Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: follow instructions; - read and interpret: documentation from a variety of sources; drawings and specifications; - recognise procedures; - report faults; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - written skills to record results of checks and tests and relevant work completion procedures; - evaluate own actions and make judgments about performance and necessary improvements; - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials; - organisational skills, including the ability to plan and set out work; - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and - management systems; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technological skills to: use a range of mobile technology, such as two-way radio and mobile phones; voice and hand signals to access and understand site-specific instructions. Students will also be expected to demonstrate the following knowledge: - below ground level waterproofing materials, processes and techniques; - characteristics and applications of waterproofing materials and adhesives; - construction systems and waterproofing considerations; - general construction terminology; - job safety analysis (JSA) and safe work method statements; - MSDS; - materials storage and environmentally friendly waste management; - plans, drawings and specifications; - plant, tools and equipment types, characteristics, uses and limitations; - principles and considerations of water exclusion; - processes for the calculation of material requirements; - quality requirements; - shoring techniques and requirements; - termination and overflashing detailing, and; - workplace and equipment safety requirements.

CPCCWP3002A Apply waterproofing process to internal wet areas

Locations:Industry, Werribee, Sunshine.

Prerequisites:CPCCOHS2001A - Apply OHS requirements, policies and procedures in

the construction industry

Description:This unit of competency specifies the outcomes required to apply waterproofing practices and principles to internal wet areas. It includes identification of the waterproofing system to be used, its preparation and its application.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: follow instructions; read and interpret: documentation from a variety of sources and drawings and specifications; recognise procedures; report faults; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; written skills to record results of checks and tests and relevant work completion procedures; - evaluate own actions and make judgments about performance and necessary improvements; - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials; - organisational skills, including the ability to plan and set out work; - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technological skills to: use a range of mobile technology, such as two-way radio and mobile phones and voice and hand signals to access and understand site-specific instructions. Students will also be expected to demonstrate the following knowledge: - assessment and appreciation of moisture content in substrate materials; - characteristics and applications of waterproofing materials and adhesives; - construction systems and waterproofing considerations; - general construction terminology; - internal waterproofing materials, processes and techniques; - job safety analysis (JSA) and safe work method statements; - materials storage and environmentally friendly waste management; - MSDS; - plans, drawings and specifications; - plant, tools and equipment types, characteristics, uses and limitations; - principles and considerations of water exclusion; - processes for the calculation of material requirements; - quality requirements; - termination and flashing principals, and; 0 workplace and equipment safety requirements.

CPCCWP3003A Apply waterproofing process to external wet areas

Locations:Werribee, Sunshine.

Prerequisites:CPCCOHS2001A - Apply OHS requirements, policies and procedures in the construction industry

Description:This unit of competency specifies the outcomes required to apply waterproofing practices and principles to external wet areas. It includes identification of the waterproofing system to be used, its preparation and its application.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: follow instructions; - read and interpret documentation from a variety of sources; drawings and specifications; - recognise procedures; - report faults; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - written skills to record results of checks and tests and relevant work completion procedures; - evaluate own actions and make judgments about performance and necessary improvements; - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials; - organisational skills, including the ability to plan and set out work; - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technological skills to: use a range of mobile technology, such as two-way radio and mobile phones; voice and hand signals to access and understand site-specific instructions. Students will also be expected to demonstrate the following knowledge: - below ground level waterproofing materials, processes and techniques; - characteristics and applications of waterproofing materials and adhesives; - construction systems and waterproofing considerations; - general construction terminology; - job safety analysis (JSA) and safe work method statements; - MSDS; - materials storage and environmentally friendly waste management; - plans, drawings and specifications; - plant, tools and equipment types, characteristics, uses and limitations; - principles and considerations of water exclusion; - processes for the calculation of material requirements; - quality requirements; - termination, cross cavity and overflashing requirements; - testing procedures for waterproof membrane systems, and; - workplace and equipment safety requirements.

CPCWP3004A Apply waterproofing remedial processes

Locations:Werribee, Sunshine.

Prerequisites:CPCOHS2001A - Apply OHS requirements, policies and procedures in the construction industry

Description:This unit of competency specifies the outcomes required to apply remedial waterproofing processes to external and below ground level wet areas, using injection epoxy, cement crystallisation or hydrostatic coating methods. It includes identification of the waterproofing system to be used, its preparation and its application.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: follow instructions; - read and interpret documentation from a variety of sources; drawings and specifications; - recognise procedures; - report faults; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand

signals; - written skills to record results of checks and tests and relevant work completion procedures; - evaluate own actions and make judgments about performance and necessary improvements; - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials; - organisational skills, including the ability to plan and set out work; - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technological skills to: use a range of mobile technology, such as two-way radio and mobile phones; voice and hand signals to access and understand site-specific instructions. Students will also be expected to demonstrate the following knowledge: - characteristics and applications of remedial waterproofing materials; - construction systems and waterproofing considerations; - general construction terminology; - job safety analysis (JSA) and safe work method statements; - materials storage and environmentally friendly waste management; - MSDS; - plans, drawings and specifications; - plant, tools and equipment types, characteristics, uses and limitations; - principles and considerations of water exclusion; - processes for the calculation of material requirements; - quality requirements; - remedial waterproofing materials, processes and testing techniques, and; - workplace and equipment safety requirements.

CPCPCM2039A Carry out interactive workplace communication

Locations:Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency specifies the outcomes required to communicate effectively through oral, visual and written means of communication in order to facilitate work practices that are safe, meet specifications and provide quality outcomes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - complete written reports and other relevant documentation; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - negotiate with employers; use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - documentation from a variety of sources; - material safety data sheets (MSDS); - signs; - work safety procedures and instructions; - report hazards, risks and faults in equipment; - work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - how instructions are conveyed in the workplace; - how work schedules, charts, bulletins and memos are used; - industry-relevant technology to support oral communication; - industry terminology; - job safety analysis (JSA) and safe work method statements (SWMS); - personnel records and their maintenance; - standardised signage; - visual signalling procedures; - workplace documentation requirements, and; - workplace English.

CPCPCM2040A Read plans and calculate plumbing quantities

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to use and interpret plans and specifications associated with construction work, and accurately complete measurements and calculations to establish quantities of materials for the plumbing and services industry. The unit requires the interpretation of plans, drawings and specifications to interpret requirements, and making measurements and calculations to determine quantities of plumbing materials.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; request relevant documentation and information; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete relevant workplace documentation; record calculations, measurements and material quantities; - read and interpret: documentation from a variety of sources; plans and specifications; - numeracy skills to apply measurements and calculations; - plan-reading skills; - planning and organising skills to plan and set out work, and; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities. Students will also be expected to demonstrate the following knowledge: - job safety analysis (JSA) and safe work method statements (SWMS); - measurements, calculations and quantities; - range of plans and specifications relevant to the plumbing and services industry; - relevant Acts, regulations and codes of practice; - simple industry calculations; - symbols, dimensions, terminology and key features of plans; - tools, equipment and materials relative to plans, drawings and specifications; - work schedules, work plans, charts, work bulletins and memos, and; - workplace safety requirements.

CPCPCM2041A Work effectively in the plumbing and services sector

Locations: Industry, Sunshine, Victoria University is a Trades Recognition Australia (TRA) approved RTO authorised to conduct skills assessment services for migration and skills recognition purposes. For more information on these programs and the states/countries in which VU conducts these assessments, please refer to: <https://www.vu.edu.au/skilled-migration-assessment-services-smas..>

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to prepare for and sustain effective work within the plumbing and services sector of the building and construction industry. It requires the ability to accept instructions, work with others, plan activities and perform tasks, as well as participate in workplace planning and meetings. Outcomes include effective participation in a plumbing and services workplace to promote a harmonious and efficient work environment. The unit covers the identification and clarification of the sector work context and setting, acceptance of workplace responsibility by the individual, working in a team, individual career path improvement and participation in meetings.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand in order to consult with colleagues, communicate work progress, report problems, request support, work in a team and participate in meetings; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: interpret information from a variety of sources; record work priorities and deadlines; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: use computers and download relevant information; use mobile communication technology; access and understand site-specific instructions in a variety of media. Students will also be expected to demonstrate the following knowledge: - basic conflict management; - basic job and skill analysis techniques; - interpersonal communication; - job safety analysis (JSA) and safe work method statements (SWMS); - meeting procedures; - plumbing and services streams and career structure and requirements, including business opportunities and requirements; - regulatory, legislative, standards and codes of conduct pertaining to the plumbing and services sector; - relevant industrial awards and agreements; - relevant legislative provisions covering discrimination and equal employment opportunity; - site and team work structure and methods; - training and development opportunities, and; - work communication procedures.

CPCPCM2043A Carry out WHS requirements

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to carry out work health and safety (WHS) requirements through safe work practices in a plumbing and services work environment. The unit requires the performance of work in a safe manner through awareness of risks, work requirements and the planning and performance of safe work practices with concern for personal safety and the safety of others. It includes the initial response to workplace emergencies; the safe use of electricity; the identification of hazardous materials, including asbestos; and compliance with legislated work safety practices.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - complete written reports and other relevant documentation; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - use language and concepts appropriate to cultural differences; - use and

interpret non-verbal communication, such as hand signals; - evaluate safety issues in the workplace and determine appropriate action; - recognise WHS hazards, including asbestos, and take all opportunities to alleviate safety problems in a variety of construction work sites and environments; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools or materials; - literacy skills to read and interpret documentation from a variety of sources; MSDS; work safety procedures and instructions; - self-management skills to deal calmly and effectively with any potential safety problems and work closely with other team members and supervisors to ensure safe working conditions are maintained; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - asbestos management code relating to prevention of exposure; - job safety analysis (JSA) and safe work method statements (SWMS); - manual handling techniques; - MSDS; - relevant legislation, regulations and workplace requirements relating to WHS, including hazard reduction and personal safety; - requirements for working in confined spaces and at height, including on rooves; - tools and equipment prohibited from being used near identified ACM; - risk assessment; - safe work practices in normal working environment; - types, possible location and risks of ACM, including serpentine and amphibole groups and their use in common building materials; - workplace and equipment safety requirements; - workplace hazards and their precautions and reduction, and; - workplace response to emergencies.

CPCPCM2045A Handle and store plumbing materials

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to safely handle and store plumbing materials and to identify and address environmental concerns and associated hazards, including the disposal of waste. It addresses work health and safety (WHS) and environmental requirements to minimise risk to the health and safety of personnel and to the environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - complete written workplace documentation; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - report hazards and follow instructions; - use and interpret non-verbal communication, such as hand signals; - use language and concepts appropriate to cultural differences; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to read and interpret plans, specifications and documentation from a variety of sources; - numeracy skills to apply measurements and calculations; - planning and organising skills to plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to identify handling and storage requirements for materials used in a plumbing work environment, including identifying, handling and disposing

of hazardous and non-hazardous waste, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - categories of materials and their safe handling, storage and transport requirements; - environmental plans, air and water contamination, erosion and sedimentation; - job safety analysis (JSA) and safe work method statements (SWMS); - MSDS; - WHS and environmental legislation and requirements; - types of waste and their disposal, including an awareness only of the requirements for asbestos handling and disposal; - workplace hazard reporting and hazard handling procedures; - workplace processes and procedures, and; - workplace safety requirements.

CPCPCM2046A Use plumbing hand and power tools

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to use commonly used hand and power tools in plumbing work applications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - report faults and follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to: identify and report to appropriate personnel any faults in tools, equipment or materials; identify, correctly apply and effectively operate tools; - literacy skills to: complete workplace documentation; read and interpret documentation from a variety of sources; - planning and organising skills to plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - function and purpose of hand and power tools used in plumbing applications; - job safety analysis (JSA) and safe work method statements (SWMS), and; - workplace safety requirements and WHS legislation.

CPCPCM2047A Carry out levelling

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to plan and use levelling equipment to establish, record and apply those levels to the plumbing and services industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determine requirements, follow instructions and access information; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - complete workplace documentation; - read and interpret: plans and specifications; documentation from a variety of sources; - numeracy skills to apply measurements and calculations; - planning and organising skills to plan and set out work; - technical skills to operate levelling equipment to read, record, establish and check: levels: horizontal, vertical and at gradient used for the placement of plumbing and services; recording levels at specific points along a set out; recording and checking levels in drainage and sanitary excavations and plumbing services; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - different types of levelling equipment, their applications and their method of operation; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - process of establishing, recording and checking levels and alignment; - relevant statutory requirements related to establishing, recording and checking levels; - simple calculations relating to carrying out levelling; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPCM2048A Cut and join sheet metal

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to cut and join sheet metal associated with the fabrication, installation and repair functions of the plumbing sector.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - cut and join sheet metal in the fabrication of plumbing components and select suitable joints and sealants for the application and material; - identify and report to appropriate personnel any faults in tools, equipment or materials; - complete workplace documentation; - read and interpret: documentation from a variety of sources; plans and specifications; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in

a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - appropriateness of different fastening methods for different applications; - capillary action, thermal expansion and fabrication techniques to prevent leaking installations; - characteristics of various metal materials and their compatibility with different joining methods; - electrolysis and problems associated with the use of dissimilar metals; - job safety analysis (JSA) and safe work method statements (SWMS); - organisational quality procedures and processes within the context of cutting and joining of sheet metal; - SI system of measurement, and; - workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

CPCPCM2049A Cut using oxy-LPG-acetylene equipment

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to use oxy-LPG acetylene equipment to carry out basic cutting of mild steel in support of plumbing applications and fabrication to meet job specifications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - identify and report to appropriate personnel any faults in tools, equipment or materials; - mark out and accurately cut mild steel up to 8mm thick and mild steel pipe up to 100mm diameter without manual force; - complete workplace documentation; - read and interpret: plans and specifications; documentation from a variety of sources; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - dangers of high pressure settings with oxy-LPG-acetylene equipment; - job safety analysis (JSA) and safe work method statements (SWMS); - operating principles of oxy-LPG-acetylene equipment; - organisational quality procedures and processes within the context of oxy cutting; - potential fumes and health and safety risks from high temperatures on materials; - properties of materials and the effect of heat on the properties of metal; - relevant WHS regulations and PPE requirements, and; - SI system of measurement.

CPCPCM2050A Mark out materials

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to mark out plumbing materials prior to fabricating piping, steel sections, ducting and sheet materials, roofing and cladding.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - identify and report to appropriate personnel any faults in tools, equipment or materials; - mark out plumbing materials according to plans and specifications for the fabrication of plumbing components and applications; - complete workplace documentation; - read and interpret plans and specifications; documentation from a variety of sources; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - identification and correct use of measuring and marking out equipment; - impact of accurate marking out on fabrication process, work time and finished work quality; - job safety analysis (JSA) and safe work method statements (SWMS); - operation requirements of equipment used for measuring and calculating; - processes of marking out plumbing materials; - relevant WHS regulations and PPE requirements; - SI system of measurement; - sources of information on characteristics and applications of materials being marked out, and; - workplace operating procedures, including required standards for marking out.

CPCPCM2052A Weld using oxy-acetylene equipment

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to weld/braze metals associated with the fabrication, installation and repair of plumbing components and systems, using oxy-acetylene equipment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - complete workplace documentation; - read and interpret documentation from a variety of sources; plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; -

technical skills to weld mild steel plate, non-ferrous materials and pipe by oxy-acetylene welding; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - dangers associated with oxy-acetylene welding in the fabrication and installation of plumbing systems; - effect of heat on the properties and shape of welded metals; - job safety analysis (JSA) and safe work method statements (SWMS); - operating principles of oxy-acetylene welding equipment; - organisational quality procedures and processes within the context of oxy-acetylene welding; - SI system of measurement, and; - workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

CPCPCM2053A Weld using manual metal arc welding equipment

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to weld metals associated with the fabrication and installation of plumbing components, using manual metal arc welding equipment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - complete workplace documentation; - read and interpret plans and specifications; documentation from a variety of sources; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to weld mild steel plates by manual metal arc welding; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - dangers associated with manual metal arc welding plumbing components; - effect of heat on the properties and shape of welded metals; - job safety analysis (JSA) and safe work method statements (SWMS); - operating principles of manual metal arc welding equipment; - organisational quality procedures and processes within the context of manual metal arc welding; - SI system of measurement, and; - workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

CPCPCM2054A Carry out simple concreting and rendering

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to perform minor repairs and undertake minor concreting and rendering tasks.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - report hazards; - use and interpret non-verbal communication, such as hand signals; - use language and concepts appropriate to cultural differences; - contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks, or management systems; - evaluate own actions and make judgements about performance and necessary improvements; - identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to complete workplace documentation; - planning and organising skills to plan and set out work; - self-management skills to: recognise procedures; respond to change; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - basic levelling techniques; - categories of materials and their safe handling, storage and transport requirements; - concrete and plastering materials; - concreting and plastering techniques; - job safety analysis (JSA) and safe work method statements (SWMS); - material safety data sheets (MSDS); - WHS and environmental legislation and requirements; - plans, drawings and specifications; - processes for the calculation of material requirements; - simple formwork and reinforcing componentry; - types of waste and their disposal, including an awareness only of the requirements for asbestos handling and disposal, and; - workplace safety requirements.

CPCPCM2055A Work safely on roofs

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to perform safe work practices when undertaking plumbing work on roofing structures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - report faults; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - conduct a safety assessment of a roof work site; - identify and report to appropriate personnel any faults in tools, equipment or materials; - complete written workplace documentation; - document scope of work and work practices; - read and interpret: documentation from a variety of sources; plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to plan and set out work; - technical skills to provide necessary safety measures, including the installation of a roof safety system; - access and understand site-specific instructions

in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - job safety analysis (JSA) and safe work method statements (SWMS); - nature of work undertaken on roofs; - processes of providing for safe work practices; - relevant statutory and regulatory authorities' requirements related to working safely on roofs; - risks associated with photovoltaic (solar) panels and systems; - roof safety equipment and systems and considerations to facilitate working safely on roofs, and; - SI system of measurement.

CPCPCM3021A Flash penetrations through roofs and walls

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to set out, cut and flash a roof and wall penetration.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - read and interpret: plans and specifications; documentation from a variety of sources; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - capillary action, thermal expansion and fabrication techniques to prevent leaking installations; - characteristics of various roofing and wall cladding materials and their compatibility with different joining methods; - corrosion prevention treatment requirements of cut sheets; - electrolysis and problems associated with the use of dissimilar metals; - job safety analysis (JSA) and safe work method statements (SWMS); - processes of flashing roof and wall penetrations; - relevant WHS regulations and fall protection codes and requirements; - relevant statutory requirements related to the flashing of roof and wall penetrations, and; - SI system of measurement.

CPCPCM3022A Weld polyethylene and polypropylene pipes using fusion method

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to fusion weld polyethylene (PE) and polypropylene (PP) (approved as per Australian standards) polymer pipes, and test joints in polymer pipe up to DN100 for water, sanitary and stormwater application only.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - complete workplace documentation; - read and interpret plans and specifications; documentation from a variety of sources; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - prepare surfaces in line with the material selected and the chosen weld technique; - fusion welding, visual inspection and testing joints in approved polymer pipes up to DN100; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - dangers associated with fusion welding of polymer pipe; - effect of heat on the properties of polymer pipe; - job safety analysis (JSA) and safe work method statements (SWMS); - operating principles of fusion welding equipment; - organisational quality procedures and processes within the context of fusion welding of polymer pipe; - relevant WHS regulations and PPE requirements; - SI system of measurement, and; - surface preparation in the welding process.

CPCPCM3023A Fabricate and install non-ferrous pressure piping

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to determine installation requirements and to fabricate, install and test non-ferrous pressure pipe.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - complete workplace documentation; - read and interpret plans and specifications; documentation from a variety of sources; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to join non-ferrous pipe materials by mechanical and manual means, prefabricate components, and fix and test the

system for soundness; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - fabrication, installation and testing process for non-ferrous pressure pipe systems; - job safety analysis (JSA) and safe work method statements (SWMS); - processes for accessing information and for calculating material requirements; - properties and characteristics of conveyed materials, including pressure, flow rates and temperature implications; - relevant statutory authorities' requirements and standards related to fabricating, installing and testing non-ferrous pressure pipe systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPCM4011A Carry out work-based risk control processes

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to carry out work-based risk control processes. It covers the identification of hazards, the assessment of risk, the identification of unacceptable risk and the determination, preparation and completion of a course of action.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access and analyse safety systems information; communicate with others; complete records and reports and other relevant workplace documentation; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - use and interpret non-verbal communication, such as hand signals; - use language and concepts appropriate to cultural differences; - initiative and enterprise skills to: accurately refer critical unacceptable risk situations to others; identify and report to appropriate personnel any faults in tools, equipment or materials, and; - technical skills to: identify courses of action, initiate action and complete records and reports; apply the three steps of identifying work-based hazards, assessing the risk and determining unacceptable risk situations. Students will also be expected to demonstrate the following knowledge: - industry terminology; - job safety analysis (JSA) and safe work method statement (SWMS); - materials safety data sheets (MSDS); - materials handling methods; - personal risk assessment and control processes (hazard identification through to action); - personal safety measures; - processes for interpreting plans, specifications, drawings and sketches; - quality assurance systems and standards; - regulatory requirements related to obligations and risk management; - reporting and recording procedures; - risk management theory, including the hierarchy of controls on treatments; - work access and traffic control responsibilities; - workplace and equipment safety requirements; - workplace communication methods, and; - workplace rules, policies, procedures and regulations.

CPCPCM4012A Estimate and cost work

Locations: Industry, Sunshine, Online.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to estimate materials, labour and time requirements and to establish costs for provision of services or products. The unit covers the gaining of information, the estimation of

materials, labour and time, the calculation of costs and the associated documentation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; identify customer requirements; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication; - complete workplace documentation; prepare quotes and tenders; - record details, including costs and charges, and; - estimate materials and labour required for provision of services or products; - determine costs for the provision of a quotation or tender in the plumbing and services industry, and; - apply calculations. Students will also be expected to demonstrate the following knowledge: - estimating and calculating processes; - impact of time on wages and other costs; - job safety analysis (JSA) and safe work method statements (SWMS); - process for estimating and costing work; - processes for accessing information and for calculating material requirements; - relevant statutory requirements related to estimating and costing work; - SI system of measurements; - relevant Australian standards applicable to the work to be undertaken; - tendering and contracting processes, and; - workplace and equipment safety requirements.

CPCPCM4013A Produce 2D architectural drawings using CAD software

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description:This unit of competency specifies the outcomes required to produce two-dimensional (2-D) architectural drawings using computer-aided design (CAD) software under limited supervision.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; seek clarification; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication; - creative design, drawing and drafting skills, using CAD software; - literacy skills to: complete workplace documentation; - read and interpret: plans, drawings, specifications and design briefs; documentation from a variety of sources; - numeracy skills to apply measurements and make calculations; - planning and organising skills to coordinate development of sketches and plans, and; - technology skills to use computers. Students will also be expected to demonstrate the following knowledge: - building materials and techniques; - building services; - construction technology; - document controls; - drafting and drawing protocols; - general work health and safety (WHS) principles and responsibilities; - relevant

industry standards and codes of practice; - requirements for the production of working drawings; - structural systems; - SI units of measurement, and; - types and application of working drawings.

CPCPDR2021A Locate and clear blockages

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description:This unit of competency specifies the outcomes required to locate and clear blockages to sanitary plumbing and drainage with the use of mechanically operated drain clearing machines and attachments, closed circuit television (CCTV) and manually operated drain cleaning tools and equipment where required.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - complete workplace documentation; - read and interpret: documentation from a variety of sources; plans and specifications; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to locate and clear blockages, such as tree roots and other refuse, from sanitary plumbing, water and sewerage pipe installations and drainage and roof installations; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics of different pipes, fittings and fixture supports, including fixing and joining techniques; - correct materials handling processes; - effective isolation processes and procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - mechanical and hydraulic principles for clearing blockages; - processes of clearing blockages; - properties of water, including pressure and flow rates; - relevant statutory requirements; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPDR2022A Install domestic treatment plants

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description:This unit of competency specifies the outcomes required to install approved prefabricated domestic treatment plants.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - complete workplace documentation; - read and interpret documentation from a variety of sources; plans and specifications; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - correctly install an approved prefabricated domestic treatment plant; - excavate plant site for installation purposes; - identify and accurately report to appropriate personnel faults in tools, equipment or materials; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipe fittings and fixture supports, including fixing and jointing techniques; - excavation processes and procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - load lifting and handling procedures; - principles and techniques of effluent treatment and disposal; - processes for accessing information and for calculating material requirements; - regulations and requirements of regulatory authorities regarding effluent disposal and the installation of domestic treatment plants; - SI system of measurements; - standards applicable to the installation, and; - workplace and equipment safety requirements.

CPCPDR2023A Maintain effluent disinfection systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to maintain chlorine disinfection systems for domestic treatment plants.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills; - numeracy skills to apply measurements and calculations; - planning and organising skills; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to maintain an effluent disinfection system for the treatment of secondary effluent in a domestic treatment plant or installations identified by regulatory authorities as requiring an effluent disinfection system, and; - technology skills. Students will also be expected to demonstrate the following knowledge: - inspection and assessment procedures for effluent disinfection systems; - job safety analysis (JSA) and safe work method statements (SWMS); - principles of drainage design; - principles of effluent chlorine disinfection and the operation of effluent chlorine disinfection systems, including their adjustment to meet necessary output measures; - processes for accessing information and for calculating material requirements; - relevant statutory and authorities' requirements related to installing effluent disinfection

systems; - SI system of measurements; - standards applicable to the installation, and; - workplace and equipment safety requirements. .

CPCPDR2024A Install stormwater and sub-soil drainage systems

Locations: Industry, Sunshine, Victoria University is a Trades Recognition Australia (TRA) approved RTO authorised to conduct skills assessment services for migration and skills recognition purposes. For more information on these programs and the states/countries in which VU conducts these assessments, please refer to: <https://www.vu.edu.au/skilled-migration-assessment-services-smas..>

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install stormwater and sub-soil drainage systems to an approved point of discharge.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - complete workplace documentation; - read and interpret documentation from a variety of sources; plans and specifications; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install a drainage system to take storm water from a down pipe or surface collection pit, and groundwater to a legal point of discharge; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipe fittings and fixture supports, including fixing and jointing techniques; - excavation processes and procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - process of installing stormwater and sub-soil drainage systems; - processes for accessing information and for calculating material requirements; - properties of water, including pressure and flow rates; - relevant statutory and authorities' requirements related to installing stormwater and sub-soil drainage systems; - SI system of measurements; - standards applicable to the installation; - water and air test systems and procedures, and; - workplace and equipment safety requirements.

CPCPDR2025A Drain work site

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to remove water from a work site, either temporarily or permanently, through stormwater and sub-soil drainage systems. It includes the installation of submersible and non-submersible type pumps, suitable for pumping unscreened roof water, sub-soil water and surface water.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to complete workplace documentation; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others; plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to remove water from a work site, which may be a trench, pit or well, using a pump; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics of stormwater installations, including capacity and installation procedures; - excavation processes and procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - positioning and construction of sedimentation and scouring controls; - principles of drainage and installation processes; - process of draining a site; - processes for accessing information and for calculating material requirements; - properties of water, including pressure and flow rates; - relevant statutory and authorities' requirements related to draining work sites; - SI system of measurements; - standards applicable to the work, and; - workplace and equipment safety requirements.

CPCPDR2026A Install prefabricated inspection openings and enclosures

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install prefabricated inspection openings and enclosures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - complete workplace documentation; - read and interpret documentation from a variety of sources; plans and specifications; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and

relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install a prefabricated inspection opening and enclosure in a drainage system, including the connection of inlet and outlet pipes; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of pipe fittings and fixture supports, including fixing and jointing techniques; - excavation processes and procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - process of installing prefabricated inspection openings and enclosures; - relevant statutory and authorities' requirements related to installing prefabricated inspection openings and enclosures; - SI system of measurement; - sources of information and processes for calculating material requirements, and; - workplace and equipment safety requirements.

CPCPDR3021A Plan layout of a residential sanitary drainage system

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to plan the layout of sanitary drainage systems for residential buildings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: confirm job specifications and client requirements; communicate with others to ensure safe and effective work practices; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret documentation from a variety of sources plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to interpret a design to plan the layout of a sanitary drainage system for residential buildings, connecting to the authority's sewer or on-site disposal system, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - application of various sanitary fixtures and appliances; - characteristics and application of different pipe systems, including their fittings and fixture supports and fixing and joining techniques; - design concepts and performance measures for sanitary drainage installations; - job safety analysis (JSA) and safe work method statements (SWMS); - principles of drainage design; - process of planning the layout of sanitary drainage systems; - properties and characteristics of sewage, including temperature implications and discharges; - pumped discharges; - relevant statutory requirements related to sanitary drainage systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPDR3022A Install below ground sanitary drainage systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install below ground sanitary drainage systems for sewage and waste discharge from sanitary fixtures to the authorities' approved point of connection.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: plans and specifications; documentation from a variety of sources; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others; plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: install and test below ground sanitary drains; transfer sewage from sanitary fixtures to a sewage authority's point; make alterations to existing sanitary drainage, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques; - excavation processes and procedures; - hazardous materials; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - materials relevant to sanitary drainage; - principles of drainage design; - process of installing and testing sanitary drains; - relevant statutory and authority requirements related to installing and fitting off sanitary fixtures; - SI system of measurements; - sources of information and processes for calculating material requirements; - standards applicable to the installation; - water and air test systems and procedures, and; - workplace and equipment safety requirements.

CPCPDR3023A Install on-site disposal systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install an on-site effluent disposal system from a domestic treatment plant.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources; plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install perforated pipe in an absorption trench to act as an on-site effluent disposal system from a septic sewerage tank; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - Australian standards applicable to the installation; - characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques; - excavation processes and procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - principles and techniques of effluent treatment and disposal; - principles of drainage design; - processes for accessing information and for calculating material requirements; - regulations and requirements of regulatory authorities regarding effluent disposal and the installation of on-site disposal systems; - SI system of measurements; - soil testing requirements and procedures, and; - workplace and equipment safety requirements.

CPCPDR4011B Design and size sanitary drainage systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to design, size and document the layout of sanitary drainage systems for unit developments. It covers the preparation for the work, the identification and confirmation of system specifications and requirements, the planning of the system layout, and work finalisation processes, including records and documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements, including system requirements; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation, including recording written plans and completing other relevant workplace documentation, such as work backups; - read and interpret: documentation from a variety of sources; plans and specifications;

regulations and relevant Australian standards; - numeracy skills to apply measurements and calculations; - planning and organising skills to: organise and sequence tasks with others, and; plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to interpret plans and specifications of a multi-unit development to plan, size and document layout of required sanitary drainage system, and; - access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - Australian standards applicable to sanitary drainage systems; - characteristics and application of different pipe systems, including their fittings and fixture supports and fixing and joining techniques; - computer use, including computer-aided design software for plumbing and construction systems; - design concepts and performance measures for sanitary drainage systems; - handling of hazardous waste; - how to find and access necessary specifications and related information; - infectious diseases relevant to working with plumbing systems; - job safety analysis (JSA) and safe work method statements (SWMS); - principles of drainage; - process of planning, sizing and documenting layout of sanitary drainage systems; - process of treating trade waste to acceptable levels for discharge; - properties and characteristics of sewage, including temperature implications, trade waste requirements and discharge levels; - relevant statutory requirements related to planning, sizing and documenting sanitary drainage systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPDR4012B Design and size stormwater drainage systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to design, size and document the layout of surface and sub-soil stormwater drainage systems up to legal points of discharge. It covers the preparation for the planning, identification and confirmation of system specifications and requirements, the planning of the system layout and work finalisation processes, including records and documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; identify requirements, including system requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - complete workplace documentation; - read and interpret: documentation from a variety of sources; plans, specifications and drawings; regulations and relevant Australian standards; record written plans and complete other relevant workplace documentation, including work backups; - numeracy skills to apply measurements and calculations; - planning and organising skills to: organise and sequence tasks with others; plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic

backgrounds and with varying physical and mental abilities; - technical skills to interpret plans and specifications to plan, size and document the layout of a surface and sub-soil stormwater drainage system, incorporating downpipes, pits, tanks and overflow discharge, and; - access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - Australian standards applicable to stormwater drainage systems; - catchment, rainfall intensity and run-off calculations; - characteristics and application of different pipe systems, including their fittings and fixture supports and fixing and joining techniques; - design concepts and performance measures for stormwater and sub-soil drainage systems; - determining levels; - job safety analysis (JSA) and safe work method statements (SWMS); - principles of water flow and stormwater and sub-soil drainage; - process of planning, sizing and documenting the layout of stormwater and sub-soil drainage systems using relevant sources of information; - relevant statutory requirements related to planning, sizing and documenting stormwater and sub-soil drainage systems; - SI system of measurements; - stormwater installation techniques; - use of computers and relevant computer-aided design (CAD) software; - water tank installation, and; - workplace and equipment safety requirements.

CPCPDR4013B Design and size domestic treatment plant disposal systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to design, size and document the layout of domestic treatment plant disposal systems. It covers preparation for the planning, identification and confirmation of system specifications and requirements, and the planning of the system layout and work finalisation processes, including records and documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements, including system requirements; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete relevant workplace documentation, including work backups; - read and interpret: documentation from a variety of sources; plans, specifications and drawings; regulations and relevant Australian standards; record written plans; - numeracy skills to apply measurements and calculations; - planning and organising skills to: organise and sequence tasks with others; plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to interpret plans and specifications to design layout and operational details of a domestic treatment plant disposal system, and; - access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - Australian standards applicable to the treatment system; - design concepts and

performance measures for domestic treatment plant disposal systems; - handling of hazardous waste; - infectious diseases; - job safety analysis (JSA) and safe work method statements (SWMS); - principles of the assessment of land capability for application of effluent; - principles, techniques and characteristics of effluent treatment and disposal; - process of designing domestic treatment plant disposal systems; - properties and characteristics of landscape application areas with suitable plants and vegetation, including: hardness; high and low water requirements; maintenance requirements; native to the local area implications, and; phosphorus tolerance; - properties and characteristics of soil, including: percentages of sand, silt and clay; absorption capacity implications; - relevant statutory and authorities' requirements related to designing domestic treatment plant disposal systems; - SI system of measurements; - sources of information; - use of computers and relevant computer-aided design (CAD) software, and; - workplace and equipment safety requirements.

CPCPFS3031A Fabricate and install fire hydrant and hose reel systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to fabricate and install fire hydrant and hose reel systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow and give instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record test results in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to fabricate, install and test fire hydrant pipework from a main, or branch into main, to a hose reel system, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques; - excavation processes and procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - materials and assemblies relevant to installation of fire hydrant and hose reel systems; - pressure test systems and procedures; - process of fabricating and installing fire hydrant and hose reel systems; - relevant statutory and authority requirements related to fabricating and installing fire hydrant and hose reel systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPFS3037A Install domestic and residential life safety sprinkler systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install domestic and residential life safety fire sprinkler systems in buildings up to four storeys in height.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow and give instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record test results in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install and test a fire sprinkler system, including piping, control valve assemblies, actuating devices, alarms and sprinkler heads, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - components and materials relevant to installing domestic and residential life safety sprinkler systems; - function and operation of a range of alarms, actuating devices, sprinkler heads and valves; - job safety analysis (JSA) and safe work method statements (SWMS); - National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice pressure test systems and procedures; - process of installing domestic and residential life safety sprinkler systems; - processes for accessing information and for calculating material requirements; - relevant statutory requirements related to installing domestic and residential life safety sprinkler systems; - SI system of measurement; - structural systems, building materials and building services; - understanding of fire rating, and; - workplace and equipment safety requirements.

CPCPGS3046A Install LPG systems in caravans, mobile homes and mobile workplaces

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to determine the requirements for installing and commissioning liquefied petroleum gas (LPG) systems with an operating pressure not exceeding 2.75kPa in caravans, mobile homes and mobile workplaces.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; inform relevant authorities and supervisors of completion of job; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret documentation from a variety of sources and plans and specifications; record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to determine requirements, and install and commission LPG systems, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - process for determining material requirements; - procedures for installing and commissioning gas systems in caravans, mobile homes and mobile workplaces; - properties of gas, gas safety, combustion principles, gas pressures, and cylinder installation and ventilation requirements; - relevant statutory requirements related to installing LPG systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3047A Install LPG systems in marine craft

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to determine the requirements for, and install and commission, gas detection systems and liquefied petroleum gas (LPG) systems with an operating pressure not exceeding 2.75kPa in marine craft.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; inform relevant authorities and supervisors of completion of job; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret documentation from a variety of sources and plans and specifications;

record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: confirm that the gas detection system complies with Australian standards and determine requirements, and install and commission LPG systems, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - requirements and procedures relating to electrical safety and requisite precautions; - procedures for accessing relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - process for determining material requirements; - procedures for installing and commissioning gas systems in marine craft; - properties of gas, gas safety, combustion principles, gas pressures, cylinder installation, ventilation and gas detection requirements; - relevant statutory requirements relating to installing LPG systems in marine craft; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3048A Install gas pressure control equipment

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and commission gas control and regulating equipment for consumer gas piping carrying natural gas (NG), liquefied petroleum gas (LPG), or tempered liquefied petroleum gas (TLPG) up to 200kPa. This unit requires the determination of the requirements for gas control and regulating equipment (for pressures up to 200kPa), and its installation, testing and commissioning according to standards.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; inform relevant authorities and supervisors of completion of job; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret documentation from a variety of sources and plans and specifications; record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: determine requirements for gas control and regulating equipment (for pressures up to 200kPa) and install, test and commission gas control and regulating equipment according to standards, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - electrical safety and requisite precautions; - gas pressure

control equipment; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - procedures for installing and testing gas pressure control and regulating equipment; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory requirements related to installing and commissioning gas control and regulating equipment; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3049A Install type a gas appliance flues

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and test flues for Type A gas appliances.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; inform relevant authorities and supervisors of completion of job; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install and test flues for Type A gas appliances, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - electrical safety and requisite precautions; - energy efficiency of appliances; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - material requirements determination process; - procedures for installing and testing flues for Type A gas appliances, including flashing of penetrations; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory requirements related to installing and testing Type A gas appliance flues; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3050A Install type b gas appliance flues

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install flue systems for Type B gas appliances.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; inform relevant authorities and supervisors of completion of job; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install flues for Type B gas appliances; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - material requirements determination process; - procedures for installing Type B appliances, including roof and wall penetration and flashing; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory requirements related to installing flues for Type B appliances; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3051A Purge consumer piping

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to purge consumer gas piping systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; inform relevant authorities and supervisors of completion of job; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a

range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: determine purging requirements of a consumer gas piping system in terms of volume, method and medium of purge; conduct purging and testing for its completeness, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics of materials used in the purging process; - effect of heat on the materials used during the purging and testing process; - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - procedures for purging gas piping systems, including isolation processes and procedures; - properties of gas, gas safety, combustion principles, ignition principles, pressure and flow rates; - relevant statutory requirements related to purging gas piping systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3052A Maintain type a gas appliances

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to perform basic maintenance on Type A gas appliances.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; inform relevant authorities and supervisors of completion of job; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret documentation from a variety of sources and plans and specifications; record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology, and; - undertaking routine basic maintenance on Type A gas appliances, including gas, mechanical and appliance construction components. Students will also be expected to demonstrate the following knowledge: - documentation and reporting requirements; - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - procedures for maintaining and testing Type A gas appliances; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory requirements related to maintaining Type A gas appliances; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3053A Disconnect and reconnect type A gas appliances

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to disconnect and reconnect services from Type A gas appliances operating on natural gas (NG), or liquefied petroleum gas (LPG), or tempered liquefied petroleum gas (TLPG) up to 200kPa.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; inform relevant authorities and supervisors of completion of job; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret documentation from a variety of sources and plans and specifications; record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to disconnect and reconnect Type A gas appliances from mechanical services, gas, water, air and other services to allow replacement, repair or maintenance, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - ignition and combustion principles relating to conveyed materials or materials used in confined work spaces; - job safety analysis (JSA) and safe work method statements (SWMS); - procedures for disconnecting and reconnecting Type A gas appliances; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory requirements related to disconnecting and reconnecting Type A gas appliances; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3054A Calculate and install natural ventilation for type a gas appliances

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to calculate and install natural ventilation for Type A gas appliances operating on natural gas (NG), liquefied petroleum gas (LPG) or tempered liquefied petroleum gas (TLPG) not exceeding 200kPa.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - calculating, installing and testing natural ventilation for Type A gas appliances; - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; inform relevant authorities and supervisors of completion of job; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - mechanical ventilation and associated interlocks; - procedures for calculating, installing and testing natural ventilation for Type A gas appliances; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory requirements related to natural ventilation requirements for Type A gas appliances; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3056A Install gas piping systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to select, install and test gas consumer piping carrying natural gas (NG), liquefied petroleum gas (LPG), or tempered liquefied petroleum gas (TLPG) up to 200kPa.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out

work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to determine pipe requirements and install and test gas piping systems where the installation conforms to relevant Australian standards or requirements of the local regulatory authority, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics of piping materials, joining methods, fittings and sealants; - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - material requirements determination process; - procedures for installing and testing gas piping systems, including brazing and mechanical pipe jointing; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory requirements related to installing and testing gas piping systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3057A Size consumer gas piping systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to size consumer gas piping carrying natural gas (NG), liquefied petroleum gas (LPG) or tempered liquefied petroleum gas (TLPG) not exceeding 200kPa.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; seek information from relevant authorities; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to plan and set out work; - technical skills to size consumer gas piping supplying appliances at an operating pressure not exceeding 200 kPa, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - appliance pressure requirements and gas consumption requirements; - characteristics of piping materials, joining methods, fittings and sealants; - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - procedures for sizing consumer gas piping systems; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory and authority requirements related to sizing consumer gas piping systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3059A Install LPG storage of aggregate storage capacity up to 500 litres

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to select, locate, install and test liquefied petroleum gas (LPG) storage facilities with a storage capacity of up to 500 litres; install either single or multiple cylinders; and test associated piping systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record test data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - material requirements determination process; - procedures for installing and testing gas storage facilities; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory requirements related to installing and testing gas storage facilities; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3060A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8kl

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to select, locate, install and test liquefied petroleum gas (LPG) storage facilities with a storage capacity of more than 500 litres but less than 8KL. The storage is connected to consumer piping systems with an operating pressure not exceeding 140kPa.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; inform relevant authorities and supervisors of completion of job; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to select, locate, install and test LPG storage facilities, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - material requirements determination process; - procedures for installing and testing gas storage facilities; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory and authority requirements related to installing and testing gas storage facilities; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS3061A Install and commission type a gas appliances

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and commission Type A gas appliances approved for use with natural gas (NG) or liquefied petroleum gas (LPG) up to 200kPa. Type A gas appliances are badged appliances of less than 500 megajoules (MJ) for which an approval scheme exists. They include but are not limited to space heaters, ducted heating systems, heated water storage, instant heated water heaters, decorative heaters, and gas stoves and hot plates.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm; requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - complete work notices and other relevant documentation; - read and interpret: - documentation from a variety of sources; - plans and specifications; - record data in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and set out work; plan work with others; - teamwork skills to work with others to action tasks and relate to

people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - electrical safety and requisite precautions; - how to access relevant information, including codes and technical standards; - job safety analysis (JSA) and safe work method statements (SWMS); - material requirements determination process; - procedures for installing and commissioning Type A gas appliances, including flashing and requirements for flues and ventilation; - procedures for using carbon monoxide testing equipment to check appliances for spillage; - properties of gas, gas safety, combustion principles, pressure and flow rates; - relevant statutory requirements related to installing and commissioning Type A gas appliances; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPGS4011C Design and size consumer gas installations

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to design, size and document a consumer's gas installation, including consumer piping operating up to a pressure of 200kPa, fluing, ventilation and appliance installation associated with natural gas (NG), simulated natural gas (SNG), liquefied petroleum gas (LPG) and tempered liquefied petroleum gas (TLPG) for a building of minimum four floors and multiple buildings supplied through one gas source (billing meter or storage tank). It covers preparing for work, determining gas installation design requirements, detailed planning of the layout, and completing work finalisation processes, including records and documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements, including system requirements; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: access and understand site-specific instructions in a variety of media; - read and interpret: documentation from a variety of sources; regulations, relevant Australian standards, plans, specifications and drawings; record plans in writing and complete workplace documentation; - numeracy skills to apply measurements and calculations; - planning and organising skills to: organise and sequence tasks with others; plan and set out work; - technical skills to plan, size and document layout of gas installations for single and multiple buildings consisting of a minimum of four floors; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - AS/NZS 5601 Gas installations, including the use of tables; - building and construction industry terminology; - drawing and sketching techniques, including the

use of conventional symbols; - gas safety, including combustion characteristics and effects; - general electrical safety requirements; - impact of ventilation on design; - job safety analysis (JSA) and safe work method statements (SWMS); - planning, sizing and layout of gas installations; - processes for accessing information and for calculating material requirements; - relevant statutory and authority requirements related to planning, sizing and layout of gas installations; - SI system of measurement; - types and properties of fuel gas, including pressure and flow rates; - types, characteristics, uses and limitations of gas pipe work and reticulation materials, including joining techniques and systems; - use of computers and computer-aided design (CAD) software, and; - workplace and equipment safety requirements.

CPCPIG2021A Design domestic urban irrigation systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to prepare basic designs and irrigation drawings for domestic irrigation systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - access information; - determine requirements; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - compile list of materials; - complete workplace documentation; - read and interpret: documentation from a variety of sources; plans and specifications; - record information; - technical skills to design and draw a domestic urban irrigation system; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - job safety analysis (JSA) and safe work method statements (SWMS); - process and workplace requirements for basic irrigation design; - processes for accessing information and for calculating material requirements; - properties of water, including pressure and flow rates; - relevant statutory and authority requirements related to drawing and installing irrigation systems; - SI system of measurement; - specifications of the range of irrigation products available; - standards applicable to the installation; - technologies for irrigation measurement and drawings; - various types of irrigation systems, including types of materials and components used; - workplace and equipment safety requirements.

CPCPIG3021A Set out, install and commission irrigation systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to set out, install

and commission irrigation systems.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: compile list of materials; complete workplace documentation and record information; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install pipework, controls, valves, backflow prevention devices and water emitters for an irrigation system and its commissioning, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipes and fittings, including fixing and joining techniques and methods; - job safety analysis (JSA) and safe work method statements (SWMS); - process of setting out, installing and commissioning irrigation systems; - processes for accessing information and for calculating material requirements; - properties of water, including pressure and flow rates; - protection of drinking water supplies; - relevant statutory and authority requirements related to installing and commissioning irrigation systems; - SI system of measurement; - standards applicable to the installation; - various types of irrigation systems, including types of materials and components used, and; - workplace and equipment safety requirements.

CPCPIG3022A Install and commission domestic irrigation pumps

Locations:Industry, Sunshine.

Prerequisites:CPCCM2043A - Carry out WHS requirements

Description:This unit of competency specifies the outcomes required to install and commission domestic irrigation pumps.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; -

initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record and document test data; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install and commission a centrifugal domestic irrigation pump, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipes and fittings, including: fixing and joining techniques and methods and flow rates; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - mechanical, hydraulic and electrical principles; - process of installing and commissioning domestic irrigation pumps; - processes for accessing information and for calculating material requirements; - properties of water, including pressure and flow rates; - relevant statutory and authority requirements related to installing and commissioning domestic irrigation pumps; - SI system of measurement; - various types of domestic irrigation pumps, and; - workplace and equipment safety requirements.

CPCPMS2021A Assemble mechanical services components

Locations:Industry, Sunshine.

Prerequisites:CPCCM2043A - Carry out WHS requirements

Description:This unit of competency specifies the outcomes required to assemble mechanical services components for heating and cooling systems prior to their installation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to fabricate and assemble mechanical services components prior to installation in heating, cooling and ventilation systems, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics of materials used in the required assembly; - classification of assembly types and identification of assembly components; - job safety analysis (JSA) and safe work method statements (SWMS);

- levelling and alignment processes; - mechanical and hydraulic principles; - personal protective equipment characteristics and use; - operation requirements of equipment used for fabricating and assembling components; - SI system of measurement; - types of fasteners, fixings and sealants; - WHS regulations relevant to assembly of irrigation components, and; - workplace operating procedures, including required standards for assembly.

CPCPMS3031A Fabricate and install steel pressure piping

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to determine installation requirements and to fabricate, install and test steel pressure piping. It applies to pipe systems with operating pressures not exceeding 1750kPa and 200°C.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation and document pipes system test; - read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: cut and weld with oxy-acetylene and arc welding and mechanical bend, joint, fix and test mild steel pressure piping systems, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - fabrication, installation and testing process for pressure pipe systems; - job safety analysis (JSA) and safe work method statements (SWMS); - processes for accessing information and for calculating material requirements; - properties of conveyed materials, including pressure, flow rates and temperature requirements; - relevant statutory authorities' requirements and Australian standards related to fabricating, installing and testing - pressure pipe systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPMS3032A Select and fit insulation and sheathing

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install insulating sheathing on hot and cold piping, fittings and vessels. It includes the selection of insulation materials.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - technical skills to select and install appropriate thermal insulation sheathing to sections of both hot and cold piping, fittings and vessels associated with refrigeration and cooling and heating systems; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - correct waste disposal and recycling processes; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - materials handling processes; - WHS regulations relevant to insulation and sheathing; - personal protective equipment requirements and use; - processes of selecting and insulating pipes, fittings and vessels; - SI system of measurement; - techniques for cutting, fabricating and assembling metal sheathing, and; - techniques for fixing insulating materials to piping and vessels.

CPCPMS3033A Install small bore heating systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install small bore hydronic heated water heating systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; document heating system test; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work

with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: determine system requirements and install and commission a heating system, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different fixing and joining techniques and methods; - effective isolation processes and procedures; - electrical and electronic principles and safety requirements; - job safety analysis (JSA) and safe work method statements (SWMS); - WHS regulations relevant to installation of small bore systems; - personal protective equipment requirements and use; - processes of installing and commissioning small bore heating systems; - properties of water, including pressure and flow rates; - SI system of measurement, and; - statutory requirements.

CPCPMS3034A Install medical gas pipeline systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and test medical gas pipeline systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; document pipeline system pressure test; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: determine system requirements and install, test and purge a medical gas pipeline system, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - job safety analysis (JSA) and safe work method statements (SWMS); - WHS regulations relevant to medical gas pipeline systems; - personal protective equipment requirements and use; - pressure testing procedures and equipment; - processes and requirements of installing, testing and purging medical gas pipeline systems, and; - SI system of measurement.

CPCPMS3035A Install and test ducting systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and test ducting systems used for ventilation systems, heating and/or cooling systems, and exhaust systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; document ducting system tests; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install, insulate and test ducting for ventilation, heating, cooling and exhaust systems, including in-duct equipment, and; - access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - applicable Australian standards; - application of flow rates, pressure and volume principles to testing procedures; - characteristics of materials used in the system being tested; - electrical and electronic principles and safety requirements; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - WHS regulations relevant to the work activity; - personal protective equipment requirements and use; - processes of installing, insulating and testing ducting; - SI system of measurement; - statutory requirements; - system types and identification of system components; - techniques for setting out, assembling, fixing and jointing duct work systems and components, including insulation and acoustic materials, and; - types of repairs for detected leaks in the duct work system.

CPCPMS3036A Install air handling units

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and test air heating, cooling and ventilation plenums or enclosures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and report to appropriate personnel

any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; document pipeline system pressure test; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install and test an air handling plenum, which is part of an air heating, cooling and ventilation system, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - effect of machinery vibrations on structures, ducts and fittings; - electrical and safety requirements; - equipment installation techniques that limit the transfer of vibrations from plant and equipment to other components; - job safety analysis (JSA) and safe work method statements (SWMS); - WHS regulations relevant to the work activity; - personal protective equipment requirements and use; - processes of installing and testing air handling units; - SI system of measurement; - statutory requirements; - techniques for setting out, assembly and fixing and jointing requirements for duct work systems, and; - testing, balancing and commissioning of air handling units.

CPCPMS3037A Install and test split system air conditioning

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and test split system air conditioning.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete workplace documentation; document pipeline system pressure test; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology; undertake preparatory work that may be needed, including penetration through building structure, installation of structural supports and installation of plinths. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different assemblies, including fixing and jointing techniques and methods; - effective isolation processes and procedures; - electrical safety requirements; - environmental impact of gases and Environment Protection Authority (EPA) requirements; - job safety analysis (JSA) and safe work method statements (SWMS); - materials handling techniques; - WHS regulations

relevant to the work activity; - personal protective equipment requirements and use; - operating principles of air conditioning and refrigeration systems; - processes of installing and testing split air conditioning systems; - SI system of measurement, and; - statutory requirements.

CPCPMS3038A Install air conditioning control equipment

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install air conditioning control equipment for the control of pressure, temperature, flow rate, humidity and density.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - effective isolation processes and procedures; - electrical and safety requirements; - job safety analysis (JSA) and safe work method statements (SWMS); - WHS regulations relevant to the work activity; - personal protective equipment requirements and use; - operating principles of air conditioning and refrigeration systems; - power and maintenance access requirements for control units; - process of installing and testing air conditioning control equipment; - SI system of measurement, and; - statutory requirements.

CPCPMS3039A Maintain mechanical services equipment

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to perform general maintenance of heating, ventilating and air conditioning systems and associated mechanical equipment (air distribution systems, hydronic systems and control systems).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication; - literacy skills to: complete workplace documentation; document maintenance report; read and interpret: documentation from a variety of sources, maintenance schedule, manufacturer catalogues, plans, specifications and drawings; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: conduct routine maintenance on air distribution and hydronic heating, ventilating and air conditioning systems and identify and accurately report to appropriate personnel any faults in tools, equipment or materials, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - air-conditioning and refrigeration principles; - electrical safety principles; - effect of bacteria in water, and potential impact on health; - job safety analysis (JSA) and safe work method statements (SWMS); - mechanical and hydraulic principles; - personal protective equipment requirements and use; - operating principles of system components used in mechanical services equipment; - processes of maintaining mechanical services equipment; - SI system of measurement; - WHS regulations relevant to the work activity, and; - workplace and statutory requirements for mechanical services equipment.

CPCPMS3040A Install and maintain evaporative air cooling systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and maintain evaporative air cooling systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete workplace documentation; document test results; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: identify and accurately report to appropriate personnel any faults in tools, equipment or materials; undertake associated penetration and flashing of the roof, provision of water, and installation of required duct work, and; -

351

technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different assemblies, including fixing and jointing techniques and methods; - effect of bacteria in water, and health implications; - effective isolation processes and procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - materials handling techniques; - WHS regulations relevant to the work activity; - personal protective equipment requirements and use; - processes of installing and testing evaporative air cooling systems; - roof penetration and flashing; - SI system of measurement, and; - statutory requirements.

CPCPMS4011B Design, size and lay out heating and cooling systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to design, size and document the layout of heating and cooling systems for multi-floor structures. It covers preparing for the work, identifying and confirming system specifications and requirements, designing system layout, and work finalisation processes, including records and documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements, including system requirements; - report faults; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete written workplace documentation; - read and interpret: documentation from a variety of sources; regulations, standards, plans, specifications and drawings; numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others; plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: identify and accurately report to appropriate personnel any faults in tools, equipment or materials; interpret plans and specifications to design, size and document the layout of heating and cooling systems for multi-floor buildings up to a height of six floors, and; - access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different fixing and joining techniques and methods; - characteristics and application of pipe and ducting systems, including their fittings and fixture supports and fixing and joining techniques; - design concepts and performance measures for heating and cooling systems; - effective isolation processes and procedures; - electrical and electronic principles and safety requirements; - environmental impact of gases and Environment Protection Authority (EPA) requirements; - job safety analysis (JSA) and safe work method statements (SWMS); - principles, operation and characteristics of heating and cooling systems; - process of designing, sizing and documenting the layout of heating and cooling systems; - properties of water and air, including

pressure and flow rates; - relevant information sources for the work activity; - relevant statutory requirements related to designing, sizing and documenting the layout of heating and cooling systems; - SI system of measurements; - standards applicable to heating and cooling systems; - use of computers and relevant computer-aided design (CAD) software, and; - workplace and equipment safety requirements.

CPCPRF2022A Select and install roof sheeting and wall cladding

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to select and install roof sheeting, steel battens and wall cladding for roofs. It includes the selection and installation of non-metallic roof materials associated with metal roofing (excluding roof tiles and slate) and of insulation materials.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete written workplace documentation; document scope of work and work practices; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: identify and accurately report to appropriate personnel any faults in tools, equipment or materials; select and install non-metallic roof materials associated with metal roofing (excluding roof tiles and slate) and insulation materials, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - capillary action, thermal expansion and fabrication techniques to prevent leaking installations; - corrosion prevention treatment requirements of cut sheets; - electrolysis and problems associated with the use of dissimilar metals; - job safety analysis (JSA) and safe work method statements (SWMS); - processes of selecting and installing roof sheeting and wall cladding; - relevant WHS regulations and fall protection codes and requirements; - relevant statutory requirements related to installing roof sheeting and wall cladding, including non-metallic materials; - SI system of measurement, and; - types of fasteners, fixings and sealants and their application to the installation of roof coverings.

CPCPRF2023A Collect and store roof water

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to determine storage requirements and to plan, prepare and install storage tanks and related piping for the collection and storage of roof water.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to: apply calculations and measurements and interpret data; - planning and organising skills to: plan and set out work and plan work with others; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - job safety analysis (JSA) and safe work method statements (SWMS); - procedures for commissioning water storage tanks for use; - processes for accessing information and for calculating material requirements; - properties of water, including: effect of gravity and atmospheric pressure; procedures for maintaining water quality; sources of contamination and impurities; - regulations and requirements pertaining to collecting and storing drinking water and non drinking water; - relevant statutory requirements related to collecting and storing roof water; - SI system of measurements; - water storage installation processes, and; - workplace and equipment safety requirements.

CPCPRF2024A Fabricate roof coverings for curved structures

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to design and fabricate curved industrial roof coverings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete written workplace documentation; develop materials list; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to

people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - capillary action, thermal expansion and fabrication techniques to prevent leaking installations; - characteristics of various metals and finishes; - design concepts and performance measures for curved roof coverings; - electrolysis and problems associated with the use of dissimilar metals; - job safety analysis (JSA) and safe work method statements (SWMS); - processes of designing and fabricating curved roof coverings; - relevant statutory and regulatory authority requirements related to metal roofs, and; - SI system of measurement.

CPCPRF3021A Receive roofing materials

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to coordinate the delivery, receipt and handling of roofing materials on a site.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; inform employees of delivery process; plan and sequence deliveries with others; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources; plans and specifications; - numeracy skills to apply calculations; - planning and organising skills to: coordinate receipt of deliveries of roofing materials to a work site; plan and set out work; sequence the delivery of materials; - relocating materials and securing them within the site; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - application of relevant regulations and workplace procedures; - deployment of relevant human and physical resources and facilities; - identification and correct use of equipment, processes and procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - methods of working and correct selection and use of equipment relevant to work activity; - relevant WHS regulations and fall protection codes and requirements; - relevant statutory requirements related to transportation and storage of roofing materials; - SI system of measurement; - techniques and procedures for delivery of roof plumbing materials, and; - workplace planning and estimation processes for delivery of roof plumbing materials.

CPCPRF3022A Fabricate and install roof drainage components

Locations: Industry, Sunshine.

353

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to fabricate and install roof drainage components and rainwater goods for commercial and residential roof systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to select, fabricate, joint and install gutter and downpipe systems to effectively drain a roof to an authorised discharge point, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - capacity of fabrication machinery involved in the production of roof drainage components; - capillary action, thermal expansion and fabrication techniques to prevent leaking installations; - characteristics of various metals and finishes; - corrosion prevention treatment requirements of cut sheets; - design concepts and performance measures for roof drainage components; - electrolysis and problems associated with the use of dissimilar metals; - job safety analysis (JSA) and safe work method statements (SWMS); - joining of materials; - processes of fabricating, jointing and fixing roof drainage components; - relevant WHS regulations and fall protection codes and requirements; - relevant statutory requirements related to fabricating and installing roof drainage components; - SI system of measurement, and; - types of fasteners, fixings and sealants and their application to the fabrication and installation of roof coverings.

CPCPRF3023A Fabricate and install external flashings

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to fabricate and install external flashings for roof and ceiling installations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - capillary action, thermal expansion and fabrication techniques to prevent leaking installations; - corrosion prevention treatment requirements of cut sheets; - design concepts and performance measures for various external flashings; - electrolysis and problems associated with the use of dissimilar metals; - job safety analysis (JSA) and safe work method statements (SWMS); - processes of fabricating and installing external flashings; - relevant WHS regulations and fall protection codes and requirements; - relevant statutory requirements related to installing external flashings; - SI system of measurement, and; - types of fasteners, fixings and sealants and their application to the fabrication and installation of external flashings.

CPCPRF3024A Install roof components

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to select and install industrial type roofing components in roofs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete written workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - capillary action, thermal expansion and fabrication techniques to prevent leaking installations;

- corrosion prevention treatment requirements of cut sheets; - electrolysis and problems associated with the use of dissimilar metals; - job safety analysis (JSA) and safe work method statements (SWMS); - processes of erecting and installing industrial roof components; - relevant WHS regulations and fall protection codes and requirements; - relevant statutory requirements related to installing roof components; - SI system of measurement, and; - types of fasteners, fixings and sealants and their application to the installation of roof components.

CPCPRF3025A Install roof coverings to curved roof structures

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to set out and install roofing to hyperbolic, paraboloid, barrel vault roof, curved roof and bull-nosed roof structures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation and read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - capillary action, thermal expansion and fabrication techniques to prevent leaking installations; - corrosion prevention treatment requirements of cut sheets; - electrolysis and problems associated with the use of dissimilar metals; - job safety analysis (JSA) and safe work method statements (SWMS); - processes of fixing covering to curved roof structures; - relevant WHS regulations and fall protection codes and requirements; - relevant statutory requirements related to installing roof coverings to curved roof structures; - SI system of measurement, and; - types of fasteners, fixings and sealants and their application to the installation of roof coverings.

CPCPRF3026A Install composite roof systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install roof sheets for composite roof systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - capillary action, thermal expansion and fabrication techniques to prevent leaking installations; - corrosion prevention treatment requirements of cut sheets; - electrolysis and problems associated with the use of dissimilar metals; - job safety analysis (JSA) and safe work method statements (SWMS); - processes of manufacturing and installing composite roof systems; - relevant WHS regulations and fall protection codes and requirements; - relevant statutory requirements related to installing composite roof systems; - SI system of measurement, and; - types of fasteners, fixings and sealants and their application to the fabrication and installation of roof coverings.

CPCPRF4011B Design and size roof drainage systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to design, size and document the layout of components of roof drainage systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete workplace documentation; - read and interpret: documentation from a variety of sources; regulations, relevant Australian standards, plans, specifications and drawings; record plans; - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others; plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic

backgrounds and with varying physical and mental abilities; - access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - accessing relevant information sources for the work activity and the processes for the calculation of catchment areas and design flows; - capacity of fabrication machinery involved in the production of roof draining components; - Australian standards applicable to roof drainage; - capillary action, thermal expansion and fabrication techniques to prevent leaking; - characteristics of various metals and finishes; - computers and computer-aided design (CAD) software; - corrosion prevention treatment requirements of cut sheets; - design concepts and performance measures for various roof draining components for all types of roofs; - electrolysis and problems associated with the use of dissimilar metals; - implications of climate variations for the design of roof draining components; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - process of planning, sizing and documenting the layout of roof drainage systems; - relevant statutory requirements related to planning, sizing and documenting the layout of roof drainage systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPSN3011B Plan layout of a residential sanitary plumbing system

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to plan the layout, size and install a sanitary plumbing system for residential buildings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access information; - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; - follow instructions; - identify requirements; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - complete workplace documentation; - read and interpret: documentation from a variety of sources; plans and specifications; - record plans; - numeracy skills to apply measurements and calculations; - plan and sequence tasks with others; - plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - access and understand site-specific instructions in a variety of media, and; - use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - application of various sanitary and drainage fixtures and appliances; - characteristics and the application of different pipe systems, including their fittings and fixture supports, and fixing and joining techniques; - job safety analysis (JSA) and safe work method statements (SWMS); - principles of drainage; - principles of sanitary plumbing; - process of planning the layout of sanitary plumbing systems; - relevant statutory requirements related to sanitary plumbing systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPSN3022A Install discharge pipes

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install pipework from soil and wastewater fixtures to a stack or drain.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; report faults; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record plans; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different materials, pipe fittings and supports, including fixing and joining techniques; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - process of installing sewage discharge pipes; - processes for accessing information and for calculating material requirements; - properties and characteristics of sewage, including temperature implications and discharges; - relevant statutory requirements related to installing discharge pipes; - SI system of measurements; - standards applicable to the installation, and; - workplace and equipment safety requirements.

CPCPSN3023A Fabricate and install sanitary stacks

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to fabricate and install sanitary stacks for soil and waste discharges.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow

instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record plans; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and the application of different pipe fittings and fixture supports, including fixing and joining techniques; - classification of assembly types and identification of assembly components; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - materials handling processes; - performance measures and characteristics of the materials used in the required soil and waste stack assembly; - process of fabricating and installing sanitary stacks; - processes for accessing information and for calculating material requirements; - product and service standards applicable to the installation; - properties of soil and waste discharges, including temperature and corrosive discharges; - relevant statutory requirements related to installing stacks, discharge pipes and vents; - SI system of measurements, and; - systems of sanitary plumbing.

CPCPSN3024A Install and fit off sanitary fixtures

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and fit off sanitary fixtures. It applies to the installation of sanitary plumbing, including the connection of discharge pipes to sanitary plumbing and drainage, including soil and waste fixtures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace written documentation; read and interpret: documentation from a variety of sources and plans and specifications; record written plans; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install sanitary plumbing, including connecting discharge pipes to sanitary plumbing and drainage and installing sanitary fixtures, and; - technology skills to: access and

understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and the application of different pipe fittings and fixture supports, including fixing and joining techniques; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - performance measures and characteristics of sanitary fixtures; - process of installing and fitting off sanitary fixtures; - processes for accessing information and for calculating material requirements; - relevant statutory, authority and manufacturer requirements related to installing and fitting off sanitary fixtures; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPSN3025A Install pre-treatment facilities

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install pre-treatment facilities designed to intercept and retain prohibited discharges to the sanitary plumbing and drainage system.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace written documentation; read and interpret: documentation from a variety of sources and plans and specifications; record written plans; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install pre-treatment facilities to intercept and retain prohibited discharges to the sanitary plumbing and drainage system, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - classification of assembly types and identification of assembly components; - fixing and joining techniques and methods; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - materials handling processes; - process of installing pre-treatment facilities; - processes for accessing information and for calculating material requirements; - prohibited waste discharges to the sewer and their properties and effects; - relevant statutory requirements related to installing pre-treatment facilities; - SI system of measurements; - types and purpose of pre-treatment facilities, and; - workplace and equipment safety requirements.

CPCPSN3026A Install sewerage pumpsets

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install sewerage pumps, and install and test small bore macerators.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace written documentation; read and interpret: documentation from a variety of sources and plans and specifications; record written plans; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install and test sewerage pumps and small bore macerators, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - atmospheric pressure; - fixing techniques; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - performance measures for various sewerage pumpsets; - process of installing sewerage pumpsets; - properties of sewage, including pressure and flow rates; - relevant statutory requirements related to installing sewerage pumpsets; - SI system of measurement; - standards applicable to the installation; - use of test equipment and procedures, and; - workplace and equipment safety requirements.

CPCPSN4011B Design and size sanitary plumbing systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to design, size and document the layout of sanitary plumbing systems for multi-floor buildings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements, including system requirements; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete workplace documentation; record plans; - read and interpret: documentation from a variety of sources, and; regulations, relevant Australian standards, plans, specifications and

drawings; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others; plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: document the layout of sanitary pipework and fixtures; identify and accurately report to appropriate personnel any faults in tools, equipment or materials, and; - access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - accessing relevant information sources for the work activity; - Australian standards applicable to the system; - characteristics and the application of different pipe systems, including their fittings and fixture supports, and fixing and joining techniques; - computers and computer-aided design software; - handling of hazardous waste; - infectious diseases; - job safety analysis (JSA) and safe work method statements (SWMS); - pipe materials and sanitary fixtures; - principles of drainage; - principles of sanitary plumbing; - process of planning, sizing and documenting the layout of sanitary pipework and fixtures; - relevant statutory requirements related to planning, sizing and documenting the layout of sanitary plumbing systems; - SI system of measurements, and; - workplace and equipment safety requirements.

CPCPWT3020A Connect and install storage tanks to a domestic water supply

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to connect and install storage tanks to a domestic water supply.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow and give instructions; record test results in writing; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; record test results in writing; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to: work with others to action tasks; relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: determine system requirements for installation of a static storage tank and identify and report faults in tools, equipment and materials, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communications technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques; - function and operation of a range of taps and valves; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - pressure test systems and procedures; - procedures for accessing information and processes for calculating material requirements; - process for connecting static storage tanks; - relevant

358

statutory requirements related to the connection of static storage tanks; - SI system of measurement; - structural systems, building materials and building services, and; - workplace and equipment safety requirements.

CPCPWT3021A Set out and install water services

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install heated, cold and tempered water services from the water supply to the fixture or points of discharge and storage.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install pipework to carry drinking and non-drinking water from a water meter, rainwater tank, storage tank or heated water service to points of discharge and storage, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipes and fittings, including fixing and joining techniques and methods; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - process of installing water piping systems; - processes for accessing information and for calculating material requirements; - properties of water, including pressure and flow rates; - regulations and requirements for non-drinkable water installations; - relevant statutory requirements related to installing water piping systems; - SI system of measurements; - Australian standards applicable to the installation; - use of test equipment and procedures, and; - workplace and equipment safety requirements.

CPCPWT3022A Install and adjust water service controls and devices

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install water service controls and mixing devices used to manually control water mix and flow. It includes the basic adjustment and maintenance of correct flow operation for flushing devices, control valves, temperature control devices pumps and appliances, and excludes the commissioning and adjustment of backflow prevention devices and thermostatic mixing valves.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities - technical skills to install and make basic adjustments to water flushing devices, control valves, pumps and appliances for heated and cold water services, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics of the materials and devices being installed; - effective isolation procedures; - hydraulics and mechanics; - job safety analysis (JSA) and safe work method statements (SWMS); - process of installing service controls and devices; - processes for accessing information and for calculating material requirements; - properties of water including pressure and flow rates; - relevant statutory requirements related to installing service controls and devices and requirements for backflow prevention devices; - SI system of measurements; - Australian standards applicable to the installation, and; - workplace and equipment safety requirements. .

CPCPWT3023A Install and commission water heating systems

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and commission water heaters for domestic and commercial applications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and

calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install and commission low pressure, mains pressure, continuous flow and solar water heating systems, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different mounting fittings, including fixing and joining techniques and methods; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - performance measures for various water heaters; - process of installing water heaters; - processes for accessing information and for calculating material requirements; - properties of water, including pressure and flow rates; - relevant statutory requirements related to installing water heaters; - SI system of measurements; - Australian standards applicable to the installation; - use of test equipment and procedures, and; - workplace and equipment safety requirements.

CPCPWT3024A Install and maintain domestic water treatment equipment

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install, test and maintain domestic water softeners, water coolers and water filtering equipment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different assemblies, including fixing and joining techniques and materials - chemistry of water, including: osmosis, filtration and purification and properties of hard and soft water, including sources of contamination, impurities, pressure and flow rates; - job safety analysis (JSA) and safe work method statements (SWMS); - process of installing water treatment equipment; - relevant statutory requirements related to installing water treatment equipment; - SI system of measurements; - Australian standards applicable to the installation; - use of test equipment and procedures, and; - workplace and equipment safety requirements.

CPCPWT3025A Install water pumpsets

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and test water pumps.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to install and test water pumps and a centrifugal pumpset, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - atmospheric pressure; - fixing techniques; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - performance measures for various water pumpsets; - process of installing water pumpsets; - properties of water, including pressure and flow rates; - relevant statutory requirements related to installing water pumpsets; - SI system of measurements; - Australian standards applicable to the installation; - use of test equipment and procedures, and; - workplace and equipment safety requirements.

CPCPWT3026A Fit off and commission heated and cold water services

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to fit off and commission heated and cold water services to appropriate fixtures. It includes the provision for non-drinkable water applications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow

instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to fit off, connect, test and commission heated and cold water services to household fixtures and appliances, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different fittings and fixtures, including fixing and joining techniques and materials; - implications of cross connections and air gaps; - isolation processes and procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - non-drinkable water processing, requirements and applications; - process of fitting off, connecting and commissioning heated and cold water services; - properties of water, including sources of contamination, impurities, pressure and flow rates; - relevant statutory requirements related to fitting off, connecting and commissioning heated and cold water services; - SI system of measurement; - Australian standards applicable to the work; - use of test equipment and procedures, and; - workplace and equipment safety requirements.

CPCPWT3027A Connect irrigation systems from drinking water supply

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to connect irrigation and watering systems from a drinking water supply. It does not include the commissioning of backflow prevention devices or arrangements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to cut into a water supply and install a take-off branch and fitting valves and backflow prevention devices for an irrigation or watering system, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology.

Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipes and fittings, including fixing and joining techniques and methods; - drinking water supplies and protection measures; - implications of cross connections and air gaps; - job safety analysis (JSA) and safe work method statements (SWMS); - process of connecting irrigation systems from a drinking water supply; - processes for accessing information and for calculating material requirements; - properties of water, including pressure and flow rates; - relevant statutory requirements related to connecting irrigation systems from a drinking water supply; - SI system of measurement; - Australian standards applicable to the connection; - use of test equipment and procedures; - various types of irrigation systems and types of materials used, and; - workplace and equipment safety requirements.

CPCPWT3028A Install water services

Locations: Industry, Sunshine.

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install a water supply system from the authorities' main to the metering device, according to water authorities' requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; identify requirements; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; read and interpret: documentation from a variety of sources; plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to: tap into a water main and connect and install valves, flanges and pipework to a water meter and test the installation of valves, flanges and pipework to a water meter, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipes and fittings, including fixing and joining techniques and methods; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - process of installing water services; - properties of water, including pressure and flow rates; - relevant statutory requirements related to installing water services; - SI system of measurement; - Australian standards applicable to the installation; - use of test equipment and procedures, and; - workplace and equipment safety requirements.

CPCPWT3029A Install water pipe systems

Locations: Industry, Sunshine.

361

Prerequisites: CPCPCM2043A - Carry out WHS requirements

Description: This unit of competency specifies the outcomes required to install and test water pipes larger than DN65, or large water services.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: determine requirements; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow and give instructions; use language and concepts appropriate to cultural differences; use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete written records and reports of test results; complete other relevant workplace documentation; read and interpret: documentation from a variety of sources and plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others and plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities, and; - technology skills to: access and understand site-specific instructions in a variety of media and use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - concrete and concrete fabrication; - confined space entry requirements; - dewatering; - equipment types, characteristics, technical capabilities and limitations; - excavation and trench safety; - installation of booster systems; - installation of thrust blocks; - job safety analysis (JSA) and safe work method statement; - mains pipe systems and installation procedures; - mains water pressure; - materials safety data sheets (MSDS) and materials handling methods; - operational, maintenance and basic diagnostic procedures, including testing procedures; - plumbing industry terminology; - processes for interpreting engineering drawings; - processes for calculating pipeline grades and percentages; - project quality requirements; - sedimentation and erosion controls; - site and equipment safety requirements; - site isolation and traffic control responsibilities and authorities; - valves and flow control devices, and; - water reticulation.

CPCPWT4011B Design and size heated and cold water services and systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to design, size and document the layout of heated, tempered and cold water services, flushing systems, and hydrant and hose reel systems for multi-floor buildings. It covers preparation for work, identification of water service and system requirements, planning the service and system layout and completion of work finalisation processes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand; follow instructions; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation, including work backup; - read and interpret: documentation from a variety of sources regulations, relevant Australian standards, plans, specifications and drawings; record written plans; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others; plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to identify requirements, including system requirements, and; - technology skills to: access and understand site-specific instructions in a variety of media; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - characteristics and application of different pipes and fittings, including fixing and joining techniques and methods; - characteristics and application of water heating systems; - characteristics and application of water pumps and water storage tanks for multiple floor buildings; - drafting techniques, which may include the use of computers and computer-aided design (CAD) software; - job safety analysis (JSA) and safe work method statements (SWMS); - levelling and alignment processes; - process of designing, sizing and documenting the layout of heated, tempered and cold water services and systems; - processes for accessing information and for calculating material requirements; - properties of water, including pressure and flow rates; - relevant statutory requirements related to designing, sizing and laying out: heated, tempered and cold water services and flushing systems, and fire hydrant and hose reel systems, including non-drinking water requirements; both mains pressure and low pressure flushing devices; - selection for installation of: thermostatic mixing valves; backflow prevention devices; - SI system of measurements; - Australian standards applicable to the service and system; - water treatment processes, and; - workplace and equipment safety requirements.

CPCPWT4022A Commission and maintain backflow prevention devices

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to test, commission and maintain backflow prevention devices in water services. It covers preparation for work, identification of testing and commissioning requirements, physical testing and commissioning of devices, maintenance of devices and completion of work finalisation processes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: access information; determine requirements; enable clear

and direct communication, using questioning to identify and confirm requirements, share information, listen and understand, and; follow instructions; - report faults; - use language and concepts appropriate to cultural differences; - use and interpret non-verbal communication, such as hand signals; - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials; - literacy skills to: complete workplace documentation; - read and interpret: documentation from a variety of sources, and; plans and specifications; - numeracy skills to apply measurements and calculations; - planning and organising skills to: plan and sequence tasks with others, and; plan and set out work; - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities; - technical skills to test, commission and maintain high, medium and low hazard backflow prevention devices in water services, and; - technology skills to: access and understand site-specific instructions in a variety of media, and; use mobile communication technology. Students will also be expected to demonstrate the following knowledge: - basic hydraulics and mechanics relevant to backflow prevention devices in water services; - characteristics and applications of the materials and backflow prevention devices; - effective isolation procedures; - job safety analysis (JSA) and safe work method statements (SWMS); - process of testing, commissioning and maintaining backflow prevention devices; - processes for accessing information and for calculating material requirements; - properties of water, including pressure and flow rates; - relationship with other service controls and devices; - relevant statutory requirements related to testing and commissioning backflow prevention devices; - SI system of measurements; - standards applicable to the service; - testing equipment and techniques, and; - workplace and equipment safety requirements.

CPPCCL2008 Clean carpeted floors

Locations: Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit specifies the outcomes to clean carpeted floors in a range of workplace contexts. The unit applies to cleaning personnel who perform cleaning tasks on carpeted floors. It includes the ability to assess the cleaning task, understand client requirements and follow workplace safety procedures. It applies to individuals who perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and use carpet cleaning equipment and cleaning agents; - clean, using a different technique in each instance, four different types of carpeted floor surfaces; - selecting, using, and maintaining personal protective equipment (PPE); - manual handling techniques; - communicating effectively with supervisor, team members or clients; - understanding, clarifying, and following supervisor or client instructions; - safely using cleaning equipment and preparing and using cleaning agents; - disposing of collected soil and waste, and; - using efficient carpet cleaning methods. Students will also be expected to demonstrate the following knowledge: - the main types of carpeted flooring and their characteristics including natural, synthetic, looped, tufted, and modular tiled

carpeting; - the main types of wet and dry soiling and effects on carpeted surfaces including dust, dirt, food, beverages, liquids, and oil; - carpet cleaning techniques and equipment; - workplace requirements for undertaking all aspects of cleaning carpeted floors; - methods for communicating and clarifying work requirements with supervisors and clients; verbally, in person or via phone, via electronic medium such as text and email, electronic or written reports, and; - workplace procedures.

CPPCLO2002 Clean hard floor surfaces

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit specifies the outcomes required to clean hard floor surfaces in a range of workplace contexts. The unit applies to cleaning personnel who perform hard floor surface cleaning tasks. It includes the ability to assess the cleaning task, understand client requirements and follow workplace safety procedures. It applies to individuals who perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and use hard floor cleaning equipment and cleaning agents; - clean, using a different technique in each instance, four different types of hard floors surfaces; - selecting, using, and maintaining personal protective equipment (PPE); - manual handling techniques; - communicating effectively with supervisor or clients; - understanding, clarifying, and following supervisor or client instructions; - safely using hard floor cleaning equipment and preparing and using cleaning agents; - disposing of collected soil and waste, and; - using efficient cleaning methods. Students will also be expected to demonstrate the following knowledge: - the main types of hard floor surfaces; including hardwood, wood tile, concrete, marble, ceramic tiling, laminate, and vinyl; - the main types of wet and dry soiling and effects on hard floor surfaces; including dust, heavy dirt build-up, food, beverages, liquids and oil; - cleaning techniques and industry standard equipment used to clean hard floor surfaces; - workplace requirements for undertaking all aspects of cleaning hard floor surfaces; - methods for communicating and clarifying work requirements with supervisors and clients; verbally, in person or via phone, via electronic medium such as text and email, electronic or written reports, and; - workplace procedures.

CPPCLO2005 Maintain glass surfaces

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency specifies the outcomes required to maintain glass surfaces, including windows, in a range of workplace contexts. The unit applies to individuals performing glass and window cleaning services, but may be applied to other custodial-cleaning roles. It includes the ability to assess the cleaning task, apply and follow workplace safety measures, and understand client requirements. It applies to individuals who perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and use glass cleaning maintenance equipment and cleaning agents; - to clean, using a different technique in each instance; - selecting, using, and maintaining personal protective equipment (PPE); - manual handling techniques; - communicating effectively with supervisor or clients; - understanding, clarifying, and following supervisor or client instructions; - safely using glass surface cleaning equipment and preparing and using cleaning agents; - disposing of collected soil and waste, and; - using efficient cleaning methods. Students will also be expected to demonstrate the following knowledge: - standard glass surfaces; including float glass, toughened, and non-toughened glass; - the main types of wet and dry soiling and effects on glass surfaces; - glass surface cleaning techniques and industry standard equipment; - workplace requirements for undertaking all aspects of maintain glass surfaces; - methods for communicating and clarifying work requirements with supervisors and clients; verbally, in person or via phone, via electronic medium such as text and email, electronic or written reports, and; - workplace procedures.

CPPCLO2009A Clean glass surfaces

Locations:Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites:Nil.

Description:This unit of competency specifies the outcomes required to clean glass surfaces, including windows, in both internal and external situations. It requires the ability to assess the extent of the cleaning task through understanding client requirements and characteristics of the glass surface, and applying company policies and procedures. Selecting the appropriate equipment, chemicals and methods is essential to performing the task safely and efficiently.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - customer service skills; - interpersonal skills to relate to people from a range of backgrounds; - language, literacy and numeracy skills; - read and interpret directions and safety instructions; - planning and organising skills; - problem-solving skills to manage contingencies; - skills to work safely, and; - self-management skills to work alone and in a team. Students will also be expected to demonstrate the following knowledge: - cleaning chemicals and equipment and their applications for glass surfaces; - company management structure and procedures; - legislation, regulations, codes of practice and industry advisory standards that apply to cleaning glass surfaces, including OHS legislation; - routes of entry and potential symptoms of exposure to chemicals; - safe work practices for using, and; - types of glass surfaces, their characteristics and appropriate cleaning methods.

CPPCLO2014 Clean and arrange furniture and fittings

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency specifies the outcomes required to clean and

arrange furniture and fittings, and to present rooms in a range of workplace contexts. This unit applies to individuals who clean furniture and fittings and then place the furniture and fittings in their original positions, or in an arrangement specified by a client. It includes the ability to assess the extent of the cleaning task, understand client requirements and apply procedures. This unit applies to individuals with the ability to follow effectively company policies and procedures and to safely perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and use furniture and fitting cleaning equipment and cleaning agents to clean, using a different technique in each instance; - two different types furniture items; - two different types of fittings; - arrange furniture and fitting twice using a different technique in each instance; - selecting, using, and maintaining personal protective equipment (PPE); - manual handling techniques; - communicating effectively with supervisor or clients; - understanding, clarifying, and following supervisor or client instructions; - safely using cleaning equipment and preparing and using cleaning agents; - disposing of collected soil and waste, and; - using efficient cleaning methods. Students will also be expected to demonstrate the following knowledge: - industry standard types of furniture including; beds, bedside cupboards, shelves, benches, chairs, tables, desks, work stations and filing cabinets, - industry standard types of fittings including; door handles, light fittings and switches, railings, skirting, window sills, window coverings, picture frames, clocks, ornaments, telephone handsets, computers, kettles and microwaves; - the main surface types including; wood, laminate, metal, glass, plastic, tile, vinyl, leather or fabric; - the main types of wet and dry soiling and effects on furniture and fitting surfaces including; mud and dirt, dust, cobwebs, grease, wax, ink, nail polish, food, beverages, blood, and human and animal waste; - standard furniture and fitting cleaning techniques and industry standard equipment; - workplace requirements for undertaking all aspects of cleaning furniture and arranging fittings; - methods for communicating and clarifying work requirements with supervisors and clients; verbally, in person or via phone, via electronic medium such as text and email, electronic or written reports, and; - workplace procedures.

CPPCLO2016 Clean wet surfaces

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency specifies the outcomes required to clean a wet area in a range of workplace contexts. This unit applies to cleaning personnel who perform cleaning tasks on wet areas. It includes the ability to assess the cleaning task, understand client requirements and follow workplace safety procedures. It applies to individuals who perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and use wet surface cleaning equipment and cleaning agents; - clean, using a different technique in each instance, four different types of wet surfaces; - selecting, using, and maintaining personal protective equipment (PPE); - manual handling techniques; - communicating effectively with supervisor or clients; - understanding, clarifying, and following supervisor or client instructions; - safely using wet surface cleaning equipment and preparing and using cleaning agents; - disposing of collected soil and waste, and; - using efficient cleaning methods. Students will also be expected to demonstrate the following knowledge: - characteristics of a wet surface and the main industry environments with wet surface cleaning requirements including; bathrooms, toilets, change rooms and laundries; - the main types of wet and dry soiling and effects on wet surfaces; - cleaning techniques and equipment for wet areas; - workplace requirements for undertaking all aspects of cleaning wet surfaces; - methods for communicating and clarifying work requirements with supervisors and clients; verbally, in person or via phone, via electronic medium such as text and email, electronic or written reports, and; - workplace procedures.

CPPCLO2018 Sort, remove and recycle waste material

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency specifies the outcomes required to sort and remove waste and recyclable materials in a range of workplace contexts. This unit applies to cleaning personnel who sort, remove and recycle waste material. It includes the ability to assess the task, identify types of waste and recyclable materials, identify the safety specifications and procedures of the task, understand client requirements and apply company policies and procedures. It applies to individuals who perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - properly use personal protective equipment (PPE); - sort and remove waste and recyclable materials in two different workplace contexts; - selecting, using, and maintaining personal protective equipment (PPE); - manual handling techniques; - communicating effectively with supervisor or clients; - understanding, clarifying, and following supervisor or client instructions; - disposing of collected waste, and; - recycling materials. Students will also be expected to demonstrate the following knowledge: - procedures to safely identify, separate and sort and remove recyclable materials; - industry-standard equipment such as, waste bins, rubbish bags, cleaning solutions and disinfecting products; - workplace requirements for undertaking all aspects of waste removal and recyclable materials; - methods for communicating and clarifying work requirements with supervisors and clients; verbally, in person or via phone, via electronic medium such as text and email, electronic or written reports, and; - workplace procedures.

