Industry, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to incorporate an understanding of the human body structure and physiology into fitness instruction, programming and provision of fitness advice. This unit applies to fitness instructors who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work independently with some level of autonomy in a controlled environment. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - effectively use knowledge of the following body systems to improve own instructional practice to plan and instruct at least five different client sessions: cardiovascular; respiratory; musculoskeletal, with attention to bone strength, muscle endurance and muscle strength; nervous; digestive, and; - explain and demonstrate: the major movements of the body, while identifying major muscles; actions of major joints during exercise; relevant information regarding structure and function of skeletal muscle, and process of

muscle contraction during exercise; muscle actions and functions during different types of contractions. Students will also be expected to demonstrate the following knowledge: - anatomical terminology; - movement terminology and muscle actions; - structural levels of body organisation; - functions of major muscles during exercise and movement; - types of muscle contractions; - tissue types; - body systems, their interdependence and contribution to a healthy body; - structure and function of: muscles, nervous system, skeletal system, cardiovascular system and respiratory system; - energy systems, pathways and substrates and relevant recovery options; - thermoregulation of the human body, and; - exercises to promote ideal postural alignment and prevent development of pathological postures.

SISFFIT005 Provide healthy eating information

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to provide healthy eating information and support healthy attitudes to eating and body composition. This is undertaken in accordance with recommended guidelines within industry endorsed scope of practice. The scope of practice of a fitness instructor does not include: - the provision of specific or individualised dietary analysis or advice, or information regarding: specific diets, fad diets, nutritional supplementation, sports foods, ergogenic aids and nutrition for exercise or sports performance; - the provision of information or advice to people with medical conditions requiring specialised dietary advice, or to frail elderly people who are at risk of malnutrition, and; - the provision of dietary information or advice for infants and toddlers. The fitness instructor must refer clients to an Accredited Practising Dietitian, Accredited Sports Dietitian, or General Practitioner as appropriate. This unit applies to fitness instructors who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work independently with some level of autonomy in a controlled environment. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access and provide each client with: current healthy eating information from identified current healthy eating information resources; information on healthy eating related to the maintenance of health and prevention of chronic disease; - answer client queries and concerns regarding interpretation of healthy eating information; - collaborate with clients to implement healthy eating habits, and; - identify and prepare referrals for at least five clients to an Accredited Practising Dietitian, Accredited Sports Dietitian and/or General Practitioner as required: clients who have specific dietary requirements or dietary concerns; clients who need support regarding positive attitudes to eating. Students will also be expected to demonstrate the following knowledge: - information to promote positive attitudes to eating and body composition; - current healthy information resources; - relevant current healthy eating information as outlined in the Australian Dietary Guidelines; - own role and limitations in providing healthy eating information; - role of Accredited Practising Dietitian, Accredited Sports Dietitian and General Practitioner for referring clients; - effects of cultural and social

influences on food choices; - referral requirements, and; - concept of metabolism and the factors affecting metabolism.

SISFFIT006 Conduct fitness appraisals

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to plan and conduct fitness appraisals, related to the health-related components of fitness. It requires the ability to determine positive behavioural change strategies in preparation for an exercise program and use fitness appraisal equipment according to manufacturer guidelines. This occurs after the completion of an industry endorsed risk stratification process and the subsequent referral of clients where required. This unit applies to fitness instructors who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work independently with some level of autonomy in a controlled environment. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and conduct health and fitness appraisals incorporating the following assessments for each client: cardiorespiratory endurance (submaximal oxygen consumption); blood pressure; range of movement/flexibility; strength; weight; height; body mass index; waist to hip ratio; girth measurements, and; - use the following fitness appraisal equipment appropriately and safely: tape measure; scales; sit and reach tools; bicycle, treadmill or rowing ergometer; heart rate monitor; blood pressure equipment - sphygmomanometer; stop watch. Students will also be expected to demonstrate the following knowledge: - legislation and regulatory requirements; - organisational policies and procedures; - industry endorsed client pre-exercise health screening processes; - industry endorsed risk stratification procedures, exercise implications and referral requirements; - features and benefits of fitness facilities, exercise programs and services; - role of medical or allied health professionals for referral processes; - health-related components of fitness; - contraindications and precautions to participation in health and fitness assessments; - benefits of fitness appraisal procedures and testing; - signs and symptoms of exercise intolerance; - interpretation of results from health and fitness assessments; - methods for measuring exercise intensity; - products and services available in the fitness industry that could be used to meet client goals, and; - exercise adherence and behavioural change strategies.

SISFFIT007 Instruct group exercise sessions

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to plan, instruct, monitor and evaluate group exercise sessions, with or without music. It requires the ability to plan the selection, sequencing and progression of exercises and appropriate music to ensure safe participation in activities. This unit applies to fitness instructors who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work independently with some level of autonomy in a controlled environment. Work

is performed according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan, instruct and evaluate at least five group exercise sessions; - conduct sessions that individually or cumulatively incorporate: pre-session instructions; safe and effective instructional techniques; modification of exercise options to meet individual needs; music to match participant needs; - monitor exercise intensity during every session using at least one of the following methods: heart rate response; perceived rate of exertion; talk test, and; - use the following communication skills: clear verbal communication; modelling and demonstration; use motivational techniques. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements regarding group exercise sessions and group circuit sessions; - organisational policies and procedures; - benefits of group exercise sessions; - contraindications and precautions to participation in selected group exercise session, and suitable modification options for participants where the safety of the participant is not compromised; - industry accepted guidelines and recommendations for determining contra-indications and precautions; - potentially harmful practices to be avoided; - intervention strategies; - variations to group exercise sessions; - phases of group exercise sessions; - function and safety of equipment suitable for group exercise to music; - motivational techniques relevant to group exercise sessions; - current industry guidelines relevant to group exercise sessions; - principles of exercise program design; - industry recognised repertoire for targeting cardiovascular, strength and conditioning and flexibility goals; - the use of music in a group exercise to music session; - realistic timings of original choreography for sessions, or parts of sessions, and sequencing of choreography to suit session type; - safe and effective exercises and combinations of exercises in group sessions to suit the needs of beginners, intermediate and advanced participants, and; - group management techniques to assist individuals within the group to achieve desired outcomes.

SISFFIT011 Instruct approved community fitness programs

Locations:Footscray Park, Industry, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to instruct an approved community fitness program designed to promote wellbeing and increase physical activity levels in community groups. Program evaluation is the responsibility of the approving authority. This unit applies to fitness and recreation program instructors who work with a range of clients in a variety of locations including aquatic, recreation, leisure, fitness, gym and community centres.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - instruct three approved community fitness programs, that individually or cumulatively incorporate: clear and accurate instructions and pre-session information: personal introduction; verbal pre-screen; session level outline and demonstration and explanation of exercises; well-timed visual and verbal cueing; class organisation and formation; emergency procedures; appropriate and safe footwear and clothing; rests; correct exercise techniques and breathing; - modification of exercise options to meet individual needs; - sensitivity to social and cultural differences or needs; - regular encouragement and feedback to clients during session, and; - use the following communication skills: clear verbal communication; modelling and demonstration, and; motivational techniques. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements regarding community fitness programs; - organisational policies and procedures; - approved community fitness programs; - instructional techniques to enable effective delivery and monitoring of program; - general characteristics of main cultural and social groups in Australian society and key aspects that relate to client cultural and religious protocols and preferences for exercise, and; - injury prevention strategies to maximise client participation in the program.

SISFFIT013 Instruct exercise to young people aged 13 to 17 years

Locations:Footscray Park, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to plan, instruct and evaluate exercise for young people aged thirteen to seventeen years. It requires the ability to supervise young people using fitness facilities and relevant equipment to promote functional capacity and fitness. It involves using industry endorsed risk management protocols when determining the provision of suitable exercise services. This may include guidance from relevant medical or allied health professionals. This unit applies to personal trainers who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work autonomously in controlled and uncontrolled fitness environments.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conduct age and skill appropriate baseline assessments; - plan, implement and evaluate at least five fitness programs for young people that reflect appropriate developmental stages, age and ability variations, and; - use the following communication skills: clear verbal communication; modelling and demonstration; motivational techniques. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements regarding safe and appropriate conduct of exercise for children and young adolescents; - organisational policies and procedures; - exercise programming and progression principles; - health-related components of fitness; - functional exercises for motor skills related to participant needs; - purpose and use of gym equipment; - anatomy and physiology related to children and adolescents; - principles of paediatric and exercise science to enable selection of exercises appropriate to participant characteristics and needs; - stages of growth and development in children and adolescents to enable effective planning of programs

and selection of exercises; - exercise implications of age and stages of growth and development; - signs and symptoms of major types of injuries typical to children and young adolescents; - injury risks related to exercise participation of children and young adolescents; - motivational techniques; - signs and symptoms of exercise intolerance and appropriate management strategies, and; - the medical and allied health sector to enable appropriate recommendations or referrals be made to parents or carers.

SISFFIT014 Instruct exercise to older clients

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to plan, instruct and evaluate exercise for male clients aged forty five and over, and female clients aged fifty five and over. It requires the ability to provide instruction of exercise programs aimed at improving health and fitness for older clients, with consideration of aspects of healthy ageing. It also covers promotion of incidental physical activity to clients to minimise the risk of developing sedentary lifestyle behaviours. It involves using industry endorsed risk stratification procedures when determining the provision of suitable advice and referral requirements. This unit applies to fitness instructors who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work independently with some level of autonomy in a controlled environment. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use industry endorsed pre-exercise screening tools and risk stratification processes to identify the risk level of at least ten older clients; - prepare referral letters to relevant medical or appropriate allied health professionals with supporting pre-exercise health screening documentation; - plan, document, implement and evaluate suitable exercise programs within scope of practice for older clients; - conduct sessions; - modify programs for clients, and; - conduct periodic ongoing evaluation of outcomes from fitness programs in accordance with the established program goals and industry best practice. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements regarding specific population exercise participation; - organisational policies and procedures in regards to specific population exercise participation; - precautions to exercise relevant to the older adults in accordance with industry guidelines where applicable; - signs and symptoms of exercise intolerance and appropriate management strategies; - situations where cessation of exercise program is required; - role of medical or allied health professionals for referral processes; - typical anatomical and physiological considerations for older adults; - common barrier to exercise participation; - methods to overcome barriers to exercise adherence; - health-related components of fitness; - awareness of major types of injuries or conditions that may present in older clients that may require referral to a relevant medical or appropriate allied health professional; - importance of strength and balance training in falls prevention; - exercise considerations in regards to components of ageing process, injuries and conditions; - awareness of injury risks or considerations that may be related to older

clients; - benefits of exercise related to older populations; - concepts of healthy ageing, and; - risks of leading a sedentary ageing lifestyle.

SISFFIT015 Collaborate with medical and allied health professionals in a fitness context

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to identify situations and conditions requiring guidance from, or the need to work with, medical or allied health professionals. This unit requires the ability to undertake referrals, and interpret and implement instructions from medical or allied health professionals to ensure appropriate exercise planning and delivery within industry endorsed scope of practice. This unit applies to personal trainers who require guidance from an appropriate medical or allied health professional following industry endorsed pre-exercise screening and risk stratification, or resulting from professional judgement.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare referral letters for at least ten clients across a range of the following appropriate medical or allied health professionals when guidance and feedback is required regarding exercise participation; - deliver at least five suitable exercise programs in response to guidance or instruction provided by medical or allied health professionals; - maintain and store the following professional records: parental or guardian consent, if relevant; pre-exercise screening results; other client health information; client informed consent; documented guidance provided by medical or allied health professional; clinical test results, as required; fitness test results, as required; exercise program, and; client participation, and; - provide ongoing clear and constructive feedback to clients and medical or allied health professionals, in a timely manner and in accordance with industry endorsed referral and communication reporting procedures. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements; - organisational policies and procedures; - industry endorsed risk stratification procedures, exercise implications and referral requirements; - role of medical or allied health professionals and their areas of expertise to enable appropriate and timely referrals for clients; - the Health Practitioner Regulation National Law, Australian Health Practitioner Regulation Agency (AHPRA) and searchable practitioner registers; - risk factors requiring client referral in accordance with industry endorsed pre-exercise screening and risk stratification processes, and; - signs and symptoms of exercise intolerance or medical conditions requiring referral to appropriate medical practitioner or allied health professional.

SISFFIT016 Provide motivation to positively influence exercise behaviour

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to promote exercise and incorporate behaviour change strategies into fitness instruction, programming and provision of fitness advice. This unit applies to personal trainers who work in controlled and uncontrolled environments. These individuals typically work independently with some level of autonomy. Work is performed

according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills which must include period(s) totalling at least three hours comprising at least three different client contact sessions and:- use knowledge of exercise behaviour change strategies to improve own instructional practice to improve exercise adherence of clients:- collect information from each client regarding attitude towards exercise, and;- motivate clients during exercise programs. Students will also be expected to demonstrate the following knowledge:- organisational policies and procedures;- strategies to promote exercise behaviour change;- components of motivation to enable effective assessment of progress;- role of intrinsic and extrinsic motivation in exercise behaviour;- methods of evaluating self-motivation, self-efficacy and stages of change;- personal and situational factors that may affect behaviour and/or exercise adherence;- stages of change;- principles of goal setting;- arousal control techniques;- common barriers to exercise participation;- methods of collecting information about client's attitude towards exercise, and;- scope of practice for a personal trainer.

SISFFIT017 Instruct long-term exercise programs

Locations:Footscray Park, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, knowledge and skills required to plan, instruct and evaluate long-term exercise programs for clients. It requires the ability to apply the principles of training and program design to achieve goals in relation to health and skill-related components of fitness. It applies to the use of a variety of training techniques and cardiovascular, free weights and contemporary training equipment, in client programs. This unit does not cover exercise prescription or instruction of uncontrolled movements. The personal trainer must only implement instruction and monitoring of power exercises that are controlled and only in situations where the client is prepared. This unit does not apply to the use of Olympic lifts.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills which must include a period(s) totalling at least ten hours comprising at least ten different client contact sessions:- plan, implement and evaluate at least five long-term exercise programs using the principles of program design to suit the needs of clients with goals related to a combination of health and skill-related components of fitness;- conduct sessions that individually or cumulatively incorporate: use of a variety of all of the following equipment; demonstration, explanation, and instruction; injury prevention strategies specific to client needs and program; competition or performance strategy into at least one of the programs; exercises to develop: skill; agility; proprioception; balance; coordination; reaction time, and; controlled power movements, for example in

plyometric-style exercises;- modify at least three existing exercise plans for clients, and;- document exercise plans and exercise programs for all clients using clear and structured forms. Students will also be expected to demonstrate the following knowledge:- long-term exercise program planning for improvement of health- and skill-related components of fitness;- safety and preparation considerations for the use of plyometric training in client programs;- program design and variables relevant to the combination of health- and skill-related components of fitness in the client's program;- training principles relevant to the health- and skill-related components of fitness in the client's program;- training methods and consideration of intensity, program types, sets and reps, circuits, matrices, super-sets, pre-fatigue and interval training;- types of conditioning and training, and expected adaptations, including timing;- client considerations and needs;- application of exercise science, anatomy, physiology, biomechanics considerations to fitness activities and long-term exercise programming;- manufacturer and exercise equipment specifications for safe use and techniques;- signs and symptoms of exercise intolerance and overtraining such as unusual fatigue, and;- physiological changes that occur from long-term exercise training.

SISFFIT018 Promote functional movement capacity

Locations:Footscray Park, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to assess client movement and exercise capacity and develop an appropriate exercise program. It requires the use of functional movement knowledge in day-to-day professional practice to encourage healthy posture, effective movement patterns and safe exercise technique for clients. This unit applies to personal trainers who offer exercise programs to improve functional movement for general populations, including older adults and young people. These clients are those with no unstable health conditions, pain or injury as identified through industry endorsed pre-exercise screening and risk stratification protocols. This unit does not apply to the provision of postural assessment, advice or treatment for an injury, disease or condition. The personal trainer is expected to refer clients requiring guidance, advice or treatment to an appropriate allied health professional. This unit applies to personal trainers who typically work autonomously in controlled and uncontrolled fitness environments. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills which must include period(s) totalling at least eight hours comprising at least five different client contact sessions:- observe and analyse functional movement capacity for at least five clients in line with accepted movement and technique standards;- identify each client's capacity to activate and achieve good muscle function in all of the following muscle groups, using at least three muscle activation exercises per client;- modify incorrect client exercise technique and poor dynamic posture of at least three clients;- explain and document functional movement observations and encourage a healthy posture for all clients, and;- recommend appropriate exercise strategies to clients to promote functional movement and reduce the likelihood of injury, in accordance with

functional movement observations and client risk status. Students will also be expected to demonstrate the following knowledge: - legislative obligations and organisational policies and procedures; - the relationship between injury, injury prevention and postural variances; - ideal postural alignment; - relationship of poor posture and risk of injury and muscular deficits; - postural influences affecting dysfunctional movement patterns and exercise technique; - typical range of movement for major joint complexes; - deviations in posture or functional limitations at commencement, during, at completion of exercise or movement; - role of muscles in contractions; - causes of poor posture; - muscle activation, correct execution, and teaching points for primal functional movement patterns; - role of muscle activation in functional movement and exercise performance; - normal range of movement for major joint complexes; - characteristics of balance and balance exercise; - characteristics of coordination and agility; - changes to centre of gravity; - industry endorsed scope of practice for a personal trainer; - industry endorsed pre-exercise screening and risk stratification protocols; - role of medical or allied health professionals for referral or guidance, and; - reasons for referral to an appropriate medical or allied health professional.

SISFFIT019 Incorporate exercise science principles into fitness programming

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to incorporate an understanding of exercise science principles into fitness instruction, programming and provision of fitness advice. This unit applies to the use of physiological and mechanical principles in training to improve the health- and skill-related components of fitness of clients who have recently completed industry endorsed pre-exercise screening and risk stratification procedures. This unit applies to personal trainers who typically work autonomously in controlled and uncontrolled fitness environments. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills which must include period(s) totalling at least five hours comprising at least five different client contact sessions in a mixture of controlled and uncontrolled environments: - effectively use knowledge of exercise science principles to improve own instructional practice to plan and instruct at least five different client sessions, and; - conduct sessions that individually or cumulatively incorporate: a variety of exercises which are targeted at health- and skill-related components of fitness, for achieving improvements and adaptations; variations of exercise; with and without equipment; exercises to change: joint action, stabilisation of the body and forces which act on the body during exercise; variations in the contribution of energy from three different energy systems, and; consideration of: musculoskeletal anatomy and physiology, mechanical principles and physiology concepts. Students will also be expected to demonstrate the following knowledge: - organisational policies and procedures; - industry endorsed client pre-exercise health screening processes; - industry endorsed risk stratification procedures, exercise implications and referral requirements; - the physiology related to achieving improvements in health-related components of fitness; - the physiology related to

achieving improvements in skill-related components of fitness; - musculoskeletal anatomy and physiology related to achieving improvements in fitness; - concepts and principles of mechanics relevant to fitness; - concepts and principles of the physiology of the body in relation to fitness; - the expected physiological responses, and appropriate action, and; - scope of practice for a personal trainer.

SISFFIT020 Instruct exercise programs for body composition goals

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to design exercise plans and programs to change and maintain desired and realistic body composition of clients. It applies to exercise programs aimed at health-related components of fitness, with particular attention to body composition. This unit does not directly apply to provision of healthy eating information regarding body composition goals, however it does cover the calculation of energy expenditure to enable planning and instruction of appropriate programs to achieve identified goals. This unit applies to the planning of programs for clients who have completed industry endorsed pre-exercise screening and risk stratification procedures. This unit applies to personal trainers who typically work autonomously in controlled and uncontrolled fitness environments. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills which must include period(s) totalling at least ten hours comprising at least ten different client contact sessions: - plan, document, implement and evaluate at least five exercise plans that meet specific body composition needs and goals of individual clients; - conduct sessions that consider each client's: training schedule; likes and dislikes; financial constraints; specific responses to questionnaire; religious restrictions; injuries; medical and exercise history, and; functional limitations; - correctly measure body composition for each client using appropriate measures: weight; height; hip circumference; waist circumference; skin folds; bioelectrical impedance analysis, and; body mass indices; - appropriately use and apply anthropometric standards: somatotypes; skin fold indices; body mass indices; waist:hip ratios, and; healthy weight range charts, and; - use appropriate and motivating instructional techniques with each client to increase exercise adherence and positive health and fitness habits. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements regarding exercise planning for body composition goals; - organisational policies and procedures; - industry endorsed client pre-exercise health screening processes; - industry endorsed risk stratification procedures, exercise implications and referral requirements; - client considerations for planning exercise programs to target body composition goals; - exercise programming principles to target body composition goals; - barriers to achieving goals; - management of body composition; - factors affecting 'weight' on scales; - role of medical or allied health professionals in relation to body composition programming; - motivational techniques and strategies to support body composition goals, and; - benefits and limitations of body composition appraisal methods.

SISFFIT021 Instruct personal training programs

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to plan, instruct and evaluate personal training programs for a variety of clients in both controlled and uncontrolled environments. It requires the ability to plan individualised programs for clients who have completed industry endorsed pre-exercise screening and risk stratification procedures. This unit applies to personal trainers who typically work autonomously in controlled and uncontrolled fitness environments. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills which must include period(s) totalling at least ten hours comprising at least ten different client contact sessions in a mixture of controlled and uncontrolled environments: - plan, document, implement and evaluate at least five personal training plans that meet specific needs and goals of individual clients, and; - conduct sessions that individually or cumulatively incorporate: a variety of indoor and outdoor training environments, methods, and equipment; resistance training; cardiovascular training techniques; demonstration, explanation, and instruction of exercises; injury prevention strategies specific to client needs and program; appropriate and motivating instructional techniques to increase exercise adherence and positive health and fitness habits, and; modify personal training plans for clients. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements regarding personal training, equipment use and selection; - organisational policies and procedures; - industry endorsed client pre-exercise health screening processes; - industry endorsed risk stratification procedures, exercise implications and referral requirements; - program planning for improvement of health- and skill-related components of fitness; - safety and preparation considerations for the use of plyometric training in personal training; - program design and variables relevant to the combination of health- and skill-related components of fitness in the client's program; - suitable training and monitoring techniques and exercises to achieve improved functioning; - training principles relevant to the health- and skill-related components of fitness in the client's program; - training methods and consideration of intensity, program types, sets and reps, circuits, matrices, super-sets, pre-fatigue and interval training; - types of conditioning and training, and expected adaptations, including timing; - client considerations and needs; - application of exercise science, anatomy, physiology, biomechanics considerations to fitness activities and personal training programs; - manufacturer and exercise equipment specifications for safe use and techniques; - signs and symptoms of exercise intolerance and appropriate management strategies; - common barriers to exercise participation; - different learning styles of clients and methods to adapt training to suit these learning styles, and; - motivational techniques.

SISFFIT023 Instruct group personal training programs

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge

required to plan, instruct and evaluate group personal training programs for a variety of clients in both controlled and uncontrolled environments. It requires the ability to plan individualised programs for clients who have completed industry endorsed pre-exercise screening and risk stratification procedures. It requires the ability to instruct personal training sessions and programs to a group of people, whilst taking into account individual goals, programming requirements, personality and fitness level. The personal trainer ensures that the supervision ratio to client adheres to organisation policies and procedures. This unit applies to personal trainers who typically work autonomously in controlled and uncontrolled fitness environments. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills which must include period(s) totalling at least ten hours comprising at least ten different client contact sessions in a mixture of controlled and uncontrolled environments: - plan, document, implement and evaluate at least three group personal training plans and exercise programs for groups of three to twelve people that meet specific needs and goals of each individual within the group, and; - conduct sessions that individually or cumulatively incorporate: a variety of indoor and outdoor training environments, methods, and equipment; flexibility; resistance training; cardiovascular training techniques; adequate spacing between clients; appropriate line of sight for clients; appropriate motivating instructional techniques to increase exercise adherence and positive health and fitness habits of the group, and; modify personal training plans for clients. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements regarding group personal training, equipment use and selection; - organisational policies and procedures; - industry endorsed client pre-exercise screening processes; - industry endorsed risk stratification procedures, exercise implications and referral requirements; - program planning for improvement of health and skill-related components of fitness; - safety and preparation considerations for the use of plyometric training in group personal training; - suitable training and monitoring techniques and exercises to achieve improved; - training principles relevant to the health and skill-related components of fitness in the client's program; - training methods and consideration of intensity, program types, sets and reps, circuits, matrices, super-sets, pre-fatigue and interval training; - types of conditioning and training, and expected adaptations, including timing; - client considerations and needs; - application of exercise science, anatomy, physiology, biomechanics considerations to fitness activities and group personal training programs; - manufacturer and exercise equipment specifications for safe use and techniques; - signs and symptoms of exercise intolerance and appropriate management strategies; - common barriers to exercise participation; - different learning styles of clients and methods to adapt training to suit these learning styles, and; - motivational techniques.

SISFFIT025 Recognise the dangers of providing nutrition advice to clients

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge

required to identify when the provision of nutritional advice is beyond the scope of practice of a personal trainer. It requires the ability to recognise the dangers of providing nutrition advice in a fitness setting and when a client requires referral to an Accredited Practising Dietitian, Accredited Sports Dietitian or General Practitioner. This unit covers recognition of appropriate information sources to apply to the provision of food advice, and when the provision of such advice is unethical and beyond the scope of practice. This unit applies to personal trainers who typically work autonomously in controlled and uncontrolled fitness environments. Work is performed according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify at least ten client situations when referral to an Accredited Practising Dietitian, Accredited Sports Dietitian or General Practitioner is required. Students will also be expected to demonstrate the following knowledge: - purpose, use and limitations of the Australian Dietary Guidelines; - the role and professional boundaries of the personal trainer, medical and allied health professionals in providing nutritional advice, weight loss support and exercise prescription; - the role of the personal trainer in providing nutritional advice within appropriate guidelines of Eat for Health Program incorporating the Australian Dietary Guidelines; - situations when referral to an Accredited Practising Dietitian, Accredited Sports Dietitian or General Practitioner is required, and which professional is most appropriate for the situation, and; - risks of providing nutritional information to the following specific population clients.

SISFFIT026 Support healthy eating through the Eat for Health Program

Locations:Footscray Park, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to use the Eat for Health Program to support clients who do not have special dietary needs. It covers assisting clients to adapt the Australian Dietary Guidelines to suit their lifestyles and food choice influences using the Eat for Health Program as a guide. This unit requires the ability to provide healthy eating information and assist clients within industry endorsed scope of practice following completion of industry endorsed pre-exercise screening.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills which must include period(s) totalling at least five hours comprising at least five different client contact sessions: - identify the daily eating patterns of at least five clients in the format of the Australian Dietary Guidelines; - compare each client's eating patterns with the recommendations in the Eat for Health Educator Guide relative to their goals, body composition, lifestyle group, and current level of physical activity, using Foundation and Total

Diets; - provide suggestions for achieving healthy dietary patterns to each client in accordance with the Eat for Health Educator Guide; - apply organisational policies and procedures and legal and ethical limitations to client contact sessions, and; - identify the need for and prepare referrals for at least five clients to an Accredited Practising Dietitian, Accredited Sports Dietitian and/or medical practitioner as required. Students will also be expected to demonstrate the following knowledge: - purpose and use of the Australian Dietary Guidelines; - purpose and use of the Eat for Health Program and Eat for Health Educator Guide; - how to read and understand food labels to support healthy food choices according to the Eat for Health Educator Guide; - how to use the template for adapting the Australian guide to healthy eating to assist clients to make informed food choices; - role of Accredited Practising Dietitian, Accredited Sports Dietitian and General Practitioner for referring clients; - referral requirements; - scope of practice of a personal trainer in regards to providing nutritional information; - the modelling of Foundation diets on a weekly basis in the Eat for Health Educator Guide allowing for flexibility in their daily implementation; - the benefits of combining healthy eating and moderate physical activity, and; - use of the Eat for Health Program, within Scope of Practice, according to the lifestyle group and different levels of physical activity.

SISOCNE202A Perform deep water rescues

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to perform deep water rescues. This unit focuses on determining the most appropriate deep water rescue for the situation and applies during canoeing, kayaking and sea kayaking.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assess the situation and conditions; - select an appropriate rescue method; - communication skills to deliver clear, concise directions to the capsized person and any other assistants involved with the rescue; - water reading skills such as direction and speed of flow, currents, eddies and other hydrological features, to assist in a safe deep water rescue; - paddling skills to safely manoeuvre craft close to capsized person or persons, and; - first aid and emergency response skills appropriate to the location to enable initial response to emergencies and personal health care. Students will also be expected to demonstrate the following knowledge: - legislation and organisational policies and procedures to enable safe conduct of all deep water rescue activities; - hydrology and river grading systems to understand how rivers work to enable safe deep water rescues; - sea features such as currents, waves and tides and how these might impact on the deep water rescue; - common hazards and risks associated with sea and river craft activities and how to negotiate these; - rescue procedures suitable to the deep water conditions and experience of the participant; - rescue equipment commonly used in deep water rescues, and; - first aid knowledge appropriate to location and level of responsibility.

SISOCNE303A Apply canoeing skills

Locations:Footscray Park.

Prerequisites:Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to paddle a canoe in controlled conditions. This unit focuses on the demonstration of effective and efficient canoeing skills on flat and undemanding water.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - teamwork skills to work with others to lift, carry and secure canoes; - communication skills to interact with supervisor, other participants and rescue crew to maintain a positive and safe environment deliver clear, concise directions to the capsized person and any other assistants involved with the rescue; - listening skills to follow instructions and directions from the supervisor and rescue crew; - problem-solving skills to navigate, determine location and follow a planned course; - planning and organising skills to select and allocate canoeing equipment and site; - swimming skills to swim 50 metres whilst clothed and wearing a personal flotation device that complies with State or Territory maritime regulations; - rescue skills to perform a deep water rescue; - paddling skills to safely manoeuvre craft close to capsized person or persons, and; - first aid and emergency response skills appropriate to the location to enable personal health care. Students will also be expected to demonstrate the following knowledge: - legislation and organisational policies and procedures to enable safe conduct of all canoeing activities to enable safe conduct of all deep water rescue activities; - types of craft and equipment, characteristics and technology used for canoeing, the advantages and disadvantages of the range of craft and equipment, and factors affecting appropriate selection; - clothing requirements for canoeing, such as wet weather gear to maintain warmth and dryness or sun protection to minimise sunburn and heat stroke; - importance of a personal flotation device in keeping a person afloat and their head above water; - stroke and directing techniques to control and manoeuvre the canoe efficiently; - navigation techniques to determine location and direction; - principles of nutrition to maintain health during activity; - basic weather and environmental information to ascertain possible conditions and their affect on the activity; - purpose and importance of safety features of craft; - common hazards and their risks associated with sea and river craft activities and how to negotiate these; - rescue procedures suitable to the deep water conditions and experience of the participant; - rescue equipment commonly used in deep water rescues, and; - emergency and rescue procedures appropriate for the craft and location to ensure risk minimisation to self and group.

SISOCNE306A Instruct canoeing skills on flat and undemanding water

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to instruct canoeing on flat and undemanding water. This unit focuses on planning, instructing and evaluating an instructional canoeing session to enable participants to achieve the skills and knowledge required to participate independently, or with minimal supervision, in a canoeing activity on flat and undemanding water.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to consult with participants to plan a canoeing session that meets their needs, convey information about the safety aspects of the session, and interact with participants to create a safe and positive canoeing environment; - problem-solving skills to plan canoeing sessions according to participant's needs and characteristics, observe and correct canoeing technique faults, and anticipate and respond to non-routine situations; - planning and organising skills to source, allocate and coordinate resources, equipment and a suitable body of water, monitor and evaluate progress, and organise participants into manageable groups for canoeing; - language and literacy skills to produce canoeing and instructional plans for the canoeing session, and complete post session participant and self evaluations; - effective and efficient personal canoeing skills on flat and undemanding water to demonstrate and explain canoeing techniques to participants; - swimming skills to remove self from danger after a capsize and to manoeuvre canoe while in paddling gear; - river reading skills, such as direction and speed of flow, currents, eddies and other hydrological features that may impact on paddling and safety, and; - first aid and emergency response skills appropriate to the location to enable initial response and or rescue in emergencies whilst instructing canoeing on flat and undemanding water. Students will also be expected to demonstrate the following knowledge: - legislation and organisational policies and procedures to enable safe conduct of canoeing sessions information about location to assist in the planning process and enable management of potential canoeing hazards and any special restrictions applying to the location; - equipment types, characteristics and technology used for canoeing on flat and undemanding water, the advantages and disadvantages of the range of equipment and factors affecting appropriate selection of equipment; - clothing and footwear requirements for canoeing to ensure comfort and safety; - care and maintenance of canoeing equipment to ensure prolonged life span and safety requirements; - instruction techniques and theories applicable to a range of ages and learning abilities; - canoeing techniques and common communication systems used between craft on rivers to reduce risk during canoeing; - technical canoeing knowledge, such as paddling, capsizing and rolling techniques used on flat and undemanding water; - hydrology and river features such as currents, banks, change in gradient and volume, and how these might impact on the canoeing session; - swimming techniques to swim out of trouble and manoeuvre canoe while in water; - communication systems and signals used in canoeing; - navigation techniques to determine location and direction; - weather and environmental information to ascertain possible conditions and their effect on the session; - hazards commonly experienced on flat and undemanding water, and; - emergency procedures, rescues, potential hazards and obstacles relevant to the location to ensure safety of self and others.

SISORAF402A Guide a raft on grade 3 rapids

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to control a raft as a guide with a crew on grade 3 rapids according to the prescribed trip plan.

Required Reading: No required text.

Assessment: Evidence of the following is essential: - executes trip plan, including confident delivery of safety briefing and crew drill applies knowledge of rivers and hydrology - monitors and maintains the safety of clients and rafting equipment - by

manoeuvring and controlling a raft effectively over multiple occasions and at multiple venues - evaluates and reflects on own rafting performance to identify strengths, weaknesses and areas that need improvement - monitors and maintains the safety of clients and raft equipment and applies effective contingency management to deal with problems and issues that arise during the activity.

SISOWWR201A Demonstrate self rescue skills in white water

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to apply self rescue skills in white water with Grade 2 rapids. This unit may be used in conjunction with other units, such as rafting, canoeing or kayaking, and applies to situations where crew member or members are in the water due to circumstances such as craft capsizes.

Required Reading:No required text

Assessment:Evidence of the following is essential - identifies hazards and their implications for white water swimmers and applies knowledge of hydrology and river features to select a suitable self rescue method - applies appropriate body position and defensive and aggressive swimming techniques suitable to the conditions - adapts to problems or issues that arise during white water self rescues and makes adjustments to ensure safety of self and group - applies procedure to safely re-enter the craft following a capsizes.

SISOWWR302A Demonstrate white water rescues and recoveries

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to perform rescues and recoveries in routine, predictable situations in rafting, canoeing or kayaking activities on water up to Grade 3 standard.

Required Reading:No required text

Assessment:Evidence of the following is essential - assesses rescue situation in a timely manner to identify potential hazards and risks, and determines efficient rescue and recovery methods - selects and uses rescue equipment and resources, including mechanical advantage systems, in a variety of white water rescue and recovery situations - communicates with other members of the rescue team and adapts to problems or issues that may arise during white water rescues and recoveries to ensure safety of self and group - evaluates and reflects on own rescue and recovery performance to identify strengths, weaknesses and areas that need improvement - carry out multiple rescues utilising the full range of rescue and recovery methods, one of these being in a time critical environment - release and rescue an entrapped victim in a time critical environment - safely recover a wrapped, pinned or breached craft using a mechanical advantage system ensuring equalisation of load and anchors to minimise damage to craft.

SISSCO003 Meet participant coaching needs

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to adapt coaching practices in a specific sport to meet individual participant needs from a diverse range of population groups including but not limited to: boys; girls; adolescent boys; adolescent girls; adult men; adult women; pregnant women; older adults; those with a physical disability; those who are deaf or hard of hearing; the blind and visually impaired; those with an intellectual disability, and; culturally and linguistically diverse groups. This unit applies to individuals working in community based coaching roles in the Australian sport industry. This includes

individuals working and volunteering in sport clubs and organisations. Specific industry accreditation requirements may apply to sport-specific coaching accreditation and information should be obtained from the relevant National Sporting Organisation (NSO).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan, conduct and evaluate three (3) sport-specific coaching sessions on three (3) occasions for a duration of at least 30 - minutes each that involves, customising the session plans to meet the individual needs of participants from two (2) of the following population groups: - boys; - girls; - adolescent boys; - adolescent girls; - adult men; - adult women; - pregnant women; - older adults; - those with a physical disability; - those who are deaf or hard of hearing; - the blind and visually impaired; - those with a intellectual disability; - culturally and linguistically diverse groups, and; - applying inclusive and non discriminatory coaching practices. Students will also be expected to demonstrate the following knowledge: - organisational policies and procedures applicable to meeting individual participant needs; - key areas of diversity, their characteristics and ways to accommodate in coaching practices such as culture, race and ethnicity, disability, religious and spiritual beliefs, gender, generational differences, sexual orientation and identity; - principles of inclusion in sport such as inclusive learning and participation, how to be inclusive as a coach. barriers to inclusion, benefits versus risk of participation; - types and characteristics of specific population groups; - factors that affect participant ability to acquire skills such as participation and competitive motivations, medical needs, levels of support and care, physical, previous experience, level of literacy skills, level of numeracy skills, cognitive factors, religious beliefs, communication strategies, cultural values, social characteristics, level of ability, impact of disability, aging processes, range of movement, safety factors, recovery techniques, functional ability; - coaching practice adaptations; - development and maturation; - overtraining and overuse in young participants; - classification systems to enable equitable competition among participants with similar functional ability and medical conditions; - competition options, rules and requirements for participants from specific population groups; - needs of female participants, and; - methods for self reflection.

SISSCO004 Plan, conduct and review coaching programs

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to deliver coaching programs in a specific sport. This can include seasonal programs depending on the specific sport. This unit applies to individuals working in community based coaching roles in the Australian sport industry. This includes individuals working and volunteering in sport clubs and organisation. No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan, conduct and review one sport-specific program plan that includes at least eight sport-specific sessions. Students will also be expected to demonstrate the following knowledge: - organisational procedures applicable to planning, conducting and reviewing programs in a specific sport; - program planning considerations such as matching program to suit participant developmental readiness, program objectives, progression and regression activities and modified games, activities inclusive of all participants, contingency plans to accommodate environmental conditions, designing activities that require participants to think and make meaningful decisions about sport-specific situations, sequencing and linking program sessions and activities to develop and progress skills, methods for making programs engaging and group organisation; - sport-specific equipment and resource constraints and options such as group organisation, safe set-up and layout, allocation of space and resources for programs; - program review, evaluation and adjustment processes, and; - methods for self reflection.

SISSSC0007 Apply sport psychology principles

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to assist participants to develop basic psychological skills to optimise sporting performance in sport-specific training and competition settings. This unit applies to individuals working in community-based roles in the Australian sport industry in coaching and support roles. This includes individuals working and volunteering in sport clubs and organisations. Specific industry accreditation requirements may apply to sport-specific coaching accreditation, and information should be obtained from the relevant National Sporting Organisation (NSO).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - using three of the following strategies, managing emotions, using relaxation techniques, managing self-talk, managing stress, establishing pre-, during- and post-performance psychological routines, identifying sources of intrinsic and extrinsic motivation, setting goals, visualisation, self reflection on performance, managing concentration; - assisting the participant to manage performance outcomes, and; - assisting the participant to access sport psychology professionals. Students will also be expected to demonstrate the following knowledge: - organisational policies and procedures applicable to applying sport psychology principles; - information sources applicable to sport psychology; - principles of sport psychology for sporting performance, such as the brain and its functions, psychological demands of specific sports, emotions, concentration, motivation, goal setting, self reflection on performance; - role and responsibilities of sport psychology professionals; - psychological skills to enhance performance such as managing emotions, managing concentration, establishing pre-, during- and post-performance psychological routines, using relaxation techniques, managing self-talk, managing stress, understanding motivation, setting goals, visualisation, self reflection on performance; - techniques to assist participants to

manage performance outcomes; - techniques to create a positive environment for participants, and; - psychology advice and support referral services for participants.

SISSSC0008 Apply anti-doping policies

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to inform participants about anti-doping policies in sport and assist participants to address drugs in sport issues according to legislative and sport-specific anti-doping requirements. This unit applies to individuals working in community based roles in the Australian sport industry in coaching and support roles. This includes individuals working and volunteering in sport clubs and organisations. Specific industry accreditation requirements may apply to sport-specific coaching accreditation, and information should be obtained from the relevant National Sporting Organisation (NSO).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply anti-doping policies to support three participants in a specific sport that involves, conveying the following international and domestic anti-doping policies such as banned and restricted drug classes, drug testing, procedures and protocols, deliberate use of drugs, inadvertent use of drugs, social drug use, ethical implications, health effects of banned substances, therapeutic use of banned drugs, participants' rights and responsibilities, herbal medications and supplements, hearings and sanctions, and; - consulting with the participants to develop, implement and review strategies to support them with drugs in sport issues. Students will also be expected to demonstrate the following knowledge: - organisational policies and procedures applicable to applying anti-doping policies; - requirements of the world anti-doping code applicable to coaches and participants; - anti-doping policy of the sport-specific National Sporting Organisation; - types of support staff and how they can assist participants with anti-doping; - methods of checking the status of medications; - types of prohibited substances and methods in sport; - therapeutic use of exemptions (TUE); - prohibited list; - role of drug testing in sport; - types of prohibited substances in foods and supplements; - drugs in sport issues such as banned and restricted drug classes, drug testing procedures and protocols, deliberate use of drugs, inadvertent use of drugs, recreational drug use, ethical implications, health effects of banned substances, therapeutic use of banned drugs, herbal medications and supplements, hearings and sanctions; - available support services and resources to assist participants with drugs in sport issues; - consent requirements for underage participants; - strategies to assist participants to address drugs in sport issues such as educational programs, use of drugs in sport information services including Australian Sports Anti-Doping Authority (ASADA), intervention strategies, and; - ethical codes and policies.

SISSSC0011 Manage integrity in sport

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to manage integrity in sport risks, inform participants about integrity in sport and assist participants to address integrity issues. This unit applies to individuals

working in the Australian sport industry in community based roles. This includes individuals working and volunteering in sport clubs and organisations. Specific industry accreditation requirements may apply to sport-specific coaching accreditation and information should be obtained from the relevant National Sporting Organisation (NSO).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - manage integrity in a specific sport over a period of one month that involves behaving and making choices with integrity, identifying and controlling three integrity in sport risks, providing integrity in sport information to three participants, consulting with the participants to develop, implement and review strategies to support them with integrity in sport issues. Students will also be expected to demonstrate the following knowledge: - legislative and regulatory requirements applicable to integrity in sport; - organisational policies and procedures applicable to integrity in sport; - behaviours that exemplify personal, practice and organisational integrity in sport; - behaviours that undermine personal, practice and organisational integrity in sport; - ethical decision making; - consequences of poor integrity to participants, wider public, work health and safety; - types of support staff and how they can assist participants with integrity in sport issues; - integrity in sport risks and issues; - abuse and discrimination including at training and events and on social media and social networking sites; - gambling; - child abuse; - available support services and resources to assist participants with integrity in sport issues; - consent requirements for under-age participants, and; - types of strategies to assist participants to address integrity in sport issues.

SISSCO101 Develop and update knowledge of coaching practices

Locations:Footscray Park, Industry, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to develop and update information on coaching, including the legal and ethical issues that must be considered by coaches. The unit focuses on the ability to source and comprehend general principles of coaching as well as National Sporting Organisation (NSO) sport specific requirements and covers the initial and ongoing development of a person's required knowledge base. It does not cover the technical requirements related to coaching in particular sport, these skills are covered in other units. This information underpins effective performance as a coach.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research skills to identify, interpret and sort relevant information; - communication skills including active listening and questioning to obtain information and to provide a summary of information; - literacy skills to read and comprehend the content of plain English information documents about legal and ethical issues, industry accreditation schemes

and codes of behaviour, and; - problem-solving skills to identify methods of incorporating risk management principles into sport specific coaching duties. Students will also be expected to demonstrate the following knowledge: - structure and function of the NCAS; - current sport specific rules, laws and regulations, best practice codes and principles; - NSO requirements for coaches, including member protection; - legal liability and duty of care; - ethical responsibilities of a coach; - state and territory specific requirements for working with children; - industry best practice equipment and safety requirements, including risk management principles; - organisational policies and procedures to enable all coaching activities, and; - coaching styles and practices applicable to a range of ages and learning abilities.

SISSCO303 Plan and deliver coaching programs

Locations:Footscray Park.

Prerequisites:SISSCO101 - Develop and update knowledge of coaching practices

Description:This unit describes the performance outcomes, skills and knowledge required to develop and deliver sports coaching programs. The unit focuses on the application of planning and organisational skills to determine developmental activities and delivery methods according to sports participants needs. This unit applies to those conducting coaching activities in a variety of sport contexts including schools and clubs.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - language and literacy skills to document coaching programs in required detail and formats; - consult with participants and elicit information required to determine appropriate program to meet participant needs; - source, interpret and confirm information to inform program planning; - convey information about the safe use of equipment to participants; - deliver engaging presentations to support coaching; - self-management skills to review and reflect on own coaching performance to facilitate personal development; - determine required venues and resources to provide an appropriate and safe learning environment for participants; - source, allocate and coordinate resources and equipment necessary for planned coaching program; - evaluate and manage risks associated with delivery of the coaching program; - develop sport-specific coaching programs with correct sequencing of learning activities that provide appropriate progression and regression; - recognise and accommodate the needs and differences of learners of different ages and varying maturity and ability levels; - select coaching styles and methods appropriate to the purpose of the coaching program and characteristics of participants; - literacy skills to document session plans; - technology skills to access internet and use digital equipment, and; - numeracy skills to support effective time management to structure coaching activities within available timeframes. Students will also be expected to demonstrate the following knowledge: - physical, psychological and social characteristics of different participants and related stages for learning and coaching activities to enable the development of appropriate coaching programs; - appropriate sequencing of skill development progression and regression activities across coaching sessions suited to individuals and groups; - structure of coaching sessions and sequencing sessions in a program; - learning principles and delivery methods including those appropriate to junior learners; - activity or sport-specific knowledge including rules, technical and tactical fundamentals; - sport-specific equipment and resource requirements constraints and

options; - techniques for the recognition and resolution of inappropriate behaviours to enable safe and inclusive conduct of coaching programs; - characteristics of behaviours and abilities which may indicate learner difficulties; - risk-analysis processes to enable assessment of the potential impact of planned program on participant safety; - evaluation processes to enable improvements to be made to the program; - documentation and recording systems; - legislation and organisational policies and procedures to enable safe and ethical coaching programming.

SISSSC0305 Implement selection policies

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to utilise selection criteria and policies to make selection decisions in consultation with relevant personnel in specific sporting areas and or activities. It focuses on conveying selection criteria and policy to potential candidates, compiling selection data for potential candidates and applying organisational selection policies.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - build rapport with candidates; - convey information and confirm understanding of selection policies and procedures; - consult and deliberate with panel members; - notify successful candidates, and provide constructive feedback to unsuccessful candidates; - language and literacy skills to research, analyse and document selection data and selection for candidates; - objectively and ethically apply selection criteria; - evaluate candidates to select appropriate applicants; - identify and address problems and issues in the implementation of selection policies; - make recommendations for adjustments to meet changing requirements in the sport, club or organisation, and; - planning and organising skills to follow procedures for the effective implementation of selection policies and procedures within required timeframes. Students will also be expected to demonstrate the following knowledge: - organisation selection objectives, criteria and policy to enable sound decision making; - regulations and guidelines such as eligibility requirements that impact on selection of candidates for the relevant sport or activity to enable fair application of selection policies; - expected levels of performance to inform the application of selection policies and procedures; - relevant legislation to enable the selection procedure to be conducted with integrity and rigour; - organisational roles and responsibilities of key people and communication channels in relation to selection of candidates to enable the efficient exchange and referral of information, and; - conflict resolution strategies to enable appropriate responses to selection disputes.

SISSSC0306 Provide drugs in sport information

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to provide information about performance enhancing and prohibited drugs to athletes and implement strategies to assist athletes to effectively address those issues according to legislative and sport-specific regulations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - build rapport with athletes; - convey information about performance enhancing and prohibited drugs to athletes; - negotiate appropriate strategies with athletes to address drug issues in sport; - seek feedback on the effectiveness of strategies; - language and literacy skills to access and interpret information on key drug issues relevant to the appropriate sport, and; - problem solving skills to assess effectiveness of strategies to address drug issues and modify accordingly. Students will also be expected to demonstrate the following knowledge: - national and international anti-doping codes to enable accurate and current information to be conveyed to athletes; - classes of banned and restricted drugs to enable the communication of current information to athletes; - organisational policies and procedures to enable athletes to implement strategies regarding drugs in sport in a professional and supported manner; - short and long term physical and psychological effects of drugs on the human body; - credible information sources regarding drugs in sport to enable understanding of rights and responsibilities in relation to drugs in sport and to maintain accuracy and currency of knowledge; - drug testing procedures and protocols and sources of current information to maintain currency and accuracy of knowledge; - available support services in order to convey information to assist athletes with drugs in sports issues, and; - strategies to assist athletes to address drugs in sport issues.

SISSSC0307 Provide nutritional information to athletes

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to enable coaches to provide information to support their athletes to apply the principles and practices of nutrition to achieve peak performance in the relevant sporting activity.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - build rapport with athletes and support personnel; - access, analyse and convey information about the principles and practices of nutrition for training and peak performance to athletes; - negotiate appropriate strategies to enhance peak performance with athletes and seek feedback on their effectiveness; - language and literacy skills to access and interpret information on the principles of nutrition for peak performance relevant to the appropriate sport; - assess effectiveness of nutritional practices to enhance performance and to modify accordingly, and; - recognise nutritional issues and refer these to appropriate support personnel. Students will also be expected to demonstrate the following knowledge: - nutrition guidelines to enable the provision of accurate information about the principles and practices of sports nutrition for training and peak performance to athletes; - principles and practices of nutrition for training and peak performance relevant to specific activity or sport to enable appropriate advice and support to be provided to athletes in specific settings; -

appropriate body weight monitoring methods in order to assist athletes to monitor their weight effectively; - principles of safe weight loss and weight gain principles in order to support athletes to adopt nutrition principles maintain an appropriate weight for peak performance; - principles of hydration and fluid replacement practices in order to correctly inform athletes; - organisational policies and procedures to enable athletes to implement strategies regarding nutritional practices in a professional and supported manner, and; - information sources regarding principles and practices of nutrition for peak performance.

SISSSC0308 Support athletes to adopt principles of sports psychology

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to enable coaches to support their athletes to apply the principles of sports psychology to their specific sporting activity. It focuses on assisting athletes to implement and evaluate psychological approaches to optimise their sporting performance.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - build rapport with athletes and support personnel; - access, analyse and convey information about sport psychology principles and approaches for peak performance to athletes using appropriate communication techniques; - negotiate appropriate strategies to achieve peak performance with athletes and seek feedback on the effectiveness of strategies; - language and literacy skills to access and interpret information on sport psychology principles and approaches for peak performance relevant to the appropriate sport; - assess effectiveness of psychological approaches to enhance performance and to modify accordingly, and; - recognise psychological barriers to enhanced performance and refer the athlete to support personnel. Students will also be expected to demonstrate the following knowledge: - psychological approaches and techniques such as mental rehearsal, goal setting and self control strategies to assist athletes to prepare psychologically for competition and to enhance performance in a sporting event; - organisational policies and procedures to enable athletes to implement psychological approaches to enhance performance in a professional and supported manner; - motivational techniques to assist athletes to prepare psychologically for a sporting event; - psychological barriers to enable these to be recognised and addressed, and; - credible information sources regarding psychological approaches for peak performance to enable accuracy and currency of knowledge to be conveyed to athletes.

SISSSC0513 Plan and implement high performance training and recovery programs

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to apply sport-specific knowledge to implement a high-performance training program designed to refine the skills and performance of individuals participating at a high level.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - ensure requirements of athletes are understood and included in planning; - ensure aspects of a training program are understood and agreed upon by the athletes; - planning and organising skills to enable the planning of a high-performance training program to meet identified athlete needs; - literacy and numeracy skills to effectively schedule, document and evaluate results of high-performance training programs; - research skills to obtain information on trends, innovations and best practice principles of the sport and high-performance training methods; - coach and motivate an individual in a high-performance training program; - liaise effectively with support personnel. Students will also be expected to demonstrate the following knowledge: - relevant activity or sport-specific knowledge, including rules and regulations, to coach the skills being included in the training program; - advanced principles of skill acquisition in order to plan and deliver high-performance training programs to meet identified needs; - anatomy, physiology and biomechanics to enable effective and safe planning and implementation of high-performance training programs, including: - type and the structure of joints as they relate to joint mobility, joint integrity and risk of injury; - major muscles, their actions, and the role of muscles during contraction; - structure and function of the musculoskeletal system; - structure of the cardio-respiratory system and the relationship between exercise intensity and circulatory and ventilation responses; - organisational policies and procedures to enable the safe and appropriate conduct and recording of long-term training programs and maintain confidentiality of participant information; - National Sporting Organisation (NSO) best practice principles; - equipment manufacturer information and organisational requirements to enable the safe and effective use of exercise and training equipment.

SISSDE502 Design and implement strategies to increase participation

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit applies to those with a sport development role. This focuses on developing strategies to increase participation and enhance pathways for emerging talent and implementing these strategies in schools, clubs and community environments. It does not cover design and delivery of specific talent identification programs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - liaise with stakeholders to identify their needs; - consult with relevant personnel to develop activity or program criteria and formats; - develop and participate in networks to promote programs; - seek feedback on outcomes; - identify relevant products and services for specific target groups; - investigate alternative activity and program formats and structures and match these to the needs and objectives of participants; - develop, implement

and monitor a budget to implement the desired strategies; - implement strategies within a defined timeframe; - manage a range of participation programs and activities; - assess resource requirements and secure necessary resources for implementation; - design, implement and monitor participation programs and activities; - adjust program structures and formats as required; - self-management skills to reflect on own performance in developing and managing participation programs and activities and make appropriate adjustments, and; - ability to develop and adapt programs, activities and formats for a range of participant abilities, ability levels and ages. Students will also be expected to demonstrate the following knowledge: - characteristics of different groups of participants and appropriate communication and motivation techniques for each group; - products and services suitable for increasing participation in a specific sport; - strategies to best develop and promote participation; - marketing and advertising strategies to increase participation; - existing and potential networks and groups to enable links to be developed with potential stakeholders and participants; - the relationship between participation and talent identification in order to develop programs that will integrate with and develop pathways through the sport for emerging talent, and; - types of program structures and formats suitable for different participant groups to ensure the development of appropriate programs and activities.

SISSSO101 Develop and update officiating knowledge

Locations: Footscray Park, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to develop and update information on officiating, including the legal and ethical issues that must be considered by officials. The unit focuses on the ability to source and comprehend general principles of officiating as well National Sporting Organisation (NSO) sport specific requirements and covers the initial and ongoing development of a person's required knowledge base. It does not cover the technical requirements related to officiating in a particular sport, these skills are covered in other units. This knowledge underpins effective performance as an official.

Required Reading: The teacher will provide teaching and learning material as required.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research skills to identify, interpret and sort relevant information; - communication skills including active listening and questioning to obtain information literacy skills to read and comprehend the content of plain English information documents about legal and ethical issues, industry accreditation schemes and codes of behaviour, and; - problem-solving skills to identify methods of incorporating risk management principles into sport specific officiating duties. Students will also be expected to demonstrate the following knowledge: - structure and function of the NOAS; - sport specific rules, laws and regulations; - NSO requirements for officials, including member protection; - legal liability and duty of care; - ethical responsibilities of an official; - industry best practice equipment and safety requirements, including risk management principles; - principles of natural justice; - generic reporting procedures and tribunal processes, and; - presentation requirements including physical capability and mental preparation.

SISSPT303A Conduct basic warm-up and cool-down programs

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge to

implement basic warm up and cool down programs incorporating stretching to assist athletes to prepare for activity and also aid in post activity recovery.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: consult with athletes to establish the presence of contraindications; refer areas beyond own responsibility to appropriate medical personnel; convey information to athletes about safe warm-up and cool-down techniques; - problem-solving skills to: select and apply appropriate warm-up and cool-down techniques for appropriate activities or events; adjust exercises and techniques in response to athlete needs, and; - self management skills to review and reflect on own performance. Students will also be expected to demonstrate the following knowledge: - legislation and organisational policies and procedures to enable the safe conduct and monitoring of warm-up and cool-down programs; - principles of biomechanics and human anatomy and physiology to enable the safe conduct of warm-up and cool-down exercises; - contraindications and precautions for warm-up and cool-down exercises to ensure effective prevention or management of injury; - warm-up, stretching and cool-down exercises and techniques for relevant activities or events to enable an appropriate program to be implemented, and; - benefits of warm-up, stretching and cool-down exercises in preventing injury and aiding recovery.

SISSPT307A Conduct advanced taping

Locations: Footscray Park, Werribee, City King St.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge to apply taping and bracing techniques including knee joints, Achilles, shoulders and elbows to assist athletes in relation to ongoing injury prevention and post-injury support.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with athletes to establish the presence of contraindications; - refer areas beyond own responsibility to appropriate medical personnel; - convey information to athletes about taping and or bracing objectives and techniques; - select and apply appropriate taping techniques for relevant area; - determine situations requiring attention from a medical support team or health professional, and; - self-management skills to review effectiveness of taping in achieving initial aims and objectives of taping. Students will also be expected to demonstrate the following knowledge: - legislation and organisational policies and procedures to enable the safe conduct of all activities; - principles of biomechanics as they relate to taping and or bracing to enable understanding of human movement and the impact of injury; - anatomy and physiology of elbow, knee, Achilles and Acromioclavicular (AC) joint and their relationship to other body systems to enable understanding of human performance in a sport or physical

activity;- contraindications and precautions for taping or bracing to ensure effective prevention or management of injury; - types and qualities of tapes and their uses for different joints to enable joints to be taped effectively, and; - principles of taping and bracing techniques to enable treatment to be carried out safely and effectively.

SISSSTC301A Instruct strength and conditioning techniques

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, knowledge and skills required to use drills, exercises and activities to instruct strength and conditioning techniques to individual athletes or groups of athletes according to their sport-specific needs, or those undertaking fitness programs to achieve personal fitness goals.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - instruct effective strength and conditioning techniques; - give and receive feedback; - teamwork skills to be able to coach and mentor an athlete through a strength and conditioning program; - technology skills to assess athletes and select exercises and drills for use within the program; - planning and organising skills to implement a plan for strength and conditioning for an individual or group, and; - literacy and numeracy skills to enable the review of training diaries and the timely completion of sessions. Students will also be expected to demonstrate the following knowledge: - motivational techniques to provide appropriate feedback to athletes; - the major body systems, bones, joints muscles and their function to enable the selection, instruction and adjustment of appropriate exercises to meet the needs of athletes; - legislation and organisational policies and procedures to enable the safe delivery of exercise programs including the safe use of equipment and a safe learning environment; - drills, activities and games to teach the techniques of strength and conditioning, and; - physiological, psychological and biomechanical changes that occur with strength and conditioning training to enable informed planning and instruction of sessions and prompt response to athlete difficulties during the class.

SISSSTC402A Develop strength and conditioning programs

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, knowledge and skills required to develop, implement and evaluate a strength and conditioning program. It focuses on the skills needed to develop a program which meets the needs of individual athletes or groups of athletes according to their sport-specific needs or those undertaking fitness programs to achieve personal fitness goals.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - liaise with other coaches and

trainers; - give and receive feedback from athletes; - problem-solving skills to select appropriate techniques and strategies for the program to meet the stated objectives; - planning and organising skills to schedule the strength and conditioning program; - technology skills to assess the fitness and condition of athletes and other participants; - document evaluation methods; - record feedback, and; - read and understand policies and procedures information. Students will also be expected to demonstrate the following knowledge: - the major body systems, bones, joints, muscles and their function to enable the selection, instruction and adjustment of appropriate exercises to meet the needs of athletes; - anatomical, physiological and biomechanical differences of athletes including age and sex; - physiological adaptation to strength and conditioning training; - current strength and conditioning training techniques; - exercise prescription and exercise order principles; - physical constraints that may affect planning for strength and conditioning program, and; - legislation organisational policies and procedures to enable the safe delivery of exercise programs including the safe use of equipment and a safe learning environment.

SISXCAI001 Provide equipment for activities

Locations: Footscray Park, Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to prepare, demonstrate, use and store equipment for activities. This unit applies to assistants under direct supervision in a range of roles and settings in the sport, fitness or recreation industries. This includes assistants in after-school or holiday-care programs, those assisting with coaching activities, or undertaking a support role in fitness activities, indoor and outdoor recreation activities such as camps and other guided activities. These individuals undertake work according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - set up, demonstrate, use, dismantle, and store at least ten different pieces of equipment for activities over at least three different sessions; - demonstrate the use of: appropriate equipment suitable to the activity and participant requirements, and; appropriate personal protection equipment such as helmets, gloves, shin pads; - convey information about essential safety aspects of all equipment, and; - complete the appropriate documentation to record. Students will also be expected to demonstrate the following knowledge: - strategies to access and provide equipment for the relevant sessions; - basic aspects of legislation that enable safe equipment use, maintenance and storage; - organisational policies and procedure to enable safe equipment use, maintenance and storage; - equipment specifications and instructions to enable the selection and safe use of appropriate equipment for identified activities, and; - equipment testing and checking techniques, as specified by manufacturer. .

SISXCAI002 Assist with activity sessions

Locations: Footscray Park, Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to assist a leader or supervisor to prepare, conduct, monitor and evaluate

activity sessions. This unit applies to assistants under direct supervision in a range of roles and settings in the sport, fitness or recreation industries. This includes assistants in after-school or holiday-care programs, those assisting with coaching activities, or undertaking a support role in fitness activities, indoor and outdoor recreation activities such as camps and other guided activities. These individuals undertake work according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assist a supervisor to plan and conduct at least five different sport, fitness or recreation sessions; - use the following communication skills: clear verbal communication; modelling and demonstration, and; motivational techniques, and; - contribute to each session evaluation: provision of personal feedback, and; collection of participant feedback. Students will also be expected to demonstrate the following knowledge: - basic aspects of legislation related to planning, conducting and evaluating sport, fitness or recreation sessions - organisational policies and procedures related to planning, conducting and evaluating sport, fitness or recreation sessions; - the aims of sport, fitness or recreation sessions; - components of sport, fitness or recreation session plans; - potential hazards associated with activities and strategies to maximise safe participation; - techniques and skills appropriate to the session; - equipment specifications and instructions to enable the selection and safe use of appropriate equipment for identified activities; - techniques to motivate participants to encourage interaction and participation, and; - organisational referral and reporting requirements, to a supervisor or other appropriate personnel.

SISXCAI003 Conduct non-instructional sport, fitness or recreation sessions

Locations:Footscray Park, Industry, Footscray Nicholson, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to plan and conduct non-instructional sport, fitness or recreation sessions. It requires the ability to develop session plans, resource sessions, ensure the welfare and satisfaction of participants, and develop and maintain group cooperation and interaction. This unit applies to assistants under direct supervision in a range of roles and settings in the sport, fitness or recreation industries. This includes assistants in after-school or holiday-care programs, those assisting with coaching activities, or undertaking a support role in fitness activities, indoor and outdoor recreation activities such as camps and other guided activities. These individuals undertake work according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and conduct at least ten different sport, fitness or recreation sessions involving: planned tasks, games, activities and exercises of varying durations; communication, demonstration and

explanation of: content, timing and sequence of activities: appropriate apparel and footwear; techniques and safe use of equipment; warm-up and cool-down techniques; activities during sessions; potential hazards; - use the following communication skills: clear verbal communication; modelling and demonstration; motivational techniques, and; - complete session evaluations: own work performance; collection of participant feedback: suitability and safety of facilities and equipment; content of session; structure and content of the activity or session; participant progress. Students will also be expected to demonstrate the following knowledge: - basic aspects of legislation related to planning, conducting and evaluating sport, fitness or recreation sessions; - organisational policies and procedures related to planning, conducting and evaluating sessions; - components of sport, fitness or recreation sessions; - participant needs; - tests and assessments appropriate to preparing for sport, fitness or recreation sessions; - likely demands of participants and sessions; - resource requirements for sessions; - external factors that may affect session outcomes; - conflict resolution strategies to enable group cohesion and interaction; - equipment specifications, testing and checking techniques to ensure the selection and safe use of appropriate equipment, and; - evaluation processes to enable improvements to be made to the program. .

SISXCAI004 Plan and conduct programs

Locations:Footscray Park, Industry, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to plan and conduct a range of non-instructional programs in a variety of contexts for diverse needs and situations. This unit applies to individuals who work autonomously in a range of roles and settings in the sport, fitness or recreation industries. This includes program staff working in after-school or holiday-care programs, those assisting with coaching activities, or undertaking a support role in fitness activities, indoor and outdoor recreation activities such as camps and other guided activities. These individuals undertake work according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan, conduct and adjust at least ten sport, fitness or recreation programs incorporating: needs, preferences and expectations of different participants; budgetary constraints; logistics; appropriate response to problems or issues that arise, and; positive feedback in a timely manner to all participants; communication and explanation of: aims and objectives; dates and times; sessions, stages and structure, and; - complete program evaluations: own work performance, and; collection of participant feedback: suitability and safety of facilities and equipment; content of program; structure and content of activities or sessions, and; participant progress. Students will also be expected to demonstrate the following knowledge: - basic aspects of legislation related to planning, conducting and evaluating sport, fitness or recreation programs; - organisational policies and procedures related to planning, conducting and evaluating programs; - participant needs; - resource requirements for programs; - principles of inclusive practice to enable participation by a range of participants; - activity-specific knowledge to ensure program activities match participant needs; - factors affecting group dynamics and conflict resolution strategies to enable group cohesion and interaction; - equipment

specifications, testing and checking techniques to ensure the selection and safe use of equipment, and; - evaluation processes to enable improvements to be made to the program.

SISXCAI006 Facilitate groups

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to establish and facilitate the effective functioning of a group of people participating in an activity. This unit applies to individuals who work autonomously in a range of roles and settings in the sport, fitness or recreation industries. This includes program staff working in after-school or holiday-care programs, those assisting with coaching activities, or undertaking a support role in fitness activities, indoor and outdoor recreation activities such as camps and other guided activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - facilitate the effective functioning of at least three groups, and develop strategies to resolve problems: group and individual goals that the individual has identified and clarified; group members who have diverse styles, aspirations, cultures and perspectives; - use the following techniques to assist each group to facilitate optimum outcomes: task allocation; mentoring, and; - provide opportunities to encourage groups to openly propose, discuss and resolve issues through: group management skills; group decision making; listening skills; negotiation techniques; defining roles and responsibilities. Students will also be expected to demonstrate the following knowledge: - factors that contribute to optimal performance; - group dynamics and interactions that influence the attitudes and behaviours of others; - stages of group development to enable effective and constructive group support; - leadership styles, categories and types, appropriate to a range of group situations; - collaborative approaches to develop effective working relationships; - barriers to effective group development and performance, and; - facilitation techniques to assist the group to obtain the best outcomes.

SISXCAI306A Facilitate groups

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to establish a functional group within the context of a sport and recreation activity. The unit focuses on the ability to facilitate a group of clients participating in a sport and recreation activity or persons within a recreation organisation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - problem-solving skills to

address activity-specific problems and client interaction or conflict; - communication and interpersonal skills to enhance interaction with clients; - conflict-resolution and negotiation skills to enable smooth functioning of the group, and; - literacy skills to enable the creation of written plans and performance records. Students will also be expected to demonstrate the following knowledge: - theories of group dynamics to understand and respond to group behaviour; - stages of group formation, such as forming, norming, storming, performing and adjourning to enable effective and constructive group support; - leadership styles, categories and types, and; - facilitation techniques to assist the group to obtain the best outcomes.

SISXCCS001 Provide quality service

Locations: Footscray Park, Industry, Footscray Nicholson, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to address needs and expectations of clients and colleagues, promote programs, services and facilities, and respond to conflict and client complaints. This unit applies to individuals working in a range of customer service roles in the sport, fitness or recreation industries. This includes individuals working in gyms, aquatic centres, community centres or indoor activity centres, as well as to those working as instructors, trainers or guides and volunteers in indoor and outdoor settings. These individuals undertake work according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - provide programs and services to clients with varying needs and expectations over at least three service periods, and; - interact with clients in a polite and courteous manner using appropriate communication strategies and organisational channels to provide relevant information. Students will also be expected to demonstrate the following knowledge: - relevant legislation related to customer service; - organisational policies and procedures to enable ethical and non-discriminatory treatment of client requests and resolution of complaints; - communication mediums required to provide service to clients and colleagues; - conflict resolution strategies; - awareness of customs and practices of various social and cultural groups within Australia, to assist with meeting client needs and expectations; - services and products within the organisation that may be suited to particular clients, and; - principles and benefits of enhanced customer service experiences and positive communication.

SISXCCS403A Determine needs of client populations

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to gather, analyse and interpret data to plan and evaluate client service relationships and develop methods of improvement.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - source and elicit information about the needs of client populations; - seek feedback from client populations for the improvement of service delivery; - literacy and numeracy skills to analyse and interpret information and data to inform the planning and development of delivery of services to meet the needs of client populations; - identify issues that may affect service delivery; - plan and implement strategies to improve service-delivery outcomes for client populations; - planning and organising skills to develop, implement, monitor and evaluate a service-delivery plan, and; - technology skills to access information in electronic form. Students will also be expected to demonstrate the following knowledge: - legislation and organisational policies and procedures to enable the delivery of professional, fair and equitable services to all client populations; - organisational services and products, to enable them to be aligned to the needs of client populations; - dimensions and characteristics of client populations to enable client needs and services to be matched appropriately and accurately; - marketing principles, such as identifying key market segments, market trends and developments and changing client requirements to enable the identification of new and emerging needs to inform planning; - research and analysis techniques and information sources to enable the collection and interpretation of information on client populations to inform planning and delivery, and; - best practice principles to enhance and maintain optimal service delivery.

SISXDIS001 Facilitate inclusion for people with a disability

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to identify and facilitate sport, recreation and fitness opportunities for people with a disability. This unit applies to group leaders in the sport, recreation or fitness industry who work within established organisational policies and procedures. This includes those working in after-school or holiday-care programs, as a coaching assistant, or in support roles in indoor or outdoor recreation activities, such as camps and guided activities. The skills in this unit must be applied in accordance with public health regulatory requirements, relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - facilitate the inclusion of at least three people with different disabilities in sport, fitness or recreation activities; - select and use communication strategies suited to individual clients; - apply principles and practices of social justice, anti-discrimination and equal access to identify the needs and opportunities for participation in recreation activities, and; - identify strategies to align recreational opportunities with the specific requirements and needs of people with a disability. Students will also be expected to demonstrate the following knowledge: - legislation and organisational policies and procedures; - social, political, cultural and historical issues that affect, or are relevant to, access and participation issues for people with a disability; - principles and practices; -

communication needs, strategies and resources in relation to people with a disability; - key issues facing people with a disability and their carers; - barriers that affect the access and participation of people with a disability; - community inclusion principles to enable effective participation of people with a disability; - strategies that support people with disabilities to exercise their rights and independence; - types of requirements likely to be associated with different developmental and acquired disabilities; - resources required for the effective participation of people with a disability; - recreation opportunities and activities that may be appropriate for people with different types of disability, and; - modified equipment and activities appropriate to people with a disability.

SISXEMR001 Respond to emergency situations

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to recognise and respond appropriately in emergency situations, such as those caused by fire, accident or weather. It requires the ability to maintain participant welfare when responding to emergency situations. This unit applies to individuals who work in a range of roles and settings in the sport, fitness or recreation industries. This includes after-school or holiday-care programs; those assisting with coaching activities, as attendants at sporting grounds or facilities; or undertaking a role in indoor and outdoor recreation activities, such as camps and other guided activities. This unit also applies to those working in aquatic centres, such as instructors, operators or lifeguards. These individuals undertake work according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - respond to at least five of the following emergency situations, relevant to the individual's current or intended work situation: fire; hazardous release; bomb threat; medical; accidents; panic and other emotional responses; equipment failure; lost party member; changing environmental conditions; activity specific, and; - use the necessary emergency equipment for each situation in an appropriate manner. Students will also be expected to demonstrate the following knowledge: - organisational policies and procedures related to emergency responses; - appropriate responses to emergency situations; - safe use of emergency equipment required for emergency responses; - the role of appropriate personnel in the workplace; - role of appropriate personnel in emergency services; - role of communication systems; - communication techniques for supporting and reassuring customers, and; - range of formats for and inclusions of incident reports.

SISXFAC001 Maintain equipment for activities

Locations: Footscray Park, Industry, Footscray Nicholson, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to conduct routine maintenance and minor repairs on equipment. This unit applies to those who undertake equipment maintenance for a specific sport or activity, or general equipment maintenance as part of sport, fitness or recreation facility operations. These individuals work under supervision and according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - safely conduct at least six of the following minor maintenance tasks on equipment within industry realistic timeframes over five service periods, and; - consistently monitor storage and condition of the following equipment over five service periods. Students will also be expected to demonstrate the following knowledge: - policies and procedures related to routine maintenance tasks; - equipment repair techniques relevant to the equipment being maintained to enable safe and appropriate equipment repair; - factors to consider when checking equipment serviceability to enable equipment to be maintained to a safe standard; - manufacturer guidelines and codes of practice for equipment maintenance and repair, where relevant, and; - safety standards for equipment within area of responsibility.

SISXFAC002 Maintain sport, fitness and recreation facilities

Locations:Footscray Park, Industry, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to maintain facilities within a sport, fitness and recreation context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and safely use cleaning agents and equipment to clean at least two of the following areas over three service periods: outdoor; indoor; dry or wet recreation centre; build and non-built; - complete the above in response to at least three of the following hazards: leaking or damaged containers; defects in the storage area; contamination; spillages; unsecured equipment; breakages; - complete above cleaning tasks to required standards, and; - complete all required documentation according to policies and procedures and with the following information: dates and times; areas cleaned; staff member involvement. Students will also be expected to demonstrate the following knowledge: - cleaning chemicals, equipment and procedures for wet and dry surfaces and materials; - safe operational practices using essential functions and features of equipment used to clean wet and dry areas; - role and use of safety data sheets (SDS); - safe manual-handling techniques; - safe handling requirements for hazardous cleaning products, including their disposal; - hygiene procedures and requirements; - ways of minimising negative environmental impacts in the cleaning process; - standards for presentation of premises and organisational procedures to achieve them, and; - hazards associated with cleaning agents.

SISXFAC409 Plan and provide sport, fitness and recreation services

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge

required to determine the sport, fitness and recreation services required by clients and to plan, implement and evaluate the services from a facility management perspective.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult and interact with target groups in the community to elicit information required to determine needs for the service; - source, interpret and confirm information to inform service planning; - liaise with appropriate personnel to make suggestions and plan the service; - seek feedback from service users and staff; - build relationships with stakeholders; - plan a service according to target group needs; - assess risk factors; - modify the service as required; - assess service outcomes against initial objectives to suggest potential improvements; - source and allocate resources for the service; - develop and implement a work plan for the service within appropriate timelines; - complete research into user needs; - produce and document service plans; - complete documentation in relation to recommendations for improvement; - numeracy skills to develop budgets for service provision and analyse profitability, and; - self-management skills to review and reflect on own work performance in planning and implementing the service according to participant expectations. Students will also be expected to demonstrate the following knowledge: - legislation to enable: - safe and equitable delivery of the service to target groups; - safe use of equipment and materials; - organisational policies and procedures to enable safe, satisfactory and beneficial outcomes for all participants; - principles of inclusive practices; - reasons for individual participation in sport, fitness and recreation services to ensure this information is included in planning for service; - risk-analysis processes to evaluate the risk and possible impact of planned sport and recreation services; - activity-specific knowledge of planned sport, fitness and recreation services to ensure services match participants' needs; - cost-benefit analysis techniques; - marketing strategies suitable for target groups; - insurance arrangements to suit the service.

SISXIND001 Work effectively in sport, fitness and recreation environments

Locations:Footscray Park, Industry, Werribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to work effectively in a sport, recreation or fitness environment. The unit requires the ability to use industry knowledge to support the completion of day-to-day work activities. This unit applies to key personnel working in customer service roles in gyms, aquatic centres, community centres or indoor activity centres. It also applies to individuals working as instructors, trainers or guides and volunteers in indoor and outdoor settings with a range of client groups. These individuals work under supervision and according to relevant legislation and organisational policies and procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - integrate industry knowledge and provide service to clients for a minimum of ten service periods that individually or in combination involve: - interacting with and positively responding to diverse demands and requests of multiple clients; - working with speed and efficiency to deal with numerous service and operational tasks simultaneously; - identifying issues and problems, determining solutions and taking appropriate action to resolve; - working cooperatively as part of a team, monitoring the service process and workflow, and taking responsibility for own work outcomes, and; - providing technical advice and support to other team members. Students will also be expected to demonstrate the following knowledge: - organisational policies and procedures; - complaint handling; - information sources for the sport, fitness and recreation industry and how to access that information; - roles and responsibilities of service team members; - sectors of the sport, fitness and recreation industry and their interrelationships, roles and functions, and; - full details of organisation products, services, facilities, current promotions, events and entertainment.

SISXIND006 Conduct a sport, fitness or recreation event

Locations:Footscray Park, Weiribee.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to organise and conduct a sport, fitness or recreation event. It requires the ability to plan, setup and conduct an event, supervise the event team, and monitor and evaluate the event outcomes. Event team members may be paid employees or volunteers. It applies to event organisation and coordination requirements at a single site or venue. Event coordinators must consistently and responsibly conduct events according to relevant legislation and organisational policy and procedures, and within the framework of the event managing organisation or sport controlling body.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan, deliver, and evaluate at least two of the following events that have prearranged operational components: banquet; business or corporate event; entertainment or leisure event; exhibition, exposition or fair; fundraising event; industry and other awards presentations; meetings and conventions; social event; sporting event; - develop and present comprehensive event proposals, and; - develop and produce these comprehensive documents for each event: briefing papers; emergency phone contacts; layout plan for venue or site; program; running sheet; schedules. Students will also be expected to demonstrate the following knowledge: - the primary components of state, territory and local council laws that impact on event delivery and actions that must be adhered to by event operators during event setup, conduct and break down, in particular laws; - legal liability and duty of care of participants; - characteristics of these events staged in various locations: banquets; business or corporate event; entertainment or leisure event; exhibition, exposition or fair; fundraising event; industry and other awards presentations; meetings and conventions; social events; sporting events; - key features and functions of these event staging products and services: catering; displays, stands and signage; exhibitor services; security; talent; technical equipment and services; venue or site; - formats for, inclusions and uses of:

event proposals; specific event documentation; event operational documentation, and; - key environmental and social sustainability impacts of event delivery and procedures.

SISXIND404A Promote compliance with laws and legal principles

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to apply legislation relevant to organisational operations. The unit focuses on analysis and interpretation of relevant legislation to inform the review of current organisational systems to determine compliance with legal obligations and promote the modification or development and implementation of systems to promote business compliance.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - liaise with colleagues; - convey information about legal obligations; - seek feedback on organisation policies, procedures and implementation strategies to support organisation compliance and undertake a review of these systems; - undertake research of relevant legislation and legal information; - interpret and update information to promote compliance; - document information to support compliance; - review compliance of current organisation policies and procedures; - identify problems and gaps; - modify or develop initiatives to promote compliance with legal obligations, and; - technology skills to access relevant legal information from electronic sources. Students will also be expected to demonstrate the following knowledge: - organisation systems and their relationship to legislative obligations to enable understanding of the purpose and aims of these systems and their effective functioning; - organisation policies and procedures related to legislative requirements and compliance to enable an assessment of gaps and potential modifications to be identified; - legislation and industry codes of practice which govern operations to enable organisation compliance; - evaluation techniques to enable the effective review of organisation policies and procedures, and; - appropriate implementation strategies for organisation policies and procedures that meet compliance requirements.

SISXIND406A Manage projects

Locations:Footscray Park.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to scope, implement, monitor and evaluate project-management plans and outcomes in specific activity areas, ensuring all resources are available to achieve project goals and that the project complies with legislative and organisational requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - liaise with internal and external service providers to negotiate project roles and responsibilities; - monitor project progress in consultation with team members; - conduct project meetings and resolve issues and conflict arising during the project; - coordinate the implementation of the project-management plan; - coordinate project resources within timelines and budget; - define parameters of the project; - monitor objectives; - identify and address deviations to the project-management plan; - develop contingency plans; - develop a project-management plan; - complete project documentation; - prepare and manage a project budget; - review and reflect on own project-management skills; - identify required improvements, and; - technology skills to use computer programs effectively. Students will also be expected to demonstrate the following knowledge: - organisational policies and procedures to enable accountability and satisfactory completion of project outcomes; - legislation to enable the project to be conducted safely and responsibly; - quality-assurance principles to enable project accountability in the achievement of quality outcomes; - project-management techniques and systems to prepare, implement and monitor a project plan within budget and on time; - organisational financial recording and reporting requirements; - conflict-resolution techniques to enable negotiation of issues arising during the project; - risk-analysis processes to enable assessment of the potential impact of the project, and; - evaluation processes to enable improvements to be made to future projects.

SISXRES001 Conduct sustainable work practices in open spaces

Locations: Footscray Park, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to plan and conduct work in open spaces while upholding sustainable practices. This unit requires the ability to conduct research of the current land condition, capability, uses and practices, and develop and implement strategies to achieve sustainable practices for outdoor programs and activities. This unit applies to operation or program managers who are responsible for planning, implementing and evaluating sport, recreation or fitness programs and activities across a range of activity areas. They work autonomously with responsibility for management of resources and upholding of sustainable work practices.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and conduct at least three sessions in two or more open space environments to minimise environmental impacts of sport, fitness or recreation activities; - for each of the sessions incorporate: local government requirements; industry codes of practice; provision of advice to clients regarding the use of open spaces, and; management of client behaviour in open spaces, and; - provide feedback on the environmental impact of at least five sport, fitness or recreation activities conducted in open spaces. Students will also be expected to demonstrate the following knowledge: - legislation, regulations and land management requirements and guidelines: - permits in national parks or on land under control of traditional owners; - restrictions on camp site operations and use of open fires; - global environmental issues, in particular a layperson understanding of the science associated with: climate change; energy; land management; waste and consumption, and; water; - environmental and social impacts of sport, fitness or

recreation industry in relation to global environmental issues in particular sites and communities; - practical sustainability considerations for sport, fitness or recreation operations; - minimal impact techniques and procedures; - biophysical and socio-cultural elements in an environment and the relationship between them, and; - information collection techniques for monitoring environmental and social impact, including what is observed and measured and how specific data is recorded.

SISXRES002 Educate user groups

Locations: Footscray Park, Industry, Werribee.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to identify and address issues in the use of facilities and activity resources. It requires the ability to develop resources or education for target user groups. This unit applies to those working as program staff with supervisory responsibilities in a range of locations or with a range of user groups in aquatic programs, sport programs or recreation leisure centres, including gyms. They work autonomously and according to relevant legislation and organisational policies and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and address at least three issues in relation to use of a current facility or activity resource through either: educational programs; information resources such as notices, leaflets or handouts; - identify and address at least two issues that could arise as a result of upcoming changes to/ addition of a facility or activity resources through either: educational programs; information resources; - promote each program and/or resource using appropriate strategies to the user group; - evaluate all educational programs and resources, identify improvements and document improvement for at least: one program; one resource, and; - maintain and update records of information and programs. Students will also be expected to demonstrate the following knowledge: - organisational policies and procedures to enable the production and storage of documentation and educational material; - potential issues in relation to resource use, to enable educational programs to target these areas; - components of an educational program; - types of educational material and presentation techniques to enable information on resource use to be conveyed effectively; - use of relevant audio-visual and multimedia equipment to enable clear presentations; - formal and informal evaluation techniques to enable improvements to be made in educational programs, and; - budgeting for educational programs and resources.

SISXRSK502A Manage organisational risks

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to develop, implement and evaluate a risk-management program for an organisation. It incorporates an assessment of potential risks facing the organisation and the development of strategies and procedures to mitigate risk situations according to the current Australian and New Zealand standard.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and assess hazards, level of risk and treatment options; - develop strategies to manage organisational risks; - develop, implement and monitor a systematic risk-management plan for an organisation; - make changes to risk-management plan and program as required in response to review recommendations; - access and analyse required risk-assessment information; - document a risk-management plan for a specific organisation; - convey information about the organisational risk-management plan; - conduct a risk-management review, and; - consult with relevant personnel to implement review recommendations. Students will also be expected to demonstrate the following knowledge: - strategic and operational plans of the organisation in relation to organisational risk-management procedures to enable organisational capability to deal with events or incidents and risks associated with activities to be assessed and addressed; - legislation to enable risk identification and assessment for the relevant activities and identification of the legal responsibilities associated with risk management; - hierarchy of controls to enable the most appropriate and viable risk-treatment options to be applied to activities; - hazards associated with specific activities and locations to enable effective risk-treatment options to be identified; - risk-assessment principles and methodology; - common risk-management terminology, such as risk, risk management, hazard, risk analysis and risk-management plan; - risk-evaluation criteria to enable level of risk to be assessed, and; - disaster, emergency and evacuation plans.

SISXWHS402 Implement and monitor work health and safety policies

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to implement Occupational Health and Safety (OHS) policies, procedures and programs within the context of an established organisational OHS system.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - convey relevant information about health and safety to the work group; - liaise with designated personnel to monitor the impact of policies and procedures on safe work practices; - elicit information from staff to assess training needs to facilitate the implementation of organisational work health and safety policies; - analyse the work environment to identify hazards and assess risks; - assess the effectiveness of organisational policies; - identify inadequacies and make recommendations to address these, such as resources needed to apply different risk-control measures; - read and analyse Occupational Health and Safety (OHS) or Work Health and Safety (WHS) legislation and organisational policies and procedures; - complete required work health and safety documentation, and; - use information to identify hazards, assess risks and evaluate the effectiveness of risk-control measures. Students will also be expected to demonstrate the following knowledge: - enable analysis of work practices and appropriate remedies; - store and handle hazardous goods and equipment; - maintain

required documentation; - organisational health and safety policies and procedures to facilitate compliance with legal requirements; - principles and practices of effective work health and safety management to enable effective implementation of organisational policies and procedures to create a safe workplace, and; - role of work health and safety management in other organisational systems, policies and procedures to enable a systemic approach to workplace safety. .

SITEEVT001 Source and use information on the events industry

Locations: Footscray Park, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to access and interpret current and emerging information on the events industry to enhance the quality of event coordination. This includes industry structure, technology, laws and ethical issues specifically relevant to event coordination.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - source and document current and emerging industry information on the events industry using at least three information sources listed in the knowledge evidence, and; - identify ways to integrate current events industry information into daily work activities to enhance the quality of work performance. Students will also be expected to demonstrate the following knowledge: - sources of information on the events industry; - event types and staging elements; - event products and services; - structure of the events industry; - information of relevance to the events industry; - general nature of allied and cross-over industries; - basic aspects of the stages of event management, from concept development through to execution; - basic aspects of Australian events industry quality assurance processes; - basic aspects of managing environmental and social sustainability when operating events; - roles and responsibilities for environmental and social sustainability in: event organisations; event management companies; event venues and sites; - basic aspects of state, territory, commonwealth and local government laws specifically relevant to the events industry, and actions that must be adhered to by organisations staging events; - basic aspects of equal employment opportunity (EEO) law; - current and emerging technology used by event organisations, and; - ethical practices for: confidentiality of customer information; declaration of commissions, fees and other charges; gifts and services provided free of charge; tips; overbooking; product recommendations; professional behaviour when participating in site inspections and industry events.

SITEEVT002 Process and monitor event registrations

Locations: Footscray Park, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to process attendee registrations for events, and administer them through to finalisation. It requires the ability to record customer information, monitor attendance numbers, generate sales and operational reports, and issue customer documents for event attendance.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - process and administer registrations for six different customers through to finalisation for at least two different types of events; - produce reports for registrations for each of the above events, and; - complete registrations within commercial time constraints and deadlines. Students will also be expected to demonstrate the following knowledge: - operation systems and software programs used to process and monitor event registrations; - types of events for which registrations are required; - types of customers for different types of events and methods of administering different registrations; - customer information required to administer registrations; - financial administration documents for customer payments; - customer event attendance documents; - event registration reports; - features of event programs, schedules, inclusions and specific costs; - information required by event coordinators and managers to monitor attendance numbers and deliver events; - procedures and deadlines for processing and administering registrations and issuing registration reports; - generating and issuing invoices and credit notes for changed registrations, and; - receiving, processing and recording payments.

SITEEV003 Coordinate on-site event registrations

Locations: Footscray Park, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to prepare for and process on-site attendee registrations at events. It requires the ability to collect and collate all registration materials in advance of the event, set up the registration area, and check attendee registration details before admission.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - coordinate on-site registrations for at least two different types of events as listed in the knowledge evidence, including undertaking each of the following: prepare registration materials and equipment; set up registration area; process on-site attendee registrations; take payments; check registration details; provide event documentation; communicate event information to all attendees; resolve registration discrepancies, and; - complete on-site registrations within commercial time constraints and customer deadlines. Students will also be expected to demonstrate the following knowledge: - types of events for which on-site registrations take place; - on-site registration processes for diverse event types; - safety considerations for on-site registration areas; - access issues for on-site registration areas, especially those associated with gathering or moving large numbers of people; - different types of operations systems, and software programs used to process on-site event registrations; - attendee information required to provide on-site event documentation and admission; - different formats for, inclusions, and uses of: event registration reports; registration materials required to process on-site event registrations; financial administration documents for attendee

payments, and; event attendance documents, and; - for specific organisation and event.

SITEEV005 Plan in-house events or functions

Locations: Footscray Park, Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to plan the delivery of events or functions in a commercial venue. It requires the ability to identify customer operational needs and preferences, prepare and confirm event proposals, and finalise operational documents for the delivery of events.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan the delivery of at least two in-house events or functions listed in the knowledge evidence to meet the operational requirements of diverse customers; - prepare and present accurate and comprehensive event proposals and operational documentation for each of the above events, and; - demonstrate the following for each of the above events: liaise with internal personnel and external suppliers to facilitate effective event planning and booking of services; issue event orders and operational documents, and; complete activities within commercial time constraints and event deadlines. Students will also be expected to demonstrate the following knowledge: - types of in-house events and functions; - characteristics of different types of events and functions staged in commercial venues; - key features and functions of event staging products and services; - styles used in venue room set-up and their different purposes; - different formats; - key environmental and social impacts of event delivery and minimal impact procedures, and; - specific organisation or event procedure and processes.

SITEEV007 Select event venues and sites

Locations: Footscray Park, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to source and select venues or sites for events. It requires the ability to analyse event plans to determine venue or site requirements; develop selection specifications; and assess, choose and contract venues or sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with stakeholders to identify and document venue and site requirements for at least one event type listed in the knowledge evidence that has multiple operational components; - research and select appropriate venue or site for the above event using at least two of the following methods: calling for tenders; conducting desk research; inspecting venues or sites; using own events industry networks, and; - source and select venue or site

for the above event within commercial time constraints and event deadlines. Students will also be expected to demonstrate the following knowledge: - types of events; - operational and venue requirements for different types of events; - sources of information on event venues or sites; - key features of local event venues or sites and their capacity to service different types of events; - event staging products and services offered by event venues or sites and their suitability for different types of events; - risk and regulatory issues associated with different types of venues and sites, and methods of managing them; - social and environmental sustainability issues associated with different venues and sites; - operational structures within venues and sites, and; - formats for, inclusions, and uses: venue or site specifications for the staging of events and venue or site contracts.

SITEEVT008 Manage event staging components

Locations: Footscray Park, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to analyse event staging requirements and organise and monitor different staging services and products. It requires the ability to use advanced planning, organisation and communication skills combined with detailed knowledge of the event management process and broad understanding of specialist component services.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consult with stakeholders to develop staging requirements for at least one type of event listed in the knowledge evidence with multiple operational components; - source and select contractors for the above event to provide staging components that meet stakeholder and event requirements, and; - monitor and evaluate event staging components for the above event by: ensuring work is completed against event requirements and schedules; confirming staging requirements are delivered as required; obtaining feedback from stakeholders on contractor performance. Students will also be expected to demonstrate the following knowledge: - types of events; - roles and responsibilities of organisations involved in event staging; - suppliers of staging products and services; - sources of information on staging services and products; - product and service terminology, features and options, current technology and risk considerations in these key areas of staging: catering; displays, stands and signage; exhibitor services; security, and; talent; technical equipment and services: audiovisual; lighting; sets; sound; stage design; rigging; special effects; venue or site requirements; venue layout and styling; - regulatory considerations for organising event staging; - factors affecting staging specifications, and; - requirements for contractor briefing and specification documents.

SITEEVT010 Manage on-site event operations

Locations: Footscray Park, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to manage on-site operational activities for the staging of events. It requires the ability to finalise operational plans, oversee event set-up, execution and break-down, and evaluate the operational success of events.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - manage on-site event operations for at least one event type listed in the knowledge evidence with multiple operational components, overseeing event: set-up; operation; break-down; - develop comprehensive plans, procedures and operational documentation for staging at above event; - conduct event briefings prior to and following the above event; - liaise and consult with contractors and other relevant personnel during event finalisation, operation and break-down to ensure service agreements are met and potential risks are mitigated, and; - manage on-site event operations in live time where commercially realistic time pressures and constraints play a key factor. Students will also be expected to demonstrate the following knowledge: - types of events; - characteristics of different types of events; their purpose, format and running order; - personnel and others involved in the operation of an event; - roles, responsibilities, hierarchy of controls, and reporting for event staging of: corporate clients; internal event team members, venue personnel and external contractors; on-site event manager; - features and functions of two-way communication equipment used to facilitate communication between event personnel; - techniques for managing stress and time during operation of events; - types of event contractors; - key features and functions of event staging products and services; - venue or site; - styles used in venue room set-up and their different purposes; - formats for, inclusions, and uses of: operational plans and procedures used to manage on-site event logistics; event service agreements; - key environmental and social impacts of event delivery and minimal impact procedures to reduce them; - control measures to mitigate risk for: attendees; contract staff; personnel; volunteers, and; - components of event break-down.

SITHASC001 Prepare dishes using basic methods of Asian cookery

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to:

<http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to use a range of basic Asian cookery methods to prepare dishes. The unit applies to hospitality and catering organisations that offer any type of Asian cuisine and to cooks who usually work under the guidance of more senior chefs. The unit may be applied to one or more Asian cuisines.

Required Reading: Not applicable.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare dishes that demonstrate use of each of the following ingredients: dairy products; dry goods; eggs; fruit; general food items; meat that is culturally appropriate; poultry; rice and farinaceous items; seafood; vegetables; - use at least

eight of the following cookery methods and complete mise en place activities when preparing above dishes: baking; barbecuing; boiling; braising; deep-frying; grilling; oil and water blanching; roasting; shallow frying; steaming; stewing; stir-frying, and; - prepare above dishes for at least six different customers. Students will also be expected to demonstrate the following knowledge: - major food types and their characteristics; - how the major food types are used in different Asian dishes and the effects of different cookery methods on them; - essential culinary terms in, and key principles and practices of, the cookery methods described in the performance evidence; - contents of stock date codes and rotation labels, and; - safe operational practices using essential functions and features of equipment used in the above cookery methods.

SITHASC002 Prepare Asian appetisers and snacks

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to:
<http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and cook Asian appetisers and snacks following standard recipes. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Asian cuisine and to cooks who usually work under the guidance of more senior chefs. The unit may be applied to one or more Asian cuisines.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare at least six different appetisers and snacks from at least one of the following Asian cuisines: Chinese; Indian; Indonesian; Japanese; Malay and Nonya; Thai; Vietnamese; - complete mise en place activities and use at least eight of the cookery methods listed in the knowledge evidence when preparing above dishes, and; - prepare above dishes for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in producing different Asian appetisers and snacks; - required changes to dips, sauces and garnishes to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels; - characteristics of Asian appetisers and snacks; - cookery methods for Asian appetisers and snacks; - historical and cultural origin of different Asian appetisers and snacks; - appropriate environmental conditions for storing appetisers and snacks, and; - safe operational practices using essential functions and features of equipment used to produce Asian appetisers and snacks.

SITHASC003 Prepare Asian stocks and soups

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to:

<http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare stocks and soups for Asian cuisines. The unit applies to hospitality and catering organisations that offer Asian cuisine and to cooks who usually work under the guidance of more senior chefs. The unit may be applied to one or more Asian cuisines.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare at least five different stocks and five different soups from at least one of the following Asian cuisines: Chinese; Indian; Indonesian; Japanese; Malay and Nonya; Thai; Vietnamese; - prepare the above stocks for use in different recipes, and; - prepare above soups for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in producing stocks and soups; - required changes to stocks and soups to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels; - characteristics of stocks and soups and their ingredients; - quality indicators for stocks and soups; - mise en place requirements for stocks and soups; - preparation and cookery methods for the stocks and soups listed in the performance evidence; - appropriate environmental conditions for storing stocks and soups to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce Asian stocks and soups.

SITHASC004 Prepare Asian sauces, dips and accompaniments

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to:
<http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and present sauces, dips and accompaniments for Asian cuisines. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Asian cuisine and to cooks who usually work under the guidance of more senior chefs. The unit may be applied to one or more Asian cuisines.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare at least three different sauces, dips and accompaniments from at least one

of the following Asian cuisines: Chinese; Indian; Indonesian; Japanese; Malay and Nonya; Thai; Vietnamese, and; - prepare the above sauces, dips and accompaniments for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of sauces, dips and accompaniments; - contents of stock date codes and rotation labels; - required changes to sauces, dips and accompaniments to reflect cultural and regional considerations and variations; - characteristics of sauces, dips and accompaniments and their ingredients; - common variations that are requested in sauces dips and accompaniments relating to: preferences and requirements; size and format of ingredients; type and format of garnishes; use and combinations of particular ingredients; - preparation methods and considerations for sauces, dips and accompaniments; - appropriate environmental conditions for storing sauces, dips and accompaniments to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce Asian sauces, dips and accompaniments.

SITHASC005 Prepare Asian salads

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to:
<http://www.vu.edu.au//skilled-migration..>

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to prepare salads, including sauces, dressings and accompaniments for national and regional Asian cuisines. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Asian cuisine and to cooks who usually work under the guidance of more senior chefs. The unit may be applied to one or more Asian cuisines.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare at least six different salads from at least one of the following Asian cuisines: Indian; Indonesian; Japanese; Malay and Nonya; Thai; Vietnamese, and; - prepare above salads for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of salads; - required changes to salads to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels; - characteristics of salad ingredients and finished dishes; - accompaniments commonly used in Asian salads; - preparation methods for Asian salads; - appropriate environmental conditions for storing salads to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce Asian salads.

SITHASC006 Prepare Asian rice and noodles

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries

in which VU conducts these assessments please refer to:
<http://www.vu.edu.au//skilled-migration..>

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to prepare rice and noodles for national and regional Asian cuisines. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Asian cuisine and to cooks who usually work under the guidance of more senior chefs. The unit may be applied to one or more Asian cuisines.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare at least three different rice and noodle dishes from each of the following Asian cuisines: Chinese; Indonesian; Japanese; Malay and Nonya; Thai; Vietnamese; - prepare the above dishes for at least six different customers: - within commercial time constraints; - reflecting required quantities to be produced; - following procedures for portion control and food safety practices when handling and storing Asian style rice and noodles, and; - responding to special customer requests and dietary requirements. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of rice and noodle dishes; - contents of stock date codes and rotation labels; - required changes to rice and noodle dishes to reflect cultural and regional considerations and variations; - characteristics of Asian rice and noodle dishes and their ingredients; - preparation methods for Asian rice and noodle dishes; - cookery methods for Asian rice and noodle dishes; - common accompaniments for Asian rice and noodles; - appropriate environmental conditions for storing rice and noodle dishes to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce Asian rice and noodles.

SITHASC007 Prepare curry pastes and powders

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to:
<http://www.vu.edu.au//skilled-migration..>

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to prepare curry pastes and powders for national and regional Asian cuisines. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Asian cuisine and to cooks who usually work under the guidance of more senior chefs. Cuisines may be Indonesian, Indian, Malay, Nonya or Thai.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare at least three curry pastes and powders from at least one of the following Asian cuisines: Indian; Indonesian; Malay and Nonya; Thai, and; - prepare above curry pastes and powders for use in at least six different curries or other dishes. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of curry pastes and powders; - required changes to curry pastes and powders to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels; - characteristics of curry pastes and powders ingredients and finished dishes; - dishes other than curries that use curry pastes and powders; - preparation methods and considerations for curry pastes and powders; - appropriate environmental conditions for storing curry pastes and powders to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce curry pastes and powders.

SITHASCO08 Prepare Asian cooked dishes

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and cook meat, poultry, seafood and vegetable dishes for national and regional Asian cuisines. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Asian cuisine and to cooks who usually work under the guidance of more senior chefs. The unit may be applied to one or more Asian cuisines.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare at least six cooked dishes from at least one of the following types of cuisine: Chinese; Indian; Indonesian; Japanese; Malay and Nonya; Thai; Vietnamese; - prepare at least one dish using each of the following ingredients: meat; poultry; seafood; vegetables; - prepare the above dishes demonstrating at least eight of the preparation techniques and using each of the cookery methods listed in the knowledge evidence at least once, and; - prepare above dishes for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of Asian cooked dishes; - required changes to dishes to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels; - characteristics of Asian cooked dishes and their ingredients; - preparation techniques used for Asian cooked dishes; - cookery methods used for Asian cooked dishes; - appropriate environmental conditions for storing Asian cooked dishes to:

ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce Asian cooked dishes.

SITHASCO09 Prepare Asian desserts

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to select, prepare desserts for national and regional Asian cuisines. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Asian cuisine and to cooks who usually work under the guidance of more senior chefs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare at least six desserts from at least one of the following types of cuisine: Chinese; Indian; Indonesian; Malay and Nonya; Thai; Vietnamese; - prepare the above desserts demonstrating at least eight of the preparation and cookery methods; - at least one of the dessert items prepared must be: hot; cold; for a special occasion, and; - prepare above desserts for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of Asian desserts; - required changes to desserts to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels characteristics of ingredients and finished dishes; - preparation and cookery methods for Asian desserts; - appropriate environmental conditions for storing Asian desserts to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce Asian desserts.

SITHASC010 Prepare Japanese cooked dishes

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to produce a range of Japanese dishes. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Japanese cuisine and to cooks who usually work under the guidance of more senior chefs.

Required Reading: Not applicable.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare at least two different Japanese cooked dishes from each of the following food groups: condiments or stocks; meat; seafood; seaweed; tofu; vegetables; - prepare the above dishes using each of the following cookery methods at least once: deep-frying; grilling; one-pot cookery; simmering; steaming, and; - prepare the above dishes for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of different Japanese cooked dishes; - required changes to dishes to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels; - characteristics of Japanese cooked dishes; - cookery methods for Japanese cooked dishes as specified in the performance evidence; - appropriate environmental conditions for storing Japanese cooked dishes to: ensure food safety; optimise shelf life; - knife care and maintenance, and; - safe operational practices using essential functions and features of equipment used to produce Japanese cooked dishes.

SITHASC011 Prepare sashimi

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and present raw fish dishes for Japanese cuisine. It requires the ability to select and prepare ingredients, using relevant equipment. The unit applies to hospitality and catering organisations that offer Japanese cuisine, and to cooks who usually work under the guidance of more senior chefs.

Required Reading: Not applicable.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare each of the following types of sashimi: kobujime; sashimi (moriawase); tataki; usu zukuri; - prepare each of the following sashimi accompaniments: daikon; ginger root and sauces; wasabi; momiji oroshi; tosa jyu; - demonstrate use of the following methods when preparing sashimi: cutting; portioning; uniformity, and; - prepare the above sashimi for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for sashimi ingredients; - required changes to sashimi to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels; - characteristics of sashimi: - accompaniments and garnishes; - items required for: momiji oroshi; sarashi-negi; - preparation methods for sashimi; - appropriate environmental conditions for storing sashimi to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce and present sashimi.

SITHASC012 Prepare sushi

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries

in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to produce sushi. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Japanese cuisine, and to cooks who usually work under the guidance of more senior chefs.

Required Reading: Not applicable.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare each of the following types of sushi: chirashi; maki; nagiri; oshi; - prepare each of the following sushi accompaniments: aromatics; pickled vegetables; salad items; herbs; pungent mustard sprouts; - sauces for dipping: nikiri joyu; nitsume joyu; - demonstrate use of the following methods when preparing sushi: blending and balancing flavours and aromatics; cutting; rolling the sushi mat, and; - prepare above sushi for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of sushi: herbs and spices; condiments; thickening and flavouring agents; season delicacies; - required changes to sushi to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels; - characteristics of sushi ingredients and finished dishes; - appropriate environmental conditions for storing sushi to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of the equipment used to produce and present sushi.

SITHASC013 Produce Japanese desserts

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare fruits, cakes and sweetmeats in Japanese cuisine. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Japanese cuisine, and to cooks who usually work under the guidance of more senior chefs.

Required Reading: Not applicable.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare at least one of each of the following types of Japanese dessert items: bean jelly; soft cakes; pastes; sweet bean soup; - demonstrate use of each of the following methods at least once when preparing above desserts: filling; shaping, and; - prepare above desserts for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for

ingredients commonly used in the production of Japanese cakes and sweetmeats; - required changes to Japanese cakes and sweetmeats to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels; - characteristics of ingredients and finished dishes; - preparation methods for Japanese cakes and sweetmeats listed in performance evidence; - appropriate environmental conditions for storing Japanese cakes and sweetmeats to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce Japanese cakes and sweetmeats.

SITHASC014 Prepare dim sum

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and cook dim sum following standard recipes. It requires the ability to select, prepare and portion ingredients and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Chinese cuisine, and to cooks who usually work under the guidance of more senior chefs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare six different types of dim sum from the list in the knowledge evidence; - prepare appropriate accompaniments for the above dim sum; - demonstrate use of each of the following preparation methods when preparing dim sum: blending and balancing flavours and aromatics; cutting; - demonstrate use of each of the following cookery methods and complete mise en place activities when preparing dim sum: boiling; deep-frying; shallow frying; braising; steaming, and; - prepare above dim sum for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of dim sum; - required changes to dim sum to reflect cultural and regional considerations and variations; - contents of stock date codes and rotation labels; - characteristics of dim sum ingredients and finished dishes; - types of dim sum and preparation and cookery methods; - effects of cooking techniques on nutrition, taste, texture and appearance; - appropriate environmental conditions for storing dim sum products and dishes to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce and present dim sum.

SITHASC015 Prepare Chinese roast meat and poultry dishes

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and cook roast meats and poultry for Chinese cuisines. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Chinese cuisine and to cooks who usually work under the guidance of more senior chefs. It mainly applies to Szechuan and Shanghai cooking but may also be relevant to other regional styles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare three Chinese roast meat and poultry dishes demonstrating use of each of the following cookery methods at least once: barbecuing; basting; roasting; smoking; - prepare the above dishes demonstrating the following methods for preparing different cuts and types of meat or poultry as appropriate: boning; cutting; drying; larding; marinating; mincing; rolling; skewering; tenderising; trimming; trussing and tying, and; - prepare above dishes for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - ingredients commonly used in the production of different roast meat and poultry dishes; - different cuts of meat and poultry and styles of cooking; - contents of stock date codes and rotation labels; - characteristics of meat and poultry products and finished dishes; - preparation methods listed in the performance evidence for different cuts and types of meat and poultry; - cookery methods listed in the performance evidence for different cuts and types of meat and poultry; - appropriate environmental conditions for storing meat and poultry products to: ensure food safety; optimise shelf life; - knife care and maintenance, and; - safe operational practices for using essential functions and features of spit roast equipment used when preparing roast meat and poultry dishes.

SITHASC016 Prepare tandoori dishes

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and cook a variety of tandoori dishes. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Indian cuisine, and to cooks who usually work under the guidance of more senior chefs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

Students will be expected to demonstrate the following required skills: - prepare six tandoori dishes using each of the following types of ingredients at least once: meat; poultry; seafood; - prepare appropriate accompaniments for tandoori dishes, and; - prepare above dishes for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of tandoori items; - cultural and regional considerations and variations to be considered when preparing tandoori; - contents of stock date codes and rotation labels; - characteristics of tandoori ingredients and finished dishes; - required conditions for marinating; - common accompaniments to tandoori dishes; - appropriate environmental conditions for storing tandoori dishes to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce tandoori.

SITHASC017 Prepare Indian breads

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and cook a variety of Indian breads. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Indian cuisine, and to cooks who usually work under the guidance of more senior chefs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare each of the following Indian breads: chapati; dosa; naan; papadum; paratha; pooris; roti; - demonstrate use of each of the following methods when preparing Indian breads: baking; frying; kneading; moulding; shaping, and; - prepare above breads for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of Indian breads; - cultural and regional considerations and variations to be considered when preparing Indian breads; - contents of stock date codes and rotation labels; - characteristics of Indian bread ingredients and finished items; - preparation methods for Indian breads; - appropriate environmental conditions for storing Indian breads to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce Indian breads.

SITHASC018 Prepare Indian sweetmeats

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge

required to prepare and cook sweetmeats for Indian cuisine. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Indian cuisine, and to cooks who usually work under the guidance of more senior chefs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare each of the following Indian sweetmeats: gajar ka halva; gulab jamoon; kheer; kulfi; malpue; shahitukra; - prepare appropriate accompaniments for Indian sweetmeats; - demonstrate use of each of the following methods when preparing Indian sweetmeats: filling; shaping, and; - prepare above dishes for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of Indian sweetmeats; - cultural and regional considerations and variations to be considered when preparing Indian sweetmeats; - contents of stock date codes and rotation labels; - characteristics of sweetmeat ingredients and finished dishes; - preparation methods for Indian sweetmeats; - appropriate environmental conditions for storing Indian sweetmeats to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce Indian sweetmeats.

SITHASC019 Prepare Indian pickles and chutneys

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare pickles and chutneys served to accompany Indian curries. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery methods. The unit applies to hospitality and catering organisations that offer Indian cuisine, and to cooks who usually work under the guidance of more senior chefs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare one pickle from each of the following types of pickles: hot; sweet; spicy; - prepare one chutney from each of the following types of chutneys: hot; sweet; - demonstrate use of each of the following preparation methods when preparing pickles and chutneys: marinating; cooking, and; - prepare above dishes for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of pickles and chutneys; - regional considerations and variations to be considered when preparing

pickles and chutneys; - contents of stock date codes and rotation labels; - characteristics of pickles and chutney ingredients and finished dishes; - preparation methods for Indian pickles and chutneys; - chemical reactions that occur during various processes in the preparation of Indian pickles and chutneys; - appropriate environmental conditions for storing pickles and chutneys to ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce Indian pickles and chutneys.

SITHCCC001 Use food preparation equipment

Locations: Footscray Park, Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to safely use commercial kitchen equipment to prepare a range of different food types. The unit applies to operational personnel responsible for general food preparation tasks in hospitality and catering organisations. It applies to individuals who work with very little independence and under close supervision. They follow predefined organisational procedures and report any discrepancies to a higher level staff member for action.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - safely and hygienically prepare food using each of the following fixed and hand-held commercial equipment: blenders; food processors; graters; sharpening steels and stones; butcher and boning; filleting; palette; mandolin slicers; measures; mouli; peelers, corers or slicers; planetary mixers; scales; thermometers; whisks: fine and coarse stainless steel wire; - use food preparation equipment to prepare each of the following food types: fruit and vegetables; batters; coatings; condiments and flavourings; garnishes; oils; sauces and marinades; meat; poultry; seafood; - make precision cuts on fruit and vegetables, and; - complete food preparation tasks within commercial time constraints. Students will also be expected to demonstrate the following knowledge: - meaning and role of mise en place in the process of preparing, cooking and presenting food; - essential features and functions of, and safe operating practices and maintenance requirements for, the following equipment used in food preparation: blenders; food processors; graters; mixers; knife sharpening equipment; sharpening steels and stones; knives: butcher and boning; chef; filleting; palette; utility; vegetable; measures; peelers, corers, and slicers; scales; thermometers, and; whisks; - food safety practices for handling different food types; - cleaning practices and agents suitable to range of equipment in use; - precision cuts used in a commercial kitchen: brunoise; chiffonade; concasse; jardinière; julienne; macédoine; mirepoix, and; paysanne; - safe operational practices using essential functions and features of equipment used to prepare: dairy products; dry goods, and; fruit; - general food items: batters; coatings; condiments and flavourings; garnishes; oils; sauces and marinades; meat; poultry; seafood, and; vegetables, and; - safe operational practices for maintenance and minor adjustments of equipment: adjusting blades, and; oiling machines.

SITHCCC002 Prepare and present simple dishes

Locations: Footscray Park, Industry, Footscray Nicholson, Online, Victoria University is 698

authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and present a limited range of simple menu items following standard recipes. While some cooking may be involved, there is no requirement to use the full range of basic cookery methods. The unit applies to operational personnel in kitchens and catering facilities who require some cooking and food preparation skills, but who are not qualified cooks. It may apply to a hospitality or catering organisation, such as cafes, kiosks, canteens and cafeterias or to organisations where catering forms only a small part of the business operation. Dishes prepared are simple in nature, and may include fast food, takeaway food and items that have been prepared off site and need re-thermalising. It applies to individuals who work with very little independence and under close supervision. They follow predefined organisational procedures and report any discrepancies to a higher level staff member for action.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare six different simple dishes selecting one from each of the following categories of simple fresh and cooked dishes: baked/roasted; deep-fried items; pasta and noodles; poached eggs; salads; sandwiches; - use each of the following applications at least once when preparing above simple dishes: cleaning, peeling and slicing raw food; batters; coatings; garnishes; marinades; - use at least six different cookery methods from the following list when preparing above simple dishes: baking; boiling; braising; deep and shallow frying; grilling; poaching; pressure cooking; steaming; - handle and prepare pre-prepared items requiring: reconstituting; thawing; re-thermalising, and; - prepare each of the above simple dishes. Students will also be expected to demonstrate the following knowledge: - characteristics of the simple dishes described in the performance evidence; - basic cookery methods for simple dishes described in the performance evidence; - methods for presenting types of food described in the performance evidence; - food safety practices for preparing and storing ingredients and simple dishes: - appropriate environmental conditions to ensure food safety; - correct processes for re-heating pre-prepared foods; - appropriate methods to optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to prepare simple dishes.

SITHCCC003 Prepare and present sandwiches

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and present a variety of sandwiches in a hospitality or catering

organisation, such as cafes, kiosks, canteens and cafeterias, or to organisations where catering forms only a small part of the business. The unit applies to operational personnel who make pre-prepared and on demand sandwiches according to customer requests. Sandwiches may be classical or modern, hot or cold, of varying cultural and ethnic origins and use a variety of fillings and types of bread. It applies to individuals who work with very little independence and under close supervision. They follow predefined organisational procedures and report any discrepancies to a higher level staff member for action.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow safe food handling practices when preparing at least one of each of the following hot or cold sandwiches within commercial time constraints: club; filled rolls; focaccia; open; pullman; wraps; - use a variety of fillings and ingredients to prepare above sandwiches using each of the following breads at least once: white, wholemeal, and grain; wraps; sourdough; flatbreads; - present sandwiches in line with organisational presentation requirements, and; - store sandwiches and ingredients to optimise shelf life in line with environmental conditions and food safety practices. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for the different types of sandwiches and breads specified in the performance evidence; - contents of stock date codes and rotation labels and their implication for food quality standards; - characteristics of different sandwiches specified in the performance evidence; - meaning and role of mise en place in the process of preparing sandwiches; - methods used in sandwich preparation; - appropriate environmental conditions and methods for storing sandwiches, and; - safe operational practices using essential functions and features of equipment used to produce sandwiches.

SITHCC005 Prepare dishes using basic methods of cookery

Locations:Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to use a range of basic cookery methods to prepare dishes. The unit applies to cooks working in hospitality and catering organisations. This could include restaurants, educational institutions, health establishments, defence forces, cafeterias, kiosks, cafes, residential caterers, in-flight and other transport caterers, and event and function caterers. It applies to individuals who work with very little independence and under close supervision and guidance of more senior chefs. They follow predefined organisational procedures and report any discrepancies to a higher level staff member for action.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - follow standard recipes for dishes that demonstrate use of each of the following major food types: dairy products; dry goods; frozen goods; fruit; meat; poultry; seafood; vegetables; - demonstrate food safety practices for handling and storing each of the major food types; - use each of the following cookery methods and complete mise en place activities when preparing the above dishes: baking; blanching; boiling; braising; deep-frying; grilling; poaching; roasting; shallow frying (pan-fry, sauté or stir-fry); steaming; stewing; microwaving, and; - prepare the above dishes for at least six different customers. Students will also be expected to demonstrate the following knowledge: - major food types and their characteristics: dairy products; dry goods; frozen goods; fruit; general food items: batters; coatings; condiments and flavourings; garnishes; oils; sauces; meat; poultry; seafood; vegetables; - how the major food types are used in different dishes and the effects on them of the different cookery methods listed in the performance evidence; - meaning and role of mise en place in the process of preparing, cooking and presenting food; - essential culinary terms in, and key principles and practices of, the cookery methods described in the performance evidence; - contents of stock date codes and rotation labels, and; - safe operational practices using essential functions and features of equipment used in the above cookery methods.

SITHCC006 Prepare appetisers and salads

Locations:Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to prepare appetisers and salads following standard recipes. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery and food storage methods. The unit applies to cooks working in hospitality and catering organisations. This could include restaurants, educational institutions, health establishments, defence forces, cafeterias, kiosks, cafes, residential caterers, in flight and other transport caterers, and event and function caterers. It applies to individuals who work with very little independence and under close supervision and guidance of more senior chefs. They follow predefined organisational procedures and report discrepancies to a higher level staff member for action.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes for dishes that demonstrate use of each of the following ingredients: bread and bakery items; condiments; dairy products; dressing ingredients; dry goods; eggs; farinaceous products; frozen goods; fruit; herbs and spices; meat; poultry; seafood; vegetables; - follow standard recipes to prepare the following appetisers and salads: appetisers: antipasto; canapés; hors d'œuvres; tapas; salads: classical; modern; cold; warm; fruit; - use at least four of the following cookery methods and complete mise en place activities when preparing the above dishes: baking; boiling; blanching; frying; grilling; poaching; roasting; steaming, and; - prepare the above dishes for at least six

different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of different appetisers and salads; - contents of stock date codes and rotation labels and their implication for food quality standards; - characteristics of different appetisers and salads: appearance and presentation; classical and contemporary variations; freshness and other quality indicators; nutritional value; service style; taste; texture; - quality indicators for appetisers and salads; - cookery methods for appetisers and salads; - dressings, sauces and garnishes for salads; - mise en place requirements for appetisers and salads; - appropriate environmental conditions for storing appetiser and salad products to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce appetisers and salads.

SITHCCC007 Prepare stocks, sauces and soups

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to prepare various stocks, sauces and soups following standard recipes. It requires the ability to select and prepare ingredients, and to use relevant equipment and cookery and food storage methods. The unit applies to cooks working in hospitality and catering organisations. This could include restaurants, educational institutions, health establishments, defence forces, cafeterias, kiosks, cafes, residential caterers, in flight and other transport caterers, and event and function caterers. It applies to individuals who work with very little independence and under close supervision and guidance of more senior chefs. They follow predefined organisational procedures and report any discrepancies to a higher level staff member for action.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare each of the following stocks: brown beef stocks; chicken stocks; fish stocks; vegetable stocks; - prepare the above stocks for use in different recipes: within commercial time constraints and deadlines; reflecting required quantities to be produced; following procedures for portion control and food safety practices when handling and storing different food types; responding to special customer requests and dietary requirements; - follow standard recipes, from a range of cultural backgrounds, to prepare each of the following sauces: béchamel; chicken and fish velouté; coulis; demi glacé; hollandaise or béarnaise; jus; mayonnaise based sauces; tomato based sauces; - soups both hot and cold: clear; broth; purée; cream, and; - prepare the above sauces or soups for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients commonly used in the production of different stocks, sauces and soups relating to: convenience products; thickening agents; - contents of stock date codes and rotation labels and their implication for food quality

standards; - characteristics of stocks, sauces and soups listed in the performance evidence: appearance and presentation; classical and contemporary variations; dishes to which they are matched; freshness and other quality indicators; nutritional value; preparation methods; production and cooking durations; service style; taste; texture; - derivatives of base stocks and sauces; - mise en place requirements for stocks, sauces and soups; - appropriate environmental conditions for storing stock, sauces and soups products to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce stocks, sauces and soups.

SITHCCC008 Prepare vegetable, fruit, eggs and farinaceous dishes

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to prepare and cook various vegetable, fruit, egg and farinaceous dishes following standard recipes. It requires the ability to select and prepare ingredients, and to use relevant equipment, cookery and food storage methods. The unit applies to cooks working in hospitality and catering organisations. This could include restaurants, educational institutions, health establishments, defence forces, cafeterias, kiosks, cafes, residential caterers, in flight and other transport caterers, and event and function caterers. It applies to individuals who work with very little independence and under close supervision and guidance of more senior chefs. They follow predefined organisational procedures and report any discrepancies to a higher level staff member for action.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare dishes for at least six different customers using each of the following types of products: - vegetables and fruit: dried; fresh; frozen; - eggs used for the following applications: aerating; binding; setting; coating; enriching; emulsifying; glazing; clarifying; gamishing; thickening; - farinaceous items: couscous; pasta and noodles; polenta; pulses; rice; - prepare dishes using each of the following cookery methods at least once: boiling; braising; deep and shallow frying; poaching or scrambling; roasting; stewing; - prepare at least three different types of fresh pasta, and; - prepare the above dishes: within commercial time constraints and deadlines; reflecting required quantities to be produced; following procedures for portion control and food safety practices when handling and storing different food types, and; responding to special customer requests and dietary requirements. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients used in standard recipes for vegetable, fruit, egg and farinaceous dishes, relating to: convenience products; fresh products; - contents of stock date codes and rotation labels; - characteristics of different vegetable, fruit, egg and farinaceous dishes: appearance and presentation; classical and contemporary variations; freshness and other quality indicators; nutritional value; service style;

taste; texture; - accompaniments and sauces for vegetable, fruit, egg and farinaceous dishes; - historical and cultural origin of different vegetable, fruit, egg and farinaceous dishes and products; - cookery methods for vegetable, fruit, egg and farinaceous dishes listed in the performance evidence; - health risks associated with raw egg products and alternative egg products; - culinary applications which use eggs as specified in the performance evidence; - mise en place requirements for vegetable, fruit, egg and farinaceous dishes; - appropriate environmental conditions for storing food products to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce vegetable, fruit, egg and farinaceous dishes.

SITHCCO11 Use cookery skills effectively

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSAO01 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to use a range of cookery skills during service and production periods. The unit integrates key technical and organisational skills covered in individual units and focuses on the way these must be applied in a commercial kitchen. The unit applies to hospitality and catering operations, including restaurants, educational institutions, health establishments, defence forces, cafeterias, kiosks, cafes, residential caterers, in flight and other transport caterers, and event and function caterers. It applies to individuals who prepare a range of food items using standard recipes, but who may not be fully qualified cooks. Styles of menus may be classical, contemporary or ethnic and may be formal or informal according to organisational requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - safely and hygienically prepare and serve menu items to industry and organisational quality standards for a minimum of twelve complete service periods (shifts) that cover a combination of: breakfast; dinner; lunch, and; special function; - multi-task and integrate technical and other skills to respond to multiple demands simultaneously; - respond to special customer requests; - perform designated kitchen roles as part of a team to achieve production requirements during the above service periods; - work professionally undertaking tasks according to team responsibilities and organisational requirements; - prepare dishes appropriate to each of the above service periods within the typical workplace time constraints of a busy commercial kitchen. Students will also be expected to demonstrate the following knowledge: - culinary terms commonly used in the industry and organisation; - characteristics of different foods from all main food categories prepared in the organisation; - features and interpretation of standard recipes; - basic principles and methods of cookery; - established roles and responsibilities in food preparation and production processes; - organisational procedures for: planning, preparing and storing food; end of shift, and; workplace safety and hygiene; - essential principles and practices related to: food safety and hygiene; kitchen safety and cleanliness, and; - safe operational practices using essential functions and features of equipment in use.

SITHCCO12 Prepare poultry dishes

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites: SITXFSAO01 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and cook a range of poultry dishes following standard recipes. It requires the ability to select, prepare and portion poultry, and to use relevant equipment, cookery and food storage methods. The unit applies to cooks working in hospitality and catering organisations. This could include restaurants, educational institutions, health establishments, defence forces, cafeterias, kiosks, cafes, residential caterers, in flight and other transport caterers, and event and function caterers. It applies to individuals who work under the guidance of more senior chefs. They demonstrate autonomy and judgement to complete routine activities and take limited responsibility in known and stable contexts within established parameters.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare poultry dishes using each of the following poultry items: chicken; duck; feathered game; turkey; - use each of the following poultry preparation techniques at least once when preparing above poultry dishes, as appropriate: barding; de boning; marinating; rolling; trussing; stuffing; trimming; - prepare the required poultry dishes using each of the following cookery methods at least once: braising; deep frying; grilling; poaching; roasting; sautéing; stewing, and; - prepare above food for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for: ingredients commonly used in the production of different poultry dishes; a variety of classical and contemporary poultry dishes, and; different cuts of poultry and styles of cooking; - contents of stock date codes and rotation labels; - characteristics of poultry products and poultry dishes: appearance; fat content; freshness and other quality indicators; nutritional value; taste; texture; - historical and cultural origin of different poultry products and poultry dishes; - essential characteristics of poultry types listed in the performance evidence and cuts; - preparation techniques for different cuts and types of poultry specified in the performance evidence; - cookery methods for different cuts and types of poultry specified in the performance evidence; - equipment used to produce poultry dishes: - knife care and maintenance; - essential features and functions; - safe operating practices; - mise en place requirements for poultry dishes, and; - appropriate environmental conditions for storing poultry products and dishes to: ensure food safety; optimise shelf life, and; safe operational practices using essential functions and features of equipment used to produce poultry dishes.

SITHCCO13 Prepare seafood dishes

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to:

<http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to prepare and cook a range of fish and shellfish dishes following standard recipes. It requires the ability to select, prepare and portion seafood, and to use relevant equipment, cookery and food storage methods.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare the following seafood classifications: flat and round fish; oily and white fish; ocean and freshwater fish; octopus and squid; crustaceans; molluscs; whole or filleted fish; - use each of the following seafood preparation techniques in preparing above seafood as required: cleaning; de-scaling; pin-bone removal; filleting; portioning; shelling; skinning; - follow standard recipes to prepare fresh, frozen and preserved seafood dishes using the following cookery methods: deep and shallow frying; grilling; poaching; roasting; sautéing; steaming, and; - prepare above food for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - contents of stock date codes and rotation labels; - seafood classifications; - characteristics of seafood products and fish and shellfish dishes; - preparation techniques for fish and shellfish specified in the performance evidence; - cookery methods for different varieties and cuts of fish and shellfish specified in the performance evidence; - equipment used to produce seafood dishes; - mise en place requirements for seafood dishes; - appropriate environmental conditions for storing and thawing fish and shellfish products, and; - safe operational practices using essential functions and features of equipment used to produce seafood dishes.

SITHCCC014 Prepare meat dishes

Locations:Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to prepare and cook a range of meat dishes following standard recipes. It requires the ability to select, prepare and portion meat, and to use relevant equipment, cookery and food storage methods. It is important to note that students will be expected to follow standard recipes to prepare meat dishes using each of the following meat items: beef, game (kangaroo, venison, specialty meats), lamb, pork, veal and offal (kidney, liver). Students will be unable to successfully complete unit SITHCCC014 Prepare meat dishes without meeting this requirement.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to prepare meat dishes using each of the following meat items: beef; kangaroo; venison; specialty meats; lamb; pork; veal; kidney; liver; - use each of the following meat preparation techniques at least once when preparing the above dishes, as appropriate: ageing; barding; boning and trimming; cutting and portioning; larding; marinating; mincing; rolling; tenderising; trussing and tying; skewering; - prepare the required meat dishes using each of the following cookery methods at least once: braising; frying; grilling; roasting; stewing, and; - prepare above food for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - contents of stock date codes and rotation labels; - meat classifications; - characteristics of meat products and meat dishes; - historical and cultural origin of different meat products and meat dishes; - preparation techniques for different cuts and types of meat specified in the performance evidence; - cookery methods for different cuts and types of meat specified in the performance evidence; - equipment used to prepare and produce meat dishes; - mise en place requirements for meat dishes; - appropriate environmental conditions for storing meat and meat products, and; - safe operational practices using essential functions and features of equipment used to produce meat dishes.

SITHCCC015 Produce and serve food for buffets

Locations:Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to produce and present foods for buffets. It requires the ability to cook buffet foods and to present, serve and replenish them throughout the service period. It does not include the overall design, planning and display of buffets which is covered by the unit SITHKOP003 Plan and display buffets.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - produce or prepare as required each of the following hot and cold buffet foods: breakfast foods; meat or poultry; seafood; salads; pasta or noodles; breads; fruit or vegetables; cheese; smallgoods; dessert and pastry items; accompaniments; glazed foods, galantines and forcemeats; themed foods; foods selected to meet special dietary requirements; - present, serve and replenish at least one buffet for each of the following: indoor venue; outdoor venue; breakfast; lunch or dinner; event or function; - produce a quantity of buffet dishes and items for above buffets that: are consistent in quality, size, shape and appearance for each buffet service period; use appropriate garnish and presentation techniques, and; - prepare above buffets: within commercial time constraints and deadlines; reflecting required quantities to be produced; following procedures for portion control and food safety practices when producing, displaying and serving hot and cold buffet food; using appropriate showpieces and decorations; responding to special customer requests and dietary requirements. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - suitable types of foods and dishes for buffets and their characteristics; -

presentation techniques for food items that comprise buffets; - organisational standards for: serving buffet foods; portion sizing; - mise en place and food safety requirements for producing and presenting foods for buffets; - appropriate environmental conditions for storing ingredients and buffet food items to: ensure food safety; optimise shelf life, and; - organisational food safety procedures for displaying and serving hot and cold buffet foods.

SITHCCC017 Handle and serve cheese

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and present cheese. This requires a comprehensive knowledge of cheese varieties. The unit applies to hospitality and catering organisations where cheese is served as a menu course. Responsibility for cheese may rest with a range of individuals depending on the organisation. It may include cooks or senior food and beverage attendants. Cheeses may include milk-based products from cows, sheep, goats or buffalo, or alternatives such as soy. They may be traditional, contemporary or specialist and may be locally produced or imported.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - serve cheeses using each of the following service styles: buffet presentation; cheese plates; table service; - prepare and present cheese from each of the following cheese types with suitable garnishes and accompaniments: cheddar; brie or camembert; blue; washed rind; chèvre; gruyère; flavoured, and; - prepare and serve cheese for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms related to different cheeses commonly used in the industry; - knowledge of varieties of cheeses and their classification and characteristics; - nutritional knowledge, in particular the food value and composition of cheese; - contexts in which cheeses are served; - food safety practices for handling and storing cheese, and; - hygiene requirements relating to possible bacterial spoilage in the preparation, storage and service of cheese.

SITHCCC018 Prepare food to meet special dietary requirements

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare dishes for people who have special dietary needs for health, lifestyle or cultural reasons. It requires the ability to confirm the dietary requirements of customers, use special recipes, select special ingredients and produce food to satisfy special requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow recipes to prepare six different dishes that cater to customers with different dietary requests, including at least one of each of the following: food restrictions; food preferences; cultural or religious requirements; - modify recipes and menu items to meet dietary requests specified above, excluding or substituting ingredients while maintaining equivalent nutritional value, and; - produce above dishes for at least six different customers. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - understanding of: drug-food interaction; food allergy; food intolerance; cultural and religious dietary sanctions; - main types, culinary characteristics and ingredients of special diets and cultural or religious diets that are part of contemporary Australian society; - key health and legal consequences of failing to address special requirements; - mise en place requirements for special diet foods; - basic principles and practices of nutrition, and; - primary components of Dietary Guidelines for Australians, in particular those for older Australians, children and adolescents.

SITHCCC019 Produce cakes, pastries and breads

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..> Geelong Learning Links..

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to produce cakes, pastries and breads in a commercial kitchen following standard recipes. It requires the ability to select, prepare and portion ingredients; and to use relevant equipment a range of cookery methods to make and decorate cakes, pastries and breads, and food storage methods.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard recipes to produce and decorate four of each of the following: cakes from the list in the knowledge evidence; pastries from the list in the knowledge evidence; breads from the list in the knowledge evidence, and; - produce each of the above cakes, pastries and breads of the same type: that are consistent in quality, size, shape and appearance; within commercial time constraints and deadlines; reflecting required quantities to be produced; following procedures for portion control and food safety practices when handling and storing food; responding to special customer requests and dietary requirements. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - contents of stock date codes and rotation labels; - food safety practices for handling and storing cakes, pastries and breads; - classical and contemporary: cakes, pastries, sweet and savoury breads; - characteristics of a variety of classical and contemporary cakes, pastries and breads; - historical and cultural derivations of a variety of cakes, pastries and breads; - basic aspects of yeast fermentation and dough development processes; - nutritional

value of classical and contemporary cakes, pastries and breads; - indicators of freshness and quality of stocked ingredients for cakes, pastries and breads; - cookery methods for cakes, pastries, breads and fillings; - main types, culinary characteristics and uses of fillings for cakes, pastries or breads; - main types, culinary characteristics and uses of decorations for cakes, pastries or breads; - appropriate baking temperatures and cooking times for cakes, pastries, breads and fillings; - appropriate environmental conditions for storing cakes, pastries, breads and re-usable by-products of their preparation; - mise en place requirements for producing cakes, pastries and breads and fillings, and; - safe operational practices using essential functions and features of equipment used to produce cakes, pastries and breads.

SITHCCO20 Work effectively as a cook

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to work as a cook. It incorporates all aspects of organising, preparing and cooking a variety of food items across different service periods and menu types; using a range of cooking methods and team coordination skills. The unit integrates key technical and organisational skills required by a qualified commercial cook. It brings together the skills and knowledge covered in individual units and focuses on the way they must be applied in a commercial kitchen.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - safely and hygienically prepare, cook and present menu items for a minimum of 48 complete food service periods that cover: breakfast; dinner; lunch; special function; - prepare, cook and present items for at least three of the following different menu styles: à la carte; set menu; table d'hôte; buffet; cyclical; - prepare, cook and serve items from the following food types that meet quality requirements: appetisers and salads; fish and shellfish; hot and cold desserts; meat, poultry and game; pastries, cakes and yeast goods; stocks, sauces and soups; vegetables, fruit, eggs and farinaceous products; - multi-task and integrate technical and other skills to respond to multiple demands simultaneously; - work professionally as part of a team and coordinate team activities in line with kitchen roles and responsibilities, and organisational requirements; - respond to special customer requests and dietary requirements, and; - prepare dishes for customers within the typical time constraints of a busy commercial kitchen. Students will also be expected to demonstrate the following knowledge: - basic principles and methods of cookery; - culinary terms commonly used in the industry and organisation; - characteristics of foods from all main food categories served in the organisation; - features of standard recipes; - organisational procedures for: planning, preparing and storing food; workplace safety and hygiene; end of shift; - essential principles and practices related to: planning and organising work; food safety and hygiene; kitchen safety and cleanliness; - varying requirements of

different food service periods and menu types, and; - safe operational practices using essential functions and features of commercial kitchen equipment in use.

SITHCCO21 Prepare specialised food items

Locations:Footscray Nicholson, Geelong Learning Links..

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to prepare and cook food items that are more unusual in nature than those in standard recipes. It requires the ability to select and prepare ingredients, use relevant equipment, specialised cookery and food storage methods.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply specialised cookery methods to prepare six different dishes that make use of specialised food items and specialised preparation techniques; - use appropriate specialised methods when preparing selected dishes above, and; - prepare above specialised items for customers: within commercial time constraints and deadlines; reflecting required quantities to be produced; following procedures for portion control and food safety practices when handling and storing one or more specialised food items; responding to special customer requests and dietary requirements. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for ingredients used in the relevant specialised area; - contents of stock date codes and rotation labels; - characteristics of relevant specialised items; - food safety practices for handling and storing one or more specialised food items; - main types and culinary characteristics of specialised food items used in contemporary cooking; - main types of preparation and cookery methods for the relevant specialised items; - mise en place requirements for specialised food items; - appropriate environmental conditions for storing products, and; - safe operational practices using essential functions and features of equipment used to produce specialised dishes.

SITHFABO01 Clean and tidy bar areas

Locations:Footscray Nicholson.

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to clean bars and public areas, clear and clean glasses, and safely dispose of waste. The unit applies to any hospitality organisation that operates a bar, including hotels, restaurants, clubs, cafes and wineries. It applies to people who work with very little independence and under close supervision, including those commonly known as 'bar usefuls'. The unit can also apply to bar attendants.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - clean the following areas and equipment according to applicable cleaning schedules and within required timeframe

on three different occasions, and; - demonstrate the following safe work practices while cleaning the above areas and equipment. Students will also be expected to demonstrate the following knowledge: - different types of cleaning agents and chemicals for bar areas and equipment - common commercial bar equipment; - safe practices for using and storing hazardous substances; - appropriate disposal methods for recyclables; - content of safety data sheets (SDS) for cleaning agents and chemicals and of workplace documents or diagrams that interpret the content of those SDS; - cleaning sanitising and disinfecting methods; - correct use of the following personal protective equipment when cleaning the areas and equipment specified in the performance evidence; - safe manual handling techniques for cleaning bar and public areas; - potential dangers associated with inert gases used in beverage dispensing systems, and their impact on staff members and customers; - appropriate signage to be used for areas of restricted access; - environmentally sound methods for using cleaning agents, chemicals, water and energy when cleaning bar surfaces, public areas and equipment, and; - safe operational practices using essential functions and features of equipment used to clean bars, public areas and equipment.

SITHFAB002 Provide responsible service of alcohol

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to responsibly sell or serve alcohol. Responsible practices must be undertaken wherever alcohol is sold or served, including where alcohol samples are served during on-site product tastings. This unit, therefore, applies to any workplace where alcohol is sold or served, including all types of hospitality venues, packaged liquor outlets and wineries, breweries and distilleries. The unit applies to all levels of sales personnel involved in the sale, service and promotional service of alcohol in licensed premises. Those selling or serving alcohol may include food and beverage attendants; packaged liquor sales persons selling in person, over the phone or online; winery, brewery and distillery cellar door staff, and supplier sales representatives. The unit also applies to security staff who monitor customer behaviour and to the licensee who is ultimately responsible for responsible service of alcohol (RSA) management. The unit incorporates the knowledge requirements, under state and territory liquor licensing law, for employees engaged in the sale or service of alcohol. Certification requirements differ across states and territories. In some cases all people involved in the sale, service and promotional service of alcohol in licensed premises must be certified in this unit. This can include the licensee and security staff. This unit covers the RSA skill and knowledge requirements common to all States and Territories. Some legislative requirements and knowledge will differ across borders. In some cases after completion of this unit, state and territory liquor authorities require candidates to complete a bridging course to address these specific differences. Those developing training to support this unit must consult the relevant state or territory liquor licensing authority to determine any accreditation arrangements for courses, trainers and assessors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret the legal requirements for responsible sale or service of alcohol for the local state or territory law; - document organisational policies and procedures that must be followed for the responsible sale or service of alcohol; - identify at least three early indicators of intoxication and identify suitable intervention strategies to prevent intoxication; - demonstrate procedure to refuse sale or service of alcohol and assist each of the following groups of intoxicated customers: those in emotional or physical distress; those with no food consumption during extended service of alcohol; those who appear to be under the effect of illicit substances or other drugs, and; - demonstrate organisational or house requirements and use effective communication and conflict-resolution skills when asking the following different intoxicated customers to leave the premises: one compliant customer; one difficult customer refusing to leave. Students will also be expected to demonstrate the following knowledge: - public interest reasons for implementing responsible service of alcohol (RSA) practices: government and community concern with alcohol misuse and abuse; alcohol-impaired driving accidents, crime, public violence, family violence and anti social behaviour associated with alcohol abuse; - ways of assessing intoxication: observing changes in behaviour; observing emotional and physical state; monitoring noise levels and drink purchases; - customers to whom sale or service must be refused according to state and territory legislation: minors and those purchasing on behalf of minors; intoxicated persons; persons affected by the consumption of illicit and other drugs; - impact of excessive drinking on: local neighbourhood and community; the night-time economy; premises and staff; customers; - particular types of customers who are at heightened risk: Aboriginal and Torres Strait Islanders; minors; people affected by the consumption of illicit and other drugs; women, particularly pregnant women; young people; - physical and mental health of individuals who drink to excess; - productivity of individuals who drink to excess; - those around the person drinking to excess; - government agencies; - key agencies and how to source relevant information on laws, regulations and codes of practice or conduct; - methods of supplying information on responsible sale or service of alcohol to customers, and; - current promotional and strategic community education campaigns developed and conducted by agencies and industry groups.