CPPCLO2032 Plan basic cleaning activities

Locations:Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to plan for safe and efficient cleaning activities in a range of workplace contexts. The unit applies to cleaning personnel who plan cleaning tasks. It includes the ability to assess the cleaning task, understand client requirements and follow workplace safety procedures. It applies to individuals who work alone or as part of a team, under routine supervision and without supervisory responsibilities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating effectively with supervisor, team members or clients, and; - understanding, clarifying, and following supervisor or client instructions. Students will also be expected to demonstrate the following knowledge: - workplace requirements for undertaking all aspects of planning basic cleaning activities, and; - workplace procedures.

CPPCLO2034 Maintain storage area and cleaning equipment

Locations: Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to maintain cleaning equipment and consumable storage areas in a range of workplace contexts. This unit applies to cleaning personnel that perform maintenance on cleaning storage areas. It includes the ability to safely secure and store equipment, chemicals and consumables, follow workplace safety procedure. It applies to individuals who perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and properly use PPE and safely store and maintain cleaning equipment in three different types of storages; - selecting, using, and maintaining personal protective equipment (PPE); - manual handling techniques; - communicating effectively with supervisors, and; - understanding, clarifying, and following supervisor or client instructions. Students will also be expected to demonstrate the following knowledge: - common requirements for storage of equipment, chemicals, and consumables and reasons for storage methods; - PPE, cleaning solutions, vehicle security elastic straps and nets; - key procedures for keeping storage areas accessible and free of obstacles including the cleaning storage areas: commercial, industrial and vehicle; - principles of first-in first-out storage of chemicals and consumables; - workplace requirements for undertaking all aspects of maintaining storage area and cleaning equipment; - methods for communicating and clarifying work requirements with supervisors and clients; verbally, in person or via phone, via electronic medium such as text and email, electronic or written reports, and; - workplace procedures.

CPPCLO2042 Clean surfaces using microfibre equipment

Locations: Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to use microfibre cleaning equipment on a range of surfaces, including floor surfaces, walls, and furniture in range of workplace contexts. The unit applies to cleaning personnel who clean using microfibre equipment. It includes the ability to assess the microfibre cleaning task, understand client requirements and follow workplace safety procedures. This unit applies to individuals with the ability to follow effectively company policies and procedures and to safely perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and use microfibre cleaning equipment; - clean, using a different technique in each instance, three different types of surface; - selecting, using, and maintaining personal protective equipment (PPE); - manual handling techniques; - communicating effectively with supervisor or clients; - safely using microfibre cleaning equipment; - disposing of collected soil and waste, and; - using efficient cleaning methods. Students will also be expected to demonstrate the following knowledge: - microfibre equipment including; microfibre cloths, microfibre mop, microfibre towels; - different type of surfaces including; hardwood, tile, vinyl, laminate, glass and marble; - microfibre cleaning techniques for removing wet and dry soiling from surfaces; - workplace requirements for undertaking all aspects of microfibre cleaning methods; - methods for communicating and clarifying work requirements with supervisors and clients; verbally, in person or via phone, via electronic medium such as text and email, electronic or written reports, and; - workplace procedures.

CPPCLO3001 Maintain hard floor surfaces

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to clean and maintain hard floor surfaces, selecting the required equipment, chemicals and methods in order to perform the task safely and efficiently. The unit supports cleaners who work alone or in teams. It applies to both manual and mechanical methods of cleaning hard floor surfaces in a range of commercial and residential work sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit; - clean and maintain two of the following different hard floor surfaces, and;

- use different cleaning methods when cleaning the above surfaces. In doing the above work, the person must: - identify site hazards and control risks before commencing the task; - identify type and condition of hard floor surface; - select cleaning equipment and chemicals required for task; - correctly and safely handle waste, including contaminated materials; - comply with company, legislative and regulatory requirements relating to the cleaning work, and; - use safe and efficient cleaning methods. Students will also be expected to demonstrate the following knowledge: - application methods for maintaining hard floor surfaces using microfibre cleaning techniques; - environmental requirements relating to maintaining hard floor surfaces; - methods for cleaning and maintaining microfibre cloths and mops; - key requirements of legislation, regulations, codes of practice and industry advisory standards relating to maintaining hard floor surfaces; - processes for safely handling and disposing of waste; - safe handling techniques for working with hazardous chemicals, and; - types and characteristics of different hard floor surfaces and required cleaning methods for each type.

CPPCLO3002 Restore hard floor surfaces

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to assess the type and condition of hard floor surfaces, determine the nature and extent of damage, remove pre-existing floor sealant, and replace it with a new protective coating using selected chemicals and techniques. The unit supports cleaners who work alone or in teams. It applies in a range of commercial and residential work sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit; - restore three of the following hard floor surfaces: brick, concrete, cork, granite, parquet, pavers, quarry tiles, rubber, slate, terrazzo and vinyl; - restore two different timber floor surfaces. In doing the above work, the person must: - identify site hazards and control risks before commencing the task; - identify type and condition of hard floor surface techniques required for the task, and; - correctly and safely handle waste, including contaminated materials. Students will also be expected to demonstrate the following knowledge: - types and characteristics of different hard floor surfaces and restoration methods; - environmental requirements relating to restoring hard floor surfaces; - processes for safely handling and disposing of waste; - range, type and characteristics of timber floor sealants; - key requirements of legislation and regulations relating to restoring hard floor surfaces; - safe handling techniques for working with hazardous chemicals; - types and uses of different scrubbing machine pads; - techniques for identifying type of existing sealant on floors; - techniques for applying sealants to different hard floor types; - types and application of different signs and barricades to be installed prior to cleaning, and; - types, characteristics and application methods of cleaning chemicals and equipment used in restoring hard floor surfaces.

CPPCLO3002A Restore hard floor surfaces

Locations: Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to restore hard floor surfaces. The unit applies to both manual and mechanical methods of hard floor surface restoration. It requires the ability to assess the extent of the restoration task through understanding client requirements and applying company policies and procedures. Selecting the appropriate equipment, chemicals and methods is essential to performing the task safely and efficiently.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - correct working skills; - customer service skills; - interpersonal skills to relate to people from a range of backgrounds; - language, literacy and numeracy skills; - planning and organising skills; - problem-solving skills to manage contingencies; - skills to work safely, and; - self-management skills to work alone and in a team. Students will also be expected to demonstrate the following knowledge: - cleaning chemicals and equipment and their applications for hard floor surfaces; - company management structure and procedures; - legislation, regulations, codes of practice and industry advisory standards that apply to restoring hard floor surfaces, including OHS legislation; - routes of entry and potential symptoms of exposure to chemicals; - safe work practices for using chemicals and equipment, including PPE, and; - types of hard floor surfaces.

CPPCLO3003 Clean using safe work practices

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to undertake cleaning tasks safely and according to company health and safety policies and procedures and legislative requirements. The unit covers assessing the work environment for hazards and ensuring risks are controlled; checking and maintaining equipment and materials, including storing and handling hazardous chemicals; safely handling equipment; and following required processes in the event of a health and safety incident in the workplace. The unit supports cleaners who work alone or in teams. It applies in a range of commercial and residential work sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit. The person must also safely perform three different cleaning tasks in a commercial or residential cleaning site, in which each task must involve: - transporting equipment and cleaning products to the area to be cleaned; - completing cleaning tasks according to client and company requirements using cleaning equipment and products selected and prepared according to job requirements, and; -

returning equipment and materials to cleaning storage area. In doing the above work, the person must: - identify site hazards and control risks before commencing the task; - use safe and efficient cleaning methods, and; - correctly and safely handle waste, including contaminated materials. Students will also be expected to demonstrate the following knowledge: - company policies and procedures for applying work health and safety (WHS) practices while cleaning; - safe handling techniques for working with hazardous chemicals; - key requirements of legislation, regulations and codes of practice relating to cleaning safely at heights, and; - processes for safely handling and disposing of waste.

CPPCLO3005 Confirm and apply privacy and security requirements for cleaning work

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to confirm and apply personal and property security procedures when cleaning a work site, and to maintain client privacy. It also involves obtaining and securing property access information and equipment, and confirming and applying procedures when security risks are evident. It covers establishing which areas of the work site are not to be accessed, and maintaining privacy of information obtained in the course of providing cleaning services. The unit supports the work of cleaners commencing at a new work site. It applies in a range of commercial and residential work sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit, and; - confirm and apply privacy and security procedures for two different work sites to be applied when cleaning. In doing the above work, the person must: - implement agreed procedures for accessing and securing the work site; - assess work site for signs of security risks or breaches, and; - implement agreed procedures for responding to and reporting security risks and breaches. Students will also be expected to demonstrate the following knowledge: - processes for obtaining and confirming client details; - procedures for using access passes and keys for different client sites; - company policy or code of conduct in relation to privacy and confidentiality of client information, and; - workplace procedures.

CPPCLO3006 Clean carpets

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to clean carpets using selected processes, chemicals and equipment. Cleaning carpets is undertaken in addition to daily maintenance of carpets to provide a thorough and deep clean of the carpet fibres. The selection of equipment, chemicals and methods suited to the task is essential for performing the work safely and efficiently. The unit supports cleaners who work alone or in teams. It applies in a range of commercial and residential work sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit, and; - must also clean two different carpet types where: one carpet type must be a natural fibre selected from organic (plant fibres), such as cotton and sisal, or wool; one carpet type must be a synthetic fibre selected from acrylic, nylon or polyester. In cleaning the above carpets, the person must: - identify site hazards and control risks before commencing the task; - correctly identify the type and characteristics of the carpet and carpet fibres; - identify cleaning techniques and chemicals required for the task; - use the following cleaning methods: bonnet cleaning; hot water extraction; - use cleaning equipment safely; - check carpet after cleaning process and assess whether further cleaning is required, and; - correctly and safely handle waste. Students will also be expected to demonstrate the following knowledge: - carpet characteristics; - range and application of cleaning equipment and chemicals; - correct application and techniques for different cleaning methods; - environmental requirements relating to removing stains from carpets; - key requirements of legislation, regulations, codes of practice and industry advisory standards relating to carpet cleaning; - processes for safely handling and disposing of waste; - range and application of cleaning solutions used to clean carpets and their reactions with different carpet types, and; - safe handling techniques for working with hazardous chemicals.

CPPCLO3007 Remove carpet stains

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to identify the nature of carpet stains and remove the stains using selected stain removal techniques, chemicals and equipment. The selection of required equipment, chemicals and methods is essential for performing the task safely and efficiently. The unit supports carpet cleaners who work alone or in teams. It applies in a range of commercial and residential work sites. Removing stains can occur as a separate task or in conjunction with other cleaning tasks, such as daily vacuuming, extraction and general carpet cleaning.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit; - must also remove three different stains from each of the following types of carpet: one natural fibre carpet; one synthetic fibre carpet, and; - stain types to be removed during above work, must include three of the following: beverage, candle wax, chewing gum, food, grease, heavy dirt build-up, hospital waste, industrial and chemical waste, lipstick, nail polish, oil, plant stains, shoe polish and tar. In doing the above work, the person must: - identify site hazards and control risks before

commencing the task; - identify type and characteristics of each carpet and its carpet fibres; - identify type of stain and cleaning techniques, cleaning equipment and chemicals required for the task, and; - correctly and safely handle waste. Students will also be expected to demonstrate the following knowledge: - carpet characteristics; - characteristics of different carpet stains and process for cleaning them according to type, duration of stain, and whether previous treatments and chemicals have been applied; - range and application of cleaning equipment and chemicals required to remove carpet stains; - environmental requirements relating to removing stains from carpets; - regulations, codes of practice and industry advisory standards relating to carpet cleaning, including AS/NZS 3733 textile floor coverings - cleaning maintenance of residential and commercial carpeting; - processes for safely handling and disposing of waste, and; - safe handling techniques for working with hazardous chemicals.

CPPCLO3009 Clean glass surfaces

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to clean glass surfaces, including mirrors, doors and windows, from the ground using extension poles to aid access if required. The unit covers assessing the extent of the cleaning task and selecting required equipment, chemicals and methods. All work is conducted according to job, health and safety, and company requirements. The unit supports cleaners who work alone or in teams. It applies to ordinary or frosted glass or mirrors as well as to textured glass surfaces in a range of commercial and residential work sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit, and; - must also clean three different glass surfaces. In doing the above work, the person must: - identify and plan for work site hazards; - identify types and characteristics of glass surfaces and select cleaning equipment and chemicals required for the task; - use safe and efficient cleaning techniques, and; - correctly and safely handle waste, including contaminated materials. Students will also be expected to demonstrate the following knowledge: - types of glass surfaces, their characteristics and required cleaning methods; - types and characteristics of organic and inorganic soils and required cleaning chemicals, equipment and methods of treatment; - application methods for cleaning glass using microfibre products; - environmental requirements relating to cleaning glass surfaces; - methods for cleaning and maintaining cloths; - processes for safely handling and disposing of waste; - range and use of cleaning chemicals and equipment for cleaning glass surfaces, and; - safe handling techniques for working with hazardous chemicals.

CPPCLO3013 Clean window coverings

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to assess the condition of blinds, curtains, screens and associated fixtures, and select required equipment, chemicals and methods to remove dirt and grime from a range of

window coverings. The unit supports cleaners who work alone or in teams. It applies to a range of window coverings, including blinds, curtains and screens in commercial and residential work sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit, and; - must also clean one fixed awning. In doing the above work, the person must select and prepare required cleaning chemicals to clean each window covering. By the end of the whole task, the person must have removed three of the following soil types: adhered soil; cobwebs; dust; mould and mildew; nicotine stains; oil; paint; road grime. In doing the above work, the person must demonstrate six of the following cleaning techniques: air blowing; dusting; low-water cleaning methods, such as using microfibre cleaning products pressure washing; rinsing; scrubbing; spot cleaning; water extraction; wiping. During the above work, the person must also: - identify type and characteristics of window coverings and fixtures; - select and prepare cleaning equipment, including personal protective equipment (PPE); - select and apply safe and efficient cleaning methods, and; - remove, clean and refit window coverings according to specified requirements. Students will also be expected to demonstrate the following knowledge: - environmental requirements relating to the use of chemicals and cleaning equipment when cleaning window coverings; - types of different window covering surfaces and their suitability for either wet or dry cleaning; - range of techniques and methods to clean window coverings; - cleaning chemicals and equipment suitable for cleaning window coverings, and their application for different window covering surfaces; - cleaning techniques for safely removing different soil types from different window coverings; - key requirements of legislation, regulations, codes of practice and industry advisory standards relating to cleaning window coverings; - processes for safely handling and disposing of waste; - safe handling techniques for working with hazardous chemicals, and; - types of window coverings and fixtures, their characteristics and methods of operation.

CPPCLO3017 Clean wet areas

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to clean wet areas, including bathrooms, toilets, change rooms and laundries and their associated fixtures and fittings, so that they are free from soil, odour and hazards. The unit covers assessing the extent of cleaning required; selecting required equipment, chemicals and methods; and performing the cleaning task safely and efficiently. The unit supports cleaners who work alone or in teams. It applies in a range of commercial and residential work sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit; - must also clean three of the following wet areas, and their fixtures and fittings: bathroom, change rooms, laundry, shower facilities, toilet, and; - must select and use three of the following cleaning techniques: buffing, cobwebbing, dusting, hosing, mopping, polishing, pre-spraying, scrubbing, spot cleaning, sweeping, wet wiping. During the above work, the person must also: - identify site hazards and control risks before commencing task; - identify fittings, surfaces and soil types found in wet areas; - select and prepare cleaning equipment and chemicals required for the task; - use safe and efficient cleaning methods; - correctly and safely handle waste, including contaminated materials, and; - replenish three of the following consumables in each wet area: air fresheners, bin liners, cloth towels and tea towels, deodorant blocks, hand towels, liquid and bar soap, personal toiletries, toilet paper. Students will also be expected to demonstrate the following knowledge: - range, application and limitation of cleaning chemicals and equipment available for wet areas; - cleaning chemicals and methods suitable for wet area surfaces; - environmental requirements relating to cleaning wet areas; - processes for safely handling and disposing of waste, and; - routes of entry and potential symptoms of exposure to chemicals.

CPPCLO3019 Remove waste and recyclable materials

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to identify waste and recyclable materials to be removed, assess hazards associated with their removal, remove waste collected or created through the cleaning process, and safely transfer it to a dedicated waste disposal point for collection using required equipment and methods. Waste collection is conducted as part of a regular cleaning routine, usually on a daily basis and can include a range of materials, such as chemicals, contaminated materials and general waste. The unit also covers identifying recyclable materials and transferring them to required collection points. Recyclable materials are those that may be reused or made into another product. The unit supports cleaners who work alone or in teams. It applies in a range of commercial and residential work sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit. The person must also use safe and efficient methods to remove waste at three different cleaning sites. Across all three sites they must remove both of the following types of waste: general; contaminated and hazardous biological waste. In doing the above work, the person must: - identify the different waste types and correct methods for dealing with each, including health and safety requirements; - identify site hazards and control risks before handling waste; - select and prepare cleaning equipment and chemicals required for the task; - identify items for recycling at each site and arrange for their transfer, and; - clean the rubbish bins and surrounds. Students will also be expected to demonstrate the following knowledge: -

environmental requirements relating to removing waste and recyclable materials; - key requirements of legislation, regulations, codes of practice and industry advisory standards relating to removing waste and recyclable materials; - processes for safely handling and treating waste; - safe handling techniques for working with hazardous chemicals, and; - waste transfer procedures.

CPPCLO3020 Pressure wash and clean surfaces

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to set up and use pressure-washing equipment to clean surfaces by producing a variable stream of water or cleaning chemical. The unit covers assessing the extent of the cleaning task, and selecting the equipment, chemicals and cleaning methods required for the task. The unit supports cleaners who work alone or in teams. It applies in a range of commercial and residential work sites.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit, and; - must also pressure wash three of the following surface types: brick, including rendered brick surfaces; concrete, including polished concrete; metal surfaces, including industrial kitchen equipment and industrial machinery; painted; polyresin. In doing the above work, the person must: - remove three of the following different soil types: graffiti; grease and oil; mould and mildew; pollution marks; - identify site hazards and control risks before commencing the task; - identify surface and soil types; - select and prepare required cleaning equipment, including personal protective equipment (PPE) and cleaning chemicals, and; - use safe and efficient cleaning methods using pressure washing. Students will also be expected to demonstrate the following knowledge: - suitability of different surfaces for pressure washing; - key requirements of legislation, regulations, codes of practice and industry advisory standards relating to cleaning using pressure washing, including industry advisory standards and codes, such as dangerous goods codes; - processes for safely handling and disposing of waste; - safe handling techniques for working with hazardous chemicals; - range and functionality of equipment used in pressure washing, and; - procedures for selecting and applying cleaning chemicals required for different surfaces.

CPPCLO3035 Maintain cleaning storage areas

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency specifies the outcomes required to maintain cleaning consumable storage areas to ensure they are accessible to authorised personnel only, that their contents are safely stored, and that equipment is maintained in serviceable condition. It requires the ability to maintain and operate a safe and efficient cleaning storage area following established procedures for storing and using chemicals according to legislative and health and safety requirements. The unit includes the movement and control of equipment, chemicals and consumables used in the provision of cleaning services. The unit supports cleaners who work alone or in teams. It applies to storage areas in a range of commercial and residential

work sites, including cleaners' rooms at a client work site, chemical cupboards, equipment storage bays, and in-built vehicular storage arrangements to keep consumables and equipment secure during transportation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - must satisfy the requirements of the elements, performance criteria, foundation skills and range of conditions of this unit, and; - must also maintain one of the following cleaning storage areas: cleaners' room located at client work site; in-vehicular cleaning storage facility used to transport cleaning equipment from site to site. In doing the above work, the person must: - maintain cleaning storage area and stock levels, ensuring correct storage of equipment, chemicals and consumables required for work site and client requirements; - maintain the security and accessibility of storage area; - maintain accurate labelling of chemicals; - maintain legible stock control records and documentation, and; - access each of the following documentation: accident and incident reporting documentation; job sheets; health and safety control procedures, forms and documentation; safety data sheets (SDS). In doing the above work, the person must also implement correct emergency response procedures in the event of a chemical spillage on site or inside the cleaning storage area, including: - undertaking correct clean-up procedures, including erecting required signs and barricades, and; - accurately and legibly completing required incident reporting documentation. Students will also be expected to demonstrate the following knowledge: - application and operation of on-site communication tools; - documentation requirements in the event of an incident or accident; - environmental requirements relating to maintaining cleaning storage areas; - key requirements of legislation, regulations, codes of practice and industry advisory standards relating to maintaining cleaning storage areas; - safe handling techniques for working with hazardous chemicals; - procedures for safe treatment and handling of the following waste; - processes for inventory and stock control and ordering replenishment stock, and; - manufacturer specifications for equipment and chemicals being used.

CPPCMN2002 Participate in workplace safety arrangements

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency specifies outcomes required to participate in predetermined workplace safety arrangements in a range of workplace contexts. The unit applies to personnel who participate in workplace safety arrangements in a cleaning work context. It includes identifying workplace hazards, basic knowledge, and application of workplace emergency procedures. It applies to individuals who perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating effectively with supervisors; - understanding workplace safety procedures; - applying basic safety principles in the workplace, and; - assessing and controlling workplace risks. Students will also be expected to demonstrate the following knowledge: - cleaning workplace safety policies and procedures, WHS standards, supervisory instructions relating to safety measures and PPE; - workplace requirements for undertaking all aspects of workplace safety arrangements tasks; - workplace procedures, and; - communicating and clarifying work requirements with supervisor, team members or client.

CPPCMN2004 Provide basic client services

Locations:Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency specifies the outcomes required to provide effective client services. The unit applies to cleaning personnel responsible for establishing effective client relationships. It includes identifying and meeting client needs by providing information/advice on products and services. Individuals undertaking this unit would perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - two different clients with two different service requirements; - effectively communicating with clients; - understanding of basic communications methods, and; - addressing client's needs. Students will also be expected to demonstrate the following knowledge: - workplace requirements for undertaking all aspects of providing effective customer service, and; - workplace procedures.

CPPCMN3006 Provide effective client service

Locations:Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency specifies the outcomes required to establish client relationships, and identify and meet client needs through the delivery of services or by providing information and advice on products and services. The unit supports those who work alone or in teams. It applies in a range of work sites, and to new or repeat client encounters, either on company or client premises.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - unit must satisfy the requirements of the elements, performance criteria and foundation skills of this unit. The person must also provide a service to two different clients within the agreed service level agreement, in which the work must include: clarifying client needs and expectations and communicating the features and benefits of one product or service

to each client verbally or in writing; - confirming and coordinating human resource requirements for the task; - responding verbally or in writing to one question from each client; - confirming the services to be provided to the client verbally or in writing, including service costs and timelines for service provision; - delivering agreed service to client within agreed timelines, and; - responding accurately and positively to one client complaint according to company's complaints handling procedures. Students will also be expected to demonstrate the following knowledge: - communication techniques for establishing and building client rapport; - company expectations for maintaining personal presentation standards; - company standards relating to customer service standards and providing effective client services, including complaints handling procedures; - key requirements of consumer protection legislation, regulations and codes of practice relating to providing client service; - processes for accessing company products and services; - key features of effective negotiation processes and techniques, and; - range of company products and services available, including their features and benefits, and ways to communicate them to different clients.

CUAACD301 Produce drawings to communicate ideas

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to produce drawings that represent and communicate ideas. It does not relate to drawing as an art form.

It applies to individuals who use drawings, either electronic or hand drawn, for personal use or in response to a project or brief. Drawings may include design concepts for objects, processes or spaces, movement sequences for performances or screen productions, exhibitions, tenders, proposals or publications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and analyse drawing requirements; - explore techniques, materials and equipment safely, and; - produce a series of drawings that: show a command of selected techniques, and; successfully communicate the required ideas. Students will also be expected to demonstrate the following knowledge: - describe physical properties and capabilities of the range of materials, tools and equipment used in drawing; - identify sources of information about different approaches to drawing; - identify work health and safety issues associated with tools and materials used for drawing, and; - explain intellectual property issues and other legislation relevant to drawing.

CUAACD302 Produce computer-aided drawings

Locations: Industry, Sunshine, Learning Links Geelong.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use a range of computer-aided design and drafting (CADD) program functions to produce drawings. The focus of this unit is on the technical skills required to operate CADD, not on design skills. It applies to individuals who use computer-aided drawing skills in various contexts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select computer-aided design and drafting (CADD) hardware and software to suit project requirements; - follow operating instructions and organisational procedures; - use features and functions of a CADD program to produce drawings that meet project objectives, and; - use feedback from others to refine and produce final drawings within specified timelines. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline the relevant hardware, software, tools and equipment used for CADD; - describe the ways in which CADD is used within the specific workplace situation, and; - describe typical features and functions of CADD programs, including drawing tools, view displays, edit functions, working with layers, plotting and printing.

CUAACD401 Integrate colour theory and design processes

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to investigate and combine colour theory and design processes into two-dimensional or three-dimensional work. It applies to individuals who use design processes in visual communication situations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research colour theory and the design process and analyse findings; - use practical exploration and experimentation to enhance idea development; - apply colour theory and design processes to communicate ideas in projects, and; - use strategies to evaluate work outcomes. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain how differences in individual perception and choice within the design process influences final outcomes; - discuss the effects of rigid application of colour theory to design processes and project outcomes; - explain ways in which colour theory and design processes can be explored and combined to meet the needs of a project; - list a range of materials, tools and equipment required for the production of samples that integrate colour theory and design processes; - explain how other artists and designers have applied colour theory and design processes to their work, and; - summarise intellectual property issues and legislation and their impact on aspects of design.

CUAACD501 Refine drawing and other visual representation tools

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use drawing and other visual representation tools to develop, refine and communicate ideas for creative work. The unit focus is on manual drawing development and refinement, and visual representation as cognitive tools in a professional practice, rather than a

particular level of drawing technique. It applies to individuals who are professional practitioners working in any area related to visual communication using drawing and other visual representation tools to support their practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse how the drawing process and visual representation techniques can support professional activities in own art and design practice; - create visuals and compositions that incorporate experimentation with materials, techniques and ideas, and; - critically evaluate final works. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe different approaches to drawing and visualising; - describe drawing techniques and visual communication devices and their roles in generating ideas or problem-solving; - describe the physical properties and capabilities of a wide range of materials and tools used in drawing and visual representation; - explain why the presentation context is important in the selection of techniques, tools and materials for drawing or visual representation, and; - explain the work health and safety considerations for drawing.

CUAACD505 Work with the human form in creative practice

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to explore and represent the human form in professional art or design practice. It applies to individuals who undertake two-dimensional or three-dimensional creative work that may or may not incorporate a direct representation of the human form. At this level, the practitioner works independently.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research the representation of the human form in historical and contemporary contexts; - develop, refine and implement ideas about the use of the human form for application to own work; - produce a complete body of creative work that shows ability to work effectively with the human form, and; - use feedback and reflection to assess success of completed work and identify further creative opportunities. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - list and describe sources of information and ideas relevant to own practice; - outline commonly used research methodologies for creative practitioners; - describe in detail techniques used to represent or reflect the human form relevant to own area of practice; - explain the aspects of human physiology and anatomy that are relevant to own work, and; -

outline the requirements of intellectual property and other legislation associated with arts practice.

CUAACD506 Refine 2-D design ideas and processes

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to extend understanding and use of two-dimensional (2-D) design ideas and processes for the production of work at a professional level.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - originate and refine concepts for two-dimensional (2-D) designs that address a brief; - plan, develop and document effective 2-D design solutions and design processes that meet project requirements, and; - use feedback and own initiative to further develop proficiency and practice in 2-D design work. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain the techniques for creating 2-D designs in the particular area of work; - describe the basic principles of 2-D design; - describe physical properties and capabilities of the range of equipment, tools and materials used for 2-D design; - explain common presentation methods for finished 2-D designs; - outline work space requirements for the production of 2-D design, including set-up of work space for particular types of 2-D work; - describe typical issues and challenges that arise in the context of making 2-D designs, and; - outline the ethical, organisational and legislative requirements associated with 2-D designs.

CUAACD507 Refine 3-D design ideas and processes

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to extend understanding and use of three-dimensional (3-D) design ideas and processes for the production of work at a professional level. It applies to individuals who work with a wide and potentially complex range of ideas about 3-D design.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - originate and refine concept for three-dimensional (3-D) designs that meet the needs of the brief; - plan, develop and document effective 3-D design solutions and design processes that meet project requirements, and; - use feedback and own initiative to extend proficiency and practice in 3-D design work. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain the techniques for creating 3-D designs in the particular area of work; - describe the basic principles of 3-D design; -

describe physical properties and capabilities of the range of equipment, tools and materials used for 3-D design; - explain common presentation methods for finished 3-D designs; - outline work space requirements for the production of 3-D design, including set-up of work space for particular types of 3-D work; - describe typical issues and challenges that arise in the context of making 3-D designs, and; - outline the ethical, organisational and legislative requirements associated with 3-D designs.

CUAACD512 Work with photomedia in creative practice

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to work with any type of photomedia professional creative practice. It applies to individuals who work in many media and disciplines and use photomedia for the creative presentation or documentation of work, or to create parts or the whole of a finished work. It may include still images, film, video, music or interactive content. This unit does not address the specialised skills needed by photo imaging professionals.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use research and analysis of traditional and contemporary photomedia practice to inform own work; - investigate and test performance of photomedia tools to refine ideas; - produce a coherent body of photomedia work using well-developed conceptual and technical skills; - apply safe work practices for the technologies being used, and; - assess the success of finished work to meet creative and technical project objectives. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - discuss the range of traditional, current and emerging options for the use of photomedia in creative practice; - describe traditional and contemporary issues that inform the use of photomedia in creative practice; - identify intellectual property issues and legislation that affect the use of photomedia, and; - detail the workplace health and safety requirements for working with photomedia.

CUACMP301 Implement copyright arrangements

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to implement individual or collaborative copyright arrangements including sourcing copyright information, gaining clearance to use other people's material, protecting material from unauthorised use and applying copyright notices for creative works.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - source information and seek assistance to organise copyright permission and clearance for creative works; -

correctly apply copyright notices on creative works; - recognise infringements of copyright, and; - correctly document and store copyright clearances claims and notices. Students will also be expected to demonstrate the following knowledge: - explain the concepts of exclusive rights, fair use, moral rights and performer's rights; - describe procedures to determine copyright ownership; - identify the range of sources of copyright information; - identify Australian organisations responsible for holding copyright collections, and; - identify laws and regulations that govern copyright in Australia.

CUACMP311 Implement copyright arrangements

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to implement individual or collaborative copyright arrangements. This unit applies to individuals required to source copyright information, obtain permission to use other people's material, protect material from unauthorised use and applying copyright notices for creative works. Individuals that undertake this unit typically work under supervision with some responsibility regarding the planning and completion of work tasks.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - source information and seek assistance to organise copyright permission and clearance for creative works; - apply copyright notices on creative works in accordance with legal obligations and workplace policies and procedures; - communicate with copyright collecting societies; - recognise infringements of copyright, and; - document and store copyright clearances claims and notices in accordance with legal obligations and workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - key concepts of exclusive rights, fair use, moral rights and performer's rights; - procedures to determine copyright ownership; - sources of copyright information; - digital content copyright and common sources of infringement; - Australian organisations responsible for holding copyright collections and their roles and responsibilities, and; - key features of laws and regulations that govern copyright in Australia.

CUADES401 Research and apply techniques for the design of wearable objects

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to test and apply the design process to the production of prototypes of wearable objects. It applies to individuals who generate design ideas and solutions for wearable objects, including fashion accessories and clothing, costumes, footwear, millinery and jewellery.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret requirements in a design brief in consultation with relevant people; - identify and prepare resources required to respond to the design brief; - test and use a range of approaches and techniques for the design of wearable objects, and document the results of testing, and; - create a prototype based on selected design approach. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline the role of testing and experimentation in the design process; - outline factors that impact on the selection and use of resources; - identify materials, tools and equipment, and their capabilities and application, to designing and making wearable objects; - describe the techniques used in the manufacture of wearable objects, and; - outline legislation and ethical considerations relevant to the design and making of wearable objects.

CUADIG304 Create visual design components

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to create visual designs for interactive media components that can be integrated into a range of media products.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - explore and experiment with design techniques and visual design and communication principles to produce ideas and concepts for visual design components; - use design techniques to create visual design components that respond effectively to a project brief; - present and discuss ideas, concepts and designs with relevant personnel, and; - save and archive files using standard industry or enterprise naming conventions. Students will also be expected to demonstrate the following knowledge: - describe differences between traditional and digital methods in creating visual images, and advantages and disadvantages of each; - describe visual design, typographic and communication principles used to construct visual design components; - explain safe work practices in relation to working on computers for periods of time, and; - explain the procedure for checking copyright clearance.

CUADIG401 Author interactive media

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to author a complete interactive media product, for example, an entire website. It applies to individuals who apply sound knowledge of mark-up and scripting languages to develop templates, themes styles sheets, forms and form objects for programmers and the technical support team. They may also use a variety of authoring software used to produce complex interactions such as digital simulations, games and puzzles. They work primarily on client-side technologies.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - discuss and determine requirements for an interactive media product; - use authoring software to create logical file directory structures and build a prototype of an interactive media product; - evaluate and incorporate feedback from user testing to the prototype; - use authoring software to develop a fully functional interactive media product that: - conforms to design and creative requirements specifications, and; - meets accessibility and interoperability standards. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain technical requirements for integrating media assets (video, audio, animation, images) for use on a range of delivery platforms; - describe interoperability and accessibility standards used in interactive media product design; - explain the purpose and process of script validation, and; - outline basic health and safety requirements when working on computers and keyboards.

CUADIG403 Create user interfaces

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to create a user interface for an interactive media product.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - create technically feasible and creative interface design ideas that consider: purpose of the interactive media product; target users; text content and media assets requirements; - use suitable software to create a user interface, and; - review ideas and user interface with relevant personnel. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe file output formats appropriate to a range of delivery platforms; - describe visual design and communication principles as they apply to interface designs; - explain user-centred design principles and their importance to creation of interactive media interfaces; - identify accessibility standards that apply to interface designs; - explain how typography influences user interface visual impact; - explain the purpose of copyright and outline copyright clearance procedures, and; - outline health and safety requirements when working for extended periods of time on computers and keyboards.

CUADIG404 Apply scripting language in authoring

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to write and apply scripting language in authoring interactive media. It applies to individuals who apply skills in writing and customising their own code for work in client-side technologies. They integrate and develop basic scripting routines to enhance interaction levels or

remedy functionality errors in interactive media products.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use design specifications and discussion with relevant personnel, to identify scripting requirements; - create pseudo-code and flowcharts to structure functional logic prior to coding; - write scripting language code to meet functional requirements for interactive media products; - produce clean, logical and well-documented code, and; - test code and de-bug as required to ensure interactive functions work without fault. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline typical challenges when writing scripts for interactive products and how to handle these; - describe a range of authoring software, scripting languages and scripted elements; - explain different structures used in scripting languages for authoring multimedia products, including Document Object Model (DOM) and Object Oriented Programming (OOP), and; - identify basic health and safety requirements when working on computers and keyboards.

CUADIG406 Produce innovative video art

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to experiment with video art techniques and ideas to develop an individual style or voice. It applies to individuals who produce video art for electronic media or physical/online display in art publications and galleries.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop ideas and techniques for video art through a process of research and experimentation; - produce multiple finished video art pieces or a single major work that demonstrates a command of techniques; - articulate ideas and techniques in own video art work processes, and; - review own skills, performance and creative work and identify future areas for improvement. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain the role of experimentation in developing and refining ideas for video art; - describe ways to adapt, extend and combine the capabilities of a wide range of video art technologies and techniques; - identify characteristics of different materials under different treatments and describe different video art effects that can be achieved; - outline how the works of other practitioners may be used to inform individual practice; - describe sources of supply for video art resources; - outline intellectual property issues to be considered by video art practitioners, and; -

describe practices and procedures for working safely and sustainably with materials, tools and equipment for producing video art.

CUADIG508 Refine digital art techniques

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to refine digital media techniques and to develop own digital art style in a body of creative work. This occurs through a process of research, refinement and evaluation, and encompasses animation, video and sound production. It applies to individuals whose professional practice includes the creation of digital media works. Work could be completely digital or an integration of digital and traditional media.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and evaluate digital media techniques that can be applied to own style; - evolve and refine use of digital media techniques through experimentation and document how experiments have informed own work; - produce a coherent body of professional digital artwork that demonstrates developing expertise and individual style, and; - evaluate own performance and techniques to identify opportunities for own creative practice. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe the relationship between digital media technique, particular effects and ideas in the work of relevant artists and in the context of own practice; - identify a range of information sources that support research in digital media techniques; - outline the intellectual property considerations relevant to producing digital media works, and; - explain key safety requirements for digital media work.

CUADIG509 Investigate technologies for the creation of digital art

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to further application of technologies in own creative practice. It applies to individuals who produce creative digital media work or integrate digital and traditional media. Their technology exploration is conducted independently with mentoring and guidance as required.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research, experiment with and integrate technologies to create individual styles of digital art, and; - use and adapt technologies in ways that support coherence of own creative works. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: -

explain the ways in which a range of digital technologies and processes are used, adapted, combined and challenged by professional artists in contemporary practice; - list cost and supply parameters issues for different technologies and types of equipment to support professional practice; - explain storage requirements and options for different materials used in digital work; - describe ways to remain informed of changes in digital art technologies, and; - explain key safety requirements for digital technologies in an art context.

CUADRA401 Experiment with techniques to produce drawings

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to proactively experiment and innovate with various drawing techniques and ideas to develop professional practice and an individual style. This unit relates to drawing as an art form and differs from units that focus on drawing as a visual representation tool. It applies to individuals who have well developed skills in design and technique and who often produce work at a pre-professional level for sale in outlets such as markets and fairs. They work independently with limited supervision and guidance as required.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use a process of thorough research and experimentation to confirm ideas for own work; - identify and acquire resources required to complete chosen work; - adapt and use a range of drawing techniques to create a single major work or multiple drawings that: - shows technical proficiency in chosen techniques; - reflects understanding of elements and principles of design; - demonstrates innovation and the emergence of an individual style, and; - review and document the research and development process. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe intellectual property requirements relevant to producing drawing works. - summarise methods used to research creative and technical approaches to drawing; - explain how the works of other practitioners may be used to inform individual practice; - describe the role of experimentation in developing and refining ideas for drawings and how it relates to the development of an individual style; - explain ways to adapt, extend and combine the capabilities of a wide range of drawing techniques; - describe, for the elements and principles of design, the detailed characteristics, key interrelationships, use in drawings and how they may be challenged; - summarise, for a wide range of tools and equipment used to produce drawings, key physical features, uses and maintenance requirements; - list and describe the physical properties and capabilities of a wide range of materials used to produce drawing works; - list suppliers of resources for professional drawing practice with particular emphasis on raw, part-processed and processed drawing materials, and; - describe practices and procedures for working safely and sustainably with materials, tools and equipment for producing drawing work.

CUAEPV403 Install and dismantle exhibition elements

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to install and dismantle the physical elements of permanent and temporary exhibitions. It involves working in line with established exhibition plans and procedures. It applies to individuals who work under guidance and supervision as exhibition venue staff or independent exhibition contractors in both business and community environments. **Required Reading:** The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify exhibition requirements and confirm procedures and processes for installation and dismantling with relevant people; - work with others to prepare exhibition by agreed timelines, including: - confirming that the site has been prepared; - installing and dismantling exhibition elements according to requirements; - packing, unpacking, handling and moving physical elements of exhibitions with care; - using safe manual handling techniques; - identifying and resolving or referring problems to others, and; - follow procedures for recordkeeping, cleaning and returning elements. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify different exhibition components relevant to the work or industry context; - explain typical processes for installing and dismantling an exhibition; - outline roles and responsibilities of personnel involved in staging exhibitions; - explain packing materials and techniques used for a range of exhibition elements; - identify tools commonly used for installing and dismantling exhibitions; - explain key features of organisational procedures, guidelines and requirements relating to installing and dismantling exhibition elements: - cleaning; - purchasing required supplies; - record-keeping; - security issues when work is underway; - storage of packaging materials; - work health and safety requirements, and; - waste disposal.

CUAFOH501 Manage front of house services

Locations: Footscray Park, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to manage front of house services at venues during performances or events.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - manage the following front of house services on at least two occasions: all aspects of preparing a venue; briefing and supervising staff; closing a venue; - resolve problems that typically arise in the context of managing front of house services, and; - work cooperatively with others. Students will also be expected to demonstrate the following knowledge: - suggest ways to address issues and challenges that typically arise in the context of managing front of house services; - explain operational procedures for the following front of

house services: box office; cloakroom; food and beverage outlets; merchandising store or stand, and; - explain organisational policies and procedures.

CUAGR302 Use typography techniques

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use typography techniques in design work.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret briefs and source relevant reference information; - experiment with typography styles and techniques; - produce typography solutions that meet the creative and technical requirements of briefs and publishing processes; - perform quality checks and produce final product within timelines, and; - back up and store files according to requirements. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline the characteristics and uses of a range of typefaces; - describe work space requirements for typographic work, including selection and set-up of work space; - outline physical properties and capabilities of a range of materials, tools and equipment used for typographic work; - list typographic output devices and processes, and; describe procedures for working safely with typographic equipment and materials.

CUAGR501 Research visual communication history and theory

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use drawing and other visual representation tools to develop, refine and communicate ideas for creative work. The unit focus is on manual drawing development and refinement, and visual representation as cognitive tools in a professional practice, rather than a particular level of drawing technique.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse how the drawing process and visual representation techniques can support professional activities in own art and design practice; - create visuals and compositions that incorporate experimentation with materials, techniques and ideas, and; - critically evaluate final works. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe different approaches to drawing and visualising; - describe drawing techniques and visual communication devices and their roles in generating ideas or problem-solving; - describe the physical properties and capabilities of a wide

range of materials and tools used in drawing and visual representation; - explain why the presentation context is important in the selection of techniques, tools and materials for drawing or visual representation, and; - explain the work health and safety considerations for drawing.

CUAGR502 Produce graphic designs for 2-D and 3-D applications

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to plan and produce a body of two-dimensional (2-D) and three-dimensional (3-D) graphic design work in response to a variety of visual communication challenges. Design work will show a well-developed command of relevant software programs and the creative ability to generate ideas to meet the different needs of design briefs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret briefs to produce a body of two-dimensional (2-D) and three-dimensional (3-D) graphic design work that meets the creative and technical requirements; - organise and schedule creative and technical processes, production and presentation of design work within effective timeframes; - collaborate with others in design and evaluation processes; - write and present explanatory information to support graphic design visuals, and; - recognise and document professional development needs. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline typical information found in briefs for 2-D and 3-D graphic design work; - explain other information that could be sourced to support understanding of design briefs; - explain the elements and principles of design; - explain colour management techniques and theory; - discuss the application of typographic theory and practice to the development of effective design solutions; - explain pre-press processes and their function in the graphic design process; - summarise costing processes for graphic design work; - list typical visual representations used in graphic design work and outline the techniques for incorporating and manipulating them; - outline critical and creative thinking techniques and their application in graphic design practice; - identify typical problems that occur during the graphic design process, and how to avoid or resolve them; - describe current practice for documenting and presenting graphic design work; - outline basic project management techniques, particularly in relation to work planning, time management and resource management; - discuss intellectual property issues and legislation associated with graphic design practice, and; - outline key safety requirements for production processes in graphic design work.

CUAGR503 Produce typographic design solutions

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to produce professional typography for a wide range of communication needs. Typographic design solutions may include advertisements, headlines, logotypes, signage systems, posters, charts or mass text applications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assess historical and contemporary information about typography for relevance to graphic design practice; - interpret and evaluate design requirements in briefs and other information sources; - manipulate type with a high level of technical proficiency using graphics software programs; - develop and present typographic concepts; - integrate typography and other visual components into final design or layout; - develop multiple pieces of professional standard typography that convey the visual communication objectives defined in client briefs, and; - evaluate the effectiveness of typography solutions. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify characteristics and styles of graphic design briefs, particularly in relation to typography requirements; - identify sources of information on typography and the range of typography options available to the graphic designer; - explain the fundamentals of typography production and application; - describe the effective application of elements and principles of design to typography; - outline the interrelationships between text and visuals and the role of typography in the overall design solution; - identify current software programs available to graphic designers and explain their advanced features; - explain opportunities and constraints of digital and manual typography techniques, and; - identify different delivery platforms for graphic design work and the technical constraints and considerations these impose.

CUAGR504 Create and manipulate graphics

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to create and manipulate graphics using a combination of creative design skills and technical software proficiency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse graphics requirements in briefs and other information sources; - develop and present ideas for graphics; - create original graphics for at least two different graphic design projects; - use an extended range of tools and features of relevant software with a high level of technical proficiency; - integrate technical and creative processes to produce outcomes that meet design objectives, and; - evaluate the technical and aesthetic effectiveness of graphics work. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain the use of graphics within different types of communication, including corporate, editorial and promotional communication; - identify sources of information for developing ideas about different graphics options; - identify the current range of software programs available to graphic designers and discuss the tools and features; - identify the different types of graphic file formats and explain their use in different contexts; - explain technical

378

requirements for the manipulation and formatting of visual components and file types; - outline file management protocols and procedures for a range of print and web-based publications, and; - explain key safety requirements for the use of computer and keyboard.

CUAGR505 Design and manipulate complex layouts

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to design complex publication layouts by combining creative design skills with technical software proficiency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse layout requirements in briefs and other information sources; - develop and present layout concepts; - create original designs for the layout of at least two publications; - use an extended range of tools and features of relevant software with a high level of technical proficiency; - integrate technical and creative processes to produce outcomes that meet design objectives, and; - evaluate the effectiveness of layouts. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain common features and formats of different types of publications; - identify sources of information for developing ideas about different layout options; - explain interrelationships between different visual design components within a complex layout; - identify the current range of software programs available to graphic designers and explain the opportunities and constraints of their application to different technologies; - identify different graphic file formats and explain how and why these are used in different contexts; - explain technical requirements for the manipulation and formatting of visual components and file types; - discuss file management protocols and procedures for a range of publications, both print and web-based, and; - explain key safety requirements for the use of computer and keyboard.

CUAGR506 Develop graphic design practice to meet industry needs

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop an industry focus for graphic design practice and to adapt that practice to meet both current and emerging industry opportunities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use a range of professional graphic design business practices in own work; - adopt intellectual property and

safety standards required for graphic design practice; - research and evaluate the effect of current and emerging trends on graphic design practice; - apply research outcomes to develop creative and commercial opportunities in own professional practice, and; - identify and address skill development needs. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - discuss the changing role of graphic design and its convergence with other design disciplines; - outline current and emerging graphic design technologies and trends at a global level; - discuss graphic design industry networks and professional development opportunities; - identify current graphic design business practice including key relationships and ways work is sourced and costed; - summarise broad global design trends that apply to design disciplines; - explain implications of emerging graphic design technologies on the business; - identify sources of information about graphic design; - explain intellectual property issues associated with professional graphic design practice, and; - describe key safety considerations for professional graphic design practice.

CUAGR601 Engage in the business of graphic design

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to adopt a professional, commercial approach to graphic design practice. It applies to individuals who work autonomously across a diverse range of industry and community contexts. They could be employed by others in small or large organisations, operate as freelancers or set up their own studios.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and evaluate a broad range of professional and commercial information about graphic design; - develop approaches and strategies for own practice based on research and reflection that address: - legal, ethical and moral obligations; - business and design practice skill development; - how to promote services; - how to pursue new work opportunities, and; - communicate with other professionals to collaborate and share ideas. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain factors that influence the client perspective on graphic design practice; - describe legal rights and obligations of graphic designer, particularly in relation to intellectual property; - identify common professional development opportunities in graphic design; - summarise the range of local and global work opportunities open to graphic designers; - summarise current trends in graphic design and their effects on professional practice; - identify key behaviour, skills and practices required in professional graphic design practice; - describe typical ways business is done in graphic design practice including key commercial relationships, and; - explain ways that graphic design work is costed and priced in different practice contexts.

CUAIND301A Work effectively in the creative arts industry

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge

required to work effectively in the creative arts industry. These include relationship building, negotiation techniques, work prioritisation and personal development.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conduct negotiations to identify realistic solutions to contractual issues; - establish and maintain contractual relationships through regular contact; - share industry information with colleagues and peers; - identify opportunities to maintain and enhance work performance; - seek feedback and integrate constructive advice into own work performance; - literacy skills to read and understand industry information and terminology; - prioritise work tasks; - work within deadlines; - monitor own work and introduce strategies to improve performance; - identify and plan for factors affecting completion of work tasks within deadlines, and; - recognise and resolve workplace issues when implementing new technology. Students will also be expected to demonstrate the following knowledge: - different sectors of the creative arts industry and their interrelationships; - terminology associated with relevant industry sector; - issues of etiquette and ethics as they apply to key work areas within the industry; - key work areas within the industry, how they interrelate, and key roles and responsibilities; - sources of information on the industry and ways of maintaining current industry knowledge; - awards and conditions of employment and copyright issues; - legal issues that affect negotiations and contracts; - major industry production and marketing issues; - nature, role and functions of unions and employer associations, including rights and responsibilities of employers and employees; - OHS requirements relevant to particular work contexts, and; - current and emerging technologies used within the relevant industry sector.

CUAIND303 Work effectively in the music industry

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to work in the music industry.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply information about industry trends and emergent technologies to own work practice; - establish and maintain work and contractual relationships; - comply with the requirements of relevant legislation and regulations, and; - prioritise and complete work tasks, in collaboration with others. Students will also be expected to demonstrate the following knowledge: - describe the key copyright issues that apply to the music industry, including why material is protected, how copyright is enforced and the consequences of infringement; - describe music industry piracy issues and their impact on the music industry; - describe the key sources of information on the music industry; - describe ways to keep up-to-date with trends and emergent technologies

in the music industry; - describe the legal issues that affect agreements and contracts in the music industry, and; - describe the work health and safety requirements that arise when negotiating work and contractual issues in the music industry.

CUAIND311 Work effectively in the creative industries

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to work effectively in the creative arts industry. It applies to any field of the arts industry and is relevant to people in a wide range of occupations, for example, dancers, musicians, actors, cabaret performers, street performers, entertainment administrators, reviewers, film makers and public artists. These individuals are required to apply judgement and operate under broad supervision within an established framework of plans and procedures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply information about creative arts industry trends and emergent technologies to own work practice; - negotiate terms of a contract; - establish and maintain work and contractual relationships; - comply with relevant regulations and organisational requirements, and; - prioritise and complete work tasks, in collaboration with others in the creative arts industry. Students will also be expected to demonstrate the following knowledge: - key features of creative arts industry workplace practice; - key features of copyright; - key features of a contract; - relationships between different sectors of the creative arts industry sector; - terminology associated with the creative arts industry sector; - key roles and responsibilities in the creative arts own industry sector; - key sources of creative arts industry information; - current and emerging technologies used in the creative arts industry sector, and; - revenue streams through digital content.

CUAIND402 Provide freelance services

Locations: Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to work as an independent operator within the creative arts industry. It applies to individuals who use a high level of self-motivation and discipline, and an entrepreneurial attitude when pursuing work opportunities. They are engaged for specific projects and are responsible for promoting themselves to potential clients, negotiating their own contracts and managing their business affairs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in industry networks and develop a dynamic list of industry contacts; - prepare resume

and self-promotional materials and circulate using a variety of media outlets and platforms; - prepare a business plan that identifies a fee structure and work schedule to maintain a viable cash flow; - negotiate service contracts or agreements; - develop and maintain an effective financial and document records system; - develop and revise a strategic plan that identifies business opportunities and risks; - seek constructive feedback to identify professional development needs and opportunities, and; - review work objectives measured against quality of life, artistic and commercial goals. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify industry network opportunities for freelance services in screen and media industries; - identify professional expertise and services available to advise and support freelance services; - identify media outlets and platforms that may be relevant for promotional purposes, and; - identify sources of information about regulatory, taxation, insurance and other business requirements in relation to offering freelance services.

CUAIND502 Maintain and apply creative arts industry knowledge

Locations: Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to maintain creative arts industry knowledge, and monitor and manage own professional practice. It applies to individuals with advanced research and analysis skills working as practitioners, administrators or managers. They could be working in the public or private sector in a variety of contexts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research, analyse and apply current and reliable industry information; - document detailed industry information and its sources; - record networking activities used to maintain and enhance industry knowledge, and; - identify and participate in professional development activities. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain how the listed points apply to day-to-day work activities in the relevant creative arts industry sector: - industry structure and operation; - employment obligations and opportunities; - laws and regulations; - industry protocols; - trends and emerging technologies; - identify sources of information on the creative arts industry, and; - describe ways of maintaining current industry knowledge.

CUAMCP303 Develop simple musical pieces using electronic media

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to prepare for and use computer based technology to develop simple musical pieces. It applies to individuals who apply knowledge of musical styles, elements and structures to create musical pieces, using computer based technology as the primary development tool. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop a selection of simple musical works for specific purposes using electronic media, and deliver the completed pieces within an agreed timeline; - use appropriate musical techniques and conventions to match each work to its purpose; - discuss work with others and use feedback to improve musical piece; - use correct processes to protect copyright. Students will also be expected to demonstrate the following knowledge: - explain features of standard hardware and software tools/packages for developing and notating music; - outline the issues and challenges that typically arise in the context of developing music using electronic media and ways of overcoming them; - explain safe practices for listening and using a computer and keyboard for long periods of time.

CUAMCP501 Compose music using electronic media

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to compose a range of musical pieces using electronic music equipment and software. It applies to individuals who apply well developed skills in aural perception, harmony and counterpoint, and the use of technology based applications, to create music.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use electronic media as a creative tool to compose a selection of musical pieces in response to different briefs; - discuss compositional requirements and apply well developed aural skills to the compositional process, and; - work collaboratively with others involved in creating, playing and evaluating own compositions. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline information to include in a plan for a composition project; - explain compositional techniques and musical elements used in a range of musical pieces; - describe features of a range of hardware and software tools/packages for composing music and generating music scores; - explain file formats used for electronic compositions; - outline copyright issues associated with composing music, and; - describe issues and challenges that typically arise in the context of composing music using electronic media and how they might be overcome.

CUAMCP502 Compose music for screen

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to apply music composition skills and create music that synchronises with sequences in screen productions. It applies to individuals who write music for varied purposes, such as to

create mood, reinforce genre or historical period, and complement action sequences, to meet tight timelines. Composers work closely with producers, directors, sound recordists and post-production personnel.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret screen music briefs and film shot lists; - document plans for screen composition projects; - generate ideas and compose music for different screen productions; - discuss compositional requirements and work collaboratively with relevant personnel, and; - evaluate composition process and own role. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline the range of personnel with whom a composer is likely to consult when working on screen compositions; - explain key compositional considerations when creating music for screen productions; - explain production values for selected screen music briefs; - explain hardware and software tools/packages and other resources for composing music; - describe copyright, royalty and licensing issues relevant to writing music for screen productions, and; - describe issues and challenges that typically arise in the context of composing theme and incidental music for screen productions, and outline ways to resolve them.

CUAMCP503 Prepare compositions for publishing

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required by music copyists to prepare compositions for electronic or print publishing. It applies to individuals who work with publishing house editors on print based scores or take the hand written score of a composer and enter the notation into a computer program. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret music publishing briefs; - prepare different types of compositions for publishing, including one that has parts; - notate and proofread music for publication, and; - evaluate own work and identify ways to improve. Students will also be expected to demonstrate the following knowledge: - explain publishers' requirements in relation to notation of music; - explain musical protocols and customs for notating and editing music for publication; - describe features of a range software tools/packages and other resources that might be required for notating music for publication; - explain file formats that might be used for publishing music; - describe copyright issues and intellectual property rights in the context of preparing compositions for publishing, and; - outline issues and challenges that typically arise in the context of preparing compositions for publishing, and how they might be overcome.

CUAMCP601 Extend techniques for arranging music

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to refine skills in arranging music for any music genre. It applies to individuals who apply commitment and high level skills in aural imagination, melodic and harmonic development, instrumentation and orchestration to extend the range of music arranging briefs to which they can confidently respond.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - practice, plan and monitor progress in own professional skill development; - arrange, in response to different briefs, a selection of musical pieces that demonstrate advanced skills in arranging techniques, and; - evaluate own arrangements, and seek and use feedback from others to extend arranging skills. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain factors and techniques that contribute to excellence in music arranging; - explain music and other criteria that might be used to measure skill development, and; - analyse issues and challenges that typically arise in the context of extending techniques for arranging music, and explain how they may be overcome.

CUAMCP602 Extend techniques for composing music

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to refine music composition skills in any music genre. It applies to individuals who apply commitment and high level skills in aural imagination, melodic development, instrumentation and orchestration to extend the range of compositional briefs to which they can confidently respond.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - practice, plan and monitor progress in own professional skill development; - compose, in response to different briefs, a selection of musical pieces that demonstrate advanced skills in compositional techniques, and; - evaluate own compositions, and seek and use feedback from others to extend compositional skills. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain factors and techniques that contribute to excellence in music composition; - explain music and compositional elements and other criteria that might be used to measure skill development, and; - analyse issues and challenges that typically arise in the context

of extending techniques for composing music, and explain how they may be overcome.

CUAMLT302 Apply knowledge of style and genre to music industry practice

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to apply knowledge of music genres and styles to music industry work and learning.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop, maintain and apply current music knowledge to own learning and industry practice; - differentiate music genres and styles; - discuss music performances with others using appropriate terminology, and; - listen and evaluate the music of a range of artists. Students will also be expected to demonstrate the following knowledge: - explain the features of styles and genres, and their conventions; - explain how elements of musical organisation and technology are used in identified genres and styles; - describe the key qualities and features of the work of selected artists, and; - outline critical listening techniques.

CUAMLT403 Develop skills in analysis of functional harmony

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to understand and use functional harmony. It applies to individuals who incorporate into their own practice a working knowledge of functional harmony and related theoretical language of music. They may be working as musicians, songwriters or music producers.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - complete at least three harmonic analyses, and; - harmonise at least three musical extracts using functional harmony and appropriate conventions of music writing and terminology. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe how to deconstruct musical examples into theoretical components for analysis; - describe elements of functional harmony; - summarise methods used for analysis of functional harmony, and; - describe the contribution of harmony to selected musical compositions and performances.

CUAMLT501 Refine aural perception skills

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description: This unit describes the skills and knowledge required to improve aural perception skills. It applies to individuals including musicians, songwriters, composers, arrangers, conductors and musical directors. These individuals use well developed aural perception skills, and knowledge of music structures and components in a range of contexts, including transcribing live or recorded music and preparing charts and other forms of notated music.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan, monitor and evaluate progress in refining own aural perception skills; - hear and recognise complex music structures accurately; - transcribe music structures using aural memory and aural perception skills, and; - discuss and apply aural perception skills relevant to own music practice. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain musical protocols, customs and terminology for listening to music relevant to the music specialisation; - describe techniques to improve aural memory and skills for aural identification; - explain conventions for music writing connected with aural transcription, and; - explain issues and challenges that arise in the context of improving aural perception skills and how they might be addressed.

CUAMLT502 Apply concepts of music and society to professional practice

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes skills and knowledge required to analyse and apply concepts about the social significance of music to one's own professional practice. It applies to individuals who require in-depth understanding of the function of music in society, particularly in relation to the cultural and commercial value of music.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - source information about the role of music and music and audio technologies, including its history, social and cultural functions, commercial value and impact in other disciplines; - analyse and synthesise research findings, and; - develop and implement a strategy to incorporate understanding of the social, cultural and commercial values of music into own practice. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe the historical evolution of music and music and audio technologies; - explain the significance of music in different cultural contexts; - describe the social impact of music, and; - explain the commercial value of music in the contemporary context.

CUAMLT602 Analyse harmony

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to analyse and deconstruct harmony for its component parts. It applies to individuals who apply high level knowledge of music theory to analyse harmony. They may work as musicians, composers, arrangers, music producers or music writers.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - complete at least three harmonic analyses that incorporate advanced harmonic theories and principles; - discuss harmony in relation to performance and compositional outcomes; - apply harmonic analysis to own professional practice, and; - evaluate own analysis of harmony for future improvement. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain methodologies and theories used for analysis of harmony, and; - describe harmonic elements and explain ways in which they can be used to achieve different aesthetic, technical and/or expressive musical outcomes. .

CUAMPF301 Develop technical skills in performance

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to build on basic technical skills in a chosen area of music specialisation, and to perform simple repertoire

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - practise and play or sing a selected set of exercises and/or studies; - perform at least three pieces in selected area of specialisation that demonstrate mastery of technical requirements of performance repertoire, including control of agreed tempi and musical markings, intonation, rhythm and appropriate sound colour; - implement practical plans to improve own performance, and; - incorporate feedback from others and own evaluations into development of performance skills. Students will also be expected to demonstrate the following knowledge: - describe instrument or voice parts, physical characteristics, applications, range and capabilities; - outline how to care for voice or instrument, and describe work health and safety principles as they apply to performance practice, and; - describe technical skills relevant to voice or instrument.

CUAMPF302 Prepare for performances

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use practice time to prepare for performances. It applies to individuals who perform as musicians and/or vocalists and need to practise the pieces to be performed, applying strategies to overcome performance anxiety and take care of own health and safety.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use personal practice time to reach the musical and technical standard required for performances; - plan and develop performance pieces in consultation with appropriate people; - incorporate feedback from others and own observations on own performance in practice sessions and rehearsals, and; - implement personal health and safety considerations during practice sessions. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline repertoire relevant to the selected instrument; - describe strategies to minimise performance anxiety; - outline requirements when preparing for performances, and; - describe health and safety principles as they apply to correct posture and prevention of personal injury.

CUAMPF305 Develop improvisation skills

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop and perform simple musical improvisation in a chosen area.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and use a range of methods to practise and develop improvisation techniques; - perform simple solo improvisation in chosen area with members of an ensemble, and; - use feedback from others to improve own techniques. Students will also be expected to demonstrate the following knowledge: - explain features of chosen pieces and their musical forms and conventions for improvisation; - outline issues and challenges that typically arise in the context of developing improvisation performances and possible strategies to overcome them, and; - outline work health and safety (WHS) principles as they apply to using musical instruments and performing in a range of environments.

CUAMPF401 Rehearse music for group performances

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to rehearse for a group performance and perform to the required standard. It applies to musicians and vocalists in all genres who need to rehearse in a group prior to performances. In addition to knowing their repertoire and being able to perform to the required

standard, they must also be disciplined to practise, arrive at rehearsals on time and collaborate with other members of the group.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - perform proficiently and to the required standard on chosen instrument or voice in at least three rehearsals by: preparing adequately beforehand; listening effectively for and adjusting intonation and nuance in performance; sight reading accurately; applying interpretation and expression skills; giving and responding to cues, and; contributing to a respectful, productive and healthy culture. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline key components of rehearsal preparation; - explain the application of listening skills and music knowledge in rehearsals; - explain the key aspects of group performance; - identify and describe issues and challenges that typically arise in the context of group rehearsals, and ways in which they may be overcome, and; - explain the work health and safety (WHS) principles as they apply to using musical instruments and rehearsing in a range of environments.

CUAMPF402 Develop and maintain stagecraft skills

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to apply a well developed range of stagecraft skills during performances. It applies to musicians and performers in all genres, whose image and reputation rely on the way they approach performances and engage with audiences, and not just their ability to play an instrument or sing.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use strategies to develop and improve own stagecraft skills; - apply a range of stagecraft skills appropriate to the style of performance on at least three occasions; - evaluate own stagecraft skills, and integrate with feedback from others to improve, and; - rehearse and perform safely in line with work health and safety (WHS) principles. Students will also be expected to demonstrate the following knowledge: - describe key stagecraft skills and outline strategies to develop these skills; - describe ways technology can be used to enhance stage image; - outline and evaluate issues and challenges that arise in the context of applying stagecraft skills to performances, and how they might be overcome, and; - outline work health and safety (WHS) principles as they apply to preventative practice against injury, healthy performance habits and performance anxiety.

CUAMPF403 Develop repertoire as part of a backup group

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to select and rehearse repertoire as part of a backup group. It applies to musicians and vocalists who accompany and support solo artists and contribute to the selection of repertoire. They could be performing in any genre.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - contribute, as a member of a backup group, to the selection of repertoire to suit particular performances, and; - participate in rehearsals in collaboration with others. Students will also be expected to demonstrate the following knowledge: - explain factors to consider when selecting repertoire; - outline issues that may arise in the context of developing repertoire and rehearsing as part of a backup group, and; - outline work health and safety principles as they apply to using musical instruments and performing in a range of environments.

CUAMPF404 Perform music as part of a group

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to perform music for an audience as part of a group. It applies to individuals who perform as instrumentalists and vocalists as members of a group. They may work in any musical genre. Performing in a group requires well developed interpersonal communication and collaboration skills, in addition to technical and musicianship skills.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - demonstrate techniques to prepare effectively for performance; - perform proficiently as a member of a group, before an audience on at least three occasions, and; - participate in evaluations of group performances. Students will also be expected to demonstrate the following knowledge: - describe pre-performance warm-up procedures; - explain factors required to be effective as a musician or singer in a group, and; - outline issues and challenges that arise in the context of performing music as part of a group for an audience, and how they might be overcome.

CUAMPF405 Develop instrumental techniques

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop instrumental techniques across a range of performance repertoire. It applies to individuals who perform as instrumentalists and are developing competence to perform in public. They plan practice regularly and willingly act on feedback from colleagues and mentors.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - demonstrate appropriate methods for caring, using, moving, tuning and storing instrument; - plan and practise a selected set of exercises and/or studies, using feedback from others to assess the need to adjust focus of practice; - demonstrate fluent performance on selected instrument for a range of repertoire, and; - use aural skills to monitor and adjust own performance to achieve the required sound. Students will also be expected to demonstrate the following knowledge: - describe accessories, applications, range, capabilities, tuning and care and maintenance for the selected instrument; - describe a repertoire relevant to the selected instrument and area of specialisation; - describe exercises for developing technique, and; - outline work health and safety (WHS) principles as they apply to correct posture and practices to avoid overuse injury.

CUAMPF406 Perform music as a soloist

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to perform live for audiences as a soloist. It applies to individuals who perform as solo instrumentalists or vocalists. They may perform in any musical genre. They apply technical and musicianship skills and well developed stagecraft skills to engage audiences.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - demonstrate pre-performance checks and warm-ups; - perform proficiently as a soloist before an audience on at least three occasions, and; - plan strategies to improve future performances. Students will also be expected to demonstrate the following knowledge: - describe pre-performance warm-up techniques; - explain how music knowledge is used by a soloist to enhance performance; - describe features of listening critically to own and others' performance; - explain the main requirements for an effective soloist musician or singer; - outline typical issues and challenges that arise in the context of performing as a soloist for audiences, and how they might be overcome, and; - outline work health and safety (WHS) principles as they apply to performing in a range of environments.

CUAMPF408 Develop performance techniques on a second instrument

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop performance techniques on an instrument other than the primary instrument. It applies to musicians who want to gain proficiency in a second instrument, including voice, and so develop flexibility in their repertoire. The techniques for playing instruments may be completely different however, the underpinning music

knowledge that needs to be applied in performance remains the same.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - demonstrate appropriate methods for caring, using, moving, tuning and storing instrument; - plan and practise a selected set of exercises and/or studies, using feedback from others to assess the need to adjust focus of practice; - perform at least three pieces that demonstrate an ability to achieve the required sound on an instrument other than the primary one; - aural discrimination to monitor and adjust own performance to achieve the required sound, and; - develop a personal skill development plan. Students will also be expected to demonstrate the following knowledge: - describe key considerations for developing performance techniques on a second instrument or voice; - explain physical characteristics, basic acoustic principles and tuning techniques relevant to selected instrument or voice; - describe use and care of second instrument and accessories, and; - outline work health and safety principles as they apply to playing and performing a second instrument.

CUAMPF501 Prepare a program for performance

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to plan and prepare a program for performance.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare a program for performance in response to specific requirements and in collaboration with others; - organise all ancillary activities and arrangements for program performance, in collaboration with others, and; - achieve the required level of performance skills and musical interpretation prior to the performance. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe factors to consider when planning and preparing a program; - explain music elements relevant to interpretation of chosen repertoire; - outline the requirements for finalising a program and preparing for performances, and; - outline issues and challenges that arise in the context of preparing a program for performance, and describe how they might be overcome.

CUAMPF505 Develop technical skills and expand repertoire

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to refine instrumental techniques and expand the range of practical performance repertoire.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - perform a specific set of technical exercises and/or studies; - demonstrate, in a performance program, fluency, individual style and musical expression in a range of repertoire on the selected instrument in area of specialisation, and; - monitor progress in own skill development. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe acoustic principles relevant to chosen instrument and area of specialisation; - explain tuning conventions for chosen instrument; - explain control in relation to chosen instrument; - explain strategies and exercises for developing technical techniques; - describe extended repertoire relevant to the chosen instrument and area of specialisation, and; - explain qualities of musical performance that would reflect refinement of technical playing skills.

CUAMPF601 Present a music performance

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to present music performances in any musical genre. It applies to individuals working as instrumentalists or vocalists who use high level technical, musicianship and stagecraft skills to engage audiences in a wide range of repertoire within an area of specialisation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan at least two music performance programs according to requirements or brief; - present at least two music performance programs on the selected instrument or voice in area of specialisation; - engage the audience with high level performance mastery of repertoire and well developed stagecraft skills; - monitor and adjust own performance to achieve the required sound, and maintain performance flow and audience experience, and; - evaluate own performance, incorporating feedback from others for future improvement. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain requirements for planning the program and preparing for the performance; - explain technical and communication requirements for performing before an audience; - describe challenges that arise in the context of presenting a music performance, and explain how they might be overcome, and; - outline work, health and safety principles relevant to particular performance contexts. .

CUAMPF602 Manage stagecraft aspects of performances

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description: This unit describes the skills and knowledge required to plan and manage stagecraft of performances. It applies to individuals who are responsible for contributing ideas to the overall look, feel and sound of performances in collaboration with other creative and production personnel. They are also responsible for overseeing that stagecraft goes according to plan during performances.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - work collaboratively on the planning and management of stagecraft aspects of performances; - conduct rehearsals and pre-performance checks; - perform own role; - providing introductions and other remarks; - respond to unplanned events; - interact with other performers; - engage with the audience, and; - integrate feedback from others, and evaluate stagecraft aspects of performances. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain stagecraft and how it can be used to enhance performances; - describe roles and responsibilities of creative and technical personnel involved in stage performances; - explain requirements of leading a group prior to and during performances; - describe challenges that arise in the context of stagecraft aspects of performances, and explain how they might be overcome, and; - outline work health and safety requirements relevant to managing stagecraft.

CUAMPF603 Refine performance techniques and expand repertoire

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to expand repertoire and present an extended professional performance. It applies to musicians or vocalists with a higher level of skills in areas such as performance preparation, craft skills and musicianship as they seek regular professional performance opportunities. They may be refining skills on either a first or second instrument.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop and implement a plan to refine own performance technique; - plan and present a performance program of a professional standard, on at least two occasions, to an audience, and; - monitor progress of own skill development, expanding repertoire in area of specialisation and incorporating feedback on own performance. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain strategies and exercises for refining technical skills and performance techniques; - describe qualities that contribute to professional standard performance; - describe typical issues and challenges that arise in the context of refining performance technique and expanding

repertoire, and how to address them, and; - describe work health and safety principles relevant to professional performance contexts.

CUAMPF604 Extend improvisation techniques

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop high level improvisation skills. It applies to musicians who apply skills to compose or vary music 'in the moment' in response to stimuli. They have highly developed skills in aural awareness and in the musical practice of a chosen genre or musical tradition. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and implement ways to refine own skills, and monitor skill development progress; - perform improvisations using a range of advanced musical techniques, and; - give and respond to cues during solo improvisations. Students will also be expected to demonstrate the following knowledge: - explain factors that contribute to excellence in improvisation; - describe typical ensemble customs, protocols and practices, in relation to improvisation; - describe issues that arise in the context of performing improvisations, and explain how they might be overcome, and; - outline work health and safety (WHS) principles relevant to performing improvisations.

CUAMPF607 Lead music rehearsals

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to direct performers in music rehearsals. It applies to individuals who have high level musicianship skills and advanced knowledge of the performance capabilities of instruments. They may work as musical directors or conductors, and are responsible for choosing repertoire, selecting musicians, overseeing the organisation of rehearsals, and providing musical leadership during rehearsals and solutions to performance problems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and implement ways to develop own direction skills; - provide musical leadership on at least three occasions; - discussing and selecting repertoire and program; - completing required preparations for rehearsals; - directing performers during rehearsals to achieve performance level required, and; - conduct and document post-rehearsal debriefing sessions to improve performances. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain factors that inform choice of

repertoire and the development of performance programs; - describe music knowledge, technical skills and communication skills required to organise and direct music rehearsals; - describe issues that typically arise in the context of leading music rehearsals, and explain how they might be overcome, and; - describe work health and safety (WHS) requirements and procedures in relation to conducting and performing. .

CUAMUP401 Design, apply and remove make-up

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to design, apply and remove standard make-up for performers and talent appearing in screen and entertainment industry productions. It applies to individuals who use their creative skills, working alone or as part of a team, to design make-up that meets production requirements and brings out the subject's best features. Good communication skills are essential since they need to create an environment where others feel at ease.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - generate make-up design ideas that consider production factors and specific requirements of performers; - incorporate colour design principles into make-up designs; - create make-up plans that take account of the condition of performers' skin and other special requirements of performers or talent; - submit requests for make-up products that fit within budget allocations; - follow health, hygiene and safety procedures when preparing, applying and removing make-up; - select appropriate make-up products and application techniques, and; - communicate effectively to explain make-up procedures and discuss specific requirements with performers or talent. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe roles and responsibilities of personnel in the screen and entertainment industries who need to be consulted in relation to make-up issues; - describe principles of make-up application; - describe effects of natural and artificial lighting on make-up and how make-up colours appear on the screen; - outline the relationship of colour design principles to make-up; - describe how and why skin can react to make-up products commonly used in screen and entertainment industry productions; - describe effects created by different make-up products and colour application techniques, and; - describe work health and safety (WHS) procedures that apply to providing make-up services.

CUAMUP402 Maintain make-up and hair continuity

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to provide continuity services for make-up and hair in screen productions. It applies to individuals who check the make-up and hair of performers is consistent when scenes are watched in the correct sequence, irrespective of the order in which they were shot. They are crucial in making sure there are smooth transitions between shots and scenes, thus facilitating post-production editing.

Required Reading:Lecturer will provide teaching and learning materials as required in

the form of Victoria Polytechnic produced workbooks.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare for hair and make-up continuity activities by documenting requirements scene by scene; - recognise the effect the filming process has on the appearance of make-up and hair; - maintain continuity of performers' make-up and hair quickly and efficiently throughout productions; - create detailed records, including photographs, of hair and make-up continuity information for productions, and; - work collaboratively with cast and crew during productions. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline protocols for interaction between cast and crew during film shoots; - explain how the process of shooting film productions affects hair and make-up continuity operations; - describe creative and technical aspects of productions relevant to the process of maintaining make-up and hair continuity; - outline administrative procedures and documentation associated with maintaining hair and make-up continuity, and; - describe safety procedures that apply to providing make-up and hair services.

CUAMUP403 Style hair for performances or productions

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to provide a range of hair styles for productions in the film, television and live entertainment industries. It applies to individuals who use a range of cutting, temporary colouring, setting and dressing methods to produce current and period hairstyles for performers. They may work independently or as a member of a make-up and hair design team.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - discuss hair design requirements for productions with relevant personnel; - research hairstyles to inform design process and make reference materials available to others; - prepare hair designs that meet production requirements and take performers' hair and general appearance into account; - provide hair services in line with production schedule using appropriate hair products and application techniques; - re-create designs for all appearances during film shoots or performances during production runs; - maintain performers' hairstyles during productions; - create a documentary record of hair designs; - comply with health and hygiene requirements when providing hair services, and; - provide clear information to performers during hair styling sessions. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline roles and responsibilities of personnel who need to be consulted in relation to designing and styling hair; - identify typical problems with providing hairdressing services and briefly describe solutions; - explain health, hygiene and safety requirements that apply to the provision of hairdressing services; - describe the process for producing hair designs; - explain how hair design can

enhance characterisation; - outline key features of period hairstyles; - describe typical theatre salon procedures for creating period hairstyles; - explain how physical appearance can influence the process of designing hairstyles, and; - explain how skin tone can be affected by the way hair colour appears under lights.

CUAMUP404 Style wigs and hairpieces for performances or productions

Locations:City King St.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to style wigs and hairpieces for productions in the film, television and live entertainment industries. It applies to individuals who use a range of cutting, temporary colouring, setting and dressing methods to produce the required appearance of wigs and hairpieces for performers. They may work independently or as a member of a make-up and hair design team and are also responsible for the maintenance of wigs and hairpieces.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare performers' wigs and hairpieces for styling in line with hairstyle design requirements; - fit wigs and hairpieces on performers and trim them to achieve the desired appearance; - maintain the condition of wigs and hairpieces; - style and apply finishes to wigs and hairpieces to meet hair design requirements; - create a documentary record of hair designs; - complete work within production timelines; - comply with health and hygiene requirements when providing hair services; - work collaboratively with others in creating hair designs that meet production requirements, and; - provide clear explanations to performers during wig and hairpiece fitting sessions. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline roles and responsibilities of personnel who need to be consulted in relation to designing and styling hair; - identify typical problems of styling wigs and hairpieces and briefly describe solutions; - describe health, hygiene and safety requirements for the provision of hairdressing services; - describe the relationship between face type and elements and principles of hair design; - outline characteristics of human and synthetic hair types used in wigs and hairpieces; - describe tools and techniques for applying design finishes to wigs and hairpieces; - explain the effects of lighting on hair colour and skin tone, and; - outline maintenance and storage requirements for wigs and hairpieces.

CUAMUP502 Design and apply specialised make-up

Locations:City King St.

Prerequisites:CUAMUP401 - Design, apply and remove make-up

Description:This unit describes the skills and knowledge required to provide specialised make-up services for productions in the screen, media and entertainment industries. It applies to individuals in senior roles who apply make-up creatively, to enhance the ability of actors to portray characters, and conduct thorough background research to ensure characters are accurately represented. They work alone or, on large-scale productions, they could be responsible for supervising others.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertake research and collaborate with others to inform development of specialised make-up designs; - develop and document specialised make-up designs and accompanying make-up plans that meet production and performer requirements, and budget constraints; - apply and remove make-up using appropriate products and application techniques; - maintain the appearance of performers' make-up during productions; - complete work within production schedules; - comply with health and hygiene requirements when providing make-up services, and; - establish any specific make-up requirements from performers and clearly explain procedures for applying and removing specialised make-up. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain roles and responsibilities of personnel who need to be consulted in relation to designing specialised make-up; - identify typical problems with designing and applying specialised make-up and briefly describe solutions; - outline techniques for applying and removing specialised make-up; - explain health, hygiene and safety requirements that relate to applying and removing make-up; - describe effects of natural and artificial lighting on make-up and how make-up colours appear on the screen; - outline how colour design principles are used in the context of designing specialised make-up, and; - explain how the use of specialised make-up can enhance characterisation.

CUAMUP503 Design and apply special make-up effects

Locations:City King St.

Prerequisites:CUAMUP401 - Design, apply and remove make-up

Description:This unit describes the skills and knowledge required to design special make-up effects and provide make-up services for productions in the screen and entertainment industries. It applies to individuals who create effects, such as scars, ageing and illness, and often have to attach prosthetics. Because application of special make-up effects can be a complex and lengthy process, these individuals need to be confident and diplomatic in the way they communicate with performers whose appearances they are transforming. They work alone or, on large-scale productions, they could be responsible for supervising others.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertake research to inform design of special make-up effects; - consider special requirements of performers and the need for prosthetic pieces when designing special make-up effects; - develop designs for special make-up effects incorporating feedback and ideas from others, and meet production requirements; - produce make-up plans that specify resources required and take account of budget constraints; - apply and remove special make-up effects and prosthetics using appropriate products and application techniques; - maintain the appearance of performers' special make-up effects during productions; - create a documentary record of designs for special make-up effects; - comply with health and hygiene requirements when providing make-up services; - complete work within production schedules; - work collaboratively with others in the development of special effects make-up designs, and; - establish any

specific make-up requirements from performers and clearly explain procedures for applying and removing special make-up effects. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline roles and responsibilities of personnel who need to be consulted in relation to designing special make-up effects; - identify typical problems with designing and applying special make-up effects and briefly describe solutions; - explain safety, health and hygiene requirements for applying and removing make-up; - outline effects of natural and artificial lighting on special make-up effects and how make-up colours appear on screen; - explain how colour design principles are used in the context of designing special make-up effects; - describe how and why skin can react to make-up products commonly used in screen and entertainment industry productions; - explain how the use of special make-up effects can enhance characterisation; - outline techniques for applying make-up to, and removing it from, prosthetic pieces, and; - explain effects created by different make-up products and colour application techniques.

CUAPH1507 Produce media photo images

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to produce photo images for media services.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret an assignment with relevant personnel; - arrange insurances, releases, licences, permits and confirm intellectual property, privacy and other relevant legal requirements and codes of practice are met; - devise a shoot timetable and organise photo imaging equipment, subjects and locations to shoot media photo images; - apply imaging skills to capture and optimise media photo images that meet industry standards, in collaboration with others; - process, catalogue and archive photo images in accordance with industry standards; - package photo images for promotional purposes, and; - evaluate own performance and creative products for future improvement. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe styles and conceptual and aesthetic approaches as they apply to media photo images in a range of contexts; - describe the features and capabilities of photo imaging capture technologies; - explain techniques to optimise, process and transfer photo images for use in media; - describe professional practice arrangements and codes of practice as they apply to the media photographer, and; - outline personal health and safety factors that may affect a media photographer.

CUAPH1513 Employ colour management in a digital imaging workplace

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to manage the integrity of colour across digital imaging devices.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - document research into the principles and techniques of digital colour management; - evaluate digital colour management systems and strategies, and select a system to apply in a digital imaging context; - manage digital colour across a range of digital devices to achieve consistent quality in products, and; - evaluate outcomes and document ways to respond to future changes or opportunities. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain how colour is created, defined and managed in digital imaging devices; - describe how common colour charts, spaces, measurement, systems and models are used in photo imaging; - outline the key industry standards that apply to colour measurement and management; - describe typical issues that may arise in managing digital colour and briefly outline solutions, and; - identify trends and emerging technologies that may have impact on colour management systems.

CUAPOS201 Perform basic vision and sound editing

Locations: Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to perform basic editing functions for screen productions. It applies to individuals responsible for digitising, cutting and logging pre-recorded image and audio content under the direction of an experienced editor. Within clearly defined parameters, they also edit content using the basic functions of editing software.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - transfer and digitise video content; - prepare vision and sound content segments for editing; - log single images, audio grabs and basic sequences according to enterprise procedures; - edit content using basic functions of editing software, within clearly defined parameters; - take direction and respond to feedback from a supervising editor; - follow procedures for completing workplace documentation, and; - meet work deadlines. Students will also be expected to demonstrate the following knowledge: - outline basic vision and sound editing conventions and techniques; - explain roles of post-production personnel; - outline basic features of digital vision and sound editing software, and; - describe health and safety procedures that apply to using computers and keyboards.

CUAPPR401 Realise a creative project

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to experiment with ideas and techniques to find an individual style or voice throughout a creative project that results in a completed work. It applies to individuals who have sound technical, conceptual and theoretical skills in a particular area of creative practice, often at a pre-professional level.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - take responsibility for the complete process of planning and producing a creative project; - develop and refine conceptual and technical skills through a demonstrated process of exploration and experimentation; - produce creative work that reflects an emerging individual style, using safe and sustainable work practices; - document the creative work from initial idea to realisation in a format suitable to creative form; - communicate effectively with others about ideas and created work, integrating constructive feedback, and; - evaluate efficiency and effectiveness of completed creative project process. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - summarise the relationship between technique, materials and process in the relevant creative form; - discuss typical problems that occur during the development of a creative project, and how to avoid or resolve them; - describe commonly used research methodologies for creative practitioners; - describe current and emerging practices for documenting work in a creative context; - outline basic project management techniques, particularly in relation to work planning, time management and resource management; - discuss intellectual property issues and legislation associated with professional creative practice; - summarise sustainability issues associated with the tools and materials used in the chosen creative form, and; - outline work health and safety procedures in relation to chosen creative form.

CUAPPR501 Realise a body of creative work

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to integrate conceptual, technical and organisational skills to create a coherent body of work in any creative form. It applies to individuals who are at the beginning of their professional practice and whose completed work conveys a well developed command of materials, process and technique, and strong conceptual and theoretical development.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - discuss and evaluate ideas and options for work in response to research and analysis; - select and refine ideas for application to own work in consultation with relevant people; - safely and sustainably create a coherent body of creative work that is technically and conceptually resolved and consistent with the project concept; - finish body of work to a professional standard; - develop detailed documentation of work from initial idea to realization, and; - evaluate efficiency and effectiveness of completed creative project process. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the

following knowledge: - describe commonly used research methodologies for creative practitioners; - outline influences on chosen area of work in historical and contemporary contexts; - explain how critical and creative thinking techniques can be used in the context of creative practice; - explain the relationships between technique, materials and process in the relevant creative form; - explain basic project management techniques, particularly in relation to work planning, time management and resource management; - discuss essential considerations when determining scope and objectives of a piece of creative work; - discuss factors to be considered when determining a realistic timeframe for a piece of creative work; - identify typical problems that occur during the production of a body of creative work, and how to avoid or resolve them; - summarise options for documenting and recording work, including the type and amount of information to include; - discuss intellectual property considerations associated with professional creative practice; - outline sustainability issues associated with the tools and materials used in the chosen creative form, and; - explain organisational and legislative work health and safety procedures in relation to chosen creative form.

CUAPPR502 Develop own sustainable professional practice

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to establish goals for own professional practice and to determine how one's practice can be developed in a sustainable way, taking account of all aspects of sustainability - individual, social, environmental and economic. It applies to individuals who must consider the sustainability of their practice in any sector or area of expertise.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and collaborate with informed others to identify development ideas and issues relevant to own practice; - develop realistic goals for own practice based on research and review; - identify opportunities to enhance sustainability in own practice and implement strategies to harness them, and; - develop and implement professional development activities that enhance the sustainability of own practice. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline the professional context for a given area of practice in terms of opportunities and constraints; - describe how the following factors affect contemporary practice: - buying trends; - economic considerations; - impacts of technology on practice; - lifestyle trends; - location of practice; - social issues; - intellectual property considerations; - summarise the tools, techniques and strategies used by practitioners to build sustainable practice, and; - explain key aspects of individual, social, economic, environmental sustainability, and how they impact on a particular area of practice.

CUAPPR503 Present a body of own creative work

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to use creative, technical and project management skills to produce a professional and innovative presentation of own creative work. It applies to individuals who maintain an up-to-date presentation package or portfolio of creative work. The presentation or portfolio

may be physical or virtual.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research new or innovative ways for presenting portfolios of creative work; - design a presentation concept that includes key proposed objectives and messages; - realise a presentation concept within required budget and timeframes; - present creative product in a manner suited to the intended audience and purpose, and; - evaluate presentation and document ways to respond to future presentation opportunities. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - analyse typical ways in which portfolios of work are presented by creative practitioners; - explain current and emerging professional trends in presentation options and technologies relevant to the particular area of work, including design, layout, typography, interactivity and accessibility; - explain how critical thinking techniques can inform the development of a presentation concept, and; - outline intellectual property considerations in relation to the use of information in a professional presentation.

CUAPPR505 Establish and maintain safe creative practice

Locations:Footscray Nicholson, City King St.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to determine and respond effectively to broad and specific safety requirements in a professional practice. It applies to individuals who are sole practitioners or working in collaborative teams across all sectors and areas of expertise, who are responsible for managing safety. The practitioner applies a self-directed approach to ensuring safety. The unit could apply to a range of internal and external work environments, including workshops, studios, offices, field locations and performance venues. The unit does not apply to individuals employed by organisations to manage the safety of a practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse the needs of a particular practice and develop a set of systems, procedures and practices to support safety in that context; - identify key safety issues, including specific hazards and risks in the relevant area of practice, and; - apply general work health and safety (WHS) legislation and specific codes, standards or guidelines relevant to own practice. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain essential components of work health and safety (WHS) legislation, regulations and codes of practice relevant to the specific area of practice; - explain essential WHS responsibilities of employers, manufacturers, suppliers, employees and

other parties with legal responsibilities; - explain relevant industry or process-specific safety guidelines that apply to particular fields of work and particular work environments; - describe hazards and their associated risks that exist in the specific professional practice; - explain the potential impact of not addressing hazards and risks in the specific area of practice; - explain organisational systems, procedures and practices that support WHS management and regulatory compliance for a professional practice; - business planning, especially new technology and organisational change; - purchasing policies and procedures; - reporting on financial, technical and other resource needs, and; - maintenance of WHS systems and procedures.

CUAPPR603 Engage in the business of creative practice

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to approach the business aspects of working as a creative practitioner in a professional manner. It applies to individuals who, depending on the creative practice, operate as sole practitioners, in artist cooperatives, or as freelance or contract workers. Regardless of the business model, all practitioners earning income from their practice engage with the professional business requirements for a sustainable creative practice. Independent creative practitioners sometimes work as employees in small and large organisations.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and evaluate a broad range of complex and varied business information, including business structures, financial considerations, and legal rights and obligations; - develop cohesive approaches and strategies, that are grounded in research and analysis, for developing and managing own practice; - interact with other professionals on management and development issues; - identify professional work opportunities within and beyond the creative sectors, including new and emerging opportunities, and; - apply relevant legal and moral rights and obligations in own practice. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - summarise the types of behaviour, skills and practice that constitute a professional way of working in the specific area of creative practice; - outline professional development opportunities for the specific area of creative practice; - identify types and sources of external expertise and professional advice for creative practitioners that could be used in professional practice, including different industry organisations; - explain general business structures, practices, systems and procedures that apply to all professional practitioners, as well as typical ways that business is done in the specific area of creative practice; - summarise the physical resources needed for different types of professional practice and different ways they may be set up or accessed; - explain the financial management practices that apply to all professional practitioners, including financial models and structures that apply to the specific area of creative practice; - identify the factors to consider when costing and selling work and methods of selling work, including commissions; - summarise trends in the consumption of culture and creative products and their impact on professional

creative practice, and; - list and describe the legal and moral obligations of creative practitioners, including intellectual property, work health and safety, and sustainability considerations.

CUAPRE401 Implement preventive conservation activities

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to provide preventive care of collection material through a sound knowledge of conservation principles, practices and ethics. It applies to individuals who apply their skills in organisations responsible for the care of cultural material, including archives, museums, libraries, galleries and cultural centres. They monitor environmental conditions, assess the condition of collection material and take action to conserve it.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify changes in the condition of collection material and take appropriate routine preventive action to protect collection material from damage and potential hazards and to conserve material; - identify agents of deterioration and assess their impact on collections in a timely manner; - apply basic conservation techniques and methods that reflect current industry methods when handling equipment, tools and materials during routine examination and conservation of collection material; - demonstrate a collaborative approach to the discussion of issues, new techniques and current approaches to conservation, and; - record and report preservation and preventive conservation activities. Students will also be expected to demonstrate the following knowledge: - describe the roles of personnel responsible for care of cultural material, including the roles of conservators and unqualified personnel; - identify sources of expert assistance on collection care; - describe the role of preventive conservation in relation to collections; - describe the critical factors contributing to deterioration of collections; - clarify the distinction between preservation, conservation and restoration; - discuss the application of cultural considerations and protocols for the handling, storage and display of collection material, and; - describe methods of protecting collection material from damage and potential hazards.

CUAPRI501 Refine printmaking techniques

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to research and experiment with a broad range of printmaking techniques to refine and evaluate an individual professional style. It applies to highly skilled visual artists who integrate the use of those different techniques explored, to realise a coherent body of creative work. They work with a high level of independence seeking mentoring and guidance as required.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to

provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research an extensive range of printmaking techniques to inform own work practice; - refine printmaking technique through a process of thorough experimentation and practice to create a coherent body of printmaking work which: - shows a command of chosen techniques; - demonstrates the development of an individual style, and; - supports own ideas for work. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe copyright, trademarks, design licences and permissions relevant to producing print works; - identify an extensive range of information sources that support research in printmaking practice; - summarise, for historical and contemporary printmaking, the main cultural, sociological, philosophical, aesthetic, political and commercial influences; - explain, for own work practice and that of other artists, the relationship between printmaking technique and particular effects and design ideas; - explain, for an extensive range of printmaking techniques, how they work to achieve effects and their limitations and constraints in achieving effects; - describe a range of creative thinking techniques and how they can be used to encourage new ideas; - describe, for the elements and principles of design, the detailed characteristics, complex interrelationships, use in prints and how they may be challenged; - discuss formal and informal professional development opportunities for professional arts practitioners working with prints, and; - explain key safety requirements for printmaking work. .

CUAPRI502 Investigate printmaking materials and processes

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to research and explore a range of printmaking materials and processes to develop an individual professional style. It applies to highly skilled visual artists who integrate the use of those different materials and processes explored, to realise a body of creative work. They work with a high level of independence seeking mentoring and guidance as required.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research the properties, capabilities and use of an extensive range of printmaking materials to inform own work practice; - create a coherent body of printmaking work which demonstrates: - new or refined ways of working with materials through a process of experimentation; - technical proficiency in the use of selected materials and processes; - integration of materials and processes into own style, and; - use of safe and sustainable work practices. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe intellectual property considerations relevant to producing print works; - identify useful information sources that support research in printmaking materials; - describe the physical properties, characteristics, capabilities and storage requirements of a wide range of materials used in printmaking; - describe how different materials and printmaking techniques combine to achieve different technical effects; - explain ways to use, adapt, combine and challenge the capabilities of an extensive range of printmaking materials to develop

an individual professional style; - summarise supply sources for printmaking materials used in professional practice; - explain the function of Safety Data Sheets, and; - explain key safety and sustainability requirements for painting work.

CUARES202 Source and use information relevant to own arts practice

Locations:Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to access relevant historical and theoretical information relevant to one's own area of creative work.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - source general history and theory information; - identify and use information related to own area of work in compliance with cultural and copyright requirements; - organise and update information, and; - initiate and respond to feedback. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - list sources of general information on history and theory arts practice and specific information related to own area of practice; - outline techniques for organising history and theory information and information specific to own area of work; - identify protocols to be observed when gathering information of a culturally sensitive nature, and; - explain intellectual property principles and legislation related to collection and use of information in own work.

CUARES402 Conduct research

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to conduct research in response to a brief in the creative industries on any topic. It applies to individuals who work with a significant degree of autonomy, but who usually report to a manager or client. Individuals might be full-time research officers or those for whom research forms part of their job. Alternatively, they may provide research services on a contract basis.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse research briefs and agree on requirements with relevant personnel; - gather valid and reliable information from a range of sources according to an agreed methodology; - analyse and interpret research findings to develop appropriate conclusions and recommendations; - present research findings to relevant personnel, in an appropriate format, by agreed deadlines; - maintain a system to store, retrieve and maintain contacts and research information, and; - discuss key issues and seek feedback from relevant personnel to improve quality of research. Note: If a specific volume or

frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain features of commonly used quantitative and qualitative research methodologies; - explain how to evaluate validity and reliability of an information source; - explain typical legal issues that can affect research activities including copyright, intellectual property and privacy legislation; - identify reliable sources of advice on legal issues; - explain requirements for gathering information with cultural sensitivities, and; - identify work health and safety standards as they relate to working for periods of time on screens and keyboards.

CUARES403 Research history and theory to inform own arts practice

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to use investigative and critical thinking techniques to evaluate history and theory information and distil key themes and ideas. It applies to individuals working in all areas of arts practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use research and critical thinking techniques to evaluate theoretical and historical information and distil key themes and ideas; - organise research materials and outcomes for application to own arts practice; - use discussion with others to inform research ideas and methodology, and; - identify and use opportunities to update knowledge information. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify sources of information about history and theory relating to own arts practice and the work of others; - explain formal and informal research techniques, and; - outline how information can be organised so that it can be easily accessed and applied to own arts practice.

CUARES503 Analyse cultural history and theory

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to research, analyse and debate cultural history and theory, and to use those processes to develop individual approaches to creative work. It applies to individuals working across all cultural sectors. It might also apply to individuals working much more broadly in business and community roles. At this level, the individual mostly works independently, although the research may be guided by others in terms of its scope and objectives.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select an appropriate research focus and relevant information sources; - analyse complex

cultural ideas and information; - develop substantiated opinions to advance professional practice; - participate in informed discussion of cultural history and theory, and; - determine ways to use research in own professional practice. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain criteria for selection of a meaningful individual research focus; - list and describe historical and contemporary sources for cultural research; - explain the characteristics of a 'substantiated opinion or idea'; - explain in detail the value of cultural history and theory to contemporary practice, and; - explain how intellectual property issues and legislation relates to the research process.

CUASOU201 Develop basic audio skills and knowledge

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to complete basic audio tasks in a range of production contexts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - complete a range of audio tasks safely and according to instructions; - apply knowledge of key features and purpose of audio equipment and accessories to work activities; - apply knowledge of signal flow through the audio chain when undertaking audio set-up tasks, and; - work collaboratively. Students will also be expected to demonstrate the following knowledge: - describe the general scope of audio operations in different live production contexts and the relationship between audio operations and other technical and performance areas; - describe the features and meaning of a signal flow chart for a typical sound system; - in the context of completing audio tasks, explain what is meant by: basic sound pressure level measurement; decibel levels; phase and phase cancellation; power isolation; - describe basic safety procedures for handling, operating and storing audio equipment and accessories, and; - describe the key features of, purpose and basic operating procedures for the following audio equipment: audio mixing consoles; common accessories; input source equipment; loudspeakers; signal processing equipment.

CUASOU202 Perform basic sound editing

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required for basic digital sound editing.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare and edit audio content to meet creative and technical production requirements; - use editing

software and equipment proficiently, manipulating and applying effects where required; - digitise audio content in compatible formats; - assess and optimise quality of sound sequences; - accurately mark, log, document and archive edited sequences, and; - seek feedback from others to improve own technical and creative performance. Students will also be expected to demonstrate the following knowledge: - describe a range of digital formats compatible with various editing processes, platforms and equipment; - outline procedures to log and document edited sequences; - outline typical challenges that arise collecting and organising content for broadcast and publication, and how to handle these; - identify characteristics of sound that can be manipulated to achieve high quality output, and; - outline work health and safety requirements for working with sound.

CUASOU301 Undertake live audio operations

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to interpret audio production requirements, participate in technical run-throughs and operate professional audio equipment during live performances in the screen, media, entertainment and events industries. At this level, individuals are required to use some discretion and judgement and operate under broad supervision within an established framework of plans and procedures. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - operate professional audio equipment to meet production requirements on at least two occasions; - follow safety procedures when operating audio equipment; - work collaboratively during productions. Students will also be expected to demonstrate the following knowledge: - describe features, formats and purpose of audio production documentation; - describe features of, and operating procedures for, industry-standard audio mixing consoles, amplifiers, speakers and equalisers; - describe the characteristics of sound in a range of environments; - explain audio effects and provide examples of when to use them; - describe techniques for amplifying music to suit varying live environment conditions; - describe typical faults and problems that occur in a live audio environment, and provide examples of how to address them; - provide examples of health and safety issues relevant to working with electricity and noise.

CUASOU307 Record and mix a basic music demo

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to plan, record and mix a basic music demonstration (demo). It applies to individuals who work collaboratively with performers to produce basic music recordings that are intended for limited circulation or reference purposes, rather than general public release. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - collaborate with others to prepare basic recording plans; - record, mix and finalise at least two basic music demos according to requirements. Students will also be expected to demonstrate the following knowledge: - list and briefly describe the components of a basic recording plan; - describe the different types of equipment used to produce a music demo; - explain the issues and challenges that typically arise when recording and mixing a basic music demo, and how to address them; - outline the safe work practices that relate to the use of sound recording and mixing equipment.

CUASOU308 Install and disassemble audio equipment

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to install and disassemble audio equipment for a range of live performance and entertainment productions. It applies to individuals who work collaboratively as part of a production team to install, align, test and disassemble audio equipment for playback, mixing and recording purposes. The model Work Health and Safety (WHS) Regulations list the work that requires a high risk work licence, including dogging and rigging. Completion of the following units is required for certification at basic, intermediate and advanced levels: - CPCCLDG3001A Licence to perform dogging; - CPCCLRG3001A Licence to perform rigging basic level; - CPCCLRG3002A Licence to perform rigging intermediate level; - CPCCLRG4001A Licence to perform rigging advanced level. Sets and staging for some productions may fall within the definition of construction work. Under section 274 of the WHS Act, it is a requirement of the approved Code of Practice for Construction Work that any person entering a construction site must successfully complete general construction induction training through a Registered Training Organisation. Completion of the unit CPCCOHS1001A Work safely in the construction industry fulfils this requirement.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret production documentation and requirements in collaboration with others; - safely install and disassemble audio equipment for at least three productions; - test audio equipment and accessories in line with production requirements. Students will also be expected to demonstrate the following knowledge: - audio equipment; - suitable venue; - relevant production documentation; - interaction with others.

CUASOU401 Mix live audio

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to mix audio for live shows in the screen, media, entertainment and events industries. Individuals who apply these skills work autonomously in a team environment as they take responsibility for the front of house mix, which involves creating quality sound for audiences. They may also be responsible for supervising others. No licensing, legislative or certification requirements apply to this unit at the

time of publication.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - mix live audio for at least two performances or productions in line with production requirements; - mix live audio using both analogue and digital mixing desks; - work collaboratively. Students will also be expected to demonstrate the following knowledge: - explain the features and mixing capabilities of a range of analogue and digital front of house consoles; - explain how the matrix and main outputs of consoles are used; - explain how signal processing options can be used for troubleshooting and for creative effects; - describe techniques for adding and patching sub-mixers into sound systems; - describe how the following apply when mixing live audio: - automation and cue delivery; - contemporary audio effectors and digital system processing (DSP) effects; - SMPTE time code and musical instrument digital interface (MIDI) to fire cues and automation; - voltage control amplifier (VCA) masters.

CUASOU402 Manage audio input sources

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to select and manage microphones and other audio input sources for productions in the screen, media, entertainment and events industries. Individuals who apply these skills work autonomously in a team environment as they work to achieve the best possible audio outcomes for performances or shows. They may also be responsible for supervising others. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - set up and test complex microphone plots and other audio input sources for at least two productions or events; - apply in-depth knowledge of microphone technology and product options to work activities; - manage a range of microphone and other audio inputs during technical run-throughs or rehearsals on at least two occasions; - correctly use terminology associated with input source management; - work collaboratively. Students will also be expected to demonstrate the following knowledge: - explain the features of a range of different microphone and the contexts in which they are best used; - explain the acoustic consequences of signal phase problems and when to use phantom power; - provide examples of current trends in microphone development and the availability of products; - provide examples of issues and challenges that typically arise when managing audio input sources, along with solutions to address them; - provide example of issues to consider when preparing microphone plots and input signal failure plans.

CUASOU405 Record sound

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to record sound and supervise sound recording operations. It applies to individuals who work as part of a production team to record sound in a range of environments, including recording studios, live performances, broadcast studios and film/sound archives. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop a sound recording plan that clearly specifies all requirements; - set up recording equipment, conduct sound checks and make adjustments as required; - implement recording plan as part of a collaborative team; - produce a final sound recording and related documentation according to production requirements. Students will also be expected to demonstrate the following knowledge: - describe the information normally found in production documentation; - explain the principles of microphone operation and the techniques used in sound recording; - list and describe commonly used sound equipment, accessories and consumables; - explain the issues and challenges that typically arise when making sound recordings, and how to address them; - outline the work health and safety (WHS) principles relevant to sound recording.

CUASOU407 Edit sound

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to edit sound material to meet production requirements. This involves assessing the quality of source materials, preparing source materials for sound editing, making technically accurate sound edits, and applying sound effects to enhance the final product. It applies to individuals who work as part of a production team to edit sound material for a range of productions. It also applies to individuals working in film and sound archives. Individuals work with minimal supervision and guidance, and may supervise others. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - edit sound material and create final mix for productions; - incorporate appropriate sound effects into final mix; - work collaboratively as part of a production team within set deadlines; - use the features of a range of industry current sound editing software and equipment in line with production requirements and industry standards. Students will also be expected to demonstrate the following knowledge: - explain the different purposes for which sound is used in productions; - explain the copyright implications

that relate to sound editing; - explain the main principles and techniques of sound editing; - explain the issues and challenges that typically arise when editing sound material, and how to address them; - explain the work health and safety (WHS) procedures and principles that relate to sound editing.

CUASOU409 Mix recorded music

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to mix music that has been recorded live or in a studio. It involves balancing all instrumentals, vocals and recorded/imported sounds, and adding effects.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - mix a range of existing multi-track recordings to formats ready for mastering, in collaboration with colleagues and clients; - use the features of a range of industry current sound mixing software and equipment in line with industry standards; - balance instruments, vocals and recorded/imported sounds, and; - incorporate appropriate effects into the final mix. Students will also be expected to demonstrate the following knowledge: - describe the main techniques and methods of mixing music; - outline mixing conventions for different music genres and explain techniques used to balance instruments and vocals; - list and describe effects that can be used to enhance a music mix; - briefly outline the operational principles for the available sound mixing software and equipment; - describe the issues and challenges that typically arise in the context of mixing music, and how to address them, and; - explain work health and safety considerations for mixing sound.

CUASOU504 Produce sound recordings

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to plan, organise and produce audio recordings. It applies to individuals who work collaboratively and creatively with artists and performers to produce audio recordings for distribution via any media.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop creative sound concepts for recording projects; - work creatively, collaboratively and constructively with others to produce at least two sound recordings for distribution; - adjust recordings to achieve project outcomes, and; - document the evaluation of the recording process, outcomes and own role. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe the production

requirements that may impact decisions about recording projects; - explain the legislative requirements that relate to sound recording; - explain how different recording and performance environments affect sound, and what adjustments can be made to produce required sound recordings; - explain the sound equipment required for a range of recording situations; - describe techniques for evaluating the quality of a sound recording, and; - explain the issues and challenges that typically arise when producing sound recordings, and how to address them.

CUAWHS302 Apply work health and safety practices

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to follow work health and safety (WHS) requirements in the creative industries. It applies to those who are required to identify their individual WHS responsibilities and implement procedures to work safely in various creative industry work contexts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - complete work tasks according to work health and safety (WHS) legislative and workplace requirements; - participate in consultation about WHS issues; - identify and report hazards according to workplace requirements; - assess and control risks and document risk control measures according to own level of responsibility, and; - follow procedures for responding to incidents and emergencies. Students will also be expected to demonstrate the following knowledge: - outline the WHS rights and responsibilities that apply to own role; - explain the term 'duty of care'; - describe typical health and safety roles in the workplace; - list and describe common safety signs and symbols; - explain procedures for reporting hazards, risks, incidents and accidents; - identify and describe common hazards and major causes of accidents relevant to the workplace; - explain what the term 'risk control' means, and; - list and describe potential emergency situations and how to respond to them.

CUAWRT301 Write content for a range of media

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to write content for a range of purposes and platforms. It applies to individuals who could be expected to write both original and re-purposed non-narrative content for websites, social media or for announcements on radio and television.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - write media content that engages target user / audience and meets production deadlines; - apply principles of writing and communication in developing content for a range of purposes, and; -

structure content and apply presentation techniques to enhance readability and navigation. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline a range of writing styles and their purpose; - describe techniques for effective writing; - describe how layout and presentation techniques may affect ways readers read and scan written content in various media; - identify media laws and codes of practice relevant to copyright, defamation, privacy, court reporting and vilification; - outline types of data that may provide information on users and audience, and; - outline health and safety requirements as they relate to working for periods of time on screens and keyboards.

CUAWRT404 Perform writing and editing tasks

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to apply the conventions of plain English to writing and editing tasks of different forms. It also includes editing and proofreading techniques. It applies to individuals in various writing contexts who write and edit texts using appropriate language, style, grammar, spelling, and standard conventions for editing and proofreading.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - write and edit at least one written material (2500-4000 words) and edit another material written by another author (2500-4000 words), of different forms (e.g. blog, journal, book) that demonstrate use of: clear and concise language; clear and logical paragraph structures; appropriate voice, tone, tense and language; plain English grammar, spelling and punctuation; accepted grammar conventions for a range of written contexts including use of numbers, quotation and tables; standard editing conventions; - complete editing and proofreading tasks using handwritten and digital methods; - accurately follow a style guide where required, and; - follow relevant health and safety practices for writing tasks. Students will also be expected to demonstrate the following knowledge: - main features of clear, concise and plain English language for written material; - grammar, punctuation and spelling conventions that meet the task requirements; - editing conventions used in substantive editing and copy-editing of written material, and; - basic software used to write and collect feedback.

CUAWRT405 Write fiction material

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to write fiction material in a range of forms and to use basic editing and proofreading skills to refine work. It applies to individuals who draw on a range of information sources and writing techniques to compose fiction materials in a variety of text types and styles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate with relevant stakeholders to confirm the purpose and requirements; - plan and acquire the resources and information required to write the fiction material; - develop timelines for completion according to contractual and regulatory requirements; - write original material using technique, form, style, structure and perspective voice, point of view, appropriate to the publication media and the requirements of the fiction material; - comply with relevant regulatory, copyright and intellectual property requirements; - identify and use at least two methods for collecting and tracking feedback on draft material from relevant people, and; - follow relevant health and safety practices for writing tasks. Students will also be expected to demonstrate the following knowledge: - various forms and text types of fiction material; - techniques and styles used to develop various forms of fiction writing; - types of media used to publish fiction material, and describe the particular characteristics of each; - basic proofreading and editing techniques, including the use of style guides; - copyright and intellectual property requirements as they relate to writing and publishing fiction works, and; - basic operations of word-processing software used to produce, edit and track changes in written material.

CUAWRT406 Write nonfiction material

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to write nonfiction material in a range of forms and to use basic editing and proofreading skills to refine work. It applies to individuals who draw on a range of information sources and writing techniques to produce nonfiction materials in variety of forms and delivery media.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicate with relevant stakeholders to confirm the purpose and requirements; - plan and acquire the necessary resources to write the nonfiction material; - develop timelines for completion of the nonfiction according to contractual and regulatory requirements; - write original material using technique, form, style, structure and perspective voice, point of view appropriate to the publication media and the requirements of the nonfiction material; - identify and use at least two methods for collecting and tracking feedback on draft material from relevant people; - comply with relevant copyright and intellectual property requirements; - edit and proofread draft material and discuss modifications with relevant people, and; - follow relevant health and safety practices for writing tasks. Students will also be expected to demonstrate the following knowledge: - forms and text types of nonfiction material; - different purposes and audiences for nonfiction material; - techniques and styles used to develop various forms of nonfiction writing; - types of media used to publish nonfiction material, and describe the particular characteristics of each; - basic proofreading and editing techniques, including the use of style guides; - regulatory, copyright and intellectual property requirements as they relate to writing and

publishing works, and; - basic operations of word-processing software used to produce, edit and track changes in written material.

CUAWRT407 Develop content for publication

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to research and produce content for a range of media suitable for electronic or hardcopy publications such as blogs, webpages, and journal articles. It applies to writers who seek to refine their content development techniques and approaches. This would usually be carried out independently, with some guidance from editors, agents or other relevant people.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the evidence of the ability to complete at least two different content development pieces of work (e.g. one blog and one infographic) of different lengths (with at least one of 2500-4000 words) and for each: - identify requirements for writing for different platforms, including social media; - develop the content concept and seek feedback for refinement; - plan and organise resources to develop the content within timelines; - develop work that meets the purpose and the needs of the intended audience and where appropriate, make use of content development software; - apply basic editing techniques to refine work; - ensure timelines and other requirements for the work are met, and; - follow relevant health and safety practices for writing tasks. Students will also be expected to demonstrate the following knowledge: - forms and examples of content including, but not limited to: blogs, webpages, infographics, eBooks, journal articles, news articles, opinion pieces, videography and photography, and web-based content; - content development techniques and their application; - basic editing techniques used to refine content; - typical constraints that impact the development of content; - copyright and intellectual property requirements that relate to content development, and; - common content development software and their application.

CUAWRT411 Write for young children

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to write a variety of written material for young children aged between three and nine years. Writers for children work on a wide range of texts with limited words and concepts. These include, but are not limited to, picture books, board books, rhyming and free verse works, magazines, chapter books, animations, short TV shows and series and both fiction and nonfiction books and series. It applies to writers for young children who draw on a range of experiences, observations and research. The process involves conception, drafting, seeking feedback and redrafting with special consideration of this particular audience.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate evidence of the ability to write at least two texts for young children (each of 500 words or more) in different forms (e.g. picture book, chapter book, short nonfiction text, performance script, web-based content with other media included) and for each text:- determine appropriate style and form of output according to the text's purpose; - conduct required planning and research to write the text; - develop timelines for completion of the text; - determine appropriateness of illustrations to support written text; - write original material using technique, form, style, structure, perspective and voice appropriate to the publication media and the requirements of the text; - proofread and edit draft material to meet standards for publication; - collect feedback on draft text from appropriate sources and amend in response to feedback; - comply with relevant copyright and intellectual property requirements, and; - follow relevant health and safety practices for writing tasks. Students will also be expected to demonstrate the following knowledge: - forms and text types including but not limited to: picture book story, picture book in verse, chapter book, short nonfiction text, performance script, and web-based content; - use of appropriate illustrations and other visual elements to accompany and support written text; - techniques, stylistic and cultural contexts, purpose and audience which contribute to various forms of children's text; - types of media used to present children's texts, including the particular characteristics of each media type; - basic proofreading and editing techniques, including the use of style guides; - copyright and intellectual property requirements as they relate to writing and publishing, and; - basic operations of word-processing software used to produce, edit and track changes in written material.

CUAWRT413 Write poetry

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes skills and knowledge required to write poetry in a range of forms including free verse, forms, anthologies, collections, verse novels, children's books, dedications, odes, song lyrics, advertising copy, magazines and web-based material. Poetry may also be written for other occasions, radio, live performances, slams, TV and films. It applies to individuals who draw on different experiences and ideas to draft poems that may be performed or published. The process involves conception, drafting, redrafting and consideration of audience.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate evidence of the ability to write at least two poems of different forms (e.g. free verse, traditional verse, song, commercial advertising script, performance script, web-based verse with other media included) and for each: - determine the appropriate style and form for a poetic work according to the poetic work's purpose; - conduct planning required to write the poetic work; - develop timelines for completion of the poetic work; - write original material using technique, form, style, structure, perspective and voice appropriate to the publication media and the requirements of the poetic work; - proofread and edit draft material to meet standards for publication; - collect feedback on draft poetic work from appropriate sources and amend in response to feedback; - comply with relevant copyright and

intellectual property requirements, and; - follow relevant health and safety practices for writing tasks. Students will also be expected to demonstrate the following knowledge: - forms of poetic work including but not limited to: free verse; traditional verse; song; commercial advertising script; performance script, and web-based verse with other media included; - techniques, literary devices, stylistic and cultural contexts, purpose and audience which contribute to various forms of poetic work; - types of media used to present poetic work, including the particular characteristics of each media type; - basic proofreading and editing techniques, including the use of style guides; - copyright and intellectual property requirements as they relate to writing and publishing works, and; - basic operations of word-processing software used to produce, edit and track changes in written material.

CUAWRT414 Write narratives

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes skills and knowledge required to write narratives for print, electronic publications and a range of other media. It applies to individuals who write narratives for different audiences and in different formats, and who develop knowledge of the elements of narrative such as theme, form, characterisation, dialogue, point of view and style in order to write narratives.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate evidence of the ability to write either one extended narrative (5000 words or more), or at least two short narratives (500-2000 words) of different forms (e.g. blog, journal, and book) and for each written material: - determine the appropriate style and form of output for the narrative according to the narrative's purpose; - conduct planning and research required to write the narrative; - develop timelines for completion of the narrative; - write original material using technique, form, style, structure, perspective and voice appropriate to the publication media and the requirements of the narrative; - proofread and edit draft material to meet standards for publication; - collect feedback on draft narrative from appropriate sources and amend draft narrative in response to feedback; - comply with relevant copyright and intellectual property requirements, and; - follow relevant health and safety practices for writing tasks. Students will also be expected to demonstrate the following knowledge: - forms and text types of narrative including but not limited to: flash fiction, micro fiction, apps, short fiction, long short stories, e-books, e-serials, and web-based content; - techniques, stylistic and cultural contexts, purpose and audience which contribute to various forms of narrative writing; - types of media used to present narratives, including the particular characteristics of each media type; - basic proofreading and editing techniques, including the use of style guides; - copyright and intellectual property requirements as they relate to writing and publishing, and; - basic operations of word-processing software used to produce, edit and track changes in written material.

CUAWRT504 Perform advanced editing tasks

Locations: Footscray Nicholson.

Prerequisites: CUAWRT404 - Perform writing and editing tasks

Description: This unit describes the skills and knowledge required to apply advanced editing skills to a range of written texts in different forms. It applies to editors who

independently evaluate and refine print-based or screen-based written materials to publication standards. The editing process includes the review of substance and structure to enhance the clarity of written communication. Collaboration with authors, clients, publishers and colleagues plays a significant role in the refinement of the product.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - discuss and confirm purpose, actions, roles, timelines and other requirements with relevant parties; - complete editing of written material, in accordance with required conventions; - complete proofreading tasks of written material; - identify and comply with relevant legislative, copyright and intellectual property requirements; - ensure materials meet all requirements and deliver within agreed timelines, and; - follow relevant health and safety practices for work tasks. Students will also be expected to demonstrate the following knowledge: - steps in the editing process; - use of style guides in the editing process; - key features of citation conventions typically used; - standard conventions for text mark-up and proofreading correction in hardcopy and electronic works; - relevant copyright and intellectual property requirements as they relate to writing and publishing works, and; - basic operations of word-processing software used to produce, edit and track changes in written material.

CUAWRT505 Perform advanced writing tasks

Locations: Footscray Nicholson.

Prerequisites: CUAWRT404 - Perform writing and editing tasks

Description: This unit describes the skills and knowledge required to research and apply advanced writing techniques in a range of forms. It applies to competent writers who seek to refine their writing techniques and approaches. This would usually be carried out independently, with some guidance from editors, agents or other relevant people.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research writing techniques and implement within a range of writing tasks (e.g. blog, journal, book); - complete one extended writing task of 8000-10,000 words and one short writing task of 4000 words or complete one extended writing task of 8000-10,000 words and two short writing tasks of 2,500-3,000 words of different forms (e.g. blog, journal, and book), and; - follow relevant health and safety practices for writing tasks. Students will also be expected to demonstrate the following knowledge: - writing techniques for a range of writing media and their application; - editing techniques used to refine writing; - use of style guides for editing of publications; - typical constraints that impact on the development of writing tasks; - copyright and intellectual property

requirements as they relate to writing and publishing works, and; - purpose, use and function of word-processing software.

CUAWRT506 Develop nonfiction works for publication

Locations: Footscray Nicholson.

Prerequisites: CUAWRT406 - Write nonfiction material

Description: This unit describes the skills and knowledge required to develop works of nonfiction suitable for publication. It applies to individuals, working as commissioned or independent writers, who write nonfiction works. Research of the topic of nonfiction material, alongside text types and method of delivery are significant steps in the process of creating nonfiction work. Guidance from others and rigorous testing for accuracy play significant roles in the refinement of the final product.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research, discuss and refine a concept for nonfiction work; - create a proposal to develop the nonfiction work for a particular purpose and audience; - identify timelines, information and resource requirements for developing the nonfiction work; - develop an outline of the nonfiction work; - write and proofread draft nonfiction work; - check the draft meets purpose and desired outcome; - collect feedback on draft from relevant people by using at least two methods of tracking feedback; - proofread and edit draft material and discuss modifications with relevant people; - produce a final draft of the nonfiction work, and; - follow relevant health and safety practices for work tasks. Students will also be expected to demonstrate the following knowledge: - current markets for nonfiction works; - methods for identifying audiences for nonfiction works; - strategies for developing concepts for nonfiction works; - criteria used to determine feasibility of concepts; - methods for gathering and authenticating reliability of information; - important features of a proposal to develop a nonfiction work; - possible ethical, copyright and intellectual property implications of nonfiction works; - suitable techniques for writing nonfiction work; - the role of style guides for proofreading and editing of publications, and; - purpose, use and function of word-processing software.

CUAWRT508 Develop children's and young adults' written works for publication

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes skills and knowledge required to produce written material for children and young adults. Written material includes a range of delivery media including print media, internet, radio, film, television, game consoles and podcasts. It applies to individuals who produce written material relevant to children and young adults. These writers draw on their knowledge of children's and young adults abilities and interests, as well as knowledge of the market for this type of written material. Producers of children's and young adults' written works undertake work either as freelance or commissioned writers.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - create concept written work appropriate for children and young adults; - communicate with relevant stakeholders to confirm the purpose and requirements, and work collaboratively in order to develop the written work; - clarify and work to a project brief; - plan and acquire the necessary resources to write written material; - develop timelines for completion of written material according to contractual and regulatory requirements; - write original material using technique, form, style, structure, perspective and voice appropriate to the publication media and the requirements of the written material; - develop written material to ensure that plot, characters and theme will engage proposed audience; - comply with relevant copyright and intellectual property requirements; - proofread and edit draft material and discuss modifications with relevant people; - collect feedback regarding draft written material from relevant people by using at least two methods of tracking feedback, and; - follow relevant health and safety practices for work tasks. Students will also be expected to demonstrate the following knowledge: - forms of children's and young adults' written works including but not limited to online blogs, social media posts, junior novels, picture books, graphic texts, non-fiction books, magazine articles and stories, comics, film/TV scripts, game scripts and electronic books; - techniques, stylistic and cultural contexts, purpose and audience which contribute to various forms of children's and young adults written work; - social and ethical impacts of children's and young adults' written work; - delivery platforms used to publish written work, and the particular characteristics of each media type; - characteristics of the leisure and educational markets for written work for young adults and children; - basic proofreading and editing techniques, including the use of style guides; - publishing houses that specialise in works for children; - copyright and intellectual property requirements as they relate to writing and publishing, and; - purpose, use and function of word-processing software.

CUAWRT509 Develop fiction works for publication

Locations: Footscray Nicholson.

Prerequisites: CUAWRT405 - Write fiction material

Description: This unit describes the skills and knowledge required to develop works of fiction suitable for publication. It applies to individuals, working as commissioned or independent writers, who write fiction works. Consideration of the audience and purpose of writing will assist in deciding upon the form and style of the fiction work. Significant planning and preparation prior to writing the fiction work must take place, while guidance from others and careful editing play significant roles in the refining the final product.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate evidence of the ability to write at least one extended written fiction material (8000 words or more) and one smaller written nonfiction material (2500-4000 words), of different forms (e.g. blog, journal, and book), and for each fiction work: - research, discuss and refine a concept for fiction work; - create a proposal to develop the fiction work for a particular purpose and audience; - identify timelines, information and resource requirements for development of fiction

work; - develop an outline of the fiction work; - write and proofread draft fiction work; - check the draft meets purpose and desired outcome; - collect feedback on draft fiction material from relevant people by using at least two methods of tracking feedback; - proofread and edit draft material and discuss modifications with relevant people; - produce a final draft of the fiction work, and; - follow relevant health and safety practices for work tasks. Students will also be expected to demonstrate the following knowledge: - current markets that exist for fiction works; - methods for identifying audiences for fiction works; - strategies and creative processes for developing concepts for fiction works; - criteria used to determine feasibility of concepts; - important features of a proposal to develop a fiction work; - possible ethical, copyright and intellectual property implications of fiction works; - suitable techniques for writing fiction work; - role of style guides when proofreading and editing of publications, and; - purpose, use and function of word-processing software.

CUFCMP301A Implement copyright arrangements

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to implement individual or collaborative copyright arrangements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - numeracy skills sufficient to determine the duration of copyright arrangements; - literacy skills sufficient to read copyright information and to complete copyright documentation; - learning skills sufficient to maintain knowledge of copyright issues; - teamwork skills sufficient to work with collaborators when discussing copyright ownership; - problem solving skills sufficient to recognise problems that arise from copyright ownership discussions and to seek expert advice on solving them, and; - technology skills sufficient to use documentation systems for tracking copyright requirements and for accessing/downloading copyright material. Students will also be expected to demonstrate the following knowledge: - basic understanding of copyright principles/legislation relevant to implementing copyright arrangements; - recognised procedures to determine copyright ownership, and; - function of the Australian Copyright Council as it relates to own work context.

CUFIND201A Develop and apply creative arts industry knowledge

Locations: Online, VETiS.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to develop and apply basic industry practices within the creative arts industries. This unit addresses the collection, application and updating of general information relevant to work roles within the creative arts industry sectors, including industry structures and operations, employment obligations and opportunities, the impact of new technology and the identification of industry laws and regulations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: The following assessment methods are appropriate for this unit: - direct observation of the candidate collecting and organising industry information - case

studies to assess ability to apply knowledge to different industry contexts and situations - written or oral questioning to test knowledge of the different aspects or distinguishing features of the creative arts industries - review of portfolios of evidence and third-party workplace reports of on-the-job performance, including authenticated samples of work in collecting and organising industry information.

CUFIND401A Provide services on a freelance basis

Locations: Industry, St Albans, City King St, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to operate as a freelancer within the creative arts industry. Success as a freelancer requires a high level of self motivation and discipline, an ability to develop industry networks and an entrepreneurial attitude when pursuing work opportunities. Freelancers are usually responsible for negotiating their own contracts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system. School of Personal Services. (2009). Provide services on a freelance basis. Melbourne: Vic Uni

Assessment: Integrated assessment with other units relevant to the industry sector, workplace and job role where the student is required to demonstrate competency with effective preparation of resume and other material to promote ones self to potential clients or employers with the ability to negotiate work contract and develop and maintain industry contacts. To participate in industry networks whilst developing and maintaining an effective financial record keeping system. That takes in account the need for adequate cash flow. 22091 Diploma of Professional Writing and Editing Assessment may include: assignments; classwork; projects; case studies; presentations; demonstration and observation.

CUFRES401A Conduct research

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to conduct research in response to a brief. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - present information and research findings in a way that is easily understood by others; - use industry and community networks as sources of information; - negotiate changes to research briefs; - participate in and act on feedback sessions with colleagues; - follow new leads in the course of research activities; - respond to difficulties encountered during the course of research activities; - organise information logically in line with its intended purpose; - document research findings clearly and concisely; - analytical and literacy skills sufficient to interpret and summarise information and research findings, and; - self-management skills sufficient to work under pressure and meet deadlines. Students will also be expected to demonstrate the following knowledge: - effective communication techniques, including effective listening, questioning and non-verbal cues; - legal issues that affect research activities, e.g. copyright, intellectual property and privacy legislation; - reliable sources of advice on legal issues; - features of

commonly used quantitative and qualitative research methodologies; - protocols to be observed when collecting information of a culturally sensitive nature, and; - OHS standards as they relate to working for periods of time on computers.

CUFWRT301A Write content for a range of media

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to write content for a range of media.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret and clarify written or verbal instructions; - write content in a style appropriate to target users and audience; - communicate information to specific audiences; - structure text-based content effectively for target audiences and delivery format; - work collaboratively in a team environment - both independently on assignment and under direction; - respond positively to constructive feedback; - conceptual skills sufficient to generate a range of text-based content ideas in response to a brief; - technical skills sufficient to: proficiently use word processing tools; check and proofread written content using manual and automated systems, and; - self-management and planning skills. Students will also be expected to demonstrate the following knowledge: - industry knowledge, including: roles and responsibilities of project team members; issues and challenges that arise when writing content; - understanding the way readers scan and read written material; - writing and communication principles for the relevant medium; - writing and presentation techniques for the relevant medium; - sound knowledge of grammar and punctuation; - media laws sufficient to identify defamation and obscenity and seek expert advice on issues that could lead to legal action; - copyright clearance procedures, and; - OHS as it relates to working for periods of time on computers.

CUFWRT401A Edit texts

Locations: Industry, St Albans, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to edit written material. People in editorial roles refine and amend text to enhance the clarity of written communication. They may also be involved in making decisions about the placement of visual material in relation to text. When editing text, they take into account the needs of the readership, the author's intention, available resources and the type of publication. A thorough knowledge of grammar, syntax, spelling and punctuation is essential, along with an eye for detail and a systematic approach to work. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment may include: assignments; classwork; projects; case studies; presentations; demonstration and observation.

CUFWRT402A Write extended stories

Locations: Industry, St Albans.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to write extended stories.

Required Reading: No text required

Assessment: Assessment may include: assignments; classwork; projects; case studies; presentations; demonstration and observation.

CUFWRT601A Write scripts

Locations: Industry, St Albans, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to write scripts for a wide range of creative productions or projects.

Scriptwriters take material from concept proposal, treatment or outline format to final draft ready for production. The script-writing process involves negotiation and mediation, as well as an understanding of working collaboratively with other members of a production or project team. This unit has strong links with: CUFWRT501A Develop storylines and treatments. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment may include: assignments; classwork; projects; case studies; presentations; demonstration and observation.

CUVACD303A Produce technical drawings

Locations: Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to apply a range of techniques to produce technical drawings that meet required standards and conventions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - learning skills to improve own skills in technical drawing; - literacy skills to interpret material required to produce technical drawings; - numeracy skills to interpret and apply calculations and measurements in technical drawing; - planning and organising skills to plan work tasks in a logical sequence; - problem-solving skills to select technical drawing techniques that best suit the purpose and make adjustments as required, and; - self-management skills to complete work within agreed timeframes. Students will also be expected to demonstrate the following knowledge: - physical properties and capabilities of the range of materials, tools and equipment used for technical drawing work; - technical drawing techniques and their application to a range of contexts and subject matter; - technical drawing practices, history and theory, including current standards and conventions; - intellectual property issues and legislation associated with technical drawing work, and; - OHS procedures for technical drawing work.

CUVPRP301A Produce creative work

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes skills and knowledge required to plan and produce creative work in any media through the exploration of ideas and techniques.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: discuss and present ideas for creative work; document the development of creative work; - learning skills to apply feedback to future work and plan skills development; - literacy skills to review information to assist the development of ideas for creative work; - numeracy skills to interpret technical data and calculate quantities and costs; - planning and organising skills to organise resources and work processes; - problem-solving skills to resolve common technical challenges in the given area of practice, and; - technical skills to use techniques specific to the creative form with some proficiency. Students will also be expected to demonstrate the following knowledge: - ways to source information and develop, refine and communicate ideas for creative work; - physical properties and capabilities of the range of materials, tools and equipment used in creative work; - work space requirements for creative work, including ways of organising and maintaining space; - ways of exploring, adapting and combining techniques and materials to achieve different effects; - formal elements and principles of design and their application to the production of creative work in the relevant context; - cleaning and maintenance techniques for tools and equipment used in creative work; - historical and theoretical contexts for creative work; - intellectual property issues and legislation that affect makers of creative work; - sustainability issues associated with tools and materials used in creative work, and; - OHS procedures for the specific area of creative work.

CUVPRP401A Realise a creative project

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to organise and realise a creative project from the development of ideas to the creation of the work. The result may be creative work in any media.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to engage with others about conceptual and technical issues in creative work; - critical thinking and analytical skills to develop ideas and skills from exploration and experimentation; - initiative and enterprise skills to recognise and act on opportunities for refinement; - receive and integrate constructive criticism from others; - engage in

an ongoing process of skills development; - interpret information dealing with complex or abstract ideas; - document work in ways that communicate processes and ideas; - research and evaluate source materials for the development of ideas; - numeracy skills to calculate project costs; - problem-solving skills to identify and respond to conceptual and technical issues in creative work; - self-management and planning skills to organise a creative project, and; - technical skills to apply and adapt specialised skills relevant to the particular creative form. Students will also be expected to demonstrate the following knowledge: - relationship between technique, materials and process in the relevant creative form; - historical and contemporary references in chosen area of practice; - typical problems that occur during the development of a creative project, and how to avoid or resolve them; - commonly used research methodologies for creative practitioners; - current and emerging practices for documenting work in a creative context; - basic project management techniques, particularly in relation to work planning, time management and resource management; - intellectual property issues and legislation associated with professional creative practice; - sustainability issues associated with the tools and materials used in the chosen creative form, and; - OHS procedures in relation to chosen creative form.

CUVPRP405A Develop and discuss ideas for own creative work

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to develop and discuss ideas for creative work. The unit includes research and analysis, as well as the ability to participate in critical and informed discussion with others about creative work.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to engage in informed discussion about potentially abstract ideas; - critical thinking skills to evaluate, distil and select ideas from research; - learning skills to learn from discussion with others, and; - literacy skills to interpret a wide range of source materials for the development of ideas. Students will also be expected to demonstrate the following knowledge: - historical and contemporary references in chosen area of practice; - different ways to communicate and collaborate in creative practice, and; - intellectual property issues and legislation that affect the development of ideas for creative work in the relevant context.

CUVRES401A Research history and theory to inform own arts practice

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to research history and theory for application to artistic practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to engage in discussions about history and theory relevant to own arts practice; - critical thinking skills to analyse and interpret complex and varied references; - initiative and enterprise skills to make connections between own arts practice and conclusions drawn from research; - learning skills to continually monitor sources of information to expand knowledge base; - literacy skills to interpret and summarise information and research findings; - planning and organising skills to document and store research findings in a way that enables easy access in the future, and; - technology skills to access and download information from the internet. Students will also be expected to demonstrate the following knowledge: - sources of information about history and theory relating to own arts practice and the work of others; - information-organisation practices and how they can be applied to own arts practice and the practices of others, and; - intellectual property issues and legislation and how they relate to the use of information in own arts practice.

DHCCCG503 Coach clients to achieve health and wellbeing goals

Locations: Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to work with clients to motivate and empower them to set and achieve their health and wellbeing goals. It requires the ability to establish an effective coach-client relationship, to apply micro-counselling and coaching techniques and to take a collaborative and supportive approach to goal setting and monitoring progress. It also requires the ability to work within professional boundaries, as well as to identify when it is appropriate to refer clients to other health and/or allied health professionals either to achieve their health and wellbeing goals or in response to clients displaying at-risk behaviours during the coaching period. This unit applies to individuals operating within the role and limitations of a health coach. Such individuals may operate in a range of settings, including, but not limited to, community centres, clinical environments, gyms, schools or in their own, autonomous practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - for at least three (3) different people ranging in age and with different health and medical conditions: established an effective coach-client relationship; applied micro-counselling, coaching and behaviour modification techniques specific to the client; demonstrated a collaborative and supportive approach to goal setting and monitoring client progress against agreed goals, and; maintained accurate records of coach-client relationship that comply with organisational requirements; - modified coaching practice and re-evaluated client goals for at least two (2) different people, and; - identified and referred at least one (1) client requiring health and/or allied health professional care. Students will also be expected to demonstrate the following knowledge: - micro-counselling techniques, including but not limited to: eye contact; attending to client; reflective listening, and; establishing acceptance; - communication and negotiation skills to interact effectively, including effective questioning techniques; - motivational interviewing; - behaviour modification techniques for positive outcomes

and increasing positive behaviour; - stages of change models; - collaborative goal setting methods; - coaching techniques; - positive psychology, and; - accessibility factors that impact coaching, including culture, age, disability; - role of other health professionals, including evidence based medical model and complementary/alternative therapies in the health and rehab continuum; - changing role of the client - from passive in the medical model to active model encouraged in coaching (taking on personal responsibility for own health); - key indicators of coaching end points - goal to establish independent functioning; - lifestyle factors that impact on wellness goals, including: high stress; poor time management; unhealthy relationships; lack of work life balance, and; inability to prioritise tasks; and tools to help manage the impact of these factors; - at risk behaviours and indicators of underlying mental health factors including but not limited to depression, anxiety, eating disorders, addictive behaviours, and; - organisational requirements and procedures relating to client referral and maintenance of records relating to the coaching relationship.

DHCCHI501 Collect and evaluate client health information

Locations:Online.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to obtain and evaluate information about client health and medical history for the purposes of understanding the impact of client health on personal health and wellbeing goals. It includes knowing when it is appropriate to refer clients for medical or specialist care. It requires the ability to communicate effectively with clients to obtain and record comprehensive health and medical information and to identify and access credible sources to evaluate the impact of disclosed conditions on client health and wellbeing goals. The unit applies to individuals working directly with clients in the capacity of a health coach to empower them to take control of their health and wellbeing. The skills in this unit must be applied within the individual's own role responsibilities and limitations.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - for at least three (3) different people ranging in age and with different health and medical conditions: collected and correctly evaluated medical and health information with respect to disclosed conditions, impact on general health and wellbeing and on health and wellbeing goals; communicated respectfully and interacted effectively, and; recorded health history and meeting details, and; - identified and referred at least one (1) client requiring medical or specialised care. Students will also be expected to demonstrate the following knowledge: - own role responsibilities and limitations and when to refer clients for medical or specialist care - health information to be collected from clients, including medical clearance for exercise from general practitioner for at risk clients - function of body systems: circulatory and respiratory system; digestive system, and; energy system; - general signs and symptoms of: good health, and; general medical conditions; - a range of: chronic conditions, and; acute health conditions; - health services available to help manage acute and chronic conditions; - approaches to establishing the credibility of sources of health information; - established evidence-based sources of information about health conditions and health

status; - contraindications and risk factors including: blood pressure and acceptable range; allergies/Asthma/Anaphylaxis; hypoglycaemia/diabetic coma; signs of stroke, and; risk of fall - unsteady gait, peripheral neuropathy; - contra-indications to health and wellbeing goals outside of scope of practice of health coach - lifestyle factors influencing health, including but not limited to: smoking; relationship with alcohol; activity level; drug use; dependence on prescription medication; nutritional habits; overweight and obesity; fatigue/sleep patterns, and; stress level; - risks associated with lifestyle factors and common health conditions; - cultural influences impacting on health beliefs and behaviours; - procedure for requesting documented evidence of disclosed medical and health related information and the circumstances under which it is appropriate to make such a request, and; - communication skills to establish rapport and trust.

DHCSEM502 Promote safe exercise and movement

Locations:Online.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to promote healthy and safe exercise and movement habits and to assist clients to set movement and exercise-related goals to improve health and wellbeing. It requires the ability to use clients' medical and health history to identify risks and contraindications to movement and to work with clients to identify individual barriers to movement and to devise and implement strategies to overcome such barriers. It also requires the ability to identify when it is appropriate to refer clients to other health and/or allied health professionals to achieve their health goals. The unit applies to individuals working directly with clients in the capacity of a health coach to empower them to take control of their health and wellbeing. The skills in this unit must be applied within the individual's own role responsibilities and limitations.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - for at least three (3) different people ranging in age and with different health and medical conditions and exercise ability: accurately identified risks and contraindications to movement; discussed options and negotiated exercise and movement goals with reference to client individual health status, preferences and accessibility considerations; negotiated strategies to overcome identified barriers to the achievement of movement goals, and; documented meeting discussion and movement goals and strategies. Students will also be expected to demonstrate the following knowledge: - medications and interactions with exercise; - injury/recent surgery management; - common pain indicators; - common health conditions and chronic diseases: asthma; arthritis; high blood pressure; blood glucose level; cardiovascular disease; diabetes - Type 1 and 2; obesity, and; thyroid disease; - musculoskeletal system and disorders including most common injuries: lower back; shoulder; knee; ankle, and; neck; - common mental health disorders; - commonly used exercise terminology; - benefits of being physically active on health and wellbeing, including mental, physical, emotional and social health; - cultural and religious considerations and implications for physical activity; - impact of poor nutrition; - physical and emotional factors of each life stage; - features and benefits of most common types of exercise; - current and emerging exercise trends; - types and benefits of incidental exercise; - accessibility considerations to be assessed when exploring client movement experiences and preferences including, but

not limited to: geographical location; transport options; financial options, and; time available; - barriers to the achievement of movement goals; - goal setting techniques; - communication and negotiation skills to interact effectively; - risks and contraindications to movement; - organisational requirements and procedures relating to the maintenance, and; - client consultation records.

EN011 English 1

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: In this unit, students read and respond to texts analytically and creatively. They analyse arguments and the use of persuasive language in texts and create their own texts intended to position audiences. In Area of Study 1, students explore how meaning is created in a text. Students identify, discuss and analyse decisions authors have made. They explore how authors use structures, conventions and language to represent characters, settings, events, explore themes, and build the world of the text for the reader. Students investigate how the meaning of a text is affected by the contexts in which it is created and read. In Area of Study 2, students focus on the analysis and construction of texts that attempt to influence an audience. Students read a range of texts that attempt to position audiences in a variety of ways. They explore the use of language for persuasive effect and the structure and presentation of argument. They consider different types of persuasive language, including written, spoken, and visual, and combinations of these, and how language is used to position the reader. This unit is delivered in Year 11.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to produce analytical and creative responses to texts. Outcome 2 On completion of this unit the student should be able to analyse how argument and persuasive language can be used to position audiences, and create their own texts intended to position audiences. Assessment will follow the requirements set out in the VCE English and English as an Additional Language Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of two outcomes. As a set these outcomes encompass all areas of study in the unit.

EN012 English 2

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: In this unit students compare the presentation of ideas, issues and themes in texts. They analyse arguments presented and the use of persuasive language in texts and create their own texts intended to position audiences. In Area of Study 1, students explore how comparing texts can provide a deeper understanding of ideas, issues and themes. They investigate how the reader's understanding of one text is broadened and deepened when considered in relation to

another text. Students explore how features of texts, including structures, conventions and language convey ideas, issues and themes that reflect and explore the world and human experiences, including historical and social contexts. Students practise their listening and speaking skills through discussion, developing their ideas and thinking in relation to the texts studied. In Area of Study 2, students build on their understanding of argument and the use of persuasive language in texts that attempt to influence an audience. Students consider a range of texts where the primary purpose is to convince an audience to share a point of view. They develop an understanding of how texts are constructed for specific persuasive effects by identifying and discussing the impact of argument and persuasive language used to influence an audience. This unit is delivered in Year 11.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to compare the presentation of ideas, issues and themes in two texts. Outcome 2 On completion of this unit the student should be able to identify and analyse how argument and persuasive language are used in text/s that attempt to influence an audience, and create a text which presents a point of view. Assessment will follow the requirements set out in the VCE English and English as an Additional Language Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of two outcomes. As a set these outcomes encompass all areas of study in the unit.

EN013 English 3

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: In this unit students read and respond to texts analytically and creatively. They analyse arguments and the use of persuasive language in texts. In Area of Study 1, students identify, discuss and analyse how the features of selected texts create meaning and how they influence interpretation. In identifying and analysing explicit and implied ideas and values in texts, students examine the ways in which readers are invited to respond to texts. They develop and justify their own detailed interpretations of texts. In Area of Study 2, students analyse and compare the use of argument and language in texts that debate a topical issue. The texts must have appeared in the media. Students read and view media texts in a variety of forms, including print, non-print and multimodal, and develop their understanding of the way in which language and argument complement one another in positioning the reader. This unit is delivered in Year 12.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical

application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to produce an analytical interpretation of a selected text, and a creative response to a different selected text. Outcome 2 On completion of this unit the student should be able to analyse and compare the use of argument and persuasive language in texts that present a point of view on an issue currently debated in the media. Assessment will follow the requirements set out in the VCE English and English as an Additional Language Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 3 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 25 per cent to the study score. SAC for Unit 4 will contribute 25 per cent to the study score (EN014 English 4). EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 50 per cent to the study score.

EN014 English 4

Locations: Footscray Nicholson.

Prerequisites: EN013 - English 3

Description: In this unit students compare the presentation of ideas, issues and themes in texts. In Area of Study 1, students explore the meaningful connections between two texts. They analyse texts, including the interplay between character and setting, voice and structure, and how ideas, issues and themes are conveyed. By comparing the texts, they gain a deeper understanding of the ideas, issues and themes that reflect the world and human experiences. In Area of Study 2, students build their understanding of both the analysis and construction of texts that attempt to influence audiences. They use their knowledge of argument and persuasive language as a basis for the development of their own persuasive texts in relation to a topical issue that has appeared in the media. This unit is delivered in Year 12.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to produce a detailed comparison which analyses how two selected texts present ideas, issues and themes. Outcome 2 On completion of this unit the student should be able to construct a sustained and reasoned point of view on an issue currently debated in the media. Assessment will follow the requirements set out in the VCE English and English as an Additional Language Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 4 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 25 per

cent to the study score (EN013 English 3). SAC for Unit 4 will contribute 25 per cent to the study score EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 50 per cent to the study score.

EN023 English (NHT) 3

Locations: Footscray Nicholson.

FBPOPR3002 Prepare food products using basic cooking methods

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: FDFFS2001A - Implement the food safety program and procedures

Description: This unit of competency describes the skills and knowledge required to prepare food products using basic cooking methods. This unit applies to individuals who work under broad direction and take responsibility for their own work in a food processing environment. All work must be carried out to comply with workplace procedures, in accordance with State/Territory work health and safety, and food safety regulations, legislation and standards that apply to the workplace.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and accessing ingredients; - reading and interpreting recipe requirements; - safely and correctly using work utensils and equipment; - interpreting numerical information on quantities and conducting measurements; - applying safe work and food safety standards; - selecting, fitting and using personal protective clothing and equipment; - planning operations; - applying cooking method to achieve quality standards for food item; - identifying cooking problems and taking corrective action, including reporting abnormalities or problems, repeating processes and/or making required adjustments; - maintaining work area to meet housekeeping standards, and; - following relevant work health and safety procedures. Students will also be expected to demonstrate the following knowledge: - uses and characteristics of basic food ingredients; - major food groups and classifications; - range of ingredients typically used in the workplace and their characteristics and effect on food quality and taste; - principles of basic cookery; - food safety standards in the workplace; - common terminology used in cooking; - maintenance requirements for knives and other utensils; - basic cooking methods and their effect on quality, taste and nutritional value, and; - waste minimisation and environmental considerations related to preparing food products using basic cooking methods.

FBPRBK2002 Use food preparation equipment to prepare fillings

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to prepare fillings for use in bread, cake or pastry products using food preparation equipment in a commercial baking environment. The unit applies to individuals who undertake routine work under supervision. This includes identifying and providing solutions to a limited range of predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing and using the following ingredients in fillings: fruit; meat and vegetables or poultry and vegetables; dairy; - preparing the following three types of fillings: cold fruit filling; hot meat and vegetables or hot poultry and vegetables filling; hot custard filling; - checking condition of ingredients used; - using the following nine items of food preparation equipment: knife sharpening steels or stones; cook's knife; paring knife; scales; peelers, corers or slicers; thermometers; fine or coarse stainless steel wire whisks; cutting boards and cooking pots; - preparing and cutting fruits and vegetables; - boiling; - shallow frying (pan-fry, sauté or stir-fry), and; - microwaving. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment (PPE), applicable to using food preparation equipment to prepare fillings; - food safety conditions applicable to using food preparation equipment to prepare fillings; - types and storage requirements of ingredients; - cookery methods, including: boiling; shallow frying, including pan-fry, sauté or stir-fry and microwaving; - meaning and role of mise en place in the process of preparing and cooking fillings; - procedures for storing fillings, including refrigeration, freezing and shelf-life; - techniques for preparing and cutting fruit and vegetables; - time and temperature requirements; - safe use and functions of food preparation equipment; - techniques for measuring ingredients; - typical cooking parameters; - required characteristics of fillings; - typical filling preparation faults; - contamination and cross-contamination risks associated with ingredients and processes; - techniques for cleaning equipment for food preparation; - techniques for cleaning the work area used for food preparation; - techniques for disposing of waste from food preparation, and; - filling and filling preparation terminology. .

FBPRBK3001 Produce laminated pastry products

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to produce laminated pastry products using pastry fats in a commercial baking environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing laminated puff or flaky pastry from scratch ingredients using two lamination styles and fat incorporation methods; - producing the following five laminated pastry products: sweet filled laminated pastry slice; vegetable filled product; meat filled product; cream or custard filled product and fruit filled product; - using the following two ratios of fat to flour: 50% half puff and 75% three quarter puff; - using the following two folding techniques: three fold and book fold; - using the following four finishing

techniques; - producing four ingredients for filling laminated pastry products; - incorporating the following seven processes: folding; sheeting; laminating; filling; glazing; baking and finishing/decorating; - using two types of equipment for folding; - selecting, using and cleaning the pastry cooking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning, and; - documenting the production schedule. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment (PPE), applicable to producing laminated pastry products; - safe use and cleaning of pastry cooking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing laminated pastry products, including temperature control and prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products; - considerations for production scheduling; - characteristics and storage requirements of ingredients used in laminated pastry production; - mixing methods for laminated pastry; - fat ratios and incorporation into laminated pastry; - development of protein; - methods for folding pastry; - purpose, techniques and requirements for finishing; - settings for baking for pastry product types; - techniques to identify and rectify causes of shrinkage and its effect on the end product; - techniques for retrieval of scrap, blending with unworked pastry and disposing of waste, and; - laminated pastry production terminology.

FBPRBK3002 Produce non laminated pastry products

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to produce non laminated pastry products using pastry fats in a commercial baking environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing three non laminated pastry types from scratch; - producing five non laminated pastry products; - applying four finishes to non laminated pastry products; - using five fillings: meat filling; vegetable filling; fruit filling; custard filling and cream filling; - using three mixing methods; - using seven production processes; - selecting, using and cleaning the pastry cooking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning, and; - documenting the production schedule. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment (PPE), applicable to producing non laminated pastry products; - safe use and cleaning of pastry cooking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing non laminated pastry products, including temperature control and prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products; - considerations for production scheduling; - storage and serving temperatures of finished non laminated products used; - characteristics and storage requirements of

ingredients used in non laminated pastry production; - types, functions, settings, safety features, safe use and cleaning of pastry cooking equipment listed in the range of conditions, including electrical hazards and risk controls applicable to cleaning; - preparing and storing fillings; - mixing methods for producing non laminated pastry products; - processes and techniques for producing non laminated pastry products; - causes and corrective action for predictable and sometimes unpredictable non laminated pastry production problems; - techniques for retrieval of scrap, blending with virgin and disposing of waste, and; - non laminated pastry production terminology.

FBPRBK3004 Produce meringue products

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to produce meringue products in a commercial baking environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing the following three meringue types: French meringue using cold meringue method; Swiss meringue using warm meringue method; Italian meringue using hot meringue method; - producing the following four meringue-based products: meringue-based gateaux or torte; meringue gamish or figurine; meringue-based confection; meringue-based dessert; - using the following three creams and icings: chocolate ganache; chocolate glaze; butter cream; - using the following four decorated finishes: fruit decorated; cream decorated; chocolate decorated; scorched meringue, and; - selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning documenting the production schedule. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment (PPE), applicable to producing meringue products; - safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing meringue products; - considerations for production scheduling; - characteristics and processes of meringue types; - types of meringue-based products; - using butter creams, ganache and glazes; - types, functions and characteristics of ingredients used in meringue products production; - processes for producing meringue products; - requirements for finishing; - purpose and functions of production settings; - techniques for testing bake of meringue by feel and sight; - required characteristics of meringue products; - causes and corrective action for predictable and sometimes unpredictable meringue production problems, and; - meringue product terminology.

FBPRBK3005 Produce basic bread products

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to

produce basic bread products in a commercial baking environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading:Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - mixing and using three dough types; - producing two basic bread types; - producing six bread product varieties and shapes; - retarding one of the following three product types produced: soft/enriched bread roll variety; crusty/lean bread roll variety and crusty/lean loaf - plaited, Vienna, French stick or cob; - selecting and using tins and trays appropriate for dough piece scale weight, volume and size; - using eight moulding techniques; - using four bread dough finishing techniques; - using five baking techniques; - selecting, using and cleaning the bread baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning, and; - documenting the production schedule. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment, applicable to producing basic bread products; - safe use and cleaning of bread baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements applicable to producing basic bread products; - techniques and considerations for production scheduling; - functions and characteristics of ingredients used in basic bread production; - mixing processes and gluten development for basic bread doughs; - sequencing of the rapid or no time basic bread production processes; - purpose and techniques for pre-bake finishing basic breads; - characteristics and techniques for moulding basic bread doughs; - impacts of factors on production of different retarded basic bread products; - techniques for calculating yields, adjusting recipes, converting units of measurement and measuring ingredients; - techniques for selecting tins and trays appropriate for dough piece scale weight, volume and size; - required baked characteristics of basic bread products; - the effects of common bread faults in basic bread production; - techniques for disposing of waste from bread production, and; - basic bread production terminology.

FBPRBK3006 Produce savoury bread products

Locations:Industry, Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit of competency describes the skills and knowledge required to produce savoury bread products in a commercial baking environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading:Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing the six types of savoury bread products: savoury flat bread; savoury bread loaf; savoury bread roll; savoury filled bread; savoury steamed bread and savoury unleavened product; - processing one savoury bread product as a retarded product; - meeting one of the following two ingredient-specific special dietary requirements in one of the above savoury bread products: vegetarian or vegan; - meeting one of the four religious special dietary needs in one of the above savoury bread products: Buddhism; Hinduism; Islam or Judaism; - mixing and using three types of dough mixes: instant/scratch mix/no time dough; bulk ferment dough and unleavened dough; - meeting two food safety requirements: identifying temperature control points of savoury ingredients used and handling and storing savoury ingredients and products; - preparing and adding five types of filling and topping ingredients; - adding the savoury fillings and toppings to savoury bread doughs using the following three methods: incorporating into dough during mixing; incorporating on top of savoury dough prior to baking and using the savoury filling as a filling inside savoury bread; - selecting, using and cleaning the savoury bread baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning; - selecting and using tins and trays appropriate for dough piece scale, weight, volume and size, and; - documenting a production schedule, including the following seven considerations. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment, applicable to producing savoury bread; - safe use and cleaning of bread baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing savoury bread products, including temperature control and prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products; - nature of special dietary requirements suitable for savoury bread products; - nature of religious special dietary needs as they relate to savoury products; - nature of ingredient-specific special dietary needs as they relate to savoury products, including: vegetarian and vegan; - techniques and considerations for production scheduling; - safe handling, shelf life and storage requirements of ingredients used in savoury bread production; - effects of seasonal changes on dairy products; - storage requirements for: cooked savoury fillings and cold savoury fillings; - principles of the production processes; - purpose and principles of the bulk fermentation process; - techniques for retarding savoury bread products; - impacts on production of the following: salted ingredients and stability of breads using savoury products; - required characteristics of savoury bread products, including: visual appeal and flavour; - techniques for disposing of waste from bread production, and; - savoury bread production terminology.

FBPRBK3007 Produce specialty flour bread products

Locations:Industry, Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit of competency describes the skills and knowledge required to produce specialty flour bread products in a commercial baking environment. Specialty flour bread products include organic flour breads, non-wheat flour breads, gluten-free breads, rye breads, whole grain flour breads and wholemeal breads. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading:Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing six types of specialty flour bread products; - mixing and using the following three doughs: scratch mix/no time/instant dough; bulk ferment sour doughs and all in mix; - using the following five product shapes: baton/Vienna; boule/cob; loaf; rolls and specialty shape; - using one of the following five sourdoughs for rye bread: lactic sour; acetic sour; natural sour; powdered sour and liquor sour; - incorporating pre-soaked grain into grain bread; - finishing bread using the following four finishing methods: post-prove scoring; seeding; dusting and steaming; - selecting, using and cleaning the bread baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning; - selecting and using bread shaping equipment, tins and trays appropriate for dough piece scale, weight, volume and size, and; - documenting the production schedule. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment, applicable to producing specialty flour bread products; - safe use and cleaning of bread baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food applicable to producing specialty flour bread products; - considerations for production scheduling; - types, characteristics and storage requirements of ingredients used in specialty flour bread production; - hydration rates for grain breads and wholemeal breads, and purpose and techniques for the soaking of grains; - benefits of organics in flours; - nature of special dietary requirements and gluten intolerance as they relate to dietary-suitable flours and specialty flour bread products; - reformulation of grain and fibre breads; - mixing processes and mixing outcomes for: scratch mix/no time/instant dough; bulk ferment sour doughs; all in mix; specialty flour doughs and rye breads; - principles of processing and hearth baking specialty flour breads; - techniques for producing rye breads; - processing and baking techniques required for using specialty flours; - impacts on production; - techniques for selecting tins and trays appropriate for dough piece scale weight, volume and size; - causes and corrective action for predictable and sometimes unpredictable specialty flour bread production problems; - techniques for disposing of waste from bread production, and; - specialty flour bread production terminology.

FBPRBK3008 Produce sponge cake products

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to produce and finish sponge cake products in a commercial baking environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing four types of

sponge products; - mixing and using the following two sponge cake batters: mixing scratch mix sponge with or without emulsifier and mixing premix sponge; - incorporating four sponge cake processing techniques; - selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning; - finishing and decorating using the following four methods: masking and combing; splitting and filling; applying piped finishes with cream or icing and garnishing; - adding creams and icings: fresh cream or imitation cream; icing or basic butter cream; - applying two of the following four piped finishing types: rosettes; scrolls; rope and swirls; - preparing and using chocolate decorations, and; - documenting the production schedule, including the following six considerations. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment, applicable to producing sponge products; - safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing sponge cake products; - techniques and considerations for production scheduling; - characteristics and storage requirements of ingredients used in sponge products production; - determining the correct quantity of colourings and flavourings to match sponge batter size; - selecting and preparing tins and trays to match sponge cake types; - recipe formulations for sponge cake; - processes required for producing sponge cake batters; - preparation and applications of finishes; - storage requirements for finished sponge cake products; - techniques for testing bake of sponge by feel and sight; - causes and corrective action for predictable and sometimes unpredictable sponge cake production problems; - techniques for disposing of waste, and; - sponge products production terminology.

FBPRBK3009 Produce biscuit and cookie products

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to produce and finish biscuit and cookie products in a commercial baking environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. Food safety legislation applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with their food safety authority for specific requirements.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing the four types of biscuit and cookie products: deposited cookie; piped shortbread; cut or portioned rolled biscuit and moulded and portioned biscuit; - using three biscuit and cookie mixing methods: creamed method; whisked method and melted method; - applying the following nine production processes: piping shortbread; depositing; conditioning fruit; roasting nuts; cutting biscuits with cutters; rolling biscuit dough; moulding biscuit dough; portioning biscuit doughs and inclusion of glace fruits or nuts into biscuit and cookie doughs; - selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning; - applying five finishing and decorating methods; - using three finishing ingredients: fondant icing; melted chocolate and icing sugar, and; - documenting the

production schedule. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment, applicable to producing biscuit and cookie products; - safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing biscuit and cookie products; - considerations for production scheduling; - characteristics and storage requirements of ingredients used in biscuit and cookie products production; - preparing and using finishes; - processes and techniques for producing biscuit and cookie products; - techniques for preparing tins and trays to match biscuit and cookie types; - mixing processes for: creamed method and whisked method; - shelf life of biscuit and cookie products; - purpose and functions of baking settings; - techniques for testing bake of biscuit and cookie by feel and sight; - required characteristics of biscuit and cookie products; - causes and corrective action for predictable and sometimes unpredictable biscuit and cookie production problems; - techniques for disposing of waste from biscuit and cookie production, and; - biscuit and cookie products production terminology.

FBPRBK3010 Produce cake and pudding products

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to produce and finish cake and pudding products in a commercial baking environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing and decorating the following six cake and pudding product varieties: fruit cake decorated with fondant or plastic icing; steamed pudding; flavoured bar cake decorated with icing; cake slice decorated with icing or glaze; flavoured cupcake or muffin and special dietary cake; - producing specialty dietary cake; - using three cake and pudding mixing methods; - using five production processes and techniques: depositing cake and pudding batter; steaming of puddings; baking of cakes; conditioning of dried fruit and portioning and slicing of cakes and slices; - using two decorating and finishing techniques; - conditioning of dried fruit for use in batter; - selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning, and; - documenting the production schedule. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment, applicable to producing cake and pudding products; - safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing cake and pudding products; - considerations for production scheduling; - types, functions and storage requirements of ingredients as used in cake and pudding products production; - special dietary requirements for cakes, including both vegan and gluten-free; - techniques for preparing tins and trays to match cake and pudding types; - ingredient ratios and mixing processes; - processes for producing cake and pudding products; - types of finishing mediums,

including: icings; glazes and RTR icing, fondant and plastic icing; - techniques for portioning cakes and cake slices to suit end-product and finishing requirements; - shelf life of cakes and puddings; - techniques for selecting tins and trays appropriate for cake and pudding product size and shape; - purpose and functions of production settings: oven temperatures to match richness of cakes; baking times to match richness of cakes and steaming times and temperatures for pudding batter type and volume; - techniques for testing bake of cakes and puddings by feel, sight and skewer; - causes and corrective action for predictable and sometimes unpredictable cake and pudding production problems; - techniques for disposing of waste from cake and pudding production, and; - cake and pudding products production terminology. .

FBPRBK3011 Produce frozen dough products

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: FBPRBK3005 - Produce basic bread products

Description: This unit of competency describes the skills and knowledge required to produce frozen dough products in a commercial baking environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing the following five frozen dough baked products: laminated frozen dough product; basic bread frozen dough product; sweet yeast bread frozen dough product; specialty flour bread frozen dough product; chemical leavened frozen dough; - incorporating the following four frozen dough processes: ready-to-prove frozen dough; ready-to-bake frozen dough; par baked frozen dough; finishing frozen dough; - using one of the following two simple fillings: simple sweet filling; simple savoury filling; - producing the following four product shapes: baguette; round or long roll; croissant or danish; cut or portioned; - producing the following three product styles: decorated frozen dough; undecorated frozen dough; undecorated par baked dough; - finishing the products using the following four techniques: dusting; glazing; piping; scoring; - selecting tins and trays appropriate for dough piece scale weight, volume and size; - selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning, and; - documenting the production schedule. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment, applicable to producing frozen dough products; - safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing frozen dough products, including temperature control; - techniques and considerations for production scheduling; - characteristics and storage requirements of frozen dough types; - functions and characteristics for frozen and par baked dough ingredients; - principles and techniques of freezing doughs; - principles of thawing frozen and par baked doughs; - types, functions, safe use, cleaning and freezing capacity of dough freezing equipment; - handling requirements for made-up and proved doughs to preserve dough structure; - impacts of factors on production of different frozen dough

products; - techniques for calculating yields, adjusting recipes and measuring ingredients; - causes and corrective action for predictable and sometimes unpredictable frozen dough product production problems; - techniques for disposing of waste from frozen dough product production, and; - frozen dough product production terminology.

FBPRBK3014 Produce sweet yeast products

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to produce sweet yeast products in a commercial baking environment. Sweet yeast products include enriched breads and fruited enriched breads. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing the following five enriched sweet yeast products: filled sweet yeast product; fruited sweet yeast product; spiced sweet yeast bun or loaf; cream decorated sweet yeast bun and iced decorated sweet yeast bun; - mixing and using the following three enriched doughs: premix dough; instant dough/no time dough/scratch mix dough and bulk ferment dough; - using retarding for one of the sweet yeast doughs listed above; - using the following six moulding techniques: rounding; batons; degassing; curling/rolling; sealing and scrolls; - using the following three finishing and decorating techniques: using cream to decorate sweet yeast product and using icing to decorate sweet yeast product and using fondant to decorate sweet yeast product; - selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning; - selecting tins and trays appropriate for dough piece scale, weight, volume and size, and; - documenting the production schedule. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment, applicable to producing sweet yeast products; - safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing sweet yeast products; - considerations for production scheduling; - recipe ratios and limits for enriched doughs; - types, functions, characteristics, and storage requirements of ingredients; - purpose and techniques for the cleaning, conditioning and use of fruits; - ingredient interactions for sweet yeast products; - characteristics of sweet yeast products; - mixing processes and gluten development for enriched doughs; - principles of the sweet yeast production processes; - techniques and requirements for finishing sweet yeast products; - impacts on production of different sweet yeast products, including: dough temperature; mixing time and gluten development; water addition and consistency of dough and yeast activity; - techniques for calculating yields, adjusting recipes and measuring ingredients; - techniques for selecting tins and trays appropriate for dough piece scale weight, volume and size; - purpose and functions of sweet yeast settings; - required characteristics of sweet yeast products, including:

crumb softness; shelf life; flavour and visual appearance, and; - causes and corrective action for predictable and sometimes unpredictable sweet yeast problems.

FBPRBK3015 Schedule and produce bakery production

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to schedule and produce bakery production in a commercial baking environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing ten baked product types; - producing seven of the following twelve baked product types: crusty loaf with no more than 2% enriching agents that is plaited, Vienna, French stick or cob; soft/enriched bread roll variety; crusty/lean bread rolls varieties; fruited sweet yeast product; savoury flat breads; fried basic artisan product as decorated donuts; wholemeal breads; sponge roll; cake slice decorated with icing or glaze; moulded and portioned biscuit; sweet filled pastry slice and filled sweet non laminated pies or tarts; - mixing, processing, baking and finishing each of the following four types of baked products per shift: bread; cake or sponge; cookie or biscuit and laminated or non laminated pastry; - monitoring operations and addressing variations to the production schedule, ensuring end-product specifications and production targets are met; - documenting and implementing four daily production schedules, including the following production scheduling considerations, and; - documenting production reports for each of the four shifts that include: scheduling efficiencies for use of equipment and labour in relation to items produced; wastage efficiencies of products produced; improvements on the scheduling to meet performance; product quantities produced in relation to products scheduled; completion times of product and product quality outcomes. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements applicable to scheduling and producing bakery products; - regulatory requirements for food safety applicable to producing bakery products, including temperature control and the prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products; - considerations relevant to scheduling bakery production; - considerations relevant to reporting on production outcomes; - techniques used to regulate dough and batter maturation and proving; - predictable causes of production variation and their likely impact on production targets; - production processes for different product ranges, and; - baking industry terminology relevant to production scheduling.

FBPRBK3018 Produce basic artisan products

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to produce basic artisan products in a commercial baking environment. Basic artisan products include European basic artisan products, cultural basic artisan products, laminated basic artisan products, fried basic artisan products, highly enriched basic

artisan products and festive occasion basic artisan products. This unit applies to individuals who apply a broad range of specialised knowledge and skills with responsibility for their own work. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading:Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing seven basic artisan products; - processing one of the above basic artisan bread products as a retarded product; - mixing and using the following three doughs: instant dough/scratch mix/no time dough; ferment and salted/dead display dough; - using the following three moulding techniques: hand moulding; machine moulding and laminating yeast dough; - using the following two finishing techniques: pre-bake finishing using pastes, washes or glazes and using creams, icings, chocolate or fondant to finish baked or fried product; - selecting, using and cleaning the basic artisan baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning; - selecting and using tins and trays appropriate for dough piece scale, weight, volume and size, and; - documenting the production schedule, including the following six considerations: timings; volume requirements; product processing requirements; recipe reformulation to minimise waste; finishing requirements for basic artisan product and baked parameters for basic artisan product. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment, applicable to producing basic artisan products; - safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing basic artisan products; - considerations for production scheduling; - functions and characteristics of ingredients used in basic artisan production; - processes for making: instant dough/scratch mix/no time dough; ferments and display doughs; - principles of retarding basic artisan products; - mixing processes and gluten development for: highly enriched doughs; laminated doughs and display doughs; - types and use of pre-baked finishing for basic artisan products; - types and use of post-baked finishing for basic artisan products; - techniques for shaping basic artisan products; - storage and shelf life of basic artisan products; - processing techniques for laminated doughs; - processing of dough for display purposes; - techniques for calculating yields, adjusting recipes and measuring ingredients; - purpose and functions of basic artisan baking and frying processes; - causes of and corrective action for predictable and sometimes unpredictable basic artisan production problems; - techniques for disposing of waste from basic artisan product production, and; - basic artisan product production terminology.

FBPRBK4003 Produce gateaux, tortes and entremets

Locations: Industry, Footscray Nicholson, Online.

Prerequisites:FBPRBK3010 - Produce cake and pudding products

Description:This unit of competency describes the skills and knowledge required to produce and finish gateaux, tortes and entremets in a commercial baking or hospitality environment. This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying

and communicating known solutions to predictable problems. All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

Required Reading:Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing the following three products: gateaux; torte; small entremets; - presenting entremets on plateware appropriate for the entremets type, with the following three finishes: using a sauce or coulis to present entremets; using a garnish of sugar or chocolate to present entremets; using an ice cream or sorbet to present with entremets; - producing gateaux and tortes using the following two bases made from scratch ingredients: non laminated or laminated pastry; cake; - using the following three processes for producing gateaux, tortes and entremets: chilling; freezing; baking; - using the following eight fillings and finishes prepared from scratch ingredients: sabayon or custard; aerated creams; chocolate-based glazes or sauces; tempered couverture chocolate; fruit fillings; bavaois or mousse; meringue or butter cream; chocolate or sugar garnishes; - using the following three decorating techniques for gateaux and tortes: couverture chocolate; glazing; prepared garnishes; - using the following three garnishes: chocolate garnishes; sugar garnishes; baked garnish; - selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning, and; - documenting the production schedule. Students will also be expected to demonstrate the following knowledge: - workplace health and safety requirements, including personal protective equipment, applicable to producing gateaux, tortes and entremets; - safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards; - regulatory requirements for food safety applicable to producing gateaux, tortes and entremets; - considerations for production scheduling; - distinguishing characteristics of types of gateaux, tortes and entremets; - types of fillings and finishes; - techniques for presenting entremets; - techniques for finishing; - assembling gateaux, tortes and entremets; - preparing cake tins and hoops; - purpose and functions of production settings; - required characteristics of gateaux, tortes and entremets; - causes and corrective action for predictable and sometimes unpredictable production problems; - techniques for disposing of waste from product production; - requirements for chilling and freezing gateaux, tortes and entremets, and; - product production terminology for gateaux, tortes and entremets.

FDFFS2001A Implement the food safety program and procedures

Locations: Industry, Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit of competency covers the skills and knowledge required to maintain personal hygiene and conduct food handling, housekeeping and waste disposal related to work tasks and responsibilities where work involves operation of production and/or packaging equipment and processes.

Required Reading:Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to

provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locate and follow workplace information; - follow workplace procedures; - monitor food safety hazards; - record results of monitoring, and maintain records; - identify and report situations that do not meet the requirements of the food safety program; - take corrective action as required by food safety program; - handle, clean and store equipment, utensils, packaging materials and similar items; - maintain personal hygiene; - take necessary precautions when moving around the workplace; - wear and maintain appropriate clothing/footwear; - report health conditions and illness as appropriate; - handle and dispose of out-of-specification or contaminated food, waste and recyclable material; - maintain the work area in a clean and tidy state; - identify and report signs of pest infestation; - record food safety information in appropriate format; - clean and sanitise equipment according to enterprise procedures; - collect samples and conduct tests; - participate in investigating food safety breaches; - use oral communication skills/language competence to fulfil the job role, and; - work cooperatively within a culturally diverse workforce. Students will also be expected to demonstrate the following knowledge: - sources of information and expertise on procedures and responsibilities for food safety; - basic concepts of HACCP-based food safety; - food safety management arrangements in the workplace; - awareness of common microbiological, physical and chemical hazards related to the foods handled in the work area; - basic understanding of the properties, handling and storage requirements of ingredients, materials and products handled and used; - suitable standard for materials, measuring devices, equipment and utensils used in the work area; - food safety requirements related to work responsibilities; - methods used to monitor that food safety is under control; - action required in the event of non-compliance; - purpose of keeping records and the recording requirements of the food safety program; - methods used in the workplace to isolate or quarantine food which may be unsafe; - product and ingredient traceability procedures; - clothing and footwear requirements for working in and/or moving between food handling areas; - personal clothing maintenance, laundering and storage requirements; - appropriate bandages and dressings to be used when undertaking food handling; - housekeeping requirements and responsibilities relating to own work; - procedures to follow in the event of pest sighting or discovery of infestation; - purpose and importance of cleaning and sanitation procedures; - waste collection, recycling and handling procedures relevant to own work responsibilities; - cleaning and sanitation procedures; - impact of rework handling/addition on food safety, and; - sampling and test methods.

FDFOHS2001A Participate in OHS processes

Locations: Industry, Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit of competency specifies the workplace performance required for an entry level employee to participate in occupational health and safety (OHS) processes in the workplace, in order to ensure their own health and safety at work, as well as that of those in the workplace who may be affected by their actions.

Required Reading: Not applicable. This unit is assessed through Skilled Migration Assessment Services (SMAS) only.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - follow clear, logical verbal or clear, logical Plain English written instructions; - interpret selected pictorial/graphical and written signs/instructions; - clarify meaning with peers and supervisors; - give

accurate verbal or written descriptions of incidents or hazards, and; - participate in OHS activities, including inspections, meetings and risk assessments. Students will also be expected to demonstrate the following knowledge: - applicable commonwealth, state or territory OHS legislation, regulations, standards, codes of practice and industry standards/guidance notes relevant to own work, role and responsibilities; - safety signs and their meanings, including signs for: personal protective equipment; emergency equipment; dangerous goods class signs and specific hazards, such as sharps and radiation; - legal rights and responsibilities of the workplace parties; - the difference between hazard and risk; - nature of common workplace hazards, such as chemicals, bodily fluids, sharps, noise, manual handling, work postures, underfoot hazards and moving parts of machinery; - standard emergency signals, alarms and required responses; - the elements within the hierarchy of control; - safety measures related to common workplace hazards; - sources of OHS information in the workplace; - the roles and responsibilities of employees, supervisors and managers in the workplace; - roles and responsibilities of OHS representatives, OHS committees and employers, and; - workplace specific information, including: hazards of the particular work environment; potential emergencies relevant to the workplace; designated person for raising OHS issues; organisation and work procedures particularly those related to performance of own work, specific hazards and risk control, reporting of hazards, incidents and injuries, consultation, use of personal protective equipment and emergency response and potential emergency situations, alarms and signals, and required response.

FDFOF2061A Use numerical applications in the workplace

Locations: Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to apply basic mathematical functions of addition, subtraction, multiplication and division to undertake workplace calculations or to estimate approximate answers when exact calculations are not required.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify whether a calculation or estimation is required to meet workplace requirements; - carry out calculations involving basic addition, subtraction, division and multiplication to support work role (this may involve use of a calculator and conversion tables where required); - use estimation techniques to check quantities, ratios, speed and other required data estimates; - use estimation techniques to check calculated results and workplace data; - record calculations and measurement information accurately according to enterprise procedures; - use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor, and; - work cooperatively within a culturally diverse workforce. Students will also be expected to demonstrate the following knowledge: - mathematical processes, including addition, subtraction, multiplication and division; - application of calculation and estimation techniques to meet work requirements; - units of measurement used in the workplace, including whole numbers, fractions and decimals (to one decimal point) (this may include use of conversion charts); - representation of numerical information relevant to work

requirements, such as charts, graphs and tables, and; - recording requirements and responsibilities where relevant.

FNSACC301 Process financial transactions and extract interim reports

Locations: Footscray Nicholson, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to prepare and process routine financial documents, prepare journal entries, post journals to ledgers, prepare banking and reconcile financial receipts, and extract a trial balance and interim reports. It applies to individuals who use specialised knowledge and follow agreed processes to carefully check and process detailed financial information to ensure standards are maintained. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - accurately enter and balance deposits and withdrawals; - process and balance petty cash transactions; - check and verify supporting documentation; - apply relevant security measures for preparing and banking receipts; - batch monetary items and prepare deposit facilities; - accurately enter data into accounting systems and process journal entries according to organisational policy and procedures and legislative requirements; - prepare and authorise journals and check journal processing reports; - extract, check and correct a trial balance, and; - file documentation to meet all organisational and regulatory requirements. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify a range of accounting conventions, processes and procedures; - describe banking procedures and guidelines; - outline typical errors that can be made in processing financial transactions; - describe forms of 'proof of lodgement'; - describe types of 'special transactions'; - industry codes of practice; - legislative and regulatory requirements relevant to the work; - organisational policy and procedures; - explain the security procedures for handling cheques, vouchers and cash, and; - describe the key features of a range of reports.