SITHFAB003 Operate a bar

Locations: Industry, Footscray Nicholson.

Prerequisites: SITHFAB002 - Provide responsible service of alcohol/SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare a bar for service, take drink orders, prepare and serve alcoholic and non-alcoholic beverages and close the bar down. Customer service and selling skills are found in other units. The unit applies to any hospitality organisation that operates a bar, including hotels, restaurants, clubs, cafes, and wineries. The unit applies to bar attendants who operate with some level of independence and under limited supervision. The sale and service of alcohol is subject to the provisions of liquor legislation law in each state and territory of Australia. Skills and knowledge for compliance with this law are covered by the prerequisite unit SITHFAB002 Provide responsible service of alcohol.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - safely and efficiently set up, operate and close down a bar over at least three different service periods, including at least one peak service period; - prepare alcoholic and non-alcoholic beverages that meet customer requests within required timeframe during the above service periods; - use the correct equipment, ingredients and standard measures to prepare the above alcoholic and non-alcoholic beverages, and; - interact with a diverse range of customers during the above service periods, determining their preferences and offering suitable products in a clear and professional manner. Students will also be expected to demonstrate the following knowledge: - different types of bars and bar service for different industry sectors and those relevant to events and functions; - meaning and role of mise en place for the service of alcoholic beverages; - organisational procedures for operating the bar; - items requirements for set-up of bar; - major types of beverages, their characteristics, preparation and service; - requirements and procedures for different types of bar service; - available options to meet specific customer preferences; - operational features, safety and hygiene issues for the following bar equipment; - organisational procedures for noting relevant information during handover duties on completion of shift; - safety issues and safe work practices of specific relevance to bar operations; - environmentally sound methods to use cleaning agents and equipment, water and energy when operating a bar, the impact of these on the environment, and minimal impact practices to reduce their use, and; - correct and environmentally sound disposal methods for bar waste.

SITHFAB004 Prepare and serve non-alcoholic beverages

Locations: Footscray Nicholson.

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare and serve a range of teas, non-espreso coffees and other non-alcoholic beverages. It requires the ability to select ingredients and equipment and to use a range of methods to make and present drinks. It does not include making espreso coffee beverages, which is covered in SITHFAB005 Prepare and serve espreso coffee. This unit applies to any hospitality organisation that serves coffee, tea and other non-alcoholic beverages, including cafes, restaurants, bars, clubs, and function and event venues. The unit applies to kitchen staff and operational food and beverage attendants who work with very little independence and under the guidance of others.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare and present non-alcoholic beverages to meet different customer requests, over a minimum of three different service periods, including at least one peak service period; - prepare and present at least six different non-alcoholic beverages from the following list on three occasions each: carbonated drinks; children's specialty drinks; non-espreso coffees; cordials and syrups; flavoured milks; frappés; freshly squeezed juices; health drinks; hot chocolate; iced chocolate or coffee; milkshakes; mocktails; smoothies, and; teas;

- prepare above non-alcoholic beverages within commercial timeframes and with consistent quality, volume and appearance and in line with organisational procedures, and; - use the correct equipment, ingredients and standard measures in preparing the above beverages. Students will also be expected to demonstrate the following knowledge: - culinary terms for and characteristics of ingredients commonly used to produce non-alcoholic beverages specified in the performance evidence; - major types and characteristics of non-espreso coffees, teas and other non-alcoholic beverages specified in performance evidence; - preparation methods of non-espreso coffees, teas and other non-alcoholic beverages; - organisational procedures suitable to beverages specified in the performance evidence; - range of options to meet specific customer preferences; - safe operational practices using essential functions and features of equipment used to produce the non-alcoholic beverages specified in the performance evidence, and; - dangers of inert gases used in post-mix dispensing systems and the measures required to ensure worker and customer safety.

SITHFAB005 Prepare and serve espreso coffee

Locations: Industry, Footscray Nicholson, Werribee, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to extract and serve espreso coffee beverages using commercial espreso machines and grinders. It requires the ability to advise customers on coffee beverages, select and grind coffee beans, prepare and assess espreso coffee beverages and to use, maintain and clean espreso machines and grinders. Complex repairs of equipment would be referred to specialist service technicians.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare and present each of the following espreso-based coffee beverages on three different occasions within commercial timeframes: coffee latte; cappuccino; espreso (short black); flat white; long black; piccolo latte; mocha; ristretto, and; short and long macchiato; - monitor quality indicators for extraction as listed in the knowledge evidence during preparation of the above espreso coffee beverages and make adjustments to restore extraction to required standard; - present the above espreso coffee beverages and accompaniments demonstrating consistency and quality of: appearance; aroma; body; crema on top of the espreso; flavour; taste; strength, and; volume, and; - use the correct equipment, ingredients and measures to prepare the above espreso coffee beverages. Students will also be expected to demonstrate the following knowledge: - major types and characteristics of espreso coffee beverages specified in the performance evidence; - different types of milk, their characteristics and uses for different types of coffee beverages; - characteristics of different types of beans, blends and roasts; - mise en place requirements for preparing coffee beverages; - methods and techniques for preparing and serving espreso coffee beverages; - sequencing orders for the preparation of coffee beverages; - quality indicators for espreso coffee extraction; - available options to meet specific customer preferences

relating to: accompaniments; blends; service-ware; strength, and; sweeteners; - factors relevant to quality of espresso coffee; - extraction rates for the different espresso coffee beverages specified in the performance evidence; - how and when adjustments are required to the following to ensure quality of espresso coffee: dose; grind; tamping technique; water flow, and; water pressure; - organisational procedures and industry standards; - appropriate environmental conditions for storing coffee beans, ground coffee, milk and other ingredients; - essential features and functions of different espresso machines and grinders used to prepare espresso coffee beverages; - basic maintenance and cleaning methods for espresso grinders, machines and equipment, and; - content of safety data sheets (SDS) for cleaning agents and chemicals, or workplace documents or diagrams that interpret the content of SDS.

SITHFAB007 Serve food and beverage

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites: SITHFSAO01 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to serve food and beverages to customers in a casual dining setting. It covers the fundamental technical skills required to prepare the outlet for the service period, interact with customers to take orders, serve and clear food and beverage, and complete end of service tasks.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - provide effective food and beverage service during five different service periods, including at least one peak period; - demonstrate effective use of techniques for: service style appropriate to organisation; carrying and placing plates containing meals; clearing and carrying multiple used plates and other service-ware; processing customer accounts as required; - demonstrate procedures for: table and room set-up; end of shift activities; - interact with and positively respond to diverse demands and requests by multiple customers during above service periods, and; - perform above service within realistic commercial timeframes. Students will also be expected to demonstrate the following knowledge: - specific organisation food and beverage features: workflow structure for food and beverage service; ordering systems and procedures; workflow between kitchen and front of house areas; service procedures; set up procedures; end of shift procedures; - common styles of food and beverage service: bar; bistro; café; counter; espresso coffee bar; plate service; table; - techniques for: carrying and placing plates containing meals; clearing and carrying multiple used plates and other service-ware; - key features of food and beverage items on the menu; - common organisational procedures used when processing accounts, and; - correct and environmentally sound disposal methods for food and beverage waste.

SITHFAB009 Conduct a product tasting for alcoholic beverages

Locations: Industry, Footscray Nicholson.

Prerequisites: SITHFAB002 - Provide responsible service of alcohol

Description: This unit describes the performance outcomes, skills and knowledge required to set up and conduct product tastings of alcoholic beverages and provide information on the key characteristics of the alcohol on offer for tasting. It requires the ability to taste and self-evaluate products on offer, set up and conduct tastings, interact with customers and maintain products at optimum quality throughout the product tasting.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - set up and conduct at least three different tasting sessions for at least two of the following types of alcoholic beverages: beer; fortified wines; liqueurs; sparkling wines; spirits, and; still wines; - maintain products at optimum quality throughout the above product tasting sessions; - provide accurate product information in the above product tasting sessions on key characteristics of the specific alcoholic beverages on offer for tasting, and; - respond to customer questions in a professional manner. Students will also be expected to demonstrate the following knowledge: - common equipment required for conducting a product tasting and its uses; - sensory evaluation techniques and their relevance to wines, beers, spirits and liqueurs; - attributes of tasting areas that appeal to customers, allow for free flowing customer traffic, and provide a safe environment for staff and customers; - ways of ensuring conducive environment for tasting; - organisational procedures; - key characteristics of: Australian and imported wine types and main Australian wine producing areas; - key characteristics of the following main grape varieties and wine types; - key characteristics of Australian and imported beers, spirits and liqueurs, and ready to drink products; - indicators of common faults with products; - hygiene practices; - organisational procedures for the responsible service of alcohol during product tastings, and; - correct and environmentally sound disposal methods for tasting waste, especially for recyclable glass and plastic bottles and sampling glasses.

SITHFAB011 Provide advice on beers, spirits and liqueurs

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to evaluate a range of local and imported beers, spirits and liqueurs; provide advice to customers on their selection; and continuously extend personal product knowledge. The unit applies to hospitality, retail, breweries and wholesale organisations that sell beers, spirits and liqueurs. It applies to personnel who operate independently or with limited guidance from others and who have substantial specialist knowledge of beers, spirits and liqueurs. This includes beverage sales consultants, bar specialists, sommeliers, and senior bar and food and beverage attendants. The sale and service of alcohol is subject to the provisions of Responsible Service of Alcohol (RSA) law in each state and territory of Australia. Skills and knowledge for compliance with this law are covered by the prerequisite unit SITHFAB002 Provide responsible service of alcohol.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - discuss the characteristics of each of the following local and imported beverage products with different customers on three different occasions: basic spirits; mid and top range spirits; beer of different strengths; beer of different types; traditional and contemporary liqueurs; - demonstrate the correct application of each of the following sensory evaluation techniques to evaluate beers, spirits and liqueurs: smell or nose appraisal; taste appraisal; visual appraisal; - provide current, accurate and relevant advice to each of the above customers to meet different taste and price preferences, and; - maintain and continuously extend personal product knowledge to enhance workplace activities. Students will also be expected to demonstrate the following knowledge: - sensory evaluation techniques and their relevance to different types of beers, spirits and liqueurs; - past, current and emerging trends in beverage service trends in the Australian liquor industry; - overview of international trends in beers, spirits and liqueurs; - key structural components of beers, spirits and liqueurs; - characteristics of both Australian and imported beers, spirits and liqueurs; - organisational activities for which knowledge of beers, spirits and liqueurs is required; - factors that affect the quality of different beers, spirits and liqueurs; - indicators of impaired quality of beer, spirit and liqueur products; - storage requirements for different beers, spirits and liqueurs; - safety and hygiene issues of particular relevance to handling and storage of beers, spirits and liqueurs; - overview of types of foods that match successfully with different beers, spirits and liqueurs, and; - formal and informal research methods to extend and update knowledge.

SITHFAB014 Provide table service of food and beverage

Locations: Industry, Footscray Nicholson.

Prerequisites:SITHFAB002 - Provide responsible service of alcohol/SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to provide quality table service of food and beverage in à la carte or fine-dining settings. It covers high order service techniques to prepare the restaurant for the service period, provide food and beverage advice to customers, serve and clear food and beverages, and complete end of service tasks. Fundamental technical skills for food and beverage service are covered by the unit SITHFAB007 Serve food and beverage. This unit applies to hospitality organisations where table service of food and beverage is provided, such as restaurants, dining rooms and function venues. It applies to food and beverage attendants who work with some independence and under limited supervision. They may provide operational advice and support to team members. The sale and service of alcohol is subject to the provisions of Responsible Service of Alcohol (RSA) law in each state and territory of Australia. Skills and knowledge for compliance with this law are covered by the prerequisite unit SITHFAB002 Provide responsible service of alcohol.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare for and provide table

service of food and beverage over a minimum of 12 service periods; - provide full explanations and advice on food and beverage menu options during each service period; - interact with and respond to customers during above service periods in a professional manner and in response to demands and requests relating to: information on beverages and food; location of customer facilities; menu choices and availability; recommendations for food and beverage specials, and; - demonstrate ability to: work with speed and efficiency; deal with numerous service and operational tasks simultaneously, and; work cooperatively as part of the service team to maximise work flow and service efficiency. Students will also be expected to demonstrate the following knowledge: - work flow structures for service in food and beverage service environments; - roles and responsibilities of a range of food and beverage attendants; - meaning of mise en place for food and beverage service and mise en place requirements for service styles specified in the performance evidence and different menu options; - organisational procedures to set up a dining venue; - organisational and traditional standards for table settings of glassware, crockery and cutlery; - ways of dressing and setting tables for service styles specified in the performance evidence for restaurants and functions; - napkin folding styles for different restaurant and function settings and occasions; - organisational and traditional dining room set-ups for different types of restaurant and function venues; - organisational end of shift duties; - food and beverage service styles and types of menus used in different hospitality contexts; - comprehensive product knowledge of food and beverage items offered during the service specified in the performance evidence; - features and uses of different types of glassware for different beverages techniques; - features of industry and organisation-specific; - environmental impacts of food and beverage service and minimal impact practices to reduce them, especially those that relate to reusable resources, water and energy use, and; - correct and environmentally sound disposal methods for food and beverage waste.

SITHFAB016 Provide advice on food

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to provide accurate information and advice on different menu options. It requires the ability to evaluate organisational menu items, provide advice to customers on their menu selection, contribute to menu design, and continuously extend personal product knowledge of food and cuisines. The unit applies to hospitality organisations that serve food, including hotels, restaurants, cafes, wineries, fine food outlets and clubs. It applies to food and beverage attendants who operate with some level of independence and under limited supervision to provide advice to others about menu selection.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - discuss the characteristics of each of the major food types listed in the knowledge evidence with at least three different customers; - demonstrate the correct application of each of the following sensory evaluation techniques to evaluate food: smell or nose appraisal; taste appraisal, and; visual appraisal; - provide current, accurate and relevant advice to each of the above customers on their selection to meet different taste and price

preferences, and; - maintain and continuously extend personal food and menu knowledge to enhance workplace activities. Students will also be expected to demonstrate the following knowledge: - major food types and their characteristics; - information relating to the major food types; - past, current and emerging trends in the Australian food industry; - organisational activities for which knowledge of major food types is required; - groups that have specific dietary requirements to be considered; - business considerations in the provision of information and advice on food; - formal and informal research methods to extend and update knowledge; - key health and legal consequences of failing to address special dietary requirements, and; - primary components of Dietary Guidelines for Australians, in particular those for older Australians, children and adolescents.

SITHFAB017 Provide advice on food and beverage matching

Locations: Industry, Footscray Nicholson.

Prerequisites: SITHFAB002 - Provide responsible service of alcohol

Description: This unit describes the performance outcomes, skills and knowledge required to evaluate a range of beverages and their compatibility with different food items and cuisines, provide advice to customers on their selection, and continuously extend personal product knowledge to enhance customer service. Beverages can include wine, beer, spirits and liqueurs. The unit applies to hospitality organisations that serve food and beverage, including hotels, restaurants, wineries, fine food outlets and clubs. Advice on food and beverage matching might also be provided by wholesalers to hospitality outlets and by retail liquor outlets to retail customers. The unit applies to frontline sales and operational personnel who operate with some level of independence and under limited supervision to provide advice to others about the matching of beverages to food items and cuisines. This includes beverage sales consultants, bar specialists, sommeliers, and other senior bar and food and beverage attendants. The sale and service of alcohol is subject to the provisions of Responsible Service of Alcohol (RSA) law in each state and territory of Australia. Skills and knowledge for compliance with this law are covered by the prerequisite unit SITHFAB002 Provide responsible service of alcohol.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - discuss the characteristics of each of the major food types listed in the knowledge evidence and their compatibility with different beverages with at least three different customers; - explain to the above customers how the following features affect compatible food and beverage matches: aroma, taste of flavour, temperature, texture and cookery method; - provide current, accurate and relevant advice to each of the above customers on their selection to meet different taste and price preferences, and; - maintain and continuously extend personal food, beverage and menu knowledge to enhance workplace activities. Students will also be expected to demonstrate the following knowledge: - major food types, their characteristics and how those characteristics affect compatibility with beverages; - major methods of cookery and their impact in regard to food and beverage matching; - beverage production techniques and their impact in regard to food and beverage matching; - compatibility of the beers, spirits and liqueurs with various food items and cuisines; - compatibility of Australian and imported wines with major food items and cuisines; - overview of the chemistry of primary food and beverage components; - different ways that alcohol is used in

cooking and the impact on food items; - traditional and contemporary food and beverage matches across above cuisines, food types and beverage styles; - current and emerging trends in food and beverage matching in Australia and internationally; - organisational activities for which knowledge of major food types is required; - business considerations in the provision of information on food and beverage matching; - formal and informal research methods to extend and update knowledge, and; - factors to consider in achieving a balance between food and beverages on a menu.

SITHFAB019 Plan and monitor espresso coffee service

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to coordinate operational aspects of espresso coffee service for an outlet. It requires the ability to develop menus, provide specialist advice to customers and staff, monitor the overall quality of espresso beverages, and maintain equipment. The unit applies to any hospitality organisation that serves espresso coffee beverages, including cafes, restaurants, bars, clubs, function and event venues. It applies to senior personnel who operate independently or with limited guidance from others and who have substantial specialist knowledge of coffee, its history and presentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - coordinate the operational aspects of espresso coffee preparation for an outlet over at least six service periods; - monitor the consistency and quality of the following characteristics of espresso coffee beverages during above service, and; - maintain commercial grade espresso coffee machines and grinders throughout each of the above service periods. Students will also be expected to demonstrate the following knowledge: - knowledge of current and emerging espresso coffee service trends through various sources; - major types of espresso coffee beverages and their characteristics; - different types of milk, their characteristics and uses for different types of coffee beverages; - impacts on flavour of coffee beverages; - organisational and industry standards; - appropriate environmental conditions for storing coffee beans, ground coffee, milk and other ingredients; - methods to ensure efficient use of ingredients and to minimise wastage; - equipment used to prepare espresso coffee beverages; - work practices for managing large coffee beverage orders; - methods for evaluating espresso coffee beverage quality; - cost and profit issues associated with providing espresso coffee service; - factors to consider when purchasing new equipment or service-ware, and; - information to educate customers about espresso coffee.

SITHIND001 Use hygienic practice for hospitality service

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to use personal hygiene practices to maintain the health and wellbeing of self and others. The unit applies to all hospitality service environments. Individuals at all levels use this skill in the workplace during the course of their daily activities.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: Establish a procedure to: - integrate at least eight personal hygiene practices in day-to-day preparation for work, and; - check at least two of the following for contamination and cleanliness during day-to-day work functions and adjust as required: hands, uniform, clothing, personal protective items. Students will also be expected to demonstrate the following knowledge: - personal and professional reasons for maintaining personal hygiene in hospitality service environments; - personal hygiene practices to care for personal health and wellbeing prior to and during service periods; - meaning of: airborne diseases; infectious diseases; - ways of transferring micro-organisms and spreading airborne and infectious diseases and illness to self and others, and; - employee responsibilities in following hygienic practices and maintaining the hygiene of the workplace.

SITHIND002 Source and use information on the hospitality industry

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to source and use current and emerging information on the hospitality industry. This includes industry structure, technology, laws and ethical issues specifically relevant to the hospitality industry. Hospitality personnel integrate this essential knowledge on a daily basis to work effectively in the industry. The unit applies to all hospitality sectors and people working at different levels. Managers will use more formal research to attain specialised and comprehensive knowledge to support product planning, marketing and strategic management activities. This is covered in other units of competency. This unit is not about having in-depth knowledge but focuses on the ability to source and interpret information relevant to day-to-day activities in order to maximise work performance.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - source and document current and emerging industry information on the hospitality industry using at least three information sources listed in the knowledge evidence; - source and interpret information on the following from the above sources and share with colleagues to improve knowledge of the hospitality industry: current and emerging products and services; current issues; career opportunities; relationship between other related industries; compliance issues and quality assurance; new products, technology, techniques and services; work ethic required to work in the industry, and; - identify ways to integrate current hospitality industry information into daily work activities to enhance the quality of work performance. Students will also be expected to demonstrate the following knowledge: - sources of information on the hospitality industry; - structure of the hospitality industry and its different sectors; - information

of relevance to the hospitality industry; - key ways that information is used to enhance the quality of work performance; - key characteristics and main functions of allied and related industries; - primary functions of: major cross-industry and sector-specific industry associations especially those with which the business has a relationship; trade unions in the industry; - basic aspects of ethical issues specifically relevant to the hospitality industry; - basic aspects of hospitality industry quality assurance processes; - basic aspects of state, territory and commonwealth laws specifically relevant to the hospitality industry and actions that must be adhered to by hospitality businesses; - basic aspects of industrial relations, and; - current and emerging technology used in the hospitality industry.

SITHIND003 Use hospitality skills effectively

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to provide effective hospitality service to customers during service periods.

It requires the ability to integrate a range of individual technical skills while dealing with numerous sales, service or operational tasks simultaneously to meet the needs of multiple and diverse customers. It incorporates preparation, service and end of service tasks. The unit applies to individuals working in a range of different departments such as accommodation services, food and beverage, gaming operations and housekeeping, in various hospitality industry settings, including bars, hotels, cafes, restaurants, clubs, pubs and motels. It applies to frontline operational service personnel who deal directly with customers on a daily basis. They work with very little independence and under close supervision, applying little discretion and judgement as they follow predefined organisational procedures and report discrepancies to a higher level staff member for action.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - integrate technical skills and provide hospitality service to customers for a minimum of 12 complete service periods (shifts) that individually or in combination involve: interacting with and positively responding to diverse demands and requests of multiple customers throughout the service periods; working with speed and efficiency to deal with numerous service and operational tasks simultaneously; identifying issues and problems, referring to supervisor when appropriate, and participating in their resolution; working cooperatively as part of a service team, and taking limited responsibility for the service process, workflow and own work outcomes. Students will also be expected to demonstrate the following knowledge: - basic organisational information; - information relevant to customers; - common operational tasks; - end of shift procedures; - roles and responsibilities of service team members, and; - organisational policies and procedures.

SITHIND004 Work effectively in hospitality service

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to work effectively in a hospitality environment and provide service to customers during service periods. It requires the ability to integrate a range of individual technical skills while dealing with numerous sales, service or operational tasks simultaneously to meet the needs of multiple and diverse customers. It incorporates preparation, service and end of service tasks. The unit applies to individuals working in a range of different departments such as accommodation services, food and beverage, gaming operations and housekeeping, in various hospitality industry settings, including bars, hotels, cafes, restaurants, clubs, pubs and motels. It applies to those frontline service personnel who deal directly with customers on a daily basis and who operate with some level of independence and under limited supervision.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - integrate technical skills and provide hospitality service to customers for a minimum of 36 complete service periods (shifts) that individually or in combination involve: - interacting with and positively responding to diverse demands and requests of different customers; - working with speed and efficiency to deal with numerous service and operational tasks simultaneously; - identifying issues and problems, determining solutions and taking appropriate action to resolve; - working cooperatively as part of a service team, monitoring the service process and workflow, and taking responsibility for own work outcomes, and; - providing technical advice and support to other team members. Students will also be expected to demonstrate the following knowledge: - information relevant to customers; - common operational tasks; - end of shift procedures; - roles and responsibilities of service team members, and; - organisational policies and procedures.

SITHKOP001 Clean kitchen premises and equipment

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to clean food preparation areas, storage areas, and equipment in commercial kitchens to ensure the safety of food. It requires the ability to work safely and to use resources efficiently to reduce negative environmental impacts. This unit is particularly important within a food safety regime and applies to all hospitality and catering organisations with kitchen premises, including permanent or temporary kitchens or smaller food preparation areas. These can be found within restaurants, cafes, kiosks, cafeterias, clubs, hotels, attractions and in catering facilities. The unit applies to kitchen personnel who work with very little independence and under close supervision, including kitchen attendants and stewards. It can also apply to cooks and chefs in small organisations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - efficiently follow cleaning schedules to clean food preparation and food storage areas in a commercial kitchen on at least six different occasions; - clean each of the following large and small equipment items on at least six occasions according to cleaning schedules: cooking equipment; dishwashers; garbage bins; glasswashers; measures; mechanical food preparation equipment; - clean and replenish the following commercial service-ware and utensils on at least six occasions: cutting boards; containers; cooking utensils; crockery and dishes; cutlery; glassware; graters and peelers; knives; - sort soiled linen and prepare for collection by laundry staff according to organisational procedures on at least six occasions: cleaning cloths; clothing; napkins; serving cloths; tablecloths; tea towels; - perform the above cleaning work demonstrating use of: different types of cleaning agents and chemicals for kitchens and equipment; cleaning, sanitising and disinfecting methods for kitchens and equipment; correct and environmentally sound disposal methods for waste and hazardous substances, and; efficient use of energy, water and other resources, and; - complete above cleaning tasks: within commercial time constraints. Students will also be expected to demonstrate the following knowledge: - hygiene and cross-contamination issues for kitchens and the importance and purpose of cleaning regimes; - different types of cleaning and sanitising products and chemicals for kitchens and equipment; - uses of different types of cleaning and sanitising products and chemicals for kitchens and equipment; - safe practices for using and storing different types of cleaning and sanitising products, chemicals and hazardous substances; - safe operational practices using essential functions and features of equipment used to clean kitchen premises and equipment; - content of safety data sheets (SDS) for cleaning agents and chemicals, or plain English workplace documents or diagrams that interpret the content of SDS; - cleaning, sanitising and disinfecting methods that avoid risk to food for the following food preparation and storage areas: kitchen floors, shelves and walls; kitchen equipment, service-ware and utensils; - purpose of the following personal protective equipment used when cleaning: face masks; gloves; goggles; rubber aprons; - safe manual handling techniques for cleaning equipment and premises, especially bending, lifting and carrying heavy equipment; - environmental impacts of cleaning commercial kitchens and equipment and minimal impact practices to reduce them, especially those that relate to water and energy use; - correct and environmentally sound disposal methods for kitchen waste, and; - organisation-specific information.

SITHKOP002 Plan and cost basic menus

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to plan and cost basic menus for dishes or food product ranges for any type of cuisine or food service style. It requires the ability to identify customer preferences, plan menus to meet customer and business needs, cost menus and evaluate their success.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and evaluate the

food preferences of customer groups with differing characteristics and use to inform menu planning; - develop and cost each of the following menu types based on above information; - evaluate success of the above menus by obtaining at least two of the following types of feedback: customer satisfaction discussions; customer surveys; improvements; regular staff meetings that involve menu discussions; seeking staff suggestions for menu items, and; - develop the above menus within commercial time constraints. Students will also be expected to demonstrate the following knowledge: - organisation-specific information; - methods and formulas for calculating portion yields and costs from raw ingredients; - hospitality and catering industry desired profit margins, mark-up procedures and rates; - different types and styles of menus for dishes or food production ranges for different types of food outlets; - range of food preferences relating to: contemporary eating habits; cultural and ethnic influences; popular menu items; quick service foods; seasonal dishes; variety of food products; - differing characteristics of customer groups; - influence of seasonal products and commodities on menu content; - naming conventions and culinary terms for a variety of cuisines; - formats for and inclusion of menus presented to customers, and; - methods of assessing the popularity of menu items.

SITHKOP003 Plan and display buffets

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITHFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to design, plan and display buffets. It requires the ability to consult on buffet requirements, design the total buffet concept, plan and document operational requirements, display a buffet creatively and supervise food service. It does not include the preparation of food items for buffets which is covered by the unit SITHCCO15 Produce and serve food for buffets. The unit applies to all hospitality and catering organisations that serve buffet food including restaurants, hotels, clubs, and event and function venues. The buffet could be a one-off for a special event or function or a series of regular buffets offered by the organisation. This unit applies to those people who operate independently or with limited guidance from others such as senior and supervising cooks and chefs, catering supervisors and managers.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - design, plan and display at least one buffet for each of the following: indoor venue; outdoor venue; breakfast; lunch or dinner; event or function; - the above buffet must incorporate use of at least six of the following hot and cold buffet foods: breakfast foods; meat or poultry; seafood; salads; breads; fruit or vegetables; cheese; smallgoods; dessert and pastry items; accompaniments; glazed foods, galantines and forcemeats; themed foods; foods selected to meet special dietary requirements; - present buffet with artistic flair, incorporating at least six of the following main elements: candles or lighting; showpieces and decorations; linen; food and food items; service equipment; service-ware; table arrangements; themed foods; - document operational requirements and supervise food preparation and service for above buffets; - prepare above buffets: -

within commercial time constraints and deadlines; - reflecting required quantities to be produced; - following procedures for portion control and food safety practices when producing, displaying and serving hot and cold buffet food, and; - responding to special customer requests and dietary requirements. Students will also be expected to demonstrate the following knowledge: - suitable types of foods and dishes for buffets and their characteristics; - culinary terms for a variety of classical and contemporary buffet items; - appropriate conditions and temperatures for display and service to maintain optimum quality and food safety; - appropriate portions; - presentation techniques for food items that make up a buffet; - design considerations for buffets: - appropriateness of food items for buffets, and; - showpieces and decorations for buffets.

SITHKOP004 Develop menus for special dietary requirements

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to develop menus and meal plans for people who have special dietary needs for health, lifestyle and cultural reasons. It requires the ability to identify the dietary requirements of customers, develop special menus and meal plans to meet those requirements, cost menus and to monitor and evaluate the success of menu performance.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop and cost at least six menus or meal plans that individually or in combination meet at least six different special dietary requirements as specified in the knowledge evidence; - two of the above menus or meal plans must reflect one or more cultural or religious dietary requirements as specified in the knowledge evidence; - two of the above menus or meal plans must address the special dietary requirements of different customer groups as specified in the knowledge evidence; - evaluate each of the above menus by obtaining at least two of the following types of feedback: customer satisfaction; customer surveys; improvements; regular staff meetings that involve menu discussions; - satisfaction discussions; seeking staff suggestions for menu items, and; - develop above menus and menu plans within commercial time constraints, demonstrating: methods for responding to feedback and adjusting menus; basic principles and practices of nutrition. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - main types and culinary characteristics of special diets that are part of contemporary Australian society; - main types and culinary characteristics of cultural or religious diets that are part of contemporary Australian society; - main types of customer groups that have special dietary requirements; - meaning of: drug-food interactions; food allergy; food intolerance; - key health and legal consequences of failing to address special requirements; - basic principles and practices of nutrition; - primary components of Australian Dietary Guidelines, in particular those for older Australians, children and

adolescents and their use in menu planning, and; - methods and formulas for calculating portion yields and costs from raw ingredients.

SITHKOP005 Coordinate cooking operations

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to coordinate the production of food in commercial kitchens. It requires the ability to plan the production of food, organise required food supplies for food production period, supervise food production processes and monitor the quality of kitchen outputs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - supervise food production processes and monitor and report on the quality of kitchen outputs for a minimum of twelve complete service periods (shifts) including: kitchen workflow schedules; mise en place lists; food preparation lists; calculating and ordering food supplies for at least four of the types of food service styles listed in the knowledge evidence; - coordinate cooking operations within commercial time constraints for food production processes, which must include at least two of the following categories: bulk cooking; cook chill for extended life; cook chill for five day shelf life; cook freeze; fresh cook. Students will also be expected to demonstrate the following knowledge: - comprehensive details of food production processes for: receiving; mise en place; preparing or cooking; post-cooking storage; reconstitution; re-thermalisation; serving; - critical control points in food production where food hazards must be controlled; - menus and recipes for items produced in performance evidence; - indicators of quality food products; - types of food service styles; - use of designated decorations, garnishes or sauces; - types of food production systems and their characteristics for different production methods specified in the performance evidence, and; - range of formats and content for: kitchen workflow schedules; mise en place plans; food preparation lists.

SITHKOP006 Plan catering for events or functions

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to plan catering for events or functions. It requires the ability to identify the purpose and scope of the event, prepare catering proposals to meet customer requirements, and finalise operational plans for the delivery of catering. It does not include food preparation, which is covered by commercial cookery units. The unit applies to catering for any type of event in the cultural, community, hospitality,

sporting, tourism and event industries. It applies to catering and event personnel who operate independently or with limited guidance from others. This unit is relevant to a caterer or other cookery specialist involved in event catering, but also to non-catering specialists including event, function and banquet coordinators.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare catering proposals in response to diverse customer requirements for at least six different event or function types as specified in the knowledge evidence; - prepare practical operational plans for each of the above events and functions that specify arrangements for all basic requirements for catering delivery as specified in the knowledge evidence; - ensure above operational plans include consideration of the different operational factors that affect catering delivery as specified in the knowledge evidence; - implement above operational plans through the delivery of catering for three of the above events and functions, and; - complete proposals and plans and coordinate the delivery of catering for events and functions within commercial time constraints. Students will also be expected to demonstrate the following knowledge: - major characteristics of the events and functions listed in the performance evidence: - purpose and format; - roles and responsibilities of different family members, officials and venue personnel; - event running order; - entertainment and speeches; - service order and timing for food and beverage items to complement event or function activities; - service expectations; - different types of events or functions where catering is required: balls; banquets; conferences; corporate events; defence operations; exhibitions; industry and other awards presentations; meetings or seminars; parties; product launches; religious celebrations; social celebrations; sporting events; themed events; trade shows; training events; wakes; weddings; - catering and service styles for above different types of events with varying numbers; - operational factors influencing catering for different venues and climatic conditions; - space and equipment requirements for above different styles of catering and varying numbers; - basic requirements for delivery of catering for events or functions: ancillary products and services; beverage; food: classic; cultural food requirements; modern; special dietary needs; menu type: à la carte; buffet; set menu; table d'hôte; - link between food service and other aspects of the event; - style of service; - timing of service; - operational factors that affect catering delivery for an event or function: - conflicting activities in venue food preparation and storage areas; - costing of components and total catering; - food production timelines and staffing roles and responsibilities: - production kitchen, and; - venue or service kitchen.

SITHPAT001 Produce cakes

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to produce cakes and sponges following standard recipes. It requires the ability to select, prepare and portion ingredients and to use equipment and a range

of cookery methods to make and decorate cakes and sponges. It does not include making specialised cakes, which is covered in SITHPAT002 Produce gateaux, torten and cakes. The unit applies to hospitality and catering organisations that produce and serve specialist patisserie products, including hotels, restaurants and patisseries. It applies to pâtissiers who usually work under the guidance of more senior chefs.

Required Reading: Not applicable.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow classical and contemporary standard recipes to produce and decorate each of the following types of cakes and sponges: basic aerated sponges; fruit cakes; Genoise sponges; Madeira cakes; Swiss rolls; - use at least five of the following fillings when producing the above cakes and sponges: creams; custard; fresh and crystallised fruit; fruit purées; jams; mousse; nuts; - use at least five of the following decorations when producing the above cakes and sponges: chocolate; coloured and flavoured sugar; fresh, preserved or crystallised fruits; fruit purées; glazes and jellies; icings; sprinkled icing sugar; whole or crushed nuts; - use appropriate preparation and cookery methods from the list in the knowledge evidence when producing the above cakes and sponges; - produce above cakes and sponges: - that are consistent in quality, size, shape and appearance; - within commercial time constraints; - reflecting required quantities to be produced; - following procedures for portion control and food safety practices when handling and storing cakes and sponges, and; - responding to special customer requests and dietary requirements. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - ingredients commonly used to produce cakes and sponges; - classical and contemporary cakes and sponges; - contents of stock date codes and rotation labels; - cookery methods used when producing cakes, sponges and fillings; - adding fats and liquids to dry ingredients; - preparing and using pre-bake finishes and decorations; - selecting and preparing appropriate cake tins and moulds; - stirring and aerating to achieve required consistency and texture; - using required amount of batter according to desired characteristics of finished products; - weighing or measuring and sifting dry ingredients; - whisking, folding, piping and spreading; - expected product characteristics of the classical and contemporary cakes and sponges; - historical and cultural derivations of a variety of cakes and sponges; - appropriate baking temperatures and cooking times for cakes, sponges and fillings; - indicators of freshness and quality of stocked ingredients for cakes and sponges; - mise en place requirements for producing cakes, sponges and fillings; - appropriate environmental conditions for storing cakes and sponges and re-usable by-products of their preparation to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce cakes and sponges.

SITHPAT002 Produce gateaux, torten and cakes

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to use standard recipes to produce specialised cakes that require finish, decoration and presentation of a high order. It requires the ability to select, prepare and portion ingredients, and to use equipment and a range of cookery methods to make, fill, assemble and decorate specialised cakes. The making of basic cakes is covered in SITHPAT001 Produce cakes. Specialised cakes include sponges, gateaux,

torten, sweet pastes and meringues. This unit applies to hospitality and catering organisations that produce and serve specialised patisserie products, including hotels, restaurants and patisseries. The unit applies to pâtissiers who usually work under the guidance of more senior chefs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow classical and contemporary recipes to produce at least five different types of specialised cakes from the following list: cakes and sponges used as bases; commercial sponges; croquembouche; gateaux; macarons; novelty cakes; Saint Honoré; sponge fingers; torten; special occasion cakes, such as wedding or birthday cakes or those for specific cultural or religious occasions; - use at least five of the following fillings when producing the above specialised cakes: cheese; creams; custard; fresh or crystallised fruit; jams; meringues; mousse; nuts; sweet pastes; - use at least five of the following decorations when producing the above specialised cakes: chocolate; coloured and flavoured sugar; fresh, preserved or crystallised fruits; glazes and jellies; icings; marzipan coatings; sprinkled icing sugar; whole or crushed nuts; - use appropriate preparation and cookery methods from the list in the knowledge evidence when producing the above specialised cakes; - produce above specialised cakes for at least three different customers; - that are consistent in quality, size, shape and appearance; - within commercial time and cost constraints and deadlines; - reflecting required quantities to be produced; - following procedures for portion control and food safety practices when handling and storing gateaux, torten and cakes, and; - responding to special customer requests and dietary requirements. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - ingredients commonly used to produce specialised cakes; - classical and contemporary specialised cakes specified above in the performance evidence; - contents of stock date codes and rotation labels; - cookery methods used when producing specialised cakes: - adding fats and liquids to dry ingredients; - preparing and using pre-bake finishes and decorations; - selecting and preparing appropriate cake tins and moulds; - stirring and aerating to achieve required consistency and texture; - using required amount of batter according to desired characteristics of finished products; - weighing or measuring and sifting dry ingredients; - whisking, folding, piping and spreading; - expected product characteristics of a variety of the classical and contemporary specialised cakes; - appropriate baking temperatures and cooking times for specialised cakes and fillings; - decoration techniques for specialised cakes; - fine icing techniques; - cigarette paste decoration techniques; - indicators of freshness and quality of stocked ingredients for specialised cakes; - mise en place requirements for producing specialised cakes and fillings; - appropriate environmental conditions for storing gateaux, torten and cakes and re-usable by-products of their preparation to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce specialised cakes.

SITHPAT003 Produce pastries

Locations: Industry, Online.

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge

required to produce pastries and pastry products following standard recipes. It requires the ability to select, prepare and portion ingredients and to use equipment and a range of cookery methods to make, fill and decorate pastries. The unit applies to hospitality and catering organisations that produce and serve specialised patisserie products, including hotels, restaurants and patisseries. It applies to patissiers who usually work under the guidance of more senior chefs.

Required Reading:Not applicable.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow classical and contemporary standard recipes to produce, fill and decorate at least one pastry or pastry product from each of the following five main categories: short and sweet paste; Scotch shortbread; choux paste; puff paste; filo or strudel; - use at least two sweet and two of the savoury fillings when preparing the above pastries; - use at least five of the following decorations when producing the above pastries or pastry products: fresh, preserved or crystallised fruits; glazes; icings; jellies; sprinkled icing sugar; whole or crushed nuts; - use preparation and cookery methods, when producing the above pastries and pastry products, and; - produce above pastries or pastry products. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - ingredients commonly used to produce pastries and pastry products; - classical and contemporary pastries and pastry products specified above in the performance evidence; - contents of stock date codes and rotation labels; - cookery methods used when producing pastries and pastry products; - expected product characteristics of the classical and contemporary pastries and pastry products; - historical and cultural derivations of a variety of pastries and pastry products; - appropriate baking temperatures and cooking times for pastries, pastry products and fillings; - indicators of freshness and quality of stocked ingredients for pastries and pastry products; - mise en place requirements for producing pastries, pastry products and fillings; - appropriate environmental conditions for storing pastries and re-usable by-products of their preparation to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce pastries and pastry products.

SITHPAT004 Produce yeast-based bakery products

Locations:Industry, Online.

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to produce yeast-based bakery products following standard recipes. It requires the ability to select, prepare and portion ingredients and to use equipment and a range of cookery methods to make and decorate sweet and savoury breads, rolls, buns and yeast raised pastries. The unit applies to hospitality and catering organisations that produce and serve specialist patisserie products, including hotels, restaurants and patisseries. It applies to patissiers who usually work under the guidance of more senior chefs.

Required Reading:Not applicable.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - follow standard recipes to produce and decorate sweet and savoury yeast-based bakery products; - use at least six different fillings from the following list, including at least two sweet and two savoury fillings, when producing yeast-based bakery products: cheese; chocolate; cream; butter or fresh custard; frangipane; ganache; fresh or crystallised fruit; jam; bacon; cheese; fish; ham; meat; poultry; vegetables; spices; whole or crushed nuts; - use appropriate preparation and cookery methods from the list in the knowledge evidence when producing the above yeast-based bakery products, and; - prepare yeast-based bakery products. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - ingredients commonly used to produce yeast-based bakery products; - classical and contemporary yeast-based bakery products; - contents of stock date codes and rotation labels; - cookery methods used when producing yeast-based bakery products; - expected product characteristics of the classical and contemporary yeast-based bakery products; - historical and cultural derivations of a variety of yeast-based bakery products; - appropriate baking temperatures and cooking times for yeast-based bakery products; - indicators of freshness and quality of stocked ingredients for yeast-based bakery products; - properties of yeast; - mise en place requirements for producing yeast-based bakery products; - appropriate environmental conditions for storing yeast-based bakery products and re-usable by products of their preparation to: ensure food safety; optimise shelf life, and; - safe operational practices using essential functions and features of equipment used to produce yeast-based bakery products.

SITHPAT005 Produce petits fours

Locations:Industry, Footscray Nicholson, Online.

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to produce, using standard recipes, specialised petits fours which require finishing, decoration and presentation of a high order. It requires the ability to select, prepare and portion ingredients and to use equipment and a range of cookery methods to make, fill, assemble and decorate specialised petits fours. The unit applies to hospitality and catering organisations that produce and serve specialised patisserie products, including hotels, restaurants and patisseries. It applies to patissiers who usually work under the guidance of more senior chefs.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow classical and contemporary standard recipes to safely and hygienically produce and decorate two different types of petits fours from each of the following main groups: iced petits fours; fresh petits fours; marzipan petits fours; caramelised petits fours; - use each of the following flavoured fillings at least once when preparing the above petits fours: cream; custard; ganache; - use each of the following coatings at least once when preparing the above petits fours: caramel; cocoa butter; food lacquer; - use each of the following decorations at least once when decorating the above petits fours: chocolate; fresh fruits; glazes; - use appropriate preparation and cookery methods from the list in the knowledge evidence when producing the above petits fours, and; - prepare petits fours. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - ingredients commonly used to

produce petits fours; - classical and contemporary petits fours specified in the performance evidence; - contents of stock date codes and rotation labels; - preparation and cookery methods used when producing petit four fillings, coatings and decorations; - expected product characteristics of the classical and contemporary petits fours; - historical and cultural derivations of a variety of petits fours; - appropriate cooking temperatures and times for petits fours and fillings; - indicators of freshness and quality of stocked ingredients for petits fours; - mise en place requirements for producing petits fours and fillings; - common bases used for producing petits fours; - types of caramelised petits fours; - types of marzipan based petits fours; - decoration techniques for petits fours; - appropriate environmental conditions for storing petits fours and re-usable by-products, and; - safe operational practices using essential functions and features of equipment used to produce petits fours.

SITHPAT006 Produce desserts

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to produce hot, cold and frozen desserts following standard and special dietary recipes. It requires the ability to select, prepare and portion ingredients and to use equipment and a range of cookery methods to make and present desserts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow standard and special recipes to produce at least ten different desserts from the common desserts listed in the knowledge evidence; - ensure that at least two of the above desserts are produced to meet requirements of different special dietary requirements as listed in the knowledge evidence; - produce and use each of the following sauces at least once when preparing above range of desserts: chocolate based sauces; custards and crèmes; flavoured butters and creams; fruit purées, sauces or coulis; fruit syrups; sabayon and zabaglione; sugar syrups; - use each of the garnishes and decorations listed in the knowledge evidence at least once when preparing above desserts; - use appropriate cookery methods from the list in the knowledge evidence when producing the above desserts; - present desserts, accompaniments and garnishes attractively and decoratively, and; - prepare above desserts. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names; - ingredients commonly used to produce desserts; - substitute ingredients used to produce desserts for special dietary recipes; - common special dietary requirements which must be considered when producing desserts; - meaning of: food allergy and food intolerance; - key health and legal consequences of failing to address special requirements; - contents of stock date codes and rotation labels; - cookery methods used when preparing desserts; - expected product characteristics of the classical and contemporary desserts specified in the performance evidence; - common garnishes and decorations used when preparing desserts; - appropriate cooking temperatures and times for desserts; - techniques to garnish, decorate, plate and present attractive desserts; - indicators of freshness and quality of stocked ingredients for desserts; - mise en place requirements for producing desserts; - appropriate environmental conditions for storing desserts and re-usable by products of their preparation, and; -

safe operational practices using essential functions and features of equipment used to produce desserts.

SITHPAT007 Prepare and model marzipan

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au/skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to prepare marzipan from manufactured marzipan paste; produce and decorate a variety of modelled figures, shapes and flowers, and to ice specialised cakes with marzipan.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - model marzipan to produce at least three different products in each of the below categories: - figures; - shapes; - flowers; - demonstrate the use of each of the following when sealing above finished products: - cocoa butter; - food lacquer; - glaze; - ice at least one of each of the following with marzipan: - cakes; - gateaux; - petits fours; - torten; - model marzipan shapes and ice cakes: - with consistent quality, size, shape and appearance of marzipan products; - within commercial time and cost constraints and deadlines; - reflecting available supplies in stock and required quantities to be produced; - following procedures for portion control and food safety practices when handling and storing marzipan. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for: - ingredients commonly used to make marzipan icing and model marzipan shapes; - marzipan shapes and icings specified in the performance evidence; - contents of stock date codes and rotation labels; - techniques to model and mould marzipan shapes; - expected product characteristics of the marzipan shapes and icings specified in the performance evidence: - appearance; - colour; - consistency; - moisture content; - shape; - size; - structure; - taste; - texture; - indicators of freshness and quality of stocked ingredients for marzipan; - mise en place requirements for modelling and moulding marzipan; - appropriate environmental conditions for storing marzipan shapes and icing to: - ensure food safety; - optimise shelf life; - safe operational practices using essential functions and features of equipment used to model and mould marzipan shapes.

SITHPAT008 Produce chocolate confectionery

Locations: Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au/skilled-migration..>

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to temper couverture (pure coating chocolate) to produce individual chocolates. It requires the ability to select, prepare and portion ingredients and to use equipment and a range of cookery methods to mould and fill individual chocolates

with hard or soft fillings and centres.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare individual chocolates from three different types listed in the knowledge evidence with each of the following: - hard centres; - soft centres; - fillings; - use at least six different centres or fillings listed in the knowledge evidence when producing above chocolates; - use at least one of the tempering methods for couverture when producing above chocolates; - produce above individual chocolates in commercial quantities: - that are consistent in quality, size, shape and appearance; - within commercial time constraints; - following procedures for portion control and food safety practices when handling and storing chocolate ingredients and chocolates; - responding to special customer requests and dietary requirements. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for: - ingredients commonly used to produce chocolate confectionery; - classical and contemporary individual chocolates specified above in the performance evidence; - contents of stock date codes and rotation labels; - types of chocolates: - cut or dressed; - hand coated; - machine enrobed; - made with prepared hollow shells; - moulded; - classical and contemporary centres and fillings used when producing chocolates: - caramel; - croquant; - flavoured fondant; - ganache; - jellies; - liqueurs; - marzipan; - nougat; - nuts and fruits; - historical and cultural derivations of a variety of chocolates; - indicators of freshness and quality of stocked ingredients for chocolates; - mise en place requirements for producing chocolate confectionery; - tempering methods for couverture: - controlling the formation of seed crystals; - tabling method; - use of heated water jackets; - use of microwave; - vaccination or addition method; - appropriate temperatures to melt and temper couverture; - properties of tempered couverture: - flow properties; - setting properties; - viscosity; - expected product characteristics of solidified couverture specified in the performance evidence: - colour; - gloss; - sheen; - snap; - methods to coat centres: - hand coating; - hand dipping; - machine enrobed; - complementary tastes and textures of dark, milk and white couverture for fillings and centres; - decoration techniques for individual chocolates; - appropriate environmental conditions for storing ingredients and individual chocolates to: - ensure food safety; - optimise shelf life; - safe operational practices using essential functions and features of equipment used to: - produce chocolate confectionery; - protect polished chocolate moulds from contamination and damage.

SITHPAT009 Model sugar-based decorations

Locations:Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to:
<http://www.vu.edu.au//skilled-migration..>

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to prepare liquid sugar and to model sugar-based decorations for cakes and desserts. It requires the ability to design decorations and to pull, cast and blow sugar.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - design creative decorations for at least six different cakes or desserts; - use each of the following techniques at least once when modelling sugar-based decorations for different cakes and desserts: - pulling sugar; - casting sugar; - blowing sugar; - use each of the cookery methods in the knowledge evidence at least once when preparing sugar solutions; - produce above sugar-based decorations: - that are consistent in quality, size, shape and appearance; - within commercial time constraints; - reflecting required quantities to be produced; - following procedures for food safety practices when handling and storing sugar products. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for: - ingredients commonly used to produce sugar-based decorations for cakes and desserts; - classical and contemporary sugar-based decorations specified above for cakes and desserts; - types of designs commonly used for sugar-based decorations for cakes and desserts; - cookery methods for preparing sugar solutions: - combining ingredients; - appropriate temperatures and cooking times; - cooling methods and times; - historical and cultural derivations of a variety of sugar-based decorations for cakes and desserts; - mise en place requirements for modelling sugar-based decorations; - required consistency of sugar solution for pulling, blowing and casting; - shaping techniques for boiled sugar: - pouring into framework; - free-flowing shapes; - pouring into moulds; - causes of premature crystallisation of boiled sugar and methods to avoid it; - properties of the ingredients used and their interaction and changes during production; - temperature requirements, cooking times and techniques for pulling, casting and blowing sugar; - dangers of handling boiled sugar at high temperatures and methods to avoid injury: - avoiding drips and dribbles; - covering exposed skin; - ensuring all equipment has secure handles; - using insulated pot rests; - using protective gloves and mitts; - appropriate environmental conditions for storing sugar-based decorations to: - ensure food safety; - optimise shelf life; - equipment used to prepare liquid sugar and to model sugar-based decorations for cakes and desserts: - essential features and functions; - safe operational procedures; - influence of cleanliness of equipment on the boiling process and quality outcome.

SITHPAT010 Design and produce sweet buffet showpieces

Locations:Industry, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to:
<http://www.vu.edu.au//skilled-migration..>

Prerequisites:SITXFSA001 - Use hygienic practices for food safety

Description:This unit describes the performance outcomes, skills and knowledge required to design and produce showpieces for display with sweet buffets. It requires the ability to make all individual decorative components from individual or combined sugar, chocolate, pastillage and marzipan materials and to assemble the complete showpiece for display.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - design, produce and assemble three sweet buffet showpieces, each containing at least two different components and using each of the following materials at least once when making the above decorative components, either individually or in combination: - chocolate; - marzipan; - pastillage; - sugar; - produce and assemble the above sweet buffet showpieces: - within commercial time constraints; - reflecting required quantities to be produced; - following procedures for food safety practices. Students will also be expected to demonstrate the following knowledge: - culinary terms and trade names for: - ingredients commonly used to produce showpiece components; - classical and contemporary showpiece components specified in the performance evidence; - historical and cultural derivations of a variety of showpiece components for sweet buffets; - types of designs used for the sweet buffet showpieces specified in the performance evidence; - mise en place requirements for producing sweet buffet showpieces; - cookery methods for preparing showpiece materials specified in the Performance Evidence; - properties of the ingredients used in the showpieces and their interaction and changes during production; - techniques used to: - handle and mould chocolate, pastillage and marzipan, individually and in combination; - blow, cast or pull sugar; - assemble the entire sweet buffet showpiece; - appropriate environmental conditions for storing showpieces and their components to: - ensure optimum appearance; - optimise shelf life; - safe operational practices using essential functions and features of equipment used to produce showpiece components and assemble the entire showpiece.

SITTIND001 Source and use information on the tourism and travel industry

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to source and use current and emerging information on the tourism and travel industry. This includes industry structures, technology, laws and ethical issues specifically relevant to the tourism and travel industry. Tourism and travel personnel integrate this essential knowledge on a daily basis to work effectively in the industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - source and document current industry information on the tourism and travel industry using at least three information sources listed in the knowledge evidence; - source and interpret information on the following from the above sources and share with colleagues to improve knowledge of the tourism and travel industry: current and emerging products and services; current issues; career opportunities; relationships between other related industries; compliance issues and quality assurance; new products, technology, techniques and services; work ethic required to work in the industry, and; - identify ways to integrate current tourism and travel industry information into daily work activities to: enhance the quality of work performance, and; conduct ethical practice within the travel and tourism industry. Students will also be expected to demonstrate the following knowledge: - sources of industry information; - structure, functions and key characteristics of the tourism and travel industry; - roles and general responsibilities for different jobs, functions and the interrelationship of different sectors in the industry; - general nature of allied and related industries; - primary

functions of: major cross-industry and sector-specific industry associations especially those with which the organisation has a relationship; trade unions in the industry; local, regional, state and national tourism information service and marketing organisations; tourism research bodies; - basic aspects of tourism and travel industry quality assurance processes; - basic aspects of state, territory and commonwealth laws specifically relevant to the tourism and travel industry and actions that must be adhered to by tourism organisations; - for inbound tour operators and guides, basic aspects of and actions that must be adhered to by tourism organisations, and; - current and emerging technology used in the tourism industry.

SITTPD003 Coordinate and operate sustainable tourism activities

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to organise and operate tourism activities with minimal negative environmental and social impact. The emphasis of this unit is on short-term operational action planning and implementation, and does not include a strategic management focus. The unit applies to the tour operations, cruise, attractions, and holiday parks and resort sectors, and to those working in senior operational or supervisory roles. This could include senior guides or activities coordinators, or owner-operators of small tourism organisations. The unit is particularly relevant to those who provide tourism experiences in environmentally sensitive areas, including nature or ecotourism-based experiences.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - organise and operate tourism activities with minimal negative environmental and social impact in at least two different environments, one of which must be in an environmentally sensitive area, and; - develop and use minimal impact procedures for activities in above tourism and operating environments. Students will also be expected to demonstrate the following knowledge: - global environmental issues, in particular a layperson understanding of the science associate; - environmental and social impacts of tourism in relation to global environmental issues, in particular impacts on sites and communities; - issues of responsibility for environmental and social sustainability; - practical sustainability considerations for tourism operations; - laws, regulations and land management requirements and guidelines; - minimal impact techniques and procedures in relation; - biophysical and socio-cultural elements in an environment and the relationship between them; - changes in the natural environment requiring monitoring, and; - information collection techniques for monitoring environmental and social impact.

SITTPD007 Research and analyse tourism data

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to conduct tourism research. It requires the ability to identify research needs, conduct research, interpret the data, and apply the results.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and plan a tourism research project, based on an organisational or situational analysis that includes at least two of the following research objectives: comparative analysis; competitor activity; customer preferences; distribution networks; hypothesis testing; identification of trends; industry pricing policies; visitation patterns, and; - conduct a tourism research project, showing effective application of: research and data collection methods; information from suitable range of sources; reliable data analysis; research presentation techniques. Students will also be expected to demonstrate the following knowledge: - role of research for different purposes in a tourism industry context; - research techniques and methodologies and their application to different industry situations; - ethical research practices related to intellectual property, confidentiality and privacy; - research and data collection methods, their features and suitability for different purposes; - methods of data analysis; - major tourism research bodies, types of research produced by those agencies and its value to different tourism operators, and; - types of technology used in the conduct of research projects.

SITTPD008 Develop tourism products

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to manage the strategic product development process from initial research through to product establishment and monitoring. The unit applies to all industry sectors and to senior personnel working in strategic planning and product development roles. This could include product development managers, marketing managers, operations or general managers, regional tourism managers, account managers, events managers, resort or hotel managers and owner-operators.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research, assess and develop a new product or service for a tourism operation. Students will also be expected to demonstrate the following knowledge: - features and inclusions of a product development plan; - tourism industry structures, interrelationships and networks; - tourism industry information sources; - distribution and marketing networks that support tourism products in the relevant context; - key stakeholders in local, regional, state and national tourism organisations and the structures of these organisations at each level; - current market trends, products and service styles that meet certain market requirements and quality expectations; - current tourism product base for the proposed destination and market to be serviced; - current and proposed products and services of competitors; - features of the destination at which the product will be delivered; - aspects of laws that impact on tourism operations and actions required of tourism operators; - factors impacting organisational capacity to provide proposed product; - financial operating costs in tourism organisations; desired profit margins and achievement of high yield in order to determine an appropriate selling price; -

expenditure items relevant to the development of tourism products, and; - industry commission and mark-up procedures and rates appropriate in the relevant industry context.

SITTSLO01 Operate online information systems

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to operate an online information system to source information for various operational purposes. It requires the ability to identify information requirements and locate, check and download information. The unit applies to any tourism, travel, hospitality, or events industry sector. The online system used will vary according to the organisation and industry sector but can include the internet, and any internal or external information database. This unit mainly applies to frontline sales and operations personnel who operate with some level of independence and under limited supervision. It does, however, describe a basic operational function of minimal complexity and those individuals who work with very little independence under close supervision would also use this skill. This includes visitor information officers, travel consultants, tour coordinators, account managers for professional conference organisers, event coordinators, tour guides, hotel guest relations officers, tour desk officers, and reservation sales agents.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - source and retrieve information using an online information system regarding each of the following: destination information for one international destination and one Australian destination; - booking requirements for a service; - commission payable for a product or service; - features and benefits of a product or service; - rates for a product or service; - schedules for a service, and; - complete information retrieval activities within commercial time constraints and deadlines determined by the customer or organisation. Students will also be expected to demonstrate the following knowledge: - types of online information systems; - features and functions of different types of online information systems; - information available from online information systems relevant to the tourism and travel industry, and; - aspects of state, territory or commonwealth copyright and intellectual property requirements for copying online information.

SITTSLO02 Access and interpret product information

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to access product information on tourism, travel, hospitality, or events products to fulfil sales or operational needs. It requires the ability to identify sources of information and to interpret specific details of the products. The product can include any international or domestic product sold by any tourism, travel, hospitality, or events business. The breadth and depth of product knowledge and its application will vary according to the industry sector, workplace and job role. This unit is not about having an in-depth knowledge of products, but focuses on the ability to source

and interpret information. The unit mainly applies to frontline sales and operations personnel who operate with some level of independence and under limited supervision. It does, however, describe a fundamental operational function and those individuals who work with very little independence under close supervision would also use this skill. This includes visitor information officers, travel consultants, corporate consultants, inbound tour coordinators, account managers for professional conference organisers, event coordinators, tour guides, hotel guest relations officers, tour desk officers, and reservations sales agents. Personnel selling travel insurance to a client must meet the requirements of the Financial Services Reform Act (2001).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and interpret current, relevant and accurate product information in response to at least three different sales-related and operations-related enquiries; - use at least two of the following sources to access product information for each of the above enquiries: computerised reservations systems (CRS); internet or intranet; global distribution systems (GDS); international government tourism authority information systems; organisation-designed information systems, such as inventory control databases; principal or supplier of the product; product library; social media websites; state and federal government tourism authority information systems; - interpret and correctly use industry terminology and common abbreviations in response to each of the above enquiries for product information; - share and interpret product information with colleagues, and; - complete activities within commercial time constraints and deadlines determined by the customer or organisation. Students will also be expected to demonstrate the following knowledge: - sources of product information and specific product types; - industry accepted terminology, codes and abbreviations for the major categories of tourism, travel, hospitality or event products and services; - features and benefits of tourism, travel, hospitality or event products; - major product categories; - sales or operational needs for product information in the tourism, travel, hospitality or event industry; - travel insurance products; - methods to obtain product information; - sources of specific product information; - special jargon or specifications; - risks relating to the sale or operation of tourism, travel, hospitality and event products; - safety risk to customer in participating in activities; - seasonal non-availability of the product; - unclear product provision, deposit, payment and cancellation terms and conditions, and; - unclear product, tax and levy costs.

SITTSLO03 Provide advice on international destinations

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to source and provide customer information and advice relating to international destinations and their features. It requires the ability to identify appropriate information sources and research destinations in order to develop and update a general destination knowledge base.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - provide tailored information to meet the requests of at least three different customers each requiring information on at least five different features of different international tourism destinations; - obtain above information by accessing at least three different information sources from the following list: computerised reservations systems (CRS); global distribution systems (GDS); international government tourism authority information systems; internet or intranet; organisation-designed information systems; principal or supplier information; destination and product libraries; social media websites; - ensure information provided is current, relevant and accurate, and; - complete above activities within commercial time constraints and deadlines determined by the customer or organisation. Students will also be expected to demonstrate the following knowledge: - formal and informal research methods; - sources of information on regions and destinations and general types of product offered; - sources of information on current health and safety issues for destinations; - sources of information on regulatory issues for destinations; - specific industry sector and organisation; - features of international destinations; - each of the destinations of interest to the customers specified in the performance evidence; - formats and inclusions used to present information to customers, and styles that cater for those with special needs, and; - different methods for storing destination information.

SITTSLO04 Provide advice on Australian destinations

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to source and provide customer information and advice relating to Australian destinations and their features. It requires the ability to identify appropriate information sources and research destinations in order to develop and update a general destination knowledge base.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - provide tailored information to meet the requests of at least three different customers each requiring information on at least five different features of one or more tourism destinations within Australia; - obtain above information by accessing at least three different information sources from the following list: computerised reservations systems (CRS); destination and product libraries; global distribution systems (GDS); internet or intranet; organisation-designed information systems; principal or supplier information; regional tourism office information systems; social media websites; state and federal government tourism authority information systems; - ensure information provided is current, relevant and accurate, and; - complete above activities within commercial time constraints and deadlines determined by the customer or organisation. Students will also be expected to demonstrate the following knowledge: - formal and informal research methods; - sources of information on regions and destinations and types of product offered; - sources of information on current health and safety issues for the destination; - specific industry sector and organisation; - features of Australian

destinations; - each of the destinations of interest to the customers specified in the performance evidence; - formats and inclusions used to present information to customers, and styles that cater for those with special needs, and; - different methods for storing destination information.

SITTSL005 Sell tourism products and services

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to proactively sell tourism, travel, hospitality or event products. It requires the ability to identify specific customer needs, suggest a range of products to meet those needs, provide current and accurate product information and close the sale. The unit only covers sales skills and not related product and destination knowledge which is covered in other units.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - proactively sell international and domestic destination products from the list in the knowledge evidence to meet the requirements of at least three different customers; - demonstrate the following skills during each of the above customer service interactions: communication with customers to correctly interpret their requirements; use of different sales techniques in response to different customer types; integration of product knowledge into the sales process, and; - complete sales within commercial time constraints and deadlines determined by the customer or the organisation. Students will also be expected to demonstrate the following knowledge: - types of international and domestic destination products; - sales techniques; - ethical and legal commitments relating to the sale of tourism products; - those dealing with Australian-based customers, the general characteristics of the main social and cultural groups in Australian society and the key aspects of their cultural and religious protocols and preferences for tourism products; - those working in inbound tourism, the general characteristics of the main inbound tourist markets and the key aspects of their cultural and religious protocols and preferences for Australian tourism products; - regarding the specific industry sector and organisation; - inbound tour operators and guides selling and delivering Queensland-based products; - where travel insurance is a product, and; - formats and inclusions used to present information to customers and, styles that cater for those with special needs.

SITTSL008 Book supplier products and services

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to make and administer customer bookings for products and services. It requires the ability to identify customer booking requirements, request and confirm them with suppliers, and administer all bookings through to finalisation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - process three bookings for different products or services listed in the knowledge evidence from initial request to finalisation of the bookings, including at least one for: a single product or service; a combination of at least four products or services making up one complete package or itinerary; - service requests and return confirmations efficiently for each of the above bookings; - issue the following paper-based or electronically transmitted customer documents tailored to each of the above bookings: confirmation letters; credit notes; information packs; invoices; receipts; - keep accurate records of above bookings and confirmations, and; - complete activities within commercial time constraints and deadlines determined by the customer and the organisation. Students will also be expected to demonstrate the following knowledge: - the specific industry sector and organisation; - different types of reservations and operations systems used to administer the booking of supplier services; - different supplier services that are booked; - industry terminology and common abbreviations used in bookings and confirmations; - primary components of consumer protection laws that relate to the provision of products and services, specifically organisational responsibility; - processes involved in updating the financial status of bookings; - supplier payment actions; - key booking details; - return confirmation inclusion details, and; - formats and inclusions used in supplier booking requests, and styles that cater for those with special needs.

SITTSL009 Process travel-related documentation

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to use a computerised reservations or operations system to create, maintain and administer bookings for products and services. The unit covers the required computer skills to use all system functions and capabilities and not the related sales skills, which are found in other units.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - operate a computerised reservations or operations system to create and administer at least five different product or service reservations or operations from the following list: accessing product information; booking a supplier service for a customer; constructing airfares; hiring special equipment; issuing air tickets, crew documentation, or customer documentation; planning functions; preparing quotations; processing and monitoring event registrations; providing specific product information and advice for destinations, foods and beverages, or events and functions; purchasing promotional products; selling tourism, hospitality or event products to the customer; - demonstrate the correct use of the full range of features when completing each of the above activities, and; - complete activities within commercial time constraints and deadlines determined by the customer or the organisation. Students will also be expected to demonstrate the following knowledge: - different types of computer systems used for reservations and operations; - products and services controlled by different computer systems; - reservations terminology and jargon; - role of computerised reservations

and operations systems; - any organisation-specific computerised reservations or operations system; - industry-wide systems used by agencies when booking supplier services; - types of reservations; - customer groups for whom reservations are made; - specific reservations and operations system; - updates and amendments made through computerised reservations or operations systems, and; - accounting processes for which computerised reservation or operations systems are used,.

SITTSLO10 Use a computerised reservations or operations system

Locations: Footscray Park, Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to use a computerised reservations or operations system to create, maintain and administer bookings for products and services. The unit covers the required computer skills to use all system functions and capabilities and not the related sales skills, which are found in other units.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - operate a computerised reservations or operations system to create and administer at least five different product or service reservations or operations from the following list: accessing product information; booking a supplier service for a customer; constructing airfares; hiring special equipment; issuing air tickets, crew documentation, or customer documentation; planning functions; preparing quotations; processing and monitoring event registrations; providing specific product information and advice for destinations, foods and beverages, or events and functions; purchasing promotional products; selling tourism, hospitality or event products to the customer; - demonstrate the correct use of the full range of features when completing each of the above activities, and; - complete activities within commercial time constraints and deadlines determined by the customer or the organisation. Students will also be expected to demonstrate the following knowledge: - different types of computer systems used for reservations and operations; - products and services controlled by different computer systems; - reservations terminology and jargon; - role of computerised reservations and operations systems; - any organisation-specific computerised reservations or operations system; - industry-wide systems used by agencies when booking supplier services; - types of reservations; - outbound to book supplier service from; - customer groups for whom reservations are made; - specific reservations and operations system; - diary entries and use of system-created deadlines for payments and issuing documents; - use of the following reports required for product or service reservations or operations specified in required skills; - updates and amendments made through computerised reservations or operations systems, and; - accounting processes for which computerised reservation or operations systems are used.

SITTSLO12 Construct normal international airfares

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to create flight itineraries and construct normal international airfares. It requires the ability to interpret flight information and conditions applicable to specific fares and to construct airfares that meet customer needs according to International

Air Transport Association (IATA) regulations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - create practical air itineraries and construct normal international airfares to meet the requirements of five different customers including: at least one adult and one child airfare; at least one airfare for travel to each of the following destinations: New Zealand, USA/Canada, Europe, Asia, Africa, South West Pacific, South America; - source information for the above itineraries and airfares using each of the following at least once across the above customers: computerised reservations system (CRS); global distribution system (GDS); information from airlines and consolidators; the internet; - demonstrate correct application of the following types of calculations and checks in constructing each of the above airfares: global indicators (GI); local currency fares (LCF); mileage system; neutral units of construction or currency (NUC) conversion; - interpret and document for each of the above customers: information on international fares, fare rules, conditions applicable to specific fares, and International Air Transport Association (IATA) regulations, and; - complete activities within commercial time constraints and deadlines determined by the customer or the organisation. Students will also be expected to demonstrate the following knowledge: - sources of information; - international fare conditions; - content and format of information provided by airlines and consolidators; - key elements of and procedures for international fare calculations and checks, and; - formats used to calculate and record international airfares.