FNSACC311 Process financial transactions and extract interim reports

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to prepare and process routine financial documents, prepare journal entries, post journal entries to ledgers, prepare banking and reconcile financial receipts, and extract a trial balance and interim reports. It applies to individuals who use specialised knowledge and follow agreed processes to carefully check and process detailed financial information to ensure standards are maintained.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - enter and balance deposits and payments; - reconcile banking documentation and process and balance petty cash transactions; - check and verify financial transaction supporting documentation; - apply security and safety measures when preparing and banking receipts; - prepare deposit facilities; - enter data into financial systems and process general and special (cash and credit) journal entries, identifying and correcting errors; - process special transactions; - prepare and authorise journals and check journal processing interim reports; - extract, check and correct a trial balance; - file documentation according to organisational and regulatory requirements, and;. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - key principles and practices of double-entry accounting and accrual accounting systems; - range of industry-accepted accounting conventions, processes and procedures for the work tasks described in the performance evidence; - standard industry banking procedures and guidelines; - key features of legislative and regulatory requirements relating to processing financial transactions; - key features of organisational policies and procedures relating to processing financial transaction, and; - key features of routine financial report.

FNSACC312 Administer subsidiary accounts and ledgers

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to reconcile and monitor subsidiary accounts in financial accounts receivable systems, identify bad and doubtful debts and plan a recovery action, record creditor invoices, and remit payments to sundry creditors. It applies to individuals who use specialised knowledge and follow agreed processes to problem solve within the scope of own responsibility. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Financial Services Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on regulatory requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reconcile and monitor subsidiary accounts according to industry compliance requirements and organisational policies and procedures. Students will also be expected to demonstrate the following knowledge: - key features of debits and credits, and their role in accounting systems; - procedures for identifying bad or doubtful debts; - key requirements relating to the administration of subsidiary accounts and ledgers; - key requirements of organisational policies and procedures relating to reconciling and monitoring financial accounts, including organisational credit policy; - industry-accepted measures and protocols to remit and collect monies, and; - key features of debt recovery plans.

FNSACC313 Perform financial calculations

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use a range of routine calculation methods and techniques when performing routine financial calculations and checking calculation outcomes. It applies to individuals who use literacy and numeracy skills to perform routine computational tasks as part of their operational job role.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply mathematical techniques and methods of calculation; - effectively use office equipment and software to enter data and complete calculations; - check for accuracy of computational results and correct errors where required, and; - record calculation worksheets for future reference and use. Students will also be expected to demonstrate the following knowledge: - Industry-standard techniques and methods to perform routine calculations; - typical computational errors and ways to check for them, and; - key features of equipment and software required to conduct routine financial calculations.

FNSACC402 Prepare operational budgets

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to prepare and document operational budgets for a variety of organisations. It applies to individuals who use specialised knowledge and systematic approaches to undertake strategic financial activity for an organisation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - establish and confirm budgetary milestones and performance indicators; - prepare budgets for a variety of purposes and organisations, and; - accurately record and document budget reports. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify and explain the key principles of budgetary control; - describe a variety of forecasting techniques; - explain the principles of double-entry bookkeeping; - outline the key principles of statistical analysis and measures of variance, and; - describe the key features of organisational procedures and policy for financial administration.

FNSACC408 Work effectively in the accounting and bookkeeping industry

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to work autonomously and in teams to complete work activities relating to the provision of accounting and bookkeeping services. It applies to individuals who occupy roles with

some responsibility and use a range of research and organisational techniques to establish and carry out their work requirements in the accounting industry. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Financial Services Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on regulatory requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - establish and maintain effective relationships with clients and colleagues; - research and identify organisational policies and procedures relevant to own role; - develop systems and guidelines for work procedures that comply with legislative requirements; - analyse, evaluate and organise information required for own role; - effectively plan work and contribute to team environment, taking into account constraints and available resources, and; - identify and evaluate opportunities for own professional development. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - avenues for identifying other professionals in the accounting and bookkeeping industry; - requirements of accounting and bookkeeping industry codes of practice; - policies and procedures required for own role in the accounting and bookkeeping industry, and; - statutory, legislative and regulatory requirements for documenting accounting procedures.

FNSACC411 Process business tax requirements

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to maintain business taxation accounting records, and to process lodgements and returns according to Australian Taxation Office (ATO) requirements, excluding income tax. Documentation for business activity statements (BAS) must be authorised by a registered BAS agent. It applies to individuals who use specialised knowledge and follow defined procedures to administer and process taxation-related information within the scope of own responsibility. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Financial Services Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on regulatory requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - maintain accounting records for taxation purposes; - establish and maintain an administrative process for managing business taxation returns, excluding income tax, and; - prepare and process business taxation returns using validated data according to Australian

taxation requirements. Students will also be expected to demonstrate the following knowledge: - key requirements of Australian Taxation Office (ATO) and legislation relating to business taxation returns; - accounting terminology used when processing business taxation requirements, including terminology found in: business activity statements; fringe benefits tax (FBT); pay as you go (PAYG) tax; company tax; wine equalisation tax; luxury car tax; payroll tax and stamp duty; - key ATO and organisational requirements for tax lodgement schedules; - key administrative procedures in a financial services organisation or business unit relating to taxation accounting, and; - records, and lodgements and returns.

FNSACC412 Prepare operational budgets

Locations: Footscray Park, Footscray Nicholson, City King St.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to prepare and document operational budgets for a variety of organisations. It applies to individuals who use specialised knowledge and systematic approaches to undertake strategic financial activity for an organisation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - establish and confirm budgetary milestones and performance indicators; - collect financial data and prepare operational budgets for a range of organisations; - identify budget variances and report variances to designated stakeholders, and; - record and document budget reports. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - key principles of budgetary control; - range of forecasting techniques used when preparing operational budgets; - key principles of statistical analysis and measures of variance in the context of financial data analysis and operational budgets, and; - key features of organisational policies and procedures for financial administration as they relate to budgeting.

FNSACC414 Prepare financial statements for non-reporting entities

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to prepare financial statements for entities that do not have a statutory duty to file financial reports with government agencies and regulators. It applies to individuals who use specialised knowledge and systematic approaches to collate and prepare financial information in line with accounting standards. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Financial Services Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on regulatory requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access, analyse and compile required financial data for non-reporting entities; - calculate financial ratios for liquidity, activity and profitability, and analyse the significance of those calculations, and; - prepare financial accounts and comprehensive statements showing financial position, performance and cash flow for: a partnership and a not-for-profit organisation. Students will also be expected to demonstrate the following knowledge: - differences between non-reporting entities and reporting entities; - different types of non-reporting entities and their key characteristics; - purpose of preparing financial statements for non-reporting entities; - key features of organisational guidelines and procedures relating to preparing financial statements for non-reporting entities; - key features of financial legislation covering taxable transactions and reporting requirements, and; - advantages and disadvantages of ratios and comparison techniques and methods of presenting financial data.

FNSACC416 Set up and operate a computerised accounting system

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to establish, operate, and modify an integrated computerised accounting system. This is generally under supervision and encompasses processing transactions in the system, maintaining the system, producing reports, and ensuring system integrity. It applies to individuals who, within the scope of own responsibility, use specialised knowledge, information technology, and planning and organising skills to establish and maintain an organisational system in service and trading environments.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - set up the chart of accounts for one organisation by modifying an established integrated financial software system; - implement an integrated computerised accounting system, ensuring integrity of the data; - process transactions in the integrated system; - generate reports in the integrated system over at least two reporting periods, and; - maintain computerised accounting system information securely. Students will also be expected to demonstrate the following knowledge: - key features of desktop and cloud-based computerised accounting systems; - key features of organisational policies and procedures relating to setting up and operating a computerised accounting system; - key requirements of financial services industry legislation relating to information privacy when using computerised accounting systems, and; - key features and characteristics of information included in source documents of financial data.

FNSACC501 Provide financial and business performance information

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to analyse and report on a broad range of financial and business performance information and encompasses assessing clients' needs, analysing data and preparing advice. It applies to individuals who, within their level of authority, apply specialised knowledge, systematic approaches and analytical techniques to research and prepare customised information for clients. Work functions in the occupational areas where

this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access clients' needs and analyse their financial data; - prepare and document appropriate advice for clients that: - complies with financial legislation and accounting standards, practices and principles; - assesses taxation, compliance and business viability issues faced by clients, and; - assesses risk management options and practices. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain the key requirements of taxation legislation relating to deductions, allowances and charges; - list the key areas that can cause significant taxation issues; - compare and contrast forecasting techniques; - identify and explain the key features of government financial policy and secretary's financial management instructions; - explain the key requirements of relevant corporations and consumer legislation; - describe a range of methods for presenting and formatting financial data; - identify and explain the key principles of cash flow and budgetary control; - identify and categorise sources of information on financial products and markets; - outline a range of risks and contingencies and risk management options relating to financial and business performance, and; - outline client rights and responsibilities.

FNSACC503 Manage budgets and forecasts

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to prepare, document and manage budgets and forecasts, and encompasses forecasting estimates and monitoring budgeted outcomes. It applies to individuals who use specialised knowledge and analytical skills to prepare and manage strategic organisational information.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare, document and present budgets and forecasting estimates that: - accurately apply accounting principles and practices; - follow organisational policy and procedures, and; - monitor budget outcomes periodically. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - discuss the key purpose and objective of budgets and forecasts, including relevance of milestones and key performance indicators; - discuss issues relating to ethical considerations for budgetary forecasting and projections to explain the strength of assumptions and

forecast reliabilities; - describe types and sources of data and information required for budgeting and forecasting; - outline a range of expenditure and revenue items relevant to budgeting and forecasting; - compare and contrast forecasting techniques; - identify the key features of organisational procedures and policy relevant to budgeting and forecasting; - identify and explain the key principles and practices of: - accrual accounting; - budgetary control; - corporate governance; - double-entry bookkeeping, and; - statistical analysis and measures of variance.

FNSACC504 Prepare financial reports for corporate entities

Locations:Footscray Nicholson.

Prerequisites:BSBFIA401 - Prepare financial reportsFNSACC301 - Process financial transactions and extract interim reports

Description:This unit describes the skills and knowledge required to prepare financial reports for a reporting entity and encompasses compiling and analysing data and meeting statutory reporting requirements. It applies to individuals who use specialised knowledge and analytical skills to prepare financial reports that meet specific compliance requirements. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access and accurately compile data and prepare reports for corporate entities that comply with: - organisational policy and procedures; - relevant accounting standards, and; - statutory and other relevant requirements of reporting bodies. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify and explain current business taxation requirements; - identify and explain current financial legislation and statutory requirements relating to taxable transactions and reporting requirements; - discuss ethical considerations in relation to conflict of interest, confidentiality and disclosure requirements; - explain the key features of integrated computerised accounting systems; - describe a range of methods and formats for presenting financial data; - outline options, methods and practices for recording and reporting deductions, benefits and depreciation; - identify and describe the key requirements of organisational policy and procedures relating to the preparation of financial reports; - identify and explain the key principles of double-entry bookkeeping and accrual accounting, and; - identify and explain business legal requirements relating to delegated authorities, reporting periods and taxation payment timings.

FNSACC506 Implement and maintain internal control procedures

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to review corporate governance requirements, implement operating procedures and monitor policy. It applies to individuals who use specialised knowledge and analytical skills to ensure organisational policy, compliance and quality requirements are met. Work functions in the occupational areas where this unit may be used are subject to regulatory

requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret and comply with corporate governance requirements, organisational policy, and financial delegations and accountabilities; - review corporate governance requirements and implement effective operating procedures, and; - monitor policy and relevant financial legislation. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - discuss ethical considerations and confidentiality for management and handling of files and records; - identify and explain the key features of financial legislation relating to taxable transactions and reporting requirements; - explain a range of methods of work practices and routines relevant to internal control procedures; - describe the key requirements of organisational policy and procedures relating to: - corporate governance; - financial delegations and accountabilities, and; - identify and explain the key principles of internal control and auditing.

FNSACC507 Provide management accounting information

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to gather, record and analyse operating and cost data, prepare budget reports and review costing systems integrity to calculate and record the costs of products and services. It applies to individuals who use specialised knowledge and analytical skills to manage complex financial data and develop comprehensive organisational reports. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - gather and record operating and cost data in accordance with organisational policy and procedures; - analyse data and assign costs to products, services and organisational units to comply with organisational procedures; - obtain data and prepare a range of cost reports and budgets to meet management information requirements, and; - analyse variances between budgeted and actual data, and review integrity of costing systems. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify and describe cost behaviour characteristics for the different cost elements of a product or service; - describe the principles of double-entry

bookkeeping and accrual based accounting; - identify and discuss the key features of organisational policy and procedures as they apply to costing systems; - outline the key management information requirements; - identify and explain the key principles and practices of budget preparation; - discuss the relationship between variance analysis and costing system integrity, and; - explain the key processes and procedures for recording and securely storing data.

FNSACC511 Provide financial and business performance information

Locations:Footscray Nicholson, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to analyse and report on a broad range of financial and business performance information. It encompasses assessing client needs, analysing data, and preparing advice. It applies to individuals who, in line with their level of authority, use specialised knowledge, systematic approaches, and analytical techniques to research and prepare customised information for clients.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assess client needs and analyse their financial data, and; - prepare and document financial and business performance advice for clients. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - key requirements of taxation legislation relating to deductions, allowances, and charges; - key areas that can cause significant taxation issues; - techniques used to forecast financial and business performance; - key features of government financial policy relating to financial and business performance advice; - key requirements of corporations and consumer legislation relating to financial and business performance information; - industry-standard methods for presenting and formatting financial data; - key principles of cash flow and budgetary control; - sources of information on financial products and markets relating to financial and business performance information; - risks, contingencies, and risk management options relating to financial and business performance, and; - client rights and responsibilities in relation to obtaining financial and business performance information.

FNSACC512 Prepare tax documentation for individuals

Locations:Footscray Nicholson, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to prepare non-complex income tax returns for individuals in line with statutory requirements. It encompasses gathering and verifying data, calculating taxable income, and reviewing compliance requirements. It applies to individuals who use systematic approaches and follow specific guidelines to ensure compliance requirements are met. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. This unit is designed to meet the education requirements of the Tax Practitioner Board (TPB). Refer to the FNS Financial Services Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on regulatory requirements.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research, critically evaluate, and apply new or changed legislative requirements relating to the preparation of client non-complex income tax documentation; - identify client data required to calculate taxable income; - prepare client tax documentation, and; - provide advice to client on tax documentation presented and obtain verification and approval. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - ethical considerations and legislative requirements required to prepare non-complex income tax documentation for individual taxpayers; - key elements of Australian tax law as they relate to income tax documentation for individual taxpayers; - key sources of information and data required to calculate taxable income; - key features of organisational policies and procedures required to prepare non-complex income tax documentation for individual taxpayers, and; - key accounting principles and practices required to prepare non-complex income tax documentation for individual taxpayers.

FNSACC513 Manage budgets and forecasts

Locations: Footscray Nicholson, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to prepare, document, and manage budgets and forecasts. It encompasses forecasting estimates and monitoring budgeted outcomes. It applies to individuals who use specialised knowledge and analytical skills to prepare and manage strategic organisational information.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare, document and present budgets and forecasting estimates, and; - monitor budget outcomes periodically, analyse budget variances and their possible causes, and make required changes in response. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - key purpose and objective of budgets and forecasts, including relevance of milestones and key performance indicators; - principal ethical requirements associated with budgetary forecasting and projections within the context of the strength of assumptions and forecast reliabilities; - types and sources of data and information required for budgeting and forecasting; - budget forecasting techniques; - key features of organisational policies and procedures relating to budgeting and forecasting; - key principles of accrual accounting and double-entry bookkeeping, and; - key principles and practices of: corporate governance; statistical analysis and measures of variance.

FNSACC514 Prepare financial reports for corporate entities

Locations: Footscray Nicholson, Werribee.

Prerequisites: BSBFIA401 - Prepare financial reports FNSACC311 - Process financial transactions and extract interim reports

Description: This unit describes the skills and knowledge required to prepare financial reports for a corporate reporting entity. It encompasses compiling and analysing data and meeting statutory reporting requirements. It applies to individuals who use specialised knowledge and analytical skills to prepare financial reports that meet specific compliance requirements. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Financial Services Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on regulatory requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access, compile and analyse data and prepare reports for corporate entities, and; - confirm data and reports. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - current business taxation requirements for preparing corporate accounting reports; - current financial legislation and statutory requirements relating to taxable transactions and reporting requirements; - ethical requirements associated with preparing financial reports for corporate entities, including conflict of interest, confidentiality, and disclosure requirements; - industry-standard methods and formats used to present financial data; - options, methods and practices for recording and reporting deductions, benefits and depreciation; - key requirements of organisational policies and procedures relating to preparing financial reports for corporate entities, and; - business legal requirements relating to delegated authorities, reporting periods, and taxation payment timings.

FNSACC516 Implement and maintain internal control procedures

Locations: Footscray Nicholson, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to review corporate governance requirements, implement internal control operating procedures, and monitor associated policy. It applies to individuals who use specialised knowledge and analytical skills to ensure organisational procedures, compliance and quality requirements are met.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret and comply with corporate governance requirements, organisational policy, and financial delegations and accountabilities; - review corporate governance requirements and implement effective operating procedures to ensure organisational compliance; - use a range of methods, work practices and routines relevant to internal control procedures, and; -

monitor internal control operating procedures and applicable financial legislation. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - ethical and confidentiality considerations when managing and handling files and records; - key features of financial legislation relating to financial transactions and reporting requirements; - benefits and limitations of internal controls and potential consequences of poor internal controls for internal operations, and; - key requirements of organisational policies and procedures.

FNSACC517 Provide management accounting information

Locations: Footscray Nicholson, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to gather, record and analyse operating and cost data, prepare budget reports, and review costing system integrity to calculate and record the costs of products and services. It applies to individuals who use specialised knowledge and analytical skills to manage complex financial data and develop comprehensive organisational reports. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Financial Services Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on regulatory requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - gather and record operating and cost data according to organisational policy and procedures; - analyse data and assign costs to products, services and organisational units to comply with organisational procedures; - obtain data and prepare a range of cost reports and budgets to meet management information requirements, and; - analyse variances between budgeted and actual data, and review integrity of costing systems. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - cost behaviour characteristics for different cost elements of a product or service; - key features of organisational policies and procedures as they apply to costing systems; - key requirements of management accounting information; - key principles and practices of budget preparation, and; - relationship between variance analysis and costing system integrity.

FNSACC601 Prepare and administer tax documentation for legal entities

Locations: Footscray Nicholson, Werribee.

Prerequisites: FNSACC512 - Prepare tax documentation for individuals

Description: This unit describes the skills and knowledge required to identify taxation requirements for complex lodgements and returns for legal entities. It involves gathering, analysing and processing taxation related data to prepare tax documentation, and to review and apply compliance requirements. It applies to individuals who use specialised knowledge and systematic approaches and who follow specific guidelines to ensure compliance requirements are met. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. This unit is designed to meet educational requirements of the Tax Practitioner Board (TPB). Refer to the FNS Implementation Guide Companion

Volume or the relevant regulator for specific guidance on requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and critically evaluate new or changed legislative requirements and apply where relevant to the preparation of the client's tax documentation; - provide taxation advice to clients in line with individual requirements; - identify legal entity tax data required to calculate taxable income; - prepare tax documentation for legal entities that complies with: Australian taxation law and Australian Taxation Office (ATO) rulings and lodgement schedules; accounting principles and practices, and; organisational policy and procedures, and; - present tax documentation to the client for verification and approval. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify and explain ethical considerations and legislative requirements relevant to the preparation of tax documentation for legal entities; - explain critical and key elements of Australian tax law as it relates to tax documentation for legal entities such as companies, trusts, partnerships and sole traders; - describe the key sources of information and taxable transactions data required to calculate taxable income; - describe the key features of organisational policy and procedures relating to the preparation of tax documentation for legal entities, and; - outline the key accounting principles and practices relevant to the preparation of tax documentation for the different types of legal entities.

FNSACC602 Audit and report on financial systems and records

Locations: Footscray Nicholson.

Prerequisites: FNSACC516 - Implement and maintain internal control procedures

Description: This unit describes the skills and knowledge required to supervise an audit of financial systems and prepare the appropriate reports, including assessing options, identifying information sources, determining audit strategies, monitoring progress, reviewing data, verifying financial statements and determining appropriate reporting formats. It applies to experienced individuals who use specialised knowledge and systematic approaches to analyse and evaluate financial information against specified criteria and compliance requirements. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assess client risk and determine financial audit strategy and methodology; - schedule resources and timelines, and monitor progress, and; - review data, verify financial statements and determine reporting formats. Students will also be expected to demonstrate the

following knowledge: - identify and explain the key features of current financial legislation and statutory requirements relating to internal control, taxable transactions and reporting requirements; - identify and explain the key features of current, relevant professional accounting standards; - outline the duties and responsibilities of auditors; - discuss professional standards and ethical considerations for management and handling of files and records; - identify and explain the key principles of: auditing; internal control, and; - compare and contrast testing procedures and methods of enquiry.

FNSACC603 Implement tax plans and evaluate tax obligation

Locations: Footscray Nicholson.

Prerequisites: FNSACC512 - Prepare tax documentation for individuals

Description: This unit describes the skills and knowledge required to assess taxation liabilities, optimise tax positions, establish processes and plans, evaluate tax policies and review tax compliance for legal entities. It applies to experienced individuals who use analytical and problem-solving skills to prepare plans and strategic advice for clients. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. This unit is designed to meet educational requirements of the Tax Practitioner Board (TPB). Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and critically evaluate new or changed legislative requirements and apply where relevant to the preparation of the client's tax documentation; - identify legal entity's tax data required to calculate taxable income; - provide taxation advice to clients in line with individual requirements; - prepare tax documentation and tax plans for legal entities, and; - evaluate tax plan for compliance with legislative requirements. Students will also be expected to demonstrate the following knowledge: - identify and explain ethical considerations and legislative requirements relevant to the preparation of tax documentation for legal entities; - explain critical and key elements of Australian taxation law as it relates to tax documentation for legal entities such as companies, trusts, partnerships and sole traders; - describe the key sources of information and taxable transactions data required to calculate taxable income; - describe the key features of organisational policy and procedures relating to the preparation of tax documentation for legal entities; - outline the key accounting principles and practices relevant to preparation of tax documentation for the different types of legal entities; - discuss ethical considerations for the preparation of returns, including the Code of Professional Conduct's disclosure and confidentiality requirements, and; - outline financial management strategies used to optimise tax position.

FNSACC608 Evaluate organisation's financial performance

Locations: Footscray Nicholson.

Prerequisites: FNSACC511 - Provide financial and business performance information

Description: This unit describes the skills and knowledge required to evaluate returns to operations, determine short-term and long-term needs, and evaluate an organisation's financial position and performance. It applies to experienced individuals who use specialised knowledge and skills to evaluate complex financial

information and make recommendations relevant to strategic organisational activity. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - evaluate returns to operations using standard financial analysis and accounting techniques, and following organisational policy and procedures; - determine long-term and short-term organisational needs; - review and monitor financial performance across an organisation, and; - assess risk strategies and make recommendations regarding financial performance. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - discuss techniques for developing long-term and short-term plans, and determining financial priorities; - explain the purpose and key features of standard financial analysis techniques and business review processes; - explain the role of audits in evaluating financial performance; - discuss ethical considerations in evaluating financial performance; - identify and explain the key features of financial legislation relating to the evaluation of financial performance; - identify and explain the key principles of: cash flow and budgetary control; cost-benefit analysis and use of forecasting techniques; internal control, including statutory requirements; - outline the key features of organisational structures and lines of management authority, and; - discuss strategies for risk identification and management.

FNSACC613 Prepare and analyse management accounting information

Locations: Footscray Nicholson.

Prerequisites: FNSACC517 - Provide management accounting information

Description: This unit describes the skills and knowledge required to gather, record and analyse operating costs and data, prepare cost reports and budgets, and calculate the costs of products, services and other organisational activities. It applies to individuals who use specialised knowledge and techniques to consolidate and report on complex information and make recommendations relating to strategic organisational activity. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - gather and record operating and cost data in accordance with organisational policy and procedures; - determine cost and operating standards for a costing system; - analyse data and assign costs to

comply with organisational procedures; - prepare a range of cost reports and budgets to meet management information requirements; - analyse variances against budget and standards; - recommend changes to cost and activity standards; - recommend further actions required resulting from review process, and; - review integrity of costing systems. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify and describe cost behaviour characteristics for the different cost elements of a product or service; - describe the principles of double-entry bookkeeping and accrual-based accounting; - identify and discuss the key features of organisational policy and procedures as they apply to costing systems; - identify and explain the key principles and practices of budget preparation; - discuss the relationship between variance analysis and costing system integrity, and; - explain the key processes and procedures for recording and securely storing data.

FNSACC614 Prepare complex corporate financial reports

Locations: Footscray Nicholson.

Prerequisites: FNSACC514 - Prepare financial reports for corporate entities

Description: This unit describes the skills and knowledge required to compile and analyse financial data, identify appropriate reporting requirements, and develop and prepare complex financial reports for reporting entities. It applies to individuals who use specialised knowledge and systematic approaches to construct detailed reports following specific guidelines and compliance requirements. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - compile, analyse and validate complex financial data, and; - prepare complex corporate reports for reporting entities. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify appropriate key reporting entities and their main purposes and roles; - outline the key types and sources of data required for complex financial reports; - outline the key features of integrated accounting computerised systems; - identify and explain the key features of business taxation requirements; - discuss ethical considerations relating to conflict of interest, confidentiality and disclosure requirements; - explain the key features of financial legislation and statutory requirements relating to delegated authorities, disclosure requirements, reporting periods and taxation payment timings; - compare and contrast methods of presenting financial data; - explain options, methods and practices for deductions, benefits and depreciations; - identify and explain the key features of organisational guidelines and procedures; - identify and explain the key principles of double-entry bookkeeping and accrual accounting, and; - identify and discuss issues relevant to business legal requirements.

FNSACC624 Monitor corporate governance activities

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to research

corporate governance reporting trends, examine corporate governance standards and practices, and review compliance to develop and implement processes and procedures for meeting corporate governance obligations. It applies to individuals who use current and specialised knowledge and analytical skills to provide advice on organisational processes to meet compliance and management requirements. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Financial Services Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on regulatory requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research corporate governance reporting trends and apply research to organisational practices; - determine processes for monitoring corporate governance compliance, and; - examine and review corporate governance standards and practices following: professional accounting standards; organisational policies and procedures and statutory and regulatory requirements. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - authority regulations and requirements; - current financial legislative, statutory and regulatory requirements; - current formats required for submission of statutory returns; - ethical considerations relating to compliance and governance; - key management processes that support corporate governance; - forms and functions of employee records; - key principles of internal control, valuation and common methods of depreciation, and; - significance of performance indicators and key result areas to monitoring corporate governance activities.

FNSBKG402 Establish and maintain a cash accounting system

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to establish and administer a cash receipts and payments system, and manage bank reconciliations and reporting responsibilities for manual and computerised systems. It applies to individuals in positions with some responsibility who may use a range of organisational and analytical techniques to provide bookkeeping services for organisations and small business owners or managers. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - establish

client files and set up manual and computerised bookkeeping system on a cash basis; - thoroughly check invoices, receipts, payments and balances outstanding; - use bank account and cash reconciliation processes; - establish a basic chart of accounts; - carry out bank reconciliations and prepare reports, and; - follow organisational procedures and legislative requirements in conducting all activities. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain the differences between cash and accrual accounting; - describe the key accounting and reporting requirements for different types of business entities; - explain bookkeeping activities necessary to meet the requirements of activity statement statutory, legislative and regulatory requirements; - outline relevant industry codes of practice; - describe organisational policy and procedures that relate to processing accounts and transactions; - outline possible reasons for discrepancies between monies owed and monies paid, and; - outline the different features of manual and computerised accounting systems.

FNSINC401 Apply principles of professional practice to work in the financial services industry

Locations:Footscray Nicholson, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to identify industry professional approaches to procedures, guidelines, policies and standards, including ethical requirements, and to model and meet expectations of these in all aspects of work. It applies to individuals who work in senior roles in the financial services industry and underpins other specialist units used in all sectors of the industry. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - access, interpret and analyse product and service information provided by industry sectors in an effective and timely manner; - interpret and comply with relevant financial services legislation, regulations and industry codes of practice, and ethics applicable to the workplace; - recognise and implement sustainability principles and work practices; - accurately analyse, evaluate and organise relevant information; - effectively plan work and maintain a team environment, taking into account any constraints and available resources, and; - identify and evaluate appropriate professional development opportunities. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - discuss environmental or sustainability legislation, regulations and codes of practice applicable to industry and organisations; - outline the main sectors in the financial services industry and the interrelationships between the sectors; - explain industry and organisational policy and procedures and ethical behaviours in regard to customer service and administration; - outline industry and organisational security practices and rationale; - identify internal administration systems such as accounting systems and databases; - explain principles, practices and available tools and techniques of sustainability management relevant to the

industry context; - explain key requirements of relevant legislation, statutory requirements and industry codes of practice; - identify the economic and political climate relating to the financial services industry, and; - explain triple bottom line principles used in work planning.

FNSINC601 Apply economic principles to work in the financial services industry

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to apply broad principles of financial economics that underpin a range of tasks and functions in the financial services industry. It includes understanding how financial instruments are priced in markets, and techniques and processes government and organisations use to manage financial risk, demonstrating broad knowledge of economic theories and related decision making in a national and organisational economic context. It applies to individuals who have an understanding of economics and how this impacts on work in the financial services industry. It also underpins other skills required for work in the financial services industry and may be applied in all sectors of the industry.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research economic trends, evaluate impacts, and access and interpret corporate regulations; - analyse and apply a range of financial modelling techniques and tools, and; - reflect on and review own performance in applying knowledge of economic principles in day-to-day work functions. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline key features of common economic theories that relate to the financial services industry; - outline key features of microeconomic principles and how they relate to financial services industry products, services and organisational practices; - explain capital adequacy requirements for financial services organisations based on financial product mix; - explain asset pricing models and their use in identifying organisational value and capital structures; - explain and apply economic theories and valuation of assets; - identify and apply financial modelling techniques and tools; - outline industry or organisation financial markets, products and services; - describe key features of relevant legislation, statutory requirements and industry codes of practice; - identify and describe techniques and tools for evaluation and interpretation of research data, and; - describe the economic and political climate relating to the financial services industry.

FNSINC602 Interpret and use financial statistics and tools

Locations:Footscray Nicholson, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to access, interpret and analyse statistical data relevant to the financial services industry. It encompasses producing new statistical information and reports from existing data using a range of tools and processes. It applies to individuals with a thorough understanding of the sources of financial data, and statistical methods and techniques for analysis. It is a base unit on which other skills required for work in the financial services industry can be built. It may be applied in all sectors of the industry.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply statistical methods to work in the financial services industry; - source and access statistical and other data, and produce and interpret statistics; - use financial data tools and calculations to produce accurate and informative statistical reports from data, and; - efficiently record and store data for retrieval. Students will also be expected to demonstrate the following knowledge: - explain and apply mathematical principles and statistical methods; - describe the range of statistical ratios and analysis tools relevant to the financial services industry; - outline sources of relevant information available to the financial services industry, and their relevance; - recognise and explain types of graphs, charts, diagrams and tables used in statistical modelling and reporting, and; - explain the principles of statistical standards and sampling techniques that are used to gather valid data.

FNSPAY501 Process salary packaging arrangements and additional allowances in payroll

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to process salary packaging arrangements and additional allowances for employees in payroll systems. It applies to individuals who, within their level of authority, use specialised knowledge, systematic approaches and analytical techniques to prepare data, calculate and verify payments, and ensure compliance with regulatory requirements using established payroll systems.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assess benefits and costs to an organisation and its employees of different salary packaging models; - identify additional allowances relating to an employee's employment conditions using required sources of information; - use a payroll system to calculate and process the impact of salary packaging arrangements and additional allowances on an employee's payments, and; - confirm compliance of salary packaging arrangements with applicable regulatory requirements and organisational policies and procedures. Students will also be expected to demonstrate the following knowledge: - key features of legislation, regulations and taxation systems relevant to salary packaging arrangements and additional allowances; - benefits and costs to organisations and employees of salary packaging arrangements; - different models for salary packaging; - common types of benefits that can be included in salary packaging arrangements; - common types of additional allowances, and; - external and organisational sources that can be accessed for additional information on salary packaging arrangements and additional allowances.

FNSPAY502 Process superannuation payments in payroll

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to process employee superannuation payments in payroll systems. It applies to individuals who, within their level of authority, use specialised knowledge, systematic approaches and analytical techniques to prepare data, calculate and verify superannuation payments, and ensure compliance with regulatory requirements using established payroll systems.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - establish procedures to ensure employee superannuation information is handled according to legislative and organisational obligations; - collect information required to process superannuation payments in a payroll system; - interact with stakeholders to ensure completeness and accuracy of information required to process superannuation payments; - calculate superannuation payments using a payroll system based on ordinary time earnings; - calculate reportable superannuation payments for inclusion in employee payment summaries, and; - prepare, produce, distribute and store reports on superannuation payments according to organisational and legislative requirements. Students will also be expected to demonstrate the following knowledge: - key legislation and organisational policies and procedures relating to calculating superannuation payments for employees; - key features of different types of superannuation funds; - different types of superannuation payments, including: employer contributions; salary sacrifice to superannuation; employee after-tax contributions; defined benefits; government co-contribution and superannuation guarantee charge; - eligibility requirements in relation to employer superannuation contributions; - pay items that are included in ordinary time earnings; - consequences of not reaching the maximum contributions earnings base for the quarter; - difference between concessional and non-concessional contributions and the impact on an employee of exceeding the concessional superannuation cap; - guidelines for implementing an effective salary sacrifice agreement for superannuation; - effect of various forms of salary packaging on the employer requirement to meet employer superannuation contribution obligations; - impact of different types of employment contracts, legal entities and business structures on an employer's superannuation payment obligations to its employees, and; - consequences for an organisation of failing to comply with its superannuation payment obligations to employees.

FNSPAY503 Process complex employee terminations in payroll

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to process uncommon and complex employee terminations in payroll systems, including calculating and providing employment termination payments (ETPs). It applies to individuals who, within their level of authority, use specialised knowledge, systematic approaches and analytical techniques to prepare data, calculate and verify payments, and ensure compliance with regulatory requirements using established payroll systems.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - collect information required to carry out an employment termination process in a payroll system; - interact with stakeholders to ensure completeness and accuracy of information required to process that termination; - ensure compliance of employment termination with legislative requirements and organisational procedures; - process each of the following employment termination types in payroll systems, including calculating the employment termination payment (ETP) for each: resignation; redundancy and retirement; - process at least one of the following employment termination types in payroll systems, and calculate the corresponding ETP: dismissal; unfair dismissal; invalidity; death; termination for pre-August 1983 starters and golden handshakes; - process the above termination payment entitlements according to commonwealth, state and territory legislative requirements, including: final salary and wages payments; unused annual leave and long service leave; notice and redundancy payments; unused rostered days off (RDOs) and other entitlements; gratuities and settlements, and; - maintain records of the above employment terminations according to legislative requirements. Students will also be expected to demonstrate the following knowledge: - different types of employment terminations, including: resignation; redundancy; retirement; dismissal; unfair dismissal; invalidity; death; termination for pre-August 1983 starters and golden handshakes; - key types of ETPs and when they are used; - key features of organisational policies and procedures relating to ETPs; - legislative requirements relating to termination notice periods and redundancy payments; - significance of determining the preservation age of an employee on termination; - tax treatment for a redundancy payment, including the Lump Sum D component and any excess over the tax free Lump Sum D amount; - tax treatment options for unused annual leave and long service leave on termination; - different tax treatments of ETPs and how they are calculated; - types of termination payments that are subject to superannuation contributions; - impact of legislative requirements on complex employee terminations, and; - sources of information on employment termination processes that can be accessed to maintain currency of knowledge and to seek advice.

FNSPAY504 Interpret and apply knowledge of industrial regulations relevant to payroll

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to research, analyse and apply knowledge of industrial regulations to the provision of payroll services. It applies to individuals who, within their level of authority, use specialised knowledge to ensure compliance with industrial regulations in the workplace.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conduct research on changes to, or new, legislative requirements and industrial regulations relevant to payroll; - assess the impact of regulations on payroll operations and comply with applicable regulations when performing payroll operations; - inform stakeholders of changes to payroll operations resulting from changes to industrial regulations in line with organisational policies and procedures; - seek advice from sources when seeking to interpret industrial regulations, and; - use sources of information to ensure currency of knowledge of industrial regulations to payroll operations. Students will also be expected to demonstrate the following knowledge: - key features and operating principles of industrial regulations relevant to payroll, including: Fair Work Act; modern awards system; National Employment Standards and state-based industrial regulations; - impacts of regulations on payroll operations, including: how different regulatory instruments interact with each other to impact payroll operations; - roles and responsibilities of key organisations relating to payroll, including: Fair Work Commission; Fair Work Ombudsman; Office of Australian Information Commissioner and state-based industrial regulations regulators, and; - sources of information on industrial regulations relevant to payroll that can be accessed to maintain currency of knowledge and to seek advice when interpreting regulations.

FNSPAY505 Interpret and apply knowledge of taxation systems relevant to payroll

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to research, analyse and apply knowledge of taxation systems to the provision of payroll services. It applies to individuals who, within their level of authority, use specialised knowledge, systematic approaches and analytical techniques to prepare data, calculate and verify payments, and ensure compliance with regulatory requirements using established payroll systems.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conduct research on changes to, or new, taxation systems relevant to payroll operations; - assess impact of taxation systems on payroll operations and apply understanding of taxation systems to payroll operations to ensure compliance and accuracy of payments; - inform stakeholders of changes to payroll operations resulting from changes to taxation systems in line with organisational policies and procedures; - determine the impact of taxation systems on at least three of the following types of legal entities and business structures: sole traders; partnerships; companies; not for profit organisations; principal contractors; subcontractors and grouped employees; - seek advice from sources when interpreting taxation systems, and; - use sources of information to ensure currency of knowledge of taxation systems relevant to payroll. Students will also be expected to demonstrate the following knowledge: - key features and operating principles of taxation systems relevant to payroll, including: income tax and state payroll tax; - impact of fringe benefits tax (FBT) on payroll including circumstances in which: FBT applies to payroll and payroll is exempt from FBT; - deductions and exemptions in taxation systems that apply to payroll,

including: tax free thresholds and superannuation concessions; - State-based variations in: payroll tax thresholds; definitions of 'taxable wages' and applicable rebates and exemptions; - impacts of taxation systems on payroll operations, including how different taxation systems interact with each other to impact payroll operations; - roles and responsibilities of key organisations, including those of the Australian Taxation Office; - key principles underpinning the concept of 'employees vs contractors' in relation to pay as you go withholding (PAYGW) tax, superannuation, workers compensation, and payroll tax; - key features of tests that need to be applied in making a determination on the status of a worker for tax purposes; - key features of nexus provisions and tests that need to be applied in order to determine the correct jurisdiction for payroll tax liability; - industry-standard methods for calculating the payroll tax threshold in each State, and impact on that threshold for organisations that employ people in more than one State; - grouping provisions for payroll tax and principles underpinning the concept of a 'designated group employer', and; - sources of information on taxation systems that can be accessed to maintain currency of knowledge and to seek advice when interpreting impact of tax on payroll.

FNSTPB401 Complete business activity and instalment activity statements

Locations:Footscray Nicholson, Werribee, City King St.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to identify and apply compliance requirements to effectively process and complete business activity statements (BAS), instalment activity statements (IAS), and other required reports. It applies to individuals who use a range of organisational and analytical techniques to work in organisations or to supply specific bookkeeping services as a small business owner or contractor. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. This unit is designed to meet the education requirements of the Tax Practitioner Board (TPB). Refer to the FNS Financial Services Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on regulatory requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research, critically evaluate, and apply changes to current or new legislative or professional conduct requirements when preparing business activity statements (BAS); - identify financial transactions required to prepare activity statements and apply the principles and classifications of the goods and services tax (GST); - prepare both BAS and instalment activity statements (IAS) for a range of legal entities, and; - present business activity statements for verification and approval. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - research methods and sources of information used to update knowledge of professional and legislative requirements relating to activity statements; - key requirements of current legislation, regulations and industry codes of practice relating to preparing activity statements; - accounting terminology used when preparing and submitting BAS and IAS for a range of business types, and; - GST terminology, classifications, regulations, and obligations.

FNSTPB402 Establish and maintain payroll systems

Locations:Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to record and prepare payroll documentation, respond to enquiries, and process payroll data for manual and computerised systems. It applies to individuals, including BAS agents, who use a range of organisational and other specialist techniques. They may work directly for organisations or be small business owners, contractors or service providers. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. This unit is designed to meet the education requirements of the Tax Practitioner Board (TPB). Refer to the FNS Financial Services Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on regulatory requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify, calculate and input data from time-recording systems for payments into manual or computerised payroll systems; - produce a payroll report according to organisational and legislative requirements; - present a payroll report for verification and approval, and; - maintain records according to organisational and legislative requirements that relate to security and confidentiality of information. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - scope of services offered by a business activity statement (BAS) agent providing payroll services; - key principles of award and enterprise agreements and industrial instruments required to maintain payroll systems; - organisational policy and procedures that affect payroll, including the structure of authority in organisations; - industry codes of practice relevant to payroll operations; - key features of manual and computerised payroll systems; - legislative and record-keeping requirements from all levels of government that affect business operation and reporting requirements; - current Australian Taxation Office (ATO) requirements relating to payroll systems; - tax Practitioners Board (TPB) requirements relating to payroll systems; - key requirements of taxation law relating to payroll systems, and; - key aspects of routine and non-routine requirements for payroll.

FNSTPB503 Apply legal principles in consumer and contract law

Locations:Footscray Nicholson, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to research, analyse and apply legal principles to provide advice on contract and consumer law implications to clients. It applies to individuals whose job role involves the application of knowledge of contract and consumer law in the workplace. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. This unit is designed to meet educational requirements of the Tax Practitioner Board (TPB). Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research for any changes to, or new, legislative requirements in relation to contract or consumer law relevant to the client's circumstances; - apply current statute, common law and equitable principles in relation to contract and consumer laws that are relevant to the client's circumstances, and; - present a recommendation to the client after considering the client's circumstances and relevant aspects of contract and/or consumer laws. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain the operation of the Australian legal systems and processes relevant to contract and consumer law including: - basic principles, current statute, common law and equitable principles; - roles and responsibilities of key organisations; - constitutional considerations; - separation of powers; - basic principles of contract law; - basic principles of the law of torts, particularly relating to negligence and negligent misstatement; - courts and regulatory bodies; - explain how laws are enacted and their underlying policy aims, and how those laws may be interpreted by existing common law and equitable rules, and apply to property laws; - examine legal concepts and scope of contract law with reference to: - formation - agreement and intention to create legal relations; - formation - consideration, form, legality and capacity; - contents - express terms, exclusion clauses; - contents - implied terms, common law and statute (Commonwealth and state competition and consumer legislation); - vitiating elements - unconscionability, misrepresentation, capacity; - discharge - remedies, including rescission for unconscionable conduct; - agency; - describe legal concepts and scope of consumer law; - misleading and deceptive conduct: - function of the Competition and Consumer Act, and; - role and jurisdiction of the Australian Competition and Consumer Commission (ACCC).

FNSTPB504 Apply legal principles in corporations and trust law

Locations: Footscray Nicholson, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to research and analyse legal principles and issues in corporations and trust law matters and then apply this knowledge to provide advice to clients. It applies to individuals who work with corporations and trust laws in the workplace as determined by the job role, legislation, rules, regulations and codes of practice relevant to different jurisdictions. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. This unit is designed to meet educational requirements of the Tax Practitioner Board (TPB). Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research changes to, or new, legislative requirements in relation to corporations and trust law relevant to the client's circumstances and business structure requirements; - apply current statute,

common law and equitable principles in relation to corporations and trust law relevant to the client's circumstances, and; - present a recommendation on suitable business structures or legal entities to the client after considering the client's circumstances. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe the operation of the Australian legal systems and processes relevant to corporations and trust law; - outline how laws are enacted and their underlying policy aims; - explain how those laws may be interpreted by existing common law and equitable rules and applied to corporations and trusts; - analyse legal concepts of business organisational structures, and underlying regulation; - examine legal aspects of superannuation; - identify and reference the key features of Australian corporations law and requirements to analyse issues and risks, and; - examine legal concepts and scope of law covering trusts.

FNSTPB505 Apply legal principles in property law

Locations: Footscray Nicholson, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to research, analyse and apply legal principles to provide advice on property law matters to clients. It applies to individuals whose job role involves the application of knowledge of property law in the workplace. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. This unit is designed to meet educational requirements of the Tax Practitioner Board (TPB). Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research for any changes to, or new, legislative requirements in relation to property law relevant to the client's circumstances; - apply current statute, common law and equitable principles in relation to property law that are relevant to the client's circumstances, and; - present a recommendation and advise clients after considering their circumstances and relevant property laws. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain the operation of the Australian legal systems and processes relevant to property law; - outline how laws are enacted and their underlying policy aims; - explain how those laws may be interpreted by existing common law and equitable rules and applied to property laws; - outline legal aspects of real property law, and; - outline legal aspects of personal property law.

FPICOT2239A Trim and cut felled trees

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the outcomes required to trim and cut felled trees with a chainsaw. It is intended for use in situations where the production of timber is not the primary focus of the activity. The unit also includes equipment maintenance. General workplace legislative and regulatory requirements apply to this unit; specific licensing or certification requirements may apply in some states and territories.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - technical skills sufficient to select, use and maintain relevant equipment to safely trim and cut felled trees in a range of situations; - ability to assess the implications related to identified stresses of the tree; - communication skills sufficient to interact with colleagues and others; - literacy skills sufficient to review and accurately identify work requirements and to locate, record and report information; - numeracy skills sufficient to estimate and measure tolerances and minimum diameter, and calculate time to complete tasks, and; - problem solving skills sufficient to identify problems, equipment faults and apply appropriate response procedures. Students will also be expected to demonstrate the following knowledge: - applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for trimming and cutting felled trees; - industry, organisational and site standards, requirements, policies and procedures for trimming and cutting felled trees; - environmental protection requirements, including the safe disposal of waste material; - characteristics of trees and types of timber defects that may affect cutting; - cutting patterns, sequences and techniques; - chainsaw operation, safety and maintenance procedures; - risk assessment processes; - problem identification and resolution strategies and common fault finding techniques; - types of tools and equipment and procedures for their use, operation and maintenance for trimming and cutting felled trees, and; - procedures for reporting workplace records and information.

FSKDIG002 Use digital technology for routine and simple workplace tasks

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use digital technology to undertake workplace tasks that are simple and routine in nature. It requires the ability to identify and interpret technical instructions, and setup and apply a range of digital technologies to achieve predetermined outcomes. An individual performing these tasks may work with an expert or mentor where support is available if requested. This unit applies to individuals who use, or are preparing to use, digital skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use digital technology to complete at least three routine and simple workplace tasks with different required outcomes and in accordance with workplace procedures. Students will also be expected to demonstrate the following knowledge: - outcomes of routine and simple

workplace tasks; - familiar types of digital technology commonly used in the workplace, their purposes and their uses; - familiar workplace instructions and procedures for the use of digital technology relevant to routine and simple workplace tasks; - relevant ethical and security practices applicable to workplace digital technology; - simple conventions of online etiquette, and; - strategies to review and improve performance.

FSKDIG01 Use digital technology for basic workplace tasks

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use digital technology to undertake basic workplace tasks under supervision. The unit applies to individuals at Australian Core Skills Framework (ACSF) level 1 who need to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and using digital technology appropriate to the task, and; - complete basic workplace tasks. Students will also be expected to demonstrate the following knowledge: - procedures for accessing and using digital technology.

FSKDIG02 Use digital technology for simple workplace tasks

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use digital technology to undertake simple workplace tasks. The unit applies to individuals at Australian Core Skills Framework (ACSF) level 2 who need to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and use digital technology appropriate to the task, and; - complete simple workplace tasks. Students will also be expected to demonstrate the following knowledge: - procedures for accessing and using digital technology.

FSKDIG03 Use digital technology for routine workplace tasks

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City

Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to use digital technology to undertake routine workplace tasks. The unit applies to individuals at Australian Core Skills Framework (ACSF) level 3 who need to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and use digital technology appropriate to the task, and; - complete routine workplace tasks. Students will also be expected to demonstrate the following knowledge: - procedures for accessing and using digital technology.

FSKLRG008 Use simple strategies for work-related learning

Locations:Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to identify own learning goals and needs and develop a learning plan and strategies to assist in participation in a vocational or workplace learning environment. An individual performing these tasks may work with an expert or mentor where support is available if requested. This unit applies to individuals who use, or are preparing to use, learning skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency. The unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) learning core skill indicators .01 and .02 at level 2 in the workplace and employment domain of communication. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify at least two work related learning goals and develop a personal learning plan to support goal achievement, and; - check and review progress against plan and goals on at least one occasion. Students will also be expected to demonstrate the following knowledge: - own strengths and weaknesses as a learner; - different learning approaches and their application to work related learning; - common barriers to learning and solutions to address them; - own learning goals and needs; - at least three simple strategies to support learning goals; - support resources and appropriate techniques to assess information relevant to work related learning goals; - typical

features of learning plans, and; - approaches to check and respond to progress of learning plans.

FSKLRG009 Use strategies to respond to routine workplace problems

Locations:Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to identify routine workplace problems and plan strategies to respond to them. An individual performing these tasks works independently and uses familiar support resources as needed. This unit applies to individuals who use, or are preparing to use, learning skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency. This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) learning core skill indicators .01 and .02 at level 3 in the workplace and employment domain of communication. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify at least two routine workplace problems and propose appropriate problem-solving strategies, and; - review and discuss the above strategies with workplace or training mentor or supervisor on at least one occasion. Students will also be expected to demonstrate the following knowledge: - routine problems relevant to workplace; - common internal and external factors that may contribute to routine workplace problems; - common workplace and personal barriers that may hinder the problem-solving process; - range of strategies to respond to routine workplace problems; - sources of advice and feedback, and; - strategies to evaluate feedback and make modifications to proposed problem solving strategy.

FSKLRG04 Use basic strategies for work-related learning

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to identify own learning goals and needs to engage in a vocational or workplace learning environment. The unit applies to individuals who need learning skills at Australian Core Skills Framework (ACSF) level 1 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop a basic personal

learning plan, and; - review own progress. Students will also be expected to demonstrate the following knowledge: - own learning goals and needs, and; - strategies for learning.

FSKLRG07 Use strategies to identify job opportunities

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to identify job pathways and identify strategies to seek employment. This unit applies to individuals who need learning skills at Australian Core Skills Framework (ACSF) level 2 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify job opportunities; - assess own suitability for preferred job, and; - identify job and training pathway. Students will also be expected to demonstrate the following knowledge: - strategies to seek employment; - requirements for employment, and; - own skills and skills needs.

FSKLRG08 Use simple strategies for work-related learning

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to identify own learning goals and needs, and develop a simple learning plan to participate in a vocational or workplace learning environment. The unit applies to individuals who need learning skills at Australian Core Skills Framework (ACSF) level 2 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop a simple personal learning plan, and; - review own progress. Students will also be expected to demonstrate the following knowledge: - own learning goals and needs; - strategies for learning, and; - preferred approaches to learning.

FSKLRG09 Use strategies to respond to routine workplace problems

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to identify routine workplace problems and strategies to respond to the problems. This unit applies to individuals who need learning skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify workplace problems; - propose appropriate strategies to respond to problems, and; - respond to feedback as appropriate. Students will also be expected to demonstrate the following knowledge: - factors contributing to routine workplace problems; - a range of strategies for problem solving, and; - sources of advice and feedback.

FSKLRG11 Use routine strategies for work-related learning

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to identify own learning goals and needs, and develop a formal learning plan to participate in a vocational or workplace learning environment. The unit applies to individuals who need learning skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway and/or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop a plan for own learning pathway, and; - review own progress. Students will also be expected to demonstrate the following knowledge: - strategies for learning; - own learning goals, and; - education and training requirements for learning pathway options.

FSKLRG15 Manage own work-related learning

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to manage own work-related formal and informal learning using an action plan. The unit applies to individuals who need learning skills at Australian Core Skills Framework (ACSF) level 4 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support

achievement of vocational competency.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prepare an action plan, and; - review the action plan. Students will also be expected to demonstrate the following knowledge: - strategies for managing own learning, and; - learning pathways.

FSKNUM007 Use simple data for work

Locations:Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to use data in simple workplace tasks and texts including tables and graphs. It includes locating and recognising simple data, performing data handling processes and communicating simple data handling information. An individual performing these tasks works alongside an expert or mentor where prompting and advice can be provided as needed. This unit applies to individuals who use, or are preparing to use, numeracy skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit can be integrated and contextualised with vocational training to support achievement of vocational competency. This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) numeracy core skill indicators .09, .10 and .11 at level 1 in the workplace and employment domain of communication. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use simple data handling process to perform a workplace task and roughly check the reasonableness of the result with support, including identifying data handling information in highly familiar short and simple oral and written workplace texts with a highly explicit purpose, comparing simple data in a highly familiar simple list or table, comparing simple data in a highly familiar simple graph and using relevant technology such as calculators. Students will also be expected to demonstrate the following knowledge: - purpose and application of data handling in the workplace including highly familiar short and simple graphs and tables; - methods for finding and comparing simple data in lists, tables and graphs; - purpose and method for performing rough check of reasonableness of outcome with support; - everyday, informal oral language for data, lists, tables and graphs, and; - relevant technology such as, calculators.

FSKNUM019 Interpret routine tables, graphs and charts and use information and data for work

Locations:Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to select and interpret information in routine tables, graphs and charts. This includes using routine calculations to interpret and compare information and methods of display. An individual performing these tasks works independently and uses familiar support resources as needed. This unit applies to individuals who use, or are preparing to use, numeracy skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency. This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) numeracy core skill indicators .09, .10 and .11 at level 3 in the workplace and employment domain of communication. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - extract and interpret statistical information from each of the following embedded in a workplace text or task such as, routine and familiar workplace table, routine and familiar workplace graph/chart. - interpret information in table and graph or chart above, including comparing data, determining and describing data features and trends, identifying data anomalies or misleading data pieces and making conclusions or summaries of data. Students will also be expected to demonstrate the following knowledge: - types of statistical information; - different types, purposes and uses of routine graphs and charts; - common features of routine tables, graphs and charts; - methods to perform calculations with data and information; - methods to use data and information to inform or persuade; - methods to identify misleading data; - methods to perform reasonableness check of processes and outcomes in relation to the workplace context; - informal and some formal mathematical written and oral language and symbolism, and; - relevant technology, such as graphic calculators or spreadsheets.

FSKNUM08 Identify and use whole numbers and simple fractions, decimals and percentages for work

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge to identify and use whole numbers into the thousands, simple fractions, decimals and percentages. This unit applies to individuals who need numeracy skills at Australian Core Skills Framework (ACSF) level 2 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - read and name whole numbers into thousands; - perform simple and familiar calculations with whole numbers and money, and; - recognise and explain simple fractions, decimals and percentages. Students will also be expected to demonstrate the following knowledge: - links between operations, and; - place value and use of zero.

FSKNUM09 Identify, measure and estimate familiar quantities for work

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to measure familiar and predictable quantities using simple and routine measuring instruments and units. This unit applies to individuals who need numeracy skills at Australian Core Skills Framework (ACSF) level 2 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - estimate and measure familiar simple amounts; - interpret measurement on simple measuring equipment; - add, subtract and multiply simple measurements, and; - record results using appropriate unit. Students will also be expected to demonstrate the following knowledge: - abbreviations of familiar units of measurement, and; - which units of measurement to use for length, mass and capacity.

FSKNUM14 Calculate with whole numbers and familiar fractions, decimals and percentages for work

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to interpret and calculate whole numbers, routine fractions, decimals and percentages. This unit applies to individuals who need numeracy skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret and use common fractions, decimals and percentages in real situations; - choose the appropriate

operations to solve real life mathematical problems, and; - perform calculations involving fractions, decimals and percentages. Students will also be expected to demonstrate the following knowledge: - place value and use of zero; - relationship between operations; - order of operations, and; - relationship between fractions, decimals and percentages.

FSKNUM15 Estimate, measure and calculate with routine metric measurements for work

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use routine measuring equipment, to convert units within the metric system, to estimate and calculate routine measurements including simple area of rectangles and squares. This unit applies to individuals who need numeracy skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - perform routine measurements; - convert between routine units of measurement; - perform routine measurement calculations, and; - record results using appropriate unit. Students will also be expected to demonstrate the following knowledge: - metric unit prefixes - meaning of milli, centi, kilo, and; - use of appropriate routine equipment e.g. setting weight scales at zero before weighing.

FSKNUM21 Apply an expanding range of mathematical calculations for work

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to extract and evaluate mathematical information and make a range of calculations including positive and negative numbers, rates and ratios, and powers and roots. This unit applies to individuals who need numeracy skills at Australian Core Skills Framework (ACSF) level 4 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - extract, interpret and use mathematical information; - perform calculations involving fractions, decimals,

percentages, positive and negative numbers, basic powers and roots and routine formulas; - perform multi-step calculations, and; - apply calculations to workplace contexts and tasks. Students will also be expected to demonstrate the following knowledge: - equivalent value of fractions, decimals and percentages; - relationship between powers and roots; - workplace application of negative numbers, and; - order of operations and use of brackets and parentheses.

FSKNUM23 Estimate, measure and calculate measurements for work

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to estimate and measure quantities, to convert units within the metric system and between metric and non-metric units, to calculate area and volume including compound shapes and to use Pythagoras' theorem. This unit applies to individuals who need numeracy skills at Australian Core Skills Framework (ACSF) level 4 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - make accurate measurements; - calculate area and volume of shapes including compound shapes; - calculate sides of triangles using Pythagoras' theorem, and; - make conversions between units. Students will also be expected to demonstrate the following knowledge: - units of measurement for specific workplace tasks; - names and basic properties of a range of 2D and 3D shapes, and; - Pythagoras' theorem.

FSKNUM31 Apply a wide range of mathematical calculations for work

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge to extract, comprehend and analyse a broad range of mathematical information and complete complex mathematical tasks. This includes using rational and relevant irrational numbers and performing calculations required in specialist areas of mathematics applicable to the workplace.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - perform a broad range of calculations using rational and irrational numbers. Students will also be expected to demonstrate the following knowledge: - irrational numbers relevant to work context.

FSKOCM003 Participate in familiar spoken interactions at work

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to participate in a limited range of familiar spoken interactions in the workplace, such as talking with co-workers, participating in workplace meetings, giving and responding to simple instructions, receiving and passing on simple messages, making an inquiry, or reporting a problem. An individual performing these tasks may work with an expert or mentor where support is available if requested. This unit applies to individuals who use, or are preparing to use, oral communication skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency. This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) oral communication core skill indicators .07 and .08 at level 2 in the workplace and employment domain of communication. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in and review performance in at least two different simple spoken workplace interactions appropriate to audience and purpose. Students will also be expected to demonstrate the following knowledge: - common purposes and audiences of simple workplace interactions; - relevant oral communication strategies that support familiar spoken interactions; - non-verbal communication methods to clarify and confirm meaning; - simple grammar and key vocabulary of personal significance; - simple verb tenses in sentences with one or more clauses, and; - some differences between informal and formal registers.

FSKOCM03 Participate in simple spoken interactions at work

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to participate in a limited range of simple spoken interactions in the workplace, such as talking with co-workers, participating in workplace meetings, giving and responding to simple instructions, receiving and passing on simple messages, or talking with clients. This unit applies to individuals who need oral communication skills at Australian Core Skills Framework (ACSF) level 2 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in a simple spoken interaction appropriate to audience and purpose. Students will also be expected to demonstrate the following knowledge: - oral communication strategies for simple spoken interactions; - non-verbal communication for simple spoken exchanges, and; - grammar, vocabulary and pronunciation for simple spoken interactions.

FSKOCMO4 Use oral communication skills to participate in workplace meetings

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use oral communication skills to contribute to workplace meetings, such as team meetings, project meetings, and work health and safety (WHS) meetings. This unit applies to individuals who need oral communication skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in workplace meetings appropriate to audience and purpose, and; - review own performance to identify areas for improvement. Students will also be expected to demonstrate the following knowledge: - oral communication strategies to participate in workplace meetings; - non-verbal communication to participate in workplace meetings, and; - grammar, vocabulary and pronunciation to participate in workplace meetings.

FSKOCMO5 Use oral communication skills for effective workplace presentations

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes skills and knowledge required to deliver effective workplace presentations, such as a prepared short presentation to co-workers, information updates (e.g. changes to Work Health and Safety (WHS)), or instructions on how to use new equipment. This unit applies to individuals who need oral communication skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and deliver a workplace presentation appropriate to audience and purpose, and; - review own performance to identify areas for improvement. Students will also be expected to demonstrate the following knowledge: - oral communication strategies to deliver workplace presentations; - non-verbal communication to enhance the delivery of workplace presentations, and; - grammar, vocabulary and pronunciation for workplace presentations.

FSKOCMO6 Use oral communication skills to participate in workplace teams

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to participate in and contribute to workplace teams, such as providing services and information, communicating workplace instructions and messages, negotiating, or participating in team meetings. This unit applies to individuals who need oral communication skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in spoken exchanges to contribute to a workplace team, and; - review own performance to identify areas for improvement. Students will also be expected to demonstrate the following knowledge: - oral communication strategies to participate in workplace teams; - non-verbal communication to participate in workplace teams, and; - grammar, vocabulary and pronunciation to participate in workplace teams.

FSKOCMO7 Interact effectively with others at work

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to interact effectively with others - external clients and internal staff, such as giving or responding to spoken instructions, responding to customer queries and complaints, negotiating with co-workers and management, explaining a workplace procedure, or taking telephone calls from the general public or internal staff. This unit applies to individuals who need oral communication skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participate in spoken interactions appropriate to audience and purpose, and; - review own performance to identify areas for improvement. Students will also be expected to demonstrate the following knowledge: - oral communication strategies for spoken interactions; - non-verbal communication for spoken interactions, and; - grammar, vocabulary and pronunciation for spoken interactions.

FSKOCM08 Use oral communication skills to facilitate workplace negotiations

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use oral communication skills to facilitate complex workplace negotiations, such as negotiating changes to work practices including performance reviews, training plans and solutions to workplace problems. This unit applies to individuals who need oral communication skills at Australian Core Skills Framework (ACSF) level 4 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - facilitate complex workplace negotiations appropriate to audience and purpose, and; - review the effectiveness of own performance to identify areas for improvement. Students will also be expected to demonstrate the following knowledge: - oral communication strategies to facilitate workplace negotiations; - non-verbal communication to facilitate workplace negotiations, and; - grammar, vocabulary and pronunciation to facilitate workplace negotiations.

FSKOCM09 Use oral communication skills to facilitate workplace meetings

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to apply oral communication skills to facilitate and participate in complex workplace meetings, such as committee meetings, project management meetings, inter-departmental meetings, or staff meetings. This unit applies to individuals who need oral communication skills at Australian Core Skills Framework (ACSF) level 4 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - facilitate workplace meetings appropriately, and; - review the effectiveness of own performance to identify areas for improvement. Students will also be expected to demonstrate the following knowledge: - oral communication strategies to facilitate workplace meetings; - non-verbal communication to facilitate workplace meetings, and; - grammar, vocabulary and pronunciation to facilitate workplace meetings.

FSKOCM10 Use oral communication skills for complex workplace presentations

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use oral communication skills to deliver complex workplace presentations, such as sales promotion or product launch, presentation at staff development forum, presentation of a proposal, seminar presentations, or leading a focus group. This unit applies to individuals who need oral communication skills at Australian Core Skills Framework (ACSF) level 4 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - deliver a complex workplace presentation appropriate to audience and purpose, and; - review the effectiveness of own performance to identify areas for improvement. Students will also be expected to demonstrate the following knowledge: - oral communication strategies to deliver complex workplace presentations; - non-verbal communication to enhance the delivery of workplace presentations, and; - grammar, vocabulary and pronunciation for complex workplace presentations.

FSKOCM11 Use oral communication skills to facilitate workplace teams

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use oral communication skills to facilitate workplace teams, such as leading group discussions, negotiating agreed outcomes, explaining workplace procedures, or exploring workflow issues. This unit applies to individuals who need oral communication skills at Australian Core Skills Framework (ACSF) level 4 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - facilitate workplace teams using oral communication skills and interpersonal skills, and; - review the effectiveness of own performance to identify areas for improvement. Students will also be expected to demonstrate the following knowledge: - oral communication strategies to facilitate workplace teams; - non-verbal communication to facilitate workplace teams, and; - grammar, vocabulary and pronunciation to facilitate workplace teams.

FSKRDG007 Read and respond to simple workplace information

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to identify, interpret and respond to information in simple and familiar workplace texts in printed or digital formats, such as short messages, notices, instructions, forms, rosters, simple diagrams, tables and charts. An individual performing these tasks may work with an expert or mentor where support is available if requested. This unit applies to individuals who use, or are preparing to use, reading skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency. This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) reading core skill indicators .03 and .04 at level 2 in the workplace and employment domain of communication. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret and identify appropriate responses to information in two different simple and familiar workplace texts. Students will also be expected to demonstrate the following knowledge: - reasons for reading and engaging with simple workplace texts; - audience, purpose and uses of a limited range of simple workplace texts; - common features of simple workplace texts and how to use these features to identify text type; - high-frequency terminology relevant to workplace in simple workplace texts; - techniques to navigate simple informal texts to locate general and specific information; - reading strategies to support the interpretation of information in simple workplace texts; - techniques to interpret and analyse simple workplace information, and; - suitable responses to information in simple workplace texts.

FSKRDG010 Read and respond to routine workplace information

Locations: Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to interpret and respond to information in routine workplace texts in printed or digital formats, such as instruction manuals, reports, emails, brochures, work instructions, notices, web

pages with data and policies. An individual performing these tasks works independently and uses familiar support resources as needed. This unit applies to individuals who use, or are preparing to use, reading skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency. This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) reading core skill indicators .03 and .04 at level 3 in the workplace and employment domain of communication. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret and identify appropriate response to information in at least two different routine workplace texts. Students will also be expected to demonstrate the following knowledge: - reasons for reading routine workplace texts and explicit questions to be answered through reading; - purpose and uses of routine workplace texts; - distinguishing features of routine workplace texts; - some specialised workplace terminology in routine workplace texts; - techniques to navigate routine workplace information using text structure and features; - formal and informal text register of writing; - techniques to self-monitor reading for sense and accuracy; - reading strategies that support the interpretation of information in routine workplace texts; - critical reading techniques to analyse routine workplace information in familiar texts, and; - suitable responses to routine workplace information.

FSKRDG05 Read and respond to simple workplace procedures

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to identify, interpret and respond to information in simple workplace procedures in printed or digital format. This unit applies to individuals who need reading skills at Australian Core Skills Framework (ACSF) level 2 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and interpret information in simple workplace procedures, and; - respond appropriately to simple workplace procedures. Students will also be expected to demonstrate the following knowledge: - purpose and features of simple workplace procedures; - workplace

terminology in simple workplace procedures, and; - reading strategies for identifying and interpreting workplace procedures.

FSKRDG06 Read and respond to simple informal workplace texts

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to identify, interpret and respond to information in simple informal workplace texts in printed or digital format, such as a written phone message, a note from a supervisor, an email from a team member, message at end of shift, an SMS, an instant message.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and interpret information in simple informal workplace texts, and; - respond appropriately to information in simple informal workplace texts. Students will also be expected to demonstrate the following knowledge: - purpose and features of simple informal workplace texts; - high-frequency vocabulary in simple informal workplace texts, and; - reading strategies to identify and interpret information in simple informal workplace texts.

FSKRDG07 Read and respond to simple workplace information

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to identify, interpret and respond to information in simple workplace texts in printed or digital format, such as short messages, notices, instructions, forms, rosters, simple diagrams, tables and charts. The unit applies to individuals who need reading skills at Australian Core Skills Framework (ACSF) level 2 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and interpret information in simple workplace texts, and; - respond appropriately to information in simple workplace texts. Students will also be expected to demonstrate the following knowledge: - purpose and features of simple workplace texts; - high-frequency terminology in simple workplace texts, and; - reading strategies to identify and interpret information in simple workplace texts.

FSKRDG09 Read and respond to routine standard operating procedures

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City

Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to interpret and respond to standard operating procedures in printed or digital format. The unit applies to individuals who need reading skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret routine standard operating procedures, and; - respond appropriately to routine standard operating procedures. Students will also be expected to demonstrate the following knowledge: - purpose and features of routine standard operating procedures; - some specialised terminology in routine standard operating procedures, and; - reading strategies to interpret routine standard operating procedures.

FSKRDG10 Read and respond to routine workplace information

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to interpret and respond to information in routine workplace texts in printed or digital format, such as instruction manuals, reports, emails, brochures, work instructions, spreadsheets. The unit applies to individuals who need reading skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret information in routine workplace texts, and; - respond appropriately to information in routine workplace texts. Students will also be expected to demonstrate the following knowledge: - purpose and features of routine workplace texts; - some specialised terminology in routine workplace texts, and; - reading strategies to interpret information in routine workplace texts.

FSKRDG11 Read and respond to complex workplace information

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to analyse, evaluate and respond to a range of complex workplace texts in printed or digital format, such

as work and organisational plans, training needs analyses, reports, manuals, standard operating procedures, product reviews and flow charts. This unit applies to individuals who need reading skills at Australian Core Skills Framework (ACSF) level 4 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse and evaluate information from complex workplace texts to complete workplace tasks. Students will also be expected to demonstrate the following knowledge: - purpose and features of complex workplace texts; - specialised or technical vocabulary relevant to complex workplace texts, and; - reading strategies to analyse and critically evaluate information from complex workplace texts.

FSKWTG006 Write simple workplace information

Locations:Footscray Nicholson, St Albans, Werribee, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to write simple workplace information, which may be in printed or digital formats, such as workplace reports, including incident or accident reports, pro-formas or templates, emails, messages, notes, statements or WHS records. An individual performing these tasks may work with an expert or mentor where support is available if requested. This unit applies to individuals who use, or are preparing to use, writing skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency. The unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) writing core skill indicators .05 and .06 at level 2 in the workplace and employment domain of communication. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - draft, check and revise two of the following different simple workplace texts such as, workplace report, including incident or accident reports, formatted text, pro-formas or templates, for example, internal job application form, shift handover reports, purchase orders, or invoices, standard workplace forms, including vehicle log or petty cash claim brief shift note, email, message or note, roster or action plan for other members of a work group, list or simple flyer of information for discussion and dot point statement about a process or procedure. Students will also be expected to demonstrate the following knowledge: - different forms, structures, and uses of simple formal and informal

workplace texts; - common features of simple workplace texts and their uses, including formatted and free form texts; - basic differences between informal and formal register of writing; - simple techniques for planning to write workplace texts; - simple grammar and vocabulary relevant to self, workplace and everyday life; - basic punctuation; - simple techniques for organising and sequencing information; - techniques to layout and present informal and formal workplace texts; - relevance and application, with support, of spell checking devices, and; - techniques to review and revise texts.

FSKWTG03 Write basic workplace information

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to write basic workplace texts which may be in printed or digital format, such as simple emails, SMSs, personnel forms, time sheets and checklists. The unit applies to individuals who need writing skills at Australian Core Skills Framework (ACSF) level 1 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - write basic workplace texts appropriate to audience and purpose, and; - check drafts to finalise basic workplace texts. Students will also be expected to demonstrate the following knowledge: - purpose and features of basic workplace texts; - writing strategies for basic workplace texts; - grammar and vocabulary for basic workplace texts, and; - writing conventions for basic workplace texts.

FSKWTG05 Complete simple workplace formatted texts

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to complete simple workplace formatted texts which may be in printed or digital format, such as simple incident or accident reports, purchase orders, or brief shift notes. The unit applies to individuals who need writing skills at Australian Core Skills Framework (ACSF) level 2 to undertake vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - complete simple workplace

formatted texts appropriate to audience and purpose, and; - review drafts to finalise simple workplace formatted texts. Students will also be expected to demonstrate the following knowledge: - features of simple workplace formatted texts; - writing strategies - planning, drafting, reviewing - to complete simple workplace formatted texts; - grammar and vocabulary for simple workplace formatted texts, and; - writing conventions for simple workplace formatted texts.

FSKWTG06 Write simple workplace information

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to write simple workplace texts which may be in printed or digital format, such as incident or accident reports, purchase orders, brief shift notes, emails, messages, or WHS records. The unit applies to individuals who need writing skills at Australian Core Skills Framework (ACSF) level 2 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - write simple workplace texts appropriate to audience and purpose, and; - review drafts to revise and finalise simple workplace texts. Students will also be expected to demonstrate the following knowledge: - features of simple workplace texts; - writing strategies - planning, drafting, reviewing - for simple workplace texts; - grammar and vocabulary for simple workplace texts, and; - writing conventions for simple workplace texts.

FSKWTG09 Write routine workplace texts

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine.

Prerequisites: Nil.

Description: This unit is broad in focus. It describes the skills and knowledge required to write routine workplace texts and could be used for a variety of writing types and purposes, including letters and emails, instructions, incident or accident reports, online forms, formatted job reports - in printed or digital form. The unit applies to individuals who need writing skills at Australian Core Skills Framework (ACSF) level 3 to undertake a vocational training pathway or workplace tasks. This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - write routine workplace texts appropriate to audience and purpose, and; - review drafts to revise and finalise

routine workplace texts. Students will also be expected to demonstrate the following knowledge: - features of a range of routine workplace texts; - writing strategies - planning, drafting, proofing, reviewing - to complete routine workplace texts; - grammar and vocabulary for routine workplace texts, and; - writing conventions for routine workplace texts.

FWPCOT2239 Trim and cut felled trees

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the outcomes required to trim and cut felled trees with a chainsaw and to complete operator maintenance. It applies to situations where the production of timber is not the primary focus of the activity. The unit applies to a forestry worker, chainsaw operator, forest harvester, harvesting technician and arboriculture worker. Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - safely and efficiently use a chainsaw to complete these activities: trim and cut hardwood or softwood trees; delimit trees; trim branches; trim burls and other small growths; - use these cutting techniques: bridging cuts; swinging cuts; side bind cuts; boring; wedge cut; ripping cuts; - trim and cut trees in these environmental conditions: dry weather condition; wet weather condition; low and moderate wind speeds, and; - complete maintenance on a chainsaw. Students will also be expected to demonstrate the following knowledge: - environmental protection measures; - key features of these varying environmental conditions and effects on tree cutting and trimming; - typical tree defects and how they affect tree cutting; - typical tree stresses and how they affect tree cutting; - range of chainsaw cutting techniques; - cutting patterns used to optimise time and recovery of product from trees; - cutting sequences used to maintain control of cut sections and minimise cutting problems; - purpose, features, operation and basic non-specialist repair and maintenance: of chainsaws; - methods for assessing chain condition, and; - organisational procedures specific to tree trimming and cutting activities.

HH033 Health and Human Development 3

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit looks at health, wellbeing and illness as multidimensional, dynamic and subject to different interpretations and contexts. Students begin to explore health and wellbeing as a global concept and to take a broader approach to inquiry. As they consider the benefits of optimal health and wellbeing and its importance as an individual and a collective resource, their thinking extends to health as a universal right. Students look at the fundamental conditions required for health improvement, as stated by the World Health Organization (WHO). They use this knowledge as background to their analysis and evaluation of variations in the health status of Australians. Area of Study 2 focuses on health promotion and improvements in population health over time. Students look at various public health

approaches and the interdependence of different models as they research health improvements and evaluate successful programs. While the emphasis is on the Australian health system, the progression of change in public health approaches should be seen within a global context. This unit is delivered in Year 12.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to explain the complex, dynamic and global nature of health and wellbeing, interpret and apply Australia's health status data and analyse variations in health status. Outcome 2 On completion of this unit the student should be able to explain changes to public health approaches, analyse improvements in population health over time and evaluate health promotion strategies. Assessment will follow the requirements set out in the VCE Health and Human Development Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 3 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 25 per cent to the study score. SAC for Unit 4 will contribute 25 per cent to the study score (HH034 Health and Human Development 4). EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 50 per cent to the study score.

HH034 Health and Human Development 4

Locations:Footscray Nicholson.

Prerequisites:HH033 - Health and Human Development 3

Description:This unit examines health and wellbeing, and human development in a global context. Students use data to investigate health status and burden of disease in different countries, exploring factors that contribute to health inequalities between and within countries, including the physical, social and economic conditions in which people live. Students build their understanding of health in a global context through examining changes in burden of disease over time and studying the key concepts of sustainability and human development. They consider the health implications of increased globalisation and worldwide trends relating to climate change, digital technologies, world trade and the mass movement of people. Area of Study 2 looks at global action to improve health and wellbeing and human development, focusing on the United Nations' (UN's) Sustainable Development Goals (SDGs) and the work of the World Health Organization (WHO). Students also investigate the role of non-government organisations and Australia's overseas aid program. Students evaluate the effectiveness of health initiatives and programs in a global context and reflect on their capacity to take action. This unit is delivered in Year 12.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical

application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to analyse similarities and differences in health status and burden of disease globally and the factors that contribute to differences in health and wellbeing. Outcome 2 On completion of this unit the student should be able to analyse relationships between the SDGs and their role in the promotion of health and human development, and evaluate the effectiveness of global aid programs. Assessment will follow the requirements set out in the VCE Health and Human Development Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 4 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 25 per cent to the study score (HH033 Health and Human Development 3). SAC for Unit 4 will contribute 25 per cent to the study score. EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 50 per cent to the study score.

HI083 Australian History 3

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit focuses on the European experience in Australia from the early years of the Port Phillip District (later Victoria) through the nineteenth century and up to the eve of World War I. This unit is offered in Year 12.

Required Reading:The lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment:Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams .

HI084 Australian History 4

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit continues the exploration of the ideas and visions underpinning Australian society by offering students the opportunity to examine a time when these visions were under threat. They may choose to focus on World War I, The Depression or World War II. The emphasis is on the ways in which Australians responded to the particular threats and whether this led to a rethinking of old certainties. Students will also examine the impact of these experiences on change and social cohesion. The study concludes with an examination of changing Australian attitudes in relation to a number of issues that have been debated in the latter decades of the twentieth century, among them Indigenous rights, the environment, immigration and involvement in war. This unit is offered in Year 12.

Required Reading:The lecturer will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment:Demonstrated of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

HLTAPO01 Recognise healthy body systems

Locations:Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, VU Learning Links at Altona Meadows.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to work with basic

information about the human body and to recognise and promote ways to maintain healthy functioning of the body. This unit applies to any worker who needs to use and interpret information that includes references to client anatomy and physiology. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - worked effectively with information about the human body and its healthy functioning in at least three (3) different situations. Students will also be expected to demonstrate the following knowledge: - basic structure and functions of the body systems and associated components; - processes, conditions and resources required by the body to support healthy functioning, and; - body regulation. .

HLTAAP002 Confirm physical health status

Locations:St Albans, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to obtain and interpret information about client health status and to check a client's physical health. It requires a detailed knowledge of anatomy and physiology. This unit applies to individuals working directly with clients and who assist in the provision of health care services. Some disciplines may be subject to state/territory regulatory determination regarding delegation and supervision. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtained, correctly interpreted and used anatomical and physiological client information to check the physical health status of at least three (3) different people presenting with different conditions. Students will also be expected to demonstrate the following knowledge: - role responsibilities and limitations for different members of the care team in relation to checking client health status; - concepts underpinning human anatomy and physiology; - structure and function of human body systems and their interactions; - anatomical and medical terminology; - common disorders, problems and complaints and their signs and symptoms, associated with each body system and its components relevant to the area of work; - basic pharmacology in relation to cautions and contraindications for relevant health procedures; - causes of disease - physical, mental and emotional, and key features of each cause; - major types of cellular adaptation; - processes of metabolism, nutrition, body temperature regulation, biological maturation, inheritance and ageing; - Oral health disease of the

mouth and teeth including edentulous (no-natural teeth) and dentate (having natural teeth), and; - variations from normal functioning and appropriate responses.

HLTAAP003 Analyse and respond to client health information

Locations:Footscray Park, St Albans, Werribee, City King St, Whitten Oval.

Prerequisites:Nil.

Description:This unit of competency describes the skills and knowledge required to analyse client health information and then to plan appropriate health services within scope of own role. It requires an in-depth knowledge of anatomy and physiology. This unit applies to individuals who plan and provide services with some level of autonomy. Some disciplines will require a state/territory regulatory determination regarding delegation and supervision. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analysed the health information and planned services for least 6 different clients presenting with different conditions, and; - assessed client health status based on: observations; physical assessments, and; interpretation of client tests. Students will also be expected to demonstrate the following knowledge: - role responsibilities and limitations for different members of the care team in relation to analysing health information and providing services; - concepts underpinning human anatomy and physiology; - variations and abnormal findings of the structure and function of human body systems and their interactions; - anatomical and medical terminology; - common disorders, problems and complaints associated with each body system and its components relevant to the services being provided; - analysis of abnormal findings from diagnostic procedures and physical assessment; - pathophysiology of diseases associated with each body system and the impact of disease on each body system and their related structures, especially in relation to potential impact of specific health procedures provided; - recognition of the signs and symptoms of common clinical conditions and the (provisional) diagnosis of same; - pharmacological processes and drug actions, indications and contraindications; - effects of biological maturation and ageing processes on body systems and their components and in relation to specific health procedures provided; - basic chemistry (molecules and compounds; chemical reaction, energy; acids and bases) and as related to metabolism, respiration, pH (respiratory and renal acidosis/alkalosis); - structure and function of cells, and; - transport systems.

HLTAHA001 Assist with an allied health program

Locations:Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to provide basic assistance to an allied health professional. This unit applies to allied health assistants working in a health or community context. Depending on the setting, work may include following treatment plans for therapeutic interventions and/or conducting programs under the regular (direct, indirect or remote) supervision of an allied health professional. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards

and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assisted with 3 allied health programs, 1 in a simulated environment and 2 in the workplace, and; - performed the activities outlined in the performance criteria of this unit during a period of at least 80 hours of work. Students will also be expected to demonstrate the following knowledge: - client individualised plans, goals and limitations of therapy; - roles, responsibilities and limitations of self and other allied health team members including nursing, medical and other personnel; - therapy tasks and programs associated with particular client population; - how to assess client readiness for therapy and whether there are changes that might affect the appropriateness of the prescribed therapy; - allied health resources available for client population; - appropriate use of allied health equipment and resources; - organisation policy and procedures; - other specific organisation procedures, including supervisory and reporting protocols; - differences between occupational therapy, physiotherapy and speech pathology and related therapy techniques; - basic human behaviour and social and interpersonal behaviour; - concepts of holistic health as wellbeing, rather than focusing on disease or its absence, and; - determinants of health, including: housing; education; nutrition; communication.

HLTAH004 Support client independence and community participation

Locations:St Albans, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to work with clients in their home and community to facilitate rehabilitation goals through supporting independence in daily living and optimising community access and participation in the context of a rehabilitation plan. This unit applies to workers in the community and should be performed under the direction and supervision (direct, indirect or remote) of a health professional. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - facilitated 3 different clients, 1 in a simulated environment and 2 in the workplace, to access and participate in the community within the context of rehabilitation plans; - assisted with facilitation of 3 different clients, 1 in a simulated environment and 2 in the workplace, involvement and participation in daily living activities within the context of rehabilitation plans, and; - performed the activities outlined in the performance criteria of this unit during a period of at least 120 hours of work. Students will also be expected to demonstrate the following knowledge: - cross cultural issues in a

community rehabilitation context; - community care service providers; - work health and safety (WHS) issues and requirements, risk assessment and risk management associated with working in client homes and the community; - philosophy and values of community rehabilitation; - psychological impact of illness and/or injury, especially in relation to client participation in daily living activities and routines; - range of aides, appliances, modifications and services that could promote client participation in daily living activities and facilitate community access; - relevant national and/or state-based community services and programs and local community care service providers; - importance of community access and participation to client well being; - motivational strategies to promote client interest in accessing and participating in the community; - the importance and meaning of home and belongings to clients and the nature and significance of working in the client's home and community settings, and; - principles and practices of self management.

HLTAH024 Work within a community rehabilitation environment

Locations:St Albans, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to work with clients to support rehabilitation within the community according to a rehabilitation plan. This unit applies to workers in the community and should be performed under the direction and supervision (direct, indirect or remote) of a health professional. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - facilitated involvement and participation of 3 clients, 1 in a simulated environment and 2 in the workplace, in the rehabilitation process within the context of rehabilitation plans, and; - performed the activities outlined in the performance criteria of this unit during a period of at least 120 hours of work. Students will also be expected to demonstrate the following knowledge: - the importance and meaning of home and belongings to clients and the nature and significance of working in the client's home and community settings; - the importance and practice of participation, social justice and equity; - values and philosophies of community rehabilitation in practice; - different frameworks, approaches and models of community rehabilitation; - cross cultural issues in a community rehabilitation context; - community advocacy groups; - importance of principles and practices to enhance sustainability in the workplace, including environmental, economic, workforce and social sustainability; - international classification of functioning, disability and health; - organisation policy and procedures; - legal and ethical considerations relevant to allied health; - relevant national and/or state-based community services and programs and local community care services, and; - medico-legal and legal implications of working outside the plans, specifically treatment style plan.

HLTAID001 Provide cardiopulmonary resuscitation

Locations:Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Other Industry locations..

Prerequisites:Nil.

Description: This unit describes the skills and knowledge required to perform cardiopulmonary resuscitation (CPR) in line with the Australian Resuscitation Council (ARC) Guidelines. This unit applies to all workers who may be required to provide CPR, in a range of situations, including community and workplace settings. Specific licensing/regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - followed DRSABCD in line with ARC guidelines, and; - responded to at least one simulated first aid scenario contextualised to the candidate's workplace/community setting. Students will also be expected to demonstrate the following knowledge: - State/Territory regulations, first aid codes of practice and workplace procedures; - legal, workplace and community considerations; - considerations when providing CPR, and; - basic anatomy and physiology.

HLTAID002 Provide basic emergency life support

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to recognise and respond to life-threatening emergencies in line with the Australian Resuscitation Council (ARC) Guidelines. This unit applies to all workers who may be required to provide an emergency response in a range of situations, including community and workplace settings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - followed DRSABCD in line with ARC guidelines; - responded to at least one simulated first aid scenario contextualised to the candidate's workplace/community setting, and; - applied first aid procedures. Students will also be expected to demonstrate the following knowledge: - State/Territory regulations, first aid codes of practice and workplace procedures; - legal, workplace and community considerations; - considerations when providing basic emergency life support; - principles and procedures for first aid management, and; - basic anatomy and physiology.

HLTAID003 Provide first aid

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City Queen, City King St, Sunshine, Whitten Oval.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to provide a first aid response to a casualty. The unit applies to all workers who may be required to provide a first aid response in a range of situations, include community

and workplace settings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - followed DRSABCD in line with ARC guidelines; - responded to at least two simulated first aid scenarios contextualised to the candidate's workplace/community setting, and; - applied first aid procedures. Students will also be expected to demonstrate the following knowledge: - State/Territory regulations, first aid codes of practice & workplace procedures; - legal, workplace & community considerations; - considerations when providing first aid; - principles & procedures for first aid management of the following scenarios, and; - basic anatomy & physiology.

HLTAID004 Provide an emergency first aid response in an education and care setting

Locations: Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Hume Global Learning Centre, Broadmeadows, Altona Meadows and Sunbury..

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to provide a first aid response to infants, children and adults.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - followed DRSABCD in line with ARC guidelines; - responded to at least three simulated first aid scenarios contextualised to the candidate's workplace/community setting, and involving infants and children of varying ages; - applied first aid procedures, and; - located and interpreted workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - State/Territory regulations, first aid codes of practice and workplace procedures; - legal, workplace and community considerations; - considerations when providing first aid, and; - principles and procedures for application of first aid management.

HLTAID006 Provide advanced first aid

Locations: Industry, St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit deals with the skills and knowledge required to provide an advanced first aid response, including management of the incident and other first aiders, until the arrival of medical or other assistance. The unit applies to workers who may be required to provide, coordinate and manage a first aid response across a range of complex situations, include community and workplace settings. Specific licensing requirements relating to this competency, including requirements for refresher training, should be obtained from the relevant state/territory Work Health and Safety Regulatory Authority.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - followed DRSABCD in line with ARC guidelines; - responded to at least three simulated first aid scenarios contextualised to the candidate's workplace/community setting; - applied first aid procedures, and; - located and interpreted workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - State/Territory regulations, first aid codes of practice and workplace procedures; - legal, workplace and community considerations; - considerations when providing first aid; - principles and procedures for first aid management of the following scenarios, and; - basic anatomy and physiology.

HLTAID007 Provide advanced resuscitation

Locations: Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to use specialised equipment in the provision of resuscitation in line with the Australian Resuscitation Council (ARC) guidelines. This unit applies to workers who may be required to use specialised equipment to provide resuscitation in a range of complex situations, include community and workplace settings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - followed DRSABCD in line with ARC guidelines; - conducted a visual and verbal secondary survey assessment of the casualty; - assessed vital signs (respirations, pulse and temperature); - responded to at least three simulated first aid scenarios contextualised to the candidate's workplace/community setting; - selected and inserted an oropharyngeal airway adjunct; - administered oxygen to an unconscious/conscious casualty; - monitored and coordinated maintenance of resuscitation equipment, and; - located and interpreted workplace policies and procedures. Students will also be expected to demonstrate the following knowledge: - State/Territory regulations, first aid codes of practice and workplace procedures; - legal, workplace or community considerations; - considerations when performing resuscitation; - considerations when providing supplementary oxygen; - basic anatomy, physiology and toxicology as it relates to the provision of advanced resuscitation, and; - methods for cleaning, replenishing, recharging and maintaining resuscitation and oxygen equipment.

HLTAMBO01 Follow procedures for routine safe removal of patient

Locations: St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to effectively communicate with patients, colleagues and health providers in complex situations using verbal and non-verbal interactions. It requires workers to address these significant challenges in the context of providing a health care service. This

unit applies to pre-hospital/out-of-hospital health care workers in a range of settings where direct patient contact is involved. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand Standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performed 2 routine extrications of a patient, and; - used interpersonal skills while working with other workers and patient during safe egress. Students will also be expected to demonstrate the following knowledge: - workplace health and safety (WHS) policies and procedures relevant to the movement of patients; - patient care requirements under a range of circumstances involving movement of patient; - correct use of relevant equipment; - potential for adaptation of available resources; - factors that may affect safety and welfare of patient and crew.

HLTAMBO02 Implement safe access and egress in an emergency

Locations: St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the knowledge and skills required to implement specialised procedures necessary to overcome major obstacles and to provide safe access and egress at the scene of an incident. The unit requires an individual to respond to situations that stretch resources and ingenuity beyond the requirements of routine procedures and may require use of specialised equipment. This unit applies to pre-hospital/out-of-hospital health care workers. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand Standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - implemented 4 non-routine extrications including: - analysing the scene and developing access and egress plans, recognising that the welfare of the patient, workers and bystanders is paramount; - communicating the plan to patient, colleagues and/or other emergency workers at the scene; - amending original plan as situation dictates, and; - achieving access and egress in difficult environments when given limited equipment, and using equipment as the situation dictates. Students will also be expected to demonstrate the following knowledge: - policies and procedures relating to access and egress; - dangers associated with various hazardous situations, and the response agency for hazard control; - patient care under circumstances requiring complex access and egress procedures; - relevant equipment and its uses, including specialist equipment for hazardous versus a routine situation, and; - factors which may affect safe access and egress and patient welfare such as decision making guidelines for extrication versus delivery of immediate patient care.

HLTAMBO03 Transport emergency patients

Locations: St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to transport patients and other appropriate workers to and from a health care facility or service under emergency circumstances. The unit includes skills for loading, driving and unloading a vehicle safely, and for checking vehicles and equipment in order to restock and remedy faults. This unit applies to pre-hospital/out-of-hospital health care workers. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand Standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - checked the safety of transport vehicle and safely transported 3 emergency patients under operational conditions including: - loading and unloading; - performing driving skills suited to specific situations and the case being attended; - assessing and analysing available driving routes and available resources, and; - making decisions that ensure the efficient and safe driving of vehicles under different operational conditions for safe transport of emergency patients. Students will also be expected to demonstrate the following knowledge: - methods of loading and unloading patients under life-threatening conditions; - organisation policy and procedures related to vehicle being used for transportation, equipment in vehicle and vehicle checks; - relevant Acts, regulations and organisation policies and procedures related to transport of patients, and; - use of communications equipment and systems for transporting emergency patients.

HLTAMBO07 Assess and deliver basic clinical care

Locations: Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency describes the knowledge and skills required to conduct clinical assessment and deliver basic clinical care in a pre-hospital/out-of-hospital environment. This unit applies to pre-hospital/out-of-hospital health care workers. The worker provides basic life support and prioritises clinical care of a patient in accordance with established clinical practice guidelines. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand Standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performed the activities outlined in the performance criteria of this unit during a period of at least eighty (80) hours under clinical supervision in the workplace; - performed a clinical

assessment and implemented basic care in an pre-hospital/out-of-hospital context on three (3) different patients for an illness or trauma impacting health status including: - performing primary survey; - performing secondary survey - systematic head to toe physical body examination including vital signs and level of consciousness; - planning and implementing basic clinical care based on assessment and time-criticality; - monitoring patient; - safely delivering patient to receiving facility or service, and; - performed basic life support on an adult, child and infant simulation manikin according to established clinical guidelines and protocols. Students will also be expected to demonstrate the following knowledge: Assessment and interpretation of vital signs including: - level of consciousness, covering for example, Glasgow Coma Score (GCS), alert, voice, pain, unconscious (AVPU); - respiratory status assessment - for example, rate, rhythm, effort and breath sounds; - temperature status - for example, febrile or afebrile or hypothermic; - blood volume and perfusion status assessment - for example pulse, blood pressure, capillary refill and skin; - basic anatomy and physiology in recognising body systems; - basic life support, including procedures and equipment used as specified within established clinical guidelines and protocols; - chief complaints when attending pre-hospital/out-of-hospital situations including trauma and medical disorders and possible actions to alleviate complaints; - clinical practice guidelines and protocols; - how to accurately obtain and document patient medical history including pre-existing conditions, allergies, social and emotional wellbeing, and current medication or treatment plans to provide to receiving health facility workers; - national and State/Territory legal and ethical considerations for emergency health care workers relevant to pre-hospital/out-of-hospital care, and how these are applied in organisations including: - children in the workplace; - continuing professional education; - discrimination; - duty of care; - human rights; - informed consent; - mandatory reporting; - practitioner/client boundaries; - privacy, confidentiality and disclosure; - specific Commonwealth legislation and State/Territory legislation or regulation for health care workers; - organisational administrative and patient care policies and procedures; - primary survey and secondary survey; - receiving facility requirements or how to access these requirements, and; - recognise the patterns of illness and injury relevant to the delivery of basic clinical patient care;.

HLTAMBO08 Assess and deliver standard clinical care

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit of competency describes the skills and knowledge required to conduct clinical assessments and deliver standard patient care in the pre-hospital/out-of-hospital environment. This unit applies to pre-hospital/out-of-hospital health care workers. The worker provides advanced life support, prioritises clinical care, implements time-critical health care procedures and therapies, and monitors patients based on patient needs and in accordance with established clinical practice guidelines. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand Standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performed the activities

outlined in the performance criteria of this unit during a period of at least 160 hours under clinical supervision in the workplace; - performed a clinical assessment and implemented standard care in a pre-hospital/out-of-hospital context on 5 different patients for an illness or trauma impacting health status; - implemented the following standard clinical care interventions under a variety of conditions and circumstances within the established clinical guidelines and protocols: providing airway management for a patient; attaching leads, recording and interpreting an electrocardiograph (ECG) to analyse cardiac dysrhythmia; performing manual direct current counter shock on an adult simulation manikin according to established clinical guidelines and protocols; administering and responding to the effects of pharmacological therapy to treat and manage patient's illness or condition, and; - performed advanced life support on an adult, child and infant simulation manikin according to established clinical guidelines and protocols. Students will also be expected to demonstrate the following knowledge: - assessment and interpretation of vital signs; - advanced life support and advanced resuscitation, including procedures and equipment used as specified within established clinical guidelines and protocols; - critical thinking and diagnostic reasoning techniques and processes; - causes and effects of trauma; - common environmental emergencies; - how to accurately obtain and document patient medical history including, pre-existing conditions, allergies, social and emotional well-being and current medication or treatment plans to provide to receiving health facility workers; - national and State/Territory legal and ethical considerations for emergency health care workers relevant to pre-hospital/out-of-hospital care, and how these are applied in organisations; - organisation policies, procedures and established clinical guidelines and protocols for patient care and emergency equipment; - pharmacology therapy and concepts underpinning pharmacology, and; - situations where the patient requires treatment that is outside the scope or authority to practice of the attending worker.

HLTAMBO11 Manage a routine non-emergency scene

Locations:St Abans, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to manage routine non-emergency situations that are not anticipated to be life-threatening to ensure safety at the scene. This unit applies to pre-hospital/out-of-hospital health care workers. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand Standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - managed 1 routine non-emergency scene including: - taken appropriate measures to ensure safety; - identified hazards, real or potential, where there are risks to participants or bystanders; - minimised risk by enlisting hazard reduction agents; - made decisions to ensure rapid and safe access and egress, and; - used available resources. Students will also be expected to demonstrate the following knowledge: - command, control and coordination responsibilities - working knowledge; - how to evaluate management strategies used in routine non-emergency activities; - hazards and

potential hazards at a scene and their effect on safe access and egress; - relevant policies and procedures relating to non-emergency management, and; - relevant current national standards.

HLTAMBO12 Communicate in complex situations to support health care

Locations:St Abans, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the skills and knowledge required to effectively communicate with patients, colleagues and health providers in complex situations using verbal and non-verbal interactions. It requires workers to address these significant challenges in the context of providing a health care service. This unit applies to pre-hospital/out-of-hospital health care workers in a range of settings where direct patient contact is involved. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand Standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - verbally communicated to patients and developed responses to meet the differing needs for each of the following 5 complex situations: - extrication from a motor vehicle accident; - providing emergency care to a person under the influence of substance misuse; - providing emergency care to a person who has a mental health condition; - providing emergency care to a person who has been assaulted; - providing emergency care to a person under stress due to a life-threatening situation, and; - provided complex information clearly and accurately using a written response on at least 1 occasion. Students will also be expected to demonstrate the following knowledge: - effective communication techniques appropriate to communication requirements of specific job role; - communication and interpersonal skills; - complex communication needs of a person under stress due to situations to themselves or others such as trauma, death and life threatening situations; - organisation operating procedures applying to identified situations where complex communication needs may be present; - relevant communication codes and systems; - referral processes of organisation and counselling services; - roles of relevant allied health personnel, and; - relevant guidelines and organisation procedures relevant to the job role.

HLTAMBO13 Contribute to managing the scene of an emergency

Locations:St Abans, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to manage procedures, provide security and communicate with other services involved with patient care at the scene of an emergency. It describes skills required in emergency situations, which may involve coordination with and by other emergency services personnel. This unit applies to pre-hospital/out-of-hospital health care workers. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand Standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - contributed to managing 1 emergency scene including: - acknowledging and responding to a range of views and clarifying information from persons at the scene; - establishing and maintaining inter-service communication and liaising and networking with personnel from other services to negotiate solutions of required tasks; - identifying and managing any hazards at the scene and facilitating information to the public concerning safety; - managing multiple competing priorities, and; - identifying and implementing available resources in accordance with established clinical guidelines and protocols. Students will also be expected to demonstrate the following knowledge: - relevant policies and procedures relating to emergency management; - working knowledge of command, control and coordination responsibilities; - relevant current national standards such as; - real and potential hazards and their effects; - roles and responsibilities of other organisations including services provided by medical and other emergency and allied agencies, and their limitations, and; - current practices, procedures and equipment used in communicating in the workplace.

HLTAMBO14 Transport non-emergency patients under operational conditions

Locations: St Abans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to load, unload and drive vehicles safely to transport non-emergency patients to and from a facility or service. It includes using communication equipment and checking vehicles and equipment in order to restock and remedy faults. This unit applies to pre-hospital/out-of-hospital health care workers.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - checked the safety of transport vehicle and safely transported 3 different non-emergency patients under operational conditions including loading and unloading. Students will also be expected to demonstrate the following knowledge: - methods of loading and unloading non-emergency patients; - organisation policy and procedures for vehicles used for transportation of non-emergency patients, equipment in vehicles and vehicle checks; - relevant acts, regulations and organisation policies/procedures related to transport of non-emergency patients; - manual handling and lifting; - care and/or restraint of patient during transportation - for example a patient with a mental health condition or a child; - non-emergency patient care procedures during transportation; - State/Territory road rules and regulations when driving emergency vehicles; - stock inventory and the safe storage and disposal of pharmacological products; - use of communications equipment and systems, and knowledge of relevant procedures, and; - vehicle and non-emergency resources organisation operating procedures.

HLTEN001 Practise nursing within the Australian health care system

Locations: St Abans, Werribee.

Prerequisites: Nil.

451

Description: This unit describes the skills and knowledge required to practise as a nursing professional within the Australian health care system, providing health care across the lifespan of people in a range of health and community care services or environments. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand Standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines, and; - during at least 1 clinical work placement, worked effectively in the context of professional nursing practice including: performing 5 different professional interactions to demonstrate adaptation to nursing role and application of knowledge of nursing practice, and reflecting on the 5 professional interactions and identifying how nursing practice contributed to the person's health outcome. Students will also be expected to demonstrate the following knowledge: - health and illness issues facing people who have come from countries other than Australia; - health insurance-related organisations and their roles in the Australian health care system; - health issues and impacts for health care delivery for Aboriginal and Torres Strait Islander people; - historical and current perspectives of the nursing profession; - development and historical context of the Australian health care system, current health service models and State/Territory standards of care; - range of health care environments and the roles of the interdisciplinary health care team and personnel associated with health service delivery; - themes that impact health and illness for people from Australia and other countries, including environment, cultural barriers and community acceptance; - social, political and economic impacts on health care delivery including funding sources and constraints on services and resource allocation; - overall structure, strengths and weakness of the Australian health care system, with emphasis on the local area; - current issues which impact health policy development; - how health and illness factors impact a person; - principles and philosophical framework of primary health care; - principles of wellness and illness, and models of care and non-western approaches to health care; - roles of regulatory authorities, industrial and professional bodies: - Nursing and Midwifery Board of Australia, including knowledge of the enrolled nurse competency standards for practice, and professional practice standards, codes and guidelines, and; - Australian Nursing and Midwifery Federation.

HLTEN002 Apply communication skills in nursing practice

Locations: St Abans, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to apply effective communication skills with a person, family or carer and with other healthcare professionals in a variety of health care settings. Communication skills in nursing practice require using information technology as well as interpersonal skills applied therapeutically in nursing care and small group discussions. This unit applies to

enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand Standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines, and; - communicated effectively within the context of the enrolled nurse role in 4 different complex communication situations, with at least 1 of the situations involving a person, family or carer, and at least 1 of the situations involving work colleagues. Students will also be expected to demonstrate the following knowledge: - characteristics of effective partnerships in nursing; - documentation related to clinical handover; - elements and skills of communication processes; - factors that may facilitate and inhibit communication; - information technology used in communication, and email etiquette and policies for use; - principles underpinning nursing documentation including legal obligations; - principles, processes and practices of open disclosure in line with Australian Open Disclosure Framework; - medical terminology used in clinical situations and enrolled nurse practice; - sensory losses and appropriate nursing responses, and; - social media policies for nurses.

HLTEN003 Perform clinical assessment and contribute to planning nursing care

Locations:St Albans, Werribee.

Prerequisites:Nil.

Description:This unit of competency describes the skills and knowledge required, within the scope of practice, to perform preliminary and ongoing physical health assessments of all body systems, gathering data that contributes to a person's individualised health care plan. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines; - performed nursing admission and discharge procedures for 2 different people in the workplace as per organisation policy and

procedures; - conducted holistic clinical health assessment on 2 different people in the workplace or in a simulated environment, and; - developed at least 1 nursing care plan in the workplace or in a simulated environment based on holistic health assessment undertaken with a real person. Students will also be expected to demonstrate the following knowledge: - admission and discharge planning processes and documentation required; - developmental stages of childhood; - developmental stages of adolescence and common health issues for adolescents; - developmental stages of adulthood and major activities related to each stage; - impact of infertility on people; - approaches to understanding human growth and development; - influences of genetics and environment on development; - family health care needs; - gender-specific health care needs; - how to use equipment for health assessment and data collection; - how to assist a person in activities of daily living including identified aids to assist these activities; - how to perform clinical measurements and/or assessments; - human growth and development; - interpretation and analysis of a person's health-related information; - principles of health assessment; - problem solving strategies and techniques for conducting health assessment; - how to recognise a deteriorating patient and determine levels of consciousness; - how and when to raise issues of concern about a person's deterioration; - wellness approach to health, including physiology and psychosocial aspects, and; - variations in health needs and activities of daily living across the person's lifespan.

HLTEN004 Implement, monitor and evaluate nursing care plans

Locations:St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to implement nursing care as outlined in a person's plan of care, evaluate outcomes of care provided, record and report progress, and respond to an emergency situation. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken work in in accordance with Nursing and Midwifery Board of Australia professional standards of practice, codes and guidelines; - implemented and monitored at least 2 different nursing care plans in the workplace; - evaluated at least 1 nursing care plan in the workplace or in a simulated environment, and; - used emergency codes and performed basic life support in a simulated environment on an adult, child and infant manikin according to organisation policy and procedures. Students will also be expected to demonstrate the following knowledge: - activities of daily living; - factors that promote and impede comfort, sleep and rest; - purpose of hygiene and grooming; - actual and potential nursing care; - basic life support; - risk identification related to episodic care; - risk prevention strategies, and; - recording and reporting requirements for comprehensive clinical handovers and case meetings.

HLTENN005 Contribute to nursing care of a person with complex needs

Locations:St Abans, Werribee.

Prerequisites:Nil.

Description:This unit of competency describes the skills and knowledge required to provide clinical nursing skills for a person with complex needs and to contribute to complex nursing interventions using critical thinking and problem-solving. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional standards of practice, codes and guidelines; - analysed, planned and evaluated the health care of 3 people using health information and clinical presentation to determine possible nursing interventions, in consultation with a registered nurse in the workplace; - performed interventions in the workplace or in a simulated environment, specific to care of a person with complex needs, and; - emptied and changed 1 urinary drainage bag in the workplace. Students will also be expected to demonstrate the following knowledge: - common disorders and conditions, and the correct terminology; - diagnostic tests for diagnosis of common conditions and disorders of body systems; - collecting specimens, including blood; - how to perform nursing interventions; - mediation, negotiation and conflict resolution as associated with nursing intervention principles for recognising a deteriorating person; - referral options and resources available in community and health care settings; - critical thinking, including its characteristics and the differences between critical thinking, creative thinking and problem-solving, and; - nursing interventions associated with reproductive and urinary system disorders and conditions including conditions which require a bladder washout.

HLTENN006 Apply principles of wound management in the clinical environment

Locations:St Abans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to apply contemporary wound management principles to the care of various types of wounds. It involves working with the interdisciplinary health care team to contribute to assessment, treatment and ongoing management of a person's wounds. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines, and; - performed wound care management, including wound assessment, health education and evaluation of the person's wound care in the workplace on 3 wounds, of which at least 1 must involve a simple wound dressing and at least 1 must involve a complex wound dressing. Students will also be expected to demonstrate the following knowledge: - National Safety and Quality Health Service (NSQHS) Standards; - chain of infection; - community and educational resources and professional organisations associated with wound management; - historical development of contemporary wound management strategies; - pain management and medication administration timeframes appropriate to wound care; - causes of wounds; - organisation policy and procedures for wound care; - wound management terminology; - wound management techniques; - acute and chronic wounds; - wound management strategies; - selection of wound products, and; - comfort needs of people with wounds such as the need for pain management and relief.

HLTENN007 Administer and monitor medicines and intravenous therapy

Locations:St Abans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to administer and monitor medications and intravenous (IV) therapy including calculating dosage requirements, interpreting written instructions from an authorised prescriber, assessing the person for medication effectiveness and side effects, and responding to an allergic pharmacological reaction. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines; - calculated medications with 100% accuracy and used the 'Rights of Medication' to administer medication to at least 2 people in simulation and at least 3 people in the workplace, and which must include the following routes: oral and sub-cutaneous injection; - calculated medications with 100% accuracy and used the 'Rights of Medication' to administer medication in the workplace or in a simulation environment to at least 2 people, and which must include the following routes: intramuscular injections and peripheral IV injection, and; - safely prepared equipment for IV therapy and blood and blood products administration, and monitored IV therapy and blood and blood products

administration in the workplace or in simulated environment to at least 2 people including assessing cannula site. Students will also be expected to demonstrate the following knowledge: - legal requirements for practice parameters of enrolled nurse in relation to the administration and documentation of medications, including legal requirements for each route of administration; - forms of medication and how they are handled, calculated, administered and stored; - pharmacology of medications; - potential complications of blood transfusion; - how to transport, store, handle, check and dispose blood and blood products safely; - 'Rights of medication' - the right medication (drug, medication, medicines), right dose, right prescription (documentation), right route, right time, right person, right expiration date, right to refuse; - how medication is administered via the following routes or methods; - IV medication administration methods; - pathophysiology related to medicine groups; - factors to consider when calculating medication dosages; - organisation policy and procedure for addressing medication errors, and; - drugs commonly used for fluid and electrolyte imbalance.

HLTEN008 Apply legal and ethical parameters to nursing practice

Locations:St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to within work legal and ethical parameters in professional nursing practice, including supporting rights and meeting duty of care requirements. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines, and; - demonstrated, through involvement in 2 specific documented situations in the workplace, the ability to work within the legal and ethical parameters that apply to professional nursing practice. Students will also be expected to demonstrate the following knowledge: - legal and ethical considerations (national, State/Territory, local) relevant to the nursing profession, and how these are applied in nursing practice; - application of ethical principles to enrolled nurse practice, and; - application of the law to enrolled nurse practice.

HLTEN009 Implement and monitor care for a person with mental health conditions

Locations:St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to contribute to the nursing care and management of a person with a mental health condition. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory

legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines, and; - analysed, planned and evaluated the health care of 2 people with a mental health condition, using health information and clinical presentation to reach a conclusion of possible nursing interventions appropriate to their mental health condition, and in consultation with a registered nurse in the workplace. Students will also be expected to demonstrate the following knowledge: - application of nursing theory to a mental health context; - social, psychological, cognitive and physical factors associated with mental health conditions; - consumer and carer perspectives on mental health care; - impact of stigma, discrimination, culture and belief systems on a person with a mental health condition; - common mental health conditions by classification or disorder, and their treatment and management; - appropriate response to a person in distress or crisis; - common behaviours associated with a range of mental health conditions, and the effect of behaviours on the person and others; - how to manage challenging behaviours including recognising triggers and deflecting them, using active listening and observation skills; - the principles of recovery in the mental health context; - national framework for recovery-orientated mental health services (Australian Government); - key features of the mental health legislation; - definition of key terms associated with mental illness, and; - strategies for managing oral health issues and possible causes such as the side effects of medication, poor nutrition and reduced motivation for self-care.

HLTEN010 Apply a palliative approach in nursing practice

Locations:St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to provide nursing care using a palliative approach in care environments such as hospitals, home and community care, hospices and long-term care facilities. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines; - analysed health information and clinical presentation of 1 person to reach an accurate conclusion of possible palliative care

planning and nursing interventions in consultation with a registered nurse; - provided nursing care using a palliative approach to 1 person in the workplace; - performed nursing interventions through the end-of-life stages to 1 person in the workplace, and; - in both of these cases, performed professional interactions with the family or carer. Students will also be expected to demonstrate the following knowledge: - how to identify needs of the person, family or carers during the palliative approach to health care; - State/Territory legislation on advance care planning, advance care directives and notification of a death; - diverse cultural, religious and spiritual factors underpinning the persons choices at end-of-life; - ethical and legal issues related to a palliative care approach; - hydration and nutrition requirements during palliative care and at end-of-life; - pain management; - indications and contraindications for use of syringe drivers in administration of pain medication; - indications for intima sub cut lines for pain relief, anti-nausea and steroid injections; - impact of loss and grief on person, family or carers and staff members; - own role and responsibilities, and those of other team members involved in palliative care; - relevant organisation policies, procedures, protocols and practices in relation to palliative care, and; - relevant resources available to those requiring grief and bereavement support.

HLTENN011 Implement and monitor care for a person with acute health problems

Locations:St Abans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to contribute to the care of the person with an acute health problem by performing clinical nursing skills and interventions that support the person's health care needs and assist them to regain optimal function and lifestyle. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines; - analysed health information and the clinical presentation of 1 person in the workplace or simulated environment to reach an accurate conclusion on possible health care planning and nursing interventions related to their acute health condition, in consultation with a registered nurse; - performed nursing interventions for 1 person undergoing a surgical procedure in the workplace, including pre-operative preparation and post-operative care, and; - implemented nursing interventions in the workplace or in a simulated environment specific to care of 1 person with acute health problems. Students will also be expected to demonstrate the following knowledge: - acute health problems; - holistic approach to care in the acute care environment including nursing interventions and outcomes; - clinical manifestations of acute disease states and illnesses requiring complex nursing interventions; - emergency management protocols for first aid procedures and cardiac and respiratory arrest; - pre- and postoperative nursing management; - equipment

used in acute care environments; - post-operative pain management strategies; - post-anaesthetic and post-operative observations; - how to perform complex interventions; - how to monitor a person with medical devices, and; - principles of surgical nursing and associated surgical procedures and related terminology.

HLTENN012 Implement and monitor care for a person with chronic health problems

Locations:St Abans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to contribute to the care of a person with chronic health problems by performing nursing interventions that support the person's needs and assist them in maintaining an optimal lifestyle. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines; - analysed health information and the clinical presentation of 1 person in the workplace or simulated environment to reach an accurate conclusion on possible nursing interventions related to their chronic health problems, in consultation with a registered nurse, and; - performed nursing interventions in the workplace to contribute to the support of 2 people who have chronic health problems. Students will also be expected to demonstrate the following knowledge: - broad context for chronic disease; - rehabilitation strategies, techniques and equipment used for chronic health conditions; - clinical manifestations of chronic disease or chronic health conditions, and; - strategies to address and manage chronic disease in the relevant work context.

HLTENN013 Implement and monitor care of the older person

Locations:St Abans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to perform nursing interventions to support the social and emotional wellbeing and nursing care needs of the older person in both acute care settings and residential care environments. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines; - analysed health information and the clinical presentation of 2 older people to reach an accurate conclusion on possible nursing interventions related to their care, in consultation with a registered nurse, and; - performed nursing interventions and monitored nursing care for 1 older person with dementia and 1 older person with a physical disability. Students will also be expected to demonstrate the following knowledge: - the potential impacts of dual or multiple diagnoses on identification and prioritisation of the older person's needs; - chronic age-related health problems; - continence care; - how to care for a deceased person; - oral hygiene for a partial or fully edentulous person; - counselling and support services and resources in the aged care environment and wider community; - difference between end-of-life care and palliative care; - functional assessment tools for assessing older people; - limitations and legal ramifications of physical, chemical and psychological restraint; - legal and ethical issues and considerations, and assessment tools relevant to the older person; - nature of dementia as a progressive neurological condition, and strategies and nursing interventions that can be used with people with dementia; - primary health care and services for the older person; - stereotypes and influences on ageing; - strategies to respond to challenging behavior; - physical triggers for behaviour including pain and not wearing the prescribed hearing aids or alternative listening devices; - complementary therapies; - the importance of a safe, physical, social and emotional environment for all older people, and particularly for people with dementia; - theories of ageing, and; - physiology of the ageing process as it relates to disease processes.

HLTENNO15 Apply nursing practice in the primary health care setting

Locations: St Albans, Werribee.

Prerequisites: Nil.

Description: This unit describes the nursing skills and knowledge required to work in a primary health care environment including community-based, educational, occupational and informal settings, and in general practice. Primary health care involves a person-centred and holistic approach to health care. It is made accessible to people by being located as close as possible to where they live, and supporting their full participation in a spirit of self-reliance and self-determination. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines; - analysed health information and the clinical

presentation of 1 person in the workplace to reach a substantiated conclusion about possible nursing interventions related to their primary health care needs, in consultation with a registered nurse, and; - reviewed and updated a plan of care for 1 person to address their specific primary health care needs. Students will also be expected to demonstrate the following knowledge: - health challenges facing Australian communities; - environmental health issues facing Australian communities; - philosophy underpinning primary health care; - care of a confused person; - care of a person with dementia; - emergency and first aid management of conditions and injuries; - age specific health issues for infants, children, adolescents, adults and older people; - community and in-hospital resources and services available for medical conditions; - critical thinking and problem-solving strategies; - evidence-based practice; - health, including the illness continuum; - literature and professional bodies associated with primary health care management, and; - variety of forms of service delivery models including preventative, curative and rehabilitative.

HLTENNO20 Conduct clinical assessments

Locations: Industry, St Albans, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to recognise the need for assessment, perform physical examinations and make clinical judgments using critical analysis and specialised knowledge of pathophysiology and clinical assessment processes. This unit applies to enrolled nurses, registered with the Nursing and Midwifery Board of Australia, seeking specialisation in enrolled nurse work that is carried out in consultation and collaboration with registered nurses and under direct or indirect supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines; - demonstrated the capacity to analyse changes in a person's health status, perform physical examinations and make sound clinical judgements for at least 3 different people presenting with a complex condition, illness or injury; - assessed health status using the following clinical assessment tools and techniques: - neurological examination, including sensory function and motor responses, reflexes; - peripheral vascular system examination; - respiratory auscultation and percussion; - chest auscultation and percussion; - abdomen auscultation and palpation; - heart sounds check, and; - interpreted the person's blood test results for abnormal findings indicating changes in health status. Students will also be expected to demonstrate the following knowledge: - communication strategies that underpin assessment and communication with the person and other health professionals; - advanced concepts underpinning human maintenance systems including immunity and homeostasis imbalance causing physical changes; - clinical assessment techniques and tools used in a head-to-toe physical body examination; - processes for the neurological examination of the sensory function and motor responses; - processes for respiratory system examination; - processes for checking

heart sounds; - processes for chest and abdomen examination; - processes for peripheral vascular system examination; - processes for skin, hair and nails examination; - effects of intrinsic factors (such as age, health) and extrinsic factors (such as environment, medications) on person's condition; - how to interpret common blood test results and their meanings as indicators of a health condition or illness; - how to recognise subtle changes in a person's condition through knowledge of a person's patterns of responses and comparing responses over periods of time; - principles for recognising a deteriorating patient and raising issues of concern about a person's deterioration, and; - socio-economic, physiological, emotional and physical variables related to clinical presentation of a person.

HLTEN025 Implement and monitor care for a person with diabetes

Locations:St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to provide nursing care to a person with diabetes including assessing needs, planning and implementing complex nursing interventions, evaluating outcomes, and educating the person on his/her condition and available resources. This unit applies to enrolled nursing work carried out in consultation and collaboration with registered nurses, and under supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines; - provided nursing care and management of 2 people with diabetes in the workplace including: - a person who has become hypoglycaemic; - a person who has become hyperglycaemic; - a person who is demonstrating signs of ketoacidosis. Students will also be expected to demonstrate the following knowledge: - anatomy, physiology and pathophysiology related to diabetes and diabetic conditions; - potential problems related to care of a person with diabetes and the following conditions - with the knowledge sufficiently in-depth and specialised to make considered judgements; - health promotion goals and their expected outcomes; - factors influencing self esteem of the person with diabetes; - issues related to diabetes care delivery and diabetes-related services, and; - underlying environmental and social factors contributing to diabetes in the Australian general population, including the factors involved with higher rates experienced by Aboriginal and/or Torres Strait Islander people.

HLTEN031 Apply nursing practice in contemporary mental health care settings

Locations:Industry, St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to work as part of the interdisciplinary health care team providing care for people requiring mental health services. Enrolled nurses working in the mental health care need to hold and apply specialised in-depth knowledge, effectively integrate theory and practice, and

make reliable clinical assessments and judgements. This unit applies to enrolled nurses, registered with the Nursing and Midwifery Board of Australia, seeking specialisation in enrolled nurse work that is carried out in consultation and collaboration with registered nurses, and under direct or indirect supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines; - provided nursing care and management for 3 people with a mental health condition and documented progress towards planned nursing outcomes in the workplace, including the following complex issues: - non-compliance with medication; - adverse effects of pharmacology used to treat mental health condition; - risk of self-harm and requirements for physical restraint; - alcohol and other drug misuse; - coping skills, and; - changes to sleep and concentration patterns. Students will also be expected to demonstrate the following knowledge: - oad classifications of mental health conditions; - application of nursing theory to a mental health context; - mental health pharmacology including therapeutic and adverse effects; - diagnostic tests used in mental health assessment and their significance; - ethical issues associated with use of antipsychotic medications; - concept of the national framework for recovery-oriented mental health services; - research related to mental health care and evidence based nursing practice; - legal and ethical considerations (national, State/Territory and local) regarding participation of the person and carer in planning and recovery, and how these are applied in organisations and individual practice; - national framework for recovery-orientated mental health services (Australian Government); - culturally appropriate health promotion activities for persons with mental health conditions; - factors influencing self-esteem; - medical terminology associated with contemporary mental health care; - philosophy underpinning mental health care; - principles of mental health assessment and risk assessment; - specialised knowledge in the antecedents and clinical manifestations of mental health conditions; - appropriate of interventions involving chemical or physical restraint, and; - classification systems for mental health conditions.

HLTEN033 Research and report on nursing trends and practice

Locations:Industry, St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to identify research needs, source and analyse emerging trends and best practice in nursing and report on the outcomes of research to inform continuous improvement at a systemic or organisational level. This unit applies to enrolled nurses, registered with the Nursing and Midwifery Board of Australia, who work in collaboration with registered nurses, and under direct or indirect supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory

legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planned, conducted and used at least two (2) research projects to contribute to the continuous improvement of nursing practice at a systemic or organisational level in at least one (1) workplace. Students will also be expected to demonstrate the following knowledge: - ways in which own practice informs research; - processes for engaging others in the identification of research needs; - internal and external factors that potentially impact research and its application; - features and formats of research plans; - research strategies, how they are implemented and their application for different research objectives; - evidence-based information - what it is, what it isn't and how it is developed and used in healthcare; - information sources for research in nursing practice; - processes that support analysis of information and how to use them, and; - report writing.

HLTEN034 Contribute to the improvement of clinical practice

Locations: Industry, St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to model high standards of performance, reflect on clinical work practices and contribute to organisation processes for systemic improvement. This unit applies to enrolled nurses, registered with the Nursing and Midwifery Board of Australia, who work in collaboration with registered nurses, and under direct or indirect supervisory arrangements aligned to the Nursing and Midwifery Board of Australia regulatory authority legislative requirements. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - contributed to the improvement of at least 1 clinical work practice through participation in organisational processes for systemic improvement. Students will also be expected to demonstrate the following knowledge: - links between enrolled nursing practice and organisational vision and objectives and how they are demonstrated in clinical practice; - ways of supporting colleagues as an enrolled nurse; - features of collaboration; - types of clinical work practices where the enrolled nurse may be involved in continuous improvement, and the structures and processes that support the improvement process; - sources of information that inform improvements in clinical practice and how these may be used; - types of opportunities in health organisations to contribute at systemic level, how they are structured and key

stakeholders involved, and; - strategies required for effective participation in organisational forums.

HLTFA211A Provide basic emergency life support

Locations: Industry, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit of competency describes the skills and knowledge required to recognise and respond to life threatening emergencies using basic life support measures only.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assess vital signs and response of casualty; - call an ambulance and/or medical assistance, according to circumstances and report casualty's condition; - demonstrate first aid casualty management principles; - demonstrate: consideration of the welfare of the casualty; control of external bleeding; correct procedures for CPR on a resuscitation manikin (i.e. as per units HLTCPR211A Perform CPR); implementation of standard precautions, and; safe manual handling of casualty; - identify and minimise hazards to health and safety of self and others in the immediate workplace or community environment; - plan an appropriate first aid response in line with established first aid principles, ARC Guidelines and guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations and respond to contingencies in line with own skills, and; - report details of emergency incident and first aid provided. Students will also be expected to demonstrate the following knowledge: - ARC guidelines, guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations, including requirements for currency; - awareness of stress management techniques and available support; - basic anatomy and physiology; - chain of survival; - duty of care requirements; - first aid procedures; - how to access emergency response support services/personnel; - need to be culturally aware, sensitive and respectful; - own skills and limitations; - privacy and confidentiality requirements; - relevant workplace hazards, and; - understanding of the use of an Automated External Defibrillator (AED), including when to use and when not to.

HLTFSE001 Follow basic food safety practices

Locations: Industry, Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to comply with personal hygiene, maintain food safety, contribute to cleanliness of food handling areas and dispose of food. This unit applies to food services workers who work under supervision and within defined guidelines.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identified at least 4

appropriate times for hand washing and followed correct hand washing procedures; - cleaned and tidied work areas at least 2 times to avoid contamination and pests; - identified at least 2 food items for disposal and followed food disposal procedures, and; - identified, corrected and reported at least 2 processes or practices that were not consistent with food safety program. Students will also be expected to demonstrate the following knowledge: - food safety program and procedures and consequences of not following these procedures; - current national, state or territory food safety laws, standards and codes; - food hazards and major causes of food contamination and food-borne illnesses; - sources and effects of microbiological contamination of food; - personal hygiene requirements; - workplace hygiene hazards when handling food and food contact surfaces, and; - minimum hand washing occasions.

HLTHIR402D Contribute to organisational effectiveness in the health industry

Locations:Online.

Prerequisites:Nil.

Description:This unit of competency describes the skills and knowledge required to contribute to effective organisation outcomes in the health industry by practising and promoting legal and ethical work practices to protect client safety and enhance outcomes for the organisation and its clients in the broader health industry context.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply the legal and ethical issues in relation to client care, as relevant to the worker's specific role and responsibilities; - demonstrate active involvement in improving the performance of the organisation in line with the scope of the worker's role and responsibilities; - demonstrate understanding of the role of the organisation, its relationship to the community and with other industry organisations and communicate this to team members and others when appropriate; - accurately communicate information to others; - comply with legal requirements specific to worker's role and responsibilities; - encourage other team members and promote good practice; - identify external organisations and other industry participants of importance to the organisation; - identify the services provided by the organisation; - identify and promote the importance of using opportunities to address waste minimisation, environmental responsibility and sustainable practice issues; - participate in accreditation, quality improvement, infection control, work health and safety (WHS) projects, service and process improvements, public relations, marketing, environmental surveys or customer service projects and initiatives relevant to role and responsibilities of the worker, and; - use key performance indicators relevant to worker's role and responsibilities. Students will also be expected to demonstrate the following knowledge: - awareness of organisation policies / procedures related to own work role; - awareness of organisation's budgeting and budget monitoring processes as they relate to own work functions; - awareness of relevant organisation or department structure and/or any associated agencies; - awareness of sources of funding and funding mechanisms relevant to organisation in line with own work functions; - awareness of appropriate practices to ensure efficient use of resources; - elementary quality improvement principles and processes; - general knowledge of legal and ethical issues related to client care and client safety; - importance and basic nature of significant organisation relationships with external industry organisations

and individuals; - workplace approach and practices aimed at maintaining sustainability, including environmental, economic, workforce and social sustainability; - performance measures used by the organisation for measuring clinical, operational and financial performance relevant to worker's role and responsibility; - role of the organisation and services it provides; - service profile and catchment area of organisation, and; - specific legal issues related to client care relevant to own and team roles and responsibilities, including child protection.

HLTHPS006 Assist clients with medication

Locations:Industry, Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to prepare for and provide medication assistance, and complete medication documentation. It also involves supporting a client to self-administer medication. This unit applies to community services and health workers with authority in their state or territory to assist with the administration of medication. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - provided assistance with medication: to at least 5 different clients according to their care plans; with at least 5 different types of medications; used at least 3 different modes of administration, and; - consistently adhered to procedures and regulatory requirements for assisting with medication. Students will also be expected to demonstrate the following knowledge: - legislation, regulations, codes of practice and workplace policies; - roles and responsibilities of those involved in medication administration and limitations of own role in only providing assistance; - basic medication terminology; - forms of medication, and how they are handled, administered and stored; - characteristics of at least 10 commonly used medications in the area of work, including prescribed and over the counter medications, and; - documentation requirements for the administration of medication.

HLTHPS010 Interpret and use information about nutrition and diet

Locations:Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to interpret and use basic information about nutritional principles and healthy diet. It does not include the provision of therapeutic nutritional or dietary advice to individual clients or the recommendation of 'practitioner only' nutritional products. This unit applies to individuals working with clients within the limits of the Australian dietary guidelines. They make referrals to other health professionals or accredited practising dietitians when those limits are exceeded.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - used critical thinking skills to review and distil information about nutrition and diet, and; - used information about nutrition and diet within the scope of own job role in the provision of services to at least 3 different people. Students will also be expected to demonstrate the following knowledge: - legal and ethical requirements in relation to the provision of nutritional and diet information to clients; - source of information about nutrition and diet and ways to assess their credibility; - established evidence-based sources of information about nutrition and diet; - anatomy and physiology relating to diet; - primary components of Australian dietary guidelines, including those for older Australians, children and adolescents; - foods and their key features as described in the Australian dietary guidelines, including diet related aspects of chronic disease; - basic principles and practices of nutrition and healthy diet, including nutrients, their function, recommended dietary intake (RDI), toxicity and their food sources; - benefits of antioxidants, and food groups that provide good sources; - influences on food choices for individuals; - food labelling and interpretation; - role and implications of using food additives and preservatives; - health implications of food choices; - role of good nutrition in avoiding dietary diseases; - effects of various processing and cooking methods and food storage on nutrients; - commonly encountered food intolerances; - main types and characteristics of special diets that are part of contemporary Australian society; - the meaning of: drug-food interactions, food allergy; food intolerance; alkaline and acidity charts, and; - indicators of need for referral to specialist advice. .

HLTINFO01 Comply with infection prevention and control policies and procedures

Locations: Industry, Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to follow organisational infection prevention and control procedures, including implementing standard and transmission-based precautions and responding to infection risks. This unit applies to individuals working in health and direct client care contexts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - followed established organisation infection prevention and control procedures on at least 3 separate occasions; - followed established organisation infection prevention and control procedures at least once for each of the following: - hand hygiene and care of hand; - use of personal protective equipment; - handling of waste; - enforcing clean and contaminated zones; - limitation of contamination; - surface cleaning. Students will also be expected to demonstrate the following knowledge: - established guidelines for the prevention and control of infection; - personal and hand hygiene; - use and scope of personal protective equipment guidelines; - surface cleaning; - types of additional precautions and their relevance to particular areas of work or client groups; - types of hazards in the work environment and associated risks and control measures; - chain of infection; - basis of infection; - key modes of disease

transmission - contact, airborne and droplet, and; - factors that increase the susceptibility to infection;.

HLTINFO04 Manage the prevention and control of infection

Locations: Footscray Park, Werribee, City King St, Whitten oval.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop, implement and monitor infection prevention and control systems and procedures in work contexts where health and personal care services are provided. This unit applies to people working in roles with managerial responsibilities for infection prevention and control in small to medium sized organisations. There may or may not be a team of workers involved.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - developed compliant infection prevention and control systems and procedures for at least 1 work environment: - accessed and analysed compliance and workplace information; - developed and documented systems and procedures; - communicated responsibilities to relevant people, and; - monitored infection prevention and control systems and procedures for at least 1 work environment and responded to problems. Students will also be expected to demonstrate the following knowledge: - key features of infection prevention and control regulation and guidelines and compliance requirements; - principles and processes of planning; - systems and procedures needed to meet compliance and quality requirements for infection prevention and control; - links between infection prevention and control systems and other management systems, and; - sustainability considerations for development of infection prevention and control systems and procedures.

HLTINFOV001 Comply with infection prevention and control policies and procedures

Locations: Industry, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to follow organisational infection prevention and control procedures, including implementing standard and transmission-based precautions and responding to infection risks. This unit applies to individuals working in health and direct client care contexts. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce, extend knowledge, skill competence within set & controlled parameters in accordance with each unit's learning outcomes & performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes. Students will be expected to demonstrate the following: 1. REQUIRED SKILLS: Hand hygiene & care of hand, use of personal protective equipment, handling of waste, enforcing clean & contaminated zones, limitation of contamination, surface cleaning. 2. KNOWLEDGE: Established guidelines for prevention & control of infection,

including: personal & hand hygiene; how to hand wash & rub; clinical moments when hand hygiene should be performed with soap & water rather than alcohol-based hand rub; non-clinical moments for hand hygiene & care; guidelines on maintaining intact skin, fingernails & jewellery/watches; use & scope of personal protective equipment guidelines for: glove use, wearing gowns & waterproof aprons, masks & protective glasses; surface cleaning procedures & their specified times, routine surface cleaning, managing a blood or body fluid spill, sharps handling & disposal techniques; reprocessing procedures for equipment; precautions & relevance to particular areas of work or client groups; hazards in the work environment & associated risks & control measures; chain of infection: source of infectious agent, mode of transmission, susceptible host; basis of infection including: bacteria & bacterial spores; fungi & viruses. Key modes of disease transmission: contact, airborne & droplet; paths of transmission including direct contact, aerosols & penetrating injuries; risk of acquisition; sources of infecting microorganisms including persons who are carriers, in the incubation phase of the disease or those who are acutely ill factors that increase the susceptibility to infection: immune status; wounds or devices medications & comorbidities; age

HLTMSG001 Develop massage practice

Locations: Footscray Park, Werribee, City King St, Whitten Oval.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to establish the foundations of massage practice, evaluate what makes a sustainable practice and then to develop an approach to own practice. This unit applies to massage therapists.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - used critical thinking skills to review and reflect on information from a range of sources about massage practice, and; evaluate and articulate requirements for sustainable massage practice; - communicated key messages about massage therapy to meet the information needs of at least 3 different individuals or groups, and; - developed goals for own practice that reflect the values and philosophies of massage therapy. Students will also be expected to demonstrate the following knowledge: - historical development of massage; - different types of massage treatments and their key features and purpose, including the difference between relaxation and remedial massage; - key features of complementary therapies used in conjunction with massage, including: aromatherapy and reflexology; - key features of allied health services and their relationship to massage, including: physiotherapy, osteopathy, chiropractic, exercise physiology, dietetics and naturopathy; - place of massage practice in the broader health care system; - professional massage networks and industry bodies; - different models of professional massage practice and their employment opportunities; - components of sustainable practice, and; - legal and ethical considerations (national and state/territory) and how these are applied in individual practice.

HLTMSG002 Assess client massage needs

Locations: Footscray Park, Werribee, City King St, Whitten Oval.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to gather client

information, make a physical assessment of the body and determine massage treatment options. This unit applies to massage therapists providing general health maintenance treatments. It does not include remedial massage assessment techniques. This unit applies to massage therapists.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performed the activities outlined in the performance criteria of this unit during a period of at least 80 hours of massage client consultation work; - prepared for and managed at least 40 massage assessments - clients must include males and females from different stages of life with varied presentations; - completed physical assessments using palpation, observation and active, passive and resisted ROM testing, and; - interacted effectively with clients. Students will also be expected to demonstrate the following knowledge: - legal and ethical considerations (national and state/territory) for client assessment; - referral options for massage practitioners; - factors and barriers that may impact on massage assessment; - factors that affect individual health status; - client information required prior to physical assessment; - considerations for performing physical massage assessments; - physical assessment techniques, how and when they are used; - contraindications to treatment and possible indications for referral; - major muscle anatomy, and; - physiology: soft tissue and hard tissue.

HLTMSG003 Perform remedial massage musculoskeletal assessments

Locations: Footscray Park, Werribee, City King St, Whitten Oval.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to assess the needs of clients presenting with soft tissue dysfunction, musculoskeletal imbalance or restrictions in range of motion (ROM). It requires the ability to gather client information, conduct specific tests and bring information together to develop a remedial massage treatment plan. There is a strong focus on functional anatomy. This unit applies to remedial massage therapists.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of massage client consultation work; - prepared for and managed at least 60 remedial massage musculoskeletal assessments - clients must include males and females from different stages of life with varied presentations; - used remedial massage assessment techniques appropriately, and; - interacted effectively with clients. Students will also be expected to demonstrate the following knowledge: - legal and ethical considerations (national and state/territory) for client assessment; - referral options for practitioners; - factors and barriers that may impact on assessment; - factors that affect individual health status; - client information required

for remedial massage assessment and the scope and depth of information needed; - protocols for performing physical massage assessments; - remedial massage diagnostic techniques, how and when they are used; - contraindications to treatment and possible indications for referral; - anatomy; - physiology, and; - conditions commonly seen by massage therapists.

HLTMSG004 Provide massage treatments

Locations:Footscray Park, Werribee, City King St, Whitten Oval.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to prepare for and provide massage treatments using a defined range of techniques and sequences. This unit applies to massage therapists providing general health maintenance treatments. It does not include remedial massage techniques. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performed the activities outlined in the performance criteria of this unit during a period of at least 80 hours of massage client consultation work; - prepared for and managed at least 40 massage treatment sessions - clients must include males and females from different stages of life with varied presentations, and; - used all of the following massage techniques: effleurage; frictions; kneading; longitudinal gliding strokes; petrissage; compressions; tapotement; vibrations. Students will also be expected to demonstrate the following knowledge: - massage techniques and how to apply them; - endangerment sites, where they are and the limitations of touching these depending on scope of practice; - potential reactions during treatment and how to respond; - potential reactions following treatment and appropriate client advice to provide; - methods of monitoring treatment progress; - types of advice and resources that can be provided to clients for their use outside the clinical environment, and; - documentation requirements for recording treatment details.

HLTMSG005 Provide remedial massage treatments

Locations:Footscray Park, Werribee, City King St, Whitten Oval.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to prepare for and provide remedial massage treatments based on the outcomes of an existing health assessment and treatment plan. This unit applies to remedial massage therapists working with clients presenting with soft tissue dysfunction, musculoskeletal imbalance or restrictions in range of motion (ROM). The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of massage client consultation work; - prepared for and managed at least 60 remedial massage treatment sessions - clients must include males and females from different stages of life with varied presentations; - applied techniques in each of the following positions during client consultation sessions according to client needs: prone; supine; seated, and; side-lying recumbent; - used all of the following techniques appropriately: frictions; passive joint movement; passive soft tissue movement; deep tissue massage; muscle energy; neuromuscular; press and release; myofascial (without skin penetration); trigger point therapy (without skin penetration); lymphatic drainage; temperature therapy; proprioceptive neuromuscular facilitation (PNF); stretching, and; mobilisation and movement at major joints (without adjustments or high velocity manipulations). Students will also be expected to demonstrate the following knowledge: - legal and ethical considerations (national and state/territory) for client assessment; - remedial massage techniques and how to apply them; - remedial massage techniques to address the following conditions: sciatica; arthritis; headache; plantar fasciiti; shoulder impingement; TMJ dysfunction; repetitive strain injuries; medial and lateral epicondylitis; carpal tunnel syndrome, and; postural imbalances; - endangerment sites - where they are and how to use palpatory skills in these areas according to scope of practice; - potential reactions during treatment and how to respond; - potential reactions following treatment and appropriate client advice to provide; - types of advice and resources that can be provided to clients for their use outside the clinical environment, and; - documentation requirements for recording treatment details.

HLTMSG006 Adapt remedial massage practice to meet specific needs

Locations:Footscray Park, Werribee, City King St, Whitten Oval.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to adapt remedial massage assessment and treatment strategies to meet the needs of clients of different genders and at different stages of life. It also includes the requirement to be able to identify and respond to other specific needs with which the practitioner may be unfamiliar. This unit applies to remedial massage therapists. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of massage client consultation work; - managed at least 60 remedial massage assessment and treatment sessions - clients must include males and females from different stages of life with varied presentations; - effectively adapted communication, assessment and treatment strategies to meet client needs, and; - conducted case specific research for at least 3 cases, where key aspects of the condition are not known to the candidate. Students will also be expected to demonstrate the following knowledge: - legal and ethical considerations (national and state/territory) for working with specific groups; - treatment management

factors that must be considered for clients of different genders and at different stages of life; - major developmental milestones for different stages of life; - features of common health conditions that affect the following groups and how those conditions are assessed and treated in the remedial massage framework; - factors for consideration when providing any form of palliative care; - professional responsibilities when presenting cases fall outside of practitioner's current scope; - when referral is appropriate or required; - information and advice sources, and; - case research techniques.

HLTMSG007 Adapt remedial massage practice for athletes

Locations: Footscray Park, Werribee, City King St, Whitten Oval.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to determine the remedial massage needs of athletes and to adjust assessment and treatment to develop preventative and injury related treatment strategies for athletes and other sport active people. This unit applies to remedial massage therapists. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate these required skills: - performed the activities outlined in performance criteria during a period of at least 200 hr of massage client consultation work; - managed at least 60 remedial massage assessment & treatment sessions - clients must include males & females from different stages of life with varied presentations, and; - assessed & treated at least 3 different sporting injuries to recovery stage. Students will also be expected to demonstrate knowledge of: - roles and responsibilities of different people associated with the health management of the athlete; - legal and ethical considerations (national and state/territory) for client assessment and treatment; - relevant principles of human movement and sport biomechanics; - pre-event and post-event massage techniques and their application; - features of acute, chronic and overuse musculoskeletal injuries in sport, including referral potential, rate of recovery and how massage can assist the following: bone injuries; articular cartilage injuries; joint injuries; ligament injuries; muscle injuries; tendon injuries; bursa injuries, and; skin injuries; - types of cryotherapy or thermotherapy used for recovery from injury and techniques used to apply them; - indications, contraindications and considerations for use of cryotherapy; - indications, contraindications and considerations for use of thermotherapy, and; - uses and indications for taping and splinting that are within scope of massage practice.

HLTMSG008 Monitor and evaluate remedial massage treatments

Locations: Footscray Park, Werribee, City King St, Whitten Oval.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to monitor and evaluate remedial massage treatments, both from an individual client and whole of practice perspective. This unit applies to remedial massage therapists. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of massage client consultation work; - managed at least 60 remedial massage assessments and treatment sessions - clients must include males and females from different stages of life with varied presentations, and; - monitored and evaluated treatments provided to at least 5 different clients with at least 3 treatments per client. Students will also be expected to demonstrate the following knowledge: - legal and ethical considerations (national and state/territory) for monitoring and evaluation; - types of criteria by which remedial massage treatments are evaluated; - expectations of treatment for different conditions and client groups, and factors that impact on those expectations; - methods of monitoring treatment progress; - barriers to therapeutic progress and ways to respond within a massage framework; - sources of research and evidence that support massage practice; - principles underpinning continuation or variation of treatment, and; - professional development opportunities in remedial massage.

HLTPO014 Assess readiness for and effect behaviour change

Locations: Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to analyse behaviour that impacts health and ways in which to reinforce or change them to promote health. This unit applies to work in a public health context and workers at this level will demonstrate judgement and limited responsibility within defined guidelines.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - developed, implemented and reviewed a behaviour change plan for at least 2 individuals, including: consulting and collaborating with each individual, team members and other stakeholders to determine, agree and implement strategies and to monitor and review progress. Students will also be expected to demonstrate the following knowledge: - legal and organisation requirements relating to developing and implementing behaviour change plans, including: national, State/Territory and local health policies, goals, targets and priorities; organisation standards, policies and procedures, including scope of own role and responsibilities; stakeholders or organisations for collaborative partnerships to support facilitating individual behaviour change, and; points of contact to assist with the implementation of strategies which are outside own area of responsibility; - equity issues in population health; - evidence-based practice; - social determinants of health; - environmental factors that restrain change; - behavioural health determinants; - the relationship between attitudes, knowledge and lifestyle factors and behaviour; - the relationship between individual behaviour and health outcomes; - behaviour change models and support strategies; - assessment techniques, and; - collaborative behaviour change planning processes.

HLTWHS001 Participate in workplace health and safety

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, City King St, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required for workers to participate in safe work practices to ensure their own health and safety, and that of others. The unit applies to all workers who require knowledge of workplace health and safety (WHS) to carry out their own work, either under direct supervision or with some individual responsibility.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - contributed to a WHS meeting or inspection in workplace; - conducted a workplace risk assessment and recorded the results; - consistently applied workplace safety procedures in the day-to-day work activities required by the job role; - followed workplace procedures for reporting hazards, and; - followed workplace procedures for a simulated emergency situation. Students will also be expected to demonstrate the following knowledge: - state/territory legislation and how it impacts on workplace regulations, codes of practice and industry standards; - safety signs and their meanings, including signs for: dangerous goods classifications; emergency equipment; personal protective equipment (PPE), and; specific hazards such as sharps, radiation; - hazard identification; - workplace emergency procedures, and; - workplace policies and procedures for WHS.

HLTWHS002 Follow safe work practices for direct client care

Locations: Industry, Footscray Nicholson, St Albans, Werribee, Sunshine, VU Learning Links at Altona Meadows.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required for a worker to participate in safe work practices to ensure their own health and safety, and that of others in work environments that involve caring directly for clients. It has a focus on maintaining safety of the worker, the people being supported and other community members. This unit applies to all workers who require knowledge of workplace health and safety (WHS) to carry out their own work, in both centre-based and home-based service provision. The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - contributed to a workplace WHS meeting or inspection; - conducted a workplace risk assessment and recorded the results; - consistently applied workplace safety procedures in the day-to-day work

activities required by the job role, and; - followed workplace procedures for at least one simulated emergency situation. Students will also be expected to demonstrate the following knowledge: - state/territory legislation and how it impacts on workplace regulations, codes of practice and industry standards; - safety symbols and their meanings; - hazard identification; - safety considerations when working in a home-based environment; - workplace emergency procedures, and; - workplace policies and procedures for WHS. .

HLTWHS003 Maintain work health and safety

Locations: Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, CHC50113 Diploma of Early Childhood Education and Care also delivered at these locations: Hume Global Learning Centre, Broadmeadows, Altona Meadows and Sunbury..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to implement and monitor work health and safety (WHS) policies, procedures and work practices as part of a small work team. This unit applies to workers who have a key role in maintaining WHS in an organisation, including duty of care for other workers.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conducted a workplace risk assessment and recorded the results; - provided WHS information to at least two workers; - consistently monitored safety procedures in the day-to-day work activities required by the job role; - completed a workplace incident report, and; - followed workplace procedures for a simulated emergency situation. Students will also be expected to demonstrate the following knowledge: - state/territory legislation and how it impacts on workplace regulations, codes of practice and industry standards; - hazards common to the work environment and how they cause harm; - principles of hazards and risk assessment; - workplace emergency procedures, and; - workplace policies and procedures for WHS.

HLTWHS004 Manage work health and safety

Locations: Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine, Whitten Oval.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to establish, maintain and evaluate work health and safety (WHS) policies, procedures and programs in the relevant work area, according to WHS legislative requirements. This unit applies to workers who have responsibility for WHS as part of their role, including workers with obligations under WHS legislation, persons conducting a business or undertaking (PCBUs), or their officers (as defined by relevant legislation). The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conducted a workplace risk assessment and recorded the results; - conducted the following consultative activities with at least two workers: identification of hazards and potential hazards; risk assessment; evaluation of policy/procedure in line with state/territory legislation and industry guidelines, and; development of risk controls and measures; - monitored workplace compliance with WHS procedures; - developed a WHS action plan, including strategies for monitoring and review, and; - coordinated workplace procedures for a simulated emergency situation. Students will also be expected to demonstrate the following knowledge: - state/territory legislation and how it impacts on workplace regulations, codes of practice and industry standards; - hazards common to the work environment and strategies for minimisation; - requirements for WHS policies, and; - principles of hazard and risk management.

HLTWHS006 Manage personal stressors in the work environment

Locations: Industry, Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to maintain health and wellbeing by preventing and managing personal stress. This unit applies to work in a range of health and community services settings, in particular work roles that operate in high stress situations and circumstances.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - developed, implemented and reviewed 1 personal stress management plan that includes identified sources, triggers and responses to stress, and; - used strategies from personal stress management plan to manage 2 stressful situations in the workplace involving colleagues and/or clients. Students will also be expected to demonstrate the following knowledge: - sources of stress and how they manifest in health and/or community services work environment; - work planning and prioritisation techniques e.g. time management strategies; - legal rights relating to the Fair Work Act; - services available for referral, both within the organisation and in the community e.g. informal/formal debriefing sessions and/or workplace counselling, and; - self-care techniques.

ICAICT308A Use advanced features of computer applications

Locations: Industry, Footscray Nicholson, St Albans, Werribee, City Flinders.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to use computer applications employing advanced features. It involves manipulating data and accessing support resources to solve routine problems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to: - communicate with supervisors and peers; seek assistance and expert advice, and; use online help; - literacy skills to interpret technical documentation, equipment manuals and specifications; - planning and organisational skills to prioritise and monitor own work; - problem-solving skills to solve operational problems as they arise; - research skills to source support resources to solve routine problems; - safety awareness skills to work systematically with required attention to detail without injury to self or others, or damage to goods or equipment, and; - technical skills to: - apply technical support for system problems; operate software applications; use applications features, and; use online help. Students will also be expected to demonstrate the following knowledge: - basic knowledge of operating systems software and system tools; - vendor product directions in computer applications, and; - vendor applications and their features.

ICAICT408A Create technical documentation

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to create technical documentation that is clear to the target audience and easy to navigate.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to interact with clients and staff; - literacy skills to: identify content; interpret standards and industry requirements, and; write content; - research skills to: analyse audience needs, and; identify target audiences, and; - technical skills to: determine appropriate content, formats and styles; and; use word-processing software and multimedia authoring tools. Students will also be expected to demonstrate the following knowledge: - content features, such as clarity and readability; - document design, web design and usability; - functions and features of templates and style guides; - instructional design principles, and; - organisational policies, procedures and standards that cover document design.

ICAWEB420A Write content for web pages

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to write concise and clear content for web pages on behalf of a client.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communication skills to liaise

and negotiate with clients and colleagues; - literacy skills to: apply principles of plain English writing for a variety of cultures and people with special needs; identify content, and; write for the internet; - planning and organisational skills to: analyse organisational and audience needs; determine appropriate content channels and formats, and; identify and understand diverse target audience needs, and; - technical skills to: create content; manage and design the visual composition of the site, and; upload content. Students will also be expected to demonstrate the following knowledge: - content features, including clarity, ease of viewing and readability; - copyright and intellectual property legislation relating to web page content; - document design, web design and usability; - functions and features of: micro-content elements, such as headings, highlighted words and link text, and; style guides, such as cascading style sheets (CSS); - information architecture; - instructional design principles; - obligations of merchants and service providers; - organisational requirements relating to web page content, and; - privacy requirements relating to web page content.

ICPPRP225 Produce graphics using a graphics application

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to develop computer-generated graphics based on a client brief, using a high-end application; and focuses on techniques required to create and manipulate visual objects on a page. It applies to individuals who assist in the production of professionally designed and presented print and electronic media using desktop publishing software. They generally work under direct supervision with some responsibility for the production process and ensuring output meets the requirements of the design brief. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop graphics based on a client brief using a high-end application, and; - demonstrate ability to find and use information relevant to the task from a variety of information sources. Students will also be expected to demonstrate the following knowledge: - correctly identify image formats; - identify correct application to be used; - explain how graphics can be manipulated; - identify different colour models; - identify attributes of appearance; - list different effects that may be applied to an object; - explain use of filters; - list text and formatting features used in graphics, and; - outline key requirements when interpreting a brief.

ICPPRP2250 Produce graphics using graphics applications

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to develop computer-generated graphics based on a client brief, using a high-end application; and focuses on techniques required to create and manipulate visual objects on a page. It applies to individuals who assist in the production of professionally designed and presented print and electronic media using desktop publishing software. They generally work under direct supervision with some responsibility for the production process and ensuring output meets the requirements of the design brief. No licensing,

legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop two graphics based on two different client briefs using a high-end application. Students will also be expected to demonstrate the following knowledge: - graphics formats; - required applications for graphics production; - methods for manipulating graphics; - different colour models; - different effects that may be applied to an object; - object selection and editing, individually and in groups; - use of filters or effects; - styles and when they may be required; - text and formatting features used in graphics; - key requirements when interpreting a brief; - work health and safety (WHS) requirements that apply to working on a computer, and; - manufacturer manuals, work health and safety and enterprise documentation, including their location and purpose.

ICTDBS401 Identify physical database requirements

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to identify the scope, and the physical and security requirements of a database.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse client requirements; - identify the technical considerations affecting the physical design of a database; - document the database requirements, and; - review the security plan for the database. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain the principles of databases and database design; - outline the general features, and capabilities, of current industry-accepted hardware and software products; - explain the quality assurance practices that apply to database design; - identify the client's business domain, and; - describe database requirements appropriate for client's business.

ICTDBS413 Determine database requirements

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to identify the scope and the physical and security requirements of a database, including the assessment and identification of options to meet user requirements. It applies to individuals employed as database administrators who are required to plan and select a database to meet user requirements. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills for one (1) database: - analyse user requirements and system architecture; - determine the scope and size of the database; - evaluate at least three database management systems and select option to meet user requirements; - develop technical database requirements including tables, relationships, dictionary, attributes and keys; - document the database scope and requirements; - align database management system and related user security with data security plan, and; - seek and incorporate user feedback. Students will also be expected to demonstrate the following knowledge: - principles of databases and database design; - general features and capabilities of current databases and database management systems; - data types and storage requirements of data types and database management systems; - quality assurance practices that apply to database design, and; - technical and security database requirements.

ICTICT103 Use, communicate and search securely on the internet

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, City Flinders, Sunshine, Online, VU Learning Links - Sunbury Neighbourhood and Altona Meadows Library..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to connect to the internet, securely send and receive emails, search the internet using web browsers and interact securely and in a socially responsible manner with a range of different internet sites. It applies to individuals who use business technology to perform a range of routine tasks in the workplace or home office with limited responsibility.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - connect to and access the internet; - send and receive emails; - secure internet access and email communications; - use search tools to locate information; - use different internet search techniques; - research and select appropriate website; - undertake online transactions, and; - assess the accuracy, currency, authority and reliability of the site and information located. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - list basic technical terminology related to reading help files and prompts; - describe the basics of copyright and privacy statements; - explain different types of messages that occur, including error messages and messages to install plug-ins; - list different types of search engines and web browsers; - list procedures for using email applications; - list procedures for evaluating and assessing the authority, reliability and authenticity of information; - outline internet search functions; - describe internet speed and traffic loads related to times of accessing the internet; - describe the makeup and structure of internet addresses; - list organisational guidelines on internet and email use (web etiquette or

netiquette); - describe business process related to online transactions; - describe web browser update techniques, and; - explain what key words and bookmarks are used for.

ICTICT201 Use computer operating systems and hardware

Locations: Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to select, configure and use computer operating systems and basic computer hardware, including configuring the operating system to work with a variety of hardware peripherals and types of information and communications technology (ICT) equipment. It applies to individuals who may work under supervision and provide support to others using a range of skills to identify and resolve issues.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use an operating system in a variety of scenarios and across functions; - scheduling, loading, initiating, and supervising the execution of programs; - allocating storage; - initiating and controlling input and output operations; - handling errors; - identify and install suitable hardware components, and; - install and upgrade application software. Students will also be expected to demonstrate the following knowledge: - outline the basic specifications of current industry accepted operating systems, hardware and applications software products; - explain the compatibility of an operating system, in respect to other versions; - explain the function of single-user and multi-user operating systems; - explain interoperability between operating systems, and; - outline work health and safety (WHS) principles and responsibilities, including ergonomic principles to avoid injury associated with using computer systems.

ICTICT202 Work and communicate effectively in an ICT environment

Locations: Industry, Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to work and communicate effectively within organisational policies and governance arrangements, using information and communications technology (ICT) systems, equipment and software. It applies to individuals who may work under supervision with responsibility to support others within a small office environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - gather information about the organisation and incorporate in communications; - process internal and external requests according to organisational policies and requirements, and; - respond promptly to client enquiries and requests from colleagues. Students will also be expected to demonstrate the following knowledge: - describe current industry

accepted hardware and software, including: features and capabilities; product directions; - outline the operational environment; - outline the organisational policies and procedures that cover: code of conduct; mission statement; routine work processes; systems, management structure and governance arrangements; - outline the principles of equal employment opportunity (EEO) and anti-discrimination, and; - explain the role and positioning of information and communications technology (ICT) within the overall business objectives of the organisation.

ICTICT203 Operate application software packages

Locations: Industry, Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to identify, select and operate three commercial software packages, including a word-processing and a spreadsheet application package. It applies to individuals who utilise different software applications within a small to large office environment to produce diverse documents.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - produce workplace documents using a minimum of three different software application packages; - open, amend and save files and documents according to organisational requirements; - apply workplace health and safety (WHS) principles and responsibilities for ergonomics, such as work periods and breaks, and; - use help manuals and online help. Students will also be expected to demonstrate the following knowledge: - identify application software packages used by the organisation and list the purpose of each; - explain basic technical terminology related to reading help files and responding to system help prompts; - outline current business practices related to using software to prepare reports; - list features and functions of commercial computing packages; - describe import and export software functions; - describe the process of linking documents; - outline WHS principles and responsibilities for ergonomics, such as work periods and breaks, and; - explain the purpose of input and output devices.

ICTICT204 Operate a digital media technology package

Locations: Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to identify, select and use a digital media package and supporting technologies to produce a variety of media rich documents. It applies to individuals who may work under supervision within a small to large office environment and have responsibility for completion of designated tasks, using a range of practical skills and basic technical knowledge.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret basic requirements of a design brief; - use digital media package to meet organisational requirements; - apply workplace health and safety (WHS) principles and responsibilities for ergonomics, such as work periods and breaks; - use help manuals and online help when appropriate, and; - use digital media technologies to support design brief requirements. Students will also be expected to demonstrate the following knowledge: - explain the basic principles of visual design; - outline the functions and features of digital media packages and technologies; - identify graphic design and stylistic language conventions; - outline WHS principles and responsibilities for ergonomics, such as work periods and breaks; - outline the principles of digital imaging and file formats, video and sound file formats, file management and transfer systems; - identify vendor product directions in digital media hardware and software, and; - explain how to visualise and interpret creative information, scripts (text) and images.

ICTICT205 Design basic organisational documents using computing packages

Locations: Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to design, create and produce basic organisational documents using application software within organisational guidelines, procedures and policies. It applies to individuals who need to use foundation information and communications technology (ICT) skills in a wide range of varying industry occupations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - produce a workplace document using a range of features, and; - develop several workplace documents with minimal instruction on their design from end user or supervisor. Students will also be expected to demonstrate the following knowledge: - identify features of application packages; - explain current business practices related to preparing organisational documents; - recognise industry standard input and output devices; - identify organisational documentation and style guides, and; - identify organisational storage and retrieval procedures.

ICTICT206 Install software applications

Locations: Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to select, install or upgrade basic commercial software applications. It applies to individuals who require basic information and communications technology (ICT) skills to undertake related tasks under supervision.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - install software applications through operating system instructions; - configure computer to accept new software or upgrade, and; - carry out testing and acceptance according to organisational guidelines. Students will also be expected to demonstrate the following knowledge: - describe a typical client business domain; - identify typical hardware storage devices; - identify typical input and output devices; - describe key licensing arrangements and responsibilities to ensure they are adhered to; - identify operating systems supported by the organisation; - describe the organisational guidelines for purchasing; - identify the installation requirements for key software application packages, and; - describe typical software copyright responsibilities.

ICTICT207 Integrate commercial computing packages

Locations: Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to manipulate, convert and integrate data between two or more different commercial software applications. It applies to individuals who require foundation skills and knowledge to use information and communications technology (ICT) in any ICT business or office environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select appropriate software and file formats; - create mailing list and merge with another document, and; - manipulate and integrate data between commercial application software following organisational procedures. Students will also be expected to demonstrate the following knowledge: - outline current business practices related to preparing reports; - identify features and functions of commercial computing packages; - identify import and export software functions; - outline processes for linking documents; - outline workplace health and safety (WHS) principles and responsibilities for ergonomics; - identify software packages used by the organisation; - outline strategies for integrating commercial computing packages, and; - outline the use of input and output devices.

ICTICT211 Identify and use basic current industry specific technologies

Locations: Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to engage in basic ongoing review and research of industry specific technologies in order to identify and apply these technologies or techniques to improve aspects of an organisation's activities. It applies to individuals who work under minimal supervision and are responsible for ensuring that the quality of the business process is maintained at the highest level possible, through the appropriate application of industry specific technologies.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify basic new and emerging industry specific technologies and techniques, and; - use basic features and functions of identified industry specific technologies to an industry standard. Students will also be expected to demonstrate the following knowledge: - outline current technology trends and directions in information and communications technology (ICT), and specifically of the major industry technology standards used in the specified area; - outline vendor product directions; - describe current industry hardware and software products, with broad knowledge of general features and capabilities, and their application, and; - outline information gathering techniques.

ICTICT301 Create user documentation

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to create user documentation that is clear to the target audience and easy to navigate. It applies to individuals who may work under supervision with responsibility to support others in a range of information and communications technology (ICT) areas.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - produce user documentation that: meets business requirements; caters for a diverse audience, and; is clear and easy to navigate. Students will also be expected to demonstrate the following knowledge: - identify content features, including clarity and readability; - discuss document design, web design and usability, and; - list the functions and features of templates and style guides.

ICTICT302 Install and optimise operating system software

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit defines the skills and knowledge required to install, configure and optimise operating system (OS) software to meet business and client needs. It applies to individuals who may work under supervision and support others using well developed skills in creating solutions through analysis and evaluation of information.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - install, configure and test an operating system to improve system performance with minimum disruption to clients. Students will also be expected to demonstrate the following knowledge: - compare current industry accepted hardware and software products; - outline functions and features of operating systems used by the organisation; - explain the installation and

configuration of systems software; - explain the architecture of current technical systems; - outline the deployment of current organisational systems; - list organisational requirements for operating system (OS) software; - explain prerequisites for system software installation; - outline set-up and configuration procedures; - list software packages supported by the organisation; - describe system's current functionality; - list system's diagnostic software, and; - outline vendor specifications and requirements for installation.

ICTICT304 Implement system software changes

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to implement system software changes and to hand over the modified system to the client's operational area. It applies to individuals working in support roles who are required to update operating systems on client computers with the latest technology fixes, working under minimum supervision.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - evaluate, document and implement changes to the system with minimum disruption to the system and client users, and; - hand over the project to the client with instructions and updated documentation. Students will also be expected to demonstrate the following knowledge: - identify and describe business scheduling requirements; - identify change control procedures; - describe client business domain; - discuss current industry accepted hardware and software products; - discuss emerging standards for data and voice communications; - outline the system's current functionality; - discuss the features of the system under modification; - outline the organisational policy and procedures with regard to system changes, and; - recognise vendor software services with regard to system changes.

ICTICT305 Identify and use current industry specific technologies

Locations: Industry, Footscray Nicholson, St Albans, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to identify, research and apply industry specific technologies to ensure that the quality of the entire business process is maintained at the highest level possible. It applies to individuals who work under minimal supervision and support information technology activities in the workplace across a wide range of information and communications technology (ICT) areas, including technical support, network administration, web technologies, software applications and digital media technologies.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify new and emerging

industry specific technologies; - use features and functions of identified industry specific technologies to an industry standard level, and; - evaluate the performance and usability of the technology. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - discuss current technology trends and directions in information and communications technology (ICT) and specifically the major industry technology standards used in the specified ICT area; - describe vendor product directions relating to the specified ICT area; - describe the general features, capabilities and application of current industry hardware and software products, and; - outline information gathering techniques.

ICTICT306 Migrate to new technology

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to research, acquire, evaluate and apply new technology to improve the organisation's performance. This unit applies to individuals who have achieved a degree of autonomy as information and communications technology (ICT) users and support staff engaged in ongoing review and research to identify and apply new technology or techniques to improve aspects of the organisation's activities.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify new and emerging technology in information and communications technology (ICT); - test and evaluate new equipment for the benefit of the organisation, and; - use features and functions of new technologies, including software and equipment. Students will also be expected to demonstrate the following knowledge: - discuss current technology trends and directions in ICT including: hardware; new developments; new protocols; services, and software; - describe the general features and capabilities of current industry hardware and software products; - outline information gathering techniques, and; - outline vendor product directions relating to specified technology.

ICTICT307 Customise packaged software applications for clients

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to analyse, design, implement and review the customisation of packaged software applications, using simple programming constructs. It applies to individuals who have achieved a degree of autonomy as information and communications technology (ICT) users and support personnel for software application activities in the workplace.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpret and document client

requirements to customise software applications; - design software applications; - analyse, implement and review customised software applications; - produce documentation for the client, and; - obtain feedback from client to ensure requirements have been met. Students will also be expected to demonstrate the following knowledge: - outline the general features and capabilities of current industry accepted hardware and software products; - discuss functions and features of software applications suitable for client; - discuss functions and features of the operating system (OS); - identify information and communications technology (ICT) structure and system infrastructure; - describe organisational policy and procedures relating to customising software, and; - identify organisational security procedures.

ICTICT308 Use advanced features of computer applications

Locations:Footscray Nicholson, St Albans, Werribee, Sunshine, Geelong Learning Links..

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to use computer applications employing advanced features. It involves manipulating data and accessing support resources to solve routine problems. It applies to individuals who have achieved a degree of autonomy as advanced information and communications technology (ICT) users, and support information technology activities in software applications.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use at least three computer applications employing advanced features and import and export capacities for efficiency and productivity purposes, and; - solve routine problems using support resources. Students will also be expected to demonstrate the following knowledge: - outline the basic features and functions of relevant operating systems software and system tools; - outline relevant vendor product directions in computer applications, and; - identify commonly available vendor applications and their features.

ICTICT401 Determine and confirm client business requirements

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to determine client business system requirements and verify the accuracy of the information gathered.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use investigative techniques to obtain information and document the business system problem, and; - produce a clear statement of business expectations and needs, including critical business requirements. Students will also be expected to demonstrate the following knowledge: - describe a variety of data gathering techniques; - describe areas related

to the client business in detail; - interpret functional organisational charts; - outline physical requirements of the client's business, taking into account current system functionality, geography, environment, client user and cost constraints; - describe products related to data capture, and; - discuss the role of stakeholders and the degree of stakeholder involvement.

ICTICT409 Develop macros and templates for clients using standard products

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to develop macros and templates for clients using industry recognised software applications. It applies to individuals working in an office environment who achieve a degree of self-sufficiency as an advanced information and communications technology (ICT) user, and who support software applications activities in the workplace.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determine client needs and specifications for macros and templates; - develop a variety of macros and templates using at least two industry recognised application packages, and; - provide support to the client for utilising the macros and templates. Students will also be expected to demonstrate the following knowledge: - outline features and functions of particular categories of commercial computing packages, in particular procedures for: creating macros and using default templates supplied by the software application package; creating new macros and templates; - identify functions and features of the operating system, and; - identify features and functions of software and hardware supported by the organisation.

ICTICT418 Contribute to copyright, ethics and privacy in an ICT environment

Locations:Footscray Nicholson, St Albans, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to maintain professional and ethical conduct, as well as to ensure that personal information of stakeholders is handled in a confidential and professional manner when dealing with stakeholders in an information and communications technology (ICT) environment.

It applies to ICT personnel who are required to gather information to determine the organisation's code of ethics, and protect and maintain privacy policies and system security.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse legislation and standards relating to professional conduct and privacy in the information and communications technology (ICT) industry; - contribute to the development of a code of ethics and monitor the workplace to ensure code of ethics is being applied and is

appropriate, and; - contribute to the development of a privacy policy and monitor the workplace to ensure the policy is being applied and is appropriate. Students will also be expected to demonstrate the following knowledge: - discuss codes of ethics pertinent to computing industry; - discuss federal and state or territory legislation and policy relevant to an ICT environment and relating to: access and equity; copyright and intellectual property; workplace health and safety (WHS); privacy; - outline organisational communication processes and procedures; - outline organisational requirements for customer service; - discuss the security features of server operating systems, and; - explain system security procedures.

ICTICT421 Connect, maintain and configure hardware components

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to install, configure and maintain personal computer devices, including mobile devices according to client and user requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - install components across a variety of situations and account for unexpected contingencies; - modify system's hardware, internal hardware and peripheral hardware components to meet client requirements; - identify and plan the modification and connection of hardware, internal hardware and peripheral hardware components according to vendor and technical specifications, and; - test components and rectify identified problems. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify and categorise the different types of personal computer devices, hardware, internal hardware and peripheral hardware components; - outline environmental considerations in e-waste disposal; - discuss systems diagnostic software; - identify areas of the operating system (OS) related to configuration and testing; - identify current industry accepted hardware and software products; - outline organisational guidelines; - outline organisational requirements; - identify system's current functionality, and; - identify vendor specifications and requirements for component installation.

ICTNWK305 Install and manage network protocols

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to install and manage network protocols in a networking environment. It applies to individuals with competent information and communications technology (ICT) skills, working as network administrators who are required to ensure that appropriate protocols have been installed in networks to allow user functionality and maintenance. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - configure, test and validate network protocols in order to facilitate interconnectivity, and; - install and manage network protocols in a network, and troubleshoot problems. Students will also be expected to demonstrate the following knowledge: - describe the client business domain, including client organisation structure and business functionality; - list current communications technologies and their associated protocols; - outline current industry accepted hardware and software products, and general features and capabilities; - summarise network protocols currently in use in the organisation and industry, including transmission control protocol, internet protocol (TCP/IP), OSI models; - clarify the vendor product range and development directions, and; - describe how network protocols transcend organisational size and network complexity.

ICTNWK402 Install and configure virtual machines for sustainable ICT

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop and implement virtualisation technologies with the goal of providing a more sustainable information and communications technology (ICT) environment. It applies to individuals who work in the network area of organisations and are responsible for the use of virtual machines to increase sustainability.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply sustainability practices related to current information and communications technology (ICT) network design; - research, identify and develop a virtual machine environment, and; - implement and maintain a virtual machine environment. Students will also be expected to demonstrate the following knowledge: - summarise the current government and industry policies and guidelines related to developing sustainable ICT environments; - identify and describe current technologies and processes designed to produce a sustainable ICT environment; - state the available tools and software applications required to manage virtual machines; - define the structure, function and business organisation of client; - outline the configuration of software applications required to manage virtual machines, and; - describe the configuration requirements required to integrate virtual machines into an existing network design.

ICTNWK404 Install, operate and troubleshoot a small enterprise branch network

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to utilise networking fundamentals, including wide area network (WAN) technologies, basic security, routing and switching fundamentals, and to configure simple networks.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - specify the network elements; - implement a small switched network; - select and implement the suitable network addressing protocols; - select and install a router; - identify and verify, wide area network (WAN) links, and; - test and resolve the problems for a small enterprise branch network. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - summarise the design of an internet protocol (IP) addressing scheme; - describe how to install, configure and test the network elements, in order to ensure interoperability within the network, and; - explain how to apply network topologies, protocols and security solutions and troubleshoot defined network problems.

ICTNWK405 Build a small wireless local area network

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to build and arrange connectivity to a single zone wireless local area network (WLAN).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop, implement and maintain wireless networks; - install, configure and test wireless access points; - test security and network to business specifications; - develop user training material, and; - monitor and resolve wireless network issues. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline features of security threats; - summarise the basic principles of network security; - describe the factors that impact on a small wireless network, and; - outline the protocols and their application for wireless network.

ICTNWK406 Install, configure and test network security

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to install, configure and test network security in an information and communications technology (ICT) network.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - assess and identify security threats, vulnerabilities and risks; - determine appropriate countermeasure for threat,

vulnerability or risk; - implement countermeasure per threat or risk; - install, configure and test network elements to ensure perimeter security; - test and verify function and performance of selected security measures; - monitor network for suspicious activity and take appropriate action where necessary, and; - document newly discovered threats, vulnerabilities and risks, including change recommendations for approval.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline authentication issues; - summarise the security requirements of the client business domain; - outline common virtual private network (VPN) issues, including bandwidth and dynamic security environment; - explain how to configure routers and switches; - summarise current industry accepted hardware and software security products, including general features and capabilities; - outline the function and operation of VPN concepts, including encryption, firewalls, packet tunnelling and authentication; - outline network protocols and operating systems; - summarise organisational issues surrounding security; - outline security perimeters and their functions; - describe security protocols, standards and data encryption; - summarise security threats, including eavesdropping, data interception, data corruption and data falsification; - outline types of VPNs, including site-to-site and user-to-site internet traffic and extranets, and; - summarise the systems and procedure.

ICTNWK408 Configure a desktop environment

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to install, configure and support a desktop or workstation operating system in a networked environment. It applies to individuals with competent technical skills employed in information and communications technology (ICT) support roles.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - install and configure a desktop operating system; - attach the desktop to the network; - configure the desktop operating system, including user accounts, file and print services, and security; - perform backup and recovery; - update operating system and software, and; - monitor and troubleshoot the desktop environment. Students will also be expected to demonstrate the following knowledge: - outline the features of current desktop operating systems, applications, compatibility issues and the resolution procedures; - summarise the configuration requirements of a desktop environment; - explain file system navigation and manipulation utilities, including: edit, copy, move and search; operating system help and support utilities, and; - summarise relevant work health and safety (WHS) and regulatory requirements for desktop operators.

ICTNWK420 Install and configure virtual machines

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to select and implement virtualisation solutions to meet organisational needs in an information and communications technology (ICT) environment. It applies to individuals who work in the network area of organisations and are responsible for the virtualisation of desktop and server operating systems. No licensing, legislative or certification

requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify one virtualisation solution for the organisation including the identification of applicable guidelines or policies, benefits and detriments and currently available software; - interpret organisational needs to determine technical requirements of virtualisation solution once; - install and configure virtualisation software to accommodate organisational needs once; - install, configure, and test the functionality of two (2) virtual machines, including evidence of the ability to backup virtual machine state on shutdown, restore virtual machine state on start up and backup and restore a virtual hard drive and software configuration files for virtual machine, and; - configure and test the functionality of a virtual network for the two (2) virtual machines, including the ability to configure internet protocol (IP) addresses to match selected network configuration, configure virtual network as host only, bridged, and network address translation (NAT) configurations and configure services to operate under current network configuration. Students will also be expected to demonstrate the following knowledge: - government and industry policies and guidelines related to virtualisation; - technologies and processes relating to virtualisation; - tools and software applications for virtual machine management; - configuration of software applications required to manage virtual machines, and; - configuration requirements for the integration of virtual machines into an existing network design.