SITTSLO13 Construct promotional international airfares

Locations: Footscray Nicholson.

Prerequisites: SITTSLO12 - Construct normal international airfares

Description: This unit describes the performance outcomes, skills and knowledge required to create flight itineraries and construct promotional or 'special' international airfares. It requires the ability to interpret flight information and conditions applicable to specific fares and to construct airfares that meet customer needs according to International Air Transport Association (IATA) regulations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - create practical air itineraries and construct promotional international airfares to meet the requirements of eight different customers; - source information for the above itineraries and airfares using each of the following at least once across the eight customers: computerised reservations system (CRS); global distribution system (GDS); information from airlines and consolidators; the internet; - demonstrate correct application of the following types of calculations and checks in constructing each of the above airfares: global indicators (GI); local currency fares (LCF); mileage system; neutral units of construction or currency (NUC) conversion; - interpret and document for each of the

above customers: information on international fares, fare rules, conditions applicable to specific fares, and International Air Transport Association (IATA) regulations, and; - complete activities within commercial time constraints and deadlines determined by the customer or the organisation. Students will also be expected to demonstrate the following knowledge: - sources of information for: international flights; airline codes; airport codes; international fares; fare conditions; fare rules; global indicators; IATA areas; IATA regulations; IATA terminology and definitions; IATA terminology and definitions; payment and ticketing deadline; taxes, fees and surcharges; - international fare conditions; - content and format of information provided by airlines and consolidators; - key elements of and procedures for advanced fare calculations and checks, and; - formats used to calculate and record promotional international airfares.

SITXCCS002 Provide visitor information

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to access general information on facilities, products and services available in the local area and to provide this to visitors. The unit applies to frontline service personnel working in a range of tourism, travel, hospitality, entertainment and cultural contexts. Information is often provided face-to-face, but may be by telephone or other remote mechanisms. It applies to frontline service personnel who routinely respond to visitor requests for general local area information. They may be working independently or with guidance from others in restaurants, hotels, wineries, attractions, entertainment venues, tour operations, visitor information centres and at tour desks.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role; - provide current, accurate and relevant information about local area features to three different visitors on three different occasions; - provide above information and assistance in a culturally appropriate manner and according to organisational service standards; - extend personal knowledge of relevant facilities, products and services, and; - seek formal and informal feedback from visitors on services. Students will also be expected to demonstrate the following knowledge: - sources of information on the available local area facilities, products and services; - information on the local area features; - organisational service procedures and standards; - awareness of customs and practices of various social and cultural groups of visitors to assist with meeting visitor needs and expectations, and; - informal and formal methods of collecting feedback.

SITXCCS003 Interact with customers

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to deliver fundamental customer service to both internal and external customers. It requires the ability to greet and serve customers, and respond to a range of basic customer service enquiries, including routine customer problems. The

unit applies to frontline service personnel who operate under close supervision and with guidance from others. They provide routine customer service and would not be expected to respond to complex customer requests or complaints. The unit applies to individuals working in a range of tourism, travel, hospitality and events contexts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify customer requirements and provide effective customer service to two different internal and two different external customers to meet requirements; - interact with above customers in line with organisational customer service standards and within designated organisational response times; - demonstrate procedures to respond to three different customer problems according to organisational policies and procedures; - identify situations where problems are beyond own level of responsibility, and process to escalate in line with organisational policies and procedures, and; - seek informal feedback from customers on above activities. Students will also be expected to demonstrate the following knowledge: - importance of the customer in the service industries; - customer service standards expected in the service industries; - profiles of different types of customers; - value and role of customer feedback in improving service delivery; - presentation standards; - customer service policies and procedures, and; - procedures for responding to routine customer problems.

SITXCCS006 Provide service to customers

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration>. Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to communicate effectively with and provide quality service to both internal and external customers. It requires the ability to establish rapport with customers, determine and address customer needs and expectations, and respond to complaints. The unit applies to those frontline service personnel who deal directly with customers on a daily basis and who operate with some level of independence and under limited supervision. This includes individuals working in a range of tourism, travel, hospitality and events contexts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify customer requirements and provide quality customer service to three different internal and three different external customers to meet requirements; - provide service to above customers in line with organisational customer service standards and within

designated organisational response times; - demonstrate procedures to respond to and resolve three different customer complaints according to organisational policies and procedures; - demonstrate effective communication with the above internal and external customers, including any with special needs, and; - seek formal and informal feedback from customers on above service. Students will also be expected to demonstrate the following knowledge: - principles of quality customer service and positive communication; - appropriate non-verbal communication for customer service; - methods for enhancing service delivery in response to staff and customer feedback; - specific industry sector; - particular organisation; - customer service policies and procedures; - awareness of special needs, customs and practices of various social and cultural groups of customers; - methods of collecting feedback, and; - essential features, conventions and usage of different types of communication techniques and equipment.

SITXCCS007 Enhance customer service experiences

Locations:Footscray Park, Industry, Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to provide professional and personalised customer service experiences. It requires the ability to determine and meet customer preferences, develop customer relationships, respond to difficult service situations, and take responsibility for resolving complaints. The unit applies to those who deal directly with customers on a daily basis and who operate independently or with limited guidance from others. It includes senior frontline sales personnel, supervisors and managers who use discretion and judgement to provide quality customer service experiences. This includes individuals working in a range of tourism, travel, hospitality and events contexts.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify customer requirements and provide professional and personalised customer service experiences to two different internal and two different external customers to meet requirements; - demonstrate procedures to respond to and resolve three different customer complaints according to organisational policies and procedures; - demonstrate effective communication with the above internal and external customers, including any with special needs; - seek formal and informal feedback from customers on quality of above service, and; - provide above service to above customers in line with organisational customer service standards and within designated organisational response times. Students will also be expected to demonstrate the following knowledge: - principles and benefits of enhanced customer service experiences and positive communication; - techniques to anticipate customer preferences, needs and expectations throughout the service experience; - conflict resolution techniques; - methods for enhancing service delivery in response to staff and customer feedback; - various extras and add-ons to enhance the customer experience; - specific industry sector; - particular organisation; - procedures for responding to the following common customer complaints; - methods of compensating dissatisfied customers; - factors to consider when determining compensation of dissatisfied customers; - awareness of special needs, customs and practices of various social and cultural groups of

customers; - methods of collecting feedback, and; - essential features, conventions and usage of different types of communication techniques and equipment.

SITXCCS008 Develop and manage quality customer service practices

Locations:Industry, Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to develop, monitor and adjust customer service practices. It requires the ability to consult with colleagues and customers, develop policies and procedures for quality service provision, and manage the delivery of customer service.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and develop customer service policies and procedures for at least three different areas of the business that meet industry standards; - implement and monitor practices for quality customer service in line with above policies and procedures over four service periods; - evaluate practices for quality service provision and identify any failings, and; - review policies and procedures, adjust as necessary, and communicate any new practices to staff. Students will also be expected to demonstrate the following knowledge: - principles of quality customer service; - specific industry sector; - roles and responsibilities of management, supervisors and operational personnel in providing quality service; - sources of information on current service trends and changes that affect service delivery; - internal and external environmental changes and their effect on planning for quality customer service; - methods of formal and informal customer research; - methods of implementing quality service provision; - methods of assessing the effectiveness of customer service practices; - methods of obtaining feedback from customers; - industry schemes, accreditation schemes and codes of conduct aimed at improving customer service; - areas where organisational policies and procedures assist in ensuring quality customer service, and; - objectives, components and comprehensive details of consumer protection laws that relate to customer service, and the business' responsibility.

SITXCOM001 Source and present information

Locations:Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to conduct basic research and present information in response to an identified need. The unit applies to all industry sectors and to any individual who needs to use very basic research and presentation skills in the workplace. People working under supervision would undertake this role.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - find and review current

information on at least three of the following topics: availability of products or services; customer service research, such as feedback from customers about a particular product or service; information from other departments in the organisation, such as available products or services; product supplier information; new workplace systems or equipment; product and service styles that would meet different customer and market requirements, and; - prepare a presentation on the above information in a logical, well organised and professional manner within designated timeframes. Students will also be expected to demonstrate the following knowledge: - types of information resources available and how to access them; - methods of presenting information; - importance of presenting information in a logical sequence and at an appropriate depth, and; - alternative presentation formats for special needs groups.

SITXCOM002 Show social and cultural sensitivity

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to be socially aware when serving customers and working with colleagues. It requires the ability to communicate with people from a range of social and cultural groups with respect and sensitivity, and to address cross-cultural misunderstandings should they arise. The unit applies to all tourism, travel, hospitality and event sectors. All personnel at all levels use this skill in the workplace during the course of their daily activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate in a non-discriminatory way with colleagues and customers from at least three different social and cultural groups: demonstrating attempts to overcome language barriers; communicating in line with appropriate social and cultural conventions, and; demonstrating respect and sensitivity, and; - identify when assistance is required in the above communication, and seek help using the appropriate channels. Students will also be expected to demonstrate the following knowledge: - key principles of fairness and equity in relation to interaction with colleagues and customers; - key cultural and religious protocols of main social and cultural groups in Australian society, including Australian Indigenous people; - key cultural and religious protocols of main inbound tourist markets to Australia; - different types of disability and their implications for the workplace; - anti-discrimination policies for the industry and specific organisation; - basic aspects of state, territory and commonwealth laws covering anti-discrimination, including requirements to: treat customers and colleagues fairly and equitably; not discriminate, show partiality or grant any special favours on the basis of social and cultural attributes, and; not threaten, humiliate or intimidate people because of their social or cultural attributes; - sources of assistance in communicating with colleagues and customers from diverse social and cultural groups, and; - approaches to overcoming language barriers in the workplace.

SITXCOM005 Manage conflict

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to:

<http://www.vu.edu.au//skilled-migration..>

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to resolve complex or escalated complaints and disputes with internal and external customers and colleagues. It requires the ability to use effective conflict resolution techniques and communication skills to manage conflict and develop solutions. It does not cover formal negotiation, counselling or mediation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - resolve escalated complaints or disputes with customers in relation to at least three of the following matters: delays or poor timing of product or service supply; incorrect pricing of product or service; delays or errors in providing product or service; misunderstanding of customer request or communication barrier; problem or fault with product or service; refused entry or ejection from premises; - resolve team member disputes in relation to at least two of the following complex matters: dispute or argument among work colleagues; job duties or rosters; lack of competence; worker mistake; dismissal; cultural misunderstanding; - take appropriate action in response to at least two of the following threat or conflict situations: customer refusing to leave or be pacified; drug or alcohol-affected person; person who appears to be violent or are threatening; people involved in physical violence; person with gun or arms; situation where someone has been or may be hurt, and; - use a range of conflict-resolution techniques and communication skills when seeking to resolve above situations. Students will also be expected to demonstrate the following knowledge: - commonly occurring conflict situations in the tourism, travel, hospitality and event industries and their typical causes; - conflict theory: signs; stages; levels; factors involved; results; - conflict-resolution techniques: assertiveness; negotiation; use of appropriate communication; - resources to assist in managing conflict: counsellors; internal security staff; mediators; other staff members; police; senior staff; - communication techniques: active listening; empathising with the person's situation while upholding organisational policy; non-verbal communication and recognition of non-verbal signs; language style; questioning techniques; those appropriate to different social and cultural groups, and; - organisational policies and procedures for complaint, conflict and dispute resolution.

SITXCR1002 Manage a business continuity crisis

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to identify the ramifications of a crisis on business continuity and to respond with strategies that ensure the financial viability of the organisation. It requires the ability to identify and interpret information relevant to the crisis and the business operation, and to assess and adapt business operations to manage the crisis. Managing business continuity is a complex process which involves the use of a range of interrelated skills, such as financial analysis, budgeting, developing operational plans and adapting the provision of products to meet the needs of a market in crisis. These skills are covered in other units. This unit applies to all tourism, travel, hospitality and event sectors and to any size organisation. The crisis could be of a

magnitude that affects the operation of an entire organisation, department or particular project. It applies to senior managers and owner-operators who operate with significant autonomy and are responsible for making a range of strategic management decisions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and assess ramifications of at least two internal and two external crises on business continuity, and; - demonstrate the following for each of the above internal or external crises on business continuity: develop a clear, accurate and complex emergency operational plan; assess and adapt business operations to manage business continuity; implement the emergency operational plan and monitor, evaluate and adapt the plan based on outcomes. Students will also be expected to demonstrate the following knowledge: - trigger factors for downturns in tourism, travel, hospitality and event business; - ramifications of an internal crisis on business continuity; - ramifications of an external crisis on business continuity; - specific industry sector; - specific organisation; - key people involved in the assessment of a business continuity crisis; - organisational documents to determine current financial and operational status of a business; - possible recommendations to ensure financial viability of businesses in continuity crisis; - formats for and inclusions in emergency operational plans, and; - features and functions of financial software programs for preparing and monitoring financial reports.

SITXBS001 Use social media in a business

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to establish a social media presence in a business. It requires an understanding of the use of social media tools and platforms to enhance customer engagement and market a business. The unit is relevant to businesses operating in many industry contexts, including the tourism, travel, hospitality, events and other service industry sectors. It applies to individuals using social media for business at an operational level under limited supervision.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify at least six content items suitable for use on a social media platform, demonstrating use of both internal content development and external content sourcing; - use social media tools on at least five occasions to engage with different customers by: - asking questions to determine customer needs; - responding to questions and complaints within timelines and according to organisational policy and procedures; - referring customers to relevant information as needed; - responding to customer reviews and

other user-generated content; - communicating effectively in writing to a variety of audiences; - respond to customers from each of the following different social media customer responder categories, through at least two different social media platforms; - market and promote a business using social media tools over a period of one month by: - managing a business account on at least one social media platform; - following monthly content calendar to pre-plan a variety of content; - curating content appropriate to business needs, and; - monitoring and reporting on organisational measurement metrics according to social media plan. Students will also be expected to demonstrate the following knowledge: - key elements of an organisational social media plan; - organisational policy and procedures for social media use; - types of social media platform, tools and their operation; - rules and regulations and terms of use of specific social media platforms; - legal and ethical practices for use of social media; - categories of social media responders specified in the performance evidence and how to effectively engage with them; - types of crisis issues or conflicts that can arise on social media locally, nationally and internationally; - crisis management processes and chain of command; - current tools that facilitate social listening/monitoring; - current tools for social media scheduling; - value of building a community of advocates on a social media platform; - importance of consumer reviews and user-generated content; - what makes good content for a social media community; - sources of information for social media content; - how to and where to source photo content from the internet; - importance of tone in online communication; - customer behaviour in relation to social media use, and; - characteristics of a well written blog.

SITXBS002 Develop, implement and monitor the use of social media in a business

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to manage the development and implementation of social media in a business and monitor its effectiveness. It requires an understanding of social media tools and platforms in order to develop a social media plan, and supporting organisational policies for social media use. This unit does not address the skills and knowledge required to set up social media accounts or its day-to-day business use. The unit is relevant to businesses operating in many industry contexts, including the tourism, travel, hospitality, events and other service industry sectors. It applies to owners or managers of businesses who are responsible for the planning, development and monitoring of social media use in a business context.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research at least three different social media tools or platforms for organisational use and select a tool or platform that best meets the business needs; - develop and implement organisational policies and procedures for the use of the above selected social media tools or platforms in a business that addresses: - guidelines for audience engagement; - guidelines for appropriate use of social media; - appropriate content; - crisis management; - develop a social media plan, to be executed over a two month period that: - addresses profiled target audiences; - addresses consumer and

stakeholder needs; - outlines metrics and performance indicators for success; - promotes the business, and; - monitor and evaluate effectiveness of social media according to metrics and performance indicators devised above and identify strategies to address any gaps. Students will also be expected to demonstrate the following knowledge: - types of social media platforms and tools, and their operation; - how various social media platforms and tools are used by customers and the general public; - rules, regulations and terms of use of specific social media platforms and tools; - legal and ethical practices for use of social media; - categories of online customer responders and how to deal with them; - types of social media conflicts and complaints and appropriate responses; - crisis management processes and chain of command; - current tools that facilitate social media listening; - reports for monitoring social media activity; - value of building a community of advocates on a social media platform; - importance of consumer reviews and user-generated content; - policy and procedure development, and; - organisational marketing and promotional plans.

SITXEBS003 Build and launch a small business website

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to build a basic website to meet business needs, including selecting a hosting service and appropriate web development software, planning the website structure, and constructing the site. It requires the technical skills and knowledge typically needed by a business that chooses to develop its own site rather than access the services of IT professionals. The unit applies to all industry sectors, and is particularly relevant to small businesses that develop their own websites. People undertaking this role work independently or with limited guidance. Depending on the business context, this could include owner-operators.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - build a website by applying appropriate business and technical skills that meet a business need and integrating the following: - content features: - business history and profile; - catalogues and brochures; - client testimonials; - frequently asked questions (FAQs); - products and services; - published materials; - staff profiles; - thumbnails; - visual enhancement features: - colour; - frames; - graphics; - photographic images; - text enhancement; - at least one of the following security requirements: - limited downloading of images or image encoding; - limited viewing of rates; - password protection, and; - payment mechanisms. Students will also be expected to demonstrate the following knowledge: - current e-business environment for a particular business context; - different services and operation systems used by internet service providers; - general principles of website architecture and design; - role of a website in the marketing mix; - website features and capabilities; - factors which impact ease of operation of website; - key features and functions of a marketing-oriented website; - features of browsers, search engines and web crawlers, and how they impact on website design, decisions and meta-tags; - relationships between content and site design; - possible inclusions in page presentation; - techniques for using colour and enhancing text in a website; - techniques for manipulating digital images and graphics, and their insertion into a website; -

functions and features of micro-content elements; - underlying impact of HTML and cascading style sheets on site design; - features and uses of frames, forms and tables in a website; - components of linked web pages, and; - privacy issues, codes of practice and legislative requirements in relation to website development.

SITXFNO01 Process financial transactions

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to accept and process cash and other payments for products and services, and reconcile takings at the end of the service period or day. The unit applies to all tourism, travel, hospitality and event sectors. This unit mainly applies to frontline sales and operations personnel who operate with some level of independence and under limited supervision. It does, however, describe a fundamental operational function and those people who work with very little independence under close supervision would also use this skill.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - process at least six different financial transactions using at least three different types of financial transactions listed in the knowledge evidence to address different types of customer payments - process each of the above financial transactions: - in line with security and other relevant procedures; - in a logical sequence; - within customer time constraints so that all customers are served effectively, and; - complete reconciliations of three different work or service periods within designated timelines. Students will also be expected to demonstrate the following knowledge: - types of financial transactions that commonly take place in tourism, travel, hospitality and event organisations; - procedures for processing and recording different types of transactions; - features and functions of point-of-sale software; - role and importance of the reconciliation process to organisational financial management system; - security procedures for transporting and securing cash floats, cash and other payments, and; - different products and services that attract GST.

SITXFNO02 Interpret financial information

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to interpret financial information and reports used by organisations to monitor business performance and provide information on operational or departmental financial activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - correctly complete each of

the following financial information documents or reports used to monitor overall business performance: account summaries and balances; balance sheets; bank deposit documentation; bank statements; banking summaries; business activity statements; credit card transaction statements; invoices; journal entries; merchant statements; merchant summaries; profit and loss statements; trial balance, and; - provide financial information using correct financial terminology on six different operational or departmental financial activities listed in the knowledge evidence. Students will also be expected to demonstrate the following knowledge: - specific industry sector and organisation; - operational or departmental financial activities relevant to the sector; - types of financial reports and their purpose; - key elements of financial record-keeping and key terminology; - key elements of accounting and how it provides information for business management; - reconciliations; - concept of costing, and fixed and variable costs, and; - accounting for and reporting goods and services tax (GST) . .

SITXFIN003 Manage finances within a budget

Locations: Footscray Park, Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to take responsibility for budget management where others may have developed the budget. It requires the ability to interpret budgetary requirements, allocate resources, monitor actual income and expenditure, and report on budgetary deviations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - manage a budget for a business over a three-month period that meets the specific business' needs; - undertake at least two of the following to inform management of the above budget: discussions with existing suppliers; evaluation of staffing and rostering requirements; evaluation of impact of potential roster changes; review of operating procedures; sourcing new suppliers; - monitor income and expenditure and evaluate budgetary performance over the above budgetary life cycle, and; - complete financial reports related to the above budget within designated timelines and using correct budget terminology. Students will also be expected to demonstrate the following knowledge: types of financial records: bank deposit documentation; bank statements; banking summaries; business activity statements; cheque books; credit card transaction statements; invoices; journal entries; labour and wages reports; merchant statements; merchant summaries; transaction reports; - types of budgets: cash budgets; cash flow budgets; departmental budgets; event budgets; project budgets; purchasing budgets; sales budgets; wage budgets; whole of organisation budgets; - factors for consideration in the preparation of financial and statistical reports: cash flow; commercial account activity; commission earnings; covers and financial return; daily, weekly and monthly transactions; expenditure; income; occupancy rates and financial return; performance of department, project and/or products and services; sales performance; sales returns; staff costs; stock levels;

variance in income and/or expenditure; wastage; yield; - use, contents of and formats for: budgets; financial reports, and; statistical reports; - budget terminology, and; - specific industry sector and organisation: use of budgets to control costs and enhance profitability; importance of budget control; techniques for maximising budget performance; financial reporting procedures and cycles; features and functions of accounting software programs used to manage budgets.

SITXFIN004 Prepare and monitor budgets

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to analyse financial and other business information to prepare and monitor budgets. It requires the ability to draft and negotiate budgets, identify deviations, and manage the delivery of successful budgetary performance. The unit applies to all tourism, travel, hospitality and event sectors. The budget may be for an entire organisation, for a department or for a particular project or activity. It applies to senior personnel who operate independently or with limited guidance from others and who are responsible for making a range of financial management decisions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare a budget for a business that meets the specific business' needs; - demonstrate the following when preparing the above budget: consultation on components; analysis of factors that impact on the budget, and; completion of draft and final versions of budget within designated timelines, and; - monitor and review the above budget against performance over its life cycle. Students will also be expected to demonstrate the following knowledge: - types of budgets; - whole of organisation budgets; - budget terminology; - specific industry sector and organisation; - internal and external factors that impact on budget development; - budget preparation and monitoring practices and techniques; - sources and contents of data required for budget preparation; - techniques for making budget estimates, and; - common reasons for deviations and budget deviation management.

SITXFIN005 Manage physical assets

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to manage the physical assets of an organisation. It requires the ability to establish systems and practices for asset monitoring, maintenance and acquisition. It applies to senior managers who operate with significant autonomy and who are responsible for making a range of strategic management decisions. The unit applies to all tourism, hospitality and event sectors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop a plan for the acquisition, maintenance and replacement of at least three different types of physical assets listed in the knowledge evidence; - monitor the utility of assets to meet business needs; - provide regular financial reports on the assets; - record formal and informal customer and staff feedback; - integrate day-to-day condition reports; - schedule internal or external inspections or audits; - schedule management reports, and; - develop and maintain a current register for assets. Students will also be expected to demonstrate the following knowledge: - business objectives relevant to the management of physical assets; - types of physical assets required by tourism, hospitality and event organisations and the organisation; - maintenance requirements for different types of physical assets; - considerations for long-term assessment of physical assets; - equipment specifications to guide acquisition process; - formats for and inclusions of asset registers specified in performance evidence; - features and benefits of different financing options for asset acquisition; - depreciation that can be applied to different types of physical assets, and; - data used in the estimation of asset acquisition.

SITXFIND006 Manage revenue

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to make, implement, and monitor pricing decisions to maximise yield and business profitability. The unit applies to senior personnel who work autonomously and are responsible for making strategic business decisions. It applies to supplier organisations in the tourism, travel and hospitality industries, in particular to the accommodation, tour operations and tour wholesaling sectors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - using each of the following at least once, develop, implement and monitor a total of six different pricing initiatives for: products; services; trading periods; market segments, and; - demonstrate consideration of the following factors when determining each of the above pricing initiatives: revenue management principles; industry distribution and marketing considerations. Students will also be expected to demonstrate the following knowledge: - key principles and terminology of revenue management; - types of business performance data used in revenue management; - mechanisms and collateral that support initiatives in different market segments; - mechanisms and collateral that support initiatives in different market segments, and; - aspects of consumer protection law that impact on pricing and distribution.

SITXFSA001 Use hygienic practices for food safety

Locations: Footscray Park, Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to use personal hygiene practices to prevent contamination of food that might cause food-borne illnesses. It requires the ability to follow predetermined organisational procedures and to identify and control food hazards. The unit applies

to all organisations with permanent or temporary kitchen premises or smaller food preparation or bar areas.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - demonstrate use of safe food handling practices in food handling work functions in line with organisational hygiene procedures on at least three occasions, and; - demonstrate procedures to: identify food hazards; report unsafe practices, and; report incidents of food contamination. Students will also be expected to demonstrate the following knowledge: - basic aspects of commonwealth, state or territory food safety laws, standards and codes; - health issues likely to cause a hygiene risk relevant to food safety; - hygiene actions that must be adhered to in order to avoid food-borne illnesses; - hand washing practices; - basic aspects of hazard analysis and critical control points (HACCP) method of controlling food safety, and; - specific industry sector and organisation.

SITXFSA002 Participate in safe food handling practices

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to handle food safely during the storage, preparation, display, service and disposal of food. It requires the ability to follow predetermined procedures as outlined in a food safety program. The unit applies to all organisations with permanent or temporary kitchen premises or smaller food preparation areas. This includes restaurants, cafes, clubs, and hotels; tour operators; attractions; function, event, exhibition and conference catering; educational institutions; aged care facilities; correctional centres; hospitals; defence forces; cafeterias, kiosks, canteens and fast food outlets; residential catering; in-flight and other transport catering. Safe food handling practices are based on an organisation's individual food safety program. The program would normally be based on the hazard analysis and critical control points (HACCP) method, but this unit can apply to other food safety systems. It applies to food handlers who directly handle food during the course of their daily work activities. This includes cooks, chefs, caterers, kitchen hands and food and beverage attendants. Food handlers must comply with the requirements contained within the Australia New Zealand Food Standards Code. In some States and Territories businesses are required to designate a food safety supervisor who is required to be certified as competent in this unit through a registered training organisation. Food safety legislative and knowledge requirements may differ across borders. Those developing training to support this unit must consult the relevant state or territory food safety authority to determine any accreditation arrangements for courses, trainers and assessors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - demonstrate use of safe food handling practices in food handling work functions on at least three occasions, and; - demonstrate the correct methods of controlling food hazards at each of the following critical control points. Students will also be expected to demonstrate the following knowledge: - key features of commonwealth, state or territory and local food safety compliance requirements as they impact workers at an operational level; - hazard analysis and critical control points (HACCP) or other food safety system principles, procedures and processes as they apply to particular operations and different food types; - contents of organisational food safety program, especially procedures, associated requirements, and monitoring documents; - food safety monitoring techniques; - methods to ensure the safety of food served and sold to customers; - safe food handling practices for the following different food types; - equipment operating procedures, especially how to calibrate, use and clean a temperature probe and how to identify faults; - choice and application of cleaning, sanitising and pest control equipment and materials, and; - cleaning, sanitising and maintenance requirements relevant to food preparation and storage.

SITXFSAO04 Develop and implement a food safety program

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to develop, implement and evaluate a food safety program for all stages in the food production process, including receipt, storage, preparation, service and disposal of food. It requires the ability to determine program requirements and prepare policies and procedures for other personnel to follow. The unit applies to all organisations with permanent or temporary kitchen premises or smaller food preparation areas.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop and implement a complete food safety program for a service industry food preparation organisation in line with regulatory requirements outlined in: the organisation's policies and procedures; product specifications; monitoring documentation; - ensure that the above food safety program reflects the following organisational characteristics: average clientele and at risk client groups with a higher than average risk of harm from food contamination; equipment; existing prerequisite programs; facilities; food items prepared and sold; re-thermalisation and service requirements; size and nature of organisation; - provides suitable food safety systems and options for the organisation for which it has been prepared, and; - monitor, evaluate and identify improvements to the above food safety program. Students will also be expected to demonstrate the following knowledge: - options for the structure and implementation of a food safety program, using the hazard analysis and critical control points (HACCP) method as the basis; - consultative and communication mechanisms used by organisations to develop and implement procedural systems; - key features of commonwealth, state or territory and local food safety compliance requirements as they impact food safety program development; - contents of organisational food safety program, especially policies and procedures; - hazards; - personal considerations; - food safety monitoring techniques; - food safety management

documents; - HACCP or other food safety system principles, procedures and processes as they apply to particular operations and different food types; - choice and application of cleaning, sanitising and pest control equipment and materials, and; - high risk customer groups who are more susceptible to harm from food contamination.

SITXGLCO01 Research and comply with regulatory requirements

Locations: Footscray Park, Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to comply with laws and licensing requirements for specific business operations. It requires the ability to access and interpret regulatory information, determine scope of compliance, and develop, implement and continuously review and update policies and practices for business compliance. The unit applies to regulatory requirements for day-to-day business operations in all tourism, travel, hospitality and event sectors and to special requirements for one-off events. It applies to senior personnel who operate independently or with limited guidance from others and who are responsible for making a range of operational business and regulatory compliance decisions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access and interpret regulatory information and determine the scope of compliance for the operations of a specific tourism, travel, hospitality or events business in relation to at least six different areas of compliance; - develop policies and procedures for legal compliance with each of the above areas of compliance, and; - integrate into compliance planning activities and documentation: sources of detailed information and advice on regulatory compliance; objectives and primary components of a broad range of local, state, territory and commonwealth government laws relevant to the specific to the business operations; use of policies and procedures in managing regulatory compliance. Students will also be expected to demonstrate the following knowledge: - legal responsibilities and liabilities of managers and directors in varying business structures; - sources of information and advice on regulatory compliance; - functions and general operating procedures of regulatory authorities of particular relevance to the tourism, hospitality and events industries; - methods of receiving updated information on laws and licensing requirements; - use of policies and procedures in managing regulatory compliance; - formats for and inclusions in policies and procedures; - objectives and primary components of local, state, territory and commonwealth government laws to which all types of businesses must comply; - objectives and primary components of laws, codes, standards and licensing requirements that impact on specific operators in the tourism, hospitality and event industries; chosen to be applicable to the individual's context; - relevant law, code, standard and licensing requirements, and; - opportunities to maintain knowledge of regulatory requirements.

SITXHRM001 Coach others in job skills

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge

required to provide on-the-job coaching to colleagues. It requires the ability to explain and demonstrate specific skills, knowledge and procedures and monitor the progress of colleagues until they are able to operate independently of the coach. The unit applies to experienced operational personnel and to supervisors and managers who informally train other people in new workplace skills and procedures. It applies to all tourism, hospitality and event sectors.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - provide effective on-the job coaching to four different colleagues;- address identified performance problems or difficulties experienced by colleagues in each of the above coaching sessions and rectify or refer as appropriate;- evaluate colleagues' performance and provide constructive feedback as part of above coaching sessions, and;- demonstrate the following during each of the above coaching activities: clear communication and demonstration of the organisational tasks required of the colleague; completion of training within commercial time constraints, and; application of the key principles of training. Students will also be expected to demonstrate the following knowledge: - communication techniques suitable to a workplace training context;- objectives and scope of the coaching;- factors which impact need for coaching;- key principles of training;- legislative work health and safety and hygiene requirements, and;- possible causes of performance problems or difficulties.

SITXHRM002 Roster staff

Locations:Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to develop, administer and communicate staff rosters. It requires the ability to plan rosters according to industrial provisions, operational efficiency requirements, and within wage budgets. This unit applies to individuals responsible for developing staff rosters for situations involving potentially large numbers of staff working across a range of different service periods or shifts. It does not apply to small office environments. It applies to senior personnel who operate independently or with limited guidance from others, including dedicated specialist staff or operational supervisors and managers. The unit applies to all tourism, travel, hospitality and event sectors.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare staff rosters that

meet diverse operational requirements across three different roster periods; - demonstrate the following when preparing each of the above staff rosters: - sufficient staff to ensure the delivery of required services within wage budget constraints; - appropriate skills mix of the team; - compliance with industrial provisions and organisational policy, and; - completion of rosters within commercial and staff time constraints. Students will also be expected to demonstrate the following knowledge: - sources of information on awards and other industrial provisions; - industrial agreements and other considerations which impact the preparation of staffing rosters: - key elements of applicable awards and enterprise agreements: - organisational policies which impact the preparation of staffing rosters, and; - industry sector and specific organisation.

SITXHRM003 Lead and manage people

Locations:Footscray Park, Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to lead and manage people including in teams and support and encourage their commitment to the organisation. It requires the ability to lead by example and manage performance through effective leadership.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - monitor individual or team performance demonstrating at least four of the following leadership and management roles: decision making; delegation of tasks; information provision; provision of feedback; motivation through recognition and rewards; planning and organising, and;- seek and respond to feedback from team members during the above service periods, in line with organisational goals and policies in the following areas: allocation or performance of work; effectiveness of communication within team, between other teams or within organisation; efficiency or deficiency in workplace practices. Students will also be expected to demonstrate the following knowledge: - roles of and functions performed by supervisors and managers: decision making; delegating tasks; monitoring staff, and; planning and organising;- providing information: organisation performance; changes in organisational policies; marketing information and targets; overall organisational objectives; plans for new equipment; rationale for management decisions; technology updates; training developments;- expectations, roles and responsibilities of team members: adhering to policies and procedures; cooperative and open communication; nature and scope of work; relationships with others in the workplace and interdependent areas of activity; reporting requirements;- considerations in the individual development of staff: change in job responsibilities; external training and professional development; formal promotion; internal training and professional development; opportunity for greater autonomy or responsibility;- features of different leadership styles;- features of open and supportive communication;- characteristics of effective leadership;- principles of teamwork and: characteristics of effective teams; roles and attributes of team members; organisation of teams; potential team problems; benefits of effective

teamwork; - role and theories of motivation as they apply to the management of individuals and teams; - the role of group dynamics in successful team management; - forms of recognition and reward applicable to leading staff: acknowledging individual good performance to the whole team; incentive initiatives; informal acknowledgement; presenting awards; written reports to management, and; - types of organisational plans and planning processes.

SITXHRM004 Recruit, select and induct staff

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to coordinate the recruitment, selection and induction of new staff members within the framework of existing human resource policies and procedures. It requires the ability to identify recruitment needs, develop selection criteria, process and evaluate applications, select people according to their attitude, aptitude and fit to the position and coordinate induction programs. The unit applies to senior personnel who operate independently or with limited guidance from others, including dedicated specialist staff or operational or senior managers. It applies to all tourism, travel, hospitality and event sectors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - administer the recruitment, selection and induction process for each of the following recruitment needs at least once: casual, contract or temporary; full time or part-time permanent; volunteer; - develop selection criteria for each of the above recruitment needs; - conduct fair and equitable selection interviews for each of the above recruitment situations, and; - evaluate at least one applicant in each of the above selection processes to select individuals that meet a specific organisational need. Students will also be expected to demonstrate the following knowledge: - specific industry sector knowledge; - specific organisation knowledge including: roles and responsibilities of different personnel in the recruitment and induction process; required make-up of interview panels; procedures for employment checks; full content of recruitment and human resource policies; - key elements of equal employment opportunity (EEO) employment laws and how they must be implemented in recruitment and selection processes; - records required of recruitment and selection process; - special arrangements required in the organisation of selection procedures; - information for inclusion in induction programs; - key organisational policies and procedures; - industrial arrangements for the organisation; - policies and procedures specific to the job role, and; - work health and safety information.

SITXHRM006 Monitor staff performance

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to monitor staff performance within the framework of established performance management systems. It requires the ability to monitor the day-to-day effectiveness of staff and conduct structured performance appraisals and formal counselling sessions. The unit applies to senior personnel who operate independently or with limited guidance from others, including dedicated specialist staff or

operational supervisors and managers. It applies to all tourism, travel, hospitality and event sectors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - monitor the effectiveness of staff in relation to at least six of the following standards of performance: adherence to procedures; cost minimisation; customer service standards; level of accuracy in work; personal presentation; productivity; punctuality; response times; team interaction, and waste minimisation; - provide supportive feedback and guidance for improving standards of performance to above staff; - conduct structured performance appraisals and formal counselling and training sessions for staff members, in line with established organisational procedures, and; - recognise outstanding performance according to organisational policies. Students will also be expected to demonstrate the following knowledge: - role and importance of monitoring staff performance and providing feedback and coaching; - key elements of performance standards and performance management systems; - forms of guidance and support to enhance staff performance; - potential solutions to staff performance issues; - performance appraisal practices; - specific organisation knowledge including: procedures for performance appraisal interviews and procedures for formal performance management and counselling sessions, and; - grievance procedures.

SITXINV001 Receive and store stock

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to check and take delivery of stock and appropriately store, rotate and maintain the quality of stock items. It does not include specialist stock control processes for perishable foodstuffs which are covered by SITXINV002 Maintain the quality of perishable items. The unit is relevant to organisations where stock control is an integral and essential part of business operations, and where there are control issues to be considered. The unit is not appropriate for situations where stock management is very simple, such as controlling stationery supplies in a small office. It applies to operational personnel who work with very little independence and under close supervision. They apply little discretion and judgement and follow predefined organisational procedures to report any stock-related discrepancies to a higher level staff member for action. The unit applies to all tourism, travel, hospitality and event sectors and to any type of stock.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - receive, store and maintain six different stock deliveries; - correctly interpret stock orders and delivery documentation for items received in the above deliveries; - complete stock

documentation relating to each of the above stock deliveries, and; - integrate into the above work activities: security procedures; manual handling techniques; commercial time constraints. Students will also be expected to demonstrate the following knowledge: - principles of stock control; - stock control systems; - stock control procedures and template documents and reports; - storage requirements for different kinds of stock; - use of stock control equipment and software where appropriate; - specific industry sector, types of: computerised stock control systems; their functions and features; electronic equipment used for stock control; their functions and features; stock recording documentation; stock security systems; storage and their suitability for different kinds of stock; - relevant stock; - product life and storage requirements for specific goods; - procedures for security, recording incoming stock, reporting on discrepancies, deficiencies, and excess stock; - order and delivery documentation; - safe manual handling techniques for the receipt, transportation and storage of stock; - safe and correct use of equipment, and; - correct and environmentally sound disposal methods for all types of waste and in particular for hazardous substances.

SITXINV002 Maintain the quality of perishable items

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: SITXFSA001 - Use hygienic practices for food safety

Description: This unit describes the performance outcomes, skills and knowledge required to maintain the quality of perishable supplies for food and beverage, commercial cookery or catering operations. It requires the ability to store perishable supplies in optimum conditions to minimise wastage and avoid food contamination. It does not include general stock control processes which are covered by SITXINV001 Receive and store stock. The unit is particularly important within a food safety regime and applies to hospitality and catering organisations, including hotels, restaurants, clubs, educational institutions, health establishments, defence forces, cafeterias, residential caterers, in flight and other transport caterers, event and function caterers. Personnel at many levels use this skill in the workplace during the course of their daily activities, including cooks, chefs, caterers, and kitchen attendants.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conduct temperature and quality checks on each of the following delivered goods to establish whether they are within allowable tolerances: cold or chilled foods; frozen foods; raw foods; reheated foods or ingredients; - maintain quality of at least six of the following range of perishable supplies for food and beverage, commercial cookery or catering operations: beverages; dairy products; frozen goods; fruit; meat; poultry; seafood; vegetables, and; - identify spoilt stock and dispose of according to organisational procedures. Students will also be expected to demonstrate the following knowledge: - contents of stock date codes and rotation labels; - meaning of: wastage to a commercial catering organisation and reasons to avoid it; contaminant, contamination and potentially hazardous foods as defined by the Australia New Zealand Food; - reasons for protecting food from contamination; - different types of contamination; - methods of rejecting contaminated food; - potential deficiencies of delivered perishable food items; - correct environmental storage conditions; - food safety procedures and standards for storage of perishable supplies; - indicators of

spoilage and contamination of perishable supplies, and; - indicators of quality of perishable items.

SITXINV003 Purchase goods

Locations: Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to determine the purchasing requirements for goods, source suppliers, discuss requirements, and assess the quality of goods before purchase. It does not cover the specialist skills to systematically purchase and control the supply of goods for an organisation. These skills are covered by: - SITXINV004 Control stock - SITXINV005 Establish stock purchasing and control systems. The unit applies to all tourism, travel, hospitality and event industry sectors where the purchase of any type of good takes place, including food and beverage supplies. Purchasing goods may involve placing an order for future delivery or purchasing goods face-to-face and taking immediate delivery. The unit applies to operational personnel who operate with some level of independence and under limited supervision. This includes tour coordinators, account managers for professional conference organisers, event coordinators and banquet coordinators. In a kitchen environment it can apply to chefs of all levels, including commis chefs, but in larger organisations purchasing often remains the responsibility of sous chefs and executive chefs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determine and confirm purchasing requirements for at least six of the goods listed in the knowledge evidence; - make purchase arrangements for the goods to meet different: end product requirements; customer specifications; - assess supplier capacity to meet price, quality and delivery expectations for each of the above goods, and; - complete above purchasing activities following organisational requirements for stock ordering, including procedures and documentation. Students will also be expected to demonstrate the following knowledge: - specific industry sector and organisation: - sources of information to determine purchase requirements; - goods that need to be purchased by a business; - considerations in determining quality and suitability of stock on hand; - organisational procedures for the supply of goods; - assessment of supplier capacity to meet price, quality and delivery expectations, and; - determinants of the quality of goods.

SITXMGT001 Monitor work operations

Locations: Footscray Park, Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to oversee and monitor the quality of day-to-day work. It requires the ability to communicate effectively with team members, plan and organise operational functions, and solve problems.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and organise workflow for a team operation or activity that takes into account at least six of the following contingencies: delays and time difficulties; difficult customer service situations; equipment breakdown or technical failure; financial resources; staffing levels and skill profiles; rostering requirements; staff performance; procedural requirements; product development and marketing; - monitor and respond to team-based operational and service issues during the above operation or activity, and; - complete each of the following organisational records for the above operation or activity: performance reports; staff records. Students will also be expected to demonstrate the following knowledge: - work organisation and planning methods appropriate to the industry sector; - leadership and management roles and responsibilities in the relevant industry sector; - operational functions in the relevant industry sector; - procedures and systems to support work operations: administration; health and safety; human resources; service standards; technology, and; work practices; - concepts of quality assurance and how it is managed and implemented in the workplace; - sustainability considerations for frontline operational management: relationship between operational efficiency and financial sustainability; ways of minimising waste in the relevant work context; social responsibilities of the operation; - time management principles and their application to leaders and managers for planning own work and the work of others; - principles of effective delegation and delegation techniques in a frontline management context: clear communication of what is required; gaining commitment; no undue interference; regular reporting; selecting the right person; - problem-solving and decision making processes and techniques and their application to typical workplace issues; - industrial or legislative issues that affect short-term work organisation appropriate to the industry sector: - relationship of relevant industrial awards to hours and conditions of work, and; - ensuring systems and procedures meet work health and safety requirements.

SITXMGTO02 Establish and conduct business relationships

Locations: Footscray Park, Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to establish and manage positive business relationships. It requires the ability to use high-level communication and relationship building skills to conduct formal negotiations and make commercially significant business-to-business agreements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - establish and maintain business relationships with at least two of the following: cooperative partner with organisation; contractor; customer; networks, and; supplier; - conduct formal negotiations, or make and manage agreements and contracts in relation to the two

relationships established above, relevant to the specific business context, and; - demonstrate the use of high-level communication and relationship building skills when conducting formal negotiations and making commercially significant business-to-business agreements in the above business relationships. Students will also be expected to demonstrate the following knowledge: - commercial context for business relationships in the relevant industry sector and related: industry structure and interrelationships; sources of supply; distribution and marketing networks, and; professional networks; - opportunities to maintain regular contact with customers and suppliers: association membership; cooperative promotions; industry functions; informal social occasions; program of regular telephone contact, and; social media; - principles of negotiation, stages in the negotiating process, and different negotiation techniques that can be applied; - nature of agreements and contracts in the relevant industry sector and their key role, features and inclusions; - key components of contract law at an overview level: terms and obligations of contract; methods of contractual agreement; exclusion clauses; dispute resolution clause; termination of contracts, and; - other legal requirements that impact negotiations and agreements in the relevant industry.

SITXMGTO03 Manage projects

Locations: Footscray Park, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to develop project plans, implement project activities, monitor progress to ensure objectives are achieved, and evaluate all aspects of projects.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop and implement a plan for a project, addressing one or more of the following objectives: community or industry development; economic or social benefits; education or training; profit; research; - administer and monitor the following components of the above project: dedicated project budget and financial control system; administrative components involving individual responsibility and reporting hierarchy for at least two of the following: advisory or reference group; consultants, contractors and suppliers; organisational management; project management committee; secretariat; progress against project objectives; quality control system; risk, regulatory and sustainability issues; - lead a project team and liaise with a wide range of stakeholders during the planning and implementation phases of the above project, providing at least two of the following forms of support and assistance as appropriate: additional resources; formal training opportunities; informal coaching and feedback; moderation and joint planning sessions; regular meetings and briefings; representing team interests in wider forums, and; - demonstrate sound administrative processes when planning and implementing the above project within required timeframes. Students will also be expected to demonstrate the following knowledge: - project management processes and the project life cycle; - project management plan inclusions; - industry sector and organisation; - risk, regulatory and sustainability issues for project management, particularly those related to: financial management; human resource management, and; physical resource management, and; - potential stakeholders in a project.

SITXMPRO03 Plan and implement sales activities

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to plan and implement sales activities. It requires the ability to identify and analyse market and customer needs, proactively target current and new customers, plan the operation of sales calls, make calls and prepare sales reports. The unit applies to all industry sectors, and to those responsible for coordinating sales activities within the parameters of an established sales strategy. Individuals working independently with limited supervision undertake this role. This could include sales and marketing personnel or managers and owner-operators of small businesses.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and implement sales activities according to organisational requirements for at least two different operations, products or services, including conducting at least one sales call as part of the activities for each operation, product or service; - use effective communication skills during sales calls that are part of above sales activities, and; - prepare a report on each of the above sales activities. Students will also be expected to demonstrate the following knowledge: - principles of selling, sales communication and relationship building; - industry structures and interrelationships, industry networks and information sources; - industry and market knowledge appropriate to the sector and organisation; - structure and content of marketing plans and the role of sales in the overall marketing mix; - information inputs into sales planning process; - sales call strategies and tactics; - legal issues that impact on sales activities and sales personnel; - ethical considerations for sales personnel, and; - sustainability considerations for sales activities.

SITXMPRO04 Coordinate marketing activities

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to plan and coordinate a range of marketing and promotional activities at an operational level. The unit incorporates knowledge of marketing principles. The unit applies to all industry sectors, and to individuals who are responsible for coordinating marketing activities within the parameters of an established marketing strategy. Individuals working independently with limited supervision undertake this role. This could include marketing coordinators or managers and owner-operators of small businesses.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and coordinate at least

two different marketing activities for an operation, product or service; - use industry networks, information sources, and distribution and marketing networks when planning and coordinating the above activities; - reflect types of marketing activities used in the relevant industry sector and major industry promotional events in the above activities; - apply marketing principles to each marketing activity, and; - evaluate and report on each of the above marketing activities against the following criteria: consistency with overall marketing direction; exposure that was achieved; matching attendees to target market; cost-effectiveness of financial and human resources; completion within established timeframe. Students will also be expected to demonstrate the following knowledge: - content and structure of marketing plans; - key marketing principles; - industry structure and interrelationships, industry networks and information sources; - industry and market knowledge appropriate to the sector and organisation; - features, benefits and practical application of marketing activities commonly used in the service industries; - information inputs into the planning process; - considerations in evaluating the suitability of marketing activities; - operational details relevant to the coordination of marketing activities; - legal issues that impact on the marketing of products and services; - ethical considerations for marketing activities, and; - sustainability considerations for marketing activities. .

SITXMPRO07 Develop and implement marketing strategies

Locations: Footscray Park, Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to analyse internal and external business environments, and develop and evaluate marketing strategies and plans for products and services. The unit applies to all industry sectors, and to individuals in senior marketing or management roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop a marketing strategy and plan for a product or service, including: identifying current and relevant marketing issues; detailed, realistic implementation and monitoring program specific to the product or service; details of marketing techniques and distribution networks specific to the product or service; opportunities presented by new technologies; - research and critically analyse internal and external business environments relevant to the above product or service, and; - evaluate and report on the above marketing strategy and plan against the following criteria: consistency with overall marketing direction; exposure achieved; penetration of target market; cost-effectiveness of financial and human resources; completion of strategy within established timeframe; recommendations for strategic responses based on evaluation. Students will also be expected to demonstrate the following knowledge: - data collection tools and research methodologies of particular relevance to marketing; - marketing planning techniques and formats and key features of a marketing plan; - internal and external issues that impact on market planning in a given industry context; - internal capabilities and resource considerations; - comparative market information relevant to marketing strategies; - industry marketing and distribution networks in the relevant context; - new and innovative marketing strategies in the relevant industry context, and in particular current and emerging marketing technologies and the opportunities they present, and; - sustainability considerations, opportunities and constraints for marketing in the relevant context, and those related to: cultural and social

sustainability; economic sustainability of marketing initiatives; resource conservation and waste minimisation.

SITXMPR501 Obtain and manage sponsorship

Locations: Footscray Park, Industry.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to obtain and manage sponsorship for a business activity, product, service or event. It requires the ability to determine sponsorship requirements, source and negotiate with potential sponsors and manage sponsorship arrangements.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to liaise and negotiate with sponsors and manage their participation; - critical thinking skills to evaluate a potential sponsor's best fit with the business activities or projects; - initiative and enterprise skills to identify and action opportunities to obtain sponsorship; - literacy skills to: - read and interpret details of the business activities or projects to be sponsored and complex sponsorship contracts or agreements; - research potential sponsors that are aligned with the business activities or projects; - write sponsorship materials and agreements expressing complex business ideas and proposals; - numeracy skills to evaluate budgets and interrogate or use a range of financial data to inform sponsorship activities; - planning and organising skills to organise sponsorship activities according to agreements; - problem-solving skills to monitor activities, identify sponsorship servicing deficiencies and make required adjustments; - self-management skills to take responsibility for sourcing and managing sponsorship arrangements; - teamwork skills to brief colleagues on details of sponsorship arrangements; - technology skills to design effective sponsorship proposals. Students will also be expected to demonstrate the following knowledge: - for the particular industry sector and business type: - a range of business activities or events which would appeal to sponsors; - potential sponsorship opportunities and sources of finance; - protocols for sponsor contact; - packages that can be offered to sponsors; - a range of formats for and inclusions of sponsorship proposals; - features of sponsorship contracts and agreements: - legal requirements to supply services as contracted and ramifications of failure to comply; - sponsor reporting expectations and requirements.

SITXWHS001 Participate in safe work practices

Locations: Footscray Park, Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to incorporate safe work practices into own workplace activities. It requires the ability to follow predetermined health, safety and security procedures and to participate in organisational work health and safety (WHS) management practices. The unit applies to all tourism, travel, hospitality and event sectors and to any small, medium or large organisation. All personnel at all levels use this skill in the workplace during the course of their daily activities. The unit incorporates the requirement for all employees under state and territory WHS legislation, to participate in the management of their own health and safety, that of their colleagues and anyone else in the workplace. They must cooperate with their

employer and follow practices to ensure safety at work.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - demonstrate the use of predetermined health, safety and security procedures and safe work practices in work functions on at least three occasions; - demonstrate correct procedures to respond in line with organisational security and emergency procedures during one emergency or potential emergency situation, seeking assistance where appropriate, and; - participate in one of the following work health and safety (WHS) consultation activities: discussion with, or formal report to, WHS representatives regarding a WHS matter; discussion with supervisor or manager regarding a WHS matter, and; staff meeting that involves WHS discussion. Students will also be expected to demonstrate the following knowledge: - basic aspects of the relevant state or territory occupational health and safety (OHS) or WHS legislation, and; - specific industry sector and organisation: workplace hazards and associated health, safety and security risks; contents of health, safety and security procedures; format and use of template reports for hazards and incident and accident reporting; safe work practices for individual job roles, and; procedures for WHS management practices.

SITXWHS002 Identify hazards, assess and control safety risks

Locations: Footscray Park, Industry, Footscray Nicholson, Online, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to identify hazards, assess the associated workplace safety risks, take measures to eliminate or minimise those risks, and document all processes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use organisational work health and safety (WHS) plan to identify each of the following types of actual or foreseeable workplace hazards: physical environment; plant; work practice, and; security issue; - assess the safety risk associated with each of the above hazards, using appropriate risk assessment tools and template documents, and; - take measures to eliminate or control the risks identified for each of the above hazards in line with organisational procedures. Students will also be expected to demonstrate the following knowledge: - basic aspects of the relevant state or territory occupational health and safety (OHS) or WHS legislation, specifically requirements for: when, where and how hazards must be identified; when, where and how risk assessments must be conducted; consultation in the hazard identification and risk assessment process; WHS committees or WHS representatives as mechanisms for consultation, and; record keeping; - specific industry sector and organisation; - appropriate methods to identify hazards, and; - people involved in the assessment of risk.

SITXWHS003 Implement and monitor work health and safety practices

Locations: Industry, Footscray Nicholson, Online, Victoria University is authorised by Trades Recognition Australia (TRA) to conduct skills assessment services for persons seeking temporary or permanent migration. For more information on these programs and the countries in which VU conducts these assessments please refer to: <http://www.vu.edu.au//skilled-migration..>

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to implement predetermined work health and safety practices designed, at management level, to ensure a safe workplace. It requires the ability to monitor safe work practices and coordinate consultative arrangements, risk assessments, work health and safety training, and the maintenance of records.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - implement and monitor adherence to workplace health and safety procedures in three of the following real or simulated situations: evacuation of staff and customers; security management of cash, documents, equipment, keys or people; handling chemicals and hazardous substances; hazard identification and reporting; incident and accident reporting; risk assessment and reporting; - coordinate consultative processes for managing the above workplace health, safety and security issues; - coordinate risk assessments, WHS training, and the maintenance of records relating to above situations; - monitor the effectiveness of the WHS system and identify: required adjustments; staff training needs, and; - demonstrate management practices that must be implemented for compliance with state or territory occupational health and safety (OHS) or WHS legislation during above situations. Students will also be expected to demonstrate the following knowledge: - primary components of relevant state or territory OHS or WHS legislation: actions that must be taken for legal compliance; employer responsibilities to provide a safe workplace; requirement to consult, and acceptable consultation mechanisms; requirements for the use of WHS representatives and committees, and their roles and responsibilities; requirements for hazard identification, risk assessment, risk control and acceptable mechanisms; requirements for record keeping and acceptable record keeping mechanisms; requirement to provide information and training; employee responsibilities to ensure safety of self, other workers and other people in the workplace; employee responsibility to participate in WHS practices; ramifications of failure to observe OHS or WHS legislation and organisational policies and procedures; - specific organisation: full content of WHS policies and procedures; and consultation, hazard identification, risk assessment and reporting documents, and; methods used for WHS consultation, hazard identification and risk assessment; - options for the provision of training: coaching or mentoring in safe work practices; formal training programs in safe work practices; - hazard identification, risk assessment and control; - WHS policy and procedure induction; - WHS representative or committee; - provision of information, fact sheets and signage to ensure safe work practices; - WHS information: - consultative arrangements for WHS; - employee roles and responsibilities in WHS management practices; - legal obligations and ramifications of failure to comply; - location of first aid kit and emergency evacuation plan, and; - WHS training information and updates.

SITXWHS004 Establish and maintain a work health and safety system

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to develop, implement and sustain effective, professional and contemporary work health and safety (WHS) management practices. It requires the ability to establish and review systems, policies and procedures designed to ensure a safe workplace. The unit applies to all tourism, travel, hospitality and event sectors and to any small, medium or large organisation. It applies to those senior managers who operate with significant autonomy and are responsible for making a range of strategic management decisions. This unit incorporates the requirement, under state and territory WHS legislation, for businesses to take a systematic approach to managing the safety of their workers and others in the workplace.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - establish and implement a complete work health and safety (WHS) system that covers the following components: adequate facilities for the welfare of employees; appropriate management of incidents or accidents and notification to WHS government regulators; availability of information, instructions, training and supervision that ensure employees' health and safety; - evaluate and identify improvements to WHS practices within the above system; - develop comprehensive WHS system documents to support above system, and; - demonstrate management practices that must be established and maintained for compliance of above system with state or territory occupational health and safety (OHS) or WHS legislation. Students will also be expected to demonstrate the following knowledge: - structure, characteristics and needs of the organisation that the WHS system must address; - objectives, components and comprehensive details of relevant state or territory OHS or WHS legislation; - objectives, components and comprehensive details of WHS codes of practice and standards developed by industry or regulatory bodies; - ramifications of failure to observe OHS or WHS laws and codes of practice; - methods of receiving updated information on OHS or WHS laws and codes of practice; - components of WHS management systems; - considerations in the formulation of WHS policies and procedures; - consultative processes; - time requirements for hazard identification; - approaches to assessing the effectiveness of WHS management systems; - methods used by the specific industry sector and organisation; - sources of assessment criteria for assessing risks; - WHS information, and; - WHS record requirements.

S0011 Sociology 1

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit uses sociological methodology to explore the social category of youth and the social institution of family. Sociologists draw on methods of science to understand how and why people behave the way they do when they interact in a group. Sociology attempts to understand human society from a holistic point of view, including consideration of society's composition, how it is reproduced over time and the differences between societies. When sociologists investigate a topic, they attempt to do so with a reflective, critical mindset. Sociologists are guided

by theories, or frameworks, to explain and analyse how social action, social processes and social structures work. Area of Study 1 explores the way youth is constructed as a social category, in the light of differing experiences of young people. There is a range of potential negative impacts of categorisation, including stereotyping, prejudice and discrimination. In Area of Study 2, students investigate the social institution of the family. In a multicultural society like Australia, different communities have different kinds of families and experiences of family life. Factors such as changing demographics, feminism, individualism, technology, changes in the labour market and government policies have been identified as influencing the traditional view of the family. There is a range of theoretical approaches used by sociologists to explain the purpose and experiences of family life, including functionalist and feminist approaches. Comparative methodologies also enable a comparison of family types and family experiences across time and space. This unit is delivered in Year 11.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to describe the nature of sociological inquiry and discuss, in an informed way, youth as a social category. Outcome 2 On completion of this unit the student should be able to analyse the institution of family. Assessment will follow the requirements set out in the VCE Sociology Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of two outcomes. As a set these outcomes encompass all areas of study in the unit.

S0022 Sociology 2

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:In this unit students explore the concepts of deviance and crime. The study of these concepts from a sociological perspective involves ascertaining the types and degree of rule breaking behaviour, examining traditional views of criminality and deviance and analysing why people commit crimes or engage in deviant behaviour. It also involves consideration of the justice system, how the understanding of crime and deviance has changed over time, and the relationship between crime and other aspects of a society, such as gender and ethnicity. In Area of Study 1 students explore the concept of deviance. There are different explanations of what constitutes deviant behaviour. Generally, it is defined as involving actions that are considered to be outside the normal range of behaviour according to the majority of members of a society. Students investigate the functionalist, interactionist, social control and positive theories of deviance. Students also explore the phenomenon known as moral panic. This refers to the belief that a subculture or group poses a threat to the social values and culture of broader society. The event is often presented in a stereotypical fashion by the mass media. In Area of Study 2, students investigate crime and punishment. They explore patterns of crime and

consider the significance of a range of factors, such as class, gender, age, race and ethnicity. Students explore different methods of punishment and the extent to which each of these methods serves its aims. This unit is delivered in Year 11.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to analyse a range of sociological theories explaining deviant behaviour and the impact of moral panic on those considered deviant. Outcome 2 On completion of this unit the student should be able to discuss crime in Australia and evaluate the effectiveness of methods of punishment in the judicial system for shaping human behaviour. Assessment will follow the requirements set out in the VCE Sociology Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of two outcomes. As a set these outcomes encompass all areas of study in the unit.

S0033 Sociology 3

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit explores expressions of culture and ethnicity within Australian society in two different contexts - Australian Indigenous culture, and ethnicity in relation to migrant groups. Area of Study 1 involves a critical exploration of the historical suppression of, and increasing public awareness of, Australian Indigenous culture. This requires some knowledge of the past and its influence on subsequent generations, as well as knowledge of contemporary factors that may be supporting and/or limiting increasing awareness of Australian Indigenous culture. Indigenous and non-indigenous perspectives and responses are integral to the area of study. Ethnicity is investigated in Area of Study 2. Ethnicity is a key sociological category that plays an important role in social life. Individuals often define themselves, or others, as members of at least one ethnic group based on a common heritage that gives them a unique social identity. Ethnicity is not fixed and unchanging; instead, ethnic identities constantly evolve and are shaped through a variety of political, cultural and social forces. The concept is often used in contrast to the concept of race, which generally refers to groups based on visible physical characteristics such as skin colour and facial features. Most sociologists prefer to focus on the concept of ethnicity rather than race. This unit is delivered in Year 12.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be

able to analyse and evaluate changes in public awareness and views of Australian Indigenous culture. Outcome 2 On completion of this unit the student should be able to identify and analyse experiences of ethnicity within Australian society. Assessment will follow the requirements set out in the VCE Sociology Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 3 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 25 per cent to the study score. SAC for Unit 4 will contribute 25 per cent to the study score (S0034 Sociology 4). EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 50 per cent to the study score.

S0034 Sociology 4

Locations: Footscray Nicholson.

Prerequisites: S0033 - Sociology 3

Description: In this unit students explore the ways sociologists have thought about the idea of community and how the various types of community are experienced. They examine the relationship between social movements and social change. In Area of Study 1 students examine the changing definitions and experiences of community. This includes examination of the challenges and opportunities posed by political, social, economic and technological change. Students examine the concept of community with particular reference to the theory of Ferdinand Tonnies. In Area of Study 2 students investigate the role of social movements. A social movement involves a group engaged in an organised effort to achieve social change. Students develop an understanding of the purpose, evolution, power and outcomes of social movements. This unit is delivered in Year 12.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to analyse the experience of community generally and analyse and evaluate a specific community. Outcome 2 On completion of this unit the student should be able to analyse the nature and purpose of social movements and evaluate their influence on social change. Assessment will follow the requirements set out in the VCE Sociology Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 4 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 25 per cent to the study score (S0033 Sociology 3). SAC for Unit 4 will contribute 25 per cent to the study score. EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 50 per cent to the study score.

TAEASS401 Plan assessment activities and processes

Locations: Industry, Werribee, City King St.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to plan the assessment process, including recognition of prior learning (RPL), in a competency-based assessment system. It applies to individuals with assessment planning responsibilities. In planning activities and processes, individuals are required to identify the components of assessment tools, analyse and interpret assessment tools, and develop assessment instruments (also known as assessment tasks) and assessment plans.

Required Reading: The qualified trainer and assessor will provide Blackwater Resources teaching and learning materials as required.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning and organising the assessment process on a minimum of five separate occasions, and; - planning and organising two Recognition of Prior Learning (RPL) assessments (which may be two of the five assessment processes above). The evidence requirements for each occasion must include: - a documented assessment plan; - a different endorsed or accredited unit of competency (or clusters of units of competency) for each of the five occasions; - contextualisation of the unit(s) of competency and the selected assessment tools, where required; - incorporation of reasonable adjustment strategies; - development of suitable assessment instruments for each of the five occasions, and; - following organisational arrangements. Students will also be expected to demonstrate the following knowledge: - obligations of an assessor under applicable legislation and/or standards; - the major features of a unit of competency, and how they are to be addressed in assessment activities and processes; - interpreting competency standards as the minimum standard for assessment; - guidelines for contextualising units of competency; - different purposes of assessment and different assessment contexts, including RPL; - the purpose and features of evidence, and different types of evidence, used in competency-based assessments, including RPL; - the principles of assessment, and how they guide the assessment process; - the rules of evidence and how they guide the assessment process; - different assessment methods, including their suitability for collecting various types of evidence, and; - the components of assessment tools.

TAEASS402 Assess competence

Locations: Industry, Werribee, City King St.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to implement an assessment plan, and gather quality evidence to assess the competence of a candidate using compliant assessment tools. It applies to teachers, trainers and assessors in enterprises and registered training organisations (RTOs) and those providing assessment advisory services. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide Blackwater Resources teaching and learning materials as required.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to

provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assessment of at least five candidates within the vocational education and training (VET) context against at least one endorsed or accredited unit of competency according to the organisation's assessment processes and practices; - using recognition of prior learning (RPL) processes in the assessment of at least one candidate (which may be one of the five candidates above), and; - making reasonable adjustments in the assessment of at least one candidate. The assessments must be undertaken under the supervision of a qualified assessor and cover an entire unit of competency for each candidate, including: - the application of different assessment methods and instruments involving a range of activities and events; - using two-way communication and feedback with the candidate; - exercising judgement in making the assessment decision; - recording and reporting assessment outcomes in accordance with the assessment system and organisational, legal and ethical requirements, and; - reviewing the assessment process. Students will also be expected to demonstrate the following knowledge: - competency-based assessment, including: VET as a competency-based system; how competency based assessment differs from other types of assessment; competency standards as the basis of qualifications; structure and application of competency standards; the principles of assessment and how they are applied; the distinction between assessment tools and assessment instruments; the rules of evidence and how they are applied; the range of assessment purposes and assessment contexts, including RPL; different assessment methods, including suitability for gathering various types of evidence, suitability for the content of units, and resource requirements and associated costs; reasonable adjustments and when they are applicable; types and forms of evidence, including assessment instruments that are relevant to gathering different types of evidence used in competency-based assessment, including RPL, and; the training and assessment strategies, including policies and procedures established by the industry, organisation or training authority; - RPL policies and procedures established by the organisation; - cultural sensitivity and equity considerations in assessment activities; - current legislative requirements relevant to the assessor and the assessment process; - workplace health and safety (WHS) responsibilities associated with assessing competence, including: requirements for reporting hazards and incidents; emergency procedures; procedures for the use of relevant personal protective equipment; the safe use and maintenance of relevant equipment, and; sources of WHS information.

TAEASS403 Participate in assessment validation

Locations: Industry, Werribee, City King St.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to participate in an assessment validation process. It applies to assessors and workplace supervisors with assessment validation responsibilities participating in, but not necessarily leading, the process.

Required Reading: The qualified trainer and assessor will provide Blackwater Resources teaching and learning materials as required.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - actively participating in a minimum of three validation sessions that address the critical aspects of validation; - clearly identifying the purpose for each validation, and the legal and ethical responsibilities of assessors; - collating and presenting documentation for each validation in a logical manner; - communicating and liaising

with relevant people; - providing feedback and interpreting documentation in validation sessions, and; - recording their contribution to validation findings. Students will also be expected to demonstrate the following knowledge: - how to determine the evidence needed to demonstrate competence in a competency-based environment; - the reasons for carrying out validation and different approaches to validation that may be appropriate before, during and after an assessment; - the components of assessment tools; - critical aspects of validation, including validation of assessment processes, methods and products; - how principles of assessment are addressed in validation; - how rules of evidence are addressed in validation; - work health and safety legislation, codes of practice, standards and guidelines that impact on assessment, and; - obligations of an assessor under applicable legislation and/or standards, particularly in relation to validation activities.

TAEASS502 Design and develop assessment tools

Locations: Industry, Footscray Nicholson, St Albans, Werribee, City King St, Sunshine, Geelong Learning Link.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to design and to develop assessment tools used to guide the collection of quality evidence, including their application in formative, summative and recognition of prior learning (RPL) assessment. It applies to experienced practitioners responsible for the development and/or delivery of training and assessment products and services.

Required Reading: The qualified trainer and assessor will provide Blackwater Resources teaching and learning materials as required.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - developing at least three assessment tools that support different assessment methods, and address at least one unit of competency each. Each assessment tool must: - include the instruments for collecting evidence, reflecting the principles of assessment and the rules of evidence, and related instructions to the assessor/s and candidates; - show how the contextual needs of different environments are addressed, and; - reporting on the trial and review of each assessment tool, including proposed changes. Students will also be expected to demonstrate the following knowledge: - the principles of assessment and how they are applied when developing assessment tools; - the rules of evidence and how they have been incorporated in the tools developed; - different assessment contexts and their relationship to developing assessment tools; - the dimensions of competency and how they are incorporated in the development of assessment tools; - the contextualisation of units of competency and contextualisation guidelines; - the components of training packages relevant to the development of assessment tools; - different assessment methods, their purposes and uses; - evaluation methods appropriate to the trial and review of assessment tools; - the principles of reasonable adjustment; - workplace health and safety (WHS) responsibilities associated with assessing competence, including: requirements for reporting hazards and incidents; emergency procedures; procedures for the use of relevant personal protective equipment, and; sources of WHS information.

TAEDEL301 Provide work skill instruction

Locations: Industry, Werribee, City King St.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to conduct individual and group instruction, demonstrate work skills and assess the success of training and

one's own training performance, using existing learning resources in a safe and comfortable learning environment. It emphasises the training as being driven by the work process and context, and applies to a person working under supervision as a work skill instructor in a wide range of settings not restricted to training organisations,

Required Reading:The qualified trainer and assessor will provide Blackwater Resources teaching and learning materials as required.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - carrying out a minimum of three training sessions, involving demonstrating and instructing particular work skills for at least two different individuals or small groups, with each session addressing: - different learning objectives, and; - a range of delivery techniques and effective communication skills appropriate to the audience. Students will also be expected to demonstrate the following knowledge: - learner characteristics and needs; - the content and requirements of the relevant learning program, and/or the delivery plan; - the sources and availability of relevant learning resources and learning materials; - the content of relevant learning resources and learning materials; - training techniques that enhance learning, and when to use them; - introductory knowledge of learning principles and learning styles; - key workplace health and safety (WHS) issues in the learning environment, including: roles and responsibilities of key personnel; responsibilities of learners; relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency procedures, and; risk controls for the specific learning environment.