ICTNWK421 Install, configure and test network security

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to install, configure and test network security in an organisational environment. It applies to individuals who are involved in the installation, configuration, and testing of network security for networks of any size in job roles including network administrator, penetration tester, and security consultant. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills with respect to one network: - identify and analyse network security threats and vulnerabilities; - make recommendations to management to address network security deficiencies and fulfill organisational asset security requirements; - implement perimeter security, network hardening measures and authentication and user account controls - according to identified deficiencies and organisational asset security requirements; - design and conduct testing to verify the key function and performance measures of network security; - debug network security according to test results; - review logs and audit reports to identify and record five security incidents, intrusions and attempts, and; -

474

undertake three (3) spot checks and audits to ensure that procedures are not being bypassed. Students will also be expected to demonstrate the following knowledge: - security requirements of the organisation, including: organisational structure and functions; features and capabilities of networking technologies; privacy issues and privacy legislation; security information sources, and; risk analysis; - virtual private network (VPN) issues, including bandwidth and dynamic security environment; - configuration of routers and switches; - current hardware and software security products, including general features and capabilities; - function and operation of VPN concepts including encryption, firewalls, packet tunnelling, and authentication; - network protocols and operating systems; - security perimeters and functions; - security protocols, standards and data encryption; - security threats including eavesdropping, data interception, data corruption and data falsification; - types of VPNs including site-to-site and user-to-site internet traffic and extranets, and; - systems and procedures related to audit and intrusion detection systems; auditing and penetration testing techniques; cryptography; local area network (LAN), wireless local area network (WLAN) and wide area network (WAN); screened subnets; transmission control protocol, internet protocol (TCPs/IPs), and applications, and; virus detection software.

ICTPMG401 Support small scale ICT projects

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to support the management of low risk, straightforward information and communications technology (ICT) projects within an organisation. It applies to individuals who may work under supervision but have responsibility to ensure workflow is planned and completed in line with requirements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop a project plan appropriate to the project objectives and the project proposal; - support the initiation, control and completion of a simple small-scale information and communications technology (ICT) project, and; - identify and apply requirements and expectations of a project according to the project plan. Students will also be expected to demonstrate the following knowledge: - identify the different project-management and planning methods and tools; - explain the characteristics of technical teams; - describe the different methods of communication and communication styles, including interviewing techniques; - explain the organisational values, policies and processes that may be relevant to the project, and; - describe the risks associated with small scale projects including: cost; scope, and; timelines.

ICTPRG301 Apply introductory programming techniques

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to create simple applications or games. It applies to individuals with responsibility for creating applications or games and includes creating code, using programming standards, testing, and debugging. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - apply programming language syntax, sequence, selection and iteration control structures to the development of an application, or game; - produce an application, or game, that is designed and built from the program specifications, and; - confirm that the created application, or game, meets the original program specifications, and obtain user sign-off for the completed program. Students will also be expected to demonstrate the following knowledge: - identify and describe common games programming languages, their syntax, and command structure, and; - describe the development of small-sized applications or games.

ICTPRG405 Automate processes

Locations:Footscray Nicholson, St Albans, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to write scripts to automate solutions, by using basic scripting processes, and application-specific scripting options. It applies to individuals who may work in information and communications technology (ICT) support roles and who are required to automate tasks.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop an algorithmic statement of a solution, for a set process; - produce a functional script to automate a set process, and; - document this script for internal and external stakeholders. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain debugging for a variety of scripting scenarios; - describe the principles of algorithms, and their application, in computer programming; - describe scripting language syntax, and; - identify and describe scripting techniques.

ICTPRG406 Apply introductory object-oriented language skills

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to undertake introductory programming tasks using an object-oriented programming language, including tool usage, documentation, debugging, and testing techniques. It applies to individuals who are programmers in a variety of fields and who are required to produce simple programs in object-oriented languages.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - use an application program to design, and build, standard reusable software modules in response to a design specification; - generate the code, and the documentation, and; - undertake testing and debugging, to meet specifications. Students will also be expected to demonstrate the following knowledge: - describe the processes and techniques related to object-oriented programming, including the concepts and language used; - describe the process for developing small-size applications, and; - identify and outline the key features of a graphical user interface (GUI), for interaction with an operator.

ICTPRG407 Write script for software applications

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to plan, design and build scripts, using a scripting language to construct a highly interactive and automated software application. It applies to individuals who build and integrate interactive applications, or websites for internal, and public, sites. They may work as application developers, application-support personnel, programmers specialising in a scripting language, web application programmers, or web developers.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - design, write, and integrate scripts into software solutions to accommodate specified application requirements; - test and debug scripts, to ensure that the software meets the specification, and; - use a framework and an integrated development environment (IDE) in developing scripts. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe the platforms suited to software development; - identify and summarise, copyright and intellectual property legislative requirements; - describe the life cycle of software development, and; - describe the processes and techniques related to the development of small-size applications.

ICTPRG414 Apply introductory programming skills in another language

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to carry out programming activities using a procedural approach.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - perform coding activities to

create, maintain and update programs using basic language and layout; - write coding using data structures and standard algorithms, and following guidelines; - debug code; - generate design and code documentation; - test and confirm that the application meets program specifications, and; - record the test results. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe and explain programming techniques; - describe documentation techniques; - give details of application development processes, and; - summarise testing techniques.

ICTPRG430 Apply introductory object-oriented language skills

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the performance outcomes, skills and knowledge required to undertake introductory programming tasks using an object-oriented programming language including tool usage, documentation, debugging, and testing techniques. It applies to individuals who are programmers in a variety of fields and who are required to produce simple programs in object-oriented languages. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - select and use three language data types, three operators and three expressions; - use correct language syntax for one sequence, one selection and two iteration constructs; - use a modular approach to implement the logic for one object operation; - implement a class that uses arrays of primitive data types twice; - read from and write to one text file; - implement two classes that each contain four instance variables; - implement one class that contains two options for object construction; - implement one class that uses user-defined object aggregation; - implement polymorphism once for code extensibility; - use one debugging tool; - apply code and documentation conventions that specify at least 3 aspects, according to organisational requirements, and; - perform and document two unit test cases; Students will also be expected to demonstrate the following knowledge: - processes and techniques related to object-oriented programming, including the concepts and language; - syntax language rules, data types structures; - primitive instance variables; - class variables; - small-size application development processes; - polymorphism and inheritance; - debugging and testing approaches and techniques; - constructors; - object aggregation; - sequence, selection and iteration constructs, and; - organisational documentation;

ICTSAS205 Maintain ICT system integrity

Locations:Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to protect and secure stand-alone or networked client server environments. It applies to technical support individuals who are required to maintain workflow and quality processes in a small or large office environment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - protect and secure stand-alone or networked client server environments and operating systems according to system maintenance procedures; - complete file backup according to organisational standards; - recover, delete and archive according to backup and recovery procedure, and; - check computers and networks for compliance with licensing requirements. Students will also be expected to demonstrate the following knowledge: - identify organisational standards regarding: - backup and recovery procedures and operations; - labelling and storage of backups; - describe current industry accepted hardware and software products; - describe current viruses and protection methods; - identify common diagnostic tools; - identify inventory procedures; - identify maintenance procedures; - describe storage and retrieval guidelines; - explain system performance, and; - identify software copyright and General Public Licence (GPL) or copyright responsibilities.

ICTSAS206 Detect and protect from spam and destructive software

Locations:Industry, Footscray Nicholson, St Albans, Werribee.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to reduce the risk of a computer's operation being affected by spam or destructive software. It applies to technical support individuals who, while working under a level of supervision, have responsibility to exercise the discretion required to protect and secure equipment and software in a small or large office environment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - install virus protection software and updates; - schedule virus protection software to run on a regular basis; - remove common destructive software, and; - identify common spam types and take appropriate action. Students will also be expected to demonstrate the following knowledge: - describe spam and virus intrusions and identify appropriate remedial actions; - identify the types of protective applications used against viruses and spam; - identify the operating systems supported by the organisation, and; - identify the common components of computer hardware that may be affected by spam.

ICTSAS301 Run standard diagnostic tests

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to troubleshoot problems and conduct diagnostic tests on a range of platforms. It applies to individuals who, while working under a level of supervision, have responsibility to action tasks in a frontline technical support capacity.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify hardware and operating system problems; - conduct diagnostic tests on a range of platforms according to preventative maintenance and diagnostic policy; - identify the root causes of the problems; - scan systems for computer viruses; - remove viruses using software tools and procedures, and; - remove viruses by restoring backups. Students will also be expected to demonstrate the following knowledge: - describe the client business domain, including client organisation structure and business functionality; - identify the current industry accepted hardware and software diagnostic tools; - describe common symptoms of problems associated with: desktop applications; operating systems; laptops; mobile devices; printers, and; other common peripherals; - describe a range of preventative tasks relevant to maintaining hardware and software applications, and; - describe the organisational procedures relevant to diagnostic testing.

ICTSAS304 Provide basic system administration

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to implement components of systems backup, restore, security and licensing in a stand-alone or client server environment. It applies to individuals who, while working under limited supervision, have responsibility in a frontline technical support capacity to exercise discretion and judgement, using appropriate knowledge to provide assistance. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - perform a systems backup, restore and maintain correct usage according to licensing agreements in a stand-alone or client server environment; - maintain software licence records and check for copyright compliance within the system, and; - maintain security access records and apply access controls on network resources. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - describe common backup procedures; - identify and outline operating systems used by the organisation; - describe the organisational security procedures; - identify organisational standards to carry out backup and restore operations; label and store backups, and; record security and software details; - describe the selection, functions and features of appropriate diagnostic tools; - identify software copyright responsibilities, and; - identify the system's current functionality.

ICTSAS305 Provide ICT advice to clients

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to provide

information and communications technology (ICT) advice and support to clients, including the communication of comprehensive technical information. It applies to frontline technical support individuals who work under a level of supervision but have responsibility for providing technical support.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - investigate client support requests and provide a documented solution after consultation with client; - convey comprehensive technical information to clients in a clear, concise, jargon-free and coherent manner, and; - use technical manuals and 'help' documentation. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify and describe the available in-house and vendor support; - explain contract and service agreements with vendors; - identify features of different types of hardware supported by the organisation; - identify sources of information relevant to the provision of services and support; - identify operating system: functions and basic features, and; supported by the organisation; - identify and describe security and network guidelines and procedures, and; - identify the advanced features of software, including the functions and support provided by the organisation.

ICTSAS306 Maintain equipment and software

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to carry out maintenance and fault repair according to organisational procedures, in order to keep equipment and software operating. It applies to frontline technical support individuals who work under a level of supervision and have some responsibility to maintain computer systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertake maintenance according to maintenance procedures; - identify and resolve a defined range of equipment and software problems, and; - maintain accurate records according to organisational guidelines. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify and describe equipment and software maintenance practices; - identify help-desk response level escalation procedures; - describe the operation and purpose of specified equipment; - identify and describe the operation of technical diagnostic tools; - identify quality assurance practices; - identify relevant service level agreements (SLAs) to determine conditions of the SLA cover; - describe client warranty claims, repair or replacement procedures;

- identify system's current functionality, and; - describe organisational work health and safety (WHS) procedures.

ICTSAS307 Install, configure and secure a small office or home office network

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to identify available network components relevant to client requirements and to install, configure and secure those components as part of a small office or home office (SOHO) network. It applies to individuals who work under a level of supervision and have experience with analysis and problem solving when working with technologies. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse the client's needs; - undertake research to source the images; - manipulate and produce images for use in website development, to meet the requirements of the brief, and; - save the images in appropriate format. Students will also be expected to demonstrate the following knowledge: - identify and describe, the industry standards and the copyright legislation relevant to digital images; - explain sustainability concepts appropriate to the ICT industry; - describe digital image formats and their application, and; - identify and summarise, common digital image editing software.

ICTSAS308 Run standard diagnostic tests

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to troubleshoot problems, identify and implement preventative maintenance techniques, and conduct diagnostic tests on a range of platforms. It applies to individuals who, while working under a level of supervision, have responsibility to action tasks in a frontline technical support capacity.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify and document six ICT problems and corresponding testing and preventative maintenance techniques to provide for troubleshooting process planning; - implement preventative maintenance techniques to address three common symptoms of problems associated with each of the following: desktop application, operating system, laptop, mobile device and printer, and; - identify and address three virus infections using a system diagnostic program. Students will also be expected to demonstrate the following knowledge: - impact of organisational structure, diagnostic testing procedures and guidelines, and software specifications on conducting diagnostic testing; - hardware and software

diagnostic tools, including products that manage backup procedures, configuration procedures, hardware maintenance and security; - common symptoms of problems associated with desktop applications, operating systems, laptops, mobile devices and printers; - preventative maintenance techniques relevant to maintaining hardware and software applications, and; - common diagnostic testing approaches.

ICTSAS410 Identify and resolve client ICT problems

Locations: Footscray Nicholson, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to record and prioritise client support activities, determine the required resources, solve client information and communications technology (ICT) problems or escalate as necessary. It applies to experienced individuals who apply specialised and technical knowledge and have responsibility for providing support to end users.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - record and prioritise client support activities; - determine required resources; - resolve client problems or escalate according to organisational guidelines or practices; - prepare maintenance report, and; - seek and record client feedback. Note: Evidence must be supplied for at least two client support activities. Students will also be expected to demonstrate the following knowledge: - describe hardware and software products: - outline sustainable practices consistent with information and communications technology (ICT) industry; - explain help desk or service desk structure and escalation procedures; - describe key functions and basic features of operating system; - describe organisational structure of workplace; - discuss principles of equal employment opportunity and anti-discrimination relating to client ICT problems; - relating to client ICT problems, and; - outline workplace security and network guidelines and procedures.

ICTSAS425 Configure and troubleshoot operating system software

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to configure, maintain and troubleshoot operating system (OS) software to ensure organisational requirements and client needs are met.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determine the appropriate operating system; - install, configure and test an operating system (OS); - improve system performance with minimum disruption to clients; - identify faults and rectify with utilities and tools; - instruct the client or users on the changes in OS, and; - seek client and user feedback. Note: Evidence must be provided in at least TWO

organisations or situations. Students will also be expected to demonstrate the following knowledge: - summarise the requirements of different operating systems; - outline the architecture of current technical systems; - identify and describe the key current industry accepted hardware and software products; - describe the functions and features of the OS used by the organisation, and; - describe the installation and configuration of systems software.

ICTSAS426 Locate and troubleshoot ICT equipment, system and software faults

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to troubleshoot problems and apply systematic processes to fault finding across a wide range of information and communications technology (ICT) disciplines.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determine the most appropriate fault finding method; - document the troubleshooting process; - analyse and identify faults; - obtain suitable tools and equipment; - apply simple checks, tests and fault finding methodologies, and; - apply the recommended means to rectify fault and document results. Note: Evidence must be provided for at least TWO organisations or situations. Students will also be expected to demonstrate the following knowledge: - explain client support and maintenance practices; - identify and describe current industry accepted hardware and software products, including features and capabilities; - discuss the system's current functionality, including details of the proposed system modifications; - describe one or more change management tools; - explain the key features of quality assurance practices with regard to locating and troubleshooting information and communications technology (ICT) equipment, system and software faults; - outline the change control procedures of the organisation; - describe a range of trouble shooting methodologies and system testing tools; - list and describe common symptoms of faulty ICT equipment, and; - identify and describe legislative, regulatory, standards or codes of practice that impact on the ICT service sector.

ICTTEN417 Install, configure and test a router

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to undertake router installation and configuration, as part of an upgrade in an existing network or the implementation of a new network.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - plan and prepare for router

installation task; - select router to meet client's business specifications; - install and test the router ensuring interoperability within the network, and applying router principles and technologies; - report on status of completed installation and seek sign-off and customer satisfaction; - use routers, and; - apply solutions to defined routing problems. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - identify and outline codes of practice for computing; - explain the effect of a router on delimiting broadcast traffic and on conserving bandwidth; - explain how dynamic routing algorithms or protocols create and maintain routing tables; - explain how to provide the network with redundant paths for reliability, and the way routers manage these paths; - summarise the following aspects of routers; - describe router-based network architectures, and; - explain the use of routing tables in intelligent packet routing and switching.

ICTWEB201 Use social media tools for collaboration and engagement

Locations: Footscray Park, Industry, Footscray Nicholson, St Albans, Werribee, Online.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to establish a social networking presence, using social media tools and applications. It includes the requirement to review, compare, and use different types of social networking tools and applications. It applies to information and communications technology (ICT) personnel who need to develop a social networking web presence for a small or large office environment, using social media tools and applications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify different types of social media tools and applications, and the issues associated with their use; - access the internet, set up a social networking presence and upload and link a wide variety of files, and; - use and evaluate social media tools and applications. Students will also be expected to demonstrate the following knowledge: - list basic technical terminology in relation to social networking, social media applications, and tools; - outline basic methods of uploading images, text files, portable document format (PDF) files, audio files, video files, and link the associated files; - state the features, and functions, of social media applications; - list import and export software functions; - explain how to link documents; - explain the process of tagging, in order to facilitate collaborative folksonomy; - list social media applications and procedures, for connecting to social networking sites; - identify and describe, input and output devices, and; - describe, and use, really simple syndication (RSS) feeds to connect a social network.

ICTWEB303 Produce digital images for the web

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the performance outcomes, skills and knowledge required to produce, and manipulate, images suitable for use in website development. This unit applies to individuals with responsibility for creating graphics for a web environment. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse the client's needs; - undertake research to source the images; - manipulate and produce images for use in website development, to meet the requirements of the brief, and; - save the images in appropriate format. Students will also be expected to demonstrate the following knowledge: - identify and describe, the industry standards and the copyright legislation relevant to digital images; - explain sustainability concepts appropriate to the ICT industry; - describe digital image formats and their application, and; - identify and summarise, common digital image editing software.

ICTWEB409 Develop cascading style sheets

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop cascading style sheets (CSS) that are attached to a markup language document, in order to externally define, and control, styles to enhance and achieve commonality between web documents. It applies to individuals who are required to layout and ensure consistency of appearance between web pages.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - develop a website style and format, using cascading style sheets (CSS), to user requirements; - lay out page elements, using CSS; - test web pages in a variety of browsers, and; - validate the CSS against industry standards. Students will also be expected to demonstrate the following knowledge: - discuss standard web and CSS design principles; - identify and describe the application of the following to CSS: - hypertext transfer protocol (HTTP); - hypertext mark-up language (HTML); - extensible hypertext mark-up language (XHTML); - industry standards for web design, and; - recognise a range of internet browsers.

ICTWEB411 Produce basic client-side script for dynamic web pages

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to develop interactive and engaging websites, using a range of features from various, appropriate languages. It applies to individuals working in web development environments who are required to produce client-side scripts as a common means of creating interactive websites. These scripts offer an effective simple means of enabling websites to provide greater interaction with clients.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determine the dynamic functionality and requirements of web documents; - select the appropriate language; - design web documents with embedded script; - produce dynamic web page documents; - test and debug, the web document functionality, and; - document and gain client approval. Students will also be expected to demonstrate the following knowledge - discuss the basic principles behind open platform programming; - describe client-side scripting and its application to dynamic web page design; - identify and outline, security restrictions on servers; - describe the difference between sever-side and client-side scripting, and; - describe the standards associated with programming documentation.

ICTWEB415 Produce server-side script for dynamic web pages

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to produce server-side scripts for dynamic web pages, using a range of relevant features from different but appropriate languages.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - create dynamic web pages according to all job requirements, using server-side scripting to retrieve information from a web-hosted database, and; - create scripts. Students will also be expected to demonstrate the following knowledge: - explain server-side technologies, and the relevant web scripting languages; - discuss server-side web analysis and design parameters; - summarise and apply, programming control structures and object-oriented programming, and; - outline web-programming concept.

ICTWEB416 Customise content management system

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to create and integrate, a website into an open-source content management system.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and evaluate client requirements; - create a content management system (CMS) powered website using an open-source solution, and; - validate the CMS against the standards set by the World Wide Web Consortium (W3C). Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected

to demonstrate the following knowledge: - define "content management system" and describe its purpose; - explain mark-up language and its associated standards; - outline server-side language and security techniques; - discuss web accessibility; - evaluate a content management system (front and backend) in commonly used browsers, and; - outline W3C standards and their application to website development.

ICTWEB417 Integrate social web technologies

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to successfully develop and integrate social networking code into new and existing websites. It applies to individuals working as web developers who apply a wide range of knowledge and skills across a range of general information and communications technology (ICT) environments and support small to medium enterprises (SMEs) that require broader, rather than more specialised, ICT support.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - analyse requirements for the integration of a social networking website into a pre-existing website; - determine the content management functionality, against current programming and security standards; - select an appropriate social networking platform; - develop and implement, social networking integration codes into an existing website, and; - validate frontend code markup, against the standards set by the World Wide Web Consortium (W3C). Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline the markup language and its associated standards; - summarise server-side language, and; - describe the advantages and disadvantages, of integrating social networking into web sites.

ICTWEB418 Use development software and ICT tools to build a basic website

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to build a basic website, consistent with the design, technical requirements and expectations of a client's business, using current industry software and tools. It applies to individuals working as web developers who use a wide range of knowledge and skills across a range of general information and communications technology (ICT) environments, and support small to medium enterprises (SMEs) that require broader, rather than more specialised, ICT support.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - conduct an assessment of,

and document the specifications relating to, the client's website needs; - build a basic website according to client specifications; - validate the final web design against the client's requirements, and; - confirm and obtain client sign off. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline a basic knowledge of design principles and the issues around accessibility and equity principles, when building for diverse users; - identify and describe the software, and tools, that are used in website development; - outline the general principles of the standard generalised markup language (SGML), and associated documentation standards; - outline the principles of website design; - describe the technical attributes specific to the web, and; - describe and apply, the types of code used in the generation of web sites.

ICTWEB420 Write content for web pages

Locations:Footscray Nicholson, Online.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to write concise, and clear, content for web pages on behalf of a client. It applies to individuals who are proficient communicators in the web development field.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - write content for web pages that recognises cultural differences and diversity, in developing website content; - upload content for a website, and; - remove content on a website. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - outline content features, including clarity, ease of viewing and readability; - explain copyright and intellectual property legislation, relating to web page content; - summarise the document design, web design and usability; - discuss the functions and features of: micro-content elements, such as headings, highlighted words and link text, and style guides, such as cascading style sheets (CSS); - explain the information architecture; - summarise the instructional design principles; - outline the obligations of merchants and service providers; - outline the organisational requirements relating to web page content and user diversity, and; - explain privacy requirements relating to web page content.

ICTWEB425 Apply structured query language to extract and manipulate data

Locations:Footscray Nicholson, Sunshine.

Prerequisites:Nil.

Description:This unit describes the skills and knowledge required to produce structured query language (SQL) statements to work with server-side scripts, enabling web designers to interact with web server databases.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identify structured query language (SQL) requirements; - create the databases and tables; - generate queries for one or more tables, to provide the required data; - add, modify and delete records from the database tables, and; - test and verify SQL statements. Note: If a specific volume or frequency is not stated, then evidence must be provided at least once. Students will also be expected to demonstrate the following knowledge: - explain the features and application of the following aggregate functions: MIN; MAX; SUM; AVG; COUNT; COUNT(*); - explain the features and application of the following clause functions: GROUP BY; HAVING; ORDER BY; dates and times; SQL data types; numbers; text; SQL syntax; SELECT; FROM; WHERE; LIKE; DISTINCT; CREATE; ALTER TABLE; INSERT INTO; UPDATE; DELETE; DROP, and; - describe the principles of "combining and/or condition" in SQL statements and Boolean operators: IN and BETWEEN conditional operators; mathematical operators; table joins (relationships).

ICTWEB430 Produce server-side script for dynamic web pages

Locations: Footscray Nicholson, Sunshine.

Prerequisites: Nil.

Description: This unit describes the skills and knowledge required to produce server-side scripts for dynamic web pages using a range of relevant features from different languages. It applies to individuals working as web designers who apply a wide range of knowledge and skills across different information and communications technology (ICT) environments to support organisations that require broad ICT support. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - create a dynamic web page according to one set of user requirements; - use server-side scripting to retrieve information from a web-hosted database in two (2) different instances; - analyse three (3) language options and the associated advantages and disadvantages based on web document requirements to select most appropriate language, and; - configure one (1) webserver to deliver the website using HTTPS. Students will also be expected to demonstrate the ability to create one (1) script for each of the following: - inserting, updating, and deleting data from a web server database; - implementing security features; - uploading and retrieving images; - managing sessions and creating secure logins, and; - test web document and undertake corrective actions to meet requirements. Students will also be expected to demonstrate the following knowledge: - server-side technologies and at least three web scripting languages and associated advantages and disadvantages; - server-side web analysis and design parameters; - XHTML standards; - testing tools and processes and associated advantages and disadvantages, and; - control structures and object-oriented programming. - web-programming concepts including the hypertext transfer protocol (HTTP) and HTTP Secure (HTTPS), stateless programming; session management; authentication and web security; database vulnerabilities and preventative software configuration and programming practices, and; - organisational procedures to document test results.

IT011 IT in Action

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit focuses on how individuals and organisations use, and can be affected by, information and communications technology (ICT) in their daily lives. In Areas of Study 1 and 3, students acquire and apply a range of knowledge and skills to manipulate different data types such as numeric, text, sound and images (still and moving) to create solutions that can be used to persuade, educate, inform and entertain. In Area of Study 3, students also explore how their lives are affected by ICT, and consider strategies for managing how ICT is applied. In Area of Study 2, students examine how networked information systems allow data to be exchanged locally and within a global environment, and explore how mobile devices, such as phones, are used within these networks.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment: Demonstrated of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

IT012 IT pathways

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: This unit focuses on how individuals and organisations use ICT to meet a range of purposes. Students apply a range of knowledge and skills to create solutions, including those that have been produced using a programming or scripting language, to meet users' needs. In this unit, students apply all stages of the problem-solving methodology when creating solutions.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment: Demonstrated of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

LGACOM401A Administer contracts

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers the administration, monitoring and transition of contracts.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - negotiation and liaison across a range of internal and external customers; - contingency management; - contract interpretation; - project management; - conflict resolution; - client interaction, and; - financial and time management. Students will also be expected to demonstrate the following knowledge: - relevant legislation, regulations, codes of practice and policies applicable to the industry and the council, including those relating to environmental/sustainable practice and OHS; - relevant systems and procedures to aid in the achievement of sustainable practice; - contract procedures; - contract law; - knowledge of the contract service; - performance standards and analysis; - complaint procedures, and; - costing processes.

LGACOM402A Arrange contracts

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers receiving and evaluating tenders, preparing recommendations and notifying tenderers of the outcome

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - report writing; - oral presentation skills and interview techniques; - applying criteria; - verifying claims, and; - investigating. Students will also be expected to demonstrate the following knowledge: - relevant council policies and procedures; - quality assurance methods; - relevant Australian and industry standards; - statutory and council tender requirements; - contractual processes; - statutory council requirements; - tendering codes of practice; - evaluation methods, and; - strategies, policies and procedures on sustainable practice.

LGACOM404B Establish cooperative arrangements with other organisations

Locations: Industry.

Prerequisites: Nil.

Description: The unit covers identifying, developing, implementing and monitoring cooperative arrangements with other organisations in an effort to improve services provided to the community. The unit is appropriate for staff working in areas of council where community and business development are a major focus.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - negotiation with a range of personnel and other agencies; - research and evaluation, including cost-benefit analysis; - written and verbal communication with public and council personnel affected by implementation; - strategic and business planning; - planning and organisational; - time management; - ability to work as part of a team particularly with people from diverse backgrounds; - problem solving, and; - using appropriate software and technology. Students will also be expected to demonstrate the following knowledge: - relevant council policies and procedures; - sustainable practices; - council operations; - council goals, objectives and strategies, and; - other organisations potentially interested in cooperative arrangements.

LGACOM409A Prepare tender documentation

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers the scoping of contract services, the preparation of tender documentation and the calling for tenders. It supports the attainment of skills and knowledge required for competent workplace performance in councils of all sizes. Knowledge of the legislation and regulations within which councils must operate is

essential. The unique nature of councils, as a tier of government directed by elected members and reflecting the needs of local communities, must be appropriately reflected.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - report and specification writing; - qualitative and quantitative research; - analytical; - consultation with relevant personnel; - specification interpretation; - negotiation with relevant internal and external people, and; - observation of protocol and probity policies. Students will also be expected to demonstrate the following knowledge: - relevant council policies, procedures and codes of conduct; - sustainability practices; - quality assurance systems; - relevant Australian and industry standards; - statutory and council tender requirements; - contractual processes; - industrial agreements; - statutory council requirements; - tendering codes of practice, and; - national competition policy.

LGACOM410A Prepare response to tenders

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers responding to tenders by preparing a tender bid or submission. It supports the attainment of skills and knowledge required for competent workplace performance in councils of all sizes. Knowledge of the legislation and regulations within which councils must operate is essential. The unique nature of councils, as a tier of government directed by elected members and reflecting the needs of local communities, must be appropriately reflected.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - logical argument for written reports, and; - verbal presentation of bid. Students will also be expected to demonstrate the following knowledge: - national competition policy and its application at state and enterprise level; - core and non-core activities; - occupational health and safety; - strategies, policies and procedures on sustainable practice; - risk assessment, and; - work flow.

LGACOMP024A Develop community relations

Locations: Industry.

Prerequisites: Nil.

Description: This unit covers developing relationships with the community and liaising effectively with individuals and the community. The unit covers areas such as community networking, developing strategies, promoting the council and organization to the community and developing ongoing relationships. The unit is appropriate to employees in all areas of the organisation who need to develop and maintain community relationships.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - literacy; - proofreading and editing; - communication; - evaluation; - problem solving; - negotiation; - leadership; - networking; - time management; - planning and managing own work priorities; - organisational; - proactive thinking and initiative; - using and maintaining appropriate technology and software, and; - relating to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities. Students will also be expected to demonstrate the following knowledge: - knowledge of the organisation's policies, plans and procedures; - principles of effective communication in relation to listening, questioning and non-verbal communication; - techniques for building relationships of trust including with people from different cultures; - understanding techniques for facilitating mutually acceptable outcomes; - methods and techniques to prepare and present information to promote the organisation; - knowledge of related organisations, agencies and networks, and; - understanding the principles and operation of networks.

LGACOMP026A Provide team leadership

Locations: Industry, Footscray Nicholson.

Prerequisites: Nil.

Description: This unit covers providing leadership to a team within the organisation. The unit includes planning work for the team, monitoring team performance, facilitating change and providing reports. The unit is suitable for team leaders across the organisation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - consultation; - communication; - negotiation; - report writing; - facilitating the participation of team members, team development and improvement; - problem solving and conflict resolution; - decision making; - working effectively with team members who have diverse work styles, aspirations, cultures and perspectives; - relating to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities, and; - using relevant software and technology skills. Students will also be expected to demonstrate the following knowledge: - relevant council policies and procedures; - relevant legislation; - access and equity issues; - code of conduct and ethics; - organization of teams; - team goal setting; - devolving responsibility and accountability to teams; - team dynamics; - conflict resolution; - leadership styles; - providing feedback to others and receiving feedback; - motivating others, and; - strategy development.

LGACORE104B Work effectively in local government

Locations: Industry.

Prerequisites: Nil.

Description: This unit covers working effectively in a local government context,

including accepting responsibility for own work. It requires an understanding of and support for local government priorities. The unit is appropriate for all council staff particularly those entering local government for the first time.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - prioritising work; - communicating need for support; - responding to workplace change; - reporting accidents and incidents verbally; - filling in accident and incident report forms; - interpreting instructions; - implementing sustainable energy work practice; - problem solving; - conflict resolution; - appropriate software and technology skills, and; - team work and team building. Students will also be expected to demonstrate the following knowledge: - council's occupational health and safety policies and procedures; - council's environmental policies and procedures; - council's quality system policies and procedures; - council's emergency procedures; - council's organisational structure; - communication channels within council; - election process; - role of councillors and mayor; - structure of government in Australia; - functions of local government; - boundaries of local government; - duty of care requirements; - council's public liability, and; - sustainable energy work practice techniques.

LGACORE105B Work with others in local government

Locations: Industry.

Prerequisites: Nil.

Description: This unit addresses the promotion of effective work relationships within local government. The importance of building relationships, fulfilling own tasks and responding to constructive feedback when working within a team setting is recognised.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - coaching others; - clear verbal communication; - resolving conflicts; - organising skills in order to prioritise work activities; - time management, and; - rebuilding. Students will also be expected to demonstrate the following knowledge: - council structure and functions; - own role in relation to whole of council; - equal employment opportunity requirements; - anti-discrimination requirements; - relevant council workplace standards; - own role and function within council, and; - local community cultures.

LGACORE603B Represent council's role and value in the community

Locations: Industry.

Prerequisites: Nil.

Description: This unit covers relationship building and communication with stakeholders in an effort to promote the value of council to the community. The need for staff to represent the value of council to the community and stakeholders through relationships that are mutually beneficial to all parties is recognised.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - verbal communication, presentation and negotiation; - consultation and liaison; - marketing, promotion and utilising and working with the media, and; - written communication, including reports and media releases. Students will also be expected to demonstrate the following knowledge: - council's political, social, economic and environmental context; - council's strategic and business plans, goals, objectives, policies and procedures; - council operations; - marketing principles and promotional strategies, including planning special events, and; - freedom of information and confidentiality.

LGAGCM708A Develop, lead and build community capacity

Locations: Industry.

Prerequisites: Nil.

Description:This unit covers the development, engagement and leadership of communities by council officers and elected members. It addresses the skills involved in the strategic development of community directions and programs and the ongoing involvement of residents, businesses and other stakeholders in the work of council. It is appropriate for elected members, CEOs and other senior managers of councils. This unit supports the attainment of skills and knowledge required for competent workplace performance in councils of all sizes. Knowledge of the legislation and regulations that provide the boundaries for the operation of councils is essential. The unique nature of councils, as a tier of government, directed by elected members and reflecting the needs of local communities must be appropriately reflected.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - high-level communication skills, including the capacity to engage community members in planning processes and negotiate successful and mutually satisfactory outcomes; - high-level research and analytical skills in relation to management accounting and finance; - application of decision-making strategies to a range of business scenarios; - strategic and operational planning, and; - reporting. Students will also be expected to demonstrate the following knowledge: - local government framework (policies and practices) for engaging communities, including key stakeholders; - operational capacity and resourcing of the council to support development project; - human, economic, social, environmental and physical resource capacity of the community, and; - available external funding sources to provide potential support for community projects.

LGAGENE302A Contribute to effective decision making

Locations: Industry.

Prerequisites: Nil.

Description:This unit examines the decision-making processes and capabilities required by those in positions of authority within council. It recognises the impact of

personal and community influences upon councillors when making clear and strong decisions

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - questioning; - listening; - research; - management, and; - lateral thinking. Students will also be expected to demonstrate the following knowledge: - decision making processes; - legislation affecting councils, and; - responsibilities conferred upon councillors to act responsibly and ethically.

LGAGENE303A Contribute to council teams

Locations: Industry.

Prerequisites: Nil.

Description:This unit covers councillor participation as part of a team. Its application may include contribution to council as a whole or to other group activities. This unit supports the attainment of skills and knowledge required for competent workplace performance in remote and Indigenous communities and councils. Knowledge of the legislation and regulations within which councils must operate is essential. The role of elected members and senior management in leading and supporting their communities, and the identification of processes and solutions to meet the specific needs of communities, must be appropriately reflected.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - management; - strategic planning; - setting team objectives; - resolving conflict, and; - effective interpersonal communication. Students will also be expected to demonstrate the following knowledge: - legislation governing council operations; - meeting procedures; - ethical practice in council, community and personal dealings; - team organisation, dynamics and accountabilities; - roles of team leaders; - quality assurance issues, and; - continuous improvement processes.

LGAGENE304A Conduct effective council meetings

Locations: Industry.

Prerequisites: Nil.

Description:This unit covers running effective council meetings. It is appropriate for those responsible for conducting subgroups or committee meetings. It recognises the importance of ensuring that clear and well-planned objectives are set for meetings and that proceedings are conducted in accordance with accepted protocols. This unit supports the attainment of skills and knowledge required for competent workplace performance in remote and Indigenous communities and councils. Knowledge of the legislation and regulations within which councils must operate is essential. The role of elected members and senior management in leading and supporting their communities, and the identification of processes and solutions to meet the specific

needs of communities, must be appropriately reflected.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - oral and written communication; - interpersonal skills, including courtesy and respect for diversity; - presentation skills; - research capacity; - negotiation and debating; - management, and; - self-discipline. Students will also be expected to demonstrate the following knowledge: - meeting procedures; - council or authority regulations; - protocols and codes of conduct; - community or locality knowledge, including history and current events, traditions, customs and social issues, and; - current communications technology.

LGAGENE501A Undertake councillor roles and responsibilities

Locations: Industry.

Prerequisites: Nil.

Description:This unit covers the behaviours and actions required of councillors in meeting their roles and responsibilities as elected representatives. This unit supports the attainment of skills and knowledge required for competent workplace performance in remote and Indigenous communities and councils. Knowledge of the legislation and regulations within which councils must operate is essential. The role of elected members and senior management in leading and supporting their communities, and the identification of processes and solutions to meet the specific needs of communities, must be appropriately reflected.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - decision making; - problem solving; - conflict resolution; - communication; - networking; - leadership and management, and; - presentation and public speaking. Students will also be expected to demonstrate the following knowledge: - state or territory legislation affecting councils and influencing bodies; - councillor, executive, administrative and specialist roles within council structure, and; - policies and protocols governing effective legal and ethical operation of council.

LGAGENE502A Provide leadership within the council and community

Locations: Industry.

Prerequisites: Nil.

Description:This unit introduces leadership concepts and the behaviours required of councillors in their role as leaders of council and prominent leaders in the community. This unit supports the attainment of skills and knowledge required for competent workplace performance in remote and Indigenous communities and councils. Knowledge of the legislation and regulations within which councils must operate is essential. The role of elected members and senior management in leading and supporting their communities, and the identification of processes and solutions to

meet the specific needs of communities, must be appropriately reflected.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - judgement and decision making; - management; - effective interpersonal; - effective verbal and written communication; - analytical and problem solving; - identifying community needs and issues, and; - research and reporting. Students will also be expected to demonstrate the following knowledge: - budgeting and financial procedures; - strategic planning processes; - policy analysis and interpretation, and; - links between policy areas and processes within council.

LGAGENE503 Perform the role of an elected member

Locations: Industry.

Prerequisites: Nil.

Description:This unit covers the competencies required to undertake the functions of an elected member in Local Government. This unit is suitable for both newly elected and returning members and provides a basic overview of the roles and responsibilities of elected members, the local government environment and Council operating procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - teamwork to work effectively with elected members; - oral and written communication skills for: interacting with the community during consultation; - contributing to discussions on complex issues: negotiating and influencing others; debating and solving problems in collaboration with other elected members, and; - numeracy and financial literacy skills for budgeting, asset management, strategic planning, financial planning and reporting. Students will also be expected to demonstrate the following knowledge: - relevant state/territory Local Government Acts and amendments; - code of conduct and relevant policies and procedures; - separation of powers of council and administration; - rights and responsibilities of elected members; - WH&S responsibilities pertaining to elected member operating environment; - meeting standing orders; - peer support network, including external organisations, and; - Australian constitution.

LGAWORK402A Prepare for operational works

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description:This unit covers preparing a works project plan that is conveyed to relevant stakeholders. This unit supports the attainment of skills and knowledge required for competent workplace performance in councils of all sizes. Knowledge of the legislation and regulations within which councils must operate is essential. The unique nature of councils, as a tier of government directed by elected members and

reflecting the needs of local communities, must be appropriately reflected.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - organisational capability across a range of physical and human resources; - communicating with public, other authorities and council staff; - estimating resources and capacity, and; - calculating quantities of resources and materials. Students will also be expected to demonstrate the following knowledge: - materials technology; - construction technology; - works methods; - state and local government standards; - relevant environmental legislation; - climatic conditions; - supply networks and council procurement policies, and; - road and traffic safety regulations.

L1033 English Literature 3

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit focuses on the ways writers construct their work and how meaning is created for and by the reader. Students consider how the form of text (such as poetry, prose, drama, non-print or combinations of these) affects meaning and generates different expectations in readers, the ways texts represent views and values and comment on human experience, and the social, historical and cultural contexts of literary works. This unit is delivered in Year 12.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment:Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams .

L1034 English Literature 4

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:This unit focuses on students' creative and critical responses to texts. Students consider the context of their responses to texts as well as the concerns, the style of the language and the point of view in their re-created or adapted work. This unit is delivered in Year 12.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment:Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams .

L1T011 Literacy Skills Foundation Reading and Writing

Locations:Footscray Nicholson, Havester Technical College..

Prerequisites:Nil.

Description:The purpose of this unit is to enable students to develop skills and knowledge to read and write simple or short texts. Texts will deal with mainly personal and familiar topics but may include some unfamiliar aspects. At this level students, often with support, use the writing process with an awareness of the purpose and audience of the text. In reading students are able to identify the main point of the text, some key details and express an opinion about the text as a whole as well as some of the details. At the end of the Foundation Reading and Writing unit students will be able to read and comprehend a range of simple short texts and

write a range of short texts in a number of contexts which may be interrelated.

Required Reading:There are no required texts for this unit. The teacher will provide teaching and learning material as required.

Assessment:Assessment may be through: For writing learning outcomes: - written text (which may be computer generated) - teacher observation. For reading learning outcomes: - oral or written explanation of task - teacher observation - oral or written response to text.

L1T012 Literacy Skills Foundation Oral Communication

Locations:Footscray Nicholson, Havester Technical College..

Prerequisites:Nil.

Description:At the end of this unit students will be able to use and respond to spoken language, around everyday subject matter which may include some unfamiliar aspects, for a range of purposes in a number of contexts which may be interrelated.

Required Reading:There is no required reading for this unit. The teacher will provide teaching and learning materials as required.

Assessment:Evidence of successful completion of each learning outcome may be ascertained through any or a combination of the following methods: teacher observation; discussion group activities; student self-assessments; peer evaluations and practical applications outside the classroom supported by evidence.

L1T021 Literacy Skills Intermediate Reading and Writing

Locations:Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites:Nil.

Description:The purpose of this unit is to enable students to develop the skills and knowledge to read and write a range of texts on everyday subject matters which include some unfamiliar aspects or material. At this level students, once they have identified the audience and purpose of the text, use the writing process to produce texts that link several ideas or pieces of information. In reading, students identify how, and if, the writer has achieved his or her purpose and express an opinion on the text taking into account its effectiveness. At the end of the unit students will be able to read, comprehend and write a range of texts within a variety of contexts.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

L1T022 Literacy Skills Intermediate Oral Communication

Locations:Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites:Nil.

Description:At the end of this unit students will be able to use and respond to spoken language including some unfamiliar material within a variety of contexts.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

LIT031 Literacy Skills Senior Reading and Writing

Locations:Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites:Nil.

Description:The purpose of this unit is to enable students to develop the skills and knowledge to read and write complex texts. The texts will deal with general situations and include some abstract concepts or technical details. At this level, students produce texts that incorporate a range of ideas, information, beliefs or processes and have control of the language devices appropriate to the type of text. In reading, the student identifies the views shaping the text and the devices used to present that view and express an opinion on the effectiveness and content of the text. At the end of the unit students will be able to read, comprehend and write a range of complex texts across a broad range of contexts.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

LIT032 Literacy Skills Senior Oral Communication

Locations:Footscray Park, Footscray Nicholson, Werribee, City King St, Sunshine.

Prerequisites:Nil.

Description:At the end of this unit students will be able to use and respond to spoken language with complex and abstract content across a broad range of contexts.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines.

LS011 Legal Studies 1

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:Criminal law and civil law aim to achieve social cohesion and protect the rights of individuals. Criminal law is aimed at maintaining social order and infringing criminal law can result in charges. Civil law deals with the infringement of a person's or group's rights and breaching civil law can result in litigation. In this unit students develop an understanding of legal foundations, such as the different types and sources of law and the existence of a court hierarchy in Victoria. Students investigate key concepts of criminal law and civil law and apply these to actual and/or hypothetical scenarios to determine whether an accused may be found guilty of a crime, or liable in a civil dispute. In doing so, students develop an appreciation of the way in which legal principles and information are used in making reasoned judgments and conclusions about the culpability of an accused, and the liability of a party in a civil dispute. This unit is delivered in Year 11.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge in

accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to describe the main sources and types of law, and assess the effectiveness of laws. Outcome 2 On completion of this unit the student should be able to explain the purposes and key concepts of criminal law, and use legal reasoning to argue the criminal culpability of an accused based on actual and/or hypothetical scenarios. Outcome 3 On completion of this unit the student should be able to explain the purposes and key concepts of civil law, and apply legal reasoning to argue the liability of a party in civil law based on actual and/or hypothetical scenarios. Assessment will follow the requirements set out in the VCE Legal Studies Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are schoolbased. For this unit students are required to demonstrate achievement of three outcomes. As a set these outcomes encompass all areas of study in the unit. .

LS011A Legal Studies 1

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:Students examine the need for laws in society. They investigate the key features of criminal law, how it is enforced and adjudicated and possible outcomes and impacts of crime. Through a consideration of contemporary cases and issues, students learn about different types of crimes and explore rights and responsibilities under criminal law. Students also consider the role of parliament and subordinate authorities in law-making, as well as the impact of the Victorian Charter of Rights and Responsibilities on law enforcement and adjudication in Victoria. This unit is studied in Year 11.

Required Reading:Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment:Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams .

LS022 Legal Studies 2

Locations:Footscray Nicholson.

Prerequisites:Nil.

Description:Criminal law and civil law aim to protect the rights of individuals. When rights are infringed, a case or dispute may arise which needs to be determined or resolved, and sanctions or remedies may be imposed. This unit focuses on the enforcement of criminal law and civil law, the methods and institutions that may be used to determine a criminal case or resolve a civil dispute, and the purposes and types of sanctions and remedies and their effectiveness. Students undertake a detailed investigation of two criminal cases and two civil cases from the past four years to form a judgment about the ability of sanctions and remedies to achieve the principles of justice. Students develop their understanding of the way rights are protected in Australia and in another country, and possible reforms to the protection of rights. They examine a significant case in relation to the protection of rights in Australia. This unit is delivered in Year 11.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to explain key concepts in the determination of a criminal case, and discuss the principles of justice in relation to the determination of criminal cases, sanctions and sentencing approaches. Outcome 2 On completion of this unit the student should be able to explain key concepts in the resolution of a civil dispute, and discuss the principles of justice in relation to the resolution of civil disputes and remedies. Outcome 3 On completion of this unit the student should be able to evaluate the ways in which rights are protected in Australia, compare this approach with that adopted by another country and discuss the impact of an Australian case on the rights of individuals and the legal system. Assessment will follow the requirements set out in the VCE Legal Studies Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of three outcomes. As a set these outcomes encompass all areas of study in the unit.

LS022A Legal Studies 2

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Students examine the rights that are protected by civil law, as well as obligations that laws impose. They investigate types of civil laws and related cases and issues and develop an appreciation of the role of civil law in society and how it affects them as individuals. The unit also focuses on the resolution of civil disputes through judicial determination and alternative methods in courts, tribunals and independent bodies. Students examine these methods of dispute resolution and evaluate their effectiveness. This unit is studied in Year 11.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

LS033 Legal Studies 3

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: The Victorian justice system, which includes the criminal and civil justice systems, aims to protect the rights of individuals and uphold the principles of justice: fairness, equality and access. In this unit students examine the methods and institutions in the justice system and consider their appropriateness in determining criminal cases and resolving civil disputes. Students consider the Magistrates' Court, County Court and Supreme Court within the Victorian court hierarchy, as well as other Victorian legal institutions and bodies available to assist with cases. Students explore matters such as the rights available to an accused and to victims in the criminal justice system, the roles of the judge, jury, legal practitioners and the parties, and the ability of sanctions and remedies to achieve their purposes. Students

investigate the extent to which the principles of justice are upheld in the justice system. They discuss recent reforms from the past four years and recommended reforms to enhance the ability of the justice system to achieve the principles of justice. Throughout this unit, students apply legal reasoning and information to actual and/or hypothetical scenarios. This unit is delivered in Year 12.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to explain the rights of the accused and of victims in the criminal justice system, discuss the means used to determine criminal cases and evaluate the ability of the criminal justice system to achieve the principles of justice. Outcome 2 On completion of this unit the student should be able to analyse the factors to consider when initiating a civil claim, discuss the institutions and methods used to resolve civil disputes and evaluate the ability of the civil justice system to achieve the principles of justice. Assessment will follow the requirements set out in the VCE Legal Studies Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 3 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 25 per cent to the study score. SAC for Unit 4 will contribute 25 per cent to the study score (LS034 Legal Studies 4). EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 50 per cent to the study score.

LS034 Legal Studies 4

Locations: Footscray Nicholson.

Prerequisites: LS033 - Legal Studies 3

Description: The study of Australia's laws and legal system involves an understanding of institutions that make and reform our laws, and the relationship between the Australian people, the Australian Constitution and law-making bodies. In this unit, students explore how the Australian Constitution establishes the law-making powers of the Commonwealth and state parliaments, and protects the Australian people through structures that act as a check on parliament in law-making. Students develop an understanding of the significance of the High Court in protecting and interpreting the Australian Constitution. They investigate parliament and the courts, and the relationship between the two in law-making, and consider the roles of the individual, the media and law reform bodies in influencing law reform. Throughout this unit, students apply legal reasoning and information to actual scenarios. This unit is delivered in Year 12.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the

following knowledge: Outcome 1 On completion of this unit the student should be able to discuss the significance of High Court cases involving the interpretation of the Australian Constitution and evaluate the ways in which the Australian Constitution acts as a check on parliament in law-making. Outcome 2 On completion of this unit the student should be able to discuss the factors that affect the ability of parliament and courts to make law, evaluate the ability of these law-makers to respond to the need for law reform, and analyse how individuals, the media and law reform bodies can influence a change in the law. Assessment will follow the requirements set out in the VCE Legal Studies Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 4 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 25 per cent to the study score (LS033 Legal Studies 3). SAC for Unit 4 will contribute 25 per cent to the study score. EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by an end-of-year examination, which will contribute 50 per cent to the study score.

MA071 General Mathematics 1

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: General Mathematics provides for different combinations of student interests and preparation for study of VCE Mathematics at the Unit 3 and 4 level. The areas of study for General Mathematics Unit 1 and Unit 2 are 'Algebra and structure', 'Arithmetic and number', 'Discrete mathematics', 'Geometry, measurement and trigonometry', 'Graphs of linear and non-linear relations' and 'Statistics'. For Units 1 and 2, to suit the range of students entering the study, content must be selected from the six areas of study using the following rules: for each unit, content covers four or more topics in their entirety, selected from at least three different areas of study; courses intended as preparation for study at the Units 3 and 4 level should include a selection of topics from areas of study that provide a suitable background for these studies; topics can also be selected from those available for Specialist Mathematics Units 1 and 2, and; content covered from an area of study provides a clear progression in knowledge and skills from Unit 1 to Unit 2. In undertaking these units, students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, sets, lists and tables, diagrams and geometric constructions, algebraic manipulation, equations and graphs with and without the use of technology. They should have facility with relevant mental and by-hand approaches to estimation and computation. The use of numerical, graphical, geometric, symbolic, financial and statistical functionality of technology for teaching and learning mathematics, for working mathematically, and in related assessment, is to be incorporated throughout each unit as applicable. This unit is delivered in Year 11.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. For this unit the student is required to demonstrate achievement of three outcomes. As a set these outcomes encompass all of the

selected areas of study for each unit. For each of Unit 1 and Unit 2, the outcomes apply to the content from the areas of study selected for that unit. Outcome 1 On completion of this unit the student should be able to define and explain key concepts as specified in the selected content from the areas of study, and apply a range of related mathematical routines and procedures. Outcome 2 On completion of each unit the student should be able to select and apply mathematical facts, concepts, models and techniques from the topics covered in the unit to investigate and analyse extended application problems in a range of contexts. Outcome 3 On completion of this unit the student should be able to select and use numerical, graphical, symbolic and statistical functionalities of technology to develop mathematical ideas, produce results and carry out analysis in situations requiring problem-solving, modelling or investigative techniques or approaches. Assessment will follow the requirements set out in the VCE Mathematical Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of three outcomes. As a set these outcomes encompass all areas of study in the unit.

MA072 General Mathematics 2

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: General Mathematics provides for different combinations of student interests and preparation for study of VCE Mathematics at the Unit 3 and 4 level. The areas of study for General Mathematics Unit 1 and Unit 2 are 'Algebra and structure', 'Arithmetic and number', 'Discrete mathematics', 'Geometry, measurement and trigonometry', 'Graphs of linear and non-linear relations' and 'Statistics'. For Units 1 and 2, to suit the range of students entering the study, content must be selected from the six areas of study using the following rules: for each unit, content covers four or more topics in their entirety, selected from at least three different areas of study; courses intended as preparation for study at the Units 3 and 4 level should include a selection of topics from areas of study that provide a suitable background for these studies; topics can also be selected from those available for Specialist Mathematics Units 1 and 2, and; content covered from an area of study provides a clear progression in knowledge and skills from Unit 1 to Unit 2. In undertaking these units, students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, sets, lists and tables, diagrams and geometric constructions, algebraic manipulation, equations and graphs with and without the use of technology. They should have facility with relevant mental and by-hand approaches to estimation and computation. The use of numerical, graphical, geometric, symbolic, financial and statistical functionality of technology for teaching and learning mathematics, for working mathematically, and in related assessment, is to be incorporated throughout each unit as applicable. This unit is delivered in Year 11.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. For this unit the student is required to demonstrate

achievement of three outcomes. As a set these outcomes encompass all of the selected areas of study for each unit. For each of Unit 1 and Unit 2, the outcomes apply to the content from the areas of study selected for that unit. Outcome 1 On completion of this unit the student should be able to define and explain key concepts as specified in the selected content from the areas of study, and apply a range of related mathematical routines and procedures. Outcome 2 On completion of each unit the student should be able to select and apply mathematical facts, concepts, models and techniques from the topics covered in the unit to investigate and analyse extended application problems in a range of contexts. Outcome 3 On completion of this unit the student should be able to select and use numerical, graphical, symbolic and statistical functionalities of technology to develop mathematical ideas, produce results and carry out analysis in situations requiring problem-solving, modelling or investigative techniques or approaches. Assessment will follow the requirements set out in the VCE Mathematical Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of three outcomes. As a set these outcomes encompass all areas of study in the unit.

MA073 Further Mathematics 3

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Further Mathematics consists of two areas of study, a compulsory Core area of study to be completed in Unit 3 and an Applications area of study to be completed in Unit 4. The Core comprises 'Data analysis' and 'Recursion and financial modelling'. The Applications comprises two modules to be completed in their entirety, from a selection of four possible modules: 'Matrices', 'Networks and decision mathematics', 'Geometry and measurement' and 'Graphs and relations'. 'Data analysis' comprises 40 per cent of the content to be covered, 'Recursion and financial modelling' comprises 20 per cent of the content to be covered, and each selected module comprises 20 per cent of the content to be covered. In undertaking these units, students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, sets, lists and tables, diagrams and geometric constructions, algebraic manipulation, equations, and graphs. They should have a facility with relevant mental and by-hand approaches to estimation and computation. The use of numerical, graphical, geometric, symbolic, financial and statistical functionality of technology for teaching and learning mathematics, for working mathematically, and in related assessment, is to be incorporated throughout each unit as applicable. This unit is delivered in Year 12.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to define and explain key concepts and apply related mathematical techniques and models. Outcome 2 On completion of this unit the student should be able to select and apply the mathematical concepts, models and techniques as specified in

Area of Study 1 in a range of contexts of increasing complexity. Outcome 3 On completion of this unit the student should be able to select and appropriately use numerical, graphical, symbolic and statistical functionalities of technology to develop mathematical ideas, produce results and carry out analysis in situations requiring problem-solving, modelling or investigative techniques or approaches. Assessment will follow the requirements set out in the VCE Mathematics Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 3 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 20 per cent to the study score. SAC for Unit 4 will contribute 14 per cent to the study score (MA074 Further Mathematics 4). EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by two end-of-year examinations, which will contribute 33 per cent each to the study score.

MA074 Further Mathematics 4

Locations: Footscray Nicholson.

Prerequisites: MA073 - Further Mathematics 3

Description: Further Mathematics consists of two areas of study, a compulsory Core area of study to be completed in Unit 3 and an Applications area of study to be completed in Unit 4. The Core comprises 'Data analysis' and 'Recursion and financial modelling'. The Applications comprises two modules to be completed in their entirety, from a selection of four possible modules: 'Matrices', 'Networks and decision mathematics', 'Geometry and measurement' and 'Graphs and relations'. 'Data analysis' comprises 40 per cent of the content to be covered, 'Recursion and financial modelling' comprises 20 per cent of the content to be covered, and each selected module comprises 20 per cent of the content to be covered. In undertaking these units, students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, sets, lists and tables, diagrams and geometric constructions, algebraic manipulation, equations, and graphs. They should have a facility with relevant mental and by-hand approaches to estimation and computation. The use of numerical, graphical, geometric, symbolic, financial and statistical functionality of technology for teaching and learning mathematics, for working mathematically, and in related assessment, is to be incorporated throughout each unit as applicable. This unit is delivered in Year 12.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to define and explain key concepts as specified in the content from the two selected modules, and apply related mathematical techniques and models in routine contexts. Outcome 2 On completion of this unit the student should be able to select and apply the mathematical concepts, models and techniques from the two selected modules in a range of contexts of increasing complexity. Outcome 3 On completion of this unit the student should be able to select and appropriately use numerical, graphical, symbolic and statistical functionalities of technology to develop mathematical ideas, produce results and carry out analysis in situations requiring

problem-solving, modelling or investigative techniques or approaches. Assessment will follow the requirements set out in the VCE Mathematics Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 4 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 20 per cent to the study score (MA073 Further Mathematics 3). SAC for Unit 4 will contribute 14 per cent to the study score. EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by two end-of-year examinations, which will contribute 33 per cent each to the study score.

MA081 Mathematical Methods 1

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Mathematical Methods (CAS) Units 1 and 2 are designed as preparation for Mathematical Methods (CAS) Units 3 and 4. The areas of study for Unit 1 are 'Functions and graphs', 'Algebra', 'Rates of change and calculus' and 'Probability'. Familiarity with determining the equation of a straight line from combinations of sufficient information about points on the line or the gradient of the line and familiarity with pythagoras theorem and its application to finding the distance between two points is assumed. Students should also be familiar with quadratic and exponential functions, algebra and graphs, and basic concepts of probability. This unit is studied in Year 11.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

MA082 Mathematical Methods 2

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: The areas of study for Unit 2 are 'Functions and graphs', 'Algebra', 'Rates of change and calculus', and 'Probability'. Students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, algebraic manipulation, equation solving, graph sketching, differentiation and integration with and without the use of technology, as applicable. This unit is studied in Year 11.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

MA093 Specialist Mathematics 3

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: In Unit 3 a study of Specialist Mathematics include content from 'Functions, relations and graphs' and a selection of material from the 'Algebra', 'Calculus' and 'Vectors' areas of study. This unit is studied in Year 12.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

MA094 Specialist Mathematics 4

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Unit 3 is a pre-requisite to this Unit. In Unit 4 this selection would typically consist of the remaining content from the 'Algebra', 'Calculus', and 'Vectors' areas of study and the content from the 'Mechanics' area of study. This unit is studied in Year 12.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

MA101 Foundation maths 1

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Foundation Mathematics provides for the continuing mathematical development of students entering VCE, who need mathematical skills to support their other VCE subjects. Students completing this course would need to undertake further mathematical study in order to attempt Further Mathematics Units 3 and 4. In Foundation Mathematics there is a strong emphasis on using mathematics in practical contexts relating to everyday life, recreation, work and study. Students are encouraged to use appropriate technology in all areas of their study. These units will be especially useful for students undertaking VET studies. The areas of study for Units 1 and 2 of Foundation Mathematics are 'Space, shape and design', 'Patterns and number', and Unit 2 deals with 'Handling data' and 'Measurement'. This Unit is delivered at Year 11 level.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

MA102 Foundation maths 2

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Foundation Mathematics provides for the continuing mathematical development of students entering VCE, who need mathematical skills to support their other VCE subjects. Students completing this course would need to undertake further mathematical study in order to attempt Further Mathematics Units 3 and 4. In Foundation Mathematics there is a strong emphasis on using mathematics in practical contexts relating to everyday life, recreation, work and study. Students are encouraged to use appropriate technology in all areas of their study. These units will be especially useful for students undertaking VET studies. The areas of study for Units 1 and 2 of Foundation Mathematics are 'Space, shape and design', 'Patterns and number', and Unit 2 deals with 'Handling data' and 'Measurement'. This Unit is offered at Year 11 level.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams .

MA111 Mathematical Methods 1

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Mathematical Methods Units 1 and 2 provide an introductory study of simple elementary functions of a single real variable, algebra, calculus, probability

and statistics and their applications in a variety of practical and theoretical contexts. They are designed as preparation for Mathematical Methods Units 3 and 4 and contain assumed knowledge and skills for these units. The focus of Unit 1 is the study of simple algebraic functions, and the areas of study are 'Functions and graphs', 'Algebra', 'Calculus' and 'Probability and statistics'. At the end of Unit 1, students are expected to have covered the content outlined in each area of study, with the exception of 'Algebra' which extends across Units 1 and 2. This content should be presented so that there is a balanced and progressive development of skills and knowledge from each of the four areas of study with connections between and across the areas of study being developed consistently throughout both Units 1 and 2. In undertaking this unit, students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, sets, lists and tables, diagrams and geometric constructions, algebraic manipulation, equations, graphs and differentiation with and without the use of technology. They should have facility with relevant mental and by-hand approaches to estimation and computation. The use of numerical, graphical, geometric, symbolic and statistical functionality of technology for teaching and learning mathematics, for working mathematically, and in related assessment, is to be incorporated throughout the unit as applicable. This unit is delivered in Year 11.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to define and explain key concepts as specified in the content from the areas of study, and apply a range of related mathematical routines and procedures. Outcome 2 On completion of this unit the student should be able to apply mathematical processes in non-routine contexts, including situations requiring problem-solving, modelling or investigative techniques or approaches, and analyse and discuss these applications of mathematics. Outcome 3 On completion of this unit the student should be able to use numerical, graphical, symbolic and statistical functionalities of technology to develop mathematical ideas, produce results and carry out analysis in situations requiring problem-solving, modelling or investigative techniques or approaches. Assessment will follow the requirements set out in the VCE Mathematics Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of three outcomes. As a set these outcomes encompass all areas of study in the unit.

MA112 Mathematical Methods 2

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: In Maths: Mathematical Methods 2 students focus on the study of simple transcendental functions and the calculus of simple algebraic functions. The areas of study are 'Functions and graphs', 'Algebra', 'Calculus', and 'Probability and statistics'. At the end of Unit 2, students are expected to have covered the material

outlined in each area of study. Material from the 'Functions and graphs', 'Algebra', 'Calculus', and 'Probability and statistics' areas of study should be organised so that there is a clear progression of skills and knowledge from Unit 1 to Unit 2 in each area of study. In undertaking this unit, students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, sets, lists and tables, diagrams and geometric constructions, algebraic manipulation, equations, graphs, differentiation and anti-differentiation with and without the use of technology. They should have facility with relevant mental and by-hand approaches to estimation and computation. The use of numerical, graphical, geometric, symbolic and statistical functionality of technology for teaching and learning mathematics, for working mathematically, and in related assessment, is to be incorporated throughout the unit as applicable. This unit is delivered in Year 11.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to define and explain key concepts as specified in the content from the areas of study, and apply a range of related mathematical routines and procedures. Outcome 2 On completion of this unit the student should be able to apply mathematical processes in non-routine contexts, including situations requiring problem-solving, modelling or investigative techniques or approaches, and analyse and discuss these applications of mathematics. Outcome 3 On completion of this unit the student should be able to select and use numerical, graphical, symbolic and statistical functionalities of technology to develop mathematical ideas, produce results and carry out analysis in situations requiring problem-solving, modelling or investigative techniques or approaches. Assessment will follow the requirements set out in the VCE Mathematical Study Guide: The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of learning activities and assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. Assessment will be a part of the regular teaching and learning program and will be completed mainly in class and within a limited time-frame. All assessments at Units 1 and 2 are school-based. For this unit students are required to demonstrate achievement of three outcomes. As a set these outcomes encompass all areas of study in the unit.

MA113 Mathematical Methods 3

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Mathematical Methods Units 3 and 4 are completely prescribed and extend the introductory study of simple elementary functions of a single real variable, to include combinations of these functions, algebra, calculus, probability and statistics, and their applications in a variety of practical and theoretical contexts. Units 3 and 4 consist of the areas of study 'Functions and graphs', 'Calculus', 'Algebra' and 'Probability and statistics', which must be covered in progression from Unit 3 to Unit 4, with an appropriate selection of content for each of Unit 3 and Unit 4. Assumed knowledge and skills for Mathematical Methods Units 3 and 4 are contained in Mathematical Methods Units 1 and 2, and will be drawn on, as applicable, in the development of related content from the areas of study, and key knowledge and skills for the outcomes of Mathematical Methods Units 3 and 4. For

Unit 3 a selection of content would typically include the areas of study 'Functions and graphs' and 'Algebra', and applications of derivatives and differentiation, and identifying and analysing key features of the functions and their graphs from the 'Calculus' area of study. In undertaking these units, students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, sets, lists and tables, diagrams and geometric constructions, algebraic manipulation, equations, graphs, differentiation, anti-differentiation, integration and inference with and without the use of technology. They should have facility with relevant mental and by-hand approaches to estimation and computation. The use of numerical, graphical, geometric, symbolic and statistical functionality of technology for teaching and learning mathematics, for working mathematically, and in related assessment, is to be incorporated throughout each unit as applicable. This unit is delivered in Year 12.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of each unit the student should be able to define and explain key concepts as specified in the content from the areas of study, and apply a range of related mathematical routines and procedures. Outcome 2 On completion of each unit the student should be able to apply mathematical processes in non-routine contexts, including situations requiring problem-solving, modelling or investigative techniques or approaches, and analyse and discuss these applications of mathematics. Outcome 3 On completion of each unit the student should be able to select and appropriately use numerical, graphical, symbolic and statistical functionalities of technology to develop mathematical ideas, produce results and carry out analysis in situations requiring problem-solving, modelling or investigative techniques or approaches. Assessment will follow the requirements set out in the VCE Mathematics Study Guide: SCHOOL-BASED ASSESSMENT 1.

Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. **Assessment of levels of achievement** The student's level of achievement in Unit 3 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 17 per cent to the study score. SAC for Unit 4 will contribute 17 per cent to the study score (MA114 Mathematical Methods 4). **EXTERNAL ASSESSMENT** The level of achievement for Units 3 and 4 is also assessed by two end-of-year examinations, which will contribute 22 and 44 per cent respectively to the study score.

MA114 Mathematical Methods 4

Locations: Footscray Nicholson.

Prerequisites: MA113 - Mathematical Methods 3

Description: Mathematical Methods Units 3 and 4 are completely prescribed and extend the introductory study of simple elementary functions of a single real variable, to include combinations of these functions, algebra, calculus, probability and statistics, and their applications in a variety of practical and theoretical contexts. Units 3 and 4 consist of the areas of study 'Functions and graphs', 'Calculus', 'Algebra' and 'Probability and statistics', which must be covered in progression from Unit 3 to Unit 4, with an appropriate selection of content for each of Unit 3 and Unit 4. Assumed knowledge and skills for Mathematical Methods Units 3 and 4 are

contained in Mathematical Methods Units 1 and 2, and will be drawn on, as applicable, in the development of related content from the areas of study, and key knowledge and skills for the outcomes of Mathematical Methods Units 3 and 4. For Unit 4, this selection would typically consist of remaining content from the areas of study: 'Functions and graphs', 'Calculus' and 'Algebra', and the study of random variables and discrete and continuous probability distributions and the distribution of sample proportions. For Unit 4, the content from the 'Calculus' area of study would be likely to include the treatment of anti-differentiation, integration, the relation between integration and the area of regions specified by lines or curves described by the rules of functions, and simple applications of this content. In undertaking these units, students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, sets, lists and tables, diagrams and geometric constructions, algebraic manipulation, equations, graphs, differentiation, anti-differentiation, integration and inference with and without the use of technology. They should have facility with relevant mental and by-hand approaches to estimation and computation. The use of numerical, graphical, geometric, symbolic and statistical functionality of technology for teaching and learning mathematics, for working mathematically, and in related assessment, is to be incorporated throughout each unit as applicable. This unit is delivered in Year 12.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of each unit the student should be able to define and explain key concepts as specified in the content from the areas of study, and apply a range of related mathematical routines and procedures. Outcome 2 On completion of each unit the student should be able to apply mathematical processes in non-routine contexts, including situations requiring problem-solving, modelling or investigative techniques or approaches, and analyse and discuss these applications of mathematics. Outcome 3 On completion of each unit the student should be able to select and appropriately use numerical, graphical, symbolic and statistical functionalities of technology to develop mathematical ideas, produce results and carry out analysis in situations requiring problem-solving, modelling or investigative techniques or approaches. Assessment will follow the requirements set out in the VCE Mathematics Study Guide: SCHOOL-BASED ASSESSMENT 1.

Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. **Assessment of levels of achievement** The student's level of achievement in Unit 4 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 17 per cent to the study score (MA113 Mathematical Methods 3). SAC for Unit 4 will contribute 17 per cent to the study score. **EXTERNAL ASSESSMENT** The level of achievement for Units 3 and 4 is also assessed by two end-of-year examinations, which will contribute 22 and 44 per cent respectively to the study score.

MA163 Further Mathematics (NHT) 3

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Further Mathematics consists of two areas of study, a compulsory Core

area of study to be completed in Unit 3 and an Applications area of study to be completed in Unit 4. The Core comprises 'Data analysis' and 'Recursion and financial modelling'. The Applications comprises two modules to be completed in their entirety, from a selection of four possible modules: 'Matrices', 'Networks and decision mathematics', 'Geometry and measurement' and 'Graphs and relations'. 'Data analysis' comprises 40 per cent of the content to be covered, 'Recursion and financial modelling' comprises 20 per cent of the content to be covered, and each selected module comprises 20 per cent of the content to be covered. Assumed knowledge and skills for the Core are contained in the General Mathematics Units 1 and 2 topics: 'Computation and practical arithmetic', 'Investigating and comparing data distributions', 'Investigating relationships between two numerical variables', 'Linear graphs and modelling', 'Linear relations and equations', and 'Number patterns and recursion'. For each module there are related topics in General Mathematics Units 1 and 2. In undertaking these units, students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, sets, lists and tables, diagrams and geometric constructions, algebraic manipulation, equations, and graphs. They should have a facility with relevant mental and by-hand approaches to estimation and computation. The use of numerical, graphical, geometric, symbolic, financial and statistical functionality of technology for teaching and learning mathematics, for working mathematically, and in related assessment, is to be incorporated throughout each unit as applicable. This unit is delivered in Year 12.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to define and explain key concepts and apply related mathematical techniques and models. Outcome 2 On completion of this unit the student should be able to select and apply the mathematical concepts, models and techniques as specified in Area of Study 1 in a range of contexts of increasing complexity. Outcome 3 On completion of this unit the student should be able to select and appropriately use numerical, graphical, symbolic and statistical functionalities of technology to develop mathematical ideas, produce results and carry out analysis in situations requiring problem-solving, modelling or investigative techniques or approaches. Assessment will follow the requirements set out in the VCE Mathematics Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 3 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 20 per cent to the study score. SAC for Unit 4 will contribute 14 per cent to the study score (MA164 Maths: Further Mathematics (NHT) 4). EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by two end-of-year examination, which will contribute 33 per cent each to the study score.

MA164 Further Mathematics (NHT) 4

Locations: Footscray Nicholson.

Prerequisites: MA163 - Further Mathematics (NHT) 3

Description: Further Mathematics consists of two areas of study, a compulsory Core area of study to be completed in Unit 3 and an Applications area of study to be completed in Unit 4. The Core comprises 'Data analysis' and 'Recursion and financial modelling'. The Applications comprises two modules to be completed in their entirety, from a selection of four possible modules: 'Matrices', 'Networks and decision mathematics', 'Geometry and measurement' and 'Graphs and relations'. 'Data analysis' comprises 40 per cent of the content to be covered, 'Recursion and financial modelling' comprises 20 per cent of the content to be covered, and each selected module comprises 20 per cent of the content to be covered. Assumed knowledge and skills for the Core are contained in the General Mathematics Units 1 and 2 topics: 'Computation and practical arithmetic', 'Investigating and comparing data distributions', 'Investigating relationships between two numerical variables', 'Linear graphs and modelling', 'Linear relations and equations', and 'Number patterns and recursion'. For each module there are related topics in General Mathematics Units 1 and 2. In undertaking these units, students are expected to be able to apply techniques, routines and processes involving rational and real arithmetic, sets, lists and tables, diagrams and geometric constructions, algebraic manipulation, equations, and graphs. They should have a facility with relevant mental and by-hand approaches to estimation and computation. The use of numerical, graphical, geometric, symbolic, financial and statistical functionality of technology for teaching and learning mathematics, for working mathematically, and in related assessment, is to be incorporated throughout each unit as applicable. This unit is delivered in Year 12.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge in accordance with each unit's learning outcomes, including the setting of practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following knowledge: Outcome 1 On completion of this unit the student should be able to define and explain key concepts as specified in the content from the two selected modules, and apply related mathematical techniques and models in routine contexts. Outcome 2 On completion of this unit the student should be able to select and apply the mathematical concepts, models and techniques from the two selected modules in a range of contexts of increasing complexity. Outcome 3 On completion of this unit the student should be able to select and appropriately use numerical, graphical, symbolic and statistical functionalities of technology to develop mathematical ideas, produce results and carry out analysis in situations requiring problem-solving, modelling or investigative techniques or approaches. Assessment will follow the requirements set out in the VCE Mathematics Study Guide: SCHOOL-BASED ASSESSMENT 1. Satisfactory completion The award of satisfactory completion for a unit is based on whether the student has demonstrated the set of outcomes specified for the unit. A variety of assessment tasks will provide a range of opportunities for students to demonstrate the key knowledge and key skills in the outcomes. 2. Assessment of levels of achievement The student's level of achievement in Unit 4 will be determined by School-assessed Coursework (SAC). SAC will be completed mainly in class and within a limited time-frame. SAC for Unit 3 will contribute 20 per cent to the study score (MA163 Maths: Further Mathematics (NHT) 3). SAC for Unit 4 will contribute 14 per cent to the study score. EXTERNAL ASSESSMENT The level of achievement for Units 3 and 4 is also assessed by two end-of-year examination, which will contribute 33 per cent each to the study score.

MA733 Further Mathematics 3

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Further Mathematics consists of a compulsory core area of study 'Data analysis' and then a selection of three from six modules in the 'Applications' area of study. Unit 3 comprises the 'Data analysis' area of study which incorporates a statistical application task, and one of the selected modules from the 'Applications' area of study. Unit 4 comprises the two other selected modules from the 'Applications' area of study. Assumed knowledge and skills for the 'Data analysis' area of study are contained in the topics: Univariate data, Bivariate data, Linear graphs and modelling, and Linear relations and equations from General Mathematics Units 1 and 2. This unit is studied in Year 12.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

MA734 Further Mathematics 4

Locations: Footscray Nicholson.

Prerequisites: Nil.

Description: Unit 3 is a pre-requisite to Unit 4. Unit 4 comprises the two other selected modules from the 'Applications' area of study. Assumed knowledge and skills for the 'Data analysis' area of study are contained in the topics: Univariate data, Bivariate data, Linear graphs and modelling, and Linear relations and equations from General Mathematics Units 1 and 2. This unit is studied in Year 12.

Required Reading: Lecturer will provide teaching and learning materials as required in the form of VU produced workbooks.

Assessment: Demonstration of 'Satisfactory completion' by a selection of Assessment tasks and Level of Performance by SAC (Tests) and Exams.

MEM03001B Perform manual production assembly

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers assembling components and/or sub-assemblies in a production environment and testing the components and/or sub-assemblies to ensure compliance with specifications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following job instructions and standard operating procedures; - selecting and using assembly tools, components and sub-assemblies; - entering routine and familiar information onto proformas and other standard workplace forms, and; - following oral instruction. Students will also be expected to demonstrate the following knowledge: - application and use of assembly tools and equipment; - sequence in which the assemblies are to be performed; - storage location of the component/sub-assemblies; - required tests and checks; - required action for non-conformance; - potential damage through the use of inappropriate handling and/or unsafe storage procedures; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with manual production assembly.

MEM03003 Perform sheet and plate assembly

Locations: Sunshine.

Prerequisites: MEM11011 - Undertake manual handling MEM13015 - Work safely and effectively in manufacturing and engineering MEM16006 - Organise and communicate information MEM18001 - Use hand tools MEM18002 - Use power tools/hand held operations

Description: This unit of competency defines the skills and knowledge required to assemble prefabricated/formed components using a range of joining techniques in a production assembly environment. Where soft soldering is required unit MEM05003 Perform soft soldering should also be selected. Where brazing and/or silver soldering is required unit MEM05006 Perform brazing and/or silver soldering should also be selected. Where production welding skills are required unit MEM05013 Perform manual production welding should also be selected. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting job requirements from verbal or written job instructions for sheet and plate assembly; - selecting appropriate tools, components and equipment for required assembly tasks; - using appropriate handling procedures to minimise damage to components and/or assemblies; - using equipment safely to assemble and join products to job requirements using specified assembly and joining techniques; - checking assembly to ensure compliance, and; - handling and storing components, fabrications and assemblies. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - purpose of a sequence of operations; - application and function of assembly equipment, including jigs, fixtures and other appropriate tools; - safety precautions and operating characteristics of assembly equipment and tools; - application and limitations of different joining techniques; - surface preparation and joining techniques; - assembly tests/checks; - safe handling and storage procedures applicable to components, fabrications and/or assemblies, and; - potential damage that can occur to components, fabrications and assemblies through the use of inappropriate handling and/or unsafe storage procedures.

MEM03003B Perform sheet and plate assembly

Locations: Industry, Sunshine.

Prerequisites: MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations

Description: The unit covers assembling prefabricated/formed components using a range of joining techniques. This unit applies to production assembly of pre-fabricated/formed components. Applications of this unit may include manufacture of white goods, appliances, electrical cabinets, metal furniture, cladding and shelving, box trailer bodies, ductwork and other sheet and plate assemblies.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following written job sheets, instructions, standard operating procedures and other applicable reference documents; - checking and clarifying routine familiar information; - selecting and using specified assembly equipment and tools; - following sequence of operations; - joining the components/fabrications correctly and safely using appropriate techniques; - testing and checking assembled products for compliance with specifications; - handling and storing components, fabrications and/or assemblies; - checking for conformance to specifications, and; - following oral instructions. Students will also be expected to demonstrate the following knowledge: - the importance of following the sequence of operations; - application and function of assembly equipment; - safety precautions and operating characteristics of assembly equipment and tools; - application and limitations of different joining techniques; - surface preparation and joining techniques; - assembly tests/checks; - safe handling and storage procedures applicable to components, fabrications and/or assemblies; - effects of inappropriate handling and storage procedures; - hazards and control measures associated with sheet and plate assembly; - use and application of personal protective equipment, and; - safe work practices and procedures for sheet and plate assembly.

MEM03006B Set assembly stations

Locations:Sunshine.

Prerequisites:MEM03001B - Perform manual production assembly MEM18001C - Use hand tools or MEM03003B Perform sheet and plate assembly, MEM18001C Use hand tools and MEM18002B Use power tools/hand held operations.

Description:This unit covers setting up, adjusting and testing assembly stations according to defined procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings for setting assembly stations; - following oral instructions; - testing and checking assembly station and outputs, and; - identifying worn and/or damaged components. Students will also be expected to demonstrate the following knowledge: - procedures to be followed in setting up assembly stations; - safety hazards associated with the assembly station and/or its setting up; - specifications applicable to the assembly station; - effect of various adjustments that can be made to the assembly station; - routine maintenance requirements; - effect of worn or damaged components on the operational requirements and specifications of the assembly station; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM04007B Pour molten metal

Locations:Sunshine.

Prerequisites:MEM13004B Work safely with molten metals/glass

Description:This unit covers starting, operating and shutting down pressure die casting machines.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and following written instructions, standard operating procedures, specifications and standard test data sheets; - selecting and checking ladle; - preparing ladle for pouring; - transferring metal to ladle; - treating metal; - removing slag and dross; - sampling and testing molten metal; - pouring molten metal into moulds and pigs; - tagging pig metal, and; - using communication skills to effectively transfer skills and knowledge to employees. Students will also be expected to demonstrate the following knowledge: - types and pouring characteristics of metals; - types and characteristics of ladles; - procedures for maintaining condition and integrity of ladle; - procedures for safe handling and transference of molten metal; - metal treatments, applications and procedures for making additions to molten metal; - slag and dross removing procedures; - techniques for sampling and testing molten metal; - pouring procedures; - metal identification and tagging procedures; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with pouring molten metal.

MEM04018B Perform general woodworking machine operations

Locations:Sunshine.

Prerequisites:MEM12023A - Perform engineering measurements MEM18001C - Use hand tools

Description:This unit covers setting up and operating wood working machines used by engineering pattern makers and marine fabricators.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determining job requirements from job instructions, specifications, standard operating procedures and other applicable reference documents; - checking and clarifying task-related information; - selecting and setting machines; - setting guards and stops; - handling, machining and storing timber and wood; - measuring materials and components to specified sizes/tolerances, and; - checking for conformance to specifications. Students will also be expected to demonstrate the following knowledge: - application and use of general wood working machines; - interpreting instructions, drawings or sketches; - numerical operations and calculations within the scope of this unit; - machine settings including installation of blades and cutters, clamping for the job, including adjustments for sizing and speed; - the range of tools/cutters for different purposes;

- the consequences of incorrect set or cutting angles; - the consequences of tool holders, tools and cutters etc., being incorrectly secured; - the consequences of not using guards etc; - timber product knowledge including features, characteristics and applications; - methods of optimising quality of appearance, retention of shape, strength, and the minimisation of waste; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with general woodworking machine operations.

MEM05001B Perform manual soldering/desoldering - electrical/electronic components

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers performing manual soldering/desoldering for the installation and fabrication of electrical/electronic components.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performing routine soldering; - performing desoldering; - undertaking material preparation; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures, and; - following oral instruction. Students will also be expected to demonstrate the following knowledge: - cleaning solutions and properties and cleaning procedures; - use and application of personal protective equipment for manual soldering/desoldering; - safe work practices and procedures; - methods of joint preparation; - properties of fluxes and their uses; - heat and damage protection procedures; - procedures for preventing electrostatic discharge damage; - soldered joint testing and inspection procedures, and; - reworking procedures and precautions.

MEM05003B Perform soft soldering

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit applies to performing soft soldering applications of ferrous and non-ferrous materials, using straightforward techniques, where heat damage to components or finish of soldered joint is not critical.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - using soldering irons; - using direct flame and other heating devices; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures, and; - following oral instruction. Students will also be expected to demonstrate the following knowledge: - the effect of material to be soft soldered on the selection of consumables; - the reasons for preparing surfaces prior to soldering; - the procedures

for rectifying defects in soldered joints; - use and application of personal protective equipment for soft soldering, and; - safe work practices and procedures.

MEM05004 Perform routine oxy fuel gas welding

Locations: Sunshine.

Prerequisites: MEM11011 - Undertake manual handling MEM13015 - Work safely and effectively in manufacturing and engineering MEM16006 - Organise and communicate information

Description: This unit of competency defines the skills and knowledge required to prepare materials and perform routine oxy fuel gas welding of mild/low carbon steel and cast iron where the welding is not required to meet an Australian Standard or equivalent. Where welding is required to meet AS 1554 General Purpose or equivalent codes, work health and safety (WHS) regulations and/or licensing requirements MEM05055 Weld using oxy fuel gas welding process should also be selected. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected. Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - cleaning and preparing materials for welding; setting up gas cylinders, hoses, blowpipes, tips and nozzles, regulators and flashback arrestors; - selecting settings and consumables; - butt and fillet weld materials to comply with specifications, and; - cleaning welds according to SOPs. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - preparatory requirements; - equipment and equipment settings; - purpose of, and setting up requirements, of gas cylinders, hoses, blowpipes, tips and nozzles, regulators and flashback arrestors; - fuel gas properties and applications, and; - weld characteristics.

MEM05004C Perform routine oxy acetylene welding

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers preparing materials and performing routine oxy acetylene welding.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing materials; - setting

up welding equipment; - welding with oxy acetylene fuel gas; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures; - following oral instructions, and; - using measurement skills for joint preparation and routine oxy acetylene welding. Students will also be expected to demonstrate the following knowledge: - preparatory requirements; - materials and consumables properties and characteristics; - equipment and equipment settings; - fuel gas properties and applications; - post welding treatments; - weld characteristics; - any applicable industry standards, NOHSC guides, State/Territory regulatory codes of practice/standards; - safe work practices and procedures; - safe welding practices, and; - use and application of personal protective equipment for routine oxy acetylene welding.

MEM05005 Carry out mechanical cutting

Locations:Sunshine.

Prerequisites:MEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate informationMEM18001 - Use hand tools

Description:This unit of competency defines the skills and knowledge required to set up and operate a range of mechanical cutting and holing equipment. Typical applications of this unit include cutting for manufacture, production cutting and cutting materials in a maintenance environment. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where the selection and use of power tools for hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected. Where operational maintenance of equipment is required unit MEM07001 Perform operational maintenance of machines/equipment should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - selecting appropriate cutting machine and tooling and loading material to match job requirements; - setting up and safely operating equipment; - securing and positioning material using a graduated measuring device and adjusting as required in conformance with specifications; - adjusting machine/tooling as required using material in most economical way, and; - checking material against specifications. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - characteristics of cutting methods and machines; - effect of materials on the machine tooling, tooling defects and adjustments; - effect of adjustments on the dimensions of the cut material; - applicable tolerances, and; - methods of marking out materials to ensure minimum wastage.

MEM05005B Carry out mechanical cutting

Locations:Industry, Sunshine.

Prerequisites:MEM12023A - Perform engineering measurementsMEM18001C - Use hand tools

Description:This unit covers setting up and operating a range of mechanical cutting and holing equipment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - loading and adjusting cutting machines; - selecting machines and tooling; - installing cutting tool; - setting up and adjusting cutting machine; - securing and correctly positioning materials; - cutting and holing materials; - applying relevant codes and standards; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures; - following oral instruction; - measuring materials to specified workplace tolerances and within the machine range, and; - clarifying routine task-related information. Students will also be expected to demonstrate the following knowledge: - the characteristics of cutting methods and machines; - effect of materials on the machine tooling, tooling defects and adjustments; - effect of adjustments on the dimensions of the cut material; - applicable tolerances; - methods of marking out materials to ensure minimum wastage; - any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standard; - use and application of personal protective equipment for mechanical cutting, and; - safe work practices and procedures.

MEM05006B Perform brazing and/or silver soldering

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers performing brazing and silver soldering including the preparation of materials and equipment and the inspection of the completed work.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing materials; - performing brazing/silver soldering; - undertaking visual inspection; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures, and; - following oral instructions. Students will also be expected to demonstrate the following knowledge: - the reasons for selecting specific methods of assembly/alignment; - the procedures for minimising distortion of the materials being brazed/silver soldered; - the procedures for assembling and setting up the specific heating equipment; - the reasons for selecting specific heating equipment; - the reasons for selecting specific consumables; - conducting test runs; - typical applications of brazing and silver soldering processes; - the procedures and precautions for preheating the materials to be joined; - the effects of the use of inappropriate techniques on the performance of the jointed materials; - the effect of inappropriate quantities of jointing material on the performance of the jointed materials; - the procedures for normalising the temperature of jointed materials; - the consequences of using inappropriate techniques to normalise the temperature of the joint; - the procedures for removing excess jointing material; - the procedures for

inspecting brazed/silver soldered joints; - use and application of personal protective equipment for silver soldering and brazing, and; - safe work practices and procedures.

MEM05006C Perform brazing and or silver soldering

Locations: Industry, Sunshine.