TAEDEL401 Plan, organise and deliver group-based learning

Locations:Industry, Werribee, City King St, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to plan, organise and deliver training for individuals within a group. It applies to a person working as an entry-level trainer, teacher or facilitator structuring a learning program developed by others in, or with, a training and assessment organisation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - facilitating group-based learning by preparing and delivering at least three training sessions, including: at least two consecutive sessions of at least 40 minutes duration, that follow one of the learning program designs, to a learner group of at least eight individuals; at least one session delivered to a learner group of at least eight individuals, with evidence of how the characteristics and needs of this group were addressed; - identifying and responding to individual needs, and; - accessing and using documented resources, and any support personnel required to guide inclusive practices. Students will also be expected to demonstrate the following knowledge: - learning theories and principles; - resources available to identify different learner styles; - the relevant industry area

and subject matter of the delivery; - the learner group profile, including characteristics and needs of individual learners in the group; - the requirements of the learning program and/or delivery plan, and the content purpose; - different delivery methods and techniques appropriate to face-to-face group delivery; - different techniques for the recognition and resolution of inappropriate behaviours; - behaviours that may indicate learner difficulties, and the methods used to address these difficulties; - the purpose of organisational record-management systems and reporting requirements; - evaluation and revision techniques used to improve session plans; - specific resources, equipment and support services available for learners with special needs; - assessment and risk control measures relating to the facilitation of group-based learning, and; - policies and procedures relevant to the learning environment.

TAEDEL402 Plan, organise and facilitate learning in the workplace

Locations:Industry, Werribee, City King St.

Prerequisites:Nil.

Description:This unit describes skills and knowledge required to plan, organise and facilitate learning for individuals in a workplace, using real work activities as the basis for learning. It applies to a person working as an entry-level trainer, teacher or facilitator or an employee, team leader or workplace supervisor responsible for guiding learning through work.

Required Reading:The qualified trainer and assessor will provide Blackwater Resources teaching and learning materials as required.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing and facilitating work-based learning; - providing a minimum of two examples of developing work-based learning pathways, that include: identifying needs for learning; analysing work practices, work environment and work activities, and; - organising and allocating work in a way that reflects learning needs, and provides effective learning opportunities through work processes; - conducting a learning facilitation relationship: - with at least two individuals; - demonstrating communication skills and flexibility, and; - demonstrating one or more of the processes, or techniques, identified. Students will also be expected to demonstrate the following knowledge: - systems, processes and practices within the organisation where work-based learning is taking place; - systems for identifying skill needs within the workplace; - different learning styles, and how to encourage learning for those who learn in different ways; - workplace health and safety (WHS) relating to the work role, including: hazards relating to the industry and specific workplace; reporting requirements for hazards and incidents; specific procedures for work tasks; safe use and maintenance of relevant equipment; emergency procedures, and; sources of WHS information.

TAEDES401 Design and develop learning programs

Locations:Industry, Werribee, City King St.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to conceptualise, design, develop and review learning programs to meet an identified need for a group of learners. The unit addresses the skills and knowledge needed to identify the parameters of a learning program, determine its design, outline the content, and review its effectiveness. It applies to trainers or facilitators who work under limited supervision to design, or develop, learning programs that are discrete, and provide a planned learning approach that relates to specific learning and training needs, or part

of the learning design for a qualification.

Required Reading:The qualified trainer and assessor will provide Blackwater Resources teaching and learning materials as required.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - designing, developing and reviewing learning programs within the vocational education and training (VET) context, and; - preparing and developing a minimum of two learning programs that contain differentiated learning program designs to reflect particular needs, contexts and timelines. Students will also be expected to demonstrate the following knowledge: - information about training package developers and course accreditation agencies responsible for specific learning program parameters; - training packages and relevant competency standards to be used as the basis of the learning program; - other performance standards and criteria to be used as the basis of the learning program, where relevant; - the distinction and relationship between a training package/accredited course, learning strategy and learning program; - the different purposes and focus of learning programs; - instructional design principles relating to different design options for learning program design and structure; - availability and types of different relevant learning resources, learning materials, and pre-developed learning activities; - methodologies relating to developing and documenting new learning activities, and related learning materials; - different delivery modes and methods; - relevant policies, legal requirements, codes of practice and national standards, including commonwealth and state or territory legislation, that may affect training and assessment in the VET sector, and; - describe relevant workplace health and safety (WHS) knowledge relating to the work role, and WHS considerations that need to be included in the learning program.

TAEDS402 Use training packages and accredited courses to meet client needs

Locations:Industry, Werribee, City King St.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to use training packages and accredited courses as tools to support industry, organisation and individual competency development needs. It applies to individuals who are working in or with training and/or assessment organisations as an entry-level trainer, teacher, facilitator or assessor using a pre-defined training product, such as a training package or accredited course.

Required Reading:The qualified trainer and assessor will provide Blackwater Resources teaching and learning materials as required.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analysing a training package and/or accredited course, to examine its component parts, identify relevant qualifications and units of competency or modules, and contextualise those to meet the specific needs of one client, and; - demonstrate a minimum of two examples of analysing training specifications, including at least one training package; the other may be another training package or an accredited course that meets a specific client need. Students will also be expected to demonstrate the following

knowledge: - Australian Qualifications Framework (AQF) guidelines, including characteristics of AQF qualification types; - functions and responsibilities of training package developers, and course accreditation agencies, and their roles as key vocational education and training (VET) organisations; - dimensions of competency; - format and structure of accredited courses; - format and structure of units of competency, and assessment requirements; - function of training packages and accredited curriculum as benchmarks in a competency-based VET training and assessment system; - methodology relating to analysing and using competency standards for a range of applications and purposes, to meet the needs of a diverse range of VET clients; - terminology used in training packages and accredited courses; - parts of training packages that can be contextualised and parts that cannot; - Standards for Training Packages, including the role and purpose of each endorsed component; - non-endorsed components of training packages, and; - sources of training package information.

TAELLN411 Address adult language, literacy and numeracy skills

Locations:Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge a vocational trainer or assessor requires to identify language, literacy and numeracy (LLN) skill requirements of training and the work environment, and to use resources and strategies that meet the needs of the learner group. The unit applies to individuals who teach, train, assess and develop resources. Competence in this unit does not indicate that a person is a qualified specialist adult language, literacy or numeracy practitioner.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by Blackwater Project Resources, and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use tools to identify the LLN skill requirements (reading, writing, speaking, listening and numeracy) of the training specification and/or assessment process relevant to vocational delivery; - use various sources to gather information on the current LLN skills of a learner group; - identify available sources of support to address at least two of the identified LLN skill needs of the learner group; - customise and use at least two learning resources to address LLN requirements; - select, use and review at least two instructional strategies that directly address the identified LLN needs of the learner group; - use advice from specialist LLN practitioners to inform practice; - select, use and review at least two assessment strategies that cater for the identified LLN needs of the learner group, and; - determine areas for improvement of own practice. Students will also be expected to demonstrate the following knowledge: - specify the critical LLN skills essential to workplace performance in an identified industry or sector; - identify cultural and social sensitivities relevant to communicating with individuals who are identified as requiring LLN support; - identify sources of resources, strategies and LLN support available in own training organisation and procedures for accessing them, and; - explain techniques for evaluating own training and assessment practice.

TJUA2013 Receive goods

Locations:Industry.

Prerequisites:Nil.

Description: This unit involves the skills and knowledge required to receive goods in accordance with regulatory and workplace requirements as part of work activities undertaken within the transport and logistics industry. It includes identifying workplace procedures and documentation requirements for receiving goods; checking and inspecting goods on arrival and completing workplace documentation; and unloading, unpacking and storing stock.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and required action to minimise, control or eliminate hazards that may exist when receiving goods; - applying relevant legislation and workplace procedures; - communicating and working effectively with others when receiving goods; - completing documentation related to receiving goods; - estimating the size, shape and special requirements of goods and loads; - identifying containers and goods coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings and where applicable, emergency information panels; - implementing contingency plans when receiving goods; - modifying activities depending on operational contingencies, risk situations and environments; - operating and adapting to differences in equipment in accordance with standard operating procedures; - reading, interpreting and following instructions, procedures, information, labels and signs relevant to receiving goods; - reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures; - selecting and using relevant load handling equipment when receiving goods; - selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - Australian and international codes and regulations relevant to receiving goods including the ADG Code and relevant bond, quarantine or other legislative requirements; - documentation requirements for receiving goods; - focus of operation of work systems, equipment, management and site operating systems for receiving goods; - housekeeping standards and procedures; - problems that may occur when receiving goods and appropriate action that can be taken to resolve these problems; - relevant WHS/OHS and environmental protection procedures and guidelines; - site layout and obstacles; - specifications and standards for checking and inspecting received goods, and; - workplace procedures and policies for receiving goods.

TUA2014 Use product knowledge to complete work operations

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to use product knowledge to complete work operations in accordance with workplace requirements and relevant regulations, as part of work activities within the transport and logistics industries. It includes identifying products in a subsection of a warehouse or other storage area, examining quality, reporting on products, as well as using inventory and labelling systems to identify and locate products.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - adapting to differences in products and services in accordance with standard operating procedures; - applying relevant legislation and workplace procedures; - communicating and working effectively with others when handling, transporting and storing products and providing information on products and services; - completing documentation related to work activities; - estimating the size, shape and special requirements of goods and loads; - identifying containers and goods coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings and where applicable, emergency information panels; - reading and comprehending simple statements in English; - reading, interpreting and following instructions, procedures, information and signs relevant to handling, transporting, storing products and providing information on products and services; - selecting and using relevant communications, computing and load handling equipment, and; - selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards. Students will also be expected to demonstrate the following knowledge: - Australian codes and regulations relevant to products being identified, handled, transported, stacked and/or stored as part of work operations; - categories or groups of products and requirements for special handling, stacking and storage; - documentation requirements including reports and records concerning damaged or contaminated goods; - focus of operation of work systems, equipment, management and site operating systems for packaging goods; - housekeeping standards and procedures; - purpose and use of cataloguing and labelling systems; - site layout and obstacles; - strategies to seek out sources of product knowledge and to use this information to inform work; - types of equipment and storage areas appropriate for different categories of goods including perishable, fragile, dangerous, composition/state goods, and; - workplace procedures and policies for identifying, handling, stacking and storing particular categories of products.

TUA2021 Despatch stock

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to despatch stock in accordance with codes/regulations and workplace requirements as part of work activities undertaken within the transport and logistics industry. It includes analysing orders to identify work requirements, following workplace order picking processes to prepare goods for despatch, and completing despatch tasks in accordance with workplace procedures and schedules.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and

required action to minimise, control or eliminate hazards that may exist during work activities; - applying relevant legislation and workplace procedures; - communicating and working effectively with others when organising despatch operations; - completing documentation related to organising despatch operations; - estimating size, shape and special requirements of goods and loads; - modifying activities depending on operational contingencies, risk situations and environments; - operating and adapting to differences in goods and equipment in accordance with standard operating procedures; - reading, interpreting and following instructions, procedures and labels relevant to organising despatch operations; - selecting and using relevant equipment and communications technology when organising despatch operations; - selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - documentation and record requirements for despatch operations; - equipment used during despatch operations and the precautions and procedures that should be followed in its use; - housekeeping standards and procedures; - operational work systems, equipment, management and site operating systems for despatching goods; - problems that may occur when despatching goods and appropriate action that can be taken to resolve these problems; - regulations relevant to despatch operations, including the Australian Dangerous Goods (ADG) Code and relevant bond, quarantine or other legislative requirements; - relevant WHS/OHS and environmental protection procedures and guidelines; - site layout and obstacles, and; - workplace procedures and policies for organising despatch operations.

TLIA2022 Participate in stocktakes

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to participate in stocktakes in accordance with relevant regulations and workplace requirements within the transport and logistics industry. It includes product knowledge, preparing and conducting stocktakes, counting and identifying stock discrepancies and completing all required documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities; - applying relevant legislation and workplace procedures; - communicating and working effectively with others when conducting stocktakes; - completing documentation related to conducting stocktakes; - modifying activities depending on operational contingencies, risk situations and environments; - monitoring work activities in terms of planned schedule; - operating and adapting to differences in equipment in accordance with standard operating procedures; - reading, interpreting and following instructions, procedures and labels relevant to conducting stocktakes; - reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures, and; - selecting and using relevant communication, computing and office equipment when conducting

stocktakes. Students will also be expected to demonstrate the following knowledge: - Australian codes and regulations relevant to conducting stocktakes; - housekeeping standards and procedures; - operational work systems, equipment, management and site operating systems for conducting stocktakes; - principles of operation and functions of stocktake systems; - site layout and obstacles; - workplace procedures and policies for conducting stocktakes, and; - workplace processes for managing records and producing stocktake reports.

TLIA3002 Maintain container/cargo records

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to maintain container/cargo records, in accordance with relevant regulations and workplace requirements as part of work activities within the transport and logistics industry. It includes processing container and/or cargo documentation, maintaining records of container/cargo movements, monitoring container/cargo including reefer units and maintaining records.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating effectively with others; - estimating size, shape and special requirements of loads; - identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) Code/International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels; - interpreting and following operational instructions and prioritising work; - reading and interpreting relevant instructions, procedures, information and labels; - receiving, acknowledging and sending messages with available communications equipment; - reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - Australian and International Standards, codes of practice and regulations relevant to maintaining container and cargo records including the current ADG Code; - cargo marking and numbering systems; - focus of operation of work systems, equipment, management and site operating systems for maintaining container and cargo records; - problems that may occur when maintaining container and cargo records and appropriate action that can be taken to resolve these problems; - relevant bond, quarantine or other legislative requirements; - relevant handling and safety codes of practice; - site layout and location of reefer units, and; - workplace procedures and policies for maintaining container and cargo records.

TLIA3015 Complete receipt/despatch documentation

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to complete receipt/despatch documentation in accordance with relevant regulations and workplace requirements as part of work activities within the transport and logistics industry. It includes analysing orders to identify work requirements to fill order, following workplace order documentation processes, and finalising documentation in

accordance with workplace procedures and any relevant regulatory requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating effectively with others; - completing receipt and despatch documentation; - estimating size, shape and special requirements of goods and loads; - identifying containers and goods coding, Australian Dangerous Goods (ADG) Code markings and emergency information panels; - monitoring work activities in terms of planned schedule; - reading and interpreting relevant instructions, procedures and labels; - selecting and using relevant computer, communications and office equipment, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - Australian and International Standards, codes and regulations relevant to completing receipt/despatch documentation, including current ADG Code and relevant bond, quarantine or other legislative requirements; - documentation requirements for receiving and despatching goods; - focus of operation of work systems, equipment, management and site operating systems for receiving and despatching goods; - housekeeping standards and procedures; - problems that may occur when completing receipt and despatch documentation and appropriate action that can be taken to resolve these problems; - relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines; - site layout and obstacles; - specifications and standards for checking and inspecting received and despatched goods, and; - workplace procedures and policies for completing receipt/despatch documentation.

TUA3038 Control and order stock

Locations: Industry.

Prerequisites: Nil.

Description:This unit involves the skills and knowledge required to control and order stock for a workplace store in accordance with relevant codes of practice, regulations and workplace procedures. It specifically covers maintaining stock levels and records, organising and administering stocktakes, identifying stock losses, processing stock orders and following up orders.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - adapting to differences in stock and systems in accordance with standard operating procedures; - applying relevant legislation and workplace procedures; - communicating and working effectively with others; - monitoring stock levels; - reading and interpreting relevant instructions, procedures and labels; - reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and

workplace procedures, and; - selecting and using relevant communications and computing equipment. Students will also be expected to demonstrate the following knowledge: - contacts and sources of information and documentation needed when controlling and ordering stock; - customer service policies and procedures; - how to interpret workplace specifications and orders for supplies; - principles of stock control; - problems that may occur and appropriate action that can be taken to resolve these problems; - procedures for ordering stock; - protocols and procedures for liaising with supplier representatives, drivers and colleagues using appropriate technology; - relevant codes of practice and legislative requirements (for example dangerous goods regulations, health and hygiene regulations); - site layout; - stock control documentation and systems used in workplace stores; - stock security systems, and; - systems for completing relevant records and documentation.

TUA3039 Receive and store stock

Locations: Industry.

Prerequisites: Nil.

Description:This unit involves the skills and knowledge required to receive and store stock for a workplace store in an enterprise/organisation in a transport, logistics, production, hospitality, retail or other relevant industry sector, in compliance with relevant codes of practice, regulations and workplace procedures. Work must be carried out for receiving and storing stock in a workplace store. It specifically covers taking delivery of stock, storing, rotating and maintaining stock received, and completing documentation. Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating and working effectively with others; - monitoring work activities in terms of planned schedule; - operating and adapting to differences in equipment in accordance with standard operating procedures; - reading and interpreting relevant instructions, procedures and labels; - selecting and using relevant communications and computing equipment; - selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - contacts and sources of information and documentation needed when receiving and storing stock; - customer service policies and procedures; - interpretation of workplace specifications and orders for supplies; - principles of stock control; - problems that may occur when receiving and storing stock and appropriate action that can be taken to resolve these problems; - procedures for operating electronic communications equipment; - protocols and procedures for liaising with supplier representatives, drivers and colleagues using appropriate technology; - purpose and procedures for using relevant personal protective equipment; - relevant codes of practice and legislative requirements (for example dangerous goods regulations, health and hygiene regulations); - relevant WHS/OHS and environmental procedures and regulations; - safe lifting and handling procedures;

- site layout; - stock control documentation and systems used in workplace stores; - stock security systems, and; - systems for completing relevant records and documentation.

TUA5058 Manage facility and inventory requirements

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to manage a facility and its inventory requirements, in various contexts within the transport and logistics industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities; - applying relevant legislation and workplace procedures; - communicating and working effectively with others when managing facility and inventory requirements; - developing and implementing contingency plans; - prioritising work and coordinating the work of others; - providing leadership to others when managing facilities and inventory requirements; - reading and interpreting plans, diagrams, regulations, codes of practice and other documentation relevant to managing facilities and inventory requirements; - reporting and/or rectifying identified problems promptly, and; - selecting and applying appropriate technology, information systems and procedures when managing facility and inventory requirements. Students will also be expected to demonstrate the following knowledge: - emergency procedures; - enterprise business policies and plans including procedures for facility operations; - operational warehouse systems, resources, management and workplace operating systems; - principles, purpose and location of controls, monitoring devices and systems; - procedures for managing and controlling hazardous situations when carrying out work activities, particularly those that relate to storing materials; - procedures for operating electronic communications equipment; - relevant sections of national and state/territory regulatory requirements and codes of practice, including applicable facility fire safety and building regulations; - requirements for completing relevant documentation; - selection and appropriate application of technology, information systems and procedures, and; - throughput and storage requirements for specific types of inventory.

TUD1001 Shift materials safely using manual handling methods

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to shift loads safely using manual handling methods. Work must be carried out in compliance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulations concerning the manual handling and movement of loads. It includes assessing the risks associated with relocating the load, planning the relocation process and carrying out the relocation in accordance with the plan.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and required action to minimise, control or eliminate risks that may exist when manually lifting and handling materials and goods; - applying relevant legislation and workplace procedures; - communicating effectively with others when manually lifting and handling materials and goods; - implementing contingency plans when manually lifting and handling, materials and goods; - interpreting and following operational instructions and prioritising work; - interpreting manual handling risks; - modifying activities depending on operational contingencies, risk situations and environments; - operating and adapting to differences in loads and materials in accordance with standard operating procedures; - reading and interpreting instructions, procedures and information relevant to the manual lifting and handling of materials and goods; - selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards; - using correct manual handling practices; - working collaboratively with others when manually lifting and handling materials and goods, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - housekeeping standards and procedures; - relevant WHS/OHS procedures and guidelines concerning the manual lifting and movement of loads; - risks when manually lifting and handling materials and goods, and related precautions to control the risk; - controlled actions on a movement during lifting; - distance over which load is to be shifted; - frequency of shifting operations; - load on the spine during lifting; - postures and positions during lifting; - rotation and side movement of the spine during lifting; - time allowed for shifting the load; - type, weight and position of the load; - work layout; - site layout and obstacles, and; - workplace procedures and policies for manual handling.

TUD2003 Handle dangerous goods/hazardous substances

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to handle dangerous goods and hazardous substances in accordance with relevant work health safety (WHS)/occupational health and safety (OHS) regulations concerning the safe handling of dangerous goods and hazardous substances, within the transport and logistics industry. It includes identifying requirements for working with dangerous goods and/or hazardous substances, confirming site incident procedures and selecting handling techniques. Work is performed under general supervision.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating and working effectively with others; - completing relevant documentation; - determining required permits; - estimating weight and dimensions of load and any special requirements; - identifying and assessing handling and storage precautions and requirements for dangerous goods/hazardous substances; - identifying and selecting safety

requirements for handling dangerous goods/hazardous substances; - identifying containers and goods coding, markings and emergency information panels for mode of transport storage selected; - identifying dangerous goods/hazardous substances using labels, International Maritime Dangerous Goods (IMDG) Code markings, HAZCHEM signs and other relevant identification criteria; - identifying job and site hazards, and planning work to minimise risks; - implementing contingency plans; - maintaining workplace records and documentation; - modifying activities depending on operational contingencies, risk situations and environments; - monitoring and prioritising work activities in terms of planned schedule, predicting consequences and identifying improvements; - operating and adapting to differences in equipment in accordance with standard operating procedures; - operating electronic communications equipment to required protocol; - reading, interpreting and following relevant instructions, procedures, regulations, information and signs; - recognising hazards and applying precautions and required action to minimise, control or eliminate recognised hazards; - reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures; - selecting and using required personal protective equipment (PPE) conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards; - selecting appropriate equipment and work systems including PPE, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - equipment applications, capacities, configurations, safety hazards and control mechanisms; - housekeeping standards and procedures; - permit and licence requirements; - problems that may arise when handling of dangerous goods and hazardous substances and actions that should be taken to prevent or solve these problems; - relevant aspects of current Australian Dangerous Goods (ADG) Code and relevant Australian Standards; - relevant regulations and codes concerning handling dangerous goods/hazardous substances; - risks when handling dangerous goods/hazardous substances and related precautions to control risk, and; - workplace procedures for handling and storing dangerous goods/hazardous substances.

TUE2007 Use communications systems

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to use communications systems in accordance with relevant regulations and workplace procedures. It includes identifying system features, operating a communications system effectively, using appropriate communications system protocols, maintaining equipment and completing documentation. It involves applying established communication principles and practices, and using local technical, colloquial language and vocabulary in day-to-day communication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and required action to minimise, control or eliminate hazards that may exist when using communications systems; - communicating and working effectively with others using available communications systems; - completing documentation related to work

activities when using communications systems; - following communications security procedures; - identifying and using required communications technology; - implementing contingency plans; - modifying activities depending on differing operational contingencies, risk situations and environments; - monitoring communications equipment performance and taking appropriate action as required; - planning, monitoring and prioritising work activities in terms of planned schedule, including predicting consequences and identifying improvements; - operating and adapting to differences in communications equipment in accordance with standard operating procedures; - reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures; - reading, interpreting and following communications systems instructions, procedures and relevant legislation using communications equipment, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - basic communication techniques including barriers to effective communication and how to overcome them; - basic principles of effective communication; - features of various communications systems; - minor routine maintenance procedures for communications equipment; - pre-operational checks for communications systems and equipment; - procedures and protocols for using communications systems during an emergency; - protocols and procedures for communicating with others using relevant communications technology including PA systems; - relevant work health and safety work health and safety (WHS)/occupational health and safety (OHS) responsibilities; - relevant procedures and duty of care requirements, and; - typical problems that may occur when using communications systems, and appropriate action and solutions.

TUE3002 Estimate/calculate mass, area and quantify dimensions

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to estimate and calculate mass, area and quantify dimensions of loads in accordance with workplace requirements and relevant regulations, as part of work functions within the transport and logistics industry. It includes estimating loads to be transported or placed in storage, estimating load limits of transport and/or storage systems, and organising a load.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating effectively with others; - identifying, selecting and using relevant calculators, computing and office equipment; - interpreting and following operational instructions and prioritising work; - performing basic mathematical operations required when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities including addition, subtraction, multiplication and division; - reading and interpreting relevant instructions, procedures, information and labels; - working collaboratively with others, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - Australian and international codes and

regulations relevant to workplace activities; - documentation requirements for the workplace activities concerned; - focus of operation of work systems, equipment, management and site operating systems for transporting and/or storing goods and stock; - problems that may occur when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities, and appropriate action that can be taken to resolve these problems; - relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines, and; - workplace procedures and policies for estimating and/or calculating mass, area and volumes of loads, and transport and storage facilities, including the quantification of dimensions.

TJUE3004 Prepare workplace documents

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to prepare workplace documents and forms in accordance with workplace requirements and applicable regulations or codes, as part of work activities within the transport and logistics industry. It includes planning and preparing simple workplace documents and gathering relevant information enabling the completion of a workplace form.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating effectively with others; - completing documentation related to work activities; - reading and interpreting relevant instructions, procedures, information and labels; - reading, writing and comprehending simple statements in English; - working collaboratively with others, and; - working systematically with required attention to detail. Students will also be expected to demonstrate the following knowledge: - conventions for sentence construction, grammar, spelling, style and punctuation; - equipment and materials required for completing documents and forms, and instructions and precautions for their use; - format and layout of various documents and forms used in workplace activities; - relevant Australian and international codes of practice and regulations relevant to documents and/or forms being prepared; - relevant work health safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines, and; - workplace procedures and policies for completing documents/forms.

TJUE4006 Collect, analyse and present workplace data and information

Locations: St Albans, Werribee, City Flinders, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to collect, analyse and present workplace data and information as part of workplace operations. It includes identifying required information, analysing and preparing information for use, explaining information and presenting workplace information to others.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating and working effectively with others when collecting, analysing and presenting workplace data and information; - completing relevant documentation; - identifying and using required communications and presentation technology; - monitoring and prioritising work activities in terms of planned schedule; - planning own work including predicting consequences and identifying improvements; - reading, interpreting and following relevant instructions and procedures, and; - working systematically with required attention to detail. Students will also be expected to demonstrate the following knowledge: - presentation and communication techniques including barriers to effective communication and how to overcome them; - principles of effective presentation and communication of information; - protocols and procedures for the collection, analysis and presentation of workplace data and information using relevant technology; - relevant procedures and duty of care requirements; - sources of data and information and procedures for processing the information for workplace use, and; - typical presentation and communications problems, and appropriate action and solutions. .

TJUF0001 Apply chain of responsibility legislation, regulations and workplace procedures

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to identify, apply and follow chain of responsibility legislation, regulations and workplace procedures in relation to heavy vehicles as they apply to an individual's own job role. It includes explaining the chain of responsibility features, applying the requirements, and identifying and reporting breaches in the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying chain of responsibility obligations relating to own job role on a minimum of three occasions; - explaining the chain of responsibility obligations of own job role and at least two other job roles directly related to own job role, and; - preparing reports of chain of responsibility breaches on a minimum of three occasions, each about a different type of breach. Students will also be expected to demonstrate the following knowledge: - consequences of non-compliance with the chain of responsibility; - methods and requirements to ensure management of fatigue, speed, load restraint, mass and dimension; - parties in the chain of responsibility; - principal obligations in chain of responsibility in the HVNL and regulations or applicable state/territory law and regulations; - what constitutes a duty, a reasonable step, a breach and a penalty to chain of responsibility legislation as they apply to a range of job roles; - where to locate current chain of responsibility information, and; - workplace policies and procedures around chain of responsibility for own job role.

TJUF0002 Administer chain of responsibility policies and procedures

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to identify, apply and follow chain of responsibility policies and procedures in a supervisory role in relation to heavy vehicles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying chain of responsibility obligations relating to own job role on a minimum of three occasions; - applying and monitoring workplace policies and procedures relating to chain of responsibility in a supervisory role for a minimum of four weeks, and; - preparing reports of chain of responsibility breaches on a minimum of three occasions, each about a different type of breach. Students will also be expected to demonstrate the following knowledge: - action required when possible breaches of the chain of responsibility are identified; - consequences of non-compliance with the chain of responsibility; - duties within the individual's own role; - duties performed by others under the individual's supervision; - duties that influence or direct other parties in the chain of responsibility; - methods and requirements to ensure management of fatigue, speed, load restraint, mass and dimension; - parties in the chain of responsibility; - principal obligations relating to chain of responsibility in the HVNL and regulations or applicable state/territory law and regulations; - what constitutes a duty, a reasonable step, a breach and a penalty to chain of responsibility regulations as they apply to a range of job roles; - where to locate current chain of responsibility information, and; - workplace policies and procedures around chain of responsibility for own job role and the range of job roles for which own job role is responsible.

TUF1001 Follow work health and safety procedures

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to follow and apply work health and safety (WHS)/occupational health and safety (OHS) procedures when carrying out work activities in compliance with the relevant WHS/OHS regulations and procedures. It includes following workplace procedures for hazard identification and risk control, contributing to WHS/OHS management arrangements and completing WHS/OHS records.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities; - applying relevant legislation and workplace procedures; - communicating effectively with others when following WHS/OHS procedures; - completing documentation related to WHS/OHS in the workplace; - implementing WHS/OHS workplace procedures; - reporting and/or rectifying identified problems, faults or

malfunctions promptly, in accordance with regulatory requirements and workplace procedures; - reading and comprehending simple statements in English; - reading and interpreting relevant safety-related information including safety labels, instructions for safe work, relevant safety data sheets (SDSs)/material safety data sheets (MSDSs), workplace procedures and codes of practice; - selecting and using required personal protective equipment conforming to industry and WHS/OHS standards; - working collaboratively with others when following WHS/OHS procedures, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - emergency and evacuation procedures; - HAZCHEM symbols and implications for safe work and storage; - housekeeping standards and procedures; - location and use of safety alarms, manifests, emergency shut-off systems, emergency communications systems; - manual and mechanically-assisted lifting and load shifting procedures; - procedures for handling broken or damaged equipment; - relevant terms used in SDSs/MSDSs; - relevant WHS/OHS procedures and guidelines; - reporting procedures for unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents; - site layout and obstacles; - storage and use of hazardous substances, and; - WHS/OHS warning signs and signals.

TUF2010 Apply fatigue management strategies

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to apply fatigue management strategies within the transport and logistics industry. Work is undertaken in compliance with relevant legislation, regulations, codes and guidelines. It includes identifying and acting on signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities, in particular when operating equipment, trains, vehicles, load shifting equipment, marine vessels and aircraft.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - adapting to changes in rosters and standard operating procedures as they relate to fatigue management; - adjusting lifestyle patterns to ensure effective fatigue management during work activities; - applying precautions and required action to minimise and control the effects of fatigue when carrying out own work functions; - applying relevant legislation and workplace procedures; - communicating effectively with others when applying fatigue management strategies; - identifying and meeting own learning needs about fatigue management related matters; - modifying activities and taking appropriate initiatives to manage fatigue in the workplace depending on work contexts, risk situations and environments; - reading and interpreting instructions, procedures, regulations and signs related to fatigue management and applying them to work activities; - recognising symptoms of fatigue and taking appropriate action in accordance with fatigue management regulations and workplace procedures, and; - working collaboratively with others to manage and minimise the effects of fatigue during work activities. Students will also be expected to demonstrate the following knowledge: - causes and effects of fatigue on workers; - factors that increase fatigue-related accidents; - how fatigue affects workplace performance; - how fatigue

contributes to workplace accidents; - lifestyles that promote effective long-term fatigue management; - relevant fatigue management codes, regulations, permit and licence requirements; - relevant work health and safety (WHS)/occupational health and safety (OHS) regulations as they relate to fatigue; - risks and hazards created by workplace fatigue; - sources of information on fatigue; - strategies and ways of managing fatigue; - ways of recognising fatigue, and; - workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents.

TU1F4014 Develop and maintain a safe workplace

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to develop and maintain a safe workplace in accordance with regulations. It includes planning and implementing safety requirements; informing and training personnel on work health safety (WHS)/occupational health and safety (OHS) legislation, codes and standards; and establishing and maintaining procedures for assessing and controlling safety risks. It also includes monitoring, adjusting and reporting safety performance, and evaluating the WHS/OHS system and related policies, procedures and programs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analysing the working environment to identify hazards and implement appropriate WHS/OHS management systems; - applying fatigue management knowledge and techniques; - applying precautions to minimise, control or eliminate identified hazards; - applying relevant legislation and workplace procedures; - communicating effectively with others; - completing relevant documentation; - designing and implementing appropriate WHS/OHS management systems; - interpreting and following instructions and prioritising work; - modifying activities; - monitoring work activities; - operating equipment in accordance with standard operating procedures; - operating electronic communications equipment to required protocols; - planning work activities; - reading and interpreting relevant instructions, procedures, information, labels and signs; - reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures; - selecting and appropriately applying technology, information systems and procedures to improve WHS/OHS; - selecting and using required personal protective equipment conforming to industry and WHS/OHS standards; - working collaboratively with others, and; - working systematically without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - appropriate links to other management systems, for example contractors, maintenance and purchasing; - arrangements for participation and consultation over WHS/OHS; - considerations for choosing between different control measures; - elements of an effective WHS/OHS management system; - hazards and associated safety risks that exist in the workplace; - hierarchy of controls; - how to identify when expert advice is needed; - incident and accident investigation arrangements; - principles of risk management; - range of control measures available; - relevant WHS/OHS and environmental protection policies and procedures; - relevant regulatory and code requirements; - role of technical information and experts in designing risk control measures, monitoring systems and health surveillance

procedures; - significance of other management systems and procedures for WHS/OHS; - systems of risk control, recognising the significance of WHS/OHS for effective workplace operation; - training, coaching and mentoring approaches appropriate for use in WHS/OHS training programs; - typical problems that can occur when managing WHS/OHS systems and related action that can be taken; - workplace business policies and plans related to WHS/OHS issues, and; - workplace protocols and procedures for managing personal work priorities and professional development.

TU1F4064 Manage fatigue management policy and procedures

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to manage organisational fatigue management policy and procedures in accordance with relevant legislation and regulations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - adapting to changes in legislation and regulations as they relate to fatigue management; - applying relevant legislation and workplace procedures; - communicating and working effectively with others when implementing the organisational fatigue risk management system; - facilitating systems that assist employees to identify their own learning needs about fatigue management; - modifying activities and taking appropriate initiative to manage the implementation of an organisational fatigue risk management system depending on differing contexts, risk situations and environments; - organising audits and reviews of an organisation's fatigue risk management system; - planning and organising budgetary requirements and resource allocation for implementing an organisational fatigue risk management system; - reading and interpreting documentation on fatigue management legislation and the organisational fatigue risk management system and applying them to management activities, and; - recognising breaches of fatigue management strategies and regulations and taking appropriate action in accordance with the organisational fatigue risk management system. Students will also be expected to demonstrate the following knowledge: - budgetary and resource requirements for implementing an organisational fatigue risk management system; - causes and effects of fatigue on employees; - components of a fatigue risk management system, policies, procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents; - fatigue reduction and proofing strategies available to an organisation that can minimise the risk of errors and safety incidents; - how fatigue affects workplace performance and accidents; - lifestyles that promote the effective long-term management of fatigue; - options and resources for providing training and learning opportunities for employees about fatigue management and implementing an organisational fatigue risk management system; - procedures for auditing and reviewing an organisational fatigue risk management system and related policies and procedures, for reporting audit outcomes; - processes and resources for assessing employee fatigue management competence; - relevant legislation, regulations, permit and licence requirements related to fatigue management; - relevant work health and safety (WHS)/occupational health and safety (OHS) regulations as they relate to fatigue; - responsibilities of an organisation and individual employees for

implementing fatigue management regulations and policies; - systems for auditing the effectiveness and efficacy of organisational fatigue risk management strategies, policies and procedures, and; - ways of recognising fatigue.

TUG1001A Work effectively with others

Locations: Footscray Park, Footscray Nicholson, St Albans.

Prerequisites: Nil.

Description: This unit involves the basic skills and knowledge required to work effectively with others in a workplace including contributing to determination of appropriate work roles, contributing to the planning of activities, and working with others to complete the activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate effectively with others when completing work activities; - read and interpret instructions, procedures, information and signs relevant to working with others as a team; - interpret and follow operational instructions and prioritise work within the team; - operate electronic communication equipment to required protocol when communicating with others in the workplace; - work collaboratively with others; - adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others; - promptly report and/or rectify any identified misunderstandings and problems that can occur in the workplace and appropriate ways of dealing with them in accordance with regulatory requirements and workplace procedures; - apply precautions and required action to minimise, control or eliminate hazards that may exist when working with others in a work environment; - monitor team activities in terms of planned schedule; - modify team activities depending on differing operational contingencies, risk situations and environments; - adapt to any differences in language and culture in accordance with standard operating procedures, and; - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - relevant workplace standards and procedures and duty of care requirements; - relevant OH&S and environmental protection procedures and responsibilities; - workplace structures and the roles and responsibilities of team/group members; - basic principles of teamwork; - typical misunderstandings and problems that can occur in the workplace and appropriate ways of dealing with them, and; - focus of operation of work systems, equipment or management, site and organisational operating procedures.

TUG2007 Work in a socially diverse environment

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to apply cultural awareness, communication principles and problem-solving techniques to facilitate working in a socially diverse environment. This is done in accordance with workplace procedures, relevant anti-discrimination and equal employment opportunity regulations. It includes communicating with customers and colleagues from diverse backgrounds and dealing with cross-cultural misunderstandings.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - adapting appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others; - communicating and working effectively with others when working in a socially diverse environment; - completing documentation related to working in a socially diverse environment; - reading, interpreting and applying instructions, legislation, procedures, information and signs relevant to working in a socially diverse environment, and; - reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures. Students will also be expected to demonstrate the following knowledge: - basic awareness of the culture of Australia's indigenous and non-indigenous peoples; - cultural awareness; - principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to individual employees; - principles that underpin cultural awareness; - recognition of the different cultural groups in Australian society; - recognition of various international customer groups (appropriate to the sector and individual workplace), and; - typical cross-cultural misunderstandings and problems that can occur in the workplace, and appropriate ways of dealing with them.

TUG3002 Lead a work team or group

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to lead a work team or group in accordance with workplace procedures and relevant regulations. It includes participating in work team/group planning, managing and developing work team/group performance, participating in and facilitating a work team/group achieve workplace tasks, as well as documenting and reviewing work team/group performance.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and required action to minimise, control or eliminate identified hazards; - applying relevant legislation and workplace procedures; - communicating effectively with others; - completing relevant documentation; - identifying and recommending improvements to services, resource allocation and use; - leading and encouraging team members; - modifying team activities depending on operational contingencies, risk situations and environments; - monitoring and prioritising team activities in terms of planned schedule; - negotiating and working effectively with team members; - operating electronic communications equipment to required protocol; - planning team activities, including predicting consequences and identifying improvements; - reading, interpreting and following relevant instructions, procedures, and; - selecting and appropriately applying technology, information systems and procedures to complete workplace tasks. Students will also be expected to demonstrate the following

knowledge: - coaching and mentoring approaches; - principles, duty of care and obligations within the chain of responsibility in the transport industry; - relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection policies and procedures; - relevant regulatory and codes of practice requirements; - strategies to implement continuous improvement processes; - techniques to encourage appropriate participation of team/group members; - typical problems that can occur when leading a work team and related appropriate action that can be taken; - workplace policies and plans including procedures for training and development, and; - workplace protocols and procedures for leading work teams.

TUIG4006 Facilitate work teams

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to lead and facilitate work teams. Work involves facilitating and encouraging the work of work teams/groups, and providing leadership to others in establishing and achieving team objectives. It includes participating and providing leadership in team planning, developing team commitment and cooperation, and managing and developing team performance.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating and working effectively with others when facilitating the operation of work teams; - completing relevant documentation; - identifying improvements to services, resource allocation and use; - leading and encouraging others; - monitoring and prioritising work activities in terms of planned schedule; - negotiating and working effectively with others; - operating electronic communications equipment to required protocol; - reading, interpreting and following relevant instructions, procedures, information and signs; - responding appropriately to cultural preferences in the workplace, including modes of behaviour and interactions with others, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - coaching and mentoring approaches to support team members to share knowledge and skills; - mechanisms to encourage team decision making, and to reward and support team achievement; - principles, duty of care and obligations within the chain of responsibility in the transport industry; - relevant regulatory and code requirements; - strategies to implement continuous improvement processes; - typical problems that can occur when facilitating work teams, and related appropriate action that can be taken; - workplace policies and plans including procedures for training and assessment, and; - workplace protocols and procedures for facilitating work teams.

TUI4001 Coordinate quality customer service

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to coordinate quality customer service in accordance with relevant regulations. It includes planning to meet internal and external customer requirements, ensuring the delivery of quality service and monitoring, adjusting and reporting customer service.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant agreements, codes of practice or other legislative requirements to work processes; - applying relevant legislation and workplace procedures; - communicating and working effectively with others when coordinating quality customer service; - completing relevant documentation; - identifying and correctly using equipment, processes and procedures; - implementing contingency plans; - modifying activities depending on operational contingencies, risk situations and environments; - monitoring and prioritising work activities in terms of planned schedule; - operating electronic communications equipment to required protocol; - reading, interpreting and following relevant instructions, procedures, information and signs; - reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - customer and market characteristics; - relevant Australian and state/territory standards, regulations and codes of practice; - requirements of workplace systems, operations and relevant equipment; - risks involved in workplace operations and related precautions to control risk; - role of customer service in company profitability, and; - workplace procedures and policies for coordinating quality customer service in workplace operations.

TUI5018 Manage customer service

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to manage customer service as part of work undertaken in various contexts within the transport and logistics industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating and consulting with others to ensure excellent customer service is modelled to staff and that customer issues are resolved; - dealing effectively with unplanned events such as a change in the volume of customer inquiries; - developing, implementing and revising contingency plans; - interpreting and following operational instructions and prioritising work; - monitoring work activities in terms of planned schedule, particularly in line with agreed time and quality standards, and; - preparing reports to develop and disseminate information on customer service performance. Students will also be expected to demonstrate the following knowledge: - organisational performance management systems; - organisational policies, principles, codes and performance standards; - quality management systems; - relevant sections of national and state/territory regulatory requirements and codes of practice such as consumer protection legislation; -

requirements for completing relevant documentation such as reports of customer complaints and resolutions; - risk management as it relates to dealing with customers and managing consequences of poor customer service, and; - steps involved in planning work activities.

TULK2010 Use infotechnology devices in the workplace

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to use infotechnology devices in the workplace in accordance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace procedures, within the transport and logistics industry. It includes identifying infotechnology equipment and systems; setting up, using and shutting down computer based equipment and systems; and inputting, storing and presenting files/data. It also involves implementing workplace procedures for managing and securing data.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - accessing and/or completing electronic documentation through the use of infotechnology devices in the workplace; - adapting to differences in software and equipment in accordance with standard operating procedures; - applying precautions and required action to minimise, control or eliminate hazards that may exist when using infotechnology devices in the workplace; - applying relevant legislation and workplace procedures; - identifying and using computer equipment, software, processes and procedures required within the job context; - identifying fault-finding procedures; - implementing contingency plans when using infotechnology devices in the workplace including using security and backup software and procedures; - modifying activities depending on operational contingencies, risk situations and environments; - operating infotechnology devices used within the workplace in accordance with operational requirements; - reading and interpreting instructions, procedures, information, operational instructions and manuals relevant to using infotechnology devices in the workplace; - reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - work health and safety (WHS)/occupational health and safety (OHS) risks and hazards when using computer equipment for work tasks, and ways of controlling these risks/hazards; - relevant WHS/OHS procedures and guidelines for using computer equipment in the workplace; - typical problems that can occur when using infotechnology devices, and computer applications in the workplace and related appropriate action that can be taken to prevent or solve these problems, and; - workplace procedures for using computer equipment and application software appropriate for work role.

TUL2008 Complete routine administrative tasks

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to complete routine

administrative activities within the transport and logistics industry, in accordance with relevant regulations and workplace procedures. It includes receiving and distributing incoming mail, receiving and despatching outgoing mail, filing documents, and receiving and relaying written and oral messages.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating and working effectively with others when completing routine administrative tasks; - completing documentation related to routine administrative tasks; - handling mail and messages in accordance with workplace procedures; - interpreting and following operational instructions and applying relevant legislation and workplace procedures; - modifying activities depending on operational contingencies, risk situations and environments; - monitoring and prioritising work activities in terms of planned schedule; - reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - equipment, methods and strategies used in routine workplace administrative operations; - hazards in routine workplace administrative operations and related precautions to control risks; - housekeeping standards and procedures; - requirements of work systems operations and relevant equipment; - typical problems that can occur when completing routine workplace administrative tasks and appropriate action that can be taken to prevent or solve these problems; - work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines relevant to administrative operations, and; - workplace procedures and policies for completing routine administrative tasks.

TUL3003 Conduct induction process

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to conduct an induction process for new workers and trainees commencing employment in the workplace, in accordance with relevant regulatory requirements, operational policies and procedures for the workplace concerned. It includes outlining the relationship between the employee and the company, establishing and explaining the requirements of the position, and completing relevant workplace documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and required action to minimise, control or eliminate identified hazards; - applying relevant legislation and workplace procedures; - communicating and working effectively with others; - identifying and correctly using relevant equipment; -

interpreting and following operational instructions; - modifying activities depending on operational contingencies, risk situations and environments; - monitoring work activities in terms of planned schedule; - operating electronic communications equipment to required protocol; - prioritising work; - reading interpreting and following relevant instructions, procedures, information and signs; - selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - customer service standards and procedures; - emergency procedures and related equipment; - employee conditions of service; - instructional methods and resources required to conduct an induction program; - personal protective equipment and instructions for its use; - site or workplace layout; - WHS/OHS policies and procedures; - workplace documentation and record keeping procedures and requirements; - workplace hazards and related hazard minimisation procedures; - workplace induction procedures and documentation requirements, and; - workplace structures and employee roles and responsibilities.

TUL4009 Manage personal work priorities and professional development

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to manage personal work priorities and personal professional development. It includes managing personal performance, setting and meeting personal work priorities, and developing and maintaining personal professional competence.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating effectively with others when managing personal work priorities and professional development; - completing documentation related to managing personal work priorities and professional development; - interpreting and following operational instructions and prioritising work; - monitoring work activities in terms of planned schedule; - planning work activities, including predicting consequences and identifying improvements; - reading and interpreting instructions, procedures, information and signs relevant to managing personal work priorities and professional development; - selecting and appropriately applying technology, information systems and procedures to complete workplace tasks; - taking advantage of learning opportunities in the workplace, training programs and workshops, and; - working collaboratively with others when managing personal work priorities and professional development. Students will also be expected to demonstrate the following knowledge: - appropriate learning methods to maintain current competence or to develop new competencies; - coaching and mentoring approaches to support team members to share and develop knowledge and skills; - competencies required to increase participation in organisational planning and development; - relevant regulatory and code requirements; - resource availability including the competencies of individuals in the team/group; - typical problems that can occur when managing personal work priorities, and professional development and related action that can be taken; - workplace business policies and plans

including procedures for undertaking professional development, and; - workplace protocols and procedures for managing personal work priorities and professional development.

TUL4070 Work effectively in the transport and logistics industry

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to work effectively in the transport and logistics industry in accordance with relevant organisational policy and procedures. This unit includes identifying current industry practices and emerging issues that underpin the identification and performance of work in the industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - completing relevant documentation; - developing competence in response to changes in activities, and legislative and organisational requirements; - identifying and anticipating operational problems, hazards and risks, and taking appropriate action; - identifying and correctly using relevant equipment; - interpreting and applying relevant regulations and instructions; - modifying activities dependent on workplace contingencies, situations and environments; - monitoring work activities in terms of planned schedule, and; - reading, interpreting and following relevant work requirements, policies and procedures. Students will also be expected to demonstrate the following knowledge: - current and emerging issues impacting on the transport and logistics industry, including infrastructure needs, technological changes and future challenges; - local and national trends in the transport and logistics industry, including emerging industry practices and needs; - organisational policies and procedures, including those relating to own area of responsibility and performance standards; - relevant sections of national and state/territory legislation, regulatory requirements, and codes of practice/or guidelines as they relate to the level and type of transport and logistics industry operations within own area of responsibility, and; - relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and guidelines.

TUL501 9 Implement and monitor transport logistics

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to implement and monitor transport logistics in accordance with relevant regulatory requirements, standards and codes of practice, including the Australian Dangerous Goods (ADG) Code and workplace procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and

required action to minimise, control or eliminate hazards that may exist during work activities; - applying relevant legislation and workplace procedures; - communicating effectively with others when implementing and monitoring transport logistics; - completing documentation related to implementing and monitoring transport logistics; - implementing contingency plans; - modifying activities depending on operational contingencies, risk situations and environments; - monitoring work activities in terms of planned schedule; - operating and adapting to differences in equipment in accordance with standard operating procedures; - operating electronic communication equipment to required protocol; - prioritising work and coordinating self and others in relation to transport logistics activities; - providing leadership and working collaboratively with others; - reading and interpreting transport schedules, regulatory requirements, customer instructions, workplace procedures and manuals relevant to implementing and monitoring transport logistics; - reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures; - selecting and applying appropriate application of technology, information systems and procedures, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - application of current competencies within functional activity; - application of relevant Australian standards and associated certification requirements; - business policies, procedures and plans including procedures for outsourcing components of operations and engaging additional resources; - code, regulatory, permit and licence requirements relevant to transport logistics; - operational transport logistics systems, resources, management and workplace operating systems; - problems that may occur when implementing and monitoring transport logistics and action that can be taken to resolve or report these problems; - relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and regulations; - relevant regulations, codes of practice and legislative requirements including local and international regulations relevant to transport logistics; - relevant workplace documentation procedures; - resource availability including the competencies of individuals in the team/group; - risks and hazards related to implementing and monitoring transport logistics and ways of controlling the risks involved; - transport and equipment applications, capacities, configurations, safety hazards and control mechanisms; - workplace policies and procedures, including those covering issue resolution and grievance, and; - workplace procedures for implementing and monitoring transport logistics. .

TUL5020 Develop and maintain operational procedures for transport and logistics enterprises

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to develop and maintain operational procedures for transport and logistics enterprises in accordance with relevant regulations, standards and codes of practice, including the Australian Dangerous Goods (ADG) Code and workplace procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying precautions and

required action to minimise, control or eliminate hazards that may exist during work activities; - applying relevant legislation and workplace procedures; - communicating effectively with others when developing and maintaining operational procedures for transport and logistics enterprises; - completing documentation related to developing and maintaining operational procedures for transport and logistics enterprises; - implementing contingency plans; - modifying activities to cater for variations in workplace contexts and environment; - monitoring work activities in terms of planned schedule; - operating electronic communication equipment to required protocol; - planning and organising activities; - prioritising work and coordinating self and others in relation to transport and logistics operations; - providing leadership and working collaboratively with others when developing and maintaining operational procedures for transport and logistics enterprises; - reading and interpreting transport and logistics schedules, inventories, regulatory requirements, customer instructions, workplace procedures and manuals relevant to developing and maintaining operational procedures for transport and logistics enterprises; - selecting and applying appropriate application of technology, information systems and procedures, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - application of current competencies within functional activity; - application of relevant Australian standards and associated certification requirements; - business policies, procedures and plans including procedures for outsourcing components of operations and engaging additional resources; - focus of operation of transport and logistics systems, resources, management and workplace operating systems; - licence and permit requirements relevant to transport and logistics operations; - problems that may occur when developing and maintaining operational procedures for transport and logistics enterprises and action that can be taken to resolve or report these problems; - regulations, codes of practice and legislative requirements including local and international regulations relevant to transport and logistics operations and the Australian Dangerous Goods (ADG) Code where applicable; - resource availability including the competencies of individuals in the team/group; - risks and hazards related to developing and maintaining operational procedures and ways of controlling the risks involved; - transport and equipment applications, capacities, configurations, safety hazards and control mechanisms; - workplace policies and procedures, including those covering issue resolution and grievance, and; - workplace procedures for developing and maintaining operational procedures for transport and logistics enterprises.

TUL5055 Manage a supply chain

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to manage a supply chain within various contexts in the transport and logistics industry. It covers the relationships between an organisation and its supply and demand partners along the chain.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - developing and implementing policies; - focusing on the

customer; - implementing, managing and reviewing management strategies; - implementing contingency plans; - negotiating and liaising with suppliers and relevant stakeholders, verbally and in writing; - using appropriate technology, including software; - working collaboratively with others, and; - working with attention to detail and thoroughness. Students will also be expected to demonstrate the following knowledge: - business terms and conditions for purchasing, tendering and contracting; - ethical behaviour; - legislation related to importing commodities; - legislation, codes of practice, national and international standards applicable Acts and contract law; - organisational policies and procedures related to supply chain management, purchasing, contracting and tendering; - procedures for operating electronic communications equipment; - product knowledge related to goods and services required by the organisation; - requirements for completing relevant documentation, and; - ways to build trust and collaboration as opposed to competition.

TLL5057 Maintain, monitor and improve transport operations systems

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to maintain, monitor and improve an enterprise's transport operations systems in various contexts within the transport and logistics industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - adapting to differences in equipment and related standard operating and servicing procedures; - applying relevant legislation and workplace procedures; - communicating and working effectively with others when maintaining, monitoring and improving transport operations systems; - completing documentation related to work activities; - identifying, managing and reviewing operation systems; - monitoring work activities in terms of planned schedule; - operating electronic communications equipment to required protocol, and; - reading and interpreting policies, documents, legislation, instructions, procedures, information and signs relevant to work activities. Students will also be expected to demonstrate the following knowledge: - emergency procedures; - principles, purpose and location of controls, monitoring devices and systems; - procedures for adjusting controls to optimise the operation of the equipment; - relevant sections of national and state/territory regulatory requirements and codes of practice; - requirements for completing relevant documentation, and; - steps involved in planning the activities.

TLLC0003 Licence to operate a forklift truck

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit specifies the skills and knowledge required to operate a forklift truck safely in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a HRWL licence to operate this plant. Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other attachments that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck. A person performing this work is

required to hold a forklift truck High Risk Work Licence (HRWL).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying safe operating procedures for a forklift truck; - applying relevant forklift truck manufacturer requirements and data plate information and approved modifications to attachments fitted are in accordance with manufacturer requirements; - carrying out pre-start checks, including visual inspection; - conducting and applying risk and hazard assessment strategies; - complying with Commonwealth, State and Territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation, regulations safe work and workplace procedures; - conducting operational checks; - confirming and following traffic management plan procedures relevant to their role in the work area; - conducting relevant procedures for refuelling and isolating fuel/power source as per manufacturer requirements using appropriate PPE; - determining relevant lifting attachment to perform work/task; - determining lift requirements; - ensuring risk control measures within the work area are effective as per workplace procedures; - identifying, isolating and tagging out defective equipment and reporting to authorised person/s; - interpreting and confirming relevant documentation, workplace instructions, safety information, emergency procedures for the work task and relevant area, and; - interpreting workplace procedures in relation to various environmental conditions. Note: For a comprehensive list of required skills: please refer to training.gov.au website. Students will also be expected to demonstrate the following knowledge: - Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck; - communication procedures; - forklift truck characteristics and capabilities, manufacturer requirements and instructions for any attachments - failure/loss of control including brakes and steering; - failure of equipment during forklift truck operations; - forklift truck instability; - operating on ramps and uneven surfaces and in restricted spaces; - use of forklift truck data plate and attachment data plate and appropriate methodology to determine weight of a load is appropriate for forklift truck and any attachment if fitted; - manufacturer requirements, instructions and operator's manual; - problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions; - problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations; - relevant procedures for refuelling and recharging forklift truck using appropriate PPE; - procedures for recording, reporting and maintaining workplace records and information; - risk assessment process including hierarchy of control; - safe use and compliance of different types of attachments; - suitability and lifting capability of the attachment to be used; - shut down procedures for a forklift truck in accordance with manufacturer requirements; - traffic management plan procedures and requirements; - typical routine problems encountered operating a forklift truck and associated equipment, and adjustments required for correction; - workplace procedures including work plan which may be verbal, documented/written, or electronically generated; - work area operating surface suitability, and; - Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) requirements, safe work and workplace procedures.

TLIC2001 Licence to operate a forklift truck

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: A classroom with multi-media capability is required to deliver this course. This unit specifies the skills and knowledge required to operate a forklift truck safely. Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other arms that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck. A person performing this work is required to hold a forklift truck high risk work (HRW) licence. This unit requires a person operating a forklift truck to plan the work, conduct routine checks on a forklift truck, shift loads in a safe manner, and safely shut down and secure equipment after completing operations. Licensing/Regulatory Information This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements. Any alteration to this unit would result in a unit that would not be acceptable to work health and safety (WHS)/occupational health and safety (OHS) regulators for the purpose of licensing.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying risk assessment and hazard control strategies, including hierarchy of control as applied to safely operating a forklift truck; - carrying out post-start operational checks; - carrying out pre-start operational checks; - communicating with other workplace personnel; - complying with Commonwealth, state and territory work health and safety (WHS)/occupational health and safety (OHS) legislation and regulations; - conducting and monitoring safe forklift truck operations that include moving loads safely, driving and manoeuvring, picking up and placing loads at various stack heights and carrying out all functions to the maximum height and load capacity; - driving a forklift truck with load in forward and reverse, while maintaining visibility; - planning and preparing for forklift truck operations; - receiving and interpreting workplace instructions, safety information and emergency procedures; - shutting down a forklift truck in accordance with manufacturer specifications and workplace procedures, and; - verifying problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations. Students will also be expected to demonstrate the following knowledge: - Australian and industry standards relevant to operating a forklift truck; - Commonwealth, state or territory WHS/OHS legislation and approved codes of practice in relation to one's own responsibilities; - forklift truck characteristics and capabilities (including use of load data plates); - forklift truck operations and safe operating techniques; - hierarchy of control; - methodology to determine weight of a load including the estimation or determination from labels, markings or load paperwork; - organisational and workplace standards, requirements, policies and procedures for operating a forklift truck; - procedures for recording, reporting and maintaining workplace records and information; - relevant Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck; - risk control measures; - selecting forklift truck to suit load and workplace conditions, and; - typical routine problems

encountered operating a forklift truck and equipment, and adjustments required for correction.

TLM4004 Mentor individuals or small groups

Locations: Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to mentor individuals or small groups (two to five people) in the workplace. It includes preparing for and undertaking mentoring, providing practice opportunities as well as reviewing mentoring processes and progress. It includes developing the required workplace competence in other workers on a one-to-one or small group basis in an on-the-job environment. This unit applies to experienced workers who take on a mentoring role.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices; - building trust with mentoring participant/s; - ensuring language used suits target audience; - giving and receiving feedback; - listening; - questioning; - completing and maintaining required documentation and records; - developing effective planning documents; - ensuring currency of relevant legislative and regulatory knowledge; - maintaining confidentiality; - making recommendations for further mentoring opportunities; - motivating mentoring participant/s; - planning and managing time effectively; - planning for and managing contingencies; - providing high quality reports; - sequencing mentoring activity in a way that facilitates the development of competence; - transferring and applying skills and knowledge to new contexts and, - working in a culturally diverse environment. Students will also be expected to demonstrate the following knowledge: - access, equity and human rights issues in relation to own area of work; - correct use of equipment and any other processes and procedures appropriate for mentoring; - ethical handling of performance issues; - identification of evidence of competency; - intended mentoring outcome; - job/role environment skills; - mentoring methodologies and strategies; - equal employment opportunity (EEO); - WHS/OHS and other workplace requirements; - relevant workplace tasks, skills and knowledge; - application of relevant competencies and, - training plan for competency development.

TLP4002 Facilitate and capitalise on change in the workplace

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to facilitate and capitalise on change within the workplace. It includes participating in planning for the introduction of change, developing creative and flexible approaches to solutions to change-related problems, and managing emerging challenges and opportunities in the workplace.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating and negotiating effectively with others when planning and facilitating the introduction of change and innovation in the workplace; - completing relevant documentation; - modifying activities depending on operational contingencies, risk situations and environments; - monitoring and prioritising work activities in terms of planned schedule; - operating electronic communications equipment to required protocol; - reading, interpreting and following relevant instructions, procedures and information; - reporting and/or rectifying identified problems that may arise, in accordance with regulatory requirements and workplace procedures; - responding appropriately to cultural preferences in the workplace, including modes of behaviour and interactions with others; - selecting and appropriately applying technology, information systems and procedures to complete workplace tasks; - surveying and assessing organisation and customer requirements for change and innovation; - working collaboratively with others when planning and facilitating the introduction of change and innovation in the workplace, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - operational business planning systems and resources; - relevant regulatory and code requirements; - relevant workplace business management policies and practices, including requirements for maintaining security and confidentiality; - resource availability including the processing capacity of equipment and software systems for planning activities; - typical problems that can occur when planning and facilitating the introduction of changes and innovations in the workplace, and related appropriate action that can be taken, and; - workplace protocols and procedures for facilitating and capitalising on change in the workplace, including risk management, problem solving, strategic planning, quality improvement and customer service.

TLP4013 Implement and monitor logistics planning and processes

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to implement and monitor logistics planning and processes undertaken in various contexts in the transport and logistics industry. It includes planning an efficient logistics operation, developing a contingency management strategy, producing operational schedules, and monitoring and coordinating systems for logistics operations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - completing relevant documentation; - developing and documenting contingency plans as part of the planning process; - identifying and solving problems; - leading others; - modifying activities depending on operational contingencies, risk situations and environments; - planning and organising logistics operations; - reading, interpreting and following local and international transport

schedules, regulatory requirements, customer instructions, and workplace procedures and manuals; - selecting and applying appropriate technology, information and communications systems and procedures, and; - working collaboratively with others. Students will also be expected to demonstrate the following knowledge: - Australian and international regulatory, permit and licence requirements relevant to logistics; - broad principles of supply chain management; - business policies and plans including procedures for outsourcing components of operations and engaging additional resources; - coaching and mentoring approaches to support team members to share knowledge and skills; - relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations; - relevant sections of national and state/territory regulatory requirements and codes of practice as they relate to the level and type of logistics operations undertaken by the enterprise, and; - workplace policies including issue resolution and grievance procedures.

TLP4039 Monitor transport operations

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to monitor transport operations in accordance with regulatory requirements and workplace policies and procedures in various contexts in the transport and logistics industry. It includes determining transport requirements, monitoring unit loads and load building, examining security requirements and analysing the costs of transport operations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - advising on recommendations about possible transport operations improvements; - analysing transport cost elements, pricing and operating costs; - communicating and working effectively with others; - completing relevant documentation; - conveying non-compliance issues; - developing own competence in response to changes in activities; - identifying and correctly using relevant equipment; - interpreting and applying relevant regulations and instructions; - modifying activities dependent on workplace contingencies, situations and environments; - monitoring and anticipating operational problems, hazards and risks, including security breaches, and taking appropriate action; - monitoring work activities in terms of planned schedule; - reading, interpreting and following relevant instructions, procedures, information and signs; - reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures, and; - reporting security breaches. Students will also be expected to demonstrate the following knowledge: - organisational policies and procedures, including those relating to effective monitoring and reporting of transport operations; - principles of load building, to enable effective and efficient movement of load; - relevant sections of national and state/territory legislation, regulatory requirements, codes of practice and/or guidelines as they relate to the level and type of transport operations; - relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and guidelines, and; - software applications commonly used to assist in transport, route planning and load building to maximise cost efficiency.

TLP4040 Monitor warehouse operations

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to monitor warehouse operations, and to identify and report issues and possible improvements in various contexts in the transport and logistics industry. All activities are carried out in accordance with relevant organisational policy and procedures. It requires knowledge of different types of warehouses, their functions, operational and organisational requirements. It includes using warehouse equipment, inventory and stock control processes, information technology and communications systems, warehouse security arrangements and applying engineered standards.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - advising on recommendations about possible improvements to warehouse operations, including measures to improve security arrangements; - communicating and working effectively with others; - completing relevant documentation; - developing own competence in response to changes in activities; - interpreting and applying relevant regulations and instructions; - modifying activities dependent on workplace contingencies, situations and environments; - monitoring and anticipating operational problems, hazards and risks, including security breaches, and taking appropriate action; - monitoring work activities in terms of planned schedule; - operating relevant equipment correctly and safely, including manually-operated material handling equipment; - reading, interpreting and following relevant instructions, procedures, information and signs; - reporting and recording non-compliance issues; - reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures, and; - using appropriate technology, including software and communications systems, to enable monitoring of goods and products in the workplace. Students will also be expected to demonstrate the following knowledge: - computer records/documentation requirements for stock control, including forms, checklists and inventory reports applicable to the workplace; - different types of inventory systems and stock management approaches applicable to a range of warehouse styles and sizes to enable stock control; - housekeeping standards and procedures; - impact of engineered standards on warehouse operations; - organisational policies and procedures, including those relating to effective monitoring and reporting of warehouse operations; - principles of operation and functions of inventory systems; - range of different warehouse structures/types and warehouse applications/functions to store a range of products and goods; - relevant sections of national and state/territory legislation, regulatory requirements, codes of practice and/or guidelines as they relate to the level and type of warehouse operations, including inventory storage; - relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and guidelines; - role and impact of information technology, including record systems, in warehouse operations; - software applications commonly used in warehouse operations; - warehouse security processes to enable identifying and reporting measures to improve security in the workplace, and; - workplace processes for records management and producing inventory reports.

TLP5008 Manage a transport and logistics business unit

Locations: Industry.

Prerequisites: Nil.

759

Description: This unit involves the skills and knowledge required to manage a transport and logistics business unit in accordance with relevant regulatory requirements, standards, codes of practice and workplace procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating effectively with others when managing a transport and logistics business unit; - completing documentation related to managing a transport and logistics business unit; - implementing contingency plans; - modifying activities depending on operational contingencies, risk situations and environments; - monitoring work activities in terms of planned schedule; - operating and adapting to differences in equipment in accordance with standard operating procedures; - operating electronic communications equipment to required protocol; - prioritising work and coordinating self and others in relation to business activities; - reading and interpreting operational data, regulatory requirements, market intelligence, finance, budgetary information and business policies relevant to managing a transport and logistics business unit; - reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures; - working collaboratively with others when managing a transport and logistics business unit, and; - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment. Students will also be expected to demonstrate the following knowledge: - application of current competencies within functional activity; - application of relevant Australian and international standards and associated certification requirements; - Australian and international regulations, codes of practice and legislative requirements relevant to business unit activities; - business policies and priorities; - operational work systems, resources, management and workplace operating systems; - hazards and risks that may arise when managing a transport and logistics business unit, and ways of controlling the risks involved; - information on key competitor operations, strengths and weaknesses; - market intelligence relevant to business operations; - Problems that may occur when managing a transport and logistics business unit, and action that can be taken to report or resolve these problems; - quality and customer service standards, policies and procedures; - relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations; - resource availability including the competencies of individuals in the team and group, and; - workplace policies and processes for managing a transport and logistics business unit.

TLR4001 Monitor supplier performance

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to monitor the performance of contracted suppliers of goods/materials/services in compliance with workplace procedures and requirements. It includes administering supplier contract, assessing for conformity to contracted requirements and completing all required contract documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - administering supplier contract; - applying relevant legislation and workplace procedures; - communicating and working effectively with others; - completing relevant documentation; - contract non-conformance; - interpreting data and providing appropriate, timely information on data analysis outcomes to appropriate personnel; - modifying activities depending on operational contingencies, risk situations and environments; - monitoring and prioritising work activities in terms of planned schedule; - operating electronic communications equipment to required protocol; - reading, interpreting and following relevant instructions, procedures and information; - reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures; - selecting and appropriately applying technology, information systems and procedures, and; - working systematically with required attention to detail. Students will also be expected to demonstrate the following knowledge: - focus of operation of recording, reporting and statistical analysis systems and resources; - relevant regulatory and code requirements; - typical problems that can occur with supply contracts and related appropriate action that can be taken; - workplace business policies and plans as they relate to supply contracts, including procedures for maintaining confidentiality; - workplace contract performance and dispute policies and procedures, and; - workplace protocols and procedures for monitoring supply contractor performance.

TUR5005 Manage a contract

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to manage a contract in various contexts within the transport and logistics industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating and communicating effectively with others when managing a contract; - completing documentation related to contract management, including reports relevant to deliverables of stages and completion; - modifying activities depending on operational contingencies, risk situations and environments, and negotiating modifications with the contractor or agent as required; - monitoring and prioritising work activities in terms of planned schedule; - negotiating solutions to problems as they arise during the contract timeframe; - operating electronic communications equipment to required protocol, and; - reading and interpreting instructions, procedures, information and the contract itself. Students will also be expected to demonstrate the following knowledge: - confidentiality issues in relation to contracted services such as intellectual property; - disposals considerations; - equal employment opportunity and anti-discrimination law; - ethical issues; - financial and accounting issues relevant to the contract; - financial management of a contract including negotiating price variations during the contract; - organisational purchasing policies and practices; - performance management in terms

of identifying and managing contract compliance; - procedures for acceptance of goods or services; - procedures for operating electronic communications equipment; - procurement approval processes; - procurement negotiation practices, including legal aspects; - relevant sections of national and state/territory regulatory requirements and codes of practice related to procurement, including contract law, trade practices law and commercial law to a level sufficient to be able to manage the performance of a contractor, and; - requirements for completing relevant documentation.

TUR5006 Develop, implement and review purchasing strategies

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to develop, implement and review an organisation's purchasing strategies in various contexts within the transport and logistics industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating effectively with others when developing, implementing and reviewing purchasing strategies, including consulting and negotiating with stakeholders, writing policies and procedures, and supporting staff to implement strategies; - developing human resources, financial and other plans when developing, implementing and reviewing purchasing strategies; - identifying and addressing problems relating to developing, implementing and reviewing purchasing strategies; - monitoring, reviewing and evaluating purchasing strategies; - planning and prioritising work activities, and researching and analysing data; - preparing reports appropriate to developing, implementing and reviewing purchasing strategies, and; - reading and interpreting instructions, procedures and information relevant to work activities. Students will also be expected to demonstrate the following knowledge: - concept of the 'Five Rights'; - information about industry benchmarks for purchasing, including information from peak bodies, industry associations and Australian standards; - organisational policies and procedures related to purchasing; contracting and tendering; business terms and conditions for purchasing, tendering and contracting; and ethical behaviour; - product knowledge related to goods and services required by the organisation, and; - relevant legislation, codes of practice, national and international standards, such as Trade Practices Act, contract law, sale of goods legislation, and legislation related to the import of goods and services.

TUR5014 Manage suppliers

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to manage suppliers in various contexts within the transport and logistics industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying relevant legislation and workplace procedures; - communicating and working effectively with others when managing suppliers; - completing documentation related to work activities; - implementing contingency plans; - modifying activities depending on operational contingencies, risk situations and environments; - monitoring and prioritising work activities in terms of planned schedule; - operating electronic communications equipment to required protocol; - reading and interpreting instructions, procedures, information and signs relevant to managing suppliers; - reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures, and; - sourcing, managing, evaluating and reviewing suppliers. Students will also be expected to demonstrate the following knowledge: - code of practice for working collaboratively with others; - common use arrangements; - contract performance and dispute policies and procedures; - financial accountability requirements; - operation of recording, reporting and statistical analysis systems and resources; - organisational policies, procedures, plans, guidelines and code of conduct relevant to procurement and supply contracts; - organisational procedures for monitoring the performance of suppliers; - probity requirements and ethical issues; - procedures for operating electronic communications equipment; - procedures for receipt and payment of goods and services; - procurement approval procedures; - relevant sections of national and state/territory regulatory requirements and codes of practice related to procurement; - requirements for completing relevant documentation; - steps involved in planning the work activities, and; - suppliers in the marketplace.

TUJ2012 Participate in environmentally sustainable work practices

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to participate in environmentally sustainable work practices. It includes identifying current resource usage, complying with environmental regulations and implementing performance improvement strategies to reduce negative environmental impacts of work practices.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assisting with enterprise plans to improve resource efficiency; - communicating effectively with others when questioning, listening, liaising and imparting knowledge; - complying with environmental regulations; - identifying and measuring current resource use; - identifying and minimising hazards and risks; - organising work methodically and prioritising duties; - reading and interpreting job sheet, work requirements or safety data sheets (SDSs)/material safety data sheets (MSDSs); - solving problems; - working in a team; - working safely and efficiently, and; - writing reports. Students will also be expected to demonstrate the following knowledge: - environmental issues relating to: life cycle of products: re-new, re-use and recycle; workplace/site; - features of an environmental management strategy; - work health and safety (WHS)/occupational health and safety (OHS) requirements relating to: dangerous goods and hazardous substances; WHS/OHS hierarchy of control; - sustainability

management principles, practices, tools and techniques relevant to the transport and logistics industry context, and; - service requirements for transport and logistics.

TUJ4028 Apply knowledge of logistics

Locations: Industry.

Prerequisites: Nil.

Description: This unit involves the skills and knowledge required to analyse and apply knowledge of logistics in accordance with relevant organisational policy and procedures. It includes accessing and interpreting relevant logistics information and applying this information in the workplace.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - adhering to relevant logistics requirements; - analysing and interpreting logistics information to determine where internal and external factors impact on the logistics requirements, and adjusting planning accordingly; - applying knowledge of logistics to assist work and to guide problem solving; - communicating key logistics information clearly, presenting information confidently and selecting the appropriate communication medium for a range of audiences, and; - using appropriate information technology and software. Students will also be expected to demonstrate the following knowledge: - logistics information or information systems; - logistics knowledge relevant to the work performed, and; - relevant and industry specific information regarding the support to capability and support to operations.

UEENEE110A Assemble, mount and connect control gear and switchgear

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE102A - Fabricate, assemble and dismantle utilities industry components
UEENEE104A - Solve problems in d.c. circuits
UEENEE105A - Fix and secure electrotechnology equipment
UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG006A - Solve problems in single and three phase low voltage machines
UEENEEG063A - Arrange circuits, control and protection for general electrical installations
UEENEEG101A - Solve problems in electromagnetic devices and related circuits
UEENEEG102A - Solve problems in low voltage a.c. circuits
UEENEEG106A - Terminate cables, cords and accessories for low voltage circuits
UEENEEG109A - Develop and connect electrical control circuits

Description: This unit covers the assembling and mounting of control gear and switchgear including the interconnections within a switchboard enclosure intended to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely, following standards, specifications and component manufacturers requirements, matching equipment with that specified, terminating cables and connecting wiring and completing necessary documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - safety issues associated with switchgear and control gear assembly and installation; - types of switchgear and other equipment; - labelling and numbering; - component layout; - choice of switchgear and control gear, and; - other considerations.

UEENEEA113A Mount and wire control panel equipment

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE102A - Fabricate, assemble and dismantle utilities industry componentsUEENEE104A - Solve problems in d.c. circuitsUEENEE105A - Fix and secure electrotechnology equipmentUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEG006A - Solve problems in single and three phase low voltage machinesUEENEG063A - Arrange circuits, control and protection for general electrical installationsUEENEG101A - Solve problems in electromagnetic devices and related circuitsUEENEG102A - Solve problems in low voltage a.c. circuitsUEENEG106A - Terminate cables, cords and accessories for low voltage circuitsUEENEG109A - Develop and connect electrical control circuits

Description:This unit covers mounting control devices, wiring support in control panel enclosures and installing the interconnecting wiring. It encompasses working safely, following layout and circuit diagrams, mounting equipment, installing and terminating wiring, functional testing and completing necessary documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - control panel types and mounting techniques; - labelling and numbering; - component layout; - choice of switchgear and control gear, and; - other considerations.

UEENEECO01B Maintain documentation

Locations: Industry, Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit covers the maintenance of the variety of documentation required to record work activities, purchases and expenses and compliance obligations. It encompasses documentation typically required in an electrotechnology enterprise, work instructions and procedures and time management.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - enterprise communication methods; - work activities records, and; - using basic computers and applications.

UEENEECO02B Source and purchase material/parts for installation or service jobs

Locations: Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers sourcing and purchasing/ordering materials/parts for installation or service jobs. It encompasses following job specification, using manufacturer's catalogues, making telephone, internet or email enquiries, selecting compliance materials and completing the necessary purchasing documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - enterprise communication methods; - work activities records; - enterprise purchasing system, and; - using basic computers and applications.

UEENEECO03B Provide quotations for installation or service jobs

Locations: Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers providing quotations for installation and service work not exceeding \$20K. It encompasses following job specification, using manufacturer catalogues, making telephone, internet or email enquiries, selecting compliance materials, pricing materials and labour costs, completing the necessary quotation documentation and applying the necessary customer relations protocols.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - enterprise communication methods; - work activities records; - enterprise customer relations protocols; - costing methods in an enterprise, and; - costing small jobs.

UEENEECO05B Estimate electrotechnology projects

Locations: Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers estimate material and labour costs for competitive quotation/tenders for work exceeding \$20K. It encompasses reading and understanding job specifications, material take-offs, determining labour and site requirements, costing and documenting.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - estimating electrotechnology projects.

UEENECC006B Prepare tender submissions for electrotechnology projects

Locations: Footscray Nicholson, Sunshine.

Prerequisites: UEENECC005B - Estimate electrotechnology projects

Description: This unit covers the preparation of tender documents. It encompasses reading and understanding tender requirements and project specifications, verifying estimates and capacity to meet timelines, complying with legal requirements and documenting submissions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - purpose and sources of a tender; - documents supplied with a tender; - typical special conditions included in a tender, and; - tender submission requirements.

UEENECC010B Deliver a service to customers

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers the interacting with customers to identify and meet their service needs. It encompasses following community and enterprise policies and standards, identifying customer needs, identifying and resolving problems/issues and maintaining product/service quality.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - enterprise communication methods; - work activities records; - problem solving concepts and techniques; - enterprise customer relations protocols; - enterprise quality management system, and; - instructing users in the use of specific items of equipment and systems.

UEENECC020B Participate in electrical work and competency development activities

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers the application of industry/enterprise/policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - responsibilities under a competency development plan; - methods of monitoring and reporting competency development activities, and; - enterprise work activities policies and procedures.

UEENEED101A Use computer applications relevant to a workplace

Locations: Industry, Sunshine.

Prerequisites: UEENEED101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the basic use of personal computers application relevant to a work function. It encompasses switching the computer on, applying user preferences, selecting basic applications, entering and retrieving information and printing files.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - starting up; - selecting application; - entering information; - saving, and; - printing.

UEENEED102A Assemble, set-up and test computing devices

Locations: Industry, Sunshine.

Prerequisites: UEENEED101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers assembly, setting up and testing personal computers as directed in computer service manuals. It encompasses safe working practices, checking computer components, assembling components to form a basic personal computer, installing and testing basic operating system, drivers and application software, following written and oral instruction and applying customer relations procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - sub-assemblies architecture and their function; - assembling and dismantling techniques; - hardware faults and troubleshooting techniques; - basic network hardware and components; - connection of network media; - set up of standard network configuration; - sub-assemblies faults and troubleshooting techniques; - repair

techniques; - operating systems in use; - operating System installation and configuration; - basic authentication and file and directory security, and; - occupational health and safety fundamentals as they relate to computing device assembly/disassembly.

UEENEED104A Use engineering applications software on personal computers

Locations: Industry, Sunshine.

Prerequisites: UEENEE1 01A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the use of computer application relevant to engineering support work functions. It encompasses applying user preferences, using application menus and tools, entering and retrieve information, working with groups and transferring and printing files.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - computer systems overview; - operating system overview; - windows operating system; - word processors; - spreadsheets; - databases; - transferring data between windows applications; - drawing and computer assisted design (CAD) programs, and; - e-mail and internet browsers.

UEENEED117A Install and configure network systems for internetworking

Locations: Industry, Sunshine.

Prerequisites: UEENEE1 01A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This competency standard unit covers the interconnection of networks. It encompasses safe working practice, basic installation and configuration of routers and documenting installation and configuration activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - calculate subnet addresses and masks; - layer 3 and 4 protocols; - static and dynamic routing; - basic router configuration; - router security; - router boot sequence; - router operating system management; - password recovery; - router components and interfaces; - troubleshooting at all layers; - interior and exterior routing protocols; - distance vector routing protocols; - link state routing protocols; - routing tables; - metrics used by routing protocols to find routes; - advantages and disadvantages of distance vector and link state routing protocols, and; - route summarisation.

UEENEED146A Set up and configure basic local area network (LAN)

Locations: Industry, Sunshine.

Prerequisites: UEENEED1 02A - Assemble, set-up and test computing devices/UEENEE1 01A - Apply Occupational Health and Safety regulations, codes and

practices in the workplace

Description: This unit covers setting up, configuring and maintaining operation of a basic local area network (LAN) of up to 20 connected devices. It encompasses safe working practices, installing network hardware, installing and configuring network software, establish user accounts, configure shared Internet connection and documenting set up parameters and LAN topology.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - analogue and digital signals; - the OSI model for computer system; - types of networks, network components and hardware; - local area network (LAN) architectures; - cabling and termination arrangements for a LAN system and define all the hardware requirements; - multiple access units and their function; - LAN standards; - basic principle of medium access methods such as polling, token passing and CSMA/CD; - current network operating systems available for establishing a LAN; - network hardware installation methods; - concepts and the hardware required for internet and worldwide web working LANs; - network software installation and configuration methods; - network testing and diagnostic tools and methods; - networking protocols; - network signal propagation; - basics of encoding networking signals, and; - IP addressing and subnetting.

UEENEED147A Develop energy sector directory services

Locations: Industry, Sunshine.

Prerequisites: UEENEE1 01A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers developing energy sector directory services to support centralised management and security, centralised authentication, information security and single sign on for network users, and standardised access to application data. It encompasses safe working practices, configuring directory integrated Domain Name System (DNS), installing and configuring directory services infrastructure, directory roles and services, creating and managing directory objects, maintaining the directory services environment, configuring certificate services, and documenting development activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - configuring directory service integrated Domain Name System (DNS); - configuring the directory services infrastructure; - configuring directory service roles and services; - creating and maintaining directory service objects; - maintaining the directory services environment, and; - configure certificate services.

UEENEED149A Develop energy sector computer network applications infrastructure

Locations: Industry, Sunshine.

Prerequisites: UEENEE01A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers developing an applications infrastructure for energy sector enterprise computer networks. It encompasses safe working practices, deploying servers, configuring remote desktop services, configuring a web services infrastructure, configuring network application servers, documenting development activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - deploying network servers; - remote desktop services; - configure a web services infrastructure, and; - configure network application services.

UEENEE009B Comply with scheduled and preventative maintenance program processes

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers the quality assurance and risk management compliance processes for maintenance of the electrotechnology aspects of plant and equipment. It encompasses working safely and to technical, quality and risk management standards, work specifications and maintenance schedules, sample inspections, evaluating components and completing the necessary maintenance documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - maintenance function; - role of maintenance department; - occupational health and safety requirements; - maintenance terminology; - preventative maintenance; - predictive maintenance; - corrective maintenance; - plant history cards/files; - inspection techniques; - predictive maintenance; - remote visual inspection; - non-destructive testing; - thermography; - vibration analysis; - oil analysis; - characteristics of plant operation; - assessment of failure characteristics; - link failure characteristics to maintenance systems; - identify production windows; - resources; - labour; - materials; - establish plan; - implementation procedures; - analysis of records; - manual recording methods, and; - computerised recording methods.

UEENEE011C Manage risk in electrotechnology activities

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers managing risk related to OHS, environment, resources and financial viability. It encompasses identifying risk events, the likelihood and consequences of such events, evaluating risk, risk management planning and mitigation of risk.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - the need for risk management within the broad project management framework; - risk management methodologies, their capabilities, limitations, applicability and outcomes; - uncertainty and the means of measurement; - the application of risk management tools and techniques; - risk management in the context of the project life cycle and other project management functions, and; - implementing risk management.

UEENEE015B Develop design briefs for electrotechnology projects

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers developing requirement to be incorporated in to the design of electrotechnology projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - purpose of customer relations, and; - purpose of critical path analysis.

UEENEE020B Provide basic instruction in the use of electrotechnology apparatus

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers instructing customers/users in the use of electrotechnology apparatus. It encompasses appropriate customer relations, the use of apparatus manufacturer's instruction material, basic instruction methods and evaluation and completing documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - methods for evaluating user needs - how equipment is used efficiently and safely and identifying wear and tear and damage to the equipment that requires repairing; - basic instruction methods - appropriate to the culture of the users and the equipment for which instruction is given; - methods for evaluating user's ability use equipment

correctly; - communicating with personnel; - communicating with suppliers; - communicating with customers; - purpose and extent of maintaining work activities records in an enterprise, and; - customer relations.

UEENEEE038B Participate in development and follow a personal competency development plan

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers the application of skills and knowledge in taking responsibility for one's own competency development. It encompasses understanding the structure of a competency development plan, participating in the development of a personal competency development plan, understanding responsibilities and obligations under a competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - competency development (training) plans; - qualification structure; - responsibilities of parties to the contract; - electrotechnology industry career opportunities; - industry customs and practices; - monitoring of workplace evidence; - RTO Policies; - apprentice/learner discipline policy; - attendance at the Vocational and Technical Education Centre; - fire and emergencies at the Vocational and Technical Education Centre; - entry requirements; - RTOs responsibility to receive and monitor workplace activities of the apprentice/learner; - industry requirements for monitoring workplace evidence; - acceptable methods for monitoring and reporting workplace activities; - apprentice's/Learner's responsibility to participate in the reporting of workplace activities; - RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement; - employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner, and; - options for appeal or assistance from RTO or State Training Authority (STA).

UEENEEE071B Write specifications for electrical engineering projects

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers developing requirements to be incorporated into the writing of specifications for electrical engineering projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - electrical engineering specifications; - dealing with suppliers and manufacturers; - using basic computers functions, and; - research skills.

UEENEEE078B Contribute to risk management in electrotechnology systems

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit covers contributing to the management of risk in electrotechnology systems related to OHS, environment, resources and financial viability. It encompasses contributing to the identification of electrotechnology systems risks; and risk events, the likelihood and consequences of such events, evaluating risk, risk management planning and mitigation of risk.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - risk management principles; - principles of risk management; - principles of risk Assessment; - principles of risk mitigation handling and monitoring, and; - principles of risk management procedures.

UEENEEE080A Apply industry and community standards to engineering activities

Locations: Industry, Sunshine.

Prerequisites: UEENEEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the industry and community standards expected of engineers. It encompasses knowledge and application of ethical and community standards, seeking advice regarding broader implications of engineering works, adopting appropriate technologies and engaging in current engineering issues.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - purpose of ethical standards; - the common tenets of ethical standards; - ethical standards of professional bodies in the electrotechnology industry; - application of ethical standards; - purpose of standards and how they are applied; - difference between standards, codes of practice and guidelines; - legal implications of standards, codes of practice and guidelines; - standards development organisations and compliance systems, and; - standards development process and community involvement.

UEENEEE081A Apply material science to solving electrotechnology engineering problems

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the application of materials for a specific purpose in electrotechnology. It encompasses working safely, knowledge of materials science including classifications, characteristics and any impact a material may have on health and the environment, the processes of corrosion and degradation, how particular materials are used, solving electrotechnology problems involving of materials for a particular application and documenting justification for such solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - classification, nature and physical properties of materials used in electrotechnology; - dielectric strength and dielectric breakdown, examples to include applications using solids, liquids, gases and vacuum; - conductors and semiconductors; - chemical effects on materials; - material processing and manufacturing, and; - environment and health issues.

UEENEE082A Apply physics to solving electrotechnology engineering problems

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the law of physics and how they apply to solving electrotechnology related problems. It encompasses working safely, knowledge of measurements of physical phenomena, linear and angular motion, harmonic motion, wave theory, optics, acoustics and heat capacity and transfer, use of measurement techniques, solving physics related problems and documenting justification for such solutions.

Required Reading: VU Produced Workbooks

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - measurement; - linear motion; - angular motion; - simple harmonic motion and vibration; - wave theory; - electromagnetic waves and propagation; - optics; - acoustics and ultrasonics, and; - heat capacity and heat transfer.

UEENEE083A Establish and follow a competency development plan in an electrotechnology engineering discipline

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers establishing and following a plan for one's own competency development. It encompasses establishing a plan in consultation with the enrolling registered training organisation (RTO), following industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing

competency, pursuing opportunities to develop competencies, to self-monitoring competency development and meeting obligations for periodic reporting of competency development activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - components of a competency development plan; - obligations and expectations under a competency development plan, and; - scope for industry/enterprise policies and procedures.

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Locations: Industry, Werribee, Sunshine, Online.

Prerequisites: Nil.

Description: This unit specifies the mandatory requirements of occupational health and safety and how they apply to the various electrotechnology work functions. It encompasses responsibilities for health and safety, risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - the basic legal requirements covering occupational health and safety in the workplace; - the work environment; - manual handling; - chemicals in the workplace; - working at heights; - confined spaces; - physical and psychological hazards; - working safely with electricity, and; - life support - CPR in the workplace.

UEENEE102A Fabricate, assemble and dismantle utilities industry components

Locations: Industry, Werribee, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers basic fitting and fabrication techniques as they apply in the various utilities industry work functions. It encompasses the safe use of hand, fixed and portable power tools; cutting, shaping joining and fixing using metallic and non-metallic materials; dismantling and assembling equipment; basic mechanical measurement and marking-out and reading drawings/diagrams.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - mechanical drawing interpretation and sketching; - workshop planning and materials; - measuring and marking out; - holding and cutting; - drills and drilling; - tapping and threading; - general hand tools; - joining techniques; - portable electric power tools; - sheet metal work; - low tolerance measurement, and; - dismantling and assembly techniques.

UEENEE103A Solve problems in ELV single path circuits

Locations: Industry, Werribee, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers providing known solutions to predictable problems in single path circuits operated at extra-low voltage (ELV) as they apply to various energy sector work functions. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - basic electrical concepts; - basic electrical circuit; - OHM's Law; - electrical power; - effects of electrical current; - EMF sources energy sources and conversion electrical energy; - resistors, and; - series circuits.

UEENEE104A Solve problems in d.c. circuits

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers determining correct operation of single source D.C. series, parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in single and multiple path circuits.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - basic electrical concepts; - basic electrical circuit; - OHM's law; - electrical power; - effects of electrical current; - EMF sources energy sources and conversion electrical energy; - resistors; - series circuits; - parallel circuits; - series/parallel circuits; - factors affecting resistance; - effects of meters in a circuit; - resistance measurement; - capacitors and capacitance, and; - capacitors in series and parallel.

UEENEE105A Fix and secure electrotechnology equipment

Locations: Industry, Werribee, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers fixing, securing and mounting techniques as apply in the various electrotechnology work functions. It encompasses the safe use of hand and portable power tools, safe lifting techniques, safe use of ladders and elevated platforms and the selection and safe application of fixing devices and supporting accessories/equipment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - device for securing and mounting electrical/electronic/instrumentation/refrigeration/air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to hollow walls; - device for securing and mounting electrical/electronic/instrumentation/refrigeration/air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to solid walls; - device for securing and mounting electrical/electronic/instrumentation/refrigeration/air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to metal fixing, and; - securing and mounting electrical/electronic/instrumentation/refrigeration/air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories using fixing adhesives and tapes.

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the use of drawings, diagrams, cable schedules, standards, codes and specifications as they apply to the various electrotechnology work functions. It encompasses the rudiments for communicating with schematic, wiring and mechanical diagrams and equipment and cable/connection schedules, manuals, site and architectural drawings and plans showing the location of services, apparatus, plant and machinery and understanding the use and format of compliance standards and job specifications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - architectural drawings; - electrical drawings; - circuit diagrams; - wiring diagrams; - building construction drawings and diagrams; - regulation for undertaking electrical work; -

standards philosophy and format, and; - purpose, format and content of typical job specifications.

UEENEE117A Implement and monitor energy sector OHS policies and procedures

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers the mandatory requirements of persons in a supervisory role to implement and monitor an organisation's occupational health and safety policies, procedures and programs. It encompasses understanding an organisation's OHS obligations, providing safety information to staff, implementing and monitoring participative arrangements, safety procedures and training and maintaining safety records.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - provisions of relevant occupational health and safety legislation; - principles and practice of effective occupational health and safety management; - workplace hazards, range and selection of control measures; - organisational health and safety management systems and policies and procedures needed for legislative compliance; - impact of characteristics and composition of the workforce on occupational health and safety management; - relevance of occupational health and safety management to other organisational management policies, procedures and systems; - analysis of entire work environment and judge occupational health and safety interventions; - analysis of relevant workplace data, and; - ability to assess resources needed for risk control.

UEENEE119A Solve problems in multiple path extra low voltage (ELV) a.c. circuits

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE104A - Solve problems in d.c. circuits

Description: This unit covers determining correct operation of single source ELV a.c. parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in multiple path circuits.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - sinusoidal alternating voltage and current; - phasors; - resistance in a.c. circuits; - inductance in

a.c. circuits; - capacitance in a.c. circuits; - impedance; - resonance, and; - power and power factor.

UEENEE121A Plan an integrated cabling installation system

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE102A - Fabricate, assemble and dismantle utilities industry components UEENEE105A - Fix and secure electrotechnology equipment UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications UEENEE106A - Terminate cables, cords and accessories for low voltage circuits

Description: This unit covers the planning of cable routes for intelligent power and lighting, information and communications, entertainment systems, distributed video and audio; energy management and control; security and safety; digital home health; age and assisted living;. This unit encompasses determining immediate and future cabling needs of an installation and their origins and termination points, planning cable routes, specifying cable types, sizes, fixing/support methods and cable identification systems and documenting cabling plans based on calculated and/or deemed-to-comply solutions as well as the planning of the wiring hub if required.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - overview of relevant residential systems; - information and communications system; - entertainment; - energy management; - security and safety; - digital home health; - age and assisted living, and; - intelligent lighting and power.

UEENEE122A Carry out preparatory energy sector work activities

Locations: Industry, Werribee, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE102A - Fabricate, assemble and dismantle utilities industry components UEENEE105A - Fix and secure electrotechnology equipment

Description: This unit covers the carrying out of preparatory work related to any energy sector work discipline. It encompasses working safely, following basic instructions under direct supervision. It will include energy sector support activities including the use of basic hand tools, the safe use of ladders and elevated work platforms and the fixing and securing of equipment under direction following routine work practices.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - hand tools and their use, and; - fixed and portable tools and their use;

UEENEE124A Compile and produce an energy sector detailed report

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers complying and producing an energy sector report. It encompasses determining the safety requirements are met and all regulatory responsibilities are adhered to. The person competent in this unit must demonstrate an ability to identify information sources and collect and analyse and format information applicable to the electrotechnology industry and produce a report as required.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - communicating with personnel; - communicating with suppliers; - communicating with customers; - purpose and extent of maintaining work activities records in an enterprise; - techniques of analysis; - summary of statistics; - correlation and regression, and; - investigation and reporting.

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

Locations: Industry, Sunshine.

Prerequisites: UEENEE126A - Provide solutions to basic engineering computational problems

Description: This unit covers determining correct operation of complex multiple path circuits and providing engineering solutions as they apply to various branches of electrotechnology work functions. It encompasses working safely, problem solving procedures, including using electrical measuring devices, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - voltage/current sources and Kirchhoff's law for d.c. linear circuits; - superposition principles for d.c. linear circuits; - mesh and nodal analysis for d.c. linear circuits; - Thevenin's principles for d.c. linear circuits; - Norton's principles for d.c. linear circuits; - phasors; - complex Impedance; - series and parallel a.c. linear circuits; - superposition principles and Kirchoff's Laws applied to a.c. linear circuits; - mesh and nodal analysis for a.c. linear circuits; - Thevenin and Norton theorems applied to a.c. linear circuits; - star-delta conversions; - complex a.c. power and maximum power transfer theorem, and; - transients.

UEENEE126A Provide solutions to basic engineering computational problems

Locations: Industry, Sunshine.

Prerequisites: A student must have completed one of the following pre-requisites: UEENEE029B Solve electrotechnical problems; UEENEE102A Solve problems in low voltage a.c. circuits, or; UEENEEH014B Troubleshoot frequency dependent circuits.

Description: This unit covers the application of computational processes to solve engineering problems. It encompasses working safely, applying problem solving techniques, using a range of mathematical processes, providing solutions to electrical/electronics engineering problems and justifying such solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - rational, irrational numbers and basic algebra; - algebraic manipulation; - law of indices; - estimations, errors and approximations; - plane figures - triangles and basic trigonometry; - plane figures - quadrilaterals and circles; - graphs of Trigonometric functions; - graphs of linear functions; - simultaneous equations; - matrices; - quadratic functions; - exponential and logarithmic functions; - vectors and phasors, and; - complex numbers.

UEENEE127A Use advanced computational processes to provide solutions to energy sector engineering problems

Locations: Industry, Sunshine.

Prerequisites: A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE126A Provide solutions to basic engineering computational problems, and; UEENEE129A Solve electrotechnical engineering problems. Electrotechnology Unit Pathway Group: UEENEEH169A Solve problems in basic electronic circuits. Electronics and Communications Unit Pathway Group: UEENEE104A Solve problems in d.c. circuits, and; UEENEEH114A Troubleshoot resonance circuits in an electronic apparatus. Electrical Unit Pathway Group: UEENEE104A Solve problems in d.c. circuits, and; UEENEEG101A Solve problems in electromagnetic devices and related circuits.

Description: This unit covers the application of advanced computational processes to solve energy sector engineering problems. It encompasses working safely, applying problem solving techniques, using a range of advanced mathematical processes, providing solutions to electrical/electronics engineering problems and justifying such solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - differential

calculus; - integral calculus; - linear algebra; - vectors; - variables; - sequences and series; - differential equations; - numbers, and; - statistics.

UEENEE128A Develop engineering solutions to photonic system problems

Locations: Industry, Sunshine.

Prerequisites: A student must complete one of the following pre-requisites options: UEENEE125A Provide engineering solutions for problems in complex multiple path circuit; UEENEE126A Provide solutions to basic engineering computational problems, and; UEENEE129A Solve electrotechnical engineering problems. OR UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE104A Solve problems in d.c. circuits, and; UEENEE101A Solve problems in electromagnetic devices and related circuits. OR UEENEE114A Troubleshoot resonance circuits in an electronic apparatus; UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace, and; UEENEE104A Solve problems in d.c. circuits, or UEENEE169A Solve problems in basic electronic circuits.

Description: This unit covers developing engineering solutions to resolve problems with photonic systems. It encompasses working safely; apply extensive knowledge of photonic technologies and their application, gathering and analysing data, and applying problem solving techniques, developing and documenting solutions and alternatives.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - photonic principles; - the environmental advantages and impacts of optical technology; - basic geometric optics; - introduction to photonic components; - the basic concepts of optical transmission; - photonic components and component technologies; - photonic components and their roles in photonic devices; - operating principles of optical couplers and their characteristics; - components for WDM systems, and; - operational principles of key photonic devices.

UEENEE130A Provide solutions and report on routine electrotechnology problems

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers the application of fundamental numerical calculations required to solve routine electrotechnology problems and reporting the outcomes to requirements. It encompasses working safely, applying routine problem solving techniques, using a range of fundamental mathematical processes and techniques to identifying solutions to electrotechnology problems, and reporting the solutions. Note. Typical electrotechnology problems are those encountered in meeting routine performance requirements and compliance standards, interpreting the operating parameters of equipment and dealing with equipment malfunctions. Typical reports are those based on routine structures and formats, and require the application of routine communication fundamentals.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - electrotechnology numeracy diagnostic test; - recommendation of remedial action; - electrotechnology literacy diagnostic test; - recommendation of remedial action, and; - communicating with suppliers and clients.

UEENEE137A Document and apply measures to control OHS risks associated with electrotechnology work

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers identifying occupational health and safety hazard and risks and documenting control measures. It encompasses identifying workplace hazards, assigning levels of risk, developing control measures to eliminate and/or mitigate risks, reviewing risk control measures and maintaining documentation of hazards, risk control measures and their application in accordance with compliance procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - risk management and assessment of risk; - hazards and risks and control measures in working on construction sites; - hazards associated with extra-low voltage, low-voltage and high-currents; - hazards and risks and control measures associated with high-voltage; - hazards and risks and control measures in working with low voltage equipment; - hazards and risks and control measures associated with harmful, devices, materials, gases, dusts and airborne contaminant; - determine the degree of the risk; - use control measures to eliminate or control the risk, and; - engaging in monitoring and reviewing processes to ensure control measures remain valid.

UEENEE142A Produce products for carrying out energy sector work activities

Locations: Industry, Werribee, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE102A - Fabricate, assemble and dismantle utilities industry components

Description: This unit covers products required to do work in the energy sector environment are produced in accordance with the schedule of work ensuring work is completed in an agreed time, to a quality standard and with a minimum waste.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - basic

technical drawing conventions and symbols; - freehand technical sketching techniques; - hand tools for cutting, shaping, drilling, threading, tapping, and finishing metallic and non-metallic components; - tools for measuring and marking out; - tools for dismantling and assembling electrical and electronic components; - fixed power tools for cutting, shaping, drilling, and finishing metallic and non-metallic components; - portable power tools for cutting, shaping, drilling, and structural components; - purpose of sequencing dismantling and assembling; - importance of marking/labelling and storing parts; - techniques for dismantling and assembling close fitting parts; - use of gasket and seals; - hazards associated with welding activities and equipment; - welding processes and industry applications; - thermal cutting techniques, and; - manual metal arc welding processes.

UEENEE146A Identify effects of energy on machinery and materials in an energy sector environment

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers effects of energy on machinery and/or materials used in an energy sector environment are identified and completed in an agreed time, to a quality standard and using appropriate technology mediums, where required. It encompasses working safely, applying knowledge of identifying the effects of energy on machinery and materials in an electrotechnology environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - motion in two dimensions; - electricity and magnetism; - light and matter; - atoms and nuclei, and; - skills.

UEENEE148A Carry out routine work activities in an energy sector environment

Locations: Industry, Werribee, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers undertake scheduled routine work activities in the energy sector in an agreed time, to a quality standard and with a minimum of waste. It encompasses working safely, applying knowledge of carrying out routine work activities in electrotechnology environments.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - energy sector vocations; - career paths in energy sector; - training in energy sector vocations; - industry organisations; - qualification requirements; - policies and practices in energy sector industry; - job application, and; - job interview.

UEENEE160A Provide engineering solutions for uses of materials and thermodynamic effects

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the engineering solution for the appropriate selection and use of materials and thermodynamic effects relative to an electrotechnology problem. It encompasses working safely, problem solving procedures, including using measuring instruments, applying appropriate theorems and providing solutions derived from measurements and calculations and justification for such solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - classification of materials on the basis of state; - difference between elements, compounds and mixtures; - atomic structure and bonding of materials; - properties of ferrous and non-ferrous materials; - properties of ceramic and composite materials; - chemical, physical and mechanical properties of materials; - causes of degradation of polymer materials; - non-destructive testing and types of test equipment; - corrosion testing; - evaluation and suitability of materials for specific applications; - principles, advantages and limitations of casting, forging, extrusion and powder metallurgical processes; - methods of joining materials; - methods used for surface finishing of materials; - relationship between energy usage and standard of living; - state of matter in terms of molecular theory; - relationship between mass, volume, density, force, pressure and temperature in thermodynamic concepts; - compression ratio and pressure ration calculations in a basic piston and cylinder mechanism; - relationship between work and pressure/volume; - concept and calculations related to energy transfer in a closed loop system; - concept of and calculations about property changes and work, heat and internal energy transfer in gases in typical engineering processes; - principle, operation and performance of common types of heat engines, and; - heat engine performance parameters.

UEENEE161A Analyse static and dynamic parameters of electrical equipment

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the analysis of static and dynamic parameters of electrical equipment associated with plant and machinery. It encompasses working safely, applying extensive knowledge of equipment operation and construction and its application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - units of mass, length, time and force and distinguish between vector and scalar quantities; - resultant and equilibrant of systems of coplanar concurrent and non-concurrent forces; - principles of movement; - reactions of structures using equations of equilibrium and including the moment effect of a couple; - laws of dry sliding friction applicable to horizontal and inclined planes; - reactions and internal forces acting on the members of a pin jointed framed structure subjected to point loads at the joint; - pin and support reactions for a non-coplanar non-concurrent force system; - linear and angular equations of motion for constant accelerations; - principles of the conservation of energy; - mechanical advantage, velocity ratio and efficiency of machines; - acceleration experienced by connected bodies so their motions are dependent upon one another, and; - principle of conversion of moment related to elastic collisions and departure masses.

UEENEE162A Select drive components for electrical equipment design

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE161A - Analyse static and dynamic parameters of electrical equipment

Description: This unit covers the selection of drive components based on design concepts for the operation of plant and electrical equipment. It encompasses working safely, applying extensive knowledge of drive component operation and characteristics, their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - function of common mechanical drive parts and components; - Australian Standards governing the design of parts and components in a drive system; - selection criteria for a part or component or drive system to suit a particular application; - design philosophy applicable to mechanical, civil and electrical engineering; - essential features of a design specification; - understanding of Australian Standards and Codes of practice for design; - steps in a designing a design, and; - ergonomics in design.

UEENEE163A Analyse materials for suitability in electrical equipment

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE161A - Analyse static and dynamic parameters of electrical equipment

Description: This unit covers the analysis of materials for their suitable use in the construction of electrical equipment. It encompasses working safely apply extensive knowledge of materials and their properties as they relate to equipment construction and operation, gathering and analysing data, applying problem solving techniques, developing and documenting findings, solutions and providing alternatives.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - structure of metals, polymers and ceramics; - interpretation of phase equilibrium and isothermal transformation diagrams; - heat treatment processes of low carbon steel, high carbon steel and tool steel as well as non-ferrous metals such as aluminium and copper; - properties and specifications of metal and non-metal materials; - common failures in materials; - determining normal stresses, strains and deformations caused by axial load; - shear stress on bolted connections; - failures in fillet welds and determine appropriate weld size and length required on welded connections; - centroid and second moment of gyration of plain figures; - shear force and bending moment diagrams for supported and cantilever beams subjected to vertical point loads and UDLs; - bending stress in beams; - deflection of beams subjected to loads; - torque distribution diagrams and calculation of torsional shear stress and angle of twist on circular shafts subjected to torque, and; - coefficient of linear expansion to determine thermal stress in single members caused by restraint and changes in temperature.

UEENEE164A Design electrical machine drives and production layout plans

Locations: Industry, Sunshine.

Prerequisites: A student must complete one of the following pre-requisite options: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE161A Analyse static and dynamic parameters of electrical equipment; UEENEE162A Select drive components for electrical equipment design; UEENEE163A Analyse materials for suitability in electrical equipment; UEENEE126A Provide computational solutions to basic engineering problems, and; UEENEE129A Solve electrotechnical engineering problems. OR UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE104A Solve problems in d.c. circuits, and; UEENEE101A Solve problems in electromagnetic devices and related circuits. OR UEENEE114A Troubleshoot resonance circuits in an electronic apparatus; UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace, and; UEENEE104A Solve problems in d.c. circuits or UEENEE169A Solve problems in basic electronic circuits.

Description: This unit covers the design of electrical machine drives and the layout of machinery for the efficient production of goods produced by automated equipment. It encompasses working safely, applying extensive knowledge of machine drives and equipment layout arrangements, their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - materials used in machine drive shafts; - standard formulas and specifications to determine machine drive shaft sizes for power, deflection, torque, bending data, key sizes, spline size and pin size; - selection of power prime movers from manufacturers catalogues; - principles associated with systematic planning of material flow in a production process; - adaptation of systematic layout planning to a production

process;- preparation of process layouts and materials flow patterns in a production process;- materials handling methods and unit load concepts; - types of materials handling systems, and; - design of materials handling systems and the factors that guide the final selection of a system.

UEENEEE179A Identify and select components, accessories and materials for energy sector work activities

Locations: Industry, Werribee, Sunshine.

Prerequisites:UEENEEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEEE148A - Carry out routine work activities in an energy sector environment

Description:This unit covers undertaking a schedule of work for selecting appropriately identified components, accessories or materials in an agreed time, to a quality standard and with a minimum of waste, using appropriate technology mediums where required.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - part and component identification; - information about parts and components; - ordering procedures, and; - receiving/dispatching procedures.

UEENEEE190A Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications

Locations: Industry, Sunshine.

Prerequisites:UEENEEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEEE102A - Fabricate, assemble and dismantle utilities industry componentsUEENEEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEEED104A - Use engineering applications software on personal computers

Description:This unit covers the preparation of, and modification of, preliminary engineering drawings for electrotechnology/ utilities applications using manual drafting methods and computer-aided design (CAD) equipment and software from specifications, layouts, sketches or verbal instructions in conformance with Australian Standards and enterprise standards.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - drawing fundamentals; - lettering; - sketching; - geometric construction; - multi-view orthographic projections Australian/New Zealand and industry standards; - auxiliary views; - descriptive geometry/revolutions; - sectional views/conventions; - pictorial drawings introduction and production to Australian/New Zealand and industry standards; - dimensioning/size description and tolerancing as applied to drafting; -

development layouts of various shaped objects to Australian/New Zealand and industry standards; - layout drawings production to Australian/New Zealand and industry standards; - technical illustrations drawing to Australian/New Zealand and industry standards; - graphs and charts production to Australian/New Zealand and industry standards; - thread representations; - working drawings; - care and use of equipment; - computer-aided drawing design (CAD) - basics; - basic production fabrication drawings to Australian/New Zealand and industry standards; - pattern development; - maps and profiles design and production to Australian/New Zealand and industry standards; - pipe/plumbing drawings basics; - structural steel, welding and sheet metal drawings basics; - ink overlay drawings produced to Australian/New Zealand and industry standards, and; - drawings reproductions to Australian/New Zealand and industry standards.

UEENEEE191A Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software

Locations: Industry, Sunshine.

Prerequisites:UEENEEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEEE102A - Fabricate, assemble and dismantle utilities industry componentsUEENEEE104A - Solve problems in d.c. circuitsUEENEEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEEE190A - Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applicationsUEENEEED104A - Use engineering applications software on personal computers

Description:This unit covers the preparation of, and modification of, preliminary electrotechnology/utilities drawings and diagrams using manual drafting methods, techniques, procedures and devices and computer-aided design equipment and software from specifications, layouts, sketches or verbal instructions in conformance with Australian Standards and enterprise standards.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - electrotechnology/utilities drafting fundamentals; - standard drawing sheets and drawing sheet layout; - electrotechnology/utilities drawings line work, symbols, lettering and techniques production to Australian/New Zealand and industry standards; - sketching techniques for electrotechnology/utilities applications; - pole and structure elevations; - survey base plan drawings; - auxiliary views and revolutions; - map drafting; - civil/GIS (Geographic Information Systems) drawings basics; - architectural and site plan drawings for electrotechnology/utilities applications; - autoCAD basics for electrotechnology/utilities applications, and; - drawing numbering, file names and digital file storage.

UEENEEE192A Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software

Locations: Industry, Sunshine.

Prerequisites:UEENEEED104A - Use engineering applications software on personal computersUEENEEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEEE102A - Fabricate, assemble and dismantle utilities industry componentsUEENEEE104A - Solve problems in d.c.

circuitsUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEE190A - Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applicationsUEENEE191A - Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software

Description:This unit covers the production of, and modification and maintenance of, detailed electrotechnology/utilities drawings and diagrams using computer-aided design (CAD) equipment and software from specifications, layouts, sketches or verbal instructions in conformance with Australian Standards, enterprise standards and/or design brief.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - detailed working drawings; - advanced (master) sketching techniques; - drafting/modelling electrotechnology/utilities; - electrotechnology/utilities related drawings; - autoCAD-functional for electrotechnology/utilities; - autoCAD - project basics; - autoCAD-schematic wiring, editing, components and reporting; - autoCAD - panel layouts; - autoCAD- PLC modules; - autoCAD- detailed settings and configurations- advanced commands; - autoCAD- detailed customised components and customised detailed data; - autoCAD- advanced auditing tools, automation tools and integration; - autoCAD- database management and productivity tools; - drawings production using CAD application programs, and; - utility programs disk and file management.

UEENEE102A Install and maintain cabling for multiple access to telecommunication services

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE102A - Fabricate, assemble and dismantle utilities industry componentsUEENEE104A - Solve problems in d.c. circuitsUEENEE105A - Fix and secure electrotechnology equipmentUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications

Description:This unit covers the installation and maintenance of telecommunications cabling in buildings and premises. It encompasses working safely and to Australian Communications and Media Authority's 'Open' Cabling Provider Rule, installing multiple telephone line, multi-pair cables, backbone cabling, terminating in socket outlets, termination modules and distributors, testing and compliance checks and completing cabling documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - principles and characteristics of sound; - transmission of sound; - telephone transmitters; - telephone receivers; - telephone circuits; - overview of earthing and protection; - customer

switching systems (CSS), interfaces and devices; - installation of CSS; - installation and termination requirements overview and hazards; - cabling provider rules; - general installation requirements; - telecommunication cable types; - cable identification; - building structures, materials and sequencing; - cable installation; - termination boundaries and devices; - cable preparation and terminations and hauling mechanisms; - earthing concepts; - surge suppression and system; - cable shielding and interference, and; - telecommunication earthing systems.

UEENEE104A Install and modify performance data communication copper cabling

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE102A - Fabricate, assemble and dismantle utilities industry componentsUEENEE104A - Solve problems in d.c. circuitsUEENEE105A - Fix and secure electrotechnology equipmentUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEE102A - Install and maintain cabling for multiple access to telecommunication services

Description:This unit covers the installation and termination of high performance data copper cabling in buildings and premises and intended for connection a telecommunications network. It encompasses working safely and to standards, installing multiple data lines and backbones using structured twisted pair cabling, terminating at distributors, termination modules and in socket outlets, testing and compliance checks and completing cabling documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - telecommunication cable types; - cable identification; - cable installation; - building construction; - fixing devices; - cable enclosures; - distribution boxes and back mounts; - electrical connections; - cable preparation and terminations and hauling mechanisms; - category 5 and 6 structured cabling; - category 5 and 6 structured cabling installation systems; - category 5 and 6 structured cabling performance requirements; - selecting cable and cabling hardware; - testing Category 5 and 6 cabling; - local area network cabling systems, and; - coaxial cables.

UEENEEG006A Solve problems in single and three phase low voltage machines

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE102A - Fabricate, assemble and dismantle utilities industry componentsUEENEE104A - Solve problems in d.c. circuitsUEENEE105A - Fix and secure electrotechnology equipmentUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEEG101A - Solve problems in electromagnetic devices and related circuitsUEENEEG102A - Solve problems in low voltage a.c. circuitsUEENEEG106A - Terminate cables, cords and accessories for low voltage circuits

Description:This unit covers ascertaining correct operation of single and three phase machines and solving machine problems as they apply to servicing, fault finding,

installation and compliance work functions. It encompasses safe working practices, machine connections circuit arrangements, issues related to machine operation, characteristics and protection and solutions to machine problems derived from calculated and measured parameters.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - transformer construction; - transformer operation; - transformer losses, efficiency and cooling; - transformer voltage regulation and percent impedance; - parallel operation of transformers and transformer auxiliary equipment; - auto-transformers and instrument transformers; - operating principles of three phase induction motors; - three phase induction motor construction; - three phase induction motor characteristics; - single phase motors - split phase; - single phase motors - capacitor and shaded pole types; - single phase motors - universal; - motor protection; - three phase synchronous machines- operation principles and construction, and; - alternators and generators.

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

Locations: Industry, Sunshine.

Prerequisites:UEENEE1 01A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE1 02A - Fabricate, assemble and dismantle utilities industry componentsUEENEE1 04A - Solve problems in d.c. circuitsUEENEE1 05A - Fix and secure electrotechnology equipmentUEENEE1 07A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEEG 101A - Solve problems in electromagnetic devices and related circuitsUEENEEG 102A - Solve problems in low voltage a.c. circuitsUEENEEG 106A - Terminate cables, cords and accessories for low voltage circuits

Description:This unit covers ascertaining correct operation of single and three phase low voltage electrical apparatus and circuits and solving circuit problems as they apply to servicing, fault finding, installation and compliance work functions. It encompasses safe working practices, apparatus circuit arrangements, issues related to operation, characteristics and protection and solutions to apparatus/circuit problems derived from calculated and measured parameters.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - lighting circuits - looping at the light/switch; - circuits for socket outlets; - final sub-circuits and segregation; - electrical heating control devices; - fixed electrical heating appliances; - electrical water heater operation; - alternative supplies; - installation of batteries; - fire protection - residential fire and smoke alarms; - emergency and evacuation lighting and lighting control; - lighting concepts and incandescent lighting; - fluorescent low intensity discharge lighting, and; - high intensity discharge lighting.

UEENEEG063A Arrange circuits, control and protection for general electrical installations

Locations: Industry, Sunshine.

Prerequisites:UEENEE1 01A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE1 02A - Fabricate, assemble and dismantle utilities industry componentsUEENEE1 04A - Solve problems in d.c. circuitsUEENEE1 05A - Fix and secure electrotechnology equipmentUEENEE1 07A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEEG 101A - Solve problems in electromagnetic devices and related circuitsUEENEEG 102A - Solve problems in low voltage a.c. circuitsUEENEEG 106A - Terminate cables, cords and accessories for low voltage circuits

Description:This unit covers the arrangement and termination of circuits, control and protection devices and systems for electrical installations operating at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses knowledge and application of schemes for protection of persons and property, correct functioning, ensuring compatibility with the supply, arranging installation into circuits and selecting and arranging switchgear/controlgear and protective devices to meet compliance requirements and documenting arrangement decisions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - safety principles to which electrical systems in building and premises shall comply; - circuit and control arrangements; - hazards and risks in an electrical installation; - protection against indirect contact; - earthing; - protection against overload and short circuit current; - devices for automatic disconnection of supply; - protection against over voltage and under voltage; - control of an electrical installation and circuits, and; - switchboards/distribution boards.

UEENEEG101A Solve problems in electromagnetic devices and related circuits

Locations: Industry, Sunshine.

Prerequisites:UEENEE1 01A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE1 04A - Solve problems in d.c. circuits

Description:This unit covers determining correct operation of electromagnetic devices and related circuits and providing solutions as they apply to electrical installations and equipment. It encompasses working safely, power circuit problems solving processes, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in electromagnetic devices and related circuits.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - magnetism; - electromagnetism; - magnetic circuits; - electromagnetic induction; - inductance; -

measurement instruments; - magnetic devices; - machine principles; - rotating machine construction, testing and maintenance; - generators; - motors, and; - machine efficiency.

UEENEEG102A Solve problems in low voltage a.c. circuits

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE104A - Solve problems in d.c. circuits
UEENEEG101A - Solve problems in electromagnetic devices and related circuits

Description: This unit covers ascertaining correct operation of single and three phase a.c. circuits and solving circuit problems as they apply to servicing, fault finding, installation and compliance work functions. It encompasses safe working practices, multiphase circuit arrangements, issues related to protection, power factor and MEN systems and solutions to circuit problems derived from calculated and measured parameters.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - alternating current quantities; - phasors diagrams; - single element a.c. circuits; - RC and RL series a.c. circuits; - RLC series a.c. circuits; - parallel a.c. circuits; - power in an a.c. circuit; - power factor improvement; - harmonics and resonance effect in a.c. systems; - three phase systems; - three phase star-connections; - three phase four wire systems; - three phase delta-connections and interconnected systems; - energy and power requirements of a.c. systems, and; - fault loop impedance.

UEENEEG103A Install low voltage wiring and accessories

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE102A - Fabricate, assemble and dismantle utilities industry components
UEENEE104A - Solve problems in d.c. circuits
UEENEE105A - Fix and secure electrotechnology equipment
UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications
UEENEE137A - Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEG006A - Solve problems in single and three phase low voltage machines
UEENEEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEG063A - Arrange circuits, control and protection for general electrical installations
UEENEEG101A - Solve problems in electromagnetic devices and related circuits
UEENEEG102A - Solve problems in low voltage a.c. circuits
UEENEEG106A - Terminate cables, cords and accessories for low voltage circuits
UEENEEG107A - Select wiring systems and cables for low voltage general electrical installations
UEENEEG108A - Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG109A - Develop and connect electrical control circuits

Description: This unit covers the installation in building and premises of wiring enclosures, cable support systems, cables and accessories and designed to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to installation standards, routing cables to specified locations, terminating cables and connecting wiring at accessories and completing the necessary installation documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - standards, codes and requirements applicable to the installation of wiring systems; - use of other installation standards called up by the Wiring Rules for special situations; - hazardous areas; - requirement for the installation of cables and accessories in damp situations and ELV installations; - aerial cabling; - underground cabling, and; - techniques for installing cables and wiring systems.

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE102A - Fabricate, assemble and dismantle utilities industry components
UEENEE104A - Solve problems in d.c. circuits
UEENEE105A - Fix and secure electrotechnology equipment
UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications
UEENEE137A - Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEG006A - Solve problems in single and three phase low voltage machines
UEENEEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEG063A - Arrange circuits, control and protection for general electrical installations
UEENEEG101A - Solve problems in electromagnetic devices and related circuits
UEENEEG102A - Solve problems in low voltage a.c. circuits
UEENEEG103A - Install low voltage wiring and accessories
UEENEEG106A - Terminate cables, cords and accessories for low voltage circuits
UEENEEG107A - Select wiring systems and cables for low voltage general electrical installations
UEENEEG108A - Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG109A - Develop and connect electrical control circuits

Description: This unit covers the installation of appliances protection devices, switchgear, controlgear, switchboards, and accessories designed to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to installation standards, matching appliances and accessories with that specified, making required circuit connections and completing the necessary installation documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - installation standards, codes and requirements applicable to installing electrical equipment; - terminal configuration for connection of phase, neutral and protective earthing conductors for each type of equipment; - building codes affecting the installation of

current-using equipment and accessories in buildings, structures and premises, and; - issues affecting electrical installations in heritage buildings and premises.

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

Locations: Industry, Sunshine.

Prerequisites: UEENEE1 01A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE1 02A - Fabricate, assemble and dismantle utilities industry components UEENEE1 04A - Solve problems in d.c. circuits UEENEE1 05A - Fix and secure electrotechnology equipment UEENEE1 07A - Use drawings, diagrams, schedules, standards, codes and specifications UEENEE1 37A - Document and apply measures to control OHS risks associated with electrotechnology work UEENEEG006A - Solve problems in single and three phase low voltage machines UEENEEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits UEENEEG063A - Arrange circuits, control and protection for general electrical installations UEENEEG1 01A - Solve problems in electromagnetic devices and related circuits UEENEEG1 02A - Solve problems in low voltage a.c. circuits UEENEEG1 03A - Install low voltage wiring and accessories UEENEEG1 04A - Install appliances, switchgear and associated accessories for low voltage electrical installations UEENEEG1 06A - Terminate cables, cords and accessories for low voltage circuits UEENEEG1 07A - Select wiring systems and cables for low voltage general electrical installations UEENEEG1 08A - Trouble-shoot and repair faults in low voltage electrical apparatus and circuits UEENEEG1 09A - Develop and connect electrical control circuits

Description: This unit covers inspection and testing to verify whether an electrical installation is safe and complies with all requirements. It encompasses working safely, visual inspections and mandatory, optional and functional testing following verification procedures, identifying non-compliance defects and mandatory reporting requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - electrical safety; - legislated regulations; - visual inspection of installations for compliance with the Wiring Rules; - testing installations; - documentation; - effects of electric current; - single path practical circuit; - single-source multiple-path d.c. circuits; - alternating voltage and current generation, phase relationships, energy in an a.c. circuit; - fundamental safety principles of the AS/NZS 3000 Part 1 (Section 1) and deemed to comply solution given in Part 2; - electric motor selection, starting method and overload protection; - ability to apply AS/NZ 3000 requirements for protective and functional earthing; - MEN system and its application; - knowledge of the application of transformers; - ability to apply AS/NZ 3000 requirements for protection of circuit against overcurrent and abnormal voltages; - additional protection by use of RCDs and use of extra-low voltage for basic and fault protection; - ability to select cables for single and three phase mains and sub-mains for single and multiple installations that comply with requirements of AS/NZS 3000 and AS/NZS 3008.1; - ability to select cables for final sub-circuits that comply with requirements of AS/NZS 3000 and AS/NZS 3008.1; - ability to apply AS/NZS 3000 requirements for the installation of electrical equipment in given damp situations; - ability to install,

modify and test electrical equipment for construction and demolition sites, complying with AS/NZS 3012 and applicable workplace safety legislation; - knowledge of AS/NZS 3000 requirements for the installation of aerial conductors and underground wiring; - knowledge of AS/NZS 3000 requirements for electrical installations in hazardous areas; - ability to perform effective safe isolation of any equipment; - ability to apply AS/NZS 3000 requirements to install and terminate thermoplastic insulated cables; elastomer sheathed cables; XLPE sheathed cables; and high temperature cables; armoured cables; and neutral screened cables in a wide range of applications; - ability to perform the circuit tests required for electrical cables in a range of installations and final sub-circuit; - ability to install final sub-circuit wiring into switchboards and connect to switchboard equipment in accordance with AS/NZS 3000 and electricity distributor's requirements; - ability to apply AS/NZS 3000 and electricity distributor's requirements for the installation and connect consumers mains; - ability to read, sketch and interpret electrical diagrams; - knowledge and understanding occupational safety and health; - knowledge and understanding of the requirements for personal safety in the workplace; - process in rescuing a person in contact with live electrical conductors or equipment and the primary importance of the safety of the rescuer; - application of emergency first aid requirements for an electric shock victim; - dangers of high voltage equipment and distribution systems; - systematic method of commissioning and decommissioning electrical equipment and installations, and; - diagnosing and rectifying faults in electrical apparatus and associated circuits.

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

Locations: Industry, Sunshine.

Prerequisites: UEENEE1 01A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE1 02A - Fabricate, assemble and dismantle utilities industry components UEENEE1 05A - Fix and secure electrotechnology equipment UEENEE1 07A - Use drawings, diagrams, schedules, standards, codes and specifications

Description: This unit covers the termination of cables and cords and their conductors at accessories and current-using devices designed to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to standards, understanding wiring system and cable types and applications, selecting appropriate termination accessories, preparing and terminating cables and cords, terminating cables/cord conductors and ensuring completed termination complies with requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - cable types and terminations; - cords, cables and plugs; - flat TPS wiring systems; - circular TPS wiring systems; - thermoplastic insulated cables in non-metallic enclosures; - thermoplastic insulated cables in metallic enclosures; - fire protection cabling and systems; - steel wire armoured (SWA) cables, and; - trailing cables and catenary systems.

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE102A - Fabricate, assemble and dismantle utilities industry components
UEENEE104A - Solve problems in d.c. circuits
UEENEE105A - Fix and secure electrotechnology equipment
UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications
UEENEG006A - Solve problems in single and three phase low voltage machines
UEENEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEG063A - Arrange circuits, control and protection for general electrical installations
UEENEG101A - Solve problems in electromagnetic devices and related circuits
UEENEG102A - Solve problems in low voltage a.c. circuits
UEENEG106A - Terminate cables, cords and accessories for low voltage circuits

Description: This unit covers selecting wiring systems and cables for electrical installations operating at voltages up to 1,000V a.c. or 1,500 V d.c. It encompasses knowledge and application of wiring systems and cable types, selecting wiring system compatible with the installation conditions, selecting cables that comply with required current-carrying capacity and voltage drop and earth fault-loop impedance limitations, coordination between protective devices and conductors and documenting selection decisions

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - performance requirements - design and safety; - final subcircuit arrangements; - factors affecting the suitability of wiring systems; - maximum demand on consumer's mains/submains; - cable selection based on current carrying capacity requirements; - cable selection based on voltage drop requirements; - cable selection based on fault loop impedance requirements; - selecting protection devices; - selecting devices for isolation and switching, and; - switchboards.

UEENEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE102A - Fabricate, assemble and dismantle utilities industry components
UEENEE104A - Solve problems in d.c. circuits
UEENEE105A - Fix and secure electrotechnology equipment
UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications
UEENEG006A - Solve problems in single and three phase low voltage machines
UEENEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEG063A - Arrange circuits, control and protection for general electrical installations
UEENEG101A - Solve problems in electromagnetic devices and related circuits
UEENEG102A - Solve problems in low voltage a.c. circuits
UEENEG106A - Terminate cables, cords and accessories for low voltage circuits

Description: This unit covers trouble-shooting and repairing faults in electrical apparatus and interconnecting circuits and equipment operating at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely, reading circuit

diagrams, sketching diagrams from traced wiring, logically applying fault finding procedures, conducting repairs and completing the necessary service documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - troubleshooting concepts; - troubleshooting water heater and appliance circuits/equipment; - troubleshooting electrical appliance circuits/equipment; - troubleshooting lighting circuits; - troubleshooting single phase motor and control circuits; - troubleshooting three phase induction motor, and; - troubleshooting electrical installations.

UEENEG109A Develop and connect electrical control circuits

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE102A - Fabricate, assemble and dismantle utilities industry components
UEENEE104A - Solve problems in d.c. circuits
UEENEE105A - Fix and secure electrotechnology equipment
UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications
UEENEG006A - Solve problems in single and three phase low voltage machines
UEENEG063A - Arrange circuits, control and protection for general electrical installations
UEENEG101A - Solve problems in electromagnetic devices and related circuits
UEENEG102A - Solve problems in low voltage a.c. circuits
UEENEG106A - Terminate cables, cords and accessories for low voltage circuits

Description: This unit covers developing, connecting and functionally testing electrical power and control circuits that perform specific control functions. It encompasses working safely; developing schematic/ladder diagrams and converting them to wiring diagrams; selecting and connecting contactors and control devices to perform a specific function.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - basic relay circuits; - relay circuits and drawing conventions; - remote STOP-START control and electrical interlocking; - time delay relays; - circuits using contactors; - jogging and interlocking; - control devices; - programmable relays; - three-phase induction motor starters; - three-phase induction motor starters- reduced voltage; - three-phase induction motor reversal and braking, and; - three-phase induction motor speed control.

UEENEG110A Find and repair faults in LV d.c. electrical apparatus and circuits

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE102A - Fabricate, assemble and

dismantle utilities industry components UEENEE104A - Solve problems in d.c. circuits UEENEE105A - Fix and secure electrotechnology equipment UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications UEENEG006A - Solve problems in single and three phase low voltage machines UEENEG063A - Arrange circuits, control and protection for general electrical installations UEENEG101A - Solve problems in electromagnetic devices and related circuits UEENEG102A - Solve problems in low voltage a.c. circuits UEENEG106A - Terminate cables, cords and accessories for low voltage circuits UEENEG108A - Troubleshoot and repair faults in low voltage electrical apparatus and circuits

Description: This unit covers finding and repairing faults in electrical apparatus and interconnecting circuits and equipment operating at voltages up to 1,500 V d.c. It encompasses working safely, reading circuit diagrams, sketching diagrams from traced wiring, applying logical fault finding procedures, conducting repairs and completing the necessary service documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - direct current machines; - direct current motor starters and their operating principles; - power and control connection arrangements; - braking methods; - speed control methods, and; - protection of d.c. motors.

UEENEG111A Carry out basic repairs to electrical components and equipment

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE102A - Fabricate, assemble and dismantle utilities industry components

Description: This unit deals with the repair and/or replacement of mechanical and electrical components of electrical apparatus. It encompasses safe working practices, following written and oral instruction and procedures, basic testing and techniques for dismantling and assembling apparatus and disconnecting and reconnecting components

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - basic cable and conductor terminations; - electrical workshop machines; - principles of metal cutting; - selection of cutting tools; - metal cutting conditions; - cutting tool defects, and; - overcoming causes of tool failure.

UEENEG120A Select and arrange equipment for special LV electrical installations

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE102A Fabricate, dismantle, assemble of utilities components UEENEE104A Solve problems in d.c circuits UEENEE105A Fix and secure electrotechnology equipment UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications UEENEG006A Solve problems in single and three phase low voltage machines UEENEG033A Solve problems in single and three phase electrical apparatus and circuits UEENEG063A Arrange circuits, control and protection for general electrical installations UEENEG101A Solve problems in electromagnetic devices and related circuits UEENEG102A Solve problems in low voltage a.c. circuit UEENEG106A Terminate cables, cords and accessories for low voltage circuits UEENEG107A Select wiring systems and cables for low voltage general electrical installations

Description: This unit covers selecting and arranging electrical equipment into distribution circuits for installations in caravan parks, construction and demolition sites, marinas, medical treatment areas and moveable premises operating at voltages up to 1,000V a.c. or 1,500 V d.c. The unit encompasses schemes for protection of persons and property, correct functioning, compatibility with the supply, arrangement of circuits and selection of switchgear, controlgear, protection devices and wiring based on calculated and deemed-to-comply solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - technical standards, regulations and codes for special electrical installations.

UEENEG125A Plan electrical installations with a low voltage demand up to 400 A per phase

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE102A - Fabricate, assemble and dismantle utilities industry components UEENEE104A - Solve problems in d.c. circuits UEENEE105A - Fix and secure electrotechnology equipment UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications UEENEG006A - Solve problems in single and three phase low voltage machines UEENEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits UEENEG063A - Arrange circuits, control and protection for general electrical installations UEENEG101A - Solve problems in electromagnetic devices and related circuits UEENEG102A - Solve problems in low voltage a.c. circuits UEENEG106A - Terminate cables, cords and accessories for low voltage circuits UEENEG107A - Select wiring systems and cables for low voltage general electrical installations

Description: This unit covers the planning of circuit and equipment for electrical installations where standardised arrangements for service and CT metering equipment are used, not exceeding 400 A per phase. This encompasses schemes for protection of persons and property, correct functioning, compatibility with the supply, arrangement of circuits, metering and control, cable route planning, specifying type and rating of switchgear, controlgear, protection devices and wiring based on calculated and deemed-to-comply solutions and planning documentation.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - electrical metering arrangements.

UEENEEG127A Design electrical installations with a low voltage demand greater than 400 A per phase

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE102A - Fabricate, assemble and dismantle utilities industry components
UEENEE104A - Solve problems in d.c. circuits
UEENEE105A - Fix and secure electrotechnology equipment
UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG006A - Solve problems in single and three phase low voltage machines
UEENEEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEG063A - Arrange circuits, control and protection for general electrical installations
UEENEEG101A - Solve problems in electromagnetic devices and related circuits
UEENEEG102A - Solve problems in low voltage a.c. circuits
UEENEEG106A - Terminate cables, cords and accessories for low voltage circuits
UEENEEG107A - Select wiring systems and cables for low voltage general electrical installations
UEENEEG125A - Plan electrical installations with a low voltage demand up to 400 A per phase

Description: This unit covers the design of supply and distribution arrangements, control, protection and selection of equipment for electrical installations with low voltage demand greater than 400 amperes per phase. This encompasses designing schemes for protection of persons and property and correct functioning, compatibility with the supply, and arrangement of circuits, determination of fault levels, effective switchgear, control gear, and protection against over current and over and under voltage and wiring based on calculations to meet required safety and performance standards and functional requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - electrical installations, determination of demand; - electrical installations, overcurrent protection, and; - electrical installations, overvoltage and undervoltage protection.

UEENEEG128A Plan low voltage switchboard and control panel layouts

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE102A - Fabricate, assemble and dismantle utilities industry components
UEENEE104A - Solve problems in d.c. circuits
UEENEE105A - Fix and secure electrotechnology equipment
UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG006A - Solve problems in single and three phase low voltage

machines
UEENEEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEG063A - Arrange circuits, control and protection for general electrical installations
UEENEEG101A - Solve problems in electromagnetic devices and related circuits
UEENEEG102A - Solve problems in low voltage a.c. circuits
UEENEEG106A - Terminate cables, cords and accessories for low voltage circuits
UEENEEG107A - Select wiring systems and cables for low voltage general electrical installations

Description: This unit covers selecting and arranging equipment in electrical switchboards and control panels operating at voltages up to 1,000V a.c. or 1,500 V d.c. and fault levels not exceeding 20 kA. The unit encompasses arrangements for protection of persons and property, correct functioning, compatibility with the supply, and intended arrangement of circuits and selection of switchgear, controlgear and protection devices based on calculated and deemed-to-comply solutions and planning documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - electrical metering arrangements; - switchgear/controlgear, and; - control panel wiring.

UEENEEG130A Design switchboards rated for high fault levels (greater than 400 A)

Locations: Industry, Sunshine.

Prerequisites: Please contact the Polytechnic, for a list of the required pre-requisites.

Description: This unit covers the design of supply and distribution arrangements, control, protection and selection of equipment for switchboards with low voltage demand greater than 400 amperes per phase. This encompasses designing schemes for protection of persons and property and correct functioning, compatibility with the supply, and arrangement of circuits, determination of fault levels, effective switchgear, control gear, and protection against over current, over and under voltage and wiring based on calculations to meet required safety and performance standards and functional requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - trade calculations; - engineering mechanics; - engineering materials, and; - fault current calculations.

UEENEEG131A Evaluate performance of low voltage electrical apparatus

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers testing of electrical apparatus for compliance with a standard and regulation for the purpose of certification, approval and/or product

quality maintenance. The unit encompasses safe working practices, determining performance requirements, inspecting, setting up performance tests, evaluating inspection and test results and documenting test outcomes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - performance standards and regulatory requirements for electrical equipment.

UEENEEG143A Develop engineering solution for synchronous machine and control problems

Locations: Industry, Sunshine.

Prerequisites:A student must have completed one of the following pre-requisite options: UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits; UEENEEE125A Provide engineering solutions for problems in complex multiple path circuit; UEENEEE126A Provide solutions to basic engineering computational problems, and; UEENEEE129A Solve electrotechnical engineering problems. OR UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEEE104A Solve problems in d.c. circuits, and; UEENEEG101A Solve problems in electromagnetic devices and related circuits. OR UEENEEH114A Troubleshoot resonance circuits in an electronic apparatus; UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace, and; UEENEEE104A Solve problems in d.c. circuits or UEENEEH169A Solve problems in basic electronic circuits.

Description:This unit covers developing engineering solutions to resolve problems with synchronous machines and their controls. It encompasses working safely, apply extensive knowledge of synchronous machine operation, construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - a.c. generators - construction, types and cooling; - a.c. generators - operating principles and characteristics; - synchronising a.c. generators; - a.c. generators power, torque and efficiency; - voltage regulation (AVR); - a.c. generator operational stability; - a.c. generator protection; - induction generator, and; - three phase synchronous motors.

UEENEEG144A Develop engineering solutions for D.C. machine and control problems

Locations: Industry, Sunshine.

Prerequisites:A student must have completed one of the following pre-requisite options: UEENEEE125A Provide engineering solutions for problems in complex multiple path circuit; UEENEEE126A Provide solutions to basic engineering

computational problems, and; UEENEEE129A Solve electrotechnical engineering problems. OR UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEEE104A Solve problems in d.c. circuits, and; UEENEEG101A Solve problems in electromagnetic devices and related circuits. OR UEENEEH114A Troubleshoot resonance circuits in an electronic apparatus; UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace, and UEENEEE104A Solve problems in d.c. circuits, or UEENEEH169A Solve problems in basic electronic circuits.

Description:This unit covers developing engineering solutions to resolve problems with d.c. machines and their controls. It encompasses working safely; apply extensive knowledge of d.c. machine operation and construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - basic d.c. machine construction and operation; - construction and use of lap and wave windings; - communication process; - armature reaction in d.c. machines; - d.c. generators; - d.c. motors; - starting and protection of d.c. motors; - speed regulation and speed control of d.c. motors; - braking of d.c. motors; - losses, heating and efficiency; - acceleration of d.c. motors and loads; - special d.c. motors construction, operation and applications; - maintenance of d.c. machines; - types of faults, and; - adjustment of machines.

UEENEEG145A Develop engineering solutions for induction machine and control problems

Locations: Industry, Sunshine.

Prerequisites:The student must have completed one of the following pre-requisite options: UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits; UEENEEE125A Provide engineering solutions for problems in complex multiple path circuit; UEENEEE126A Provide solutions to basic engineering computational problems, and; UEENEEE129A Solve electrotechnical engineering problems. OR UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEEE104A Solve problems in d.c. circuits, and; UEENEEG101A Solve problems in electromagnetic devices and related circuits. OR UEENEEH114A Troubleshoot resonance circuits in an electronic apparatus; UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace, and; UEENEEE104A Solve problems in d.c. circuits, or UEENEEH169A Solve problems in basic electronic circuits.