Prerequisites: N/A

Description: This unit covers performing brazing (including braze welding) and silver soldering. It includes the preparation of materials and equipment and the inspection of the completed work.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing materials; - performing brazing, braze welding, silver soldering; - undertaking visual inspection; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures, and; - following oral instructions. Students will also be expected to demonstrate the following knowledge: - the reasons for selecting specific methods of assembly/alignment; - the procedures for minimising distortion of the materials being brazed/braze welded/silver soldered; - the procedures for assembling and setting up the specific heating equipment; - the reasons for selecting specific heating equipment; - the reasons for selecting specific consumables; - conducting test runs; - typical applications of brazing/braze welding and silver soldering processes; - the procedures and precautions for preheating the materials to be joined; - the effects of the use of inappropriate techniques on the performance of the jointed materials; - the effect of inappropriate quantities of jointing material on the performance of the jointed materials; - the procedures for normalising the temperature of jointed materials; - the consequences of using inappropriate techniques to normalise the temperature of the joint; - the procedures for removing excess jointing material; - the procedures for inspecting brazed/braze welded/silver soldered joints; - use and application of personal protective equipment for silver soldering and brazing/braze welding, and; - safe work practices and procedures.

MEM05007 Perform manual heating and thermal cutting

Locations: Sunshine.

Prerequisites: MEM09002 - Interpret technical drawing MEM11011 - Undertake manual handling MEM12023 - Perform engineering measurements MEM13015 - Work safely and effectively in manufacturing and engineering MEM16006 - Organise and communicate information

Description: This unit of competency defines the skills and knowledge required to perform manual heating, thermal cutting and gouging including the assembly and disassembly and operation of the equipment on a range of materials. Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - selecting equipment appropriate to the material; - checking condition of equipment; - setting up gas cylinders, hoses, blowpipes, tips and nozzles, regulators and flashback arrestors; - operating equipment to cut materials making appropriate cutting allowances to ensure material is used in most economical way; - identifying defects and taking appropriate remedial action; - heating material to specification, and; - checking final product for compliance with specifications. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - cutting processes appropriate to various materials; - heating and cutting specifications; - purpose of, and setting up requirements, of gas cylinders, hoses, blowpipes, tips and nozzles, regulators and flashback arrestors; - tools, equipment, techniques and procedures for heating and cutting; - potential equipment faults; - assembling procedures for equipment and accessories; - equipment pre-checks and operation; - procedures for adjusting heating and cutting equipment; - cutting allowances and reasons for applying them; - procedures and reasons for minimising waste material, and; - cutting defects and their causes and tools, equipment and techniques required to correct defects.

MEM05007C Perform manual heating and thermal cutting

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers performing manual heating, thermal cutting and gouging including the assembly and disassembly and operation of the equipment on a range of materials (ferrous, non-ferrous and non-metallic) using a variety of methods.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performing pre-start checks; - safely starting equipment; - following standard operating procedures; - adjusting equipment to operating specifications; - making cutting allowances; - economising material and minimising wastage; - identifying cutting defects and taking corrective action; - heating and cutting materials to specifications; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings; - following oral instructions; - performing measurements needed to meet the requirements of this unit, and; - entering routine and familiar information onto proformas and standard workplace forms. Students will also be expected to demonstrate the following knowledge: - cutting processes appropriate to various materials; - heating and cutting specifications; - procedures for heating and cutting; - the tools, equipment and techniques for heating and cutting; - assembling procedures for equipment and accessories; - hazards and control measures associated with manual heating and thermal cutting; - use and application of personal protective clothing and equipment; - equipment pre-checks and operation; - procedures for adjusting heating and cutting equipment; - cutting allowances and reasons for applying them; - procedures for minimising waste material; - reasons for minimising waste material; - cutting defects and their causes; - procedures for

correcting cutting defects; - tools, equipment and techniques required to correct cutting defects; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM05008 Perform advanced manual thermal cutting, gouging and shaping

Locations:Sunshine.

Prerequisites:MEM05007 - Perform manual heating and thermal cuttingMEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to perform advanced manual heating, thermal cutting, gouging and shaping to produce complex internal and external profiles. Items are cut, shaped or gouged by a variety of methods to satisfy predetermined shape, size and surface finish specifications. Where the selection and use of tools is required unit MEM18001 Use hand tools, and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - selecting appropriate equipment to manual heat, thermal cut and gouge, including the selection of settings and consumables to specifications; - checking condition of equipment; - setting up gas cylinders, hoses, blowpipes, tips and nozzles, regulators and flashback arrestors; - operating equipment to produce complex internal and external profiles with shape/profile/surface finish to predetermined specifications with minimum loss of sound material; - identifying defects and taking appropriate remedial action, and; - checking final product for compliance with specifications. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - cutting processes and procedures appropriate to various materials; - potential equipment faults; - heating, cutting and surface finish specifications and procedures; - use and applications of tools, equipment and techniques for heating and cutting; - assembling procedures for equipment and accessories; - equipment settings, pre-checks and operation; - sources of information and application on equipment settings and consumables; - procedures for adjusting heating and cutting equipment; - cutting allowances and reasons for applying them; - tools, equipment and techniques required to correct cutting defects; - procedures and reasons for minimising waste material, and; - cutting defects and their causes and tools, equipment and techniques required to correct defects.

MEM05008C Perform advanced manual thermal cutting, gouging and shaping

Locations:Industry, Sunshine.

Prerequisites:MEM05007C - Perform manual heating and thermal cutting

Description:This unit covers performing manual heating, thermal cutting and gouging to produce complex internal and external profiles. It includes the assembly/disassembly of plant and equipment, selection of settings and

consumables and operation of the equipment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining, interpreting and following relevant job sheets, drawings, instructions and procedures; - selecting and assembling equipment and accessories; - following safety procedures; - safely checking, starting and operating equipment; - cutting material to specifications; - identifying and correcting cutting defects, and; - economising material and minimising waste. Students will also be expected to demonstrate the following knowledge: - cutting processes and procedures appropriate to various material; - heating and cutting specifications; - procedures for heating and cutting; - specifications for cutting and surface finish; - use and applications of tools, equipment and techniques for heating and cutting; - assembling procedures for equipment and accessories; - equipment settings; - application of various consumables; - sources of information on equipment settings and consumables; - hazards and control measures associated with manual heating and thermal cutting; - use and application of personal protective clothing and equipment; - equipment pre-checks and operation; - procedures for adjusting heating and cutting equipment; - cutting allowances and reasons for applying them; - procedures for minimising waste material; - reasons for minimising waste material; - cutting defects and their causes; - procedures for correcting cutting defects; - tools, equipment and techniques required to correct cutting defects; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM05009C Perform automated thermal cutting

Locations:Industry, Sunshine.

Prerequisites:MEM12023A - Perform engineering measurements

Description:This unit covers setting up and using single and multi-headed automated thermal cutting machines.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - setting up materials and machines; - using thermal cutting machines; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures, and; - following oral instruction. Students will also be expected to demonstrate the following knowledge: - material set-up procedures; - advantages of stack cutting and nesting; - procedures for establishing machine datum; - hazards associated with igniting cutting media; - safety precautions to be taken when starting and shutting down the machine; - procedures for using powder marking and other tracing devices; - use and application of personal protective equipment for automated thermal cutting, and; - safe work practices and procedures.

MEM05010 Apply fabrication, forming and shaping techniques

Locations:Sunshine.

Prerequisites:MEM05037 - Perform geometric developmentMEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade-level skills in fabrication, forming and shaping of a wide variety of shapes and products undertaken using a variety of forming and shaping techniques. Fabrication, forming and shaping is done to specifications interpreted from technical drawings and job specifications using a variety of tools and equipment. Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boiler making or sheet metal work. Where heating and thermal cutting is required unit MEM05007 Perform manual heating and thermal cutting should also be selected. Where marking off/out skills is required unit MEM12007 Mark off/out structural fabrications and shapes should also be selected. Where welds are required to meet legislative or regulatory requirements appropriate welding units should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - selecting relevant tools and equipment to fabricate, form and shape materials; - setting up and safely operating equipment; - forming and shaping materials; - performing calculations associated with allowances for shrinkage, thickness and inside/outside measurements; - checking final product for compliance with specifications, and; - rectifying defects. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - hot and cold forming/shaping processes; - machines, tools and equipment required to perform forming/shaping processes and reasons for selection; - equipment adjustments that can be made and the effect on the object being formed/shaped; - calculations to determine allowances; - machine and equipment operation; - material positioning/feeding requirements; - location and function of all safety guards, and; - defects in formed/shaped materials and required rectification by further work/adjustment.

MEM05010C Apply fabrication, forming and shaping techniques

Locations:Industry, Sunshine.

Prerequisites:MEM05037C - Perform geometric developmentMEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM12024A - Perform computationsMEM18001C - Use hand tools

Description:This unit covers applying the fabrication of shapes and products using a variety of forming and shaping techniques, using a variety of tools and equipment.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - selecting tools and equipment; - setting up and adjusting equipment; - calculating allowances; - taking measurements; - starting up and shutting down the machine; - positioning material; - positioning safety guards; - obtaining drawings and/or specifications; - selecting the most appropriate forming/shaping process to achieve the required size and specification; - forming/shaping material to size and specification; - checking the final form/shape of the object for conformance with specifications; - reworking the object to ensure conformance with specifications; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations, and; - checking task-related information. Students will also be expected to demonstrate the following knowledge: - variety of hot and cold forming/shaping processes; - machines, tools and/or equipment required to perform forming/shaping processes; - reasons for selecting chosen tools, equipment and processes; - adjustments that can be made to the equipment and the effect of adjustments on the object being formed/shaped; - allowances when forming/shaping materials; - sources of data relating to allowances; - startup and shutdown procedures; - the material positioning/feeding requirements; - the location and function of all safety guards; - procedures for the forming/shaping process; - defects in formed/shaped materials; - defects that can be rectified by further work/adjustment; - hazards and control measures associated with undertaking fabrication, forming and shaping, including housekeeping; - safe work practices and procedures.

MEM05011 Assemble fabricated components

Locations:Sunshine.

Prerequisites:MEM05005 - Carry out mechanical cuttingMEM05007 - Perform manual heating and thermal cuttingMEM05051 - Select welding processesMEM05052 - Apply safe welding practicesMEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operationsMEM05015 - Weld using manual metal arc welding process orMEM05017 - Weld using gas metal arc welding process orMEM05019 - Weld using gas tungsten arc welding process orMEM05055 - Weld using oxy fuel gas welding process

Description:This unit of competency has been developed for Engineering Tradesperson - Fabrication apprenticeship training and recognition of trade-level skills in the assembly of general fabricated components in plate, pipe and section or sheet in typical applications either on-site or in a fabrication workplace. Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boilermaking or sheet metal work. Work may be undertaken individually or as part of a team. Where assembly involves using pre-constructed jigs unitMEM03001 Perform manual production assembly and unit MEM03003 Perform sheet and plate assembly, should also be selected as appropriate. Where skills for the assembly of fabricated engineering components are required unit MEM18006 Perform precision fitting of engineering components should also be selected. Where

welds are required to meet legislative or regulatory requirements, then appropriate welding units should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - constructing necessary jigs; - planning fabricated component assembly tasks and sequences efficiently and effectively; - aligning material in jigs and using fixtures, tools and equipment as necessary to check the position of all assembled components visually and dimensionally; - marking datum lines in an appropriate manner; - positioning and assembling general fabricated components in accordance with drawing/specifications using accepted engineering trade techniques, practices, processes and workplace procedures either on-site or in a fabrication workshop, and; - applying appropriate distortion control techniques and checking to ensure compliance of the final assembly with specifications. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - methods and techniques for assembly of fabricated components; - jig construction; - effects of distortion of fabricated components and distortion prevention techniques; - uses and interpretation of drawings, specifications and material lists; - characteristics of relevant tools and equipment for determining squareness, level and alignment - function and determination of datum lines; - fixing/joining techniques, including welding, adhesives, fasteners, rivets, and; - defects associated with the assembly of fabricated components and methods of rectification of defects by rework or adjustment.

MEM05011D Assemble fabricated components

Locations:Industry, Sunshine.

Prerequisites:MEM05005B - Carry out mechanical cuttingMEM05007C - Perform manual heating and thermal cuttingMEM05012C - Perform routine manual metal arc weldingMEM05015D - Weld using manual metal arc welding processMEM05051A - Select welding processesMEM05052A - Apply safe welding practicesMEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C MEM18002B The above units belong to Path 1 - ARC Welding. Path 2 - TIG Welding MEM05005B MEM05007C MEM05019D MEM05049B MEM05051A MEM05052A MEM09002B MEM12023A MEM18001C MEM18002B Path 3 - OXY Welding MEM05004C MEM05005B MEM05007C MEM05022C MEM05051A MEM05052A MEM09002B MEM12023A MEM18001C MEM18002B Path 4 - MIG Welding MEM05005B MEM05007C MEM05017D MEM05050B MEM05051A MEM05052A MEM09002B MEM12023A MEM18001C MEM18002B

Description:This unit covers assembling general fabricated components in plate, pipe and section or sheet.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - constructing jigs where appropriate; - applying distortion prevention/control techniques; - positioning components in accordance with drawing/specifications; - using jigs, fixtures, tools and equipment; - correctly marking the datum line; - checking the position of all assembled components visually and dimensionally, and; - using appropriate fixing/joining techniques. Students will also be expected to demonstrate the following knowledge: - methods for assembly of fabricated components; - jigs construction; - effects of distortion of fabricated components; - distortion prevention techniques; - drawing and material list; - characteristics of relevant tools and equipment squareness, level and alignment; - function of datum lines; - variety of fixing/joining techniques; - defects associated with the assembly of fabricated components; - methods of rectification of defects by rework or adjustment, and; - requirements of relevant codes/standards.

MEM05012 Perform routine manual metal arc welding

Locations:Sunshine.

Prerequisites:MEM11011 - Undertake manual handlingMEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to carry out routine manual metal arc welding (MMAW) of low carbon mild steel where the welding is not required to meet an Australian Standard or equivalent. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected. Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing routine manual metal arc welding (MMAW); - cleaning and preparing materials to specifications; - setting up welding equipment, selecting appropriate electrodes and adjusting settings to suit application; - welding materials to comply with specifications, and; - cleaning welds for slag and splatter in accordance with SOPs. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - material and equipment preparation; - equipment set-up and settings; - appropriate welding consumables consistent with standard operating procedures, and; - MMAW processes and properties.

MEM05012C Perform routine manual metal arc welding

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description: This unit covers preparing the materials and carrying out routine manual metal arc welding (MMAW).

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing materials and electrodes; - setting up welding equipment; - welding with MMAW; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures, and; - performing measurements for joint preparation and routine MMAW. Students will also be expected to demonstrate the following knowledge: - material and equipment preparation; - properties and characteristics of materials and consumables; - weld characteristics; - equipment set-up and settings; - MMAW processes and properties; - post-welding treatments; - safe welding practices, and; - use and application of personal protective equipment.

MEM05013C Perform manual production welding

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers performing tacking or production welding, including spot welding using a range of methods and metallic and non-metallic materials in a production environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - aligning to jigs and fixtures; - welding within the scope of this unit, and; - following standard operating procedures. Students will also be expected to demonstrate the following knowledge: - function and use of jigs and fixtures in production welding; - hazards associated with the welding process used; - function, application and operation of welding equipment within the scope of this unit; - material preparation, and; - acceptable workplace standards.

MEM05014C Monitor quality of production welding/fabrications

Locations: Industry, Sunshine.

Prerequisites: MEM05012C - Perform routine manual metal arc welding MEM05015D - Weld using manual metal arc welding process MEM05051A - Select welding processes MEM05052A - Apply safe welding practices MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations
The units above belong to Path 1 - ARC Welding. Path 2 - MIG Welding MEM05017D Weld using gas metal arc welding MEM05050B Perform routine gas metal arc welding MEM05051A Select welding process MEM05052A Apply safe welding practice MEM12023A Perform engineering measurement MEM18001C Use hand tools MEM18002B Use power tools/hand held operation Path 3 - TIG Welding MEM05019D Weld using gas tungsten arc welding MEM05049B Perform routine gas tungsten arc welding MEM05051A Select welding

process MEM05052A Apply safe welding practice MEM12023A Perform engineering measurements MEM18001C Use hand tools MEM18002B Use power tools/hand held operation Path 4 - OXY Welding MEM05004C Perform routine oxy acetylene welding MEM05007C Perform manual heating & thermal cutting MEM05051A Select welding process MEM05052A Apply safe weld practice MEM12023A Perform engineering measurements MEM18001C Use hand tools MEM18002B Use power tools/hand held operation

Description: This unit covers performing basic inspection of completed or partly completed welded fabrications produced by others in a production environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - recognising nonconforming welds; - reading, interpreting and following information on specifications, standard operating procedures, drawings and other - applicable reference documents; - using pre-set gauges; - collecting weld test data, and; - entering routine and familiar information onto proformas and standard workplace forms/reports. Students will also be expected to demonstrate the following knowledge: - the function of pre-set gauges; - test requirements appropriate to the welded product; - legislative and/or regulatory requirements of the welded product, and; - reporting and corrective action procedures.

MEM05015 Weld using manual metal arc welding process

Locations: Sunshine.

Prerequisites: MEM05012 - Perform routine manual metal arc welding MEM05051 - Select welding processes MEM05052 - Apply safe welding practices MEM09002 - Interpret technical drawing MEM11011 - Undertake manual handling MEM12023 - Perform engineering measurements MEM12024 - Perform computations MEM13015 - Work safely and effectively in manufacturing and engineering MEM14006 - Plan work activities MEM16006 - Organise and communicate information MEM18001 - Use hand tools MEM18002 - Use power tools/hand held operations

Description: This unit of competency has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade-level skills in manual metal arc welding (MMAW) on heavy or light metal fabrications. It may also apply to other trade occupations requiring higher level MMAW welding skills. Weld quality would typically conform to AS 1554 General Purpose, and American Bureau of Shipping (ABS) or equivalent. Where manual thermal processes associated with preparation, pre-heat and/or post-heat is required unit MEM05007 Perform manual heating and thermal cutting and unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions,

standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for welding using manual metal arc welding process (MMAW) to the specified standard; - selecting appropriate weld and joint preparation methods; - consistently weld a range of materials to the specified standard or equivalent using AC or DC welding machines and electrodes while preventing distortion; - rectifying any defects, and; - completing weld records related to MMAW onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - material preparation for MMAW; - weld joint preparations; - welding electrode classification; - causes of distortion for materials when welded; - causes of weld defects and methods of rectification; - relationships between amperage, electrode and material, and; - standards for MMAW, including AS 1554 General Purpose any other equivalent standards.

MEM05015D Weld using manual metal arc welding process

Locations: Sunshine.

Prerequisites: MEM05012C - Perform routine manual metal arc welding MEM05051A - Select welding processes MEM05052A - Apply safe welding practices MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations

Description: This unit of competency covers the preparation, positioning, fixing, and manual welding techniques associated with general trade level welding using manual metal arc welding (MMAW) equipment including the selection and set up of the equipment appropriate to both the material and the weld to be performed, carrying out the MMAW to prescribed standards, and examining for and correcting defects, in a range of welded fabrications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent; - selecting and using appropriate tools and equipment; - using a variety of welding machines and electrodes; - identifying and rectifying weld defects; - applying techniques for distortion prevention and rectification; - cleaning welds; - reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings; - recording routine information including routine weld records related to MMAW onto proformas and standard workplace forms; - following oral instructions, and; - measurement skills relating to joint preparation and MMAW. Students will also be expected to demonstrate the following knowledge: - material preparation; - joint preparations; - electrode classification; - causes of distortion for materials within the scope of this unit; - causes of defects and methods of rectification; - the relationships between amperage, electrode and material; - safe welding practices, and; - use and application of personal protective equipment for MMAW.

MEM05016 Perform advanced welding using manual metal arc welding process

Locations: Sunshine.

505

Prerequisites: MEM05007 - Perform manual heating and thermal cutting MEM05012 - Perform routine manual metal arc welding MEM05015 - Weld using manual metal arc welding process MEM05051 - Select welding processes MEM05052 - Apply safe welding practices MEM09002 - Interpret technical drawing MEM11011 - Undertake manual handling MEM12023 - Perform engineering measurements MEM12024 - Perform computations MEM13015 - Work safely and effectively in manufacturing and engineering MEM14006 - Plan work activities MEM16006 - Organise and communicate information MEM18001 - Use hand tools MEM18002 - Use power tools/hand held operations

Description: This unit of competency defines the skills and knowledge required to carry out advanced welding using manual metal arc welding (MMAW). Welds are associated with a range of structural sections and/or plate and/or pipe for general fabrication. Weld quality would typically conform to AS 1554 Structural Purpose or equivalent. Where advanced manual thermal cutting, gouging and shaping is required unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing advanced welding using manual metal arc welding process (MMAW) to Australian Standard 1554 Structural Purpose; - selecting appropriate weld and joint preparation methods; - consistently weld materials to AS 1554 Structural Purpose or equivalent using AC or DC welding machines and electrodes while preventing distortion; - rectifying any defects, and; - completing and maintaining weld records related to MMAW Structural Purpose onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - properties and characteristics of low carbon, stainless and low alloy steel; - requirements to conform to AS 1554 Structural Purpose or equivalent; - weld specifications and requirements, and; - different welder identification systems, including numbering, bar coding, paint coding and letter stamps.

MEM05016C Perform advanced welding using manual metal arc welding process

Locations: Industry, Sunshine.

Prerequisites: MEM05007C - Perform manual heating and thermal cutting MEM05012C - Perform routine manual metal arc welding MEM05015D - Weld using manual metal arc welding process MEM05051A - Select welding processes MEM05052A - Apply safe welding practices MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM18001C - Use hand tools Path 1: including the above units for this Path and unit MEM18002B Use power tools/hand held operations.

Description: This unit covers preparing materials, selecting and setting up the welding equipment, carrying out advanced manual metal arc welding (MMAW), inspecting for and correcting defects, and maintaining the weld records.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - welding to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent; - interpreting weld requirements and specifications; - entering information onto proformas and standard workplace forms; - interpreting technical drawings and weld specifications relating to advanced MMAW; - using hand and power tools to prepare and weld material using MMAW; - using measurement and numeracy skills relating to advanced MMAW and preparation; - selecting equipment and consumables appropriate to the task, and; - using visual identification of faults/defects. Students will also be expected to demonstrate the following knowledge: - in-depth knowledge of the properties and characteristics of a wide range of materials; - requirements to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent; - weld procedures and requirements; - different welder identification systems such as numbering, bar coding, paint coding, letter stamps; - safety requirements; - safe welding practices, and; - use and application of personal protective equipment for MMAW.

MEM05017 Weld using gas metal arc welding process

Locations:Sunshine.

Prerequisites:MEM05050 - Perform routine gas metal arc weldingMEM05051 - Select welding processesMEM05052 - Apply safe welding practicesMEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade-level skills in gas metal arc welding (GMAW) on heavy or light metal fabrications. It may also apply to other trade occupations requiring higher level GMAW welding skills. Weld quality would typically conform to Australian Standard 1554 General Purpose, and American Bureau of Shipping (ABS) or equivalent. Where manual thermal processes associated with preparation, pre-heat and/or post-heat is required unit MEM05007 Perform manual heating and thermal cutting and unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job

instructions for welding using gas metal arc welding process (GMAW) to the specified standard; - selecting appropriate weld and joint preparation methods; - consistently weld materials to the specified standard or equivalent using AC or DC welding machines and electrodes while preventing distortion; - rectifying any defects, and; - completing weld records related to GMAW onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: safe welding practices and procedures and use of personal protective equipment (PPE) types of gases and their uses relationships between amperage/wire feed, voltage, gas flow, electrode and material - application of weld metal transfer (short arc and spray); - correct welding machine, leads, hand pieces and electrodes; - material preparation; - weld joint preparations; - filler wire classification; - causes of distortion for materials when welded; - causes of weld defects and methods of rectification, and; - standards for GMA welding, including Australian Standard 1554 General Purpose and any other equivalent standards.

MEM05017D Weld using gas metal arc welding process

Locations:Industry, Sunshine.

Prerequisites:MEM05050B - Perform routine gas metal arc weldingMEM05051A - Select welding processesMEM05052A - Apply safe welding practicesMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operations

Description:This unit covers preparing materials, selecting and setting up gas metal arc welding equipment, carrying out the welding, visually inspecting welds and correcting defects.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent; - selecting and using appropriate tools and equipment; - using a variety of welding machines and electrodes; - identifying and rectifying weld defects; - applying techniques for distortion prevention and rectification; - cleaning welds; - reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings; - recording routine information including routine weld records related to GMAW onto proformas and standard workplace forms; - following oral instructions, and; - measurement skills relating to joint preparation and GMAW. Students will also be expected to demonstrate the following knowledge: - types of gases and their uses; - the relationships between amperage/wire feed, voltage, gas flow, electrode and material; - the application of weld metal transfer (short arc, spray etc.); - correct welding machine, leads, hand pieces and electrodes; - material preparation; - joint preparations; - electrode classification; - causes of distortion for materials within the scope of this unit; - safe welding practices, and; - use and application of personal protective equipment for GMAW.

MEM05018 Perform advanced welding using gas metal arc welding process

Locations:Sunshine.

Prerequisites:MEM05007 - Perform manual heating and thermal cuttingMEM05017 - Weld using gas metal arc welding processMEM05050 - Perform routine gas metal

arc welding/MEM05051 - Select welding processes/MEM05052 - Apply safe welding practices/MEM09002 - Interpret technical drawing/MEM11011 - Undertake manual handling/MEM12023 - Perform engineering measurements/MEM12024 - Perform computations/MEM13015 - Work safely and effectively in manufacturing and engineering/MEM14006 - Plan work activities/MEM16006 - Organise and communicate information/MEM18001 - Use hand tools/MEM18002 - Use power tools/hand held operations

Description:This unit of competency defines the skills and knowledge required to carry out advanced welding using gas metal arc welding (GMAW). Welds are associated with a range of structural sections and/or plate and/or pipe for general fabrication using ferrous and non-ferrous materials. Weld quality would typically conform to AS 1554 Structural Purpose or equivalent. Where advanced manual thermal cutting, gouging and shaping is required unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing advanced welding using gas metal arc welding (GMAW) process to AS 1554 Structural Purpose; - selecting appropriate weld and joint preparation methods; - consistently weld materials to AS 1554 Structural Purpose or equivalent using AC or DC welding machines and electrodes while preventing distortion; - rectifying any defects, and; - completing and maintaining weld records related to GMAW Structural Purpose onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - in-depth knowledge of the properties and characteristics of a wide range of materials; - requirements to conform to AS 1554 Structural Purpose or equivalent; - weld procedures and requirements; - different welder identification systems, including numbering, bar coding, paint coding and letter stamps, and; - causes of weld defects and methods of rectification.

MEM05018C Perform advanced welding using gas metal arc welding process

Locations: Industry, Sunshine.

Prerequisites:MEM05007C - Perform manual heating and thermal cutting/MEM05017D - Weld using gas metal arc welding process/MEM05050B - Perform routine gas metal arc welding/MEM05051A - Select welding processes/MEM05052A - Apply safe welding practices/MEM09002B - Interpret technical drawing/MEM12023A - Perform engineering measurements/MEM18001C - Use hand tools/MEM18002B

Description:This unit covers preparing materials, selecting and setting up the welding equipment, carrying out advanced gas metal arc welding (GMAW), inspecting for and correcting defects, and maintaining the weld records.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - welding to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent performing safe welding practices; - using and applying personal protective equipment for GMAW; - interpreting weld requirements and specifications; - entering information onto proformas and standard workplace forms; - interpreting technical drawings and weld specifications relating to advanced GMAW; - using hand and power tools to prepare and weld material using GMAW; - using measurement and numeracy skills relating to advanced GMAW and preparation; - selecting equipment and consumables appropriate to the task, and; - using visual identification of faults/defects. Students will also be expected to demonstrate the following knowledge: - in-depth knowledge of the properties and characteristics of a wide range of materials; requirements to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent - weld procedures and requirements; - different welder identification systems such as numbering, bar coding, paint coding, letter stamps; - safe welding practices, and; - use and application of personal protective equipment for GMAW.

MEM05019 Weld using gas tungsten arc welding process

Locations:Sunshine.

Prerequisites:MEM05049 - Perform routine gas tungsten arc welding/MEM05051 - Select welding processes/MEM05052 - Apply safe welding practices/MEM09002 - Interpret technical drawing/MEM11011 - Undertake manual handling/MEM12023 - Perform engineering measurements/MEM12024 - Perform computations/MEM13015 - Work safely and effectively in manufacturing and engineering/MEM14006 - Plan work activities/MEM16006 - Organise and communicate information/MEM18001 - Use hand tools/MEM18002 - Use power tools/hand held operations

Description:This unit of competency has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade-level skills in gas tungsten arc welding (GTAW) on heavy or light metal fabrications. It may also apply to other trade occupations requiring higher level GTAW welding skills. Weld quality would typically conform to AS 1554 General Purpose and American Bureau of Shipping (ABS), or equivalent. Where manual thermal processes associated with preparation, pre-heat and/or post-heat is required unit MEM05007 Perform manual heating and thermal cutting and unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for welding using gas tungsten arc welding process (GTAW) to the specified standard; - selecting appropriate weld and joint preparation methods; - consistently weld

materials to the specified standard using AC or DC welding machines and electrodes while preventing distortion; - rectifying any defects, and; - completing weld records related to GTAW onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - correct welding machine, leads, hand pieces and electrodes; - material preparation; - joint preparations; - electrode classification; - causes of distortion for materials when welded; - causes of defects and methods of rectification; - relationships between amperage, electrode and material; - types of gases and their uses; - types of electrodes, current settings and high frequency voltage; - filler materials and consumables, and; - standards for GTAW welding, AS 1554 General Purpose and other equivalent standards.

MEM05019D Weld using gas tungsten arc welding process

Locations: Industry, Sunshine.

Prerequisites: MEM05049B - Perform routine gas tungsten arc welding MEM05051A - Select welding processes MEM05052A - Apply safe welding practices MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations

Description: This unit covers preparing materials, selecting and setting up the welding equipment, carrying out the gas tungsten arc welding (GTAW) and inspecting for and correcting defects.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent; - selecting and using appropriate tools and equipment; - using a variety of welding machines and electrodes; - identifying and rectifying weld defects; - applying techniques for distortion prevention and rectification; - cleaning welds; - reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings; - recording routine information including routine weld records related to GTAW onto proformas and standard workplace forms; - following oral instructions, and; - measurement skills relating to joint preparation and GTAW. Students will also be expected to demonstrate the following knowledge: - correct welding machine, leads, hand pieces and electrodes; - material preparation; - joint preparations; - electrode classification; - causes of distortion for materials within the scope of this unit; - causes of defects and methods of rectification; - the relationships between amperage, electrode and material; - types of gases and their uses; - types of electrodes, current settings and high frequency voltage; - filler materials and consumables; - safe welding practices, and; - use and application of personal protective equipment for GTAW.

MEM05020 Perform advanced welding using gas tungsten arc welding process

Locations: Sunshine.

Prerequisites: MEM05007 - Perform manual heating and thermal cutting MEM05019 - Weld using gas tungsten arc welding process MEM05049 - Perform routine gas tungsten arc welding MEM05051 - Select welding processes MEM05052 - Apply safe welding practices MEM09002 - Interpret technical drawing MEM11011 - Undertake

manual handling MEM12023 - Perform engineering measurements MEM12024 - Perform computations MEM13015 - Work safely and effectively in manufacturing and engineering MEM14006 - Plan work activities MEM16006 - Organise and communicate information MEM18001 - Use hand tools MEM18002 - Use power tools/hand held operations

Description: This unit of competency defines the skills and knowledge required to carry out advanced welding using gas tungsten arc welding (GTAW). Welds are associated with a range of structural sections and/or plate and/or pipe for general fabrication. Weld quality would typically conform to AS 1554 Structural Purpose or equivalent. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing advanced welding using gas tungsten arc welding process (GTAW) to AS 1554 Structural Purpose; - selecting appropriate weld and joint preparation methods; - consistently weld materials to AS 1554 Structural Purpose or equivalent using AC or DC welding machines and electrodes while preventing distortion; - rectifying any defects, and; - completing and maintaining weld records related to GTAW Structural Purpose onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - in-depth knowledge of the properties and characteristics of a wide range of materials; - requirements to conform to AS 1554 Structural Purpose or equivalent; - weld procedures and requirements, and; - different welder identification systems, including numbering, bar coding, paint coding, and letter stamps.

MEM05020C Perform advanced welding using gas tungsten arc welding process

Locations: Industry, Sunshine.

Prerequisites: MEM05007C - Perform manual heating and thermal cutting MEM05019D - Weld using gas tungsten arc welding process MEM05049B - Perform routine gas tungsten arc welding MEM05051A - Select welding processes MEM05052A - Apply safe welding practices MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM18001C - Use hand tools Path 1: including the above for this path and unit MEM18002B Use power tools/hand held operations.

Description: This unit covers preparing materials, selecting and setting up the welding equipment, carrying out advanced gas tungsten arc welding (GTAW), inspecting for and correcting defects, and maintaining the weld records.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - welding to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Vericas or equivalent; - interpreting technical drawings and weld specifications relating to advanced GTAW; - using hand and power tools to prepare and weld material using GTAW; - using measurement and numeracy skills relating to advanced GTAW and preparation; - selecting equipment and consumables appropriate to task, and; - using visual identification of faults/defects. Students will also be expected to demonstrate the following knowledge: - in-depth knowledge of the properties and characteristics of a wide range of materials; - requirements to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Vericas or equivalent; - weld procedures and requirements; - different welder identification systems such as numbering, bar coding, paint coding, letter stamps; - safe welding practices; - use and application of personal protective equipment for GTAW, and; - hazards and control measures related to GTAW.

MEM05023 Weld using submerged arc welding process

Locations:Sunshine.

Prerequisites:MEM05051 - Select welding processesMEM05052 - Apply safe welding practicesMEM05057 - Perform routine submerged arc weldingMEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency defines the skills and knowledge required to carry out submerged arc welding (SAW) where the welds are more likely to be associated with heavy rather than with light fabrication. Weld quality would typically conform to AS 1554 General Purpose or equivalent. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for welding using submerged arc welding (SAW) process to AS 1554 General Purpose or equivalent; - selecting appropriate weld and joint preparation methods; - consistently weld materials to the specified standard or equivalent using DC welding machines and electrodes while preventing distortion; - rectifying any defects, and; - completing and maintaining weld records related to SAW welding onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: safe welding practices and procedures and use of personal protective equipment (PPE) - main types of fluxes and flux/wire combinations; - typical applications of SAW and common materials; - application of weld metal

transfer (short arc and spray); - material preparation; - joint preparations; - electrode classification; - causes of distortion for materials; - causes of defects and methods of rectification, and; - requirements of AS 1554 General Purpose or equivalent.

MEM05023C Weld using submerged arc welding process

Locations:Sunshine.

Prerequisites:MEM12023A - Perform engineering measurements

Description:This unit covers preparing materials, selecting and setting up the welding equipment, carrying out the submerged arc welding, inspecting for and correcting defects, and maintaining weld records.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and interpreting appropriate standard e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent; - selecting and using appropriate tools and equipment; - using a variety of welding machines, wire electrodes, settings and materials; - identifying and rectifying weld defects; - applying techniques for distortion prevention and rectification; - cleaning weld, and; - maintaining weld records. Students will also be expected to demonstrate the following knowledge: - main types of fluxes and flux/wire combinations; - typical applications of SAW and common materials; - the application of weld metal transfer (short arc, spray, etc.); - material preparation; - joint preparations; - electrode classification; - causes of distortion for materials within the scope of this unit; - causes of defects and methods of rectification; - code requirements; - safe welding practices; - use and application of personal protective equipment for submerged arc welding, and; - relevant hazards and control measures related to the competency.

MEM05024B Perform welding supervision

Locations:Sunshine.

Prerequisites:MEM05026C - Apply welding principles

Description:This unit covers instructing and qualifying welders in accordance with weld procedures, and maintaining quality and safety procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - individuals working in this field would hold at least one certificate satisfying the requirements of Australian Standard 1796 Certificate 1-9; - welding to the procedure being supervised; - providing training to welders on welding procedures; - communicating to welders on welding requirements; - planning of weld procedures, and; - writing workplace welding procedures, recording information on proformas and other workplace documents/reports. Students will also be expected to demonstrate the following knowledge: - welding science, principles and effects of heat treatment; - welding terms, codes and symbols; - welding processes, parameters and relation to weld

quality; - welding procedures defined by code and technical requirements; - non-destructive testing; - any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards; - use and application of personal protective equipment for welding supervision, and; - safe work practices and procedures.

MEM05025C Perform welding/fabrication inspection

Locations:Sunshine.

Prerequisites:MEM05026C - Apply welding principlesMEM12023A - Perform engineering measurements

Description:This unit covers performing welding/fabrication inspection by selecting, conducting or verifying appropriate nondestructive tests, establishing and validating welding procedures, ensuring quality assurance is carried out, and monitoring procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining, interpreting and applying relevant job instructions, design and weld specifications, codes, standards and procedures; - organising tests; - initiating and conducting weld tests; - obtaining and interpreting weld tests; - obtaining and interpreting weld design data; - verbally conveying, checking and clarifying information; - checking weld parameters for conformance to specifications; - documenting welding procedures; - preparing test reports; - recording movement of material through the workshop; - producing test pieces; - marking consumables for identification; - checking material for conformance to specifications; - using and storing welding consumables; - maintaining welding quality records; - checking welding records for conformance with welding quality requirements; - checking the form of the material to be welded for conformance with specifications; - using measurement skills for checking the dimensions of welded components, and; - performing relevant calculations. Students will also be expected to demonstrate the following knowledge: - hazards and control measures associated with welding/fabrication inspection; - safe work practices and procedures; - use and application of personal protective equipment; - types of non-destructive tests and their application; - welding procedures for the given weld; - tests/checks to be conducted; - arithmetic operations, formulae and calculations for testing welding/fabrications; - procedures for initiating the weld tests; - procedures for conducting a variety of non-destructive tests; - procedures for obtaining previous weld tests; - discrepancies between previous and current weld tests; - reasons for any identified discrepancies; - effects of testing procedures on test results; - procedures for verifying/amending previously established weld test procedures; - the parameters affecting the performance of the weld with respect to specifications; - variables affecting the performance of the weld; - tools, equipment and techniques necessary to check each variable; - procedures, tools, techniques and equipment necessary to check the form and dimensions of the welded components; - procedures for documenting welding procedures and preparing a weld test piece; - tools, equipment and techniques to carry out the prescribed tests; - procedures for initiating prescribed tests, obtaining test results, and reporting test result; - discrepancies between the test results and weld specifications; - action to be taken to return the welds produced to specification; - weld specifications; - methods of identifying weld materials; - reasons for correctly marking/identifying weld materials; - procedures for

510

documenting/recording the movement of material through the workshop; - the reasons for documenting/recording the movement of material through the workshop, and; - procedures for transferring material test certification numbers. .

MEM05026 Apply welding principles

Locations:Sunshine.

Prerequisites:MEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate information

Description:This unit of competency has been developed for post-trade training of advanced engineering tradespeople and the recognition of post-trade skills in applying welding principles to meet the statutory and regulatory requirements for welding procedures generally associated with the application of one of the units satisfying AS 1796-2001 (R2016) Certification of welders and welding supervisors, Certificates 1-9. This unit covers the underpinning knowledge required to satisfy AS 1796-2001 (R2016) Certification of welders and welding supervisors and includes knowledge of welding terms, codes and symbols, the effects of heat treatment on metal as it relates to welding, and the logical sequence for a welding process required to be conducted to AS 1796-2001 (R2016) Certification of welders and welding supervisors. It covers welding, planning and set up principles for a range of materials and processes. This unit must be assessed in combination with one of the units satisfying the AS 1796-2001 (R2016) Certification of welders and welding supervisors, Certificates 1-9. These units include: MEM05042 Perform welds to code standards using flux core arc welding process; MEM05043 Perform welds to code standards using gas metal arc welding process; MEM05044 Perform welds to code standards using gas tungsten arc welding process; MEM05045 Perform pipe welds to code standards using manual metal arc welding process; MEM05046 Perform welds to code standards using manual metal arc welding process, and; MEM05058 Perform welds to code standards using oxy fuel gas welding process. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - interpreting and applying statutory and safety requirements, including welding terms, codes and symbols as required by AS 1796-2001 (R2016) Certification of welders and welding supervisors, and welding codes for welding processes; - applying appropriate pre- and postheat treatment processes for a range of welded materials, and; - setting up weld sequence and preparing materials in a logical manner for welding job. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - welding terminology, including codes and symbols; - heat treatment processes and the effect of heat treatment on metal; - logical sequence for welding processes, and; - tools, equipment and techniques used in welding.

MEM05026C Apply welding principles

Locations:Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency covers applying welding principles to meet the statutory and regulatory requirements for welding procedures generally associated with the application of one of the units satisfying Australian Standard 1796 Certificates 1-9.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting welding specifications including terms, codes and symbols, and; - planning the sequence of welding operations Students will also be expected to demonstrate the following knowledge: - any applicable industry standards, national/Australian standards, NOHSC guidelines, state/territory regulatory codes of practice/standards for the applicable welding processes; - safe work practices and procedures; - hazards related to welding; - safety equipment and procedures related to welding activities; - welding terminology; - welding codes and symbols; - heat treatment processes; - logical sequence for welding processes; - tools, equipment, techniques used in welding, and; - effect of heat treatment on metal.

MEM05036 Repair, replace and/or modify fabrications

Locations: Sunshine.

Prerequisites: MEM05005 - Carry out mechanical cutting MEM05007 - Perform manual heating and thermal cutting MEM05051 - Select welding processes MEM05052 - Apply safe welding practices MEM09002 - Interpret technical drawing MEM11011 - Undertake manual handling MEM12023 - Perform engineering measurements MEM12024 - Perform computations MEM13015 - Work safely and effectively in manufacturing and engineering MEM14006 - Plan work activities MEM16006 - Organise and communicate information MEM18001 - Use hand tools MEM18002 - Use power tools/hand held operations MEM05011 - Assemble fabricated components MEM05015 - Weld using manual metal arc welding process or MEM05017 - Weld using gas metal arc welding process or MEM05019 - Weld using gas tungsten arc welding process or MEM05047 - Weld using flux core arc welding process or MEM05055 - Weld using oxy fuel gas welding process

Description: This unit of competency defines the skills and knowledge required to undertake repair, replacement and/or modifications of fabrications requiring an integrated level of skills in fabrication maintenance and repair and is intended to build on skills covered by the specialist prerequisites. Where machines and equipment for forming, bending or shaping are required unit MEM05010 Apply fabrication, forming and shaping techniques should also be selected. Where additional or more complex marking out skills are required see MEM12007 Mark off/out structural fabrications and shapes should also be selected. Where the selection and use of welding processes are required appropriate units should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions and inspecting fabrication for defects/faults, non-compliance and determining suitability for repair/replacement/modification; - selecting material, marking out and safely cutting, bending, rolling, shaping or forming ensuring minimum wastage using correct principles, tools, equipment and procedures; - selecting appropriate welding equipment and preparing materials for welding, including pre-tack checks and set up jigs, fixtures and clamps; - consistently welding materials while preventing distortion and rectifying any defects and ensuring repair, replacement and/or modification is cleaned and finished and visually inspected to meet predetermined specifications, and; - completing and lodging maintenance report. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - characteristics of faults, defects and/or non-compliance and means of rectification by rework or additional work, or by replacement of components/materials; - effects of proposed modifications on the fabrication; - reasons for selection of specific materials, tools, equipment and consumables; - marking out principles and techniques; - material preparation processes; - clamping method(s) for the welds undertaken; - location of all materials to be welded; - weld specifications; - equipment, consumables and settings required to achieve the weld specification; - distortion minimisation procedures and methods for rectifying any distortion of materials; - material cleaning and finishing processes for the repair/replacement/modification, and; - report requirements.

MEM05036C Repair/replace/modify fabrications

Locations: Industry, Sunshine.

Prerequisites: MEM05005B - Carry out mechanical cutting MEM05007C - Perform manual heating and thermal cutting MEM05011D - Assemble fabricated components MEM05012C - Perform routine manual metal arc welding MEM05015D - Weld using manual metal arc welding process MEM05051A - Select welding processes MEM05052A - Apply safe welding practices MEM09002B - Interpret technical drawing MEM12023A MEM18001C MEM18002B The units above belong to Path 1 - ARC Welding Path 2 - MIG Welding MEM05005B MEM05007C MEM05011D MEM05017D MEM05050B MEM05051A MEM05052A MEM09002B MEM12023A MEM18001C MEM18002B Path 3 - OXY Welding MEM05004C MEM05005B MEM05007C MEM05011D MEM05022C MEM05051A Path 4 - TIG Welding MEM05005B MEM05007C MEM05011D MEM05019D MEM05049B MEM05051A MEM05052A MEM09002B MEM12023A MEM18001C MEM18002B

Description: This unit covers assessing task requirements; preparing materials; undertaking the repair, replacement or modification of the fabrication; cleaning and finishing to specifications; and inspecting the result.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - visually inspecting fabrication for defects, faults, and compliance; - marking out; - minimising wastage of materials;

- cutting, bending, rolling, shaping or forming materials; - positioning and clamping materials for welding; - undertaking pre-welding/tacking checks; - setting up and adjusting welding equipment; - tack welding; - welding according to all relevant codes, and specifications; - cleaning and finishing materials/fabrication; - reading and interpreting job sheets, specifications, drawings, standard operating procedures, manufacturer; - documentation and other literature to the level required by this unit; - assessing material and equipment requirements; - using measuring skills for preparing and marking out materials and for checking modification against specifications, and; - completing short reports using relevant terminology and format. Students will also be expected to demonstrate the following knowledge: - applicable industry standards, national/Australian standards, NOHSC guidelines, State/Territory regulatory codes of practice/standards; - characteristics of faults, defects and or non-compliance; - means of rectifying faults, defects and/or non-compliance by rework or additional work, or by replacement of components/materials; - effects of proposed modifications on the fabrication; - reasons for selection of specific materials, tools, equipment and consumables; - marking out principles, techniques; - material preparation processes; - clamping method(s) for the welds undertaken; - location of all materials to be welded; - weld specifications; - equipment, consumables and settings required to achieve the weld specification; - distortion minimisation procedures and methods for rectifying any distortion of materials; - material cleaning and finishing processes for the repair/replacement/modification; - reporting requirements; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and hazard control measures associated with repairing, replacing or modifying fabrications.

MEM05037 Perform geometric development

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate information

Description:This unit of competency has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade-level skills in marking out general fabrications using geometric development techniques. Marking out associated with geometric development is done to specifications interpreted from technical drawings and job specifications. This unit applies in jobbing workshops and involves the development of templates and general fabricating using geometrical layout techniques. Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boiler making or sheet metal work. For skills required for marking out activities associated with general engineering and maintenance functions, see the following units: MEM07005 Perform general machining; MEM12006 Mark off/out (general engineering), and; MEM18006 Perform precision fitting of engineering components. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - examining detailed drawings for fabrication requirements and specifications, including materials,

measurements and tolerances, joining methods, standards and code requirements; - calculating allowances for fabrication and assembly; - establishing and marking datum points; - selecting and using parallel line, radial line and triangulation development methods with minimum material wastage and accurate dimensions, and; producing templates accurately and following storage procedures. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - specifications of work; - tools and equipment; - development preparation, methods and application; - datum points; - materials used for the preparation of templates; - manufacturing allowance considerations; - template development, labelling, identification and storage requirements; - fabrication and assembly allowances, and; - sources of data on fabrication and relevant standards and codes.

MEM05037C Perform geometric development

Locations:Industry, Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM12024A - Perform computations

Description:This unit of competency covers the skills required by an Engineering Tradesperson - Fabrication for marking out general fabrications using geometric development techniques. The marking out is done to specifications interpreted from technical drawings and job specifications.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performing geometric calculations; - carrying out geometric development; - establishing datum points; - producing templates to specification; - labelling and storing templates; - developing patterns; - making fabrication and assembly allowances; - determining material and component quantities, and; - minimising material wastage. Students will also be expected to demonstrate the following knowledge: - specifications of work; - tools and equipment; - development preparation; - datum points; - materials used for the preparation of templates; - manufacturing allowance considerations; - template development, labelling, identification and storage requirements; - development methods and applications; - fabrication and assembly allowances; - sources of data on fabrication, and; - relevant standards and codes.

MEM05038B Perform advanced geometric development - cylindrical/rectangular

Locations:Industry, Sunshine.

Prerequisites:MEM05037C - Perform geometric developmentMEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM12024A - Perform computationsMEM30012A - Apply mathematical techniques in a manufacturing engineering or related environmentThe above units are part of the approved Path 1 for students.

Description:This unit covers marking out complex cylindrical/rectangular fabrications.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performing material calculations; - carrying out geometric development; - establishing datum points; - calculating allowances; - marking out techniques; - producing template/patterns; - labelling and storing template/patterns; - developing template/patterns; - determining and transferring fabrication and assembly allowances; - applying relevant codes/standards; - determining material and component quantities using geometric formulae, and; - applying principles for minimising material wastage. Students will also be expected to demonstrate the following knowledge: - tools, equipment, techniques in template/patterns; - datum points; - geometrical principles and formulae; - calculations of allowances: - thickness; - bend; - pitch; - angle; - circumference; - perimeter; - template/patterns materials; - manufacturers' allowances on materials; - procedures for making template/patterns; - template/patterns labelling, identification and storage; - fabrication and assembly allowances; - effects of material type/thickness on fabrication and assembly allowances; - sources of data on fabrication/assembly allowances; - relevant standards, codes, symbols; - fabrication materials; - optimising material use and minimising material wastage, and; - safe work practices and procedures.

MEM05039B Perform advanced geometric development - conical

Locations: Industry, Sunshine.

Prerequisites: MEM05037C - Perform geometric development MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM12024A - Perform computations MEM30012A - Apply mathematical techniques in a manufacturing engineering or related environment

Description: This unit covers marking out complex conical fabrications using advanced geometric development techniques.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performing material calculations; - carrying out geometric development; - establishing datum points; - calculating allowances; - marking out techniques; - producing template/patterns; - labelling and storing template/patterns; - developing template/patterns; - determining and transferring fabrication and assembly allowances; - applying relevant codes/standards; - calculating material and component quantities by applying geometric formulae, and; - applying principles for minimising material wastage. Students will also be expected to demonstrate the following knowledge: - tools, equipment, techniques in template/pattern development; - datum points; - geometrical principles, and formulae; - template/patterns materials; - procedures for making template/patterns; - template/patterns labelling, identification, storage and development; - calculations of allowances; - manufacturers' allowances on materials; - fabrication and assembly allowances; - effects of material type/thickness on fabrication and assembly allowances; - sources of data on fabrication/assembly allowances; - relevant standards, codes, symbols; - fabrication materials; - optimising material use and minimising material wastage, and; - safe work practices and procedures.

MEM05040B Perform advanced geometric development - transitions

Locations: Industry, Sunshine.

Prerequisites: MEM05037C - Perform geometric development MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM12024A - Perform computations MEM30012A - Apply mathematical techniques in a manufacturing engineering or related environment

Description: This unit covers marking out complex fabrications using geometric development.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performing material calculations; - carrying out geometric development; - establishing datum points; - calculating allowances; - marking out techniques; - producing template/patterns; - labelling and storing template/patterns; - developing template/patterns; - determining and transferring fabrication and assembly allowances; - applying relevant codes/standards; - determining material and component quantities by applying geometric formulae, and; - applying principles for optimising material use and minimising material wastage. Students will also be expected to demonstrate the following knowledge: - tools, equipment, techniques in template/patterns development; - datum points; - geometrical principles and formulae; - calculations of allowances: - template/patterns materials; - template/patterns development; - manufacturers' allowances on materials; - procedures for making template/patterns; - template/patterns labelling, identification and storage; - fabrication and assembly allowances; - effects of material type/thickness on fabrication and assembly allowances; - sources of data on fabrication/assembly allowances; - relevant standards, codes, symbols; - fabrication materials; - optimising material use and minimising material wastage, and; - safe work practices and procedures.

MEM05042B Perform welds to code standards using flux core arc welding process

Locations: Sunshine.

Prerequisites: MEM05007C - Perform manual heating and thermal cutting MEM05026C - Apply welding principles MEM05047B - Weld using flux core arc welding process MEM05048B - Perform advanced welding using flux core arc welding process MEM05050B - Perform routine gas metal arc welding MEM05051A - Select welding processes MEM05052A - Apply safe welding practices MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations

Description: This unit applies to the production of butt and fillet welds in all positions. Welds in this unit are associated with high quality fabrications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - depositing welds to procedure requirements; - determining weld outcomes, consumables and settings from welding procedure specification; - interpreting technical drawings and weld specifications for welding to code standards using FCAW; - using hand and power tools to prepare and weld materials to code standard; - using measurement and numeracy skills for welding to code standards, and; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings. Students will also be expected to demonstrate the following knowledge: - requirements to produce welds to quality of AS1210, AS4041, ASME IX or equivalent; - safe welding practices; - use and application of personal protective equipment for FCAW; - relevant standards or codes; - methods for preparing plate and pipe for code standard welding; - pre-welding and post-welding heating methods and requirements for plate and pipe welding to code standard; - requirements for maintaining weld records to code standard, and; - hazards and control measures associated with welding, including housekeeping.

MEM05043 Perform welds to code standards using gas metal arc welding process

Locations:Sunshine.

Prerequisites:MEM05007 - Perform manual heating and thermal cuttingMEM05017 - Weld using gas metal arc welding processMEM05018 - Perform advanced welding using gas metal arc welding processMEM05026 - Apply welding principlesMEM05050 - Perform routine gas metal arc weldingMEM05051 - Select welding processesMEM05052 - Apply safe welding practicesMEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency defines the skills and knowledge required to prepare and produce welds to code standards using gas metal arc welding (GMAW) on a range of materials. Butt and fillet welds in the flat, horizontal, vertical and overhead positions would be applied to meet AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Engineers (ASME) IX or equivalent. This unit, in conjunction with Unit MEM05026 Apply welding principles, may satisfy the requirements of AS 1796-2001 (R2016) Certification of welders and welding supervisors Certificate 8G. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing welds using gas metal arc welding (GMAW) to code standards; - cleaning and preparing materials to specifications; - setting up welding equipment, including performing routine maintenance; - consistently weld materials to specifications; - rectifying any discontinuities, and; - completing and maintaining

weld records related to GMAW to code standards onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - requirements to produce welds to quality of AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX or equivalent; - relevant standards or codes; - methods for preparing plate and pipe for code standard welding, and; - pre-welding and post-welding heating methods and requirements for plate and pipe welding to code standard requirements for maintaining weld records to code standard.

MEM05043B Perform welds to code standards using gas metal arc welding process

Locations:Sunshine.

Prerequisites:MEM05007C - Perform manual heating and thermal cuttingMEM05017D - Weld using gas metal arc welding processMEM05018C - Perform advanced welding using gas metal arc welding processMEM05026C - Apply welding principlesMEM05050B - Perform routine gas metal arc weldingMEM05051A - Select welding processesMEM05052A - Apply safe welding practicesMEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operations

Description:This unit covers preparing and producing welds to code standards using gas metal arc welding (GMAW).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - depositing welds to procedure requirements; - determining weld outcomes, consumables and settings from welding procedure specification; - interpreting technical drawings and weld specifications for welding to code standards using GMAW; - using hand and power tools to prepare and weld materials to code standard; - using measurement and numeracy skills for welding to code standards, and; - using language and literacy skills to enable completion of weld records. Students will also be expected to demonstrate the following knowledge: - requirements to produce welds to quality of AS 1210, AS 4041, ASME IX or equivalent; - safe welding practices; - use and application of personal protective equipment for GMAW; - relevant standards or codes; - methods for preparing plate and pipe for code standard welding; - pre-welding and post-welding heating methods and requirements for plate and pipe welding to code standard; - requirements for maintaining weld records to code standard, and; - hazard and control measures associated with welding, including housekeeping.

MEM05044 Perform welds to code standards using gas tungsten arc welding process

Locations:Sunshine.

Prerequisites:MEM05007 - Perform manual heating and thermal cuttingMEM05019 - Weld using gas tungsten arc welding processMEM05020 - Perform advanced welding using gas tungsten arc welding processMEM05026 - Apply welding principlesMEM05049 - Perform routine gas tungsten arc weldingMEM05051 - Select welding processesMEM05052 - Apply safe welding practicesMEM09002 - Interpret

technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency defines the skills and knowledge required to prepare and produce welds to code standards using gas tungsten arc welding (GTAW) on a range of materials. Butt and fillet welds in the flat, horizontal, vertical and overhead positions would be applied to meet AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX or equivalent. The unit, together with unit MEM05026 Apply welding principles, may satisfy the requirements of AS 1796-2001 (R2016) Certification of welders and welding supervisors, Certificate 7. Where advanced manual thermal cutting, gouging and shaping is required unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing welds using gas tungsten arc welding (GTAW) to code standards; - cleaning and preparing materials for welding to specifications; - setting up welding equipment, including performing routine maintenance; - consistently weld materials to specifications; - rectifying any discontinuities, and; - completing and maintaining weld records related to GTAW to code standards onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - requirements to produce welds to quality of AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) or equivalent; - relevant standards or codes; - methods for preparing plate and pipe for code standard welding; - pre-welding and post-welding heating methods and requirements for plate and pipe welding to code standard, and; - requirements for maintaining weld records to code standard.

MEM05044B Perform welds to code standards using gas tungsten arc welding process

Locations:Sunshine.

Prerequisites:MEM05007C - Perform manual heating and thermal cuttingMEM05019D - Weld using gas tungsten arc welding processMEM05020C - Perform advanced welding using gas tungsten arc welding processMEM05026C - Apply welding principlesMEM05049B - Perform routine gas tungsten arc weldingMEM05051A - Select welding processesMEM05052A - Apply safe welding practicesMEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operations

Description:This unit covers preparing and producing welds to code standards using

gas tungsten arc welding (GTAW).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - depositing welds to procedure requirements; - determining weld outcomes, consumables and settings from welding procedure specification; - interpreting technical drawings and weld specifications for welding to code standards using GTAW; - using hand and power tools to prepare and weld materials to code standard; - using measurement and numeracy skills for welding to code standards; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings, and; - following oral instructions. Students will also be expected to demonstrate the following knowledge: - requirements to produce welds to quality of AS 1210, AS 4041, ASME IX or equivalent; - safe welding practices; - use and application of personal protective equipment for GTAW; - relevant standards or codes; - methods for preparing plate and pipe for code standard welding; - pre-welding and post-welding heating methods and requirements for plate and pipe welding to code standard; - requirements for maintaining weld records to code standard, and; - hazards and control measures associated with welding, including housekeeping.

MEM05045 Perform pipe welds to code standards using manual metal arc welding process

Locations:Sunshine.

Prerequisites:MEM05007 - Perform manual heating and thermal cuttingMEM05012 - Perform routine manual metal arc weldingMEM05015 - Weld using manual metal arc welding processMEM05016 - Perform advanced welding using manual metal arc welding processMEM05026 - Apply welding principlesMEM05051 - Select welding processesMEM05052 - Apply safe welding practicesMEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency defines the skills and knowledge required to prepare and produce pipe welds to code standards using manual metal arc welding (MMAW) on a range of materials. Butt welds in pipe with the axis horizontal, vertical and/or askew would be applied to meet AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX or equivalent. The unit, together with unit MEM05026 Apply welding principles, may satisfy the requirements of AS 1796-2001 (R2016) Certification of welders and welding supervisors, Certificates 2 and 4. Where advanced manual thermal cutting, gouging and shaping is required unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing pipes welds using manual metal arc welding (MMAW) to code standards; - cleaning and preparing materials for welding to specifications; - setting up welding equipment, including performing routine maintenance; - consistently weld materials to specifications; - rectifying any discontinuities, and; - completing and maintaining weld records related to MMAW to code standards onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - requirements to produce welds to quality of AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX or equivalent; - relevant standards or codes; - methods for preparing pipe for code standard welding; - pre-welding and post-welding heating methods and requirements for pipe welding to code standard, and; - requirements for maintaining weld records to code standard.

MEMO5045B Perform pipe welds to code standards using manual metal arc welding process

Locations:Sunshine.

Prerequisites:MEMO5007C - Perform manual heating and thermal cuttingMEMO5012C - Perform routine manual metal arc weldingMEMO5015D - Weld using manual metal arc welding processMEMO5016C - Perform advanced welding using manual metal arc welding processMEMO5026C - Apply welding principlesMEMO5051A - Select welding processesMEMO5052A - Apply safe welding practicesMEMO9002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operations

Description:This unit covers preparing and producing pipe welds to code standards using manual metal arc welding (MMAW).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - depositing welds to procedure requirements; - determining weld outcomes, consumables and settings from welding procedure specification; - interpreting technical drawings and weld specifications for welding to code standards using MMAW; - using hand and power tools to prepare and weld materials to code standard; - using measurement and numeracy skills for welding to code standards, and; - using language and literacy skills to enable completion of weld records. Students will also be expected to demonstrate the following knowledge: - requirements to produce welds to quality of AS 1210, AS 4041, ASME IX or equivalent; - safe welding practices; - use and application of personal protective equipment for MMAW; - knowledge of appropriate standards or codes; - methods for preparing pipe for code standard welding; - pre-welding and post-welding heating methods and requirements for pipe welding to code standard; -

requirements for maintaining weld records to code standard, and; - hazards and control measures associated with welding, including housekeeping.

MEMO5046 Perform welds to code standards using manual metal arc welding process

Locations:Sunshine.

Prerequisites:MEMO5007 - Perform manual heating and thermal cuttingMEMO5012 - Perform routine manual metal arc weldingMEMO5015 - Weld using manual metal arc welding processMEMO5016 - Perform advanced welding using manual metal arc welding processMEMO5026 - Apply welding principlesMEMO5051 - Select welding processesMEMO5052 - Apply safe welding practicesMEMO9002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency defines the skills and knowledge required to prepare and produce welds to code standards using manual metal arc welding (MMAW) on a range of materials. Butt and fillet welds in the flat, horizontal, vertical and overhead positions would be applied to meet AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX or equivalent. This unit, together with unit MEMO5026 Apply welding principles, may satisfy the requirements of AS 1796-2001 (R2016) Certification of welders and welding supervisors, Certificates 1, 1E, 3 and 3E. Where advanced manual thermal cutting, gouging and shaping is required unit MEMO5008 Perform advanced manual thermal cutting, gouging and shaping should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing welds using manual metal arc welding (MMAW) to code standards; - cleaning and preparing materials for welding to specifications; - setting up welding equipment, including performing routine maintenance; - consistently weld materials to specifications; - rectifying any discontinuities, and; - completing and maintaining weld records related to MMAW to code standards onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - requirements to produce welds to quality of AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX or equivalent; - relevant standards or codes; - methods for preparing plate for code standard welding; - pre-welding and post-welding heating methods and requirements for plate welding to code standard, and; - requirements for maintaining weld records to code standard.

MEMO5046B Perform welds to code standards using manual metal arc welding process

Locations:Sunshine.

Prerequisites:MEM05007C - Perform manual heating and thermal cuttingMEM05012C - Perform routine manual metal arc weldingMEM05015D - Weld using manual metal arc welding processMEM05016C - Perform advanced welding using manual metal arc welding processMEM05026C - Apply welding principlesMEM05051A - Select welding processesMEM05052A - Apply safe welding practicesMEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operations

Description:This unit covers preparing and producing welds to code standards using manual metal arc welding (MMAW).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - depositing welds to procedure requirements; - determining weld outcomes, consumables and settings from welding procedure specification; - interpreting technical drawings and weld specifications for welding to code standards using MMAW; - using hand and power tools to prepare and weld materials to code standard; - using measurement and numeracy skills for welding to code standards, and; - using language and literacy skills to enable completion of weld records. Students will also be expected to demonstrate the following knowledge: - requirements to produce welds to quality of AS 1210, AS 4041, ASME IX or equivalent; - safe welding practices; - use and application of personal protective equipment for MMAW; - knowledge of appropriate standards or codes; - methods for preparing plate for code standard welding; - pre-welding and post-welding heating methods and requirements for plate welding to code standard; - requirements for maintaining weld records to code standard, and; - hazards and control measures associated with welding, including housekeeping.

MEM05047 Weld using flux core arc welding process

Locations:Sunshine.

Prerequisites:MEM05051 - Select welding processesMEM05052 - Apply safe welding practicesMEM05046 - Perform welds to code standards using manual metal arc welding processMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency defines the skills and knowledge required to perform flux core arc welding (FCAW) on heavy or light metal fabrications. Weld quality would conform to AS 1554 General Purpose and American Bureau of Shipping (ABS) or equivalent. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where thermal processes, hand and/or power tools are required the appropriate specialisation units should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from sketches and verbal or written job instructions for welding using flux core arc welding process (FCAW) to the specified standard; - selecting appropriate weld and joint preparation methods; - consistently weld materials to the specified standard or equivalent using semi-automatic machines and consumables while preventing distortion; - rectifying any defects, and; - completing weld records related to FCAW onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - types of gases and their uses; - relationships between amperage/wire feed, voltage, gas flow, electrode, contact tip and material; - material preparation; - polarity; - electrode stickout; - joint preparations; - electrode classification; - causes of distortion for materials when welded; - causes of weld defects and methods of rectification, and; - standards for FCAW, including AS 1554 General Purpose and any other equivalent standards.

MEM05047B Weld using flux core arc welding process

Locations:Industry, Sunshine.

Prerequisites:MEM05050B - Perform routine gas metal arc weldingMEM05051A - Select welding processesMEM05052A - Apply safe welding practicesMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operations

Description:This unit covers preparing materials, selecting and setting up the welding equipment, carrying out flux core arc welding (FCAW) and inspecting for and correcting defects.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and interpreting appropriate standard e.g. Australian Standard 1554 General Purpose, American-Bureau of Shipping (ABS) or equivalent; - depositing welds in accordance with appropriate standards; - following specifications and drawings; - using appropriate tools and techniques to prepare material for welding; - undertaking distortion prevention and rectification; - cleaning the welded joint using appropriate tools and techniques; - removing weld defects to achieve a minimum amount of sound metal with the defect; - reading and interpreting information on written job instructions, specifications, standard operating procedures and drawings; - recording routine information related to FCAW onto proformas and standard workplace forms; - following oral instructions; - using measurement skills relating to joint preparation and FCAW. Students will also be expected to demonstrate the following knowledge: - types of gases and their uses; - the relationships between amperage/wire feed, voltage, gas flow, electrode, contact tip and material; - material preparation; - polarity; - electrode stickout; - joint preparations; - electrode classification; - causes of distortion for materials within the scope of this unit; - safe welding practices; - use

and application of personal protective equipment for FCAW, and; - hazards and control measures associated with welding, including housekeeping.

MEMO5048 Perform advanced welding using flux core arc welding process

Locations:Sunshine.

Prerequisites:MEMO5007 - Perform manual heating and thermal cuttingMEMO5047 - Weld using flux core arc welding processMEMO5051 - Select welding processesMEMO5052 - Apply safe welding practicesMEMO9002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency defines the skills and knowledge required to carry out advanced welding using flux core arc welding (FCAW). Welds are associated with a range of structural sections and/or plate and/or pipe for general fabrication using ferrous materials. Weld quality would typically conform to AS 1554 Structural Purpose or equivalent. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing advanced welding using flux core arc welding process (FCAW) to the specified standard; - selecting appropriate weld and joint preparation methods; - consistently weld materials to the specified standard or equivalent using semi-automatic welding machines and electrodes while preventing distortion; - rectifying any defects, and; - completing and maintaining weld records related to FCAW Structural Purpose onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - in-depth knowledge of the properties and characteristics of a wide range of materials; - requirements to conform to AS 1554 Structural Purpose or equivalent; - weld procedures and requirements; - purpose of pre-welding and/or post-welding heating and the methods of application; - instructions, symbols, specifications, including bead size, bead placement, reinforcement and weld procedure sheet discontinuities in relation to standards/requirements, and; - different welder identification systems, including numbering, bar coding, paint coding and letter stamps.

MEMO5048B Perform advanced welding using flux core arc welding process

Locations:Industry, Sunshine.

Prerequisites:MEMO5007C - Perform manual heating and thermal cuttingMEMO5047B - Weld using flux core arc welding processMEMO5050B - Perform routine gas metal arc weldingMEMO5051A - Select welding processesMEMO5052A - Apply safe welding practicesMEMO9002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operations

Description:This unit covers preparing materials, selecting and setting up the welding

equipment, carrying out advanced flux core arc welding (FCAW), inspecting for and correcting defects, and maintaining the weld records.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - depositing fillet and butt welds correctly; - performing all weld and preparation requirements; - identifying discontinuities that do not meet standard requirements; - repairing discontinuities; - using preheat methods; - interpreting weld requirements and specifications; - entering information onto profornas and standard workplace forms; - interpreting technical drawings and weld specifications relating to advanced FCAW; - using hand and power tools to prepare and weld material using FCAW; - using measurement and numeracy skills relating to advanced FCAW and preparation; - selecting equipment and consumables appropriate to task, and; - using visual identification of faults/defects. Students will also be expected to demonstrate the following knowledge: - in depth knowledge of the properties and characteristics of a wide range of materials; - requirements to conform to Australian Standard AS 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent; - weld procedures and requirements; - safe welding practices; - use and application of personal protective equipment for FCAW; - purpose of pre-welding and/or post-welding heating and the methods of application; - instructions, symbols, specifications including bead size, bead placement, reinforcement, weld procedure sheet; - discontinuities in relation to standards/requirements, and; - different welder identification systems such as numbering, bar coding, paint coding, letter stamps.

MEMO5049 Perform routine gas tungsten arc welding

Locations:Sunshine.

Prerequisites:MEM11011 - Undertake manual handlingMEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to prepare the materials and carry out routine gas tungsten arc welding (GTAW) and applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard. Where welding is required to meet AS 1554 General Purpose or equivalent codes, work health and safety (WHS) regulations and/or licensing requirements Unit MEMO5019 Weld using gas tungsten arc welding process should also be selected. Where the interpretation of technical drawings is required unit MEMO9002 Interpret technical drawing should also be selected. Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected. Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications from sketches and verbal or written job instructions for performing routine gas tungsten arc welding (GTAW); - cleaning and preparing materials for welding to specifications; - setting up welding equipment, including selecting settings and consumables to suit application; - consistently welding materials to specifications, and; - cleaning welds in accordance with SOPs. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - preparatory requirements; - equipment and equipment settings; - shielding gas properties and applications, and; - weld characteristics.

MEM05049B Perform routine gas tungsten arc welding

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers preparing the materials and carrying out routine gas tungsten arc welding (GTAW). This unit applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard. Fillet and butt welds would typically be performed on low carbon/mild steels and aluminium. Where welding is required to meet Australian Standard 1554 General Purpose or equivalent codes, occupational health and safety regulations and/or licensing requirements, Unit MEM05019D (Weld using gas tungsten arc welding process) should be selected.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing materials; - setting up welding equipment; - welding with GTAW; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures, and; - using measurement skills for joint preparation and routine GTAW. Students will also be expected to demonstrate the following knowledge: - preparatory requirements; - properties and characteristics of materials and consumables; - equipment and equipment settings; - fuel gas properties and applications; - post welding treatments; - weld characteristics; - safe welding practices, and; - use and application of personal protective equipment for routine GTAW.

MEM05050 Perform routine gas metal arc welding

Locations: Sunshine.

Prerequisites: MEM11011 - Undertake manual handling MEM13015 - Work safely and effectively in manufacturing and engineering MEM16006 - Organise and communicate information

Description: This unit of competency defines the skills and knowledge required to prepare materials and carry out routine gas metal arc welding (GMAW) and applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard or equivalent. Where welding is required to meet AS 1554 General Purpose or equivalent codes, work health and safety (WHS) regulations and/or licensing requirements unit MEM05017 Weld using gas metal arc

welding process should also be selected. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected. Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures and safe work practices; - identifying and interpreting specifications from sketches and verbal or written job instructions for performing routine gas metal arc welding (GMAW); - cleaning and preparing materials for welding to specifications; - setting up welding equipment, including selecting settings and consumables to suit application; - consistently welding materials to specifications, and; - cleaning welds in accordance with SOPs. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - different current and voltage settings, gas flow rates wire diameters, wire feed speed and other variables to suit typical situations; - material and equipment preparation; - properties and characteristics of materials and consumables; - equipment and equipment settings; - shielding gas properties and applications; - post-welding treatments, and; - weld characteristics.

MEM05050B Perform routine gas metal arc welding

Locations: Industry, Werribee, Sunshine.

Prerequisites: Nil.

Description: This unit covers preparing materials and routine gas metal arc welding (GMAW). This unit applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard or equivalent. Fillet and butt welds would typically be performed on low carbon/mild steels. Where welding is required to meet Australian Standard 1554 General Purpose or equivalent codes, occupational health and safety regulations and/or licensing requirements, Unit MEM05017D (Weld using gas metal arc welding process) should be selected.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each competency unit's learning outcomes and performance criteria requirements, including the setting of project and work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing materials; - setting up welding equipment; - welding with GMAW; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures; - following oral instruction, and; - using measurement skills relating to joint preparation and routine GMAW. Students will also be expected

to demonstrate the following knowledge: - different current and voltage settings, gas flow rates wire diameters, wire feed speed and other variables to suit typical situation; - material and equipment preparation; - properties and characteristics of materials and consumables; - equipment and equipment settings; - fuel gas properties and applications; - postwelding treatments; - weld characteristics; - safe welding practices, and; - use and application of personal protective equipment for routine GMAW.

MEM05051 Select welding processes

Locations:Sunshine.

Prerequisites:MEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to identify material properties and select appropriate welding processes that would typically conform to AS 1554 General Purpose and American Bureau of Shipping (ABS) or equivalent, to achieve safe and effective welding outcomes. This unit applies to all types of welding and includes the identification of properties and characteristics of all commonly used metals, and selection of appropriate welding techniques to ensure integrity of materials is maintained during welding processes. This unit can only be selected in conjunction with one or more of the following units: MEM05015 Weld using manual metal arc welding process; MEM05017 Weld using gas metal arc welding process; MEM05019 Weld using gas tungsten arc welding process; MEM05023 Weld using submerged arc welding process; MEM05047 Weld using flux core arc welding process, and; MEM05055 Weld using oxy fuel gas welding process. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying properties of common used metals; - identifying potential contingencies and considering solutions; - identifying and selecting appropriate welding process and the effects of the welding process on materials, and; - identifying processes for cleaning and preparing metals and the role of contaminants in welding flaws. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE); - properties and characteristics of commonly used metals and materials; - basic metallurgy principles associated with alloys and grades of metals; - uses and purposes of various metals; - distortion prevention measures for various metals; - different types of electrodes, and; - hazards associated with the use of chemicals and the fumes emitted by welding processes.

MEM05051A Select welding processes

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers identifying material properties and selecting appropriate welding processes to achieve safe and effective welding outcomes.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating-procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations, and; - checking and clarifying task-related information. Students will also be expected to demonstrate the following knowledge: - hazards and control measures associated with welding practices, including housekeeping; - safe work practices and procedures; - properties and characteristics of commonly used metals and materials; - basic metallurgy principles; - information resources; - chemical content of fumes emitted by welding processes; - uses and purposes of various metals, and; - distortion prevention measures for various metals.

MEM05052 Apply safe welding practices

Locations:Sunshine.

Prerequisites:MEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to identify risks associated with welding operations that would typically conform to AS 1554 General Purpose and American Bureau of Shipping (ABS) or equivalent on all commonly used metals and the implementation of techniques used to reduce or eliminate welding hazards. This unit can only be selected in conjunction with one or more of the following units: MEM05015 Weld using manual metal arc welding process; MEM05017 Weld using gas metal arc welding process; MEM05019 Weld using gas tungsten arc welding process; MEM05023 Weld using submerged arc welding process; MEM05047 Weld using flux core arc welding process, and; MEM05055 Weld using oxy fuel gas welding process. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting work health and safety (WHS) information and legislation; - identifying risks and hazards associated with welding; - implementing risk control measures and procedures, including using appropriate manual handling techniques and personal protective equipment (PPE), and; - reporting workplace non-compliances in accordance with workplace procedures. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of PPE; - characteristics and properties of common metals and welding materials; - effect of gas and electrical welding operations on metals; - effect of various treatments on a range of commonly used metals; - WHS information and sources; - work-related safety information; - pollutants present as a result of welding activities; - all the welding processes, including equipment and material requirements, and; - hazards associated with welding processes and methods to minimise those hazards.

MEM05052A Apply safe welding practices

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers identifying risks associated with welding operations and implementing hazard reduction practices.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - sourcing and interpreting safety-related information and Material Safety Data Sheets (MSDS); - planning and sequencing operations; - identifying workplace risks and nonconformances; - reporting workplace risks and nonconformances, and; - checking and clarifying task-related information. Students will also be expected to demonstrate the following knowledge: - characteristics and properties of common metals and welding materials; - effect of gas and electrical welding operations on metals; - hazards and control measures associated with gas and electrical welding, including housekeeping; - welding safety practices and procedures; - effect of various treatments on a range of commonly used metals, and; - use and application of personal protective equipment.

MEM05055 Weld using oxy fuel gas welding process

Locations: Sunshine.

Prerequisites: MEM05004 - Perform routine oxy fuel gas welding MEM05051 - Select welding processes MEM05052 - Apply safe welding practices MEM09002 - Interpret technical drawing MEM11011 - Undertake manual handling MEM12023 - Perform engineering measurements MEM12024 - Perform computations MEM13015 - Work safely and effectively in manufacturing and engineering MEM14006 - Plan work activities MEM16006 - Organise and communicate information MEM18001 - Use hand tools MEM18002 - Use power tools/hand held operations

Description: This unit has been primarily developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade-level skills in oxy fuel gas welding on heavy or light metal fabrications. It may also apply to other trade occupations requiring higher level oxy fuel gas welding skills. Weld quality would typically conform to AS 1554 General Purpose and American Bureau of Shipping (ABS) or equivalent. Where manual thermal processes associated with preparation, pre-heat and/or post-heat is required unit MEM05007 Perform manual heating and thermal cutting and unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures and safe work practices - identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for oxy

fuel gas to AS 1554 General Purpose or equivalent - selecting appropriate weld and joint preparation methods - setting up: - gas cylinders - hoses - blowpipes - tips and nozzles - regulators - flashback arrestors - weld materials to AS 1554 General Purpose or equivalent using oxy fuel gas welding equipment while preventing distortion - rectifying any defects completing weld records related to oxy fuel gas onto standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe welding practices and procedures and use of personal protective equipment (PPE) - purpose of and setting up requirements of: - gas cylinders - hoses - blowpipes - tips and nozzles - regulators - flashback arrestors - material preparation for oxy fuel gas welding - weld joint preparations. - filler rod materials - causes of distortion for materials when welded - causes of weld defects and methods of rectification - standards for oxy fuel gas welding, including AS 1554 General Purpose or equivalent

MEM06003C Carry out heat treatment

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers carrying out heat treatment of materials using a variety of equipment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - setting up and operating heat treatment equipment; - applying heat treatment, and; - safely loading furnace(s). Students will also be expected to demonstrate the following knowledge: - work specifications; - material characteristics; - heat treatment applications, equipment and processes; - emergency procedures; - material preparation, quenching, preheating requirements; - material condition during heat treating process; - batch and/or piece loading of furnaces; - safe loading of furnaces; - hazards and control measures associated with heat treatment, including housekeeping; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM06007B Perform basic incidental heat/quenching, tempering and annealing

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit covers performing straightforward heating/quenching, tempering and annealing of ferrous and non-ferrous metals.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, manufacturer instructions, charts, lists, drawings and other applicable

reference documents; - checking and clarifying task-related information; - following verbal instructions; - orally reporting routine information; - selecting appropriate processes for heating/quenching, tempering, annealing, and; - setting up, adjusting and operating equipment. Students will also be expected to demonstrate the following knowledge: - characteristics and applications of heating/quenching, tempering, annealing processes; - specifications for heating, quenching, tempering, and annealing; - process for heating/quenching, tempering, annealing, different materials; - operating/adjusting heating equipment; - hazards and control measures associated with heating/quenching, tempering, annealing, including housekeeping; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM07001B Perform operational maintenance of machines/equipment

Locations:Sunshine.

Prerequisites:MEM18001C - Use hand tools

Description:This unit covers carrying out programmed safety and maintenance checks on machines/equipment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaking programmed safety and maintenance checks; - undertaking programmed operational maintenance; - entering routine and familiar information onto proformas and standard workplace forms; - following routine information on written procedures; - following oral instructions, and; - orally reporting routine information. Students will also be expected to demonstrate the following knowledge: - programmed maintenance and safety check procedures for the specified machine/equipment; - recording/reporting requirements; - safe work practices and procedures, and; - hazards and control measures associated with operational maintenance of machines/equipment.

MEM07003B Perform machine setting (routine)

Locations:Sunshine.

Prerequisites:MEM07024B - Operate and monitor machine/processMEM12023A - Perform engineering measurementsMEM16006A - Organise and communicate informationMEM18001C - Use hand tools

Description:This unit covers routine setting of machines in accordance with defined procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting and following job/operation sheets, standard operating procedures, specifications, safe working procedures and other applicable reference documents; - verbally conveying routine and familiar instructions; - identifying worn tools; - using hand tools for machine setting; - measuring to specified tolerances, and; - following oral instructions.

Students will also be expected to demonstrate the following knowledge: - sequences of machine setting operations; - techniques, tools and equipment to measure samples; - characteristics of machines/processes; - safe work practices and procedures; - tools and equipment for machine setting; - applicable machine tooling and accessories; - symptoms of tool wear; - use and application of personal protective equipment; - hazards and control measures associated with machine setting (routine), and; - strategies for conveying routine instructions.

MEM07004B Perform machine setting (complex)

Locations:Industry, Sunshine.

Prerequisites:Students must meet the requirements of one path. Path 1 MEM07005C Perform general machining MEM07006C Perform lathe operations MEM09002B Interpret technical drawing MEM12023A Perform engineering measurements MEM16006A Organise and communicate information MEM18001C Use hand tools Path 2 MEM07005C Perform general machining MEM07007C Perform milling operations MEM09002B Interpret technical drawing MEM12023A Perform engineering measurements MEM16006A Organise and communicate information MEM18001C Use hand tools Path 3 MEM07005C Perform general machining MEM07008D Perform grinding operations MEM09002B Interpret technical drawing MEM12023A Perform engineering measurements MEM16006A Organise and communicate information MEM18001C Use hand tools Path 4 MEM07005C Perform general machining MEM07013B Perform machining operations using horizontal and/or vertical boring machines MEM09002B Interpret technical drawing MEM12023A Perform engineering measurements MEM16006A Organise and communicate information MEM18001C Use hand tools Paths 5, 6, 7 and 8 The Polytechnic do not currently offer all units listed within these paths. Refer to www.training.gov.au for a full list of units in these paths.

Description:This unit covers determining job requirements, performing complex machine setting, instructing the operator and replacing worn or damaged tooling.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting information on written job sheets, instructions, standard operating procedures, safe working procedures and other applicable reference documents; - determining machine/process sequences; - verbally conveying routine and familiar instructions; - checking and adjusting machine and replacing worn or damaged tooling; - checking and clarifying task-related information, and; - measuring to specified tolerances. Students will also be expected to demonstrate the following knowledge: - characteristics and hazards of machine/process; - tooling, equipment and timing requirements of the machine's operations; - common product faults or defects and adjustments; - consequences of not instructing the machine operator; - use and application of personal protective equipment; - safe work practices and procedures, and; - strategies for conveying routine instructions. .

MEM07005 Perform general machining

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and

engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand tools

Description:This unit of competency has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade-level skills in non-computer numerical controlled (CNC) machining of ferrous and non-ferrous materials. Where high level production machining applications are undertaken unit MEM07041 Perform production machining should be selected. Where set-up and operation of electro-discharge machines (EDM) is required unit MEM07014 Perform electro-discharge machining (EDM) operations should also be selected. Where machining is undertaken without undertaking any set up, including mounting of tools, setting of speeds, feeds and other operational parameters unit MEM07024 Operate and monitor machine and process and unit MEM07025 Perform advanced machine and process operation, should be selected as appropriate. Where the selection and use of precision measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected. Where substantial marking out is required unit MEM12006 Mark off/out (general engineering) should also be selected. Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - planning a job including identifying job requirements from drawings, instructions or specifications and a sequence of operations; - identifying any required tooling, measuring equipment and accessories; - selecting and mounting required tooling; - selecting material and marking out, as required; - performing machining to meet specifications; - checking machined components for conformance to specifications and identifying adjustments to be made to settings/tooling; - rectifying non-compliant components, and; - carrying out routine maintenance and adjustments, as required. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - reasons for selecting the chosen sequence of operations; - methods of work holding for machining operations; - transferring dimensions, including establishing datum points/lines; - geometry of cutting tools for a range of materials and applications; - reasons for maintaining properly sharpened cutting tools; - principles underpinning machining operations; - selection of feeds and speeds to suit a range of materials and operations; - methods of mounting a range of cutting tools; - safety precautions associated with clamping materials, guards and shields; - tolerances and limits of size;- machine adjustment, lubrication and cleaning; - measurement techniques, tools and devices, and;- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

MEM07005C Perform general machining

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand tools

Description:This unit covers determining the job requirements and sequence of operations, selecting and mounting tools, performing the machining, measuring the

components, and adjusting and maintaining a range of standard machine tools.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and interpreting routine information on written job instructions, specifications and standard operating procedures which may include drawings;- following oral instruction;- planning and sequencing operations;- preparing operational work plan;- sharpening and shaping cutting tools;- identifying worn or damaged cutting tools;- correct mounting and positioning of cutting tools;- basic marking out of materials;- setting machining parameters to achieve the job requirements and maximise tool life;- using appropriate and sufficient clamping/mounting of the work piece;- using coolant/lubricant correctly;- checking for conformance to specifications, and;- measuring to specified tolerances and dimensions. Students will also be expected to demonstrate the following knowledge: - reasons for selecting the chosen sequence of operations;- methods of work holding;- basic marking out techniques including datum points/lines;- geometry of cutting tools for a range of materials and applications;- benefits of using correctly sharpened cutting tools;- machine operation;- selection of feeds and speeds to suit a range of materials and operations within the scope of this unit;- correct methods of mounting a variety of cutting tools;- safety issues with regard to correct clamping, guards and shields;- tolerances and limits of size;- situations indicating the need for machine adjustment, lubrication and cleaning;- techniques, tools and equipment to measure materials and machined components;- use and application of personal protective equipment;- safe work practices and procedures, and;- hazards and control measures associated with general machining.

MEM07006 Perform lathe operations

Locations:Sunshine.

Prerequisites:MEM07005 - Perform general machiningMEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand tools

Description:This unit of competency has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade-level skills in performing machining operations on a lathe to produce components to required tolerances and specifications using all types of accessories. Skills covered by this unit are generally applied in occupational and work situations associated with trade-level fitting and machining work. This unit does not cover turning of multi-start threads or use of taper turning attachment, copy turning attachment or multi-start threads. Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting engineering drawings to AS 1100,401-1884 (R2014) Technical drawing to determine job requirements for lathe operations, including quantity, material, measurements and tolerances; - selecting cutting tools using International Standard Organisation (ISO) standards or according to SOPs from drawings, sketches, specifications and instructions, as appropriate; - fixing of job and tooling to specifications; - calculating and setting required speeds and feeds; - undertaking turning operations to specifications; - checking components for conformance to specifications, and; - rectifying non-compliant product. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - sequence of lathe operations to achieve job requirements; - tool type and geometry to achieve required specifications and for work pieces of different materials; - numerical operations, geometry and calculations/formulae for lathe operations; - consequences of varying speeds and feeds from the optimum rates calculated; - characteristics of different materials and their effects on cutting speeds and feeds; - application of lathe accessories; - techniques, tools and equipment to measure materials and machined components, and; - tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

MEMO7006C Perform lathe operations

Locations:Sunshine.