Description:This unit covers developing engineering solutions to resolve problems with induction machines and their controls. It encompasses working safely; apply extensive knowledge of induction machine operation and construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - operating principles of polyphase induction motors; - construction of polyphase induction motors; - speed-torque relationships in induction motors; - induction motor performance testing; - induction motor starters; - reduced voltage starting; - speed control of induction motors; - braking of induction motors; - motor protection; - motor selection criteria and RMS rating; - induction motor maintenance/repair, and; - single phase induction motors.

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

Locations: Industry, Sunshine.

Prerequisites: UEENEE125A - Provide engineering solutions for problems in complex multiple path circuits UEENEEG102A - Solve problems in low voltage a.c. circuits

Description: This unit covers determining correct operation of complex polyphase power circuits and providing solutions as they apply to electrical power engineering work functions. It encompasses working safely, problem solving procedures, including using electrical measuring devices, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - polyphase supply system; - types of three phase system connections; - balanced three phase loads; - unbalanced three phase loads; - power in three-phase circuits; - reactive three phase power; - fault currents, and; - harmonics in three phase systems.

UEENEEG160A Evaluate performance of LV electrical machines

Locations: Industry, Sunshine.

Prerequisites: Please contact the Polytechnic for a list of pre-requisite combinations specific to this unit of competency.

Description: This unit covers electrical and mechanical safety and performance evaluation of electrical machines across their load range. The unit encompasses working safely, setting up and conducting evaluation measurements, evaluating performance from measured parameters and documenting results and recommending any resulting corrective actions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - additional

technical standards, regulations and codes for special electrical installations, and; - electrical machines, performance monitoring.

UEENEEG161A Design and develop modifications to LV electrical machines

Locations: Industry, Sunshine.

Prerequisites: Please contact the Polytechnic for a list of pre-requisite combinations specific to this unit of competency.

Description: This unit covers the performance and efficiency aspects of electrical machine design as applied to the modification of existing machines. It encompasses designing to given parameters including those related to safety and efficiency, adhering to compliance standards and compliance assessments and documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - motor windings principles and construction; - direct current armature windings; - simplex lap windings; - simplex wave windings; - commutation and interpoles; - alternator windings; - breadth factor and sinusoidal output; - rating, cooling and regulation, and; - testing techniques.

UEENEEG169A Manage large electrical projects

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the management of large electrical projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses management of safety, budget variation, personnel, resources, critical path timelines and completion documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - defining project parameters; - time management concepts and standard practices; - financial management; - quality management concepts and practices; - human resource management concepts and practices within a project; - communication management concepts and practices within a project; - risk management and contingencies; - procurement management concepts and practices; - physical resource management concepts and practices relating to equipment, technology, information and facilities; - contracts; - performance assessment and continuous improvement; - engineering ethics principles; - customer/client relations, and; - electrical industry sector customs and practice.

UEENEEG170A Plan large electrical projects

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations,

codes and practices in the workplace

Description:This unit covers development and documentation of large electrical project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - project planning; - purpose of project planning; - defining project parameters; - time management concepts and standard practices; - financial management; - quality management concepts and practices; - human resource management concepts and practices within a project; - communication management concepts and practices within a project; - risk management and contingencies; - procurement management concepts and practices; - physical resource management concepts and practices relating to equipment, technology, information and facilities; - contracts; - performance assessment and continuous improvement; - engineering ethics principles; - customer/client relations; - electrical industry sector customs and practice; - critical path and project analysis, and; - electrical industry sector customs and practice.

UEENEEG175A Develop compliance policies and plans to conduct a electrical contracting business

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description:This unit covers the development of plans and policies to ensure regulatory requirements are met in conducting a contracting business, regulatory compliance, occupational and workplace relation requirements associated with functions and responsibilities of a contracting business. It encompasses applying knowledge of compliance regulations and standards, legislated obligations in relation to safety, the environment, heritage sites and employment and human resources.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - enterprise regulatory requirements and non regulatory standards; - electricity distributors, supply requirements, and; - electricity regulatory safety requirements.

UEENEEG179A Develop detailed electrical drawings

Locations: Industry, Sunshine.

Prerequisites:UEENEE104A - Use engineering applications software on personal computersUEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE102A - Fabricate, assemble and dismantle utilities industry componentsUEENEE104A - Solve problems in d.c.

circuitsUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEE190A - Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applicationsUEENEE191A - Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and softwareUEENEE192A - Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software

Description:This unit covers the production of detailed electrical drawings, drawing sets and documentation. It includes safe working practices; interpreting technical data and specifications; using advanced computer-aided systems and commands and appropriate drafting peripheral systems, equipment and tools to develop detailed drawings. It also includes applying knowledge of electrical equipment design drawing methods, techniques, procedures and protocols and documenting design, storing and retrieving data, and producing related documentation for presentation of preliminary and final drafts for verification.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - producing final drafts for verification; - detailed electrical drawing production covering; - schematic component commands detailed; - schematic editing; - detailed panel layouts, and; - digitising and scanning.

UEENEEG180A Develop detailed and complex drawings for electrical systems using CAD systems

Locations: Industry, Sunshine.

Prerequisites:UEENEE104A - Use engineering applications software on personal computersUEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE102A - Fabricate, assemble and dismantle utilities industry componentsUEENEE104A - Solve problems in d.c. circuitsUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEE190A - Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applicationsUEENEE191A - Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and softwareUEENEE192A - Produce detailed electrotechnology/utilities drawings using computer aided design equipment and softwareUEENEE179A - Develop detailed electrical drawings

Description:Develop detailed and complex drawings for electrical systems using computer aided design (CAD) systems to meet design specification. It includes 2D and 3D drawing formats covering a representative range of electrical systems such as installations with alternative supplies, installations over 400 A per phase at low voltage and/or high voltage, single or multi tenancies, heavy plant, switchgear, protection systems, earthing, power factor correction, control equipment, and energy monitoring and management.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - advanced computer-aided drawing design (CAD) systems; - computer based modelling and application systems; - computer based modelling, design and drafting systems; - CAD modelling techniques; - graphical engineering design techniques for products, processes, systems or services representation; - managing resources - CAD; - managing CAD Systems, and; - managing CAD utilities.

UEENEEG181A Provide advice on effective and energy efficient lighting products

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers advising customers of effective and energy efficient lighting products within the scope of manufacturers' product data. It encompasses a basic knowledge of lighting principles, light source types and typical applications and interpreting manufacturers' technical data and documenting advice given.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - technology of light; - nature of light; - incandescent lamp; - fluorescent lamps; - high intensity discharge (HID) lamps; - LED lamps, and; - luminaires (Light fittings).

UEENEEG182A Supply effective and efficient lighting products for domestic and small commercial applications

Locations: Industry, Sunshine.

Prerequisites: UEENEEG181A - Provide advice on effective and energy efficient lighting products

Description: This unit covers responding to customer request for the supply of effective and efficient luminaires and associated control and mounting apparatus. It encompasses working safely, a knowledge of luminaires, their application and parameters, energy efficiency and safety compliance requirements and regulations, interrogating customer requests, extracting information from manufacturer's catalogues and technical data and supplying the most appropriate and compliant fittings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - dealing with customer requests; - extracting information from manufacturers' catalogues and other technical data; - lighting and energy conservation; - lamp types where colour is important for functional or safety reasons; - luminaire types where glare or illumination level gradients may cause difficulty for vision or introduce safety

problems; - regulatory requirements, and; - criteria for recommending the most appropriate light fittings (luminaires).

UEENEEG183A Provide advice on the application of energy efficient lighting for ambient and aesthetic effect

Locations: Industry, Sunshine.

Prerequisites: UEENEEG181A - Provide advice on effective and energy efficient lighting products
UEENEEG182A - Supply effective and efficient lighting products for domestic and small commercial applications

Description: This unit covers advising customers on energy efficient lighting for ambient and aesthetic effects. It encompasses a basic knowledge of lighting principles, light source types, effects of colour, visual perception and interpreting manufacturers' technical data and documenting advice given.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - colour of light sources; - colour rendering index; - effects of surface texture; - visual perception; - effects of indirect light; - diffused light; - psychology of lighting, perception and mood; - function of ambience, and; - control of lighting levels.

UEENEEG184A Provide photometric data for illumination system design

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers the provision of photometric data to support illumination system designs. It encompasses working safely, applying knowledge of photometric calculations for the selecting and arranging light sources for particular applications, recognising the visual requirements of the human subject, complying with standards and documenting justification for the data provided.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - nature of light; - photometric principles and definitions; - physiology of the eye and light detection; - colour, and; - photometry.

UEENEEG185A Select effective and efficient light sources and luminaires for given locations and designs

Locations: Industry, Sunshine.

Prerequisites: UEENEEG184A - Provide photometric data for illumination system design

Description: This unit covers the selecting effective and efficient light sources and luminaires for a given location and lighting design. It encompasses, applying knowledge of light sources and luminaires and given lighting design parameters, complying with standards and documenting justification for the selections made.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - types of light sources and their historic development including the practical requirements, advantages and disadvantages of light sources; - each practical lamp type is designated in terms; - types of luminaire; - natural lighting and building design; - techniques used to minimise energy expenditure, and; - specific application lamps.

UEENEEG186A Design effective and efficient lighting for residential and commercial buildings

Locations: Industry, Sunshine.

Prerequisites:UEENEEG1 84A - Provide photometric data for illumination system design
UEENEEG1 85A - Select effective and efficient light sources and luminaries for given locations and designs

Description:This unit covers lighting design for residential and commercial buildings to provide sufficient illumination with minimal energy use. It encompasses an understanding of safety principles and photometrics, the application of design calculations, compliance standards, energy management, lighting control and available lighting products appropriate to the illumination design and fully documenting completed design.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - detailed knowledge of lighting principles; - lighting applications; - safety aspects of lighting; - energy efficiency; - integrating various lighting types into one application; - control and energy management; - interpreting and applying manufacturers technical data; - architectural considerations; - utilising natural lighting, and; - use of computer programs for lighting design.

UEENEEG187A Design effective and efficient lighting for public, open and sports areas

Locations: Industry, Sunshine.

Prerequisites:UEENEEG1 84A - Provide photometric data for illumination system design
UEENEEG1 85A - Select effective and efficient light sources and luminaries for given locations and designs

Description:This unit covers effective and efficient lighting design for public and open areas, such as indoor and outdoor sporting facilities, urban parks and the like, to provide sufficient illumination with minimal energy use. It encompasses an understanding of safety principles and photometrics, the application of design calculations, compliance standards, energy management, lighting control and available lighting products appropriate to the illumination design and fully documenting completed design.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - reasons for quality lighting in sport; - key terms in sports lighting; - the sports lighting design process; - layout for lighting in multi-purpose halls and enclosed areas; - sports grounds and stadiums; - swimming/diving; - other considerations, and; - recommendations.

UEENEEG188A Prepare quotations for the supply of effective and efficient lighting products for lighting projects

Locations: Industry, Sunshine.

Prerequisites:UEENEEG1 84A - Provide photometric data for illumination system design
UEENEEG1 85A - Select effective and efficient light sources and luminaries for given locations and designs

Description:This unit covers preparing quotations for supply of effective and efficient lighting products based on given specifications and/or material schedules. It encompasses knowledge of lighting and ancillary components, their application and parameters, compliance requirements, installations conditions, interpreting manufacturer's technical data, job specifications and equipment schedules and documenting quotations accurately.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - knowledge of lighting products; - illumination principles; - lighting applications; - lighting product parameters; - compliance requirements; - installation conditions; - interpreting manufacturers technical data; - interpreting job specifications; - interpreting equipment schedules; - documenting quotations, and; - use of computer program for quoting purposes.

UEENEEH102A Repairs basic electronic apparatus faults by replacement of components

Locations: Industry, Sunshine.

Prerequisites:UEENEEH1 01A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEH1 02A - Fabricate, assemble and dismantle utilities industry components

Description:This unit deals the replacement of electronic components, cabling and sub systems of electronic apparatus. It encompasses safe working practices, following written and oral instruction and procedures, basic testing and techniques, dismantling and assembling apparatus and disconnecting and reconnecting components.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - electronic soldering equipment and techniques; - printed circuit board soldering techniques; - soldering electronic cables; - electronic component basics; - electronic cable overview and coaxial cable; - performance copper cables, and; - electronic apparatus components.

UEENEEH111A Troubleshoot single phase input d.c. power supplies

Locations: Industry, Sunshine.

Prerequisites: A student must complete the following pre-requisites: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE104A Solve problems in d.c. circuits; UEENEE102A Repair basic electronic apparatus faults by replacement of components; AND Either: One of the following units: UEENEEH114A Troubleshoot resonance circuits in an electronic apparatus; UEENEE119A Solve problems in multiple path extra low voltage (ELV) a.c. circuits; UEENEEH169A Solve problems in basic electronic circuits, or or both of the following units: UEENEEG101A Solve problems in electromagnetic devices and related circuits, and; UEENEEG102A Solve problems in low voltage a.c. circuits.

Description: This unit covers determining correct operation of independent power supplies and power supply sections of electronic apparatus. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in d.c. power supplies with single phases input.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - power supplies operating principles and applications; - d.c. rectification circuits; - filter circuits; - zener diode regulator; - three terminal regulator circuits; - electronic testing and measuring devices and techniques; - d.c. power supply testing and fault finding, and; - OH&S.

UEENEEH147A Assess electronic apparatus compliance

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers assessing electronic apparatus for compliance with a standard and/or regulation for the purpose of certification or approval. The unit encompasses safe working practices, determining specified requirements, inspecting, setting up performance tests, evaluating inspection and test results and documenting evaluation outcomes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - technical standards, regulations and codes for electronic apparatus; - compliance certification; - preparation required to assess equipment for compliance with Standards, and; - compliance testing and assessment of equipment.

UEENEEH150A Assemble and set up basic security systems

Locations: Industry, Sunshine.

Prerequisites: UEENEE102A - Fabricate, assemble and dismantle utilities industry components UEENEE105A - Fix and secure electrotechnology equipment UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications

Description: This unit covers installing electronic security systems with up to 50 connected devices typically used in single domestic and small commercial premises. It encompasses, working safely and to standards, following oral and written instructions and procedures, securely placing and connecting security system components, and applying customer relation protocols.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - regulations applicable to the security industry; - circuit arrangements; - mechanical detectors; - electro-mechanical detectors; - relays; - security planes; - communication systems, and; - closed circuit television.

UEENEEH188A Design and develop electronics - computer systems projects

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the design and development of electronics/computer systems projects. It encompasses working safely, designing, constructing, and recording, evaluating and reporting of an electronics/computer systems design project.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - electronic measuring instruments; - connection of test/measuring devices into a circuit; - taking readings; - storage, maintenance and care of test/measuring devices; - engineering design processes; - the functional and non-functional requirements of a customer; - design objectives (specifications) to satisfy a given set of customer attributes; - creation of the design plan through solution synthesis by selecting or creating the solution; - analysis; - optimisation of the proposed solution; - validations of the resulting design against the customer's; - implementation of the selected design; -

occupational health and safety fundamentals; - the work environment; - manual handling; - working at heights; - confined spaces; - physical and psychological hazards; - working safely with electricity; - life support - CPR in the workplace; - risk management and assessment of risk; - hazards associated with low-voltage, extra-low voltage and high-currents; - risks and control measures associated with high-voltage; - risks and control measures associated with low voltage; - risks and control measures associated with the high levels of radiation; - optical fibre safety, and; - safety, selection, use, maintenance and care of test equipment.

UEENEE101A Use instrumentation drawings, specification, standards and equipment manuals

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications

Description: This unit covers using drawings, specifications, standards and equipment manual applicable to installing, maintaining and fault finding process controls. It encompasses the principles of process control embodied in drawings, standards, specifications and equipment manuals, matching equipment with that specified for a given function and location and determining the connections required between pneumatic, hydraulic and electrical equipment from instrumentation drawings and specifications

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - industrial instrumentation; - instrument standards; - instrumentation terminology and SI units; - calibration of link and lever instruments; - instrumentation safe working practices; - instrumentation drawings, diagrams and manuals; - quantity take-offs and parts lists, and; - sketching of instrumentation and control.

UEENEE102A Solve problems in pressure measurement components and systems

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications UEENEE101A - Use instrumentation drawings, specification, standards and equipment manuals

Description: This unit covers setting up pressure measuring components and systems and providing solutions to pressure measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating pressure measuring components and systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in pressure measurement components and systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - pressure measurement terms and transducers; - manometers; - absolute, gauge and atmospheric pressure measurement; - mechanical pressure measuring devices; - electrical pressure measuring devices; - dead weight testers; - testing and installation of pressure measurement devices, and; - pressure transmitters and converters.

UEENEE103A Solve problems in density/level measurement components and systems

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications UEENEE101A - Use instrumentation drawings, specification, standards and equipment manuals UEENEE102A - Solve problems in pressure measurement components and systems

Description: This unit covers setting up density/level measuring components and systems and providing solutions to density/level measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating density/level measuring components and systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in density/level measurement components and systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - introduction to level/density measurement; - level measurement techniques - sight type; - level/density measurement - force type techniques; - level/density measurement - pressure-type techniques; - level/density measurement - electrical techniques; - level/density measurement - non-intrusive type techniques, and; - level/density measurement calibration.

UEENEE104A Solve problems in flow measurement components and systems

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications UEENEE101A - Use instrumentation drawings, specification, standards and equipment manuals UEENEE102A - Solve problems in pressure measurement components and systems

Description: This unit covers setting up flow measuring components and systems and providing solutions to flow measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating flow measuring systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in flow measurement systems.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - introduction to flow measurement in closed conduits; - differential pressure flow measurement; - differential pressure flow measurement circuits; - variable area flow meters and turbine flow meters; - electromagnetic, vortex and ultrasonic flow meters; - mass flow measurement and volumetric flow rate correction; - mechanical flowmeters for liquid service, and; - open-channel flow measurement and flow meter calibration.

UEENEE105A Solve problems in temperature measurement components and systems

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEE101A - Use instrumentation drawings, specification, standards and equipment manuals

Description:This unit covers setting up temperature measuring components and systems and providing solutions to temperature measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating temperature measuring components and systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in temperature measurement components and systems.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - introduction to temperature measurement; - resistance temperature detectors (RTDs); - RTD measuring circuits; - thermocouples; - thermocouple measuring circuits; - filled system thermometers; - radiation thermometers, and; - other temperature measuring techniques.

UEENEE106A Set up and adjust PID control loops

Locations: Industry, Sunshine.

Prerequisites:A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE104A Solve problems in d.c. circuits UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications UEENEE101A Use instrumentation drawings, specification, standards and equipment manuals UEENEE102A Solve problems in pressure measurement components and systems UEENEE103A Solve problems in density/level measurement components and systems UEENEE104A Solve problems in flow measurement components and systems, and; UEENEE105A Solve problems in temperature measurement

components and systems Electrical Pathway Group: UEENEEG101A Solve problems in electromagnetic devices and related circuits, and; UEENEEG102A Solve problems in low voltage a.c. circuits. Instrumentation and Control Pathway Group: UEENEE119A Solve problems in multiple path extra low voltage (ELV) a.c. circuits.

Description:This unit covers providing solutions to predictable problems in process control loops. It encompasses working safely, applying logical problem solving procedures, evaluating performance, the use of measuring devices, providing solutions to predictable control problems, and documenting solutions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - introduction to control systems; - process control terminology; - process characteristics; - types of control and control modes; - connection of controllers; - testing of control modes; - process controllers, and; - tuning and installation of control loops,

UEENEE107A Install instrumentation and control cabling and tubing

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEE101A - Use instrumentation drawings, specification, standards and equipment manuals

Description:This unit covers the installation and termination of instrument and control cabling and tubing for chemical, industrial or food processing systems or equipment used in medical procedures. It encompasses working safely and to standards, routing cables and tubing to specified locations, terminating cables and tubing and connecting wiring at accessories and at instruments and control apparatus and completing the necessary installation documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - instrumentation cable types and terminations, and; - instrumentation pneumatic/hydraulic control tubing/piping.

UEENEE108A Install instrumentation and control apparatus and associated equipment

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEE101A - Use instrumentation drawings, specification, standards and equipment manuals

Description:This unit covers the installation of measurement, monitoring and control apparatus and associated equipment. It encompasses working safely and to installation standards, matching equipment with that specified for a given location,

placing and securing equipment accurately, making required pneumatic, hydraulic and electrical circuit connections and completing the necessary installation documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - instrumentation and control equipment installation requirements and techniques; - equipment specification; - manufacturer's installation instructions; - system specifications; - communication/signal cabling installation requirements; - power wiring requirements, and; - initial set up procedures.

UEENEE112A Verify compliance and functionality of instrumentation and control installations

Locations: Industry, Sunshine.

Prerequisites:A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE104A Solve problems in d.c. Circuits; UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications; UEENEE101A Use instrumentation drawings, specification, standards and equipment manuals; UEENEE102A Solve problems in pressure measurement components and systems; UEENEE103A Solve problems in density/level measurement components and systems; UEENEE104A Solve problems in flow measurement components and systems; UEENEE105A Solve problems in temperature measurement components and systems; UEENEE106A Set up and adjust PID control loops; UEENEE110A Set up and adjust advanced PID process control loops, and; UEENEE113A Setup and configure Human-Machine Interface (HMI) and industrial networks. Electrical Pathway Group: UEENEEG101A Solve problems in electromagnetic devices and related circuits, and; UEENEEG102A Solve problems in low voltage a.c. circuits. Instrumentation and Control Pathway Group: UEENEE119A Solve problems in multiple path extra low voltage (ELV) a.c. circuits.

Description:This unit covers pre-commissioning testing and visual inspection for verifying that installed instrumentation and control apparatus in non-hazardous areas is safe and complies with requirements. It encompasses procedures for safely conducting safety tests, conducting visual inspections, identifying non-compliance defects and reporting requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - safety working practices; - equipment selection; - control loop installation, and; - test and verification.

UEENEE116A Assemble, enter and verify operating instructions in microprocessor equipped devices

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description:This unit covers assembling and entering instructions in microprocessor-equipped devices (embedded system) with simple built-in programming function and verifying that the device operates as intended. It encompasses safe working practices, checking device installation, following written and oral instruction and procedures and completing necessary documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - overview of digital controllers; - controller input and output equipment; - installation of controllers, and; - configuration and digital controller set-up.

UEENEE123A Design electronic control systems

Locations: Industry, Sunshine.

Prerequisites:A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE104A Solve problems in d.c. Circuits; UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications; UEENEEG101A Solve problems in electromagnetic devices and related circuits; UEENEEG102A Solve problems in low voltage a.c. circuits; UEENEE124A Fault find and repair analogue circuits and components in electronic control systems, and; UEENEE139A Diagnose and rectify faults in digital controls systems. Electrical Pathway Group: Please contact Victoria University Polytechnic, for the list of pre-requisites required and contained within this group. Instrumentation Pathway Group: Please contact Victoria University Polytechnic, for the list of pre-requisites required and contained within this group.

Description:This unit covers designing electronic control systems incorporating closed loop and digital and analogue elements. It encompasses working safely, following design brief, applying knowledge of digital and analogue devices, interpreting device specifications, constructing prototypes, using appropriate development software, applying programming techniques, testing developed system prototype operation and documenting design and development work.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - control systems; - purpose built microprocessor controller multiple inputs resulting in different or changed outputs; - different types and applications of system transducers and sensors, and; - actuators and drive systems.

UEENEE124A Fault find and repair analogue circuits and components in electronic control systems

Locations: Industry, Sunshine.

Prerequisites: A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE104A Solve problems in d.c. Circuits, and; UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications.

Instrumentation and Control Pathway Group: UEENEE119A Solve problems in multiple path extra low voltage (ELV) a.c. circuits; UEENEE1101A Use instrumentation drawings, specification, standards and equipment manuals; UEENEE1102A Solve problems in pressure measurement components and systems; UEENEE1103A Solve problems in density/level measurement components and systems; UEENEE1104A Solve problems in flow measurement components and systems; UEENEE1105A Solve problems in temperature measurement components and systems; UEENEE1106A Set up and adjust PID control loops; UEENEE1110A Set up and adjust advanced PID process control loops; UEENEE112A Verify compliance and functionality of instrumentation and control installations, and; UEENEE113A Setup and configure Human-Machine Interface (HMI) and industrial networks. Electrical Pathway Group: Please contact Victoria Polytechnic, for the list of pre-requisites required and contained within this group.

Description: This unit covers fault finding and repairing analogue applications in electronic control systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of analogue circuits and components to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - amplifier fundamentals; - basic op-amp configurations; - op amp limitations; - single stage amplifiers; - amplifier applications; - op amp/diode circuits; - oscillators; - op amp/RC circuits; - filters; - timers; - power amplifiers, and; - multi-stage circuits.

UEENEE125A Provide solutions to fluid circuit operations

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE102A - Fabricate, assemble and dismantle utilities industry components; UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications

Description: This unit covers the solution to problems associated with the operation of fluid controlled circuits. It encompasses working safely, problem solving procedures, including using measuring instruments, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - terms and their definitions used in fluid power systems; - applications of fluid power; - Pascal's law as it relates to force transfer, multiplication and intensification; - mathematical relationships involving temperature and volume (Charles law), pressure and volume (Boyles law), pressure and volume (Boyles law) and their combinational relationships; - fluid power principles related to components and the identification of components; - operation of fluid power components; - interpretation of fluid system operation from circuit diagrams; - operation and construction of basic pneumatic circuit; - operation and construction of a basic hydraulic circuit; - routing maintenance procedures, and; - safety requirement.

UEENEE129A Set up electronically controlled mechanically operated complex systems

Locations: Industry, Sunshine.

Prerequisites: A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE102A Fabricate, assemble and dismantle utilities industry components; UEENEE104A Solve problems in d.c. Circuits; UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications; UEENEE1101A Solve problems in electromagnetic devices and related circuits; UEENEE1102A Solve problems in low voltage a.c. circuits; UEENEE124A Fault find and repair analogue circuits and components in electronic control systems; UEENEE127A Analyse complex electronic circuits controlling fluids, and; UEENEE139A Diagnose and rectify faults in digital controls systems. Electrical Pathway Group: Please contact Victoria University Polytechnic, for the list of pre-requisites required and contained within this group. Instrumentation and Control Pathway Group: Please contact Victoria University Polytechnic, for the list of pre-requisites required and contained within this group.

Description: This unit covers the setting up, adjustment, maintenance and modification to electronically controlled mechanically operated complex systems. It encompasses working safely, applying extensive knowledge of electronic circuits and the integration to mechanically operated equipment and systems, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - connection of sensors and actuators to an interface for communications with a discrete device electronic controller or programmable controller or computer for the operation of a process requiring continuously variable changes; - description of the logic sequence for the integrated system including: operator actions, input signals, output actions, interlocks and safety and emergency requirements; - transformation of the system logic into a program to carry out the desired task using a port address on a computer using programming software and codes; - commissioning systems and perform fault

diagnosis using computer automation; - operation of circuits controlling hydraulics; - technical specifications and data for the selection of hydraulic components for machine control, and; - installation, commissioning and testing hydraulic systems.

UEENEE138A Provide solutions to extra low voltage (ELV) electro-pneumatic control systems and drives

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers developing and implementing control solutions for systems using electro-pneumatic elements operating at extra-low voltage and variable speed drives. It encompasses safe working practices, establishing required control functions, checking device installation, entering instruction into programmable devices, following written and oral instruction and procedures and completing necessary documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - electrical and pneumatic safety; - electrical/pneumatic drawing types and applications; - electrical and pneumatic control system components; - electrical relay types; - pneumatic control valves and actuators; - basic logic as applied to control systems; - evidence shall show an understanding of variable speed drive (VSD) functions and set up; - basic function of a variable speed drive in controlling an induction motor; - configuring a variable speed drive; - configuration includes setting rated motor voltage and current, digital and analogue inputs, speed range, ramp times and the like, and; - testing procedures.

UEENEE140A Plan the electrical installation of integrated systems

Locations: Industry, Sunshine.

Prerequisites: A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE102A Fabricate, assemble and dismantle utilities industry components; UEENEE105A Fix and secure electrotechnology equipment, and; UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications. Electrotechnology Pathway Group: UEENEE108A Lay wiring/cabling and terminate accessories for ELV circuits. Electrical Pathway Group: UEENEE106A Terminate cables, cords and accessories for low voltage circuits.

Description: This unit covers the planning and practices in installing an integrated systems. It encompasses working safely, applying knowledge bus system parameters, topology and installation requirements, bus system cables and terminations, control and dimming methods and planning and documenting integrated installation plans.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - bus system parameters; - LV supply voltage parameters and quality; - cabling; - supply and load protection; - output devices; - installation requirements for input devices; - acceptable and unacceptable topologies for a single network, and; - devices and connections for other control methods.

UEENEE141A Develop electrical integrated systems

Locations: Industry, Sunshine.

Prerequisites: A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Use computer applications relevant to a workplace UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE102A Fabricate, assemble and dismantle utilities industry components; UEENEE105A Fix and secure electrotechnology equipment, and; UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications. Electrotechnology Pathway Group: UEENEE108A Lay wiring/cabling and terminate accessories for ELV circuits. Electrical Pathway Group: UEENEE106A Terminate cables, cords and accessories for low voltage circuits.

Description: This unit covers the development of integrated systems. It encompasses working safely, scrutinising and adapting project specifications, applying knowledge of the application for integrated systems, system topologies and devices applications and capabilities, system programming methods, using diagnostic tools and documenting the developed systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - applications and advantages of integrated systems; - system components; - network specifications; - software for system and device programming, monitoring and controlling; - system and device programming, and; - system fault-finding processes.

UEENEE142A Develop an electrical integrated system interface for access through a touch screen

Locations: Industry, Sunshine.

Prerequisites: A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Use computer applications relevant to a workplace; UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE102A Fabricate, assemble and dismantle utilities industry components; UEENEE105A Fix and secure electrotechnology equipment; UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications, and; UEENEE141A Develop electrical integrated systems' Electrotechnology Pathway Group: UEENEE108A Lay wiring/cabling and terminate accessories for ELV circuits. Electrical Pathway Group: UEENEE106A Terminate cables, cords and accessories for low voltage circuits.

Description: This unit covers the development of integrated systems touch screen interface. It encompasses working safely, applying knowledge of the application integrated system, working with customers to determine required control parameters,

application of touch screen software components and embellishments, network connectivity, using diagnostic tools and documenting the developed systems.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - integrated system touch screen types, features and parameters; - touch screen mounting methods and manufacturer's instructions; - touch screen wiring and connection arrangements; - electrical protection requirements; - programming requirements and process; - programming software specifications and tools; - HMI programming techniques with proprietary software, and; - methods for transferring and project data and backing up.

UEENEE143A Develop access control of electrical integrated systems using logic-based programming tools

Locations: Industry, Sunshine.

Prerequisites:A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Use computer applications relevant to a workplace; UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE102A Fabricate, assemble and dismantle utilities industry components; UEENEE105A Fix and secure electrotechnology equipment; UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications; UEENEE141A Develop electrical integrated systems, and; UEENEE142A Develop an electrical integrated system interface for access through a touch screen, Electrotechnology Pathway Group: UEENEE108A Lay wiring/cablings and terminate accessories for ELV circuits. Electrical Pathway Group: UEENEE106A Terminate cables, cords and accessories for low voltage circuits.

Description:This unit covers programming functions and parameters of touch screens and other access controls in an integrated system. It encompasses working safely and to manufacturer's instructions and regulatory requirements, applying knowledge of the application integrated system, using proprietary touch screen programming tools, and documenting as-programmed assess functions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - integrated system hardware parameters and limitations; - integrated system configuration software features and options; - logic gates as they apply in integrated system control, and; - logic-based software tools.

UEENEE144A Develop interfaces for multiple access methods to monitor, schedule and control an electrical integrated system

Locations: Industry, Sunshine.

Prerequisites:A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Use computer applications relevant to a workplace; UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace; UEENEE102A Fabricate, assemble and dismantle utilities industry components; UEENEE105A Fix and secure electrotechnology equipment; UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications; UEENEE141A Develop electrical integrated systems, and; UEENEE142A Develop an electrical integrated system interface for access through a touch screen. Electrotechnology Pathway Group: UEENEE108A Lay wiring/cablings and terminate accessories for ELV circuits. Electrical Pathway Group: UEENEE106A Terminate cables, cords and accessories for low voltage circuits.

Description:This unit covers programming for multiple access to integrated systems for a single dwelling. Such access includes mobile phones, computer networks, remote controls, touch screens and the like. It encompasses working safely and to manufacturer's instructions and regulatory requirements, installing and setting up gateway equipment, applying knowledge of the application of integrated system including remote reprogramming and monitoring, using proprietary programming tools, and documenting as-programmed assess functions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - gateway devices; - network set up; - controller user interface; - programming software and application, and; - interface web browsers.

UEENEE145A Diagnose and rectify faults in a.c. motor drive systems

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE104A - Solve problems in d.c. circuitsUEENEE105A - Fix and secure electrotechnology equipmentUEENEE107A - Use drawings, diagrams, schedules, standards, codes and specificationsUEENEEG006A - Solve problems in single and three phase low voltage machinesUEENEEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuitsUEENEEG063A - Arrange circuits, control and protection for general electrical installationsUEENEEG101A - Solve problems in electromagnetic devices and related circuitsUEENEEG102A - Solve problems in low voltage a.c. circuitsUEENEEG106A - Terminate cables, cords and accessories for low voltage circuitsUEENEE124A - Fault find and repair analogue circuits and components in electronic control systemsUEENEE148A - Solve problems in single phase electronic power control circuitsUEENEE149A - Solve problems in polyphase electronic power control circuits

Description:This unit covers diagnosing and rectifying faults in systems controlling starting, speed, torque, power output, efficient running and braking of a.c. motors. The unit encompasses safe working practices, interpreting technical data, applying knowledge of a.c. motors operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - methods and operating principles; - installation requirements; - filtering; - performance characteristics; - set up and commissioning, and; - common faults: their symptoms and causes.

UEENEE1146A Diagnose and rectify faults in d.c. motor drive systems

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE104A - Solve problems in d.c. circuits UEENEE105A - Fix and secure electrotechnology equipment UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications UEENEG006A - Solve problems in single and three phase low voltage machines UEENEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits UEENEG063A - Arrange circuits, control and protection for general electrical installations UEENEG101A - Solve problems in electromagnetic devices and related circuits UEENEG102A - Solve problems in low voltage a.c. circuits UEENEG106A - Terminate cables, cords and accessories for low voltage circuits UEENEE1124A - Fault find and repair analogue circuits and components in electronic control systems UEENEE1148A - Solve problems in single phase electronic power control circuits UEENEE1149A - Solve problems in polyphase electronic power control circuits

Description: This unit covers diagnosing and rectifying faults in systems controlling starting, speed, torque, power output, efficient running and braking of d.c. motors. The unit encompasses safe working practices, interpreting technical data, applying knowledge of d.c. motors operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - methods and operating principles; - installation requirements; - filtering; - performance characteristics; - set up and commissioning, and; - common faults their symptoms and causes.

UEENEE1147A Diagnose and rectify faults in servo drive systems

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEE104A - Solve problems in d.c. circuits UEENEE105A - Fix and secure electrotechnology equipment UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications UEENEG006A - Solve problems in single and three phase low voltage machines UEENEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits UEENEG063A - Arrange circuits, control and

protection for general electrical installations UEENEG101A - Solve problems in electromagnetic devices and related circuits UEENEG102A - Solve problems in low voltage a.c. circuits UEENEG106A - Terminate cables, cords and accessories for low voltage circuits UEENEE1124A - Fault find and repair analogue circuits and components in electronic control systems UEENEE1148A - Solve problems in single phase electronic power control circuits UEENEE1149A - Solve problems in polyphase electronic power control circuits

Description: This unit covers diagnosing and rectifying faults in systems controlling servo and drives. The unit encompasses safe working practices, interpreting technical data, applying knowledge of servo/stepper drives operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - servomechanism terminology and concepts; - difference between an open loop and a closed loop system; - differences in operation between types of servomechanism systems; - causes of hunting; - inspection, testing, and alignment of a servomechanism system; - common faults their symptoms and causes, and; - programming and configuration of a PLC driven servo system.

UEENEE1148A Solve problems in single phase electronic power control circuits

Locations: Industry.

Prerequisites: A student must have completed all the units in the Common Unit Group, as well as all units contained within one Pathway Group. Common Unit Group: UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace, and; UEENEE104A Solve problems in d.c. Circuits. Electrotechnology Pathway Group: Please contact Victoria Polytechnic, for the list of pre-requisites required and contained within this group. Electronics and Communications Pathway Group: Please contact Victoria Polytechnic, for the list of pre-requisites required and contained within this group. Electrical Pathway Group: Please contact Victoria Polytechnic, for the list of pre-requisites required and contained within this group. Instrumentation and Control Pathway Group: Please contact Victoria Polytechnic, for the list of pre-requisites required and contained within this group.

Description: This unit covers solving problems with electronic aspects of single phase power control devices and circuits. The unit encompasses safe working practices, interpreting diagrams, applying knowledge of electronic power control devices and their application, using effective problem solving techniques, safety and functional testing and reporting work activities and outcomes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - introduction to power control; - single phase power rectifiers; - silicon controlled rectifiers; - triacs and gate turn off (GTO) thyristors; - power transistors (BJTs); - power field effect transistors (FET); - triggering devices diac; - programmable unijunction transistors (PUTs); - triggering circuits; - half wave controlled rectification; - full wave controlled bridge rectification; - fully controlled bridge rectification; - single-phase a.c. voltage control; - zero voltage switching (ZVS), and; - fault finding of power control circuits.

UEENEE149A Solve problems in polyphase electronic power control circuits

Locations: Industry.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE104A - Solve problems in d.c. circuits
UEENEE105A - Fix and secure electrotechnology equipment
UEENEE107A - Use drawings, diagrams, schedules, standards, codes and specifications
UEENEG006A - Solve problems in single and three phase low voltage machines
UEENEG033A - Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEG063A - Arrange circuits, control and protection for general electrical installations
UEENEG101A - Solve problems in electromagnetic devices and related circuits
UEENEG102A - Solve problems in low voltage a.c. circuits
UEENEG106A - Terminate cables, cords and accessories for low voltage circuits
UEENEE124A - Fault find and repair analogue circuits and components in electronic control systems
UEENEE148A - Solve problems in single phase electronic power control circuits

Description: This unit covers solving problems with electronic aspects of polyphase power control devices and circuits. The unit encompasses safe working practices, interpreting diagrams, applying knowledge of electronic power control devices and their application, using effective problem solving techniques, safety and functional testing and reporting work activities and outcomes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - three-phase circuit configurations; - three-phase half wave controlled rectifiers; - three-phase half controlled bridge rectifier; - three-phase fully controlled bridge rectifier; - three-phase a.c. controllers; - d.c. converters; - cycloconverters; - inverters; - thyristor protection; - installation of thyristor devices and circuits; - series and parallel thyristor connections, and; - fault finding three-phase thyristor circuits.

UEENEE150A Develop, enter and verify discrete control programs for programmable controllers

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers development, installation and testing of programs for programmable controllers (PLC) for a system requiring discrete control functions. It encompasses working safely, applying knowledge of control systems, control system development methods, using ladder diagrams/statement list/function block diagram instruction sets, following written instructions and documenting program development and testing activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - PLC introduction; - types of PC programs; - programming timers; - programming counters; - program storage; - PLC input and output modules; - PLC input; - output; - PLC installation requirements; - master control; - jump function; - the shift register; - the step sequencer, and; - PLC diagnostics and fault finding.

UEENEE151A Develop, enter and verify word and analogue control programs for programmable logic controllers

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE150A - Develop, enter and verify discrete control programs for programmable controllers

Description: This unit covers development, installation and testing of programs for an industrial system requiring advance control functions. It encompasses working safely, using structure logic, acceptable design techniques, applying knowledge of high level instructions, and documenting development and programming activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - numbering systems and codes; - use PLC software; - PLC hardware; - analogue modules; - data manipulation; - sequencer; - languages; - diagnostic, and; - complex industrial process.

UEENEE152A Develop, enter and verify programs in Supervisory Control and Data Acquisition systems

Locations: Industry, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE150A - Develop, enter and verify discrete control programs for programmable controllers
UEENEE151A - Develop, enter and verify word and analogue control programs for programmable logic controllers

Description: This unit covers development, installation and testing of programs for supervisory control and data acquisition. It encompasses working safely, process analysis, developing process condition database and Human-Machine Interface (HMI) using SCADA software package and documenting programming activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - SCADA system communications and networking; - mimics and animated graphics; - trending; - alarm logging; - recipes and scheduling; - data collection and databases; - programming language, and; - implementation and applications.

UEENEE153A Design and configure Human-Machine Interface (HMI) networks

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE150A - Develop, enter and verify discrete control programs for programmable controllersUEENEE151A - Develop, enter and verify word and analogue control programs for programmable logic controllers

Description:This unit covers monitoring and maintaining the operation of distributive and central control system networks. It encompasses safe working practices, installing and configuring controllers and devices, monitoring system operations, diagnosing malfunctions and faults and documenting development activities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - purpose and application of control system networks systems; - open and common proprietary control system networks models (layers) and protocols - CANopen, ControlNet, Devicenet, Ethernet, Foundation Fieldbus, Interbus, Modbus, Profibus; - control system networks interface; - domain name service (DNS); - dynamic host configuration protocol (DHCP); - network infrastructure; - network protocols; - internet naming services in a network; - IP routing; - network address translation (NAT), and; - certificate services.

UEENEE154A Design and use advanced programming tools PC networks and HMI interfacing

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE150A - Develop, enter and verify discrete control programs for programmable controllersUEENEE151A - Develop, enter and verify word and analogue control programs for programmable logic controllers

Description:This unit covers the design of computer application for control processes. It encompasses apply knowledge of control devices, control systems, programmable logic controllers, supervisory control and data acquisition systems and control programming methods, developing alternative design schemes based on design brief, customer relations and documenting designs.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - alternative/enhancing programming methods; - system diagnostics techniques; - control loops; - specialist instructions - interrupt driven applications, high speed counters, positional encoders; - communications methods and requirements; - intelligent terminals/graphic interfaces installation and communication requirements; - data link layer; - bus monitor; - fieldbus message specification, and; - high speed ethernet.

UEENEE155A Develop structured programs to control external devices

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description:This competency standard unit covers programming of microprocessor/microcontroller devices to access external devices. The unit encompasses working safely, applying knowledge of control applications, and analogue and digital input/output signals, programming fundamentals, writing and testing program and documenting programming activities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - control applications of software; - software terminology; - programming languages currently used by industry; - program development - flowcharts, pseudocode, algorithms, and; - programming concepts.

UEENEE156A Develop and test code for microcontroller devices

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description:This competency standard unit covers structured programming instructions for micro devices at a fundamental level. The unit encompasses working safely, applying knowledge device architecture and programming fundamentals, writing and testing specified instructions and documenting development activities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - microcontroller architecture; - programmer's model; - programming terms; - language programming basics; - memory organisation, operation and addressing methods, and; - system clock circuits fetch and execute.

UEENEE157A Configure and maintain industrial control system networks

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations,

codes and practices in the workplace

Description: This unit covers installing, configuring and maintaining communication service on a control network. It encompasses safe working practices, applying knowledge of industrial control network topology and protocols, configuring data links, bus monitoring and system management and access, network testing and documenting system settings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - purpose and application of control system networks systems; - open and common proprietary control system networks models (layers) and protocols - CANopen, ControlNet, DeviceNet, Ethernet, Foundation Fieldbus, Interbus, Modbus, Profibus; - control system networks interface; - data link layer; - bus monitor; - fieldbus message specification, and; - high speed ethernet.

UEENEE102A Prepare and connect refrigerant tubing and fittings

Locations: Industry, Werribee, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the basic connection of refrigeration and air conditioning piping/tubing and fittings. It encompasses the safe use of hand, fixed and portable power tools for cutting, flaring, bending, swaging, silver brazing copper tube to copper tube, Bundy tube and brass and steel fittings, measurement and reading drawings and diagrams.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Evidence shall show an understanding of cutting, bending and joining refrigeration piping and tubing tools, equipment and techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects: T1 Piping - Refrigeration & water grade copper tube; - Maintaining cleanliness (always capped, do not blow out with mouth etc); - Soft and hard drawn tube; - Tubing applications (soft, hard, pair coil, water grade etc); - Tube qualities - diameter, wall thickness (gauge) and pressure ratings (R410A etc); - Pipe insulation (types - tube, slit tube, sheet etc and joining methods - glue, tape etc), and; - Other tube materials (Bundy, steel, aluminum, brass). T2 Cutting - Cutting tools (Imps, normal & large pipe cutters, tube cutting rings etc); - Precautions while cutting (sharp burrs, sharp blades etc), and; - Deburring tools (reamers, deburrers etc). T3 Bending - Bending tools (springs, levers, presses etc); - Precautions while bending (work hardening, collapsing etc), and; - Bending hard drawn tube - the process of annealing. T4 Joining - Flare nuts (plain, short barrel, frost proof, reducing); - Flaring tools (flare block, eccentric with clutch for high pressure tube); - Precautions while flaring (deburred, length past block face, cleanliness); - Swaging tools (punch, flare block, expander etc); - Precautions while swaging (length past block face, tube shortening

effect, cleanliness etc); - Other tube fittings (BSP to flare elbows, tees, unions, plugs, flare washers, Lokrings etc); - Thread sealants (tapes, pastes etc); - Access valves (Schradler, piercing, cutaway of service valve/s), and; - Precautions using access valves (refrigerant leakage, core removal, limitations on piercing valves etc). T5 Soldering and brazing equipment - Gas types (oxy acetylene, air acetylene, propane, Mapp gas); - Hazards associated with their use (cylinder transport, remove regulator, oil & oxy = bang); - Personal safety (MSDS - oxy, acetylene, propane, MAPP gas); - Flash back arrestors; - Setting up equipment (fitting regulator, adjusting pressures, tip selection); - Igniting and flame types (flint guns, oxidising, neutral, carburising), and; - Care and maintenance of equipment (hoses, regulator, tips, cylinders, flash back arrestors). T6 Silver solder - Types (yellow, brown, blue and their metal components); - Personal safety (MSDS - silver brazing alloys); - Flux and its use (dissimilar metals); - Personal safety (MSDS - flux), and; - Preparing surfaces (removing oxides, oils, applying flux). T7 Soldering techniques - Dry nitrogen; - Personal safety (MSDS - nitrogen); - Applying dry nitrogen to a piping circuit; - Silver soldering copper to copper; - Silver soldering copper to dissimilar metals, and; - Annealing copper tube.

UEENEE104A Establish the basic operating conditions of air conditioning systems

Locations: Werribee, Sunshine.

Prerequisites: UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers the determination of basic operating conditions of air conditioning systems. It encompasses working safely, determining air temperature, air flow rates and relative humidity using measurement and basic calculation methods.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Evidence shall show an understanding of basic air conditioning operating conditions, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects: T1 The Air Conditioning Industry - industry classifications; - applications and typical equipment used in each classification, and; - types of systems commonly used. T2 Working safely with air conditioning systems - risk management principles and processes, and; - hazards and risk control measures associated with air conditioning systems and components and measuring and testing equipment. T3 Temperature & relative humidity measuring devices - thermometer types and applications; - relative humidity measurement devices and applications; - hazards and related safe working practices; - care and maintenance; - calibration; - typical locations where values are commonly obtained; - obtaining temperature and relative humidity readings, and; - recording temperature and relative humidity readings. T4 Air velocity measuring devices (Anemometers only) - anemometer types; - typical applications for each; - air speed; - air flow rate; - methods for setting up and using anemometers; - hazards & safe working practices; - care and maintenance (maintaining vane balance; - calibration requirements; - typical locations where air velocity measurements values are commonly obtained; - obtaining and recording air velocity readings, and; - calculating volume flow rate from an outlet/grille. T5 Psychrometrics - composition of air; - psychrometric chart; - terms

used in the study of air; - sensible heat, latent heat and total heat; - sensible heat ratio; - plotting basic points on a chart; - reading additional information, and; - values relevant to a plotted process and plotting a simple process on a psychrometric chart. T6 Basic air conditioning processes- factors effecting human comfort; - industry recognised human comfort conditions; - the comfort zone, and;- basic processes used to obtain comfort conditions. T7 Ventilation - basic needs for ventilation; - methods used to ventilate an area, and; - typical applications for ventilation systems. T8 Regulations - covering ventilation; - common council requirements/regulations, and; - fresh air requirements for typical situations. T9 Heat loads - sources of sensible heat in an air conditioned space; - sources of latent heat in an air conditioned space; - changes in sensible/latent ratios and their effect on operating system capacity; - industry check figures; - basic room heat load calculation using check figures, and; - basic RAC/split system unit selection.

UEENEE105A Position, assemble and start up single head split air conditioning and water heating heat pump systems

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE102A - Prepare and connect refrigerant tubing and fittingsUEENEE172A - Recover, pressure test, evacuate, charge and leak test refrigerants - split systems

Description:This unit covers the assembly, installation and starting up and de-commissioning of single head split air conditioning systems and split water heating heat pump systems up to a maximum of 18kW refrigeration capacity. It encompasses working safely and to standards, following routine procedures to install equipment, connecting pipe work, pressure testing, evacuating, perform functional checks and complete installation / regulatory documentation. Note: The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - sustainable energy; - sustainable energy work practices; - heritage awareness; - relevant installation codes; - split air conditioning systems; - types and applications; - split water heating heat pump systems; - installation of unit and pipework; - system start up, and; - de-commission split air conditioning systems.

UEENEE172A Recover, pressure test, evacuate, charge and leak test refrigerants - split systems

Locations: Industry, Sunshine.

Prerequisites:UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplaceUEENEE102A - Prepare and connect refrigerant tubing and fittings

Description:This competency standard unit covers the recovery of refrigerant, pressure and leak testing, evacuation and refrigerant charging in split air conditioning and heat pump systems. It encompasses working safely and to standards, following regulations and industry practices for handling refrigerants and completing the

necessary documentation. Note: The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this competency standard unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - the Residential Air Conditioning and Heat Pump Industry and Licensing Requirements; - heat; - temperature and relative humidity; - sensible and latent heat; - pressure; - refrigerant conditions; - the vapour compression cycle; - thermometers and relative humidity devices; - leak detectors; - service gauges; - properties of split heat pump refrigerants; - properties of split heat pump refrigerant oils, and; - procedures for working with refrigerants.

UEENEE112A Provide basic sustainable energy solutions for energy reduction in residential premises

Locations: Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit covers monitoring energy use and providing basic sustainable energy options to reduce the energy consumption in residential premises. It encompasses working safely and providing basic sustainable energy solutions for energy reduction in domestic premises.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - non-technical issues; - energy services/demand; - solar radiation resource; - solar thermal systems; - photovoltaic arrays; - wind energy resource and technology; - micro-hydro resource and technology, and; - stand-alone power system configuration.

UEENEE123A Carry out basic repairs to renewable energy apparatus

Locations: Industry, Sunshine.

Prerequisites:A student must have completed the following pre-requisites:

UEENEE104A Solve problems in d.c. circuits, and; UEENEE108A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits, or UEENEE106A Terminate cables, cords and accessories for low voltage circuits.

Description:This unit deals with the replacement of electrical and non-electrical components of renewable energy apparatus. It encompasses safe working practices, following written and oral instructions and procedures, basic testing techniques, disconnecting and reconnecting electrical/electronic components, dismantling and assembling apparatus and reporting repair activities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - major non-technical issues; - energy services and demand; - the solar resource; - solar thermal systems; - energy efficient building design; - photovoltaic arrays; - wind energy resources; - micro-hydro system basis; - energy storage; - stand alone power system basis, and; - biomass.

UEENEEK124A Solve basic problems in micro hydro systems

Locations: Industry, Sunshine.

Prerequisites: UEENEEG101A - Solve problems in electromagnetic devices and related circuits UEENEE104A - Solve problems in d.c. circuits UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers providing known solutions to predictable problems in micro hydro apparatus and systems operated at ELV and LV. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - system components and configuration; - micro-hydro systems standards, and; - micro-hydro systems drawings.

UEENEEK125A Solve basic problems in photovoltaic energy apparatus and systems

Locations: Industry, Sunshine.

Prerequisites: A student must complete the following pre-requisites: UEENEE104A Solve problems in d.c. circuits; UEENEE137A Document and apply measures to control OHS risks associated with electrotechnology work, and; One of the following units: UEENEE108A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits, or; UEENEE106A Terminate cables, cords and accessories for low voltage circuits. Note: Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian State or Territory meet the pre-requisite requirements of this unit.

Description: This unit covers providing known solutions to predictable problems in photovoltaic energy apparatus and systems operated at ELV and LV. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - daily irradiation; - photovoltaic modules, and; - module characteristics.

UEENEEK128A Solve problems in stand-alone renewable energy systems

Locations: Industry, Sunshine.

Prerequisites: UEENEEK123A - Carry out basic repairs to renewable energy apparatus

Description: This unit covers providing known solutions to predictable problems in stand-alone renewable energy systems operated at extra-low voltage. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - ELV wiring and circuit protection for renewable power systems; - electrical diagrams for a renewable power system; - batteries; - balance of system components and common loads; - basic lighting design; - generating sets, and; - generator set sizing calculations.

UEENEEK130A Solve problems in wind energy conversion systems rated to 10 kW

Locations: Industry, Sunshine.

Prerequisites: UEENEE104A - Solve problems in d.c. circuits UEENEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace UEENEEG101A - Solve problems in electromagnetic devices and related circuits

Description: This unit covers providing known solutions to predictable problems in wind energy conversion systems rated up to 10 kW. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - basic operation of lift and drag type WECS; - characteristics of WECS in terms of power and torque, efficiency (power and output co-efficient), solidity and tip speed ratio; - major categories and sub-categories of WECS; - advantages and disadvantages of each type of WECS; - suitable materials for the construction of WECS taking into consideration fatigue stresses and environmental conditions such as salt air, humidity and ice; - typical system configurations and components for: stand-alone power systems and water pumping; - strategies and/or mechanisms to control mechanical stresses on

the WECS in gale force winds and power output for battery charging, and; - appropriate types of WECS for a particular application.

UEENEEK131A Design wind energy conversion systems (WECS) rated to 10 kW

Locations: Industry, Sunshine.

Prerequisites:UEENEEK130A - Solve problems in wind energy conversion systems rated to 10 kWUEENEEG101A - Solve problems in electromagnetic devices and related circuitsUEENEEE104A - Solve problems in d.c. circuitsUEENEEE101A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description:This unit covers the design of wind energy conversion systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - wind characteristics; - wind speed data measurement and analysis; - site selection, and; - selection of WECS.

UEENEEK132A Develop energy sector strategies to address environmental and sustainability issues

Locations: Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers developing strategies to address environmental and sustainability issues in the energy sector. It encompasses working safely, apply extensive knowledge of sustainable energy systems and components and their operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting alternatives solutions.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - principles of sustainability; - problems in a sustainable world; - sustainability principles; - addressing the problem of global warming; - greenhouse gas emissions profile; - understanding and communicating climate change and its impacts; - partnerships for greenhouse action; - efficient and sustainable energy use and supply; - efficient transport and sustainable urban planning; - greenhouse sinks and sustainable land management; - models of greenhouse best practice in industrial processes and waste management, and; - adaptation to climate change.

UEENEEK133A Design hybrid renewable power systems

Locations: Industry, Sunshine.

800

Prerequisites:UEENEEK128A - Solve problems in stand-alone renewable energy systems

Description:This unit covers the design of hybrid renewable power systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - energy demand; - hybrid energy system operation; - system design; - life cycle costing; - installation, commissioning and maintenance; - data communications; - data-logging, and; - interactive inverters.

UEENEEK135A Design grid connected photovoltaic power supply systems

Locations: Industry, Sunshine.

Prerequisites:UEENEEK125A - Solve basic problems in photovoltaic energy apparatus and systems

Description:This unit covers the design of grid connected photovoltaic power supply systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - site survey; - PV arrays selection; - system components selection; - other design considerations; - inverters; - inverter operation; - inverter characteristics; - PV grid connected system operation, and; - grid connect inverter selection.

UEENEEK138A Design micro-hydro systems rated to 6.4 kW

Locations: Industry, Sunshine.

Prerequisites:UEENEEK124A - Solve basic problems in micro hydro systems

Description:This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - site evaluation; - system design; - system costing, and; - micro-hydro systems installation and maintenance processes.

UEENEEK139A Design stand-alone renewable energy (RE) systems

Locations: Industry, Sunshine.

Prerequisites: UEENEEK128A - Solve problems in stand-alone renewable energy systems

Description: This unit covers the design of stand-alone renewable energy systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - load analysis and projected use; - availability of sustainable/renewable energy sources; - incorporating diesel generating plant; - component selection factors, and; - installation requirement.

UEENEEK140A Develop engineering solutions to renewable energy (RE) problems

Locations: Industry, Sunshine.

Prerequisites: UEENEEK131A - Design wind energy conversion systems (WECS) rated to 10 kW
UEENEEK132A - Develop energy sector strategies to address environmental and sustainability issues
UEENEEK135A - Design grid connected photovoltaic power supply systems
UEENEEK138A - Design micro-hydro systems rated to 6.4 kW
UEENEEK139A - Design stand-alone renewable energy (RE) systems

Description: This unit covers developing engineering solutions to resolve problems with renewable energy. It encompasses working safely, applying extensive knowledge of renewable energy systems and components and their operating parameters, gathering and analysing data, and applying problem solving techniques, developing and documenting alternative solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - energy and humanity; - basic concepts; - energy; - energy transfer in closed and open systems; - gases; - heat engines; - heat engine performance; - structure of the existing generation, transmission and distribution system; - benefits, issues and impacts; - distributed generation technologies; - electrical power distribution systems operation; - protection and relaying; - distributed generation issues; - renewable energy supplies issues, and; - factors affecting the uptake of distributed generation.

UEENEEK142A Apply environmental and sustainable procedures in the energy sector

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This competency standard unit requires the worker to undertake methods of work practice that minimises energy and material usage and to seek energy reduction strategies in the energy sector workplace. The unit seeks to minimise negative impacts on the environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - sustainable work practices, and; - techniques for reducing carbon produced energy and hence greenhouse gases.

UEENEEK145A Implement and monitor energy sector environmental and sustainable energy policies and procedures

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This Competency Standard Unit specifies the outcomes for the collecting, interpretation and application of environmental management information, the identification of environmental impacts and the assessment of risks. It also consists of monitoring while implementing environmentally sustainable work policies and plans and, the development of modifications as part of the review process.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - provisions of relevant environmental legislation; - notion of sustainable work practice; - effects of neglecting sustainable work practice; - the greenhouse effect - causes, consequences; - international and national greenhouse imperatives; - the role of regulators and similar bodies; - economic benefits of sustainable initiatives; - techniques for reducing the use of carbon based energy sources and hence greenhouse gas emissions; - domestic, commercial and industrial strategies; - trade related technologies and methods; - renewable energy technologies; - energy efficient retrofits; - principles and practice of effective sustainable work practice management; - workplace sustainable work practice non compliance, range and selection of control measures; - organisational systems and policies and procedures needed for legislative compliance; - impact of characteristics and composition of the workforce on sustainable work practice management; - relevance of sustainable work practice management to other organisational management policies, procedures and systems; - analysis of entire work environment and judge sustainable work practice interventions; - analysis of relevant workplace data, and; - ability to assess resources needed for risk control.

UEENEEK146A Design energy management controls for electrical installations in buildings

Locations: Industry, Sunshine.

Prerequisites: UEENEEK132A - Develop energy sector strategies to address environmental and sustainability issues

Description: This competency standard unit covers designing and developing methods to reduce the energy use without compromising occupancy standards in new buildings and structures. The unit encompasses working safely, setting up and conducting evaluation measurements, predicting energy use from plans and specifications and designing and documenting strategies to effectively reduce energy use in the completed installation. It draws on some multi-disciplinary skills.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - functions of a BMS; - BMS hardware; - input and output functions; - energy management; - information processing functions, and; - risk and maintenance management.

UEENEEK148A Install, configure and commission LV grid connected photovoltaic power systems

Locations: Industry, Sunshine.

Prerequisites: UEENEEK125A - Solve basic problems in photovoltaic energy apparatus and systems UEENEEG103A - Install low voltage wiring and accessories

Description: This unit covers the installation, adjustment and set-up of photovoltaic power systems and connecting to a supply grid inverter. It encompasses working safely and to installation standards, matching components with that specified for a given location, placing and securing system components accurately, making required circuit connections and completing the necessary installation documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - PV array installation requirements; - electrical PV array installation requirements; - system installation and maintenance; - inverters; - inverter operation; - inverter characteristics; - PV grid connected system operation; - installation of grid connected inverters, and; - system commissioning and maintenance.

UEENEEK151A Develop effective engineering strategies for energy reduction in buildings

Locations: Industry, Sunshine.

Prerequisites: UEENEEK132A - Develop energy sector strategies to address environmental and sustainability issues

Description: This unit covers evaluating energy used in buildings and developing and documenting strategies/methods to effectively reduce energy use without

compromising occupancy standards. It encompasses working safely, setting up and conducting evaluation measurements and evaluating energy use from measured parameters.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - climate and thermal comfort; - solar geometry and radiation; - heat transfer; - glazing systems; - insulation; - thermal mass; - comfort control strategies; - energy efficiency in buildings; - thermal performance of a building; - integration of active solar systems; - energy rating schemes, and; - sustainable and safe building materials.

UEENEEM019A Attend to breakdowns in hazardous areas - coal mining

Locations: Sunshine.

Prerequisites: A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description: This unit covers the explosion-protection aspects of attending to a breakdown in a hazardous area or of explosion-protected and associated equipment. It requires the ability to ascertain the nature of a breakdown, the extent of repairs required and the personnel needed to repair the breakdown.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment - ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique, and; - common characteristics of explosion-protection techniques.

UEENEEM020A Attend to breakdowns in hazardous areas - gas atmospheres

Locations: Sunshine.

Prerequisites: A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description: This unit covers the explosion-protection aspects of attending to a breakdown in a hazardous area or of explosion-protected and associated equipment. It requires the ability to ascertain the nature of a breakdown, the extent of repairs required and the personnel needed to repair the breakdown.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique, and; - common characteristics of explosion-protection techniques.

UEENEEM021 A Attend to breakdowns in hazardous areas - dust atmospheres

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects of attending to a breakdown in a hazardous area or of explosion-protected and associated equipment. It requires the ability to ascertain the nature of a breakdown, the extent of repairs required and the personnel needed to repair the breakdown.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - explosion-protection techniques for dusts, and; - common characteristics of explosion-protection techniques.

UEENEEM022A Attend to breakdowns in hazardous areas - pressurisation

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects of attending to a breakdown in a hazardous area or of explosion-protected and associated equipment. It requires the ability to ascertain the nature of a breakdown, the extent of repairs required and the personnel needed to repair the breakdown.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique, and; - common characteristics of explosion-protection techniques.

UEENEEM023A Install explosion-protected equipment and wiring systems - coal mining

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects for installing explosion-protected and associated equipment and wiring systems. It requires the ability to match equipment with that specified for a given location, work safely, and to installation standards and complete the necessary installation documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation Standards and requirements applicable to hazardous; - maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique; - cable termination types suitable for use in hazardous areas, and; - terminating cables suitable for use in hazardous areas.

UEENEEM024A Install explosion-protected equipment and wiring systems - gas atmospheres

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A

Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects for installing explosion-protected and associated equipment and wiring systems. It requires the ability to match equipment with that specified for a given location, work safely, and to installation standards and complete the necessary installation documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation Standards and requirements applicable to hazardous; - maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique; - cable termination types suitable for use in hazardous areas, and; - terminating cables suitable for use in hazardous areas.

UEENEEM025A Install explosion-protected equipment and wiring systems - dust atmospheres

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects for installing explosion-protected and associated equipment and wiring systems. It requires the ability to match equipment with that specified for a given location, work safely, and to installation standards and complete the necessary installation documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; -

non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation Standards and requirements applicable to hazardous; - maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique; - cable termination types suitable for use in hazardous areas, and; - terminating cables suitable for use in hazardous areas.

UEENEEM026A Install explosion-protected equipment and wiring systems - pressurisation

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects for installing explosion-protected and associated equipment and wiring systems. It requires the ability to match equipment with that specified for a given location, work safely, and to installation standards and complete the necessary installation documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique; - cable termination types suitable for use in hazardous areas, and; - terminating cables suitable for use in hazardous areas.

UEENEEM027A Maintain equipment in hazardous areas - coal mining

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects for maintaining

explosion-protected and associated equipment and wiring systems. It requires the ability to follow a maintenance program, work safely, carry out maintenance to Standards and manufacturer instructions and complete the necessary maintenance documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td')- explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique; - cable termination types suitable for use in hazardous areas, and; - terminating cables suitable for use in hazardous areas.

UEENEEM028A Maintain equipment in hazardous areas - gas atmospheres

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects for maintaining explosion-protected and associated equipment and wiring systems. It requires the ability to follow a maintenance program, work safely, carry out maintenance to Standards and manufacturer instructions and complete the necessary maintenance documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td')- explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between

805

explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique; - cable termination types suitable for use in hazardous areas, and; - terminating cables suitable for use in hazardous areas.

UEENEEM029A Maintain equipment in hazardous areas - dust atmospheres

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects for maintaining explosion-protected and associated equipment and wiring systems. It requires the ability to follow a maintenance program, work safely, carry out maintenance to Standards and manufacturer instructions and complete the necessary maintenance documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td')- explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique; - cable termination types suitable for use in hazardous areas, and; - terminating cables suitable for use in hazardous areas.

UEENEEM030A Maintain equipment in hazardous areas - pressurisation

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects for maintaining explosion-protected and associated equipment and wiring systems. It requires the ability to follow a maintenance program, work safely, carry out maintenance to Standards and manufacturer instructions and complete the necessary maintenance documentation.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique; - cable termination types suitable for use in hazardous areas, and; - terminating cables suitable for use in hazardous areas.

UEENEEM036A Conduct a conformity assessment of explosion-protected equipment - gas atmospheres

Locations: Industry, Sunshine.

Prerequisites: A student must be confirmed competent in compliance assessment of electrical/electronic equipment and general technical evaluation and report writing at AQF 5 or equivalent, as a pre-requisite to this unit.

Description: This Competency Standard Unit covers assessing the Certification documentation of explosion-protected equipment with a certificate of conformity other than an IECEx, ANZEx or AUS Ex Certificate, and producing a conformity assessment document. It encompasses skills and knowledge to examine and compare document content, compare requirements of IEC or AS/NZS Standards with alternative Standards on which the original certification was based, knowledge of explosion-protection techniques and technical report writing. This unit is directly equivalent to the Unit 2.9 Conduct a conformity assessment of explosion-protected equipment in the Australian/New Zealand Standard AS/NZS 476.1.1 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - occupational health and safety responsibilities related to hazardous areas; - the roles of the parties involved in the safety of hazardous areas; - properties of combustible substances and their potential to create an explosive hazard; - the nature of hazardous areas; - explosive-protected equipment; - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex

'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - the compliance certification and the 'ex' scheme for recognition of certification; - the preparation required to assess explosion-protected equipment for compliance with standards; - assessing and testing explosion-protected equipment; - documentation used in assessing explosion-protected equipment for conformance to accepted standards; - assessing to a current acceptable standard existing equipment that has been certified to previously acceptable standards, and; - a clause by clause assessment between the equipment manufacturing standard(s) and the current acceptable ex standards.

UEENEEM038A Conduct testing of hazardous area installations - coal mining

Locations: Industry, Sunshine.

Prerequisites: A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description: This unit covers the explosion-protection aspects for electrical, electronic, instrument and data communication installations for hazardous areas. It requires the ability to select, prepare and use appropriate testing devices, work safely and to Standards and to interpret and record test results.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - cable termination types suitable for use in hazardous areas; - terminating cables suitable for use in hazardous areas; - preparation for conducting installation testing in a hazardous area; - characteristics and limitations of testing equipment used to test installation in hazardous areas, and; - documentation of results of hazardous area installation tests.

UEENEEM039A Conduct testing of hazardous area installations - gas atmospheres

Locations: Industry, Sunshine.

Prerequisites: A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3

or equivalent.

Description:This unit covers the explosion-protection aspects for electrical, electronic, instrument and data communication installations for hazardous areas. It requires the ability to select, prepare and use appropriate testing devices, work safely and to Standards and to interpret and record test results.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - cable termination types suitable for use in hazardous areas; - terminating cables suitable for use in hazardous areas; - preparation for conducting installation testing in a hazardous area; - characteristics and limitations of testing equipment used to test installation in hazardous areas, and; - documentation of results of hazardous area installation tests.

UEENEEM040A Conduct testing of hazardous area installations - dust atmospheres

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects for electrical, electronic, instrument and data communication installations for hazardous areas. It requires the ability to select, prepare and use appropriate testing devices, work safely and to Standards and to interpret and record test results.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection

technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - cable termination types suitable for use in hazardous areas; - terminating cables suitable for use in hazardous areas; - preparation for conducting installation testing in a hazardous area; - characteristics and limitations of testing equipment used to test installation in hazardous areas, and; - documentation of results of hazardous area installation tests.

UEENEEM041A Conduct testing of hazardous area installations - pressurisation

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent.

Description:This unit covers the explosion-protection aspects for electrical, electronic, instrument and data communication installations for hazardous areas. It requires the ability to select, prepare and use appropriate testing devices, work safely and to Standards and to interpret and record test results.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - explosion-protection equipment- ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - cable termination types suitable for use in hazardous areas; - terminating cables suitable for use in hazardous areas; - preparation for conducting installation testing in a hazardous area; - characteristics and limitations of testing equipment used to test installation in hazardous areas, and; - documentation of results of hazardous area installation tests.

UEENEEM042A Conduct close visual inspection of existing hazardous areas installations

Locations: Industry, Sunshine.

Prerequisites:A student must complete the following pre-requisite: UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area; AND Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3

or equivalent.

Description:This unit covers the explosion-protection aspects for conducting visual inspections of explosion-protected equipment and installations. It requires the ability to work safely in a hazardous area, and to identify conditions that affect the integrity of explosion-protection and document inspection findings.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - occupational health and safety procedures; - requirements for a verification dossier and relationship to as-built electrical installation; - purpose, scope and limitations of visual inspections, and; - documentation requirements resulting from a visual inspection.

UEENEEM052A Classify hazardous areas - gas atmospheres

Locations: Industry, Sunshine.

Prerequisites:A student must have completed one of the following pre-requisites: UEENEE071B Write specifications for electrical engineering projects; UEENEE075B Write specifications for industrial electronics and control projects, or; UEENEER002B Contribute to the conduct of a research project.

Description:This unit covers knowledge and skills to classify areas where flammable/combustible potentially explosive materials may exist. It requires the ability to gather and analyse data relative to explosion hazards, determine the extent of risk and establish and document zones. This unit is directly equivalent to the Unit 2.16 Classify hazardous areas in the Australian/New Zealand Standard AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - occupational health and safety responsibilities related to hazardous areas; - the roles of the parties involved in the safety of hazardous areas; - properties of combustible substances and their potential to create an explosive hazard; - the nature of hazardous areas; - the process of classifying hazardous areas; - the likelihood (zoning) or risk assessment method of an explosive hazard, and; - the extent of an explosive hazard and classifying an area accordingly.

UEENEEM053A Classify hazardous areas - dust atmospheres

Locations: Industry, Sunshine.

Prerequisites:A student must have completed one of the following pre-requisites: UEENEE071B Write specifications for electrical engineering projects; UEENEE075B Write specifications for industrial electronics and control projects, or UEENEER002B Contribute to the conduct of a research project.

Description:This unit covers knowledge and skills to classify areas where

flammable/combustible materials may exist. It requires the ability to gather and analyse data relative to explosion hazards, determine the extent of risk and establish and document zones. This unit is directly equivalent to the Unit 2.16 Classify hazardous areas in the Australian/New Zealand Standard AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - occupational health and safety responsibilities related to hazardous areas; - the roles of the parties involved in the safety of hazardous areas; - properties of combustible substances and their potential to create an explosive hazard; - the nature of hazardous areas; - the process of classifying hazardous areas; - the likelihood (zoning) or risk assessment method of an explosive hazard, and; - the extent of an explosive hazard and classifying an area accordingly.

UEENEEM057A Design explosion-protected electrical systems and installations - gas atmospheres

Locations: Industry, Sunshine.

Prerequisites:A student must have confirmed competency in designing electrical systems and installations at AQF level 6 or equivalent as a pre-requisite to this unit.

Description:This unit covers the explosion-protection aspects of designing electrical power, control and instrumentation systems and installations. It requires the ability to establish design briefs and to pursue economical and effective design solutions. This unit is directly equivalent to the Unit 2.18 Design explosion-protected electrical systems and installations in the Australian/New Zealand Standard AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - occupational health and safety responsibilities related to hazardous areas; - the roles of the parties involved in the safety of hazardous areas; - properties of combustible substances and their potential to create an explosive hazard; - the nature of hazardous areas; - explosion-protection equipment - ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain

explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - interpretation of documents showing the classification of a hazardous area; - selecting and checking equipment, wiring and accessories; - documentation of hazardous area installation design; - process for establishing a design brief for an explosion-protected electrical system; - system design, and; - design documentation required for a hazardous area.

UEENEEM058A Design explosion-protected electrical systems and installations - dust atmospheres

Locations: Industry, Sunshine.

Prerequisites: A student must have confirmed competency in designing electrical systems and installations at AQF level 6 or equivalent as a pre-requisite to this unit

Description: This unit covers the explosion-protection aspects of designing electrical power, control and instrumentation systems and installations. It requires the ability to establish design briefs and to pursue economical and effective design solutions. This unit is directly equivalent to the Unit 2.18 Design explosion-protected electrical systems and installations in the Australian/New Zealand Standard AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - occupational health and safety responsibilities related to hazardous areas; - the roles of the parties involved in the safety of hazardous areas; - properties of combustible substances and their potential to create an explosive hazard; - the nature of hazardous areas; - explosion-protection equipment - ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - interpretation of documents showing the classification of a hazardous area; - selecting and checking equipment, wiring and accessories; - documentation of hazardous area installation design; - process for establishing a design brief for an explosion-protected electrical system; - system design, and; - design documentation required for a hazardous area.

UEENEEM059A Design explosion-protected electrical systems and installations - pressurisation

Locations: Industry, Sunshine.

Prerequisites: A student must have confirmed competency in designing electrical systems and installations at AQF level 6 or equivalent as a pre-requisite to this unit

Description: This unit covers the explosion-protection aspects of designing electrical power, control and instrumentation systems and installations. It requires the ability to establish design briefs and to pursue economical and effective design solutions. This unit is directly equivalent to the Unit 2.18 Design explosion-protected electrical systems and installations in the Australian/New Zealand Standard AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - occupational health and safety responsibilities related to hazardous areas; - the roles of the parties involved in the safety of hazardous areas; - properties of combustible substances and their potential to create an explosive hazard; - the nature of hazardous areas; - explosion-protection equipment - ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous; - interpretation of documents showing the classification of a hazardous area; - selecting and checking equipment, wiring and accessories; - documentation of hazardous area installation design; - process for establishing a design brief for an explosion-protected electrical system; - system design, and; - design documentation required for a hazardous area.

UEENEEM065A Conduct audit of hazardous areas installations - gas atmospheres

Locations: Industry, Sunshine.

Prerequisites: A student must have completed one of the following pre-requisites: UEENEEG131A Evaluate performance of low voltage electrical apparatus, or; UEENEEG060B Evaluate performance of LV electrical machines

Description: This competency standard unit covers the explosion-protection aspects of conducting an audit of an electrical installation. It requires the ability to verify whether an installation complies with the relevant hazardous areas Standards for that installation and includes the verification of design and certification documentation (verification dossier), maintenance, overhaul and repair, work safety, inspection against Standards and reporting of audit results. This unit is directly equivalent to the Unit 2.21 Conduct audit of hazardous areas installations in the Australian/New Zealand Standard AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - occupational health and safety responsibilities related to hazardous areas; - the roles of the parties involved in the safety of hazardous areas; - properties of combustible substances and their potential to create an explosive hazard; - the nature of hazardous areas; - explosive-protected equipment; - explosion-protection equipment - ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions; - installation standards and requirements applicable to hazardous, and; - processes used in auditing hazardous areas.

UEENEEM068A Assess the fitness-for-purpose of hazardous areas explosion-protected equipment - gas atmospheres

Locations: Industry, Sunshine.

Prerequisites: UEENEEM036A - Conduct a conformity assessment of explosion-protected equipment - gas atmospheres UEENEEM044A - Conduct detailed inspection of hazardous areas installations gas atmospheres UEENEEM065A - Conduct audit of hazardous areas installations - gas atmospheres

Description: This Competency Standard Unit covers the explosion-protection aspects of overhauling and repairing explosion-protected equipment at a craftsman level. It requires the ability to identify and select authorized components, follow repair specifications to effect the overhauled/repaired of equipment and complete repair documentation. This unit is directly equivalent to the Unit 2.20 Carry out overhaul and repair of explosion-protected equipment in the Australian/New Zealand Standard AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - preparation to install and maintain explosion-protected equipment in hazardous areas; - the relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instruction; - installation standards and requirements applicable to hazardous; - maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique; - cable termination types suitable for use in hazardous areas; - the relationship between the documentation held in a verification

dossier and the installed equipment; - inspecting a hazardous area installation; - documentation used in assessing explosion-protected equipment for conformance to accepted standards; - assessing to a current acceptable standard existing equipment that has been certified to previously acceptable standards; - a clause by clause assessment between the equipment manufacturing standard(s) and the current acceptable ex standards; - techniques used in fitness-for purpose assessment of equipment for use in hazardous areas, and; - processes used in auditing hazardous areas.

UEENEEM075A Design explosion-protected electrical systems - coal mining

Locations: Industry, Sunshine.

Prerequisites: A student must have confirmed competency in designing electrical systems and installations at AQF level 6 or equivalent as a pre-requisite to this unit.

Description: This unit covers the explosion-protection aspects of designing electrical power, control and instrumentation systems and installations. It requires the ability to establish design briefs and to pursue economical and effective design solutions. This unit is directly equivalent to the Unit 2.18 Design explosion-protected electrical systems and installations in the Australian/New Zealand Standard AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - occupational health and safety responsibilities related to hazardous areas; - the roles of the parties involved in the safety of hazardous areas; - properties of combustible substances and their potential to create an explosive hazard; - the nature of hazardous areas; - explosive-protected equipment; - explosion-protection equipment - ex certification schemes; - flameproof (ex 'd') explosion-protection technique; - increased safety (ex 'e') explosion-protection technique; - non-sparking (ex 'n') explosion-protection technique; - intrinsic safety (ex 'i') explosion-protection technique; - pressurization (ex 'p') explosion-protection technique; - enclosures for dusts (ex 'td') - explosion-protection technique; - common characteristics of explosion-protection techniques; - preparation to install and maintain explosion-protected equipment in hazardous areas; - installation standards and requirements applicable to hazardous; - cable termination types suitable for use in hazardous areas; - interpretation of documents showing the classification of a hazardous area; - selecting and checking equipment, wiring and accessories; - documentation of hazardous area installation design; - common and specific hazardous areas for which classification examples are given in standards; - system design, and; - design documentation required for a hazardous area.

UEENEEM079A Design of gas detection systems

Locations: Industry, Sunshine.

Prerequisites: A student must have completed one of the following pre-requisites: UEENEEM057A Design explosion-protected electrical systems and installations gas atmospheres; UEENEEM058A Design explosion-protected electrical systems and installations dust atmospheres, or; UEENEEM059A Design explosion-protected electrical systems and installations pressurisation.

Description: This unit covers the selection aspects of gas detection equipment for the design of gas detection systems and installations for hazardous areas. It requires the ability to establish equipment parameters and to evaluate these against manufacturer specifications. This unit is directly equivalent to the Unit 2.19 Design gas detection systems and installations in the Australian/New Zealand Standard AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique; - techniques for the installation and maintenance of fixed gas detection equipment; - location of fixed sample points or sensors; - gas and vapour releases; - common problems with fixed gas detectors; - calibration and response checking; - factors to consider in the evaluation and selection of portable and fixed gas detection equipment; - detecting gases and vapours; - oxygen deficiency and effects on safety; - measuring principles of catalytic sensors, electrochemical sensors, infrared sensors and semi-conductor sensors; - measuring principles of thermal conductivity sensors, flame ionization detectors (FID), flame temperature analyzers (FTA), photo ionisation detectors (PID) and paramagnetic oxygen detectors; - selection of apparatus; - behaviour of gas and vapour releases; - design and installation; - integrity and safety, and; - commissioning and scheduled maintenance.

UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area

Locations: Industry, Sunshine.

Prerequisites: UEENEEG105A - Verify compliance and functionality of low voltage general electrical installations UEENEE112A - Verify compliance and functionality of instrumentation and control installations MEMO7001B - Perform operational maintenance of machines/equipment PMAOPS201B - Operate fluid flow equipment

Description: This unit covers the explosion-protection aspects of plant and machinery operation and maintenance. It requires the ability to visually identify any damage or deterioration of explosion-protected equipment, monitor changes in the explosion hazard and to implement procedures established to limit the risk of an explosion.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - Occupational Health and Safety responsibilities related to hazardous areas; - the roles of the parties involved in the safety of hazardous areas; - properties of combustible substances and their potential to create an explosive hazard; - the nature of

hazardous areas; - explosive-protected equipment, and; - explosion-protection visual checks.

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

Locations: Industry, Sunshine.

Prerequisites: A student must have completed unit/s of competency needed for emergency services and equipment repair.

Description: This unit covers disconnecting and reconnecting composite appliances connected to low voltage installation wiring. This may be incidental to or a primary and regular function of work related to a principle work function. It encompasses working safely, identifying supply arrangements, following isolation procedures, selecting and using testing and measuring devices, terminating and connecting cables and conductors, safely testing and reporting. The unit coverage excludes disconnecting or reconnecting circuits at a switchboard or to general electrical accessories (including switches, socket outlets, circuit protective devices etc); or installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installing work).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - the basic electrical circuit; - relationships in an electrical circuit; - electrical diagrams; - test equipment - selection and care; - test equipment - voltage measurement; - test equipment - resistance measurement; - test equipment - current measurement; - cable connections; - protection for safety; - safety testing preparation and procedures; - isolating supplies; - disconnecting composite electrical equipment - ELV; - reconnecting composite electrical equipment - ELV; - disconnecting composite electrical equipment - LV; - reconnecting composite electrical equipment - LV; - produce documentation and reports, and; - enterprise reporting and recording system.

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

Locations: Industry, Sunshine.

Prerequisites: UEENEEP012A - Disconnect / reconnect composite appliances connected to low voltage installation wiring

Description: This unit covers locating and rectifying fault(s) in composite appliances intended to operate to a connected supply up to 1,000 volts a.c. or 1,500 volts d.c. This may be incidental to or a primary and regular function in the workplace. It encompasses following prescribed procedures, working safely, reading circuit diagrams, isolation procedures, identifying faults according to procedures, identifying like for like replacement/repair components according to procedures, selecting and using testing and measuring devices, terminating and connecting cables and conductors, safety testing and reporting.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - safe fault finding; - single and three phase composite equipment, and; - produce documentation and reports.

UEENEE024A Attach cords and plugs to electrical equipment for connection to a single phase 230 volt supply

Locations: Industry, Sunshine.

Prerequisites: UEENEE01A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers attaching flexible cords and plugs to electrical equipment for connection to supplies up to 230V a.c. This may be incidental to or a primary and regular function of work related to a principle function in the workplace. It encompasses working safely, identifying plug configurations, selecting and using testing and measuring devices, terminating and connecting cords/plugs and conductors, safety testing and reporting.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - safety; - the basic electrical circuit; - relationships in an electrical circuit; - test equipment - resistance measurement; - selection of flexible cords and plugs to suit given applications; - connecting flexible cords and plugs to appliances; - testing, and; - producing documentation and reports.

UEENEE025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

Locations: Industry, Sunshine.

Prerequisites: UEENEE024A - Attach cords and plugs to electrical equipment for connection to a single phase 230 volt supply

Description: This unit covers attaching flexible cords, cables and plugs to electrical equipment connected to a supply up to 1,000V a.c. or 1,500V d.c. This may be incidental to or a primary and regular function of work related to a principle function in the workplace. It encompasses working safely, identifying plug configurations, selecting and using testing and measuring devices, terminating and connecting flexible cords/plugs and conductors, safety testing and reporting.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - safety; - selection of flexible cords/cables and plugs to suit given applications; - connect flexible cords/cables and plugs to multiphase equipment; - determine that a flexible

cord/cable and plug is safe and is connected correctly, and; - producing documentation and reports.

UEENEE026A Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

Locations: Industry, Sunshine.

Prerequisites: UEENEE01A - Apply Occupational Health and Safety regulations, codes and practices in the workplace

Description: This unit covers safety testing of electrical cord connected equipment and cord assemblies. It encompasses working safely, using portable apparatus tester, identifying faults, applying tagging, arranging for repair of faulty equipment and complete testing documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - Australian Standards and Commonwealth/State/Territory legislation and regulations; - basic electrical testing concepts; - electrical equipment and cord assemblies testing, and; - testing and tagging documentation requirements.

UEPOPS202B Apply quality systems to work

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - quality management systems; - principles contained within the AS/NZS ISO 9001 quality management standard; - quality management tools and techniques; - continuous improvement techniques; - communication in a team environment, and; - principles of sustainable energy practice.

UEPOPS337B Maintain quality systems within the team

Locations: Industry, Sunshine.

Prerequisites: UEPOPS202B - Apply quality systems to work

Description: This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - quality management theory; - quality management system; - performance reporting; - advanced quality management tools and techniques; - advanced continuous improvement techniques, and; - communication when leading a team.

UEPOPS416B Monitor the implementation of the enterprise's production-maintenance quality control procedures

Locations: Industry, Sunshine.

Prerequisites:UEPOPS338B - Facilitate effective workplace communication

Description:This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills and knowledge: - evidence shall show that knowledge has been acquired for safe working practices, and; - specific skills needed to achieve the performance criteria.

VU20276 Write non-fiction

Locations: Industry, St Albans, Online.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to develop works of non-fiction suitable for publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment may include: assignments; classwork; projects; case studies; presentations; demonstration and observation.

VU20277 Refine writing skills

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit covers the knowledge and skills required to research and experiment with writing techniques in a range of media.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - an ability to research information to inform experimentation in writing; - an ability to write extended work using appropriate style, grammar, responding to proof correction and revision; - an ability to apply appropriate techniques to a specific writing task; - an ability to apply creative thinking to writing, and; - an ability to experiment in the developing and refining of concepts for writing. Students will also be expected to demonstrate the

following knowledge: - a knowledge of writing theories and their application; - a knowledge of the writing techniques most appropriate for particular purposes; - a knowledge of the historical and theoretical contexts for writing styles and techniques, and; - a knowledge of the copyright, moral rights and intellectual property issues associated with writing.

VU20278 Refine editing skills

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit covers the knowledge and skills required to apply advanced editing skills to a range of text in different media. This unit addresses the skills and knowledge to do with issues of substance and structure in a publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - ability to edit written work for clarity of expression; - ability to edit written work for tone and consistency; - ability to edit written work for grammar, style and punctuation; - ability to work with others; - ability to develop clear action plans, and; - ability to use word processing software. Students will also be expected to demonstrate the following knowledge: - a knowledge of the steps in the publishing process; - a knowledge of standard industry practices for both paper-based and screen-based publications; - a knowledge of Australian publication styles; - a knowledge of conventions for citing resources and research; - a knowledge of standard symbols for text mark-up and proof correction, and; - a basic knowledge of the essential legal issues involved in copyright, intellectual property and libel.

VU20279 Write for children and young adults

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit covers the knowledge and skills required to work as a writer for children.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - ability to generate concept for a work suitable for children; - ability to workshop and develop age-appropriate stories; - writing and editing skills sufficient to produce a written work for children; - ability to recognise most suitable platform and format for work; - ability to develop plot, characters and theme that will engage proposed audience; - ability to create dialogue suitable for proposed audience; - work collaboratively with editors, illustrators, designers, animators etc. to develop the work; - request and respond to constructive feedback; - understand and respond to a brief; - prioritise work tasks; - create and manage timelines, and; - seek expert assistance when necessary. Students will also be expected to demonstrate the following knowledge: - stages of

development in children's reading interests and abilities; - conceptual levels of understanding of children at different ages; - language, structure and formats of works suitable for writing for children; - trade and educational markets; - genres of fictional works written for children; - alternative platforms for children's writing; - trends in children's writing; - publishing houses that specialise in works for children; - national and international journals specialising in discussing works written for children, and; - wider forums and networking opportunities for children's writers.

VU20280 Develop a novel to a second draft

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit covers the knowledge and skills required to develop an existing draft of a fictional narrative suitable for a novel.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - an ability to experiment in the development and refining of concepts for a novel; - an ability to use research to inform experimentation in writing; - an ability to develop the elements of the novel within the chosen structure; - an ability to write a synopsis; - an ability to apply appropriate writing techniques to draft; - an ability to apply appropriate editing techniques to draft; - discuss written draft in a collaborative manner; - request and respond to critical feedback, and; - pitch the concept or idea for the novel. Students will also be expected to demonstrate the following knowledge: - a knowledge of the relationship between the different elements of a novel; - a knowledge of established conventions associated with different genres of novel; - a knowledge of writing theories and their application to novel writing; - a knowledge of different writing techniques; - a knowledge of the copyright, moral rights and intellectual property issues associated with writing; - a knowledge of copyright, moral rights and intellectual property legislation; - a knowledge of the publishing industry, and; - a knowledge of the current market.

VU20746 Apply essential further study skills

Locations: Footscray Park, Footscray Nicholson, St Albans, Werribee.

Prerequisites: Nil.

Description: This unit covers the knowledge and skills required to study and participate effectively in a tertiary learning environment within an art or arts related discipline.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - verbal communication such as skills in argument, participation and debate; - writing skills appropriate for the completion of complex texts including correct use of citations; - collaborative learning skills; - reading skills such as skimming, scanning, reading for meaning; - note-taking skills including summarising, synthesising and record keeping; - information access

using library resources including internet and online searches; - assessing appropriateness of information for specific purposes; - ability to work in groups, and; - negotiation skills. Students will also be expected to demonstrate the following knowledge: - range of learning strategies; - library services; - online services; - reading strategies; - writing processes; - text structures; - usage and syntax; - conventions of academic referencing, and; - plagiarism and collusion. .

VU20747 Research fields of study and enquiry

Locations: Footscray Park.

Prerequisites: Nil.

Description: This unit develops the knowledge and the skills required to research a tertiary field of study in a tertiary learning environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - respond in online discussion; - ask for and give feedback, and; - use online tools such as email to communicate effectively. - access and use features of Learning Management Systems for example Moodle or Blackboard; - access and use online tools such as blogs and wikis, and; - send and reply to emails, SMS. - compose online posts, and; - prepare questions and answers. - determine appropriate language to use to meet the purpose; - deal with possible break downs in online group activity; - use reflective processes to evaluate online learning; - seek assistance as required, and; - prioritise activities and meet deadlines. Students will also be expected to demonstrate the following knowledge: - online discussion protocols and etiquette, and; - privacy principles when engaging in online learning.

VU20749 Analyse stories/narratives within cultures

Locations: Industry, Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers the knowledge and skills required to analyse and explore the significance of stories told within and across cultures and the ways personal, cultural and cross-cultural identities are shaped and mediated by stories. These skills and knowledge can be extended to and underpin other areas of arts and arts related study.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read and interpret complex texts; - synthesise and summarise information; - locate and assess reference materials; - gather evidence in support of an argument or point of view; - cite resources using academic conventions, and; - use terminology of the discipline. Students will also be expected to demonstrate the following knowledge: - primary stories told in major cultures; - the nature of culture and acculturation; - different

versions of stories commonly told across cultures, and; - theories relevant to narrative and narrative structure. .

VU20832 Write fiction

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to develop works of fiction using a range of formats and approaches suitable for publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: collect, compile and record raw material as the basis of a fiction work; - create a narrative suitable for a work of fiction; - organise material; - pitch a concept or idea; - plan a complex writing project; - write a proposal; - communication skills sufficient to undertake interviews and to work with other people; - research skills sufficient to undertake archival research, electronic searches and case study approaches; - interview skills sufficient to interview a wide range of persons of differing backgrounds, and; - writing and editing skills sufficient to produce an extended work using correct style, grammar, proof correction and revision. Students will also be expected to demonstrate the following knowledge: - marketing and distribution strategies; - legislation governing copyright and ownership of material; - legislation governing privacy provisions; - the markets that exist for fiction works; - the range of writing techniques and editing most appropriate to works of fiction, and; - different sources for research.

VU20833 Coordinate editing and pre-production processes for a publication

Locations:Footscray Nicholson, Online.

Prerequisites:VU20278 - Refine editing skills

Description:This unit describes the performance outcomes, skills and knowledge required to manage the processes of editing and refinement of the range of content suitable for publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - work with others; - assess purpose and audience of a work; - develop a production plan and schedule; - liaise with industry professionals; - manage a range of editorial tasks; - edit a range of publication content, and; - draft a range of briefs. Students will also be expected to demonstrate the following knowledge: - production processes; - editorial roles and duties in the publishing industry; - processes required to coordinate production of a publication; - legal issues in copyright, defamation and intellectual property, and; - publishing contracts.

VU20880 Develop writing and editing skills

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit covers the knowledge and skills in the use of the English language for writing and editing tasks. It also includes the use of appropriate punctuation, as well as basic proofreading and editing skills.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - applying grammar; - applying the fundamentals of English grammar, spelling and vocabulary to a range of written contexts; - applying correct punctuation Using structural editing conventions; - using a dictionary and thesaurus, and; - the ability to clearly articulate corrections, amendments and suggestions on both hard copy and on-screen materials. Students will also be expected to demonstrate the following knowledge: - components of speech; - industry standards of grammar and structure; - principles of clear language; - conventions of grammar and usage; - punctuation and spelling, and; - proofreading marks.

VU20881 Write fiction material

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit covers the knowledge and skills required to write fiction material such as, narratives, dialogue, genre and poetry. It also includes the use of appropriate punctuation, as well as basic proof reading and editing skills.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - collecting and analysing relevant information; - writing fiction material using correct style, grammar, proof correction and revisions; - applying appropriate techniques to a range of fiction writing tasks; - applying creative thinking applicable to fiction writings, and; - developing and using imagination, personal experience and observation to furnish material for the fiction Students will also be expected to demonstrate the following knowledge: - historical and contemporary writing contexts, and; - a range of fiction writing techniques, forms and styles.

VU20882 Write non-fiction material

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit covers the knowledge and skills required to write non-fiction material such as, feature articles, obituaries, reviews and advertorials. It also includes the use of appropriate punctuation, as well as basic proof reading and editing skills.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - collecting and analysing relevant information; - writing non-fiction material using correct style, grammar, proof correction and revisions; - applying appropriate techniques to a range of non-fiction writing tasks, and; - applying creative thinking applicable to non-fiction writings. Students will also be expected to demonstrate the following knowledge: - writing theories and the implications for writing, and; - appropriate non-fiction writing techniques.

VU20883 Write short narratives

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to write short narratives for print and electronic publication, and for a range of other media. A writer of short narratives must draw on a range of experiences, observations and research. The process involves conception, form, drafting, redrafting and consideration of the requirements of the media or performance platform.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply correct grammar, spelling and punctuation; - analyse forms, audience and purpose; - read material in a range of forms and discuss to inform own writing; - apply redrafting skills; - present drafts for workshoping and apply feedback; - ability to take part in workshoping and critique works by other writers; - technical skills sufficient to use word-processing applications and format a range of works to industry expectations; - self-management and planning skills sufficient to: prioritise work tasks, meet deadlines, develop clear goals and outcomes, seek out and participate in professional development activities; - learning skills sufficient to improve written drafts and final product through self-reflection and redrafting after feedback, and; - initiative and enterprise skills. Students will also be expected to demonstrate the following knowledge: - issues and challenges involved in writing short narratives, knowledge of standards of literacy skills required for publication; - intended audiences for short narratives, and ways in which works can be performed or published; - communication and inter-personal techniques required for workshoping; - organisational and legislative OHS standards as they relate to working for periods of time on computers, and; - copyright and intellectual property requirements as they relate to writing and publishing works.

VU20884 Write long narratives

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to write long narratives for print and electronic publication, and for a range of other media. A writer of long narratives must draw on a range of experiences,

observations and research. The process involves conception, form, drafting and redrafting.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills sufficient to: apply correct grammar, spelling and punctuation; analyse forms, audience and purpose; read material in a range of forms and discuss to inform own writing; apply redrafting skills; present drafts for workshoping and apply feedback; - ability to take part in workshoping and critique works by other writers; - technical skills sufficient to use word-processing applications and format work to industry expectations; - self-management and planning skills sufficient to: prioritise work tasks, meet deadlines, develop clear goals and outcomes, seek out and participate in professional development activities; - learning skills sufficient to improve written drafts and final product through self-reflection and redrafting after feedback; - initiative and enterprise skills. Students will also be expected to demonstrate the following knowledge: - issues and challenges involved in writing long narratives, knowledge of standards of literacy skills required for publication; - intended audiences for long narratives, and ways in which works can be published; - communication and inter-personal techniques required for workshoping; - organisational and legislative OHS standards as they relate to working for periods of time on computers, and; - copyright and intellectual property requirements as they relate to writing and publishing works.

VU20885 Write poetry

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to write poetry for a wide range of audiences, magazines, journals, books and web-based formats. A poet draws on many different experiences and ideas to draft poems that may be performed or published. The process involves conception, form, drafting, redrafting and consideration of audience.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills sufficient to: - apply correct grammar, spelling and punctuation; analyse forms, audience and purpose; read poetry and discuss to inform own writing; apply redrafting skills; present drafts for workshoping and apply feedback; - ability to take part in workshoping and critique poems by other writers; - technical skills sufficient to use word-processing applications and format poems to industry expectations; - self-management and planning skills sufficient to: prioritise work tasks, meet deadlines, develop clear goals and outcomes, seek out and participate in professional development activities; - learning skills sufficient to improve written drafts and final

product through self-reflection and redrafting after feedback, and; - initiative and enterprise skills. Students will also be expected to demonstrate the following knowledge: - issues and challenges involved in writing poems, knowledge of standards of literacy skills required for publication; - various audiences for poetry, and ways in which poetry can be performed or published; - communication and inter-personal techniques required for workshoping; - organisational and legislative OHS standards as they relate to working for periods of time on computers, and; - copyright and intellectual property requirements as they relate to writing and publishing poems. .

VU20886 Write for young children

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to write picture books, poetry, fiction and nonfiction for younger children ideally aged between 3- 9 years. A writer for younger children must draw on a range of experiences, observations and research. The process involves conception, form, drafting, redrafting and consideration of this particular audience.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills sufficient to: apply correct grammar, spelling and punctuation; analyse forms, audience and purpose; read material in a range of forms for younger children and discuss to inform own writing; apply redrafting skills; present drafts for workshoping and apply feedback; - ability to take part in workshoping and critique works by other writers - technical skills sufficient to use word-processing applications and format a range of works to industry expectations; - self-management and planning skills sufficient to: prioritise work tasks, meet deadlines, develop clear goals and outcomes, seek out and participate in professional development activities; - learning skills sufficient to improve written drafts and final product through self-reflection and redrafting after feedback, and; - initiative and enterprise skills. Students will also be expected to demonstrate the following knowledge: - issues and challenges involved in writing for younger children, knowledge of standards of literacy skills required for publication; - intended audiences for content for younger children, and ways in which works can be performed or published; - communication and inter-personal techniques required for workshoping; - organisational and legislative OHS standards as they relate to working for periods of time on computers, and; - copyright and intellectual property requirements as they relate to writing and publishing works.

VU20887 Write comedy

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to write comedic scripts for TV, film and theatre, and for a range of other media. A writer of comedy must draw on a range of experiences, observations and research. The process involves conception, form, drafting, redrafting and consideration of the requirements of the media or performance platform.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills sufficient to: apply correct grammar, spelling and punctuation; analyse forms, audience and purpose; read material in a range of forms and discuss to inform own writing; apply redrafting skills; present drafts for workshoping and apply feedback; - ability to take part in workshoping and critique works by other writers; - technical skills sufficient to use word-processing applications and format a range of scripts to industry expectations; - self-management and planning skills sufficient to: prioritise work tasks, meet deadlines, develop clear goals and outcomes, seek out and participate in professional development activities; - learning skills sufficient to improve written drafts and final product through self-reflection and redrafting after feedback, and; - initiative and enterprise skills. Students will also be expected to demonstrate the following knowledge: - issues and challenges involved in writing comedy, knowledge of standards of literacy skills required for publication; - intended audiences for comedy, and ways in which works can be performed or published; - communication and inter-personal techniques required for workshoping; - organisational and legislative OHS standards as they relate to working for periods of time on computers, and; - copyright and intellectual property requirements as they relate to writing and publishing works.

VU20888 Write journalism

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to develop a range of journalism articles suitable for publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply creative thought processes to journalism writing; - research, analyse and determine the suitability of content material; - employ a range of form and style to suit specific non-fiction content, and; - edit and proofread texts to a publishable standard. Students will also be expected to demonstrate the following knowledge: - occupational health & safety procedures relevant to writing; - feature writing styles and techniques, and; - non-fiction writing theories and the implications for writing.

VU20890 Write short scripts

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to write scripts for TV, film and theatre, and for a range of other media. A writer of scripts must draw on a range of experiences, observations and research. The process involves conception, form, drafting, redrafting and consideration of the requirements of the media or performance platform.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication and literacy skills sufficient to: apply correct grammar, spelling and punctuation; - use correct script formatting for intended purpose; - ability to take part in workshoping and critique works by other writers; - technical skills sufficient to use word-processing applications and produce a range of scripts to industry expectations; - self-management and planning skills sufficient to: prioritise work tasks, meet deadlines, develop clear goals and outcomes, seek out and participate in professional development activities; - learning skills sufficient to improve written drafts and final product through self-reflection and redrafting after feedback, and; - initiative and enterprise skills. Students will also be expected to demonstrate the following knowledge: - issues and challenges involved in writing scripts, knowledge of standards of literacy skills required for publication; - intended audiences for scripts, and ways in which works can be performed or published; - communication and interpersonal techniques required for workshoping; - organisational and legislative OHS standards as they relate to working for periods of time on computers, and; - copyright and intellectual property requirements as they relate to writing, performing and publishing works.

VU20903 Produce basic engineering components and products using fabrication and machining

Locations: Industry, Sunshine.

Prerequisites: VU20912 - Perform basic machining processes VU20913 - Apply basic fabrication techniques

Description: This unit of competency sets out the knowledge and skills required to produce a range of basic engineering components and products using basic fabrication and machining techniques. This involves identifying the required manufacturing methods, planning the operations, preparing materials and tooling, producing components and assembling components.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and sequence a job; - follow instructions; - use machines and handle materials safely; - mark out materials using appropriate marking medium and tools; - select techniques for holding work; - cut a range of materials; - identify worn or damaged cutting tools; - reshape and/or sharpen cutting tools; - use common abrasives; - set up and operate cutting, grinding, drilling, turning and milling machines; - turn, face and bore using a lathe; - select drill bits and cutting/shaping tools; - select cutting speeds and feeds; - mount and position work and cutting tools; - adjust machine settings, and; - select and apply lubricants. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures; - hazards and control measures; - basic marking out techniques; - techniques and tools for measuring materials; - properties of

materials; - safe operation of tools and machines; - machine types, operation and maintenance for cutting, grinding, drilling turning and milling; - methods of holding work; - selection of feeds and speeds, and; - cutting tool materials.

VU20904 Perform cutting, grinding and turning operations

Locations: Industry, Sunshine.

Prerequisites: VU20912 - Perform basic machining processes

Description: This unit of competency sets out the knowledge and skills required to produce a range of basic engineering components and products by cutting, grinding and turning techniques. This involves identifying the required manufacturing methods, planning the operations, preparing materials and equipment, producing components and assembling components. The unit is intended to develop the basic skills and techniques attained through the pre-requisite machining, drawing interpretation, materials handling and OHS units.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and sequence operations; - mark out work to meet specified tolerances; - complete calculations; - select and prepare machines and accessories for use; - set up and operate cutting machines, grinding machines and lathes; - cut/machine materials to specified dimensions and tolerances; - hold work for cutting, grinding or turning; - maintain mechanical cutting machines, grinding machines and lathes; - calculate work speeds and feed rates; - apply recommend tool angles from charts/tables for different material types; - overcome cutting tool failure; - apply quality procedures; - read and interpret routine information on written job instructions, procedures, specifications, charts, lists, drawings; - follow oral instructions and standard procedures; - check and clarify task related information; - enter routine and familiar information onto proforma and standard workplace forms; - check conformance of work to specifications, and; - measure to specified tolerances and dimensions. Students will also be expected to demonstrate the following knowledge: - factors influencing cutting machine, grinding machine and centre lathe selection; - machine capacities; - marking out tools and techniques; - safe work practices and procedures; - hazards and control measures; - functions of the major parts of cutting machines, grinding machines and centre lathe; - factors influencing feeds and speeds and depth of cut or material removal; - cutting fluids and coolants; - cutting tool materials; - principles of chip formation and control; - standard grinding sheet shapes, grades, composition and relevant applications, and; - cutting machine, grinder and lathe maintenance.

VU20909 Develop an individual career plan for the engineering industry

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to research careers and training opportunities in the Manufacturing and Engineering Industry and develop an individual career path plan. This involves examining the range of activities the industry covers, the types of occupations that are available and the training pathways that can lead to those occupations.

Required Reading: No required text

Assessment: The evidence on which competency in this unit is deemed should demonstrate consistent performance. A representative body of performance criteria

demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to: Demonstrate essential knowledge and associated skills as described in this unit Demonstrate an appropriate level of skills enabling employment Assessments may include: - practical assessment - work projects - demonstration - written and verbal tasks. Specific unit assessments are located in the learning and assessment plans within the School.

VU20911 Handle engineering materials

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to safely handle materials in accordance with occupational health and safety requirements and enterprise procedures. This involves using manual handling techniques, operating mechanical handling equipment and handling industrial chemicals and materials. The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practise in this unit is subject to regulations directly related to occupational health and safety and, where applicable, contracts of training such as apprenticeships.

Required Reading: No required text

Assessment: A person who demonstrates competency in this unit must be able to safely handle engineering materials. Competency in this unit cannot be claimed until all prerequisites have been satisfied. Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to: Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range Demonstrate essential knowledge and associated skills as described in this unit Demonstrate an appropriate level of skills enabling employment Plan to lift and move a range of engineering materials, considering applicable safety and handling factors Safely lift and move materials using a range of mechanical handling aids and equipment Demonstrate hazard control and emergency procedures Assessments may include: - practical assessment - work projects - demonstration - written and verbal tasks. Specific assessments are located in the learning and assessment plans within the College.

VU20912 Perform basic machining processes

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to undertake basic machining operations under supervision. This involves setting up and machining components by using lathes, milling machines, cut off saws, pedestal grinders and fixed position drilling machines. Marking out skills are also included as necessary in the machining process.

Required Reading: No required text

Assessment: Before the critical aspects of evidence are considered all prerequisite requisite shall be met. The evidence on which competency in this unit is deemed should demonstrate consistent performance. A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to: Implement Occupational Health and Safety workplace

procedures and practices including the use of risk control measures as specified in the performance criteria and range; Demonstrate essential knowledge and associated skills; Demonstrate an appropriate level of skills enabling employment Assessments may include: - practical assessment - work projects - demonstration - written and verbal tasks. Specific unit assessments are located in the learning and assessment plans within the School.

VU20913 Apply basic fabrication techniques

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to perform basic fabrication tasks under supervision. This involves using appropriate machinery and applying associated fabrication and assembly techniques to the fabrications process.

Required Reading: No required text

Assessment: The evidence on which competency in this unit is deemed should demonstrate consistent performance. A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to: Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; Demonstrate essential knowledge and associated skills as described in this unit; Demonstrate an appropriate level of skills enabling employment. Assessments may include: - practical assessment - work projects - demonstration - written and verbal tasks. Specific unit assessments are located in the learning and assessment plans within the School.

VU20914 Form, bend and shape engineering materials

Locations: Industry, Sunshine.

Prerequisites: VU20913 - Apply basic fabrication techniques

Description: This unit of competency sets out the knowledge and skills required to produce a range of basic engineering components and products using basic fabrication techniques. This involves identifying the required manufacturing methods, planning the operations, preparing materials and equipment, producing components and assembling components.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - mark out materials; - bend allowance/neutral axis; - plan job and task sequence; - set feeds and speeds; - hold work for cutting and forming; - set up and operate cutting equipment; - set up and operate forming equipment; - apply joining method; - apply quality procedures; - check conformance of work specifications; - read and interpret routine information on written job instructions, specifications and standard operating procedures; - follow oral instruction and standard procedures, and; enter routine and familiar information onto proforma and standard workplace forms. Students will also be expected to demonstrate the following knowledge: - production techniques and processes; - forming, fabricating, shaping, extrusions; - marking out medium and tools; - marking out calculations; - fabrication methods/techniques; - machine capacities; - sequence

of operations; - cut off machine types and operation; - assembly aids, and; - joining methods and materials.

VU20915 Perform basic welding and thermal cutting processes to fabricate engineering structures

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to perform: basic welding using manual metal arc welding (MMAW) basic welding using gas metal arc welding (GMAW) basic thermal cutting using fuel gas equipment This involves identifying the welding/cutting requirements, preparing materials and equipment, welding and cutting components. Welding is routine and where the welding quality is not required to meet an Australian Standard or equivalent. Fillet and butt welds would typically be performed on low carbon/mild steels. Thermal cutting is manual straight line cutting. License to practice The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and traineeships.

Required Reading: Refer to Learning and Assessment Plan

Assessment: A person who demonstrates competency in this unit must be able to fabricate engineering structures using basic welding and thermal cutting processes. Competency in this unit cannot be claimed until all prerequisites have been satisfied. Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to: Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and Demonstrate essential knowledge and associated skills of this unit; and Demonstrate an appropriate level of skills enabling employment

VU20939 Recognise and interpret safety signs and symbols

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to recognise and interpret safety signs and symbols commonly found in workplace and community settings

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to identify and interpret key words regularly used in common safety signs and symbols; - numeracy skills to recognise and interpret the meaning of shapes in safety signage, and; - problem solving skills to distinguish between different types of commonly used safety signs and symbols using shapes, colours and words. Students will also be expected

to demonstrate the following knowledge: - navigation skills and reading strategies to enable recognition and interpretation of commonly used safety signs and symbols; - high frequency words used in safety signage, and; - colours and shapes used in the main categories of safety signage.

VU20940 Recognise and use basic mathematical symbols and processes

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to recognise and use basic mathematical symbols and whole and half numbers to make basic mathematical calculations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - simple mathematical vocabulary such as addition/plus; subtraction/minus; multiplication/times, and; - the links between addition and subtraction. Students will also be expected to demonstrate the following knowledge: - problem solving skills to select the mathematical process appropriate for each different basic calculation and to test the accuracy of results.

VU20958 Prepare for work in the construction industry

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: The purpose of this module is to provide the participant with the skills and knowledge to determine opportunities and pathways, and to apply for work in the construction industry.

Required Reading: VU Produced Workbooks.

Assessment: - Describe different streams and sectors in building and construction industry. - Identify employment services and opportunities. - Develop a career pathway plan in the construction industry. - Develop methods and strategies to seek work in the construction industry. - Produce an application letter and resume for two potential employment opportunities. - Effectively apply the interview requirements described in the range statement to two simulated or actual job interviews. Specific unit assessments are located in the learning and assessment plans within the School.

VU20960 Introduction to scaffolding and working platforms

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to safely erect, use and disassemble restricted height scaffolding and working platforms.

Required Reading: VU Produced Workbooks.

Assessment: - Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with organisational policies and procedures. - Communicate and work safely and effectively with others. - Construct modular scaffolding which must include a minimum of three bays one lift high incorporating: - one access bay and one return - Or - two

bays plus return and one lift high. - Erect one mobile scaffold to four metres or less in height according to manufacturers' specifications. Specific unit assessments are located in the learning and assessment plans within the School.

VU20964 Workplace documents and plans

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: The purpose of this module is to provide the participant with the skills and knowledge to read, interpret and produce documents and plans used in the construction industry.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulation, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. -

Read and interpret the symbols and features of a minimum of two different site plans. - Select and demonstrate the appropriate plan and drawing techniques for given tasks including a minimum of one site plan, one floor plan and one elevation plan for a structure containing floor, walls and roof. Specific unit assessments are located in the learning and assessment plans within the School.

VU20965 Bricklaying hand tools

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to select, use and maintain hand tools and equipment in the bricklaying industry.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. -

Select and use appropriate hand tools and equipment. - Mark and cut three bricks using a bolster and hammer to specific requirements. - Use a minimum of six bricklaying hand tools from the range statement to lay brickwork between profiles to a line and gauge to a minimum of eight courses high and eight bricks long. - Select and use PPE appropriately when using bricklaying hand tools. Specific unit assessments are located in the learning and assessment plans within the School.

VU20966 Bricklaying basic skills

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to apply basic bricklaying skills. This module also includes an appreciation of the principles of concrete.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. -

Describe the components and principles of mortar. - Select and use the appropriate materials, tools and equipment for basic bricklaying. - Mix a mortar batch to a required standard. - Set out and lay brickwork to a line and gauge. - As a minimum, construct an internal/external corner wall 14 courses high with one stopped end. Specific unit assessments are located in the learning and assessment plans within the School.

VU20967 Brick veneer construction processes

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to apply brick veneer construction processes.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. -

Select and use the appropriate materials, tools and equipment for brick veneer construction. - Set out and lay veneer brickwork with one internal and one external corner and one opening containing a window or door with flashing over the opening. This brick veneer structure is to be a minimum of 6 metres in total length and a minimum of 1.7 metres high, and include a brick sill that is a minimum of 600 mm wide. A control joint is to be included in this brick veneer structure. -

Set out and construct base brickwork with bearer piers of a minimum height of six courses, incorporating vents, control joints and sub-floor access. Specific unit assessments are located in the learning and assessment plans within the School.

VU20968 Cavity brick construction processes

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to apply cavity brick construction processes.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulations, - Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. -

Select and use the appropriate materials, tools and equipment for cavity brick construction. - Set out and lay cavity brickwork with one corner and one opening containing a window or door with flashing over the openings. This cavity brick structure must be a minimum of 6 metres in total length and a minimum of 1.7 metres high, and include a brick sill that is a minimum of 600 mm wide. This cavity brick structure must incorporate base brickwork, including bearer piers. Specific unit assessments are located in the learning and assessment plans within the School.

VU20969 Masonry blockwork

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to apply masonry blockwork construction principles. This module excludes the practical application of reinforced concrete masonry bond beams.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. -

Describe the components and principles of mortar for masonry blockwork. - Select and use the appropriate materials, tools and equipment for masonry blockwork construction. - As a minimum, set out and lay two masonry blockwork walls, each with one internal and one external corner to a line and gauge. These walls must be constructed from different sized blocks, using blocks that are from the 150 mm series and the 200 mm series. Both walls must be a minimum of six courses high and include one stopped end. Specific unit assessments are located in the learning and assessment plans within the School.

VU20971 Carpentry hand tools

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to select, use and maintain hand tools and equipment used in the carpentry industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - work safely and effectively as an individual and as part of a team; - communicate effectively by questioning, sharing information and listening; - select appropriate tools to use with carpentry materials; - handle/hold materials while using hand tools, and; - safely and effectively use carpentry hand tools. Students will also be expected to demonstrate the following knowledge: - workplace safety requirements and OHS legislation; - the characteristics of carpentry materials; - the characteristics and functions of materials, equipment and hand tools in carpentry; - manufacturers' specifications for hand tools in carpentry, and; - relevant Australian Standards and codes related to hand tools.

VU20972 Carpentry power tools

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to select, safely operate and maintain power tools used in the carpentry sector of the building and construction industry.

Required Reading: VU Produced Workbooks.

Assessment: - Comply with OHS legislation, regulations Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. - Identify and correctly use the carpentry power tools listed in the range statement during carpentry projects. - Use PPE appropriately when using carpentry power tools. - Correctly replace the blades on a minimum of one power saw and one electric plane. - Correctly replace a minimum of two router bits. Specific unit assessments are located in the learning and assessment plans within the School.

VU20973 Basic setting out

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to set out a building.

Required Reading: VU Produced Workbooks.

Assessment: - Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. - Select and use materials, tools and equipment for setting out. - Complete set out for one rectangular and one L-shaped building according to a plan for a specific building. - Square a corner of a building set out using the 3, 4, 5 triangle method. Specific unit assessments are located in the learning and assessment plans within the School.

VU20974 Sub-floor framing

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to construct sub-floor framing.

Required Reading: VU Produced Workbooks.

Assessment: - Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. - Select and use the appropriate materials, tools and equipment to construct sub-floor framing. - Set out, level, dig stump holes, position soleplates and stumps and construct sub-floor framing for one rectangular shaped building. - Install bearers showing at least one joining method. - Install floor joist to suit fitted and platform floors. Specific unit assessments are located in the learning and assessment plans within the School.

VU20975 Wall framing

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to construct wall framing.

Required Reading: VU Produced Workbooks.

Assessment: - Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. - Select and use the appropriate materials, tools and equipment for wall framing construction. - Set out and construct wall framing for one rectangular shaped building including: - one door and one window opening including a lintel - one external corner for weatherboard and one external corner for brick veneer - one internal wall with junction - two types of bracing. Specific unit assessments are located in the learning and assessment plans within the School.

VU20976 Roof framing

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to construct roof framing.

Required Reading: VU Produced Workbooks.

Assessment: - Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. - Select and use the appropriate materials, tools and equipment for constructing roof framing. - Set out and construct the roof frame for a hip and gable end roof including ceiling framing, outriggers, collar ties and roof battens. - Set out and construct a pattern rafter. - Construct a roof boat. - Mark and cut rafter tails and outriggers to a specified length. - Identify truss types and components. Specific unit assessments are located in the learning and assessment plans within the School.

VU20977 External cladding

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to install external cladding.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. - Select and use the appropriate materials for external cladding. - Set out weatherboard stop showing spacing of weatherboards and lap. - Install weatherboards to a frame with one internal corner and one external corner, and two openings (one for a window and one for a door) with flashings. - Join weatherboards using appropriate method. Specific unit assessments are located in the learning and assessment plans within the School.

VU20978 Installation of window and door frames

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to install window and door frames.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. - Select and use the appropriate materials for the installation of window and door frames. - Install as a minimum one window frame and one door frame into a wall frame, ensuring frames are flashed, packed, levelled, plumbed and in-wind. Specific unit assessments are located in the learning and assessment plans within the School.

VU20979 Interior fixing

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to install interior fixing.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. - Select and use the appropriate materials for interior fixing. - Install one internal door jamb and door complete with architraves and door furniture. - Install one window complete with architraves and window furniture. - Install skirting with a minimum of one internal scribe and one external mitred corner. - Install lining boards and trim around using at least two different types of timber mouldings taken from the range statement. Specific unit assessments are located in the learning and assessment plans within the School.

VU20980 Introduction to demolition

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge necessary to demolish internal structures.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. - Select and use materials, tools and equipment required for demolition. - Demolish a timber structure, including denailing, reclaiming and stacking of salvaged materials. Specific unit assessments are located in the learning and assessment plans within the School.

VU20981 Formwork for concreting

Locations: Industry, Werribee, Sunshine.

Prerequisites: CPCCOHS1001A - Work safely in the construction industry

Description: The purpose of this module is to provide the participant with the skills and knowledge to construct formwork for concreting.

Required Reading: VU Produced Workbooks.

Assessment:- Comply with OHS legislation, regulations, Codes of Practice applicable to workplace operations. - Comply with workplace/organisational policies and procedures. - Communicate and work safely and effectively with others. - Complete set out to achieve levels and other specified dimensions before construction of formwork. - Construct formwork for an L-shaped dwelling using the appropriate materials and techniques, including: - external corner - internal corner - edge rebate. Specific unit assessments are located in the learning and assessment plans within the School.

VU21038 Develop study skills

Locations: St Albans.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by Aboriginal and Torres Strait Islander learners to support others to plan, undertake, monitor and review a small scale community project.

Required Reading: The teacher will provide teaching and learning material as required.

Assessment: Assessment must confirm the ability to: - work as part of a team to complete a small scale community project - manage own time to complete tasks - make a positive contribution to the project by offering and accepting feedback on project and personal progress.

VU21047 Participate in a practical placement with support

Locations: Footscray Nicholson, Werribee, City King St, Sunshine, Geelong Learning Links.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to select, negotiate and participate in a practical work or community placement.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - negotiate placement; - participate in a work placement; - complete required documentation; - read and interpret workplace documents/signage and procedures relevant to work performed, and; - personal management skills to assess personal strengths and weaknesses. Students will also be expected to demonstrate the following knowledge: - sources of information on placement options.

VU21049 Use basic measuring and calculating skills

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to measure quantities in standard units and carry out basic calculations involving these quantities.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret the measurement requirements; - apply the appropriate mathematical method to make required calculations, and; - check the accuracy of calculations. Students will also be expected to demonstrate the following knowledge: - measurements of quantities such as time, length, volume, using common measuring instruments; - mathematical processes; - basic functions of calculators, and; - basic measuring instruments. .

VU21054 Develop written job application skills

Locations:Industry, Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to produce a written job application in response to an advertised position.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to interpret and address requirements of written job applications, and; - planning and organisational skills to complete and submit applications in required time and format. Students will also be expected to demonstrate the following knowledge: - elements of written job applications to enable accurate and relevant information to be supplied: personal details; technical and generic skills; relevant experience, and; referees, and; - conventions of written job applications: accuracy of spelling, grammatical expression and punctuation; relevance to criteria, and; concise expression.

VU21055 Develop job interview skills

Locations:Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to prepare for and participate in job interviews.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy skills to access and interpret information and prepare required documentation; - personal management skills to attend interviews punctually, and; - communication skills to participate effectively in interviews. Students will also be expected to demonstrate the following knowledge: - sources of information on job interviews, and; - features of references and resumes.

VU21058 Use a range of techniques to solve mathematical problems

Locations:Footscray Park, Footscray Nicholson.

Prerequisites:Nil.

Description:The purpose of this unit is to provide learners with the knowledge and skills to use a range of specialist techniques and concepts to solve mathematical problems.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - perform calculations involving fractions and mixed numbers; - perform calculations involving decimals and directed numbers; - round a decimal to a given number of decimal places; - use simple geometry to determine angles in triangles (including non-right angled); - convert the unit of a quantity to a unit with a different prefix; - write a number correct to a given number of significant figures; - calculate systematic, random and percentage errors; - read off values in a table, chart or graph; - describe the general shape of a given or plotted scatter diagram; - identify general shapes and major characteristics of linear and simple non-linear graphs; - locate embedded information necessary to solve a problem or analyse quantitative information; - estimating skills to check calculations and reasonableness of outcomes; - use mathematical symbolism, charts, diagrams and graphs as appropriate to convey mathematical thinking and processing, and; - use specialised calculator functions relevant to mathematical needs. Students will also be expected to demonstrate the following knowledge: - apply a wide range of strategies and techniques to solve mathematical problems; - using ratio, proportion and percent; - using trigonometry to determine lengths and angles; - using basic indices; - using measurements to solve mensuration problems in two and three dimensions; - substituting into and transposing simple equations and formulae; - solving problems by plotting points; - presenting and evaluating statistical information; - identifying connections between formulae and graphical representations; - using algebraic techniques to analyse and solve problems; - demonstrate estimating skills to check calculations and reasonableness of outcomes, and; - use mathematical symbolism, charts, diagrams and graphs as appropriate to convey mathematical thinking and processing.

VU21092 Apply advanced statics principles to engineering problems

Locations:Industry, Sunshine.

Prerequisites:VU21100 - Apply principles of mechanics to engineering problems
VU21103 - Apply calculus to engineering problems

Description:This unit of competency sets out the knowledge and skills required to apply advanced static concepts and principles to solve complex engineering problems. It includes two and three dimensional force analysis and associated diagrams for structures and mechanical componentry.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and following relevant OH&S procedures; - interpreting industry codes, regulations and technical documentation; - selecting the most appropriate computational method to analyse and solve the engineering problem; - solving engineering problems involving the analysis of two dimensional force and couple systems; - representing forces and moments as three dimensional Cartesian vectors; - analysing and solving engineering problems involving basic three dimensional applications; - analysing and solving problems involving free body diagrams of two and three dimensional structures and assemblies; - constructing shear force and bending moment diagrams for structures and assemblies subjected to two and three dimensional force systems. presenting results in graphs, charts and tables to requirements; - writing technical reports, and; - working with others in a team; adapting to changes in work. Students will also be expected to demonstrate the following knowledge: - two dimensional force analysis; - three dimensional force analysis; - free body diagrams of two and three dimensional systems, and; - shear force, bending moments and torque diagrams for two and three dimensional force systems.

VU21093 Apply advanced dynamics principles to engineering problems

Locations: Industry, Sunshine.

Prerequisites: VU21400 - Apply scientific principles to engineering problems

Description: This unit of competency sets out the knowledge and skills required to apply advanced dynamics to solve problems common to all engineering fields. This includes friction, centrifugal force, balancing, mechanical vibrations, impulse, momentum, impact, systems of bodies in motion, and simple, compound and epicyclic gearing.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and following relevant OH&S procedures; - interpreting industry codes, regulations and technical documentation; - recognising the underlying dynamic principles to solve engineering problems; - selecting the most appropriate computational method to analyse and solve the mechanical engineering problem; - applying advanced dynamics to engineering problems; - quoting and recording assumptions made in the solution; - presenting results in graphs, charts and tables to requirements; - writing technical reports; - working with others in a team, and; - adapting to changes in work. Students will also be expected to demonstrate the following knowledge: - friction; - centrifugal force; - balancing; - mechanical vibrations; - impulse, momentum and impact; - systems of bodies in motion, and; - gearing.

VU21094 Apply finite element analysis

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply advanced dynamics to solve problems common to all engineering fields. This includes friction, centrifugal force, balancing, mechanical vibrations, impulse, momentum, impact, systems of bodies in motion, and simple, compound and epicyclic gearing.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the application of finite element analysis This includes: - modelling a wide range of shapes and structures; - choice of element type and control of element shape so as to minimise calculation errors; - effective use of library files; - selection of efficient modelling techniques including importation of geometry from other software packages; - application of appropriate boundary conditions; - verification of results; - presentation of results, including software generated graphics, in a form useful to others; - ability to identify areas of excessive stress and/or deformation and to recommend modifications.

VU21095 Apply electrotechnology principles in an engineering work environment

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to select, set-up and use a range of test equipment to measure voltage, current and resistance. This involves testing for continuity, insulation and identifying commonly used electrical/electronic devices for the supply of power and for the control of machines and plant in an engineering environment License to practice The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and traineeships.

Required Reading: Refer to Learning and Assessment Plan

Assessment: To be considered competent in this unit the participant must be able to demonstrate the achievement of all of the elements of competency to the level defined by their associated performance criteria and incorporating the required skills and knowledge. Specifically they must be able to: - Perform each element on at least two occasions - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement - Demonstrate application of the Required Skills and Knowledge at a level and within timeframes appropriate to the workplace.

VU21096 Use basic engineering concepts to plan the manufacture of engineering components

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to plan the fabrication of engineering components. This involves defining the problem, identifying and reviewing specifications, determining resources, production sequence and schedules. License to practice The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and, where applicable, contracts of training such as apprenticeships and the like.

Required Reading: Refer to Learning and Assessment Plan

Assessment: To be considered competent in this unit the participant must be able to demonstrate the achievement of all of the elements of competency to the level defined by their associated performance criteria and incorporating the required skills and knowledge. Specifically they must be able to: - perform each element on at least two occasions - implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement - demonstrate application of the Required Skills and Knowledge at a level and within timeframes appropriate to the workplace. - plan the routine manufacture of engineering components.

VU21098 Apply mathematical solutions to engineering problems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply mathematical concepts and methods that are common to all engineering fields. This includes arithmetic, algebra, geometry, equations, functions, graphs and the use of scientific calculators but does not include differential and integral calculus.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to apply mathematical concepts to engineering problems in new situations and different contexts.

VU21099 Apply statistical methods for quality control and reliability

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply statistical concepts and methods that are common to all engineering fields for the purpose of quality control. This includes averages, probability, frequency distributions, standard deviation, and quality control applications.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Perform each element on at least two occasions - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement - Demonstrate application of the Required Skills and Knowledge at a level and within timeframes appropriate to the workplace. - Perform a range of statistical computation to obtain enumerated data on quality systems and reliability of outputs in different engineering contexts.

VU21100 Apply principles of mechanics to engineering problems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply mechanics concepts and principles to solve problems common to all engineering fields. This includes forces, moments, friction and frames.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - apply principles of mechanics to solve engineering problems on at least two occasions researching from each of the following areas respectively: Force and Gravity Equilibrium Moment and Torque Friction Couples Forces in Frames

VU21101 Apply principles of strength of materials to engineering problems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply principles of strength of materials to standard engineering problems. This includes stress strain, deformation, and properties of sections, shear force and testing.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to successfully apply strength of materials solutions to common engineering problems on five different occasions.

VU21103 Apply calculus to engineering problems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply calculus to the solution of engineering problems. This includes differentiation and integration, applications to rectilinear motion, maxima and minima and simple differential equations.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial

environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range- Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to successfully apply the correct methodology in solving a wide range of complex engineering problems using calculus.

VU21104 Annotate and create assemblies using solid models

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply modelling techniques to create 3D solid model assemblies for computer processing and presentation purposes. This includes applications in CAD, computer graphics and animation, Rapid prototyping, medical testing, and visualisation of scientific research.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range- Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to create models of solid object assemblies for computer processing and presentation purposes on more than one occasion and in different contexts.

VU21108 Select and apply lubrication principles

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to select, apply and review lubrication principles and products. This includes the requirement to classify and select common and special lubricants and to diagnose problems in lubrication systems.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range- Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to select, apply and review lubrication principles and products in a range of engineering applications and on more than one occasion and in different contexts

VU21109 Select and maintain bearing and rotary shaft assemblies

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to select, maintain and review plain and anti-friction bearing assemblies, and rotary shaft seals. This includes selecting and applying appropriate lubricants and conducting premature fault analysis.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range- Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate to select, maintain and review plain and anti-friction bearing assemblies, and rotary shaft seals on a range of equipment/plant on more than one occasion and in different contexts. It must include: bearing selection; routine checks, replacements, lubrication, fault analysis

VU21110 Plan for the implementation of mechanical drive systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to plan for the implementation of mechanical drive systems. This includes using catalogues and drawing of components including shafts, couplings, belts, chains, gears variable speed drives, brakes, clutches, bearings, winch equipment, reciprocating drives/linear to rotational

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range- Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to plan the implementation of mechanical drive systems to the specified level on more than one occasion and in different context.

VU21111 Perform vibration measurement and control

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to select suitable vibration measuring equipment, use and apply the instruments required to evaluate, monitor and control machine vibrations.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated

performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to select suitable vibration measuring equipment, use and apply the instruments required to evaluate, monitor and control machine vibrations. - Obtain measurements using transducers and related instrumentation on more than one occasion and in different contexts. This includes measurement and evaluation through data analysis by employing appropriate methodology and the design of vibration control mechanisms.

VU211 12 Design mechanical engineering systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to design mechanical engineering systems. This includes use of codes, catalogues and design handbooks to extract information to make appropriate calculations and/or selections. This is based on skills encompassing project management, client liaison, design options, tender documentation and technical reporting.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to design mechanical engineering systems on more than one occasion and in different contexts. This includes: writing specifications; analysing components and assembly design conditions; selecting mechanical components and materials; designing mechanical engineering systems and; documenting mechanical engineering designs.

VU211 13 Apply the thermodynamic principles in engineering

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply thermodynamic principles in engineering. This includes concepts, forms and principles and performing relevant calculations with respect to thermodynamics. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced Workbooks.

Assessment: Students will be expected to demonstrate the following required skills: Consult and communicate with others Identify and follow relevant OH & S procedures Read and use charts and diagrams Perform measurements and calculations Perform maintenance and fault tracing Students will also be expected to demonstrate the following knowledge: General economic and social impacts energy

conversion - typical processes and efficiencies sources of energy solar energy hydro-electric power geothermal energy tidal energy nuclear energy - fission and fusion, burner and breeder reactors stored fuel reserves fuel conservation - reduction in wastage, recycling, greater usage efficiency and use of waste heat Thermodynamic concepts nature of matter - atoms, molecules, inter-molecular forces, molecular motion, states of matter mass and conservation of mass principle volume, density, specific volume, relative density force, weight, pressure (atmospheric, gauge and absolute) temperature (Celsius and Kelvin) systems and black box analysis reciprocating piston and cylinder mechanism - pressure ratio and compression ratio Energy definition and principles potential energy kinetic energy work (linear and rotational), constant and variable force, relationship to pressure and volume change power (linear and rotational) sensible heat - specific heat capacity (constant pressure and constant volume) latent heat chemical energy - energy content of a fuel internal energy Energy transfer in closed and open Systems definition of a closed system calorimetry as an example of a closed system (with or without phase change) non-flow energy equation - typical applications such as stirring with simultaneous heating or cooling definition of an open system mass and volume flow rate and continuity equation steady flow energy equation leading to the concept of enthalpy - typical applications such as turbines, compressors, boilers and heat exchangers. Gases energy balance for a heat engine (as a black box) and efficiency maximum possible efficiency (Carnot efficiency) types of heat engines according to working substance, heat source, mechanical arrangement and working cycle typical practical cycles - stirling, otto, diesel, dual, two stroke (spark and compression ignition) joule cycle. Heat engine performance measurement of torque and power output - rope brake, shoe brake, hydraulic dynamometer, electric dynamometer. heat supply rate, efficiency, specific fuel consumption measurement of indicated power - mechanical indicator, electric/electronic indicator, Morse test friction power, mechanical efficiency, indicated thermal efficiency volumetric efficiency energy balance performance curves - variable load constant speed, variable speed constant throttle setting. Heat transfer modes of heat transfer conduction through a flat plate, series flat plates, thick and thin wall pipe, composite pipes (eg lagged pipes and drums) convection at a flat surface or tube radiation from a flat surface or tube for black or grey bodies combined conduction and convection through single or multiple flat plates or thin wall tubes combined convection and radiation combined conduction, convection and radiation such as fluid in a tank (convection to wall), through wall and/or insulation (conduction) to outside air (convection and radiation) heat exchangers - parallel, counterflow and cross flow Combustion and fuels the combustion process fuels - desirable and undesirable characteristics, solid, liquid and gaseous types, their relative advantages and disadvantages and common methods of combustion air/fuel ration - stoichiometric excess or insufficient air emissions and pollutants and their control combustion equations - element mass balance combustion products - gravimetric basis Steam Refrigeration/heat pump basic principles and terminology vapour compression cycle performance criteria.

VU211 14 Design mechanical machines

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to design rotating machines, using catalogues and standard machine designs.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial

environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to interpret design requirements for a rotating machine to design rotating machines, using catalogues and standard machine designs on more than one occasion and in different contexts. This includes selecting mechanical machine components; and designing and documenting mechanical machines.

VU21122 Produce an advanced engineering design for a reinforced concrete structure

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to complete an engineering project brief, including the analysis and design of complex flexural reinforced concrete members from first principles, using appropriate design aids

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit, as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to complete an engineering project brief including the analysis and design of advanced flexural reinforced concrete members of a concrete structure from first principles, using appropriate design aids on more than one occasion and in different contexts - Prepare and present reports

VU21123 Produce an advanced engineering design for a steel structure

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to complete an engineering project brief, including the analysis and advanced design of steel structures from first principles, using appropriate design aids.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to complete an engineering project brief including the analysis and advanced design of structural

steel members in a steel structure from first principles using appropriate design aids on more than one occasion and in different contexts. - Prepare and present reports

VU21124 Implement site investigation procedures

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply site investigation procedures and geological studies, through an understanding of engineering soils, major rock and mineral types, in accordance with AS 1726. This includes tests that are common to the behaviour of engineering soils, in accordance with AS 1289.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate practical activities and tests that are common to site investigation, testing and engineering analysis of soils on more than one occasion and in different context. Testing must be done in accordance to the appropriate Australian Standard.

VU21125 Apply construction principles to civil engineering works

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply the fundamental principles and concepts associated with planning, estimating and costing to the preparation and interpretation of tender documents, costs estimates and the reporting of actual versus estimated project costs. This includes the documenting of people, plant, equipment and processes employed in the building and civil construction industry.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate planning, estimating, costing and developing construction principles of a civil engineering project on more than one occasion and in different contexts.

VU21126 Apply principles of materials to civil engineering applications

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required in

practical activities and tests that are common in construction materials, such as aluminium, brick, timber and concrete.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate practical activities and tests that are common in construction materials, such as aluminium, brick, timber and concrete on more than one occasion and in different context. Testing must be done in accordance to the appropriate Australian Standard.

VU21127 Apply environmental solutions to engineering projects

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to undertake an environmental study for an engineering project, including pollution problems, methods used for monitoring the environment and principles used for restoration programs.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability and skills required to undertake an environmental study on more than one occasion and in different contexts.

VU21128 Apply principles of mechanics to engineering structures

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to perform analyses concerned with the mechanical properties of materials as they relate to problems of strength and stability of structures and mechanical structures. This includes the calculation of different kinds of loading on structural elements.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures

as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to perform analyses concerned with the mechanical properties of materials on more than one occasion and in different context. Analyses must be done in accordance to the appropriate Australian Standard and manufactures' manuals.

VU21129 Apply surveying for civil engineering projects

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to design and establish survey control for engineering and construction purposes. This includes the measurement and calculation of survey data, drawing of sketch plans, collection and processing of topographical data for detail mapping and related computational skills.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to design and establish survey control for engineering and construction purposes. This includes the measurement of and calculation of survey data, drawing of sketch plans, collection and processing of topographical data for detail mapping and related computational skills on more than one occasion and in different contexts.

VU21130 Perform measurements and layout tasks on construction sites

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to perform basic measurement and layout tasks on construction sites, including the use of levels and distance measuring techniques.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to design and establish survey control for engineering and construction purposes. This includes the measurement of and calculation of survey data, drawing of sketch plans, setting out of works and related computational skills, on more than one occasion and in different contexts.

VU21131 Produce an engineering drainage design of pipes and culverts

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply principles of design for a minor culvert for a rural road using appropriate drainage standards. This includes the application of basic practices, concepts and terminology in engineering hydrology to estimate flood flow magnitude.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to design a drainage system on more than one occasion and in different contexts.

VU21132 Produce an engineering design for a stormwater reticulation scheme

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply principles of design for an engineering stormwater reticulation scheme using appropriate design standards.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to design a stormwater reticulation scheme on more than one occasion and in different contexts.

VU21133 Produce an engineering design for a sewerage reticulation scheme

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to apply principles of design for an engineering sewerage reticulation scheme using appropriate design standards.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial

environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to apply principles of design for an engineering sewerage reticulation scheme using appropriate design standards.

VU21134 Produce an engineering design for a reinforced concrete structure

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to complete an engineering project brief, including the analysis and design of flexural reinforced concrete members from first principles, using appropriate design aids.

Required Reading: Refer to Learning and Assessment Plan

Assessment: Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the associated performance criteria, including required skills and knowledge, and to be capable of applying the competency in new and different situations and contexts within the timeframes typically expected of the discipline, work function and industrial environment. Specifically they must be able to: - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range - Demonstrate the required knowledge and skills as described in this unit; - Demonstrate a representative body of performance criteria within a timeframe typically expected of the discipline, work function and industrial environment; and - Demonstrate the ability to complete an engineering project brief including the analysis and design of flexural reinforced concrete members from first principles, using appropriate design aids on a reinforced concrete structure on more than one occasion and in different contexts.

VU21135 Produce an engineering design for a steel structure

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency sets out the knowledge and skills required to complete an engineering project brief, including the analysis and design of simple steel structures from first principles, using appropriate design aids.

Required Reading: Refer to Learning and Assessment Plan