Prerequisites:MEMO7005C - Perform general machiningMEMO9002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand tools

Description:This unit covers performing machining operations on a lathe to required tolerances and specifications using all types of accessories.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting technical drawings/specifications in relation to turning; - setting up jobs using appropriate equipment; - calculating and setting cutting feeds and speeds appropriate to the job; - checking that job is concentric and running true; - safely operating lathes, and; - performing turning operations. Students will also be expected to demonstrate the following knowledge: - sequence of operations to achieve the job requirements; - tool type and geometry to achieve the required specifications and for work pieces of different materials; - numerical operations, geometry and calculations/formulae within the scope of this unit; - the consequences of varying speeds and feeds from the optimum rates calculated; - characteristics of different materials and their effects on cutting speeds and feeds; - application of lathe accessories; - techniques, tools and equipment to measure materials and machined components; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with lathe operations.

MEMO7007 Perform milling operations

Locations:Sunshine.

Prerequisites:MEMO7005 - Perform general machiningMEMO9002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand tools

Description:This unit of competency has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade-level skills in using a range of milling machines to produce components to required tolerances and specifications using all types of accessories. Skills covered by this unit are generally applied in occupational and work situations associated with trade-level fitting and machining work. Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting engineering drawings to AS 1100,401-1884 (R2014) Technical drawing to determine; job requirements for milling operations, including quantity, material, measurements and tolerances; - selecting cutting tools using International Standard Organisation (ISO) standards or according to SOPs from drawings, sketches, specifications and instructions, as appropriate; - fixing of job and tooling to specifications; - calculating and setting required speeds and feeds; - undertaking milling operations to specifications; - checking components for conformance to specifications, and; - rectifying non-compliant product. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - sequence of milling operations to achieve the job requirements; - cutter types and tooling geometry; - consequences of varying speeds and feeds from the optimum rates calculated effects of different materials on cutting speeds and feeds; - conventional and climb milling techniques and their applications; - application of each of the following - slab, gang, shell, slot and form and slitting; - use of dividing heads and rotary tables when milling components; - procedures for using dividing heads and rotary tables on milling machines; - appropriate techniques, tools and equipment to measure milled components, and; - tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

MEMO7007C Perform milling operations

Locations:Sunshine.

Prerequisites:MEMO7005C - Perform general machiningMEMO9002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand tools

Description:This unit covers performing milling operations on a range of milling machines.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - setting up jobs using appropriate equipment; - calculating and setting cutting feeds and speeds appropriate to the job; - interpreting drawings and job instructions/specifications; - milling components to specification, and; - visually and dimensionally checking components for conformance to specification. Students will also be expected to demonstrate the following knowledge: - safety hazards associated with milling machines; - sequence of operations to achieve the job requirements; - cutter types and tooling geometry; - consequences of varying speeds and feeds from the optimum rates calculated; - effects of different materials on cutting speeds and feeds; - conventional and climb milling techniques and their applications; - the application of each of the following: slab, gang, shell, slot, form and slitting; - applications requiring the use of dividing heads and rotary tables when milling components; - the procedures for using dividing heads and rotary tables on milling machines; - appropriate techniques, tools and equipment to measure milled components; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM07008 Perform grinding operations

Locations:Sunshine.

Prerequisites:MEM07005 - Perform general machiningMEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand tools

Description:This unit of competency has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade-level skills in performing grinding operations and checking finished components for conformance to specifications. Skills covered by this unit are generally applied in occupational and work situations associated with trade-level fitting and machining work. Where the selection and use of precision mechanical measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected. Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - determining requirements for grinding job, including quantity, material, measurements and tolerances; - planning a job, including identifying required measuring instruments and equipment, safety equipment, holding devices, grinding wheels, accessories and

sequence of operations; - identifying guard, coolant and dust extraction requirements and checking equipment and coolant before grinding operation; - securely hold job for grinding operations; - performing grinding operation to specifications; - checking components for conformance to specifications, and; - rectifying non-compliant product. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - reasons for selecting the chosen sequence of grinding operations; - application of a range of holding devices/accessories; - reasons for selecting specific work holding devices, tools, techniques and equipment; - coolant selection and function; - standard grinding wheel shapes; - range of abrasive materials used in grinding wheels; factors impacting grinding wheel selection, including grain size of abrasive particles, grade or strength of bond and bond material; - grinding wheel dressing tools and their application; - internal/external cylindrical grinding process; - principles of effective clamping; - grinding operations and procedures; - function of grinding accessories, and; - tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

MEM07008D Perform grinding operations

Locations:Sunshine.

Prerequisites:MEM07005C - Perform general machiningMEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand tools

Description:This unit of competency covers determining the job requirements, observing safety precautions, selecting appropriate wheels and accessories, performing the grinding operations and checking the components for conformance to specifications.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and interpreting information on written job instructions, procedures, specifications, charts, lists, drawings and other applicable reference documents; - checking and clarifying task related information; - preparing an operational work plan; - planning and sequencing operations; - using precision measurement equipment within the scope of this unit; - setting up work using tools, techniques and equipment; - using coolant and dust extraction devices; - selecting and preparing grinding wheels and accessories appropriate to the grinding task; - performing and monitoring internal/external cylindrical grinding process; - clamping/mounting work pieces; - checking for conformance to specifications, and; - performing numerical operations and calculations within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - reasons for selecting the chosen sequence of operations; - the application of a range of holding devices/accessories; - reasons for selecting specific work holding devices, tools, techniques and equipment; - coolant selection/function; - standard grinding wheel shapes; - the range of abrasive materials used in grinding wheels; - factors impacting grinding wheel selection including grain size of abrasive particles, grade or strength of bond and bond material; - grinding wheel dressing tools and their application; - internal/external cylindrical grinding process; - principles of effective clamping; - grinding operations/procedures; - the function of any grinding accessories; - tools, techniques and equipment for checking components for conformance to specifications; - hazards

and control measures associated with grinding operations, including housekeeping; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEMO7010B Perform tool and cutter grinding operation

Locations:Sunshine.

Prerequisites:MEMO7005C - Perform general machiningMEMO7008D - Perform grinding operationsMEMO9002B - Interpret technical drawingMEM12003B - Perform precision mechanical measurementMEM12023A - Perform engineering measurementsMEM18001C - Use hand tools

Description:This unit covers performing a range of tool and cutter grinding operations.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents; - checking and clarifying task related information; - preparing operational work plan; - planning and sequencing operations; - performing numerical operations and calculations within the scope of this unit; - performing safety checks of equipment; - selecting tool and cutter grinding accessories; - balancing/dressing grinding wheels; - sharpening/shaping tools and cutters; - checking components for conformance with specifications, and; - using precision measurement equipment within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - reasons for selecting the chosen sequence of operations; - function of coolant and dust extraction devices; - criteria for grinding wheel selection; - grinding wheel dressing procedures and wheel dressing tools; - source(s) of data on tool geometry for the full range of tools and cutters, including the terminology used to describe the tool geometry; - procedures to be followed when parallel grinding on a tool and cutter grinder; - procedures to be followed when grinding tapers on a tool and cutter grinder; - tools, techniques and equipment used to check ground components for conformance; - hazards and control measures associated with tool and cutter grinding, including housekeeping; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEMO7011B Perform complex milling operations

Locations:Sunshine.

Prerequisites:MEMO7005C - Perform general machiningMEMO7007C - Perform milling operationsMEMO9002B - Interpret technical drawingMEM12003B - Perform precision mechanical measurementMEM12023A - Perform engineering measurementsMEM12024A - Perform computationsMEM18001C - Use hand tools

Description:This unit covers performing complex milling operations, including gear cutting and helical milling of a range of materials.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of

competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying work related information; - setting up work to the required level of accuracy; - determining cutting parameters; - selecting the correct milling cutter inserts for the cutting parameters in accordance with ISO standards; - calculating cutting parameters such as speeds, feeds and ratios; - setting up gear trains according to calculations and standard operating procedures; - safely operating milling machine, and; - performing complex milling operations using dividing heads and omniversal tables. Students will also be expected to demonstrate the following knowledge: - precision measuring equipment and their applications; - procedures for accurately setting up work; - ISO standards applicable to milling cutter inserts; - procedures for milling components such as racks and gears; - calculations, geometry and formulae relating complex milling activities; - accessories used for complex milling; - the applications and use of omniversal tables and differential dividing heads to complex milling operations; - hazards and control measures associated with complex milling operations, including housekeeping, and; - safe work practices and procedures.

MEMO7012B Perform complex grinding operations

Locations:Sunshine.

Prerequisites:MEMO7005C - Perform general machiningMEMO7008D - Perform grinding operationsMEMO9002B - Interpret technical drawingMEM12003B - Perform precision mechanical measurementMEM12023A - Perform engineering measurementsMEM18001C - Use hand tools

Description:This unit covers performing complex grinding operations.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing an operational work plan; - dressing grinding wheel to form and size; - performing specialised grinding operations; - reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying information; - entering routine and familiar information onto proformas and standard workplace forms; - checking for conformance to specifications; - using precision measurement equipment within the scope of this unit; - measuring components to specified tolerances, and; - performing numerical operations, geometry and calculations/formulae for specialised complex grinding operations. Students will also be expected to demonstrate the following knowledge: - reasons for selecting the chosen sequence of operations; - function and application of work holding devices/accessories appropriate to complex grinding; - appropriate techniques, tools and equipment to measure machined components; - hazards and control measures associated with complex grinding, including housekeeping; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEMO7013B Perform machining operations using horizontal and/or vertical boring machines

Locations:Sunshine.

Prerequisites:MEMO7005C - Perform general machiningMEMO9002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand tools

Description:This unit covers performing horizontal/vertical boring operations.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, quality and standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task-related information; - preparing an operational work plan; - selecting, mounting and positioning cutting tools; - calculating and selecting cutting parameters, including speeds and feeds, and; - performing horizontal and/or vertical boring operations. Students will also be expected to demonstrate the following knowledge: - reasons for selecting the chosen sequence of operations; - geometry for cutting tools for a range of materials; - calculations for determining cutting parameters and checking tolerances within the scope of this unit; - consequences of varying the speeds and feeds from the optimum rates; - procedures and techniques for carrying out horizontal and vertical boring operations; - appropriate techniques, tools and equipment to measure components; - hazards and control measures associated with horizontal and/or vertical boring, including housekeeping; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEMO7014B Perform electro-discharge (EDM) machining operations

Locations:Sunshine.

Prerequisites:Path 1 - Basic Machining MEMO7005C - Perform general machining MEMO9002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM18001C - Use hand tools Path 2 - N/C Process MEMO7024B - Operate and monitor machine/process MEMO9002B - Interpret technical drawing MEM18001C - Use hand tools

Description:This unit covers performing electro-discharge (EDM) machining operations.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - following relevant safety procedures; - obtaining and interpreting relevant drawings, job instructions and specifications; - selecting correct electrode to ensure that the finished product conforms to specification; - determining the coordinates of the work pieces relative to the machine datum; - calculating machining parameters necessary to achieve the safe, accurate and efficient machining of the work piece; - calculating the surface area of the electrode; - positioning work piece and electrode to enable the safe, accurate and efficient machining of the required feature(s); - producing components to specification, and; - checking machined components for conformance with

specifications. Students will also be expected to demonstrate the following knowledge: - safety hazards associated with the use of electro-discharge machines; - the job requirements; - the sequence of operations to achieve the job requirements; - the electrode type and geometry required to achieve the specified outcome; - the effects of material to be machined on the electrode material and geometry; - the procedures for producing electrodes for the electro-discharge machining process; - the coordinates of the feature(s) to be machined; - the coordinates of the electrode relative to the machine datum; - the procedures for operating the electro-discharge machine to produce components; - the tools, techniques and equipment appropriate to the checking of machined components; - the procedures for checking machined components for conformance to specification, and; - the reasons for selecting the tools, techniques and equipment to be used.

MEMO7015B Set computer controlled machines/process

Locations:Sunshine.

Prerequisites:Pathway 1: MEMO7024B Operate and monitor machine/process MEMO7028B Operate computer controlled machine/processes MEMO9002B Interpret technical drawing MEM12023A Perform engineering measurements MEM18001C Use hand tools Pathway 2: MEMO7005C Perform general machining MEMO9002B Interpret technical drawing MEM12023A Perform engineering measurements MEM18001C Use hand tools

Description:This unit covers mounting work holding fixtures/devices/tools, conducting pre-start checks, setting numerical and computer controlled machines, instructing the operator and replacing worn or damaged tooling.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - mounting work holding fixtures/devices/tooling; - mounting preset tooling; - verifying tool offsets and/or datum settings against job sheets or instructions; - loading and verifying programs; - conducting pre-start checks; - following safety procedures; - checking safety features and safety equipment for correct operation; - performing numerical operations and calculations/formulae within the scope of this unit; - setting and adjusting machines; - measuring and verifying first-off samples; - instructing machine operators on the sequence of operations, and; - identifying worn or damaged tooling and taking appropriate corrective action. Students will also be expected to demonstrate the following knowledge: - work holding fixtures/devices/tools and preset tooling for different machines/processes; - procedures for mounting work holding fixtures/devices/tools; - location of work holding fixtures/devices/tools relative to the machine datum or zero; - reasons for establishing tool offsets; - the purpose of datum settings; - the source(s) of information on tool offsets and datum settings; - procedures to locate and load programs; - procedures for verifying loaded programs; - pre-start checks; - safety features of the machine/process; - the purpose and function of safety features and/or safety equipment; - machine/process setting procedures; - machine operating procedures; - adjustments that can be made to the machine/process; - the effect of adjustments on machine and operational specifications; - product or part

specifications in relation to the machining process; - measuring devices for checking parts or products; - examples of worn or damaged tooling; - the effects of worn or damaged tooling; - the corrective action for worn or damaged tooling; - hazards and control measures associated with numerical and computer controlled machines, including housekeeping, and; - safe work practices and procedures.

MEMO7016C Set and edit computer controlled machines/processes

Locations:Sunshine.

Prerequisites:Path 1 MEMO7015B Set computer controlled machines/processes MEMO7024B Operate and monitor machine/process MEMO7028B Operate computer controlled machines/processes MEMO9002B Interpret technical drawing MEM12023A Perform engineering measurements MEM18001C Use hand tools Path 2 MEMO7005C Perform general machining MEMO7015B Set computer controlled machines/processes MEMO9002B Interpret technical drawing MEM12023A Perform engineering measurements MEM18001C Use hand tools

Description:This unit covers setting work holding fixtures/devices/tools, setting tooling offsets, trialling the program, instructing the operator and replacing worn or damaged tooling.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - attaching ancillary devices; - mounting work holding devices; - measuring tool offsets; - entering and verifying tool offsets; - producing and checking first-off samples; - editing programs; - instructing machine operator on the sequence of operations; - following safety procedures, and; - identifying worn or damaged tooling and taking appropriate corrective action. Students will also be expected to demonstrate the following knowledge: - ancillary equipment and its applications; - procedures for attaching the ancillary device(s) to the NC/CNC machine; - work holding devices, their application and procedures for mounting them; - location of work holding fixtures/devices/tools relative to the machine zero or datum; - reasons for establishing tool offsets; - procedures and devices for measuring tool offsets; - procedures for entering and verifying tool offset; - procedures for adjusting tool offsets; - operating procedures; - safety features and equipment; - measuring devices/ techniques for checking the parts or product; - effects of changes to cutting feeds and speeds; - the impact of changes to the sequence of operations on the part or product to be produced; - procedures for editing programs via the machine controller; - the sequence of operations of the machine/process; - examples of worn or damaged tooling; - the effects of worn or damaged tooling; - the corrective action to be taken for worn or damaged tooling; - hazards and control measures associated with computer controlled machines, including housekeeping, and; - safe work practices and procedures.

MEMO7018C Write basic NC/CNC programs

Locations:Sunshine.

Prerequisites:Path 1 MEMO7015B Set computer controlled machines/processes MEMO7016C Set and edit computer controlled machines/processes MEMO7024B

Description:This unit covers identifying computer controlled machine program elements, writing a basic program and operation sheet, and trialling the program.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - calculating coordinates of all relevant points on the part or product to be produced; - writing NC/CNC program in standard code format; - producing NC/CNC operation sheet(s); - operating NC/CNC machine safely in manual mode; - editing NC/CNC program, and; - checking parts or products for conformance to specifications. Students will also be expected to demonstrate the following knowledge: - the elements of a basic NC/CNC program; - the function of elements in controlling the operation of an NC/CNC machine; - machining operations; - type(s) of NC/CNC machine and their applications; - machining operations controlled by program; - the tool path(s) to be followed when producing a part or product; - the sequence of machining operations; - the reasons for selecting tool path(s) and sequence of operations; - the zero point of the NC/CNC machine; - standard codes used in the writing of NC/CNC programs; - applications of standard codes in NC/CNC programming; - procedures for writing NC/CNC programs in standard code format; - procedures for completing NC/CNC operation sheets; - the information to be included in NC/CNC operation sheets; - procedures for manual operation of the NC/CNC machine; - reasons for testing and proving the NC/CNC program; - procedures for editing the NC/CNC program via the machine controller; - the effects of editing on the operation of the NC/CNC machine and the part or product to be produced; - the measuring equipment/techniques used to check for conformance to specification; - hazards and control measures associated with numerical and computer controlled machines, including housekeeping, and; - safe work practices and procedures.

MEMO7019C Program NC/CNC machining centre

Locations:Sunshine.

Prerequisites:Path 1 MEMO7015B Set computer controlled machines/processes MEMO7016C Set and edit computer controlled machines/processes MEMO7018C Write basic NC/CNC programs MEMO7024B Operate and monitor machine/process MEMO7028B Operate computer controlled machines/processes MEMO9002B Interpret technical drawing MEM12023A Perform engineering measurements MEM18001C Use hand tools Path 2 MEMO7005C Perform general machining MEMO7015B Set computer controlled machines/processes MEMO7016C Set and edit computer controlled machines/processes MEMO7018C Write basic NC/CNC programs MEMO9002B Interpret technical drawing MEM12023A Perform engineering measurements MEM18001C Use hand tools

Description: This unit covers writing and trialling programs for NC/CNC machining centres.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting engineering drawings, specifications and instructions; - calculating coordinates of all relevant points on the part or product to be produced; - writing NC/CNC program in standard code format and incorporating, where appropriate, canned cycles and sub-routines; - producing NC/CNC operation sheet(s); - operating NC/CNC machine in manual mode; - editing NC/CNC program, and; - checking parts or products produced for conformance with specifications. Students will also be expected to demonstrate the following knowledge: - elements of an NC/CNC program; - the function of elements in controlling the operation of an NC/CNC machine; - machining operations to be performed in the manufacture of the given part or product; - the appropriate type(s) of NC/CNC machine to perform the required machining operations; - the machining operations to be controlled by the program to be written; - the tool path(s) to be followed when producing the part or product; - the sequence of machining operations to be programmed; - reasons for selecting the chosen tool path(s) and sequence of operations; - the zero point of the NC/CNC machine; - the canned cycles and sub-routines accessible in the particular NC/CNC machine; - the application of each canned cycle and sub-routine available; - the canned cycles and/or sub-routines to be used in the NC/CNC program; - reasons for selecting the chosen canned cycles and/or sub-routines; - standard codes used in the writing of NC/CNC programs; - applications of standard codes in NC/CNC programming; - procedures for writing NC/CNC programs in standard code format; - procedures for completing NC/CNC operation sheets; - the information to be included in NC/CNC operation sheets; - relevant Australian standards; - procedures for manual operation of the NC/CNC machine; - the reasons for testing and proving the NC/CNC program; - the procedures for editing the NC/CNC program via the machine controller; - the effects of editing on the operation of the NC/CNC machine and the part or product to be produced; - the specifications of the part or product, and; - the measuring equipment/techniques to be used to check for conformance with specifications.

MEMO7021 Perform complex lathe operations

Locations: Sunshine.

Prerequisites: MEMO7005 - Perform general machining MEMO7006 - Perform lathe operations MEMO9002 - Interpret technical drawing MEM11011 - Undertake manual handling MEM12003 - Perform precision mechanical measurement MEM12023 - Perform engineering measurements MEM12024 - Perform computations MEM13015 - Work safely and effectively in manufacturing and engineering MEM14006 - Plan work activities MEM16006 - Organise and communicate information MEM18001 - Use hand tools

Description: This unit of competency defines the skills and knowledge required to perform complex turning operations on a range of materials, including non-standard metals and alloys. Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents in performing complex lathe operations; - setting and supporting work to avoid distortion on release of clamping devices; - selecting and setting up cutting tooling or inserts as appropriate to turning operation; - calculating cutting parameters, speeds and feeds to meet job requirements; - modifying tooling and accessories, as required; - performing complex turning operations according to specifications, and; - checking machined components for conformance to specifications. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - precision measuring equipment and measuring techniques used in complex turning operations and reasons for selecting different measuring equipment; - procedures for accurately setting up work for a variety of techniques; - International Standards Organisation (ISO) or other standards applicable to cutting tool inserts; - cutting parameters for the given task; - feeds and speeds for complex turning operations; - formulae and data relating to feeds and speeds, and; - techniques and procedures for carrying out the following turning operations - single-start thread cutting, multi-start thread cutting, internal blind hole thread cutting, eccentrics, copy turning, taper turning, counter balancing work on face plates, mandrel work, trepanning and heavy (multi-tonne) shafts.

MEMO7021B Perform complex lathe operations

Locations: Sunshine.

Prerequisites: MEMO7005C - Perform general machining MEMO7006C - Perform lathe operations MEMO9002B - Interpret technical drawing MEM12003B - Perform precision mechanical measurement MEM12023A - Perform engineering measurements MEM12024A - Perform computations MEM18001C - Use hand tools

Description: This unit covers setting up work, selecting and preparing tooling and performing complex turning operations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - setting up work to the required level of accuracy using appropriate precision measuring equipment; - setting and supporting work to avoid distortion on release of clamping devices; - selecting correct cutting tools or inserts as appropriate to turning operation; - selecting and using appropriate feeds and speeds; - performing complex turning operations - counter balancing work on face plates: mandrel work; trepanning, and; heavy (multi-tonne) shafts; - calculating cutting parameters, speeds and feeds; - reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - entering

routine and familiar information onto proformas and standard workplace forms; - checking for conformance to specifications; - using precision measurement equipment; - measuring components to specified tolerances; - performing numerical operations, geometry and calculations/formulae within the scope of this unit; - following oral instructions, and; - orally reporting information. Students will also be expected to demonstrate the following knowledge: - precision measuring equipment and measuring techniques within the scope of this unit; - reasons for selecting different measuring equipment; - procedures for accurately setting up work for a variety of techniques; - ISO or other standards applicable to cutting tool inserts; - cutting parameters for the given task; - feeds and speeds for complex turning operation(s); - formulae and data relating to feeds and speeds; - techniques and procedures for carrying out the following turning operations: single-start thread cutting; multi-start thread cutting; internal blind hole thread cutting; eccentrics; copy turning, and; taper turning; - techniques and procedures for carrying out the following turning operations: counter balancing work on face plates; mandrel work; trepanning, and; heavy (multi-tonne) shafts; - hazards and control measures, including housekeeping; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM07024B Operate and monitor machine/process

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers obtaining the job instruction, conducting the pre-start checks, and operating and monitoring the machine or process.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following job sheets, standard operating procedures and other applicable workplace forms; - manual handling; - following oral instructions; - entering routine and familiar information onto proformas and standard workplace forms; - orally reporting routine information, and; - identifying deviations and faults in machine operation/process. Students will also be expected to demonstrate the following knowledge: - pre-start checks; - machine/process start-up and unloading procedures; - component/feed stock levels to ensure continuous process; - production recording and reporting requirements; - types of product fault/deviations; - consequences of improper handling and storing of finished work; - procedures to be followed in emergency situations; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with operating and monitoring machine/process.

MEM07028B Operate computer controlled machines/processes

Locations:Sunshine.

Prerequisites:MEM07024B - Operate and monitor machine/process

Description:This unit covers obtaining the job instructions, conducting the pre-start checks, and operating and monitoring the computer controlled machine or process.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge

and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - making pre-start checks; - checking safety equipment and guards for correct operation; - following safety procedures; - selecting and verifying the correct computer controlled program; - operating the computer controlled machine; - identifying and reporting machine malfunctions; - checking parts/products for conformance to specification; - monitoring the machine or process for signs of tool wear; - taking corrective action, and; - reporting part or product deviations from specification. Students will also be expected to demonstrate the following knowledge: - pre-start checks; - safety equipment and features associated with the machine/process; - safety procedures associated with the machine/process; - procedures for accessing computer controlled programs installed in the machine controller; - procedures for verifying the correct computer controlled program; - computer controlled machine operating procedures; - typical machine malfunctions; - procedures for reporting machine malfunctions; - measuring instruments/techniques; - examples of tool wear and the effect on product or part specifications; - procedures to be followed once tool wear has been detected; - replacing preset tools; - adjustments to tool offsets; - the effect of adjustments on part or product specifications; - procedures for reporting product or part deviations; - hazards and control measures associated with operating computer controlled machines/processes, including housekeeping, and; - safe workplace practices and procedures.

MEM07029B Perform routine sharpening/maintenance of production tools and cutters

Locations:Industry, Sunshine.

Prerequisites:MEM12023A - Perform engineering measurementsMEM18001C - Use hand tools

Description:This unit covers preparing, grinding, checking and reassembling production tooling.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following performance criteria: - reading and interpreting drawings and instructions; - planning a sequence of operations; - selecting and using appropriate tools, and; - entering routine and familiar information on to proforma and standard workplace forms. Students will also be expected to demonstrate the following knowledge: - sequence of operations to be performed; - function of coolant and dust extraction devices; - hazards associated with tool and cutter grinding operations; - the standard grinding wheel shapes; - range of abrasive materials used in grinding wheels; - the effect of the following grinding wheel features on wheel selection and application: grain size of abrasive particles; grade or strength of bond material, and; structure of grain spacing and dressing processes; - function and application of the full range of tool and cutter grinding accessories; -

preparation requirements for tool maintenance; - requirements for checking: dimensions and tolerances, and; geometry and tolerances; - surface finish; - use and application of personal protective equipment; - safe work practices and procedures.

MEM07032B Use workshop machines for basic operation

Locations: Industry, Sunshine.

Prerequisites: MEM18001C - Use hand tools

Description: This unit covers basic machining in a maintenance or jobbing environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following routine and familiar information on written job instructions, standard operating procedures and other applicable reference documents; - selecting the appropriate machine for the given task; - setting up machines and tooling within the scope of this unit, including speeds and feeds; - sharpening tools within the scope of this unit; - operating machines within the scope of this unit; - checking finished components; - checking and clarifying task-related information, and; - measuring components to specification within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - cutting tool sharpening methods and techniques; - tool geometry within the scope of this unit; - units of measurement, tool geometry and numerical operations within the scope of this unit; - safe operation of tool sharpening equipment; - consequences of incorrect sharpening; - machine set-up; - consequences of incorrect speeds and feeds; - procedures for operating workshop machines; - reasons for poor surface finish; - hazards and control measures; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM08007B Control surface finish production and finished product quality

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit covers applying the principles of quality assurance, applying research and quality information to the production process, and performing quality tests to industry standards.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and interpreting quality assurance standards, test data other applicable reference documents; - liaising between the production section and the control laboratory; - checking and clarifying information; - using effective communication skills and terminology for conveying and discussing task-related information; - determining and recommending process changes; - using tests to calculate process parameters on the basis of test and production data collected, and; - using appropriate tests, testing equipment and

techniques to test the surface coating for conformance with specification. Students will also be expected to demonstrate the following knowledge: - enterprise and industry quality assurance standards that apply to surface finish production and product quality; - the role of the control laboratory and procedures for liaising with internal/external control laboratories; - surface finish specifications; - characteristics of deviations of test/production data and their causes; - the procedures, calculations and formulae for determining process parameters; - the effect of varying process parameters on the specification of the surface finish; - surface coating tests and the procedures, equipment and techniques necessary to carry out those tests; - hazards and control measures within the scope of this unit; - use and application of personal protective equipment; - safe work practices and procedures, and; - manual handling techniques.

MEM08009C Make up solutions

Locations: Sunshine.

Prerequisites: MEM13003B - Work safely with industrial chemicals and materials

Description: This unit covers making up solutions and maintaining process specific equipment, such a probes and electrodes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing operational plan; - calculating volumes and determining quantities required; - preparing appropriate solutions; - inspecting probes and electrodes; - calibrating meter probes; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings; - following oral instructions; - undertaking calculations using formulae, and; - entering routine and familiar information onto profformas and standard workplace forms. Students will also be expected to demonstrate the following knowledge: - reasons for selecting chosen sequence of operations; - solution concentrations; - procedures for making up solution; - procedures for inspecting probes and electrodes; - procedures for recalibrating meter probes; - the equipment and techniques necessary to recalibrate meter probes; - use and application of personal protective equipment; - safe work practices and procedures, and; - relevant hazards and control measures related to the competency.

MEM09002 Interpret technical drawing

Locations: Sunshine.

Prerequisites: MEM12023 - Perform engineering measurements MEM12024 - Perform computations MEM13015 - Work safely and effectively in manufacturing and engineering MEM16006 - Organise and communicate information

Description: This unit of competency defines the skills and knowledge required to interpret technical drawings. Technical drawings may utilise perspective, exploded views or hidden view techniques and may include symbol glossaries. Drawings are provided to AS 1100 Technical drawing or AS 1102 Graphical symbols and their equivalents from the full range of engineering disciplines. Where any technical drawing, sketch, chart, diagram is only used as a technique for communication, then this unit does not apply: unit MEM12023 Perform engineering measurements or unit MEM16006 Organise and communicate information should be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at

the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - selecting, checking and validating technical drawing against job requirements or equipment; - interpreting technical drawing through recognition of components, assemblies, objects and symbols; - identifying dimensions; - applying drawing conventions appropriate to engineering discipline, and; - compiling a materials list. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - application of AS 1100 Technical drawing or AS 1102 Graphical symbols; - conventions used in technical drawings; - correct interpretation of instructions contained in drawings, and; - materials from which drawing object(s) are made and their features and manufacturing and assembly requirements.

MEMO9002B Interpret technical drawing

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers interpreting technical drawing applying to any of the full range of engineering disciplines.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - checking the drawing against job requirements/related equipment in accordance with standard operating procedures; - confirming the drawing version as being current in accordance with standard operating procedures; - where appropriate, obtaining the current version of the drawing in accordance with standard operating procedures; - reading, interpreting information on the drawing, written job instructions, specifications, standard operating procedures, charts, lists and other applicable reference documents; - checking and clarifying task related information, and; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - application of AS1100.101 in accordance with standard operating procedures; - relationship between the views contained in the drawing; - objects represented in the drawing; - units of measurement used in the preparation of the drawing; - dimensions of the key features of the objects depicted in the drawing; - understanding of the instructions contained in the drawing; - the actions to be undertaken in response to those instructions; - the materials from which the object(s) are made; - any symbols used in the drawing as described in range statement; - hazard and control measures associated with interpreting technical drawings, including housekeeping, and; - safe work practices and procedures.

MEMO9004B Perform electrical/electronic detail drafting

Locations:Sunshine.

Prerequisites:MEMO9002B Interpret technical drawing MEMO9003B Prepare basic engineering drawing

Description:This unit covers producing electrical/electronic drawings under supervision.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - drawing electrical/electronic schematics correctly and indicating the relative position of the components; - producing electrical/electronic drawings with all relevant specifications; - producing electrical/electronic schematics/drawings in conformance with AS1102 or equivalent; - obtaining the circuit/component specifications; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable documents; - planning and sequencing operations; - checking and clarifying task related information, and; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - relative position of electrical/electronic components; - symbols used in electrical/electronic schematics and drawings; - specifications of all components; - circuit specifications; - requirements of AS1102 or equivalent with respect to electrical/electronic schematics/drawings; - design specifications of the circuit/components; - appropriate components and materials from supplier/manufacturers' catalogues; - reasons for selecting the chosen components and/or materials; - hazards and control measure associated with performing electrical/electronic detail drafting, including housekeeping, and; - safe work practices and procedures.

MEMO9008B Perform advanced structural detail drafting

Locations:Sunshine.

Prerequisites:MEMO9002B - Interpret technical drawing

Description:This unit covers producing fabrication/structural assembly, fabrication/structural layout drawings to AS 1100 or equivalent.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - producing all drawings in accordance with AS1100 or equivalent; - representing the function of each component within the assembly/layout in accordance with design specifications/operational requirements; - manufacturing, fabricating and assembling all components in accordance with the specifications contained in the drawings; - where appropriate, correctly orientating all components to surrounding structures and services; - where appropriate, modifying drawings to ensure conformance to

specification AS1100 or equivalent, and/or changes to production, assembly and fabrication requirements and/or the availability of standard hardware items etc.; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - checking for conformance to specifications, and; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - function of each component within the assembly/layout; - manufacturing, fabrication and assembly procedures to be used in producing the components/assemblies; - reason for ensuring that all components are correctly orientated to existing or proposed structures and services; - reasons for updating/modifying drawings to incorporate changes to specifications, production, assembly and fabrication methods and availability of standard hardware items, etc.; - hazards and control measures associated with performing advanced structural detail drafting, including housekeeping, and; - safe work practices and procedures.

MEM09009C Create 2D drawings using computer aided design system

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM16008A - Interact with computing technology

Description:This unit covers preparing the CAD environment, creating 2D drawings, and producing output including linked bills of materials.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining all relevant manuals, instructions and operation procedures for the CAD software and hardware being used; - where appropriate, customising the relevant system variables to suit the applicable drafting standards/procedures; - where appropriate, customising menus to suit the applicable drafting standards/procedures; - where appropriate, customising the system defaults to suit the applicable drafting standards/procedures; - where appropriate, developing macros; - creating drawings using the appropriate drawing features of the software system; - where appropriate, linking drawing entities to database attributes; - producing detailed views of the object being drawn; - printing drawing files at the appropriate scale; - saving drawing files in the appropriate format; - producing bills of material from the drawing files/database; - extracting supplementary data from the drawing file to meet job requirements; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - checking for conformance to specifications, and; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - CAD software system; - system variables that can be customised; - procedures for customising identified system variables; - reasons for customising the system variables; - applicable drafting standards/procedures; - procedures for customising menus; - reasons for customising menus; - procedures for customising system defaults; - reasons for customising system defaults; - procedures for developing macros; - reasons for developing macros; - drawing features of the CAD software

system; - reasons for using specialised software features; - procedures for linking drawing entities to database attributes; - appropriate drawing scales; - procedures for printing drawing files; - procedures for creating additional views of the object being drawn; - procedures for saving drawing files; - various formats in which drawing files can be saved; - reasons for using different formats when saving drawing files; - procedures to produce bills of material; - procedures to extract data with respect to drawn shapes/features; - properties of shapes/sections/ features that can be extracted from the drawing file; - hazards and control measures associated with using computer aided design system, including housekeeping, and; - safe work practices and procedures.

MEM09022A Create 2D code files using computer aided manufacturing system

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM16008A - Interact with computing technologyMEM12023A - Perform engineering measurements

Description:This unit covers producing 2D CAM code files, managing files, managing tools and associated customisation of installed software including the use of macros, menus and default settings.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting relevant manuals, instructions and operating procedures; - customising relevant system variables; - customising menus and system defaults; - developing macros; - manipulating models; - linking model entities to database attributes; - creating manufacturing data for various operations and processes; - importing CAD files, and; - saving and managing CAM files. Students will also be expected to demonstrate the following knowledge: - model features of the CAM software system; - operation of the CAM software system; - the system variables and procedures for customising; - procedures for customising user interface; - procedures for customising system defaults; - procedures for developing macros; - procedures for linking model entities to database attributes; - CAD file conversion; - CAM file formats, and; - procedures for saving and managing CAM files.

MEM09157A Perform mechanical engineering design drafting

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers the preparation of design drawings or graphics used in the mechanical engineering, manufacturing engineering and related industry sectors. The unit includes working with a design brief or concept prepared by an engineer or other designer as well as the specification of items, functions, limits, fits, tolerances, and other engineering information required for the eventual production of fully detailed drawings. The unit requires the design drawing to be performed using appropriate computer-aided design (CAD) and other drafting techniques that include sketching, computer graphics and the application of drawing standards.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reviewing mechanical or maintenance engineering applications for required features, functions and context of engineering design drawings; - determining the range of design drawings required; - using CAD systems, comparing and selecting available software, functions and features appropriate to the design drawing task; - developing orthographic, isometric and other 3-D graphical representations; - representing mechanical components and assemblies using sketching and computer graphics; - representing mechanical components and features using a comprehensive range of standard conventions and graphical techniques; - representing a range of mechanical assemblies using standard graphical representations; - selecting and applying design criteria to meet requirements of the design brief; - engaging appropriate licensed technical and professional assistance for advice, as required, and reporting results of review and the application of graphics techniques, and; - providing documentation, images and files according to job and enterprise procedures. Students will also be expected to demonstrate the following knowledge: - availability and features of standards related to mechanical plant and devices, design, maintenance and alteration; - AS 1100 Technical drawing, and means of locating and referencing other relevant standards; - availability and features of standards related to mechanical plant and devices, design, maintenance and alteration; - application of relevant standard for mechanical designs; - methods of representing mechanical components and assemblies using sketching and computer graphics, including all relevant symbols, conventions, abbreviations, and so on; - current and traditional methods of documentation generation and control; - worksite procedures for the processing and filing of graphics, specifications and operating and maintenance instructions/manuals, and; - WHS and regulatory requirements, codes of practice, risk assessment and registration requirements relevant to mechanical and maintenance applications.

MEM10001C Erect structures

Locations: Industry, Sunshine.

Prerequisites: Path 1 MEM05007C Perform manual heating and thermal cutting MEM05012C Perform routine manual metal arc welding MEM05015D Weld using manual metal arc welding process MEM05051A Select welding processes MEM05052A Apply safe welding practices MEM09002B Interpret technical drawing MEM12007D Mark off/out structural fabrications and shapes MEM12023A Perform engineering measurements MEM18001C Use hand tools MEM18002B Use power tools/hand held operations Path 2 MEM05007C Perform manual heating and thermal cutting MEM05017D Weld using gas metal arc welding process MEM05050B Perform routine gas metal arc welding MEM05051A Select welding processes MEM05052A Apply safe welding practices MEM09002B Interpret technical drawing MEM12007D Mark off/out structural fabrications and shapes MEM12023A Perform engineering measurements MEM18001C Use hand tools MEM18002B Use power tools/hand held operations

Description: This unit covers inspecting and preparing the erection site and erecting structures.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - inspecting sites; - using measurement equipment within the scope of this unit; - undertaking numerical operations and calculations within the scope of this unit; - using tools and equipment associated with erecting structures; - checking and clarifying task-related information; - communicating and liaising with appropriate authorities; - planning job and site preparation; - preparing site; - handling materials; - inspecting materials/structure; - interpreting drawings, plans and specifications; - making authorised alterations, corrections or adjustments to the site and/or structure, and; - completing reports and documentation. Students will also be expected to demonstrate the following knowledge: - site management requirements; - site preparation and levelling requirements; - range of technique/equipment which can be used to check the site levels; - procedures to be followed if the location, dimensions and/or levels of the site do not comply with specifications; - procedures for making alterations/corrections; - methods/techniques for a range of alterations/corrections; - legislative and regulatory guidelines; - materials applications, properties and characteristics; - materials specifications; - the procedures for checking the components of the structure; - correct erection sequence; - methods and selection of fixing/fastening the components of the structure; - methods and selection of lifting/moving the components of the structure; - methods and selection of locating/holding the components; - procedures for checking the structure for conformance; - procedures to be followed if the structure does not comply; - adjustments which can be made to bring the structure into specification; - approval process for final alterations; - required documentation; - reporting procedures; - hazards and control measures associated with erecting structures; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM10002B Terminate and connect electrical wiring

Locations: Industry, Sunshine.

Prerequisites: MEM09002B - Interpret technical drawing MEM12002B - Perform electrical/electronic measurement MEM18001C - Use hand tools

Description: This unit covers terminating, disconnecting or reconnecting electrical wiring and circuits.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - checking materials for conformance to specifications; - checking existing and new installation site for correct location and specification; - making terminations/connections to specification, manufacturer and regulatory requirements; - adjusting and fixing wiring supports; - marking, tagging and labelling cables, wires, conductors and connections to specification; - undertaking testing of wiring and connections for conformance to specification; - using language and literacy skills to complete short reports and required documentation; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures May include drawings, and; - using measurements for checking connections and components. Students will also be expected to demonstrate the following knowledge: - safety hazards associated with the termination and connection of electrical wiring; - statutory and

regulatory requirements associated with the termination and connection of electrical wiring; - wiring support and/or protection requirements and specifications; - relevant manufacturer requirements; - specifications and methods for terminating different materials; - wiring support techniques and alternatives; - marking, tagging and labelling requirements for cables, wires, conductors and connections; - tests for wiring and connections; - data to be recorded/reported and the frequency of recording/reporting; - requirements for approval to work, and; - use and application of personal protective equipment for terminating and connecting electrical wiring.

MEM10003B Install and test electrical wiring and circuits up to 1000 volts A.C. and 1500 volts d.c.

Locations:Sunshine.

Prerequisites:MEM09002B Interpret technical drawing MEM10002B Terminate and connect electrical wiring MEM12002B Perform electrical/electronic measurement MEM12023A Perform engineering measurements MEM18001C Use hand tools MEM18002B Use power tools/hand held operations MEM18049C Disconnect/reconnect fixed wired equipment (up to 1000 volts a.c. and 1500 volts d.c.)

Description:This unit covers installing and testing electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting circuits, drawings, specifications and instructions; - preparing work plans in accordance with legislative and regulatory requirements and standard operating procedures and hazard and safety requirements; - following relevant legislative and regulatory requirements and standard operating procedures to work practices; - using measurement for installing and testing electrical wiring and circuits; - checking materials for conformance to specification; - selecting cables; - installing cables/wires/conduit/enclosures and support systems; - marking and labelling cabling for identification; - testing wiring/systems and enclosures for compliance with specifications, relevant regulatory and legislative requirements; - energising and testing installation; - identifying and rectifying faults; - completing reports and documentation using short descriptions, comments and relevant terminology; - considering potential points of danger when planning a rescue or provision of assistance; - isolating electrical hazards in accordance with safety procedures, and; - applying procedures for the movement/treatment of injured. Students will also be expected to demonstrate the following knowledge: - hazard control measures and safety requirements applicable to the work undertaken; - work permit requirements; - safe work practices and procedures; - cable selection/support fit for purpose; - the legislative and regulatory requirements appropriate to the work to be done; - work planning procedures; - procedures to be followed if materials and or supports do not conform to specification; - techniques, tools and equipment required to install cables, wires, conduit, enclosures and support systems; - the marking and/or labelling requirements for cabling; - the reasons for marking and/or labelling cables; - the procedures and equipment to test before and after energising wiring and systems; - reasons for carrying out all tests; - common wiring system faults; - method(s) for rectifying faults; - the documentation to be completed; - dangers present in electrical

rescue; - appropriate standards and procedures for first aid recording procedures; - recognised procedures for the movement and treatment of injured persons; - local medical and rescue services; - the reasons for recording first aid, and; - requirements for approval to work.

MEM10004B Enter and change programmable controller operational parameters

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM16008A - Interact with computing technology

Description:This unit covers entering and changing programmable controller operational parameters, including specifications and procedures gained from a range of circuit drawings, engineering data sheets, step print out, manufacturers' procedure and data books.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - selecting appropriate data transfer device(s)/procedure(s) and transferring the software accurately; - verifying machine operation or process output; - obtaining specific changes required to operating parameters within the software program; - adjusting/changing operational parameters; - checking machine operation or process output; - reporting; - identifying problems; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - checking for conformance to specifications, and; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - appropriate and correct program loading techniques and reasons for selecting the chosen program loading technique; - checks to be undertaken during and after downloading; - reasons for checking that the data transfer is accurate and complete; - action to be taken if data transfer is inaccurate and/or incomplete; - specifications relating to the transferred data; - correct operation of the machine or process; - specific machine operations or process outputs being controlled by the programmable controller; - specific problems in accordance with standard operating procedures; - operating parameters within the software program; - standard operating procedures; - specification to be met and functions to be controlled and machine operation or process output; - reporting process; - procedures to change parameters and their implications; - hazard and control measures associated with entering and changing programmable controller operational parameters, including housekeeping, and; - safe work practices and procedures.

MEM10005B Commission programmable controller programs

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM10004B - Enter and change programmable controller operational parametersMEM16008A - Interact with computing technology

Description:This unit covers adjusting and commissioning the programmable controller program to specification only.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining all relevant circuit drawings, ladder diagrams, engineering data sheets, manufacturers' procedures and data sheets; - complying with specifications and adjusting programs; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - checking external inputs for conformance to specification using appropriate techniques/equipment; - checking process operation, and editing and adjusting as required to ensure conformance to specification, and; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - format of the program; - program specifications; - procedures and techniques for checking that program instructions comply with specifications; - procedures for dealing with any non-conformances with specifications; - procedures for setting software timers and counters; - function of software timers and counters; - procedures for manually stepping through the program; - checks that can be made of program outputs; - techniques to be used in checking program outputs; - measurements to be taken during the checking of program outputs; - instruments to be used to take measurements; - procedures for editing programs; - checks to be made to ensure that the external inputs comply with specifications; - techniques and equipment to be used in checking external inputs; - procedures for running the program; - specifications and operational processes controlled by the programmable logic controller; - techniques and equipment to be used to check the operational process; - adjustments that can be made to the program; - effects of adjustments on the operational processes controlled by the program; - procedures to be followed when adjusting programs; - hazards and control measures associated with commissioning programmable controller programs, including housekeeping, and; - safe work practices and procedures.

MEM10006B Install machine/plant

Locations: Industry, Sunshine.

Prerequisites: MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations MEM18003C - Use tools for precision work MEM18006C - Repair and fit engineering components MEM18009B - Perform levelling and alignment of machines and engineering components MEM18055B - Dismantle, replace and assemble engineering components

Description: This unit covers installing machine/plant where the equipment being installed requires substantial modification to the existing site and/or connecting equipment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be

expected to demonstrate the following required skills: - interpreting and following information on written job instructions, manufacturer specifications, standard operating procedures, charts, lists, reports and other applicable reference documents; - interpreting layout drawings and specifications; - checking and clarifying information; - orally reporting routine information; - planning and sequencing tasks; - locating and verifying site and levels for installation; - identifying non-compliances; - preparing surfaces prior to commencing the installation; - completing proformas, standard workplace forms, workplace reports and other applicable documents; - checking for conformance to specifications; - measuring to specified tolerances, and; - performing numerical operations, geometry and engineering calculations/formulae within unit's scope. Students will also be expected to demonstrate the following knowledge: - installation specification of the machine/plant - procedures to follow if the location, dimensions and/or levels of the site do not comply with the specifications; - procedures for checking whether the installed machine/plant conforms to specifications; - materials and components to be used in the installation of the machine/plant; - applicable codes and standards; - installation sequence; - methods to locate, fix/fasten machine/plant; - methods of lifting/moving machine/plant and components; - techniques, tools and equipment to measure site and machine/plant installation; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with installing machine/plant, including housekeeping.

MEM10007C Modify control systems

Locations: Sunshine.

Prerequisites: Path 1 MEM09002B Interpret technical drawing MEM10002B Terminate and connect MEM electrical wiring MEM10003B Install and test electrical wiring and circuits up to 1000 volts a.c./1500 volts d.c. MEM12002B Perform electrical/electronic measurement MEM12004B Perform precision electrical/electronic measurement MEM12023A Perform engineering measurements MEM18001C Use hand tools MEM18002B Use power tools/hand held operations MEM18048B Fault find and repair/rectify basic electrical circuits MEM18049C Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c. MEM18051B Fault find repair/rectify complex electrical circuits Path 2 Please refer to training.gov.au. Path 3 Please refer to training.gov.au. Path 4 Please refer to training.gov.au. Path 5 Please refer to training.gov.au. Path 6 Please refer to training.gov.au. Path 7 Please refer to training.gov.au. Path 8 Please refer to training.gov.au.

Description: This unit covers planning the commissioning procedure, assessing the control system performance, adjusting the control system, and undertaking commissioning modifications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining, reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - obtaining necessary approvals; - checking system components against specification; - calibrating and checking test equipment to be used; - energising and checking the components and/or the control loop/system for correct supply; - checking and clarifying task-related information; - adjusting control loop/system

components; - conducting appropriate measurements/tests; - carrying out authorised modifications to the control system and/or process components; - checking for conformance to specifications; - completing reports and documentation on commissioning activity, and; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - work to be undertaken; - control system format; - operational intent of the processes being controlled by the control system; - specifications of the control system and the processes being controlled; - regulatory and legislative requirements associated with the commissioning procedure; - procedures for commissioning the control system; - procedures to ensure that control characteristics, application and process specifications are achieved; - components of the operational processes; - installation specifications for each component of the operational processes; - measuring techniques and equipment appropriate to the measurements to be taken; - test equipment and techniques appropriate to the commissioning of the control; - calibration procedures for the selected test equipment; - procedures for energising components and/or the control loop/system; - supply requirements of components and the control loop/system; - recording requirements for readings/measurements taken; - adjustments that can be made to the control loop/system components; - effects of adjustments on the control characteristics and operational processes; - measurements/tests to be undertaken to verify control system and process operation; - reasons for selecting the chosen measurements/tests; - procedures to be followed if the operational specifications of the control system and/or process cannot be achieved; - effect of changes to control system components on system performance; - appropriate authority to approve any modifications; - reporting requirements associated with the commissioning of control systems; - requirements for recording modifications; - reasons for recording modifications; - hazard and control measures associated with modifying control systems, including housekeeping, and; - safe work practices and procedures.

MEM10008B Undertake commissioning procedures for plant and/or equipment

Locations: Sunshine.

Prerequisites: MEM09002B - Interpret technical drawing MEM10006B - Install machine/plant MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations MEM18003C - Use tools for precision work MEM18006C - Repair and fit engineering components MEM18009B - Perform levelling and alignment of machines and engineering components MEM18055B - Dismantle, replace and assemble engineering components Path 2 Please refer to training.gov.au. Path 3 Please refer to training.gov.au. Path 4 Please refer to training.gov.au.

Description: This unit covers undertaking commissioning work on internally or externally located plant and/or equipment

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining work approvals and permits; - selecting measuring/testing devices; - safely taking measurements/readings; - recording variations in machine/plant performance from specification; - making appropriate adjustments to machine/plant; - completing short

reports using relevant technical terminology; - reading, interpreting and following information on written job instructions, specifications, manufacturer documents, commissioning procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - entering information onto standard workplace forms and reports; - checking for conformance to specifications; - using precision measurement equipment, and; - undertaking numerical operations and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - the sequence of events in the commissioning of the machine/plant; - performance tests appropriate to the machine/plant to be commissioned; - measurements required to ensure conformance to specifications and correct points at which measurements are to be taken; - appropriate adjustments to bring the machine/plant into line with operational specifications based on engineering principles or appropriate technical advice; - reporting requirements relevant to the machine/plant being commissioned; - use and application of personal protective equipment; - safe work practices and procedures, and; - relevant hazards and control measures related to the competency.

MEM10009B Install refrigeration and air conditioning plant and equipment

Locations: Industry, Sunshine.

Prerequisites: MEM05006C - Perform brazing and or silver soldering MEM09002B - Interpret technical drawing MEM10010B - Install pipework and pipework assemblies MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations MEM18055B - Dismantle, replace and assemble engineering components MEM18086B - Test, recover, evacuate and charge refrigeration systems

Description: This unit covers installing refrigeration/air conditioning systems in commercial, industrial, marine and transport applications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking task-related information; - checking the site for correct location, dimensions and levels; - detecting and reporting non-conformance to specifications; - preparing surfaces for installation; - checking for conformance to specifications; - preparing plant for start-up; - adjusting refrigeration plant and equipment, and; - using appropriate tools, techniques and equipment. Students will also be expected to demonstrate the following knowledge: - procedures for non-compliances; - procedures for checking the refrigeration/air conditioning plant and associated equipment; - procedures for making alterations, corrections or adjustments to the refrigeration/air conditioning plant and associated equipment; - correct sequential installation of all components; - methods of fixing/fastening and locating/holding the components; - procedures for checking refrigeration systems for leaks; - procedures for checking refrigeration/air conditioning plant and associated equipment prior to start-up; - procedures for adjusting the refrigeration/air conditioning plant and associated equipment to specification; - codes and regulations relevant to the refrigeration/air conditioning industry including environmental and ozone and greenhouse substance legislation; - hazards and control measures

associated with installing refrigeration and/or air conditioning plant and associated equipment, including housekeeping, and; - safe work practices and procedures.

MEM10010B Install pipework and pipework assemblies

Locations: Industry, Sunshine.

Prerequisites: MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations

Description: This unit covers planning, preparing and installing pipework and assemblies.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting and following information on specifications, standard operating procedures and other applicable reference documents; - planning and sequencing installation; - preparing the site; - preparing joining surfaces; - purging pipework and assembly; - capping and sealing pipework and assembly; - installing enclosure/hanging/supporting assemblies; - assembling and installing pipework and ancillaries, and; - testing installed pipework and rectifying leaks. Students will also be expected to demonstrate the following knowledge: - installation techniques; - site and safety requirements; - cleaning procedures and the applications and precautions for using solvents/cleaning material; - purging techniques, applications and precautions; - capping/sealing pipework and assembly methods; - identification of location/layout of pipework and assemblies and application and characteristics of enclosure/hanging/supporting systems; - pipework, ancillary installation and joining procedures; - leak testing applications and uses; - regulations and legislative requirements; - hazards and control measures; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM11005B Pick and process order

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit covers receiving an order, picking an order, checking against documentation, placing in the correct area and completing enterprise documentation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and interpreting routine information on written orders and standard operating procedures. May include simple drawings; - using materials handling equipment in a warehouse; - identifying dangerous goods; - following oral instruction, and; - entering routine and familiar information onto proformas and standard workplace forms. Students will also be expected to demonstrate the following knowledge: - safe manual handling procedures; - reasons for selecting materials handling equipment; - safe storage and

handling procedures for a range of products including dangerous goods; - applicable Material Safety Data Sheets; - applicable industry standards, national/Australian standards, NOHSC guidelines, State/Territory regulatory codes of practice/standards; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with picking and processing orders.

MEM11006B Perform production packaging

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit covers packaging and labelling of finished goods for storage or transport.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and interpreting routine information on written job instructions and standard operating procedures. May include simple drawings; - determining packaging requirements from safety, storage conditions, site and legislative requirements; - labelling packaged items; - handling and storing products; - using scanning devices, if required; - following oral instruction; - entering routine and familiar information on to proforma and standard workplace forms, and; - orally reporting routine information. Students will also be expected to demonstrate the following knowledge: - labelling procedures and standards; - storage and recording procedures; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with production packaging.

MEM11007B Administer inventory procedures

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit covers using inventory procedures and requisitioning goods.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on requisition, purchase, shipping and invoice documentation, standard operating procedures, charts, lists and other applicable reference documents; - accessing and maintaining manual and electronic inventory information; - undertaking numerical operations and calculations within the scope of this unit; - organising information; - recording and filing information; - managing time; - checking for conformance to specifications; - measuring to specified tolerances, and; - entering information on to manual and electronic proformas and standard workplace documents. Students will also be expected to demonstrate the following knowledge: - features and application of inventory systems such as Just-in-Time, KANBAN; - inventory procedures; - safe work practices and procedures; - use and application of

personal protective equipment; - hazards and control measures associated with administering inventory procedures, and; - measurement techniques, tools and equipment for administering inventory procedures.

MEM11008B Package materials (stores and warehouse)

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers determining packaging requirements, packaging and labelling items in a stores and warehousing environment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - selecting packaging methods and materials to suit given products; - effectively communicating with the production and dispatch personnel; - undertaking numerical operations and calculations within the scope of this unit; - managing time; - following procedures for labelling packaged products, and; - entering routine and familiar information onto proformas and standard workplace forms. Students will also be expected to demonstrate the following knowledge: - packaging methods, materials and legislation; - weights, measures and capacities; - types of transport; - knowledge of organisational receipt and dispatch functions; - applicable material safety data sheets (MSDS); - labelling procedures and standards; - storage and recording procedures; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with packaging materials.

MEM11010B Operate mobile load shifting equipment

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers operating mobile load shifting equipment, including moving and placing loads.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting and following routine information on standard operating procedures. May include simple drawings, tables and figures, written documents; - performing routine safety, basic service and maintenance procedures; - calculating load masses and safe working loads; - selecting appropriate load shifting device; - following oral instructions; - safely operating load shifting devices and shifting loads; - working with others; - interpreting communication signals and instructions; - determining load masses and equipment requirements; - determining mass of irregular shaped loads; - demonstrating emergency operating procedures, and; - communicating faults, malfunctions and workplace hazards, reports and maintenance of operational records. Students will also be expected to demonstrate the following knowledge: - pre-operational checks; - design specifications of load shifting device; - load chart; - licensing requirements; -

load protection; - safe load placement; - operational environment; - appropriate permits; - hazards and control measures associated with load shifting and equipment; - use and application of personal protective equipment; - safe work practices and procedures; - workplace communication procedures, and; - manufacturers' specifications.

MEM11011 Undertake manual handling

Locations:Sunshine.

Prerequisites:MEM13015 - Work safely and effectively in manufacturing and engineering/MEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to lift and move materials manually and/or using basic manual handling equipment in a wide range of environments. Maximum manual lifting weight is limited to Safe Work Australia recommendations. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - assessing the risks associated with lifting materials manually and determining the most appropriate technique, and; - selecting and using the appropriate equipment to move/shift materials ensuring safety of personnel and security of material. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - manual handling techniques, including individual or team lifting; - appropriate equipment associated with move/shift materials; - hazards of incorrect procedures, and; - Safe Work Australia standards for manual handling.

MEM11011B Undertake manual handling

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers lifting and moving materials manually.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying relevant standards and lifting techniques; - assessing weight of material; - selecting lifting equipment; - working and communicating in teams; - assessing risks; - planning; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings, and; - following oral instructions. Students will also be expected to demonstrate the following knowledge: - manual handling techniques; - hazards of incorrect procedures; - NOHSC standards for manual handling, and; - safe work practices and procedures.

MEM11013B Undertake warehouse receipt process

Locations:Sunshine.

Prerequisites:MEM11011B - Undertake manual handling

Description:This unit covers checking supplier documentation, confirming the quality and quantity of received goods, arranging the unloading of goods and preparing, locating and storing goods

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting information on job instructions, orders, supplier documents, signs, codes, labels and other applicable reference documents; - checking orders, quantities, descriptions and supplier documentation; - maintaining goods inwards documentation; - manual handling within the scope of this unit; - selecting and using appropriate lifting equipment; - operating lifting equipment for goods inwards; - selecting storage procedures and processes, including labelling, and; - entering information onto manual and electronic workplace documents. Students will also be expected to demonstrate the following knowledge: - relevant legislation, regulations and codes; - checking and recording processes and procedures; - handling of hazardous goods; - storage procedures and processes, including labelling; - safe work practices and procedures, and; - hazards and control measures associated with undertaking warehouse receipt processes.

MEM11014B Undertake warehouse dispatch process

Locations:Sunshine.

Prerequisites:Path 1 MEM11006B Perform production packaging MEM11011B Undertake manual handling Path 2 MEM11008B Package materials (stores and warehouse) MEM11011B Undertake manual handling

Description:This unit covers arranging and consolidating orders, preparing and dispatching goods

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting information on job instructions, orders, supplier documents, signs, codes, labels and other applicable reference documents; - checking orders, quantities, descriptions and supplier documentation; - packing, shrink-wrapping and/or palletising goods for dispatch; - maintaining dispatch documentation; - manual handling; - selecting and using lifting equipment appropriate to the load; - selecting dispatch procedures and processes, including labelling, and; - entering information onto manual and electronic workplace documents. Students will also be expected to demonstrate the following knowledge: - relevant legislation, regulations and codes; - checking and recording processes and procedures; - handling of hazardous goods, storage procedures and processes, including labelling; - safe work practices and procedures, and; - hazards and control measures associated with undertaking warehouse dispatch processes.

MEM12001B Use comparison and basic measuring devices

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers sorting items using basic comparison measuring equipment, and maintaining the equipment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - using device in accordance with standard operating procedures; - storing and maintaining devices; - using basic numeracy skills for undertaking comparison measurements, and; - following oral instructions and written standard operating procedures. Students will also be expected to demonstrate the following knowledge: - use and application of various comparison or measurement devices; - procedures for the correct use of devices; - procedures for maintaining and storing devices; - hazards and control measures associated with conducting measurements, including housekeeping, and; - safe work practices and procedures.

MEM12002B Perform electrical/electronic measurement

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers selecting and using basic electro-measuring devices to check variables and the ability to maintain the devices.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - setting and using electro-measuring devices; - obtaining and interpreting specified electrical measurements; - selecting appropriate measuring devices; - performing arithmetic operations required to convert measurements into appropriate units of measurement; - maintaining and storing electro-measuring devices, and; - reading and interpreting information on standard operating procedures. Students will also be expected to demonstrate the following knowledge: - terminology and concepts relating to electrical/electronic measurement; - the selection of different measuring devices for particular applications within the scope of this unit; - specifications of selected electro-measuring devices; - the application of the settings on each electro-measuring device; - the procedures for obtaining electrical/electronic measurements; - procedures for connecting electro-measuring devices to circuitry; - the correct scale for each setting on the electro-measuring device; - the scale factor to be applied to readings taken from the electro-measuring device; - the units applying to electrical and electronic measurements; - maintenance and storage requirements for a range of electro-measuring devices; - that devices can impact on the circuit condition; - relevant State/Territory or Commonwealth legislative and regulatory requirements, industry standards, NOHSC guidelines and code of practice; - hazards and control measures associated with

electrical/electronic measurement; - safe work practices and procedures, and; - use and application of personal protective equipment.

MEM12003 Perform precision mechanical measurement

Locations:Sunshine.

Prerequisites:MEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to perform precision mechanical measurement. This unit covers comprehensive measuring skills where judgement is required in the selection of the most appropriate techniques/devices and where results are interpreted and/or analysed. Where interpretation of technical drawings is required unit MEMO9002 Interpret technical drawing should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting measurement requirements from specifications, including sketches and job; - instructions, schematics, diagrams and technical manuals; - selecting appropriate measuring device or equipment to achieve the required outcome; - checking the accuracy of the selected measuring equipment where appropriate; - setting up measuring equipment where appropriate; - obtaining measurements on components or equipment in a safe and effective manner, interpreting results and recording measurements, as required, and; - storing and maintaining measuring devices including routine adjustments according to manufacturer's specifications or SOPs. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - appropriate precision mechanical measuring device for given measurement requirements; - procedures for verifying equipment being used has been recently calibrated; - procedures for obtaining a range of mechanical measurements and techniques to be used; - suitability of environmental conditions for the measurements being carried out; - setting precision mechanical measuring devices procedures; - accuracy to which a range of precision mechanical measuring devices can be read; - procedures for reading graduated mechanical measuring devices; - units of measurement and numerical operations within the scope of this unit; - specifications of the equipment to be set; - tools and equipment for setting mechanical measuring devices; - procedures and techniques required to undertake adjustments to a range of precision mechanical measuring devices, and; - storage procedures.

MEM12003B Perform precision mechanical measurement

Locations:Industry, Sunshine.

Prerequisites:MEM12023A - Perform engineering measurements

Description:This unit covers performing precision mechanical measurement by using precision measuring equipment, setting comparison measuring devices and maintaining precision equipment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and interpreting text and numerical information on manufacturer specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - selecting/using precision mechanical measuring devices; - setting measuring devices to specification; - obtaining specified mechanical measurements to the finest graduation of the device; - measuring components to specified tolerances; - reading and interpreting measurements; - maintaining and adjusting precision mechanical measuring devices; - storing precision mechanical measuring devices, and; - undertaking calculations and numerical operations for measurement using precision mechanical measuring equipment. Students will also be expected to demonstrate the following knowledge: - the appropriate precision mechanical measuring device for given measurement requirements; - procedures to verify equipment being used has been recently calibrated; - suitability of environmental conditions for the measurements being carried out; - procedures/techniques for obtaining a range of mechanical measurements; - the accuracy to which a range of precision mechanical measuring devices can be read; - procedures for reading graduated mechanical measuring devices; - units of measurement and numerical operations within the scope of this unit; - procedures for setting precision mechanical measuring devices; - specifications of the equipment to be set; - tools and equipment for setting mechanical measuring devices; - the adjustments that can be made to a range of precision mechanical measuring devices; - procedures for adjusting and maintaining precision mechanical measuring devices; - procedures for storing precision mechanical measuring devices; - hazards and control measures associated with precision mechanical measurement, including housekeeping, and; - safe work practices and procedures.

MEM12004B Perform precision electrical/electronic measurement

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers using precision measuring equipment, setting measuring devices and maintaining precision equipment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - interpreting drawings, specifications, data sheets and instructions; - taking measurements using precision electrical/ electronic measuring devices; - interpreting measurements for a range of precision electrical/electronic measuring devices; - setting and adjusting precision electrical/electronic measuring devices, and; - maintaining and storing precision electrical/electronic measuring devices. Students will also be expected to demonstrate the following knowledge: - specifications of the circuitry and/or components to be tested; - application of a range of precision electrical/electronic measuring devices; - procedures/techniques for obtaining a range of electrical/electronic measurements; - units of measurement used in conjunction with

precision electrical/electronic measurement; - procedures for setting a range of precision electrical/electronic measuring devices; - specifications of the equipment to be set; - tools and equipment to be used in setting precision electrical/electronic measuring devices; - adjustments that can be made to a range of precision electrical/electronic measuring devices; - procedures for adjusting and maintaining a range of precision electrical/electronic measuring devices; - procedures for storing precision electrical/electronic measuring devices, and; - specifications of precision electrical/electronic measuring devices.

MEM12006 Mark off/out (general engineering)

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM11011 - Undertake manual handling

Description:This unit of competency has been developed for engineering tradesperson - mechanical apprenticeship training and the recognition of trade-level skills in marking off/out in general engineering. Marking off/out is undertaken using appropriate tools and equipment and templates are produced as required. Marking off/out techniques may apply to a range of materials and shapes. Skills covered by this unit are generally applied in occupational and work situations associated with trade-level fitting, machining and toolmaking work. Where the task involves a simple transfer of a dimension or marking a location point associated with general engineering and maintenance functions, select one or more of the following units as appropriate: MEM07005 Perform general machining MEM18006 Perform precision fitting of engineering components MEM18014 Manufacture press tools and gauges. Where the manufacture of marked out components is required, appropriate units should also be selected. Where a higher level of calculation is required unit MEM12026 Perform advanced trade calculations in a manufacturing, engineering or related environment should also be selected. Where a higher level of measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected. Where a higher level of precision work is required unit MEM18003 Use tools for precision work should also be selected. Where marking out structural fabrications and shapes is required unit MEM12007 Mark off/out structural fabrications and shapes should also be selected. Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications and drawings for marking out requirements, including measurements and tolerances; - carrying out all marking off/out using tools and equipment to specifications; - calculating measurements not shown on drawings, as required; - establishing and marking datum points, and; - transferring measurements, as required. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment

(PPE); - drawings, job instructions and specifications; - procedures for marking off/out; - tools, equipment and techniques related to the task; - purpose of establishing datum points, and; - method of determining/calculating dimensions.

MEM12006C Mark off/out (general engineering)

Locations:Industry, Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurements

Description:This unit of competency covers marking off/out by transferring dimensions from engineering drawings, prints or plans to engineering items that are to be either manufactured or set up. Dimensions may be directly transferred or may require calculation from information on the drawings, prints or plans.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - determining job requirements; - transferring dimensions; - applying method and sequence of marking out; - making templates as required; - establishing datum points; - reading and interpreting routine information on written job instructions, specifications standard operating procedures and engineering drawings - performing calculations using formulae; - locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation, and; - checking and clarifying strategies. Students will also be expected to demonstrate the following knowledge: - drawings, job instructions and specifications; - procedures for marking off/out; - tools, equipment and techniques related to the task; - purpose of establishing datum points; - method of determining/calculating dimensions; - use and application of personal protective equipment; - safe work practices and procedures, and; - relevant hazards and control measures related to the competency.

MEM12007 Mark off/out structural fabrications and shapes

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate information

Description:This unit of competency been developed for engineering tradesperson - fabrication apprenticeship training and the recognition of trade-level skills in mark off/out of structural fabrications and shapes. It applies to the marking off/out of general fabrications and shapes to specified measurements, tolerances and shapes using appropriate tools and equipment. Templates and patterns are produced as required. Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boiler making or sheet metal work. In a marine setting, it includes basic lofting/set out for construction of marine vessels and includes stem and transom development and use of tables of offsets that reflect chine and hull configuration. This includes lofting surfaces, straight edges, string lines, French curves and templates and marking out techniques apply to a range of materials and shapes. Where more extensive lofting practices are required unit MEM09021 Interpret and produce drawings of curved 3-D shapes should also be selected. Where marking out of general engineering components is required unit

MEM12006 Mark off/out (general engineering) should also be selected. Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications and drawings for fabrication requirements, including materials, measurements and tolerances, joining methods, standards and code requirements; - carrying out all marking off/out using appropriate marking out tools and equipment to specifications; - calculating measurements not shown on drawings, as required; - establishing and marking datum points; - selecting appropriate template material and producing templates to specifications; - storing templates, including labelling and identification, to procedures, as required; - developing patterns by selecting and applying appropriate development and/or measurement sequence and determining correct allowances for fabrication and assembly and transferring these measurements; - calculating allowances for fabrication and assembly, including shrinkage, thickness and inside/outside measurements, and transferring these measurements, and; - identifying and estimating quantities of materials from drawings with minimise wastage. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - procedures for marking off/out and pattern development; - tools and equipment to be used in the preparation of the marking off/out; - datum points; - materials that can be used for the preparation of templates and their application; - manufacturing allowances that have to be considered when developing patterns; - template labelling and identification procedures and storage requirements of templates; - appropriate methods of development/marking off/out of a range of given objects; - appropriate fabrication and assembly allowances; - effects of material type and thickness on fabrication and assembly allowances; - sources of data on fabrication and assembly allowances; - relevant standards and codes and the meaning of symbols used; - requirements of the codes/standards applicable to the work to be done; - materials from which the component/assembly is to be manufactured, and; - benefits of minimising material wastage.

MEM12007D Mark off/out structural fabrications and shapes

Locations: Industry, Sunshine.

Prerequisites: MEM12023A - Perform engineering measurements

Description: This unit of competency covers the skills required by an Engineering Tradesperson - Fabrication for transferring the dimensions from the detail drawing to work, making templates as required, developing patterns and/or transferring measurements to structures, interpreting relevant codes, standards and symbols and estimating quantities of material from drawings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit; - planning and sequencing operations; - using techniques and equipment required for marking off/out and developing patterns; - checking for conformance to specifications; - establishing and marking datum points; - developing patterns according to specification; - determining fabrication and assembly allowances and transferring to the pattern; - where applicable, applying the requirements of the codes/standards during the geometric development/marking off/out process; - determining material and component quantities from drawings and job specifications, and; - minimising material wastage. Students will also be expected to demonstrate the following knowledge: - procedures for marking off/out and pattern development; - tools and equipment to be used in the preparation of the marking off/out; - datum points; - materials that can be used for the preparation of templates and their application; - manufacturing allowances that have to be considered when developing patterns; - template labelling and identification procedures; - storage requirements of templates; - appropriate methods of development/marking off/out of a range of given objects; - appropriate fabrication and assembly allowances; - effects of material type and thickness on fabrication and assembly allowances; - sources of data on fabrication and assembly allowances; - relevant standards and codes and the meaning of symbols used; - requirements of the codes/standards applicable to the work to be done; - materials from which the component/assembly is to be manufactured; - benefits of minimising material wastage; - applicable industry standards, national/Australian Standards, NOHSC guides, state/territory regulatory codes of practice/standards; - safe work practices and procedures. and; - relevant hazards and control measures related to the competency.

MEM12019B Measure components using coordinate measuring machines

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers operating coordinate measuring machines (CMM) in a production environment. The unit also covers basic setting up of components and manually aligning probes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and following routine, familiar information for loading, setting probes and measuring components; - identifying and following pre-start check procedure; - following safety procedures; - selecting specified fixture/clamping device; - positioning and clamping components; - taking manual hits and determining probe alignment; - verifying probe/s configuration to specifications; - selecting and activating part programs as required where machine is fitted with microprocessors; - verifying and confirming correct program operation; - applying correct measuring techniques; - reporting out of tolerance measurements; - shutting down the part program; - removing and handling components; - cleaning machine and site; - following verbal instructions, and; - orally

reporting routine information. Students will also be expected to demonstrate the following knowledge: - task-related information on job sheets or equivalent; - pre-start checks; - hazards and control measures associated with operating a CMM, including housekeeping; - use and application of personal protective equipment; - safe work practices and procedures; - fixtures/clamping devices and their uses; - storage location and procedures; - fixing/clamping methods; - procedures for undertaking pre-measurement manual hits for manual alignment; - procedures for checking probe configuration; - procedures for running and verifying part program; - methods/techniques for interpreting results; - procedures for reporting results and recommendations for adjustment; - procedures for shutting down part program; - procedures to safely remove and handle components; - required cleaning tasks and the importance of cleaning the CMM, and; - effects of contamination.

MEM12023 Perform engineering measurements

Locations:Sunshine.

Prerequisites:MEM13015 - Work safely and effectively in manufacturing and engineering/MEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to perform measurements requiring straightforward use of mechanical measuring devices which incorporate visual inspections representing units of measurement and associated calculations in a range of manufacturing, engineering and related environments. Measurements may be expressed in metric or imperial units. Electrical/electronic devices used are those not requiring the connection or disconnection of circuitry. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting measurement requirements from specifications; - selecting appropriate measuring device or equipment to achieve the required outcome; - obtaining measurements in a safe and effective manner and recording measurements, including preparing a freehand sketch which depicts required information, as required; - performing calculations to determine or verify dimensions, and; - storing and maintaining measuring devices including routine adjustments according to manufacturer's specifications or SOPs. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures; - correct application of a range of measuring devices; - correct and appropriate measuring technique for a range of measuring devices; - calculations, including addition, subtraction, multiplication, division, fractions and decimals; - manufacturer's or SOPs for handling and storing a range of measuring devices; - appropriate procedures for adjusting and zeroing a range of measuring devices, including scale adjustment, and; - appropriate methods of communicating measurements by drawings.

MEM12023A Perform engineering measurements

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers performing measurement skills requiring straightforward

use of mechanical measuring devices and associated calculations.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - selecting the appropriate measuring device for given measuring tasks; - using appropriate measuring technique; - reading all measurements taken accurately to the finest graduation of the selected measuring device; - handling and storing measuring devices in accordance with manufacturers' specifications or standard operating procedures; - verifying all measuring devices before use; - making, where appropriate, routine adjustments to measuring devices; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - checking for conformance to specifications; - undertaking numerical operations involving addition, subtraction, multiplication, division, fractions and decimals within the scope of this unit, and; - preparing drawings as required. Students will also be expected to demonstrate the following knowledge: - correct application of a range of measuring devices; - correct and appropriate measuring technique for a range of measuring devices; - addition, subtraction, multiplication, division, fractions, decimals to the scope required by this unit; - procedures for handling and storing a range of measuring devices; - procedures for adjusting and zeroing a range of measuring devices; - methods of communicating measurements by drawings, as required, and; - safe work practices and procedures.

MEM12024 Perform computations

Locations:Sunshine.

Prerequisites:MEM13015 - Work safely and effectively in manufacturing and engineering/MEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to estimate approximate answers to arithmetical problems, carry out calculations involving percentages and proportions, and determine simple ratios and averages. It also covers producing and interpreting simple charts and graphs in manufacturing, engineering or related environments. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - obtaining and interpreting data from job instructions and relevant sources to establish required outcomes; - determining the appropriate calculation method to suit the application; - performing calculations and confirming answer/s, and; - producing and interpreting simple charts and graphs from given data. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures; -

formulae applicable to the determination of perimeter, area and volume of simple geometric shapes and the reasons for using dimensions with the same units; - techniques and procedures for rounding off figures when estimating approximate answers; - features and use of mixed numbers, decimals, fractions and whole numbers; - procedures for carrying out calculations involving fractions and using each of the four basic rules of addition, subtraction, multiplication and division; - concept of percentage and procedures to be followed in converting a decimal and fraction to a percentage; - concepts and calculations of ratio and proportion; - scales applicable to the axes of the graphs or charts; - types of charts and/or graphs used in the individual's field of work; - upper and lower limits of acceptability applicable to data entered on a graph or chart; - trends indicated by the slope or gradient of a graph; - action to be taken when given trends occur or set limits are approached on graphs or charts; - procedures for drawing 'lines of best fit', and; - trends indicated by the graphs or charts drawn.

MEM12024A Perform computations

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers estimating approximate answers to arithmetical problems, carrying out basic calculations involving percentages and proportions, and determining simple ratios and averages. The unit includes producing and interpreting simple charts and graphs.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - performing calculations involving whole numbers using all four basic rules; - performing calculations involving length, perimeter, area and volume; - checking calculated answers for accuracy; - rounding off estimated answers; - expressing information presented in fractional or decimal format as a percentage; - selecting appropriate formulae for the given application; - substituting the correct values for each term in the relevant formulae; - using appropriate mathematical operations; - performing calculations involving ratios or proportions; - determining required information from appropriate charts or graphs; - producing simple charts or graphs from given information or observations made; - selecting appropriate scales and using them in the production of charts and graphs; - marking appropriate limits clearly on the graph or chart; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - checking for conformance to specifications, and; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - formula applicable to the determination of perimeter, area and volume of simple geometric shapes; - techniques for estimating approximate answers; - reasons for using dimensions with the same units when calculating length, perimeter, area and volume; - concepts of perimeter, area and volume; - procedures for rounding off figures when estimating approximate answers; - mixed numbers, decimals, fractions and whole numbers; - concept of percentage; - procedures to be followed in converting a decimal to a percentage; - procedures for carrying out calculations involving fractions and using each of the four basic rules; - procedures to be followed

on converting a fraction to a percentage; - sources of appropriate formulae; - reasons for ensuring that the units of each term are consistent with the formulae selected; - procedures for converting given units to those required for use in formulae; - concepts of ratio and proportion; - given ratios and proportions can be expressed in terms of whole numbers, fractions and decimal fractions; - scales applicable to the axes of the graphs or charts; - three types of charts and/or graphs used in the individual's field of work; - where appropriate, upper and lower limits of acceptability applicable to data entered on a graph or chart; - where appropriate, the trends indicated by the slope or gradient of a graph; - where appropriate, the action to be taken when given trends occur or set limits are approached on graphs or charts; - procedures for drawing 'lines of best fit'; - the trends indicated by the graphs or charts drawn; - hazards and control measures associated with performing computations, including housekeeping, and; - safe work practices and procedures.

MEM12025A Use graphical techniques and perform simple statistical computations

Locations: Industry, Sunshine.

Prerequisites: MEM12024A - Perform computations

Description: This unit covers interpreting and constructing graphs and charts from given or determined data, and performing basic statistical calculations.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of Victoria Polytechnic produced workbooks and/or via the Victoria Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining required information by interpreting data presented in graphical form; - determining the trend(s) indicated by the data presented in graphical form; - constructing graphs to scale; - labelling the axes appropriately; - selecting scales appropriate to the purpose for which the graph is intended; - constructing histograms, control charts, straight line and parabolic graphs; - determining for a given set of data the mean, median and mode; - determining for a given set of data the standard deviation; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task related information; - checking for conformance to specifications, and; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - characteristics of straight line, parabolic and hyperbolic curves; - procedures for determining the slope/rate of change of a curve; - the trend(s) indicated by changes in gradient of a graph; - procedures for drawing the line of best fit for the coordinates plotted; - standard form of equations relating to straight lines and parabolic curves; - gradient, intercepts, maximum and minimum values and limit lines for straight line and parabolic curves; - function of control charts; - the meaning of the terms mean, median and mode; - the meaning of the term standard deviation; - the significance of 1, 2 and 3 sigma limits. and; - safe work practices and procedures.

MEM13001 Perform emergency first aid

Locations: Sunshine.

Prerequisites: MEM11011 - Undertake manual handling MEM13015 - Work safely and effectively in manufacturing and engineering MEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to apply the administration of basic emergency first aid treatment and the management of life threatening situations where an unconscious person requires expired air resuscitation (EAR) and cardiopulmonary resuscitation (CPR). This unit does not meet all of the requirements expected of designated First Aid Officers. The competencies required for situations involving isolation of persons from hazardous electrical situations is covered in unit MEM18049 Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.. and unit MEM18050 Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - demonstrating correct procedures for expired air resuscitation (EAR) and cardiopulmonary resuscitation (CPR) on a mannequin; - simulating first aid treatment of the cuts/abrasions and fractures, burns/scalds, concussion and shock, foreign bodies in eyes, poisoning, and; - recording details of first aid administered. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - applicable regulatory and legislative requirements; - instances where EAR and CPR should be performed; - procedures for preparing a person for the administration of EAR and CPR; - procedures for performing EAR and CPR on a child and an adult; - dangers and precautions to be taken when administering EAR and CPR; - emergency first aid procedures for injuries covered by the scope of this unit; - details to be recorded of first aid administered; - procedures and reasons for recording first aid administered; - relevant regulatory and legislative requirements with respect to emergency first aid, and; - impact of regulatory/legislative requirements on the individual and others.

MEM13001B Perform emergency first aid

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers performing basic emergency first aid, EAR (expired air resuscitation) and CPR (cardiopulmonary resuscitation).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning and sequencing operations; - checking and clarifying task-related information; - performing EAR (expired air resuscitation) and CPR (cardiopulmonary resuscitation) on a mannequin; - simulated first aid treatment for the full range of injuries covered by the range statement; - reading, interpreting and following emergency first aid procedures and related documents; - entering information onto proformas and other relevant

documents, and; - communicating effectively with injured persons, appropriate personnel and authorities. Students will also be expected to demonstrate the following knowledge: - applicable regulatory and legislative requirements; - use and application of any applicable personal protective equipment; - hazards and control measures associated with performing emergency first aid, including housekeeping; - instances where EAR and CPR should be performed; - procedures for preparing a person for the administration of EAR and CPR; - procedures for performing EAR and CPR on a child and an adult; - dangers and precautions to be taken when administering EAR and CPR; - emergency first aid procedures for injuries covered by the scope of this unit; - details to be recorded of first aid administered; - procedures and reasons for recording first aid administered; - relevant regulatory and legislative requirements with respect to emergency first aid; - the impact of regulatory/legislative requirements on the individual and others, and; - safe work practices and procedures.

MEM13003B Work safely with industrial chemicals and materials

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers using personal protective equipment (PPEs), identifying the particular hazards and emergency procedures, and observing safe working practices in that environment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaking risk assessment; - communicating with others; - performing proper manual handling techniques, and; - interpreting safety signage, labelling and placarding. Students will also be expected to demonstrate the following knowledge: - dangerous goods classification and labelling/placarding; - testing, use and maintenance of PPE; - inherent hazardous properties of the chemicals to be used; - interpretation of the relevant MSDS; - basic fire fighting procedures; - site-specific emergency plan procedures; - chemical spill confinement procedures; - dangerous occurrence (near miss) reporting procedures, and; - hierarchy of control.

MEM13013B Work safely with ionizing radiation

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers working safely with ionizing radiation when performing radiographic testing in a range of industrial applications.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - calculating and numerical operations within the scope of this unit; - reading and interpreting charts, written job instructions, specifications, standard operating procedures, lists, drawings and other

applicable reference documents; - planning and sequencing operations; - checking and clarifying task-related operations; - checking for conformance to specifications; - using monitoring equipment; - calculating and monitoring radiation; - handling emergencies; - following safety requirements, and; - assessing risk. Students will also be expected to demonstrate the following knowledge: - properties of X-rays and gamma rays and principal radioactive sources used in industrial radiography; - attenuation factors; - known biological effects of radiation; - general principles of gas ionisation, photographic effect, luminescence; - use of film, film badges, ionisation chamber devices, quartz fibre, fluorescent, electronic devices accuracy limits (energy/range); - different SI units of radiation including becquerel, sievert and gray; - exposure limits for personnel as laid down by the radiation authorities in Australia; - the three exposure reduction factors including: time, distance and shielding; - procedures for establishing safe working barriers; - relevant techniques and checks; - emergency procedures; - safety procedures; - emergency situations, causes and appropriate responses; - hazards and control measures associated with ionizing radiation, including housekeeping; - storage requirements of equipment and materials; - use and application of personal protective equipment; - safe workplace practices and procedures, and; - legal requirements.

MEM13014A Apply principles of occupational health and safety in the work environment

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers following occupational health and safety procedures in an engineering or similar work environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following safe working practices; - maintaining a safe and clean condition workplace; - carrying out workplace activities such as working safely, not endangering others, following company and legislative requirements, following procedures; - selecting, wearing and storing appropriate personal protective equipment; - using appropriate safety equipment and devices; - carrying out work with the information given by safety signs and symbols; - carrying out manual handling principles; - using emergency equipment correctly; - noting workplace hazards; - contacting appropriate personnel and emergency services in the event of an accident; - following emergency and evacuation procedures; - communicating and interpreting information appropriate to OH&S within the scope of this unit; - checking and clarifying task-related information; - communicating with emergency personnel, and; - checking for conformance to specifications. Students will also be expected to demonstrate the following knowledge: - rights, responsibilities and duties of employees and employers; - use of personal protective equipment; - appropriate equipment and safety devices for particular workplace tasks; - reasons for using safety equipment and devices; - meaning and application of safety signs and symbols; - procedures and limits for manual handling; - location and use of emergency equipment; - reasons for selecting a particular type of equipment; - procedures for identifying and reporting hazards; - persons or services to be contacted in the event of a range of accidents; - reasons for use of standard procedures; - standard procedures including those for emergencies

and evacuation; - hazards and housekeeping requirements associated with the work environment, and; - safe work practices and procedures.

MEM13015 Work safely and effectively in manufacturing and engineering

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit of competency defines the skills and knowledge required to work effectively in manufacturing and engineering work situations, including planning routine work and participating in and following work health and safety (WHS) procedures. The unit applies to working either individually or in a team situation and includes contributing to work-related group activities in a manufacturing or engineering workplace. This unit covers WHS skills associated with carrying out routine operational activities safely and in compliance with legislative and regulatory requirements. The unit covers the skills associated with participation in quality systems, communication and cooperation with others. The unit applies to workplaces with informal or formal quality management and improvement systems. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and avoiding or controlling hazards; - reporting hazards, incidents, injuries and other work health and safety (WHS) non-conformances following SOPs; - recognising and responding to emergencies following SOPs; - identifying and obtaining, instructions and information on job requirements, including one or more of the following, verbal or written job instructions, specifications, SOPs, charts and lists; - identifying and responding to contingencies, including equipment breakdowns, non-conforming components and safety hazards; - recording information into proforma workplace documents, including production tally forms, quality control forms and safety incident forms; - performing assigned tasks and checking outcome of own work for conformance to specifications; - identifying own responsibilities within the workplace quality system; - giving and receiving feedback on own and group work, and; - seeking assistance from supervisors and mentors. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use and application of personal protective equipment; basic quality system terminology and concept, including quality assurance, quality control, and quality improvement; - procedures to be followed in performing own work; - objectives, requirements and specifications to which the individual's work is to comply; - costs and consequences of poor quality; - effective interpersonal skills eg, effective listening, basic speaking skills, use of workplace terminology and jargon, giving and receiving feedback, checking and clarifying task-related information, verbal, visual and written instructions and appropriate modes and methods of communication; - barriers to effective communication; - sources of technical expertise/assistance, and; - hazards and control measures associated with workplace activities.

MEM14002B Undertake basic process planning

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit covers reviewing process specifications and determining the production sequence.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining, reading and interpreting engineering and production data; - preparing flow charts; - communicating; - planning; - assessing; - reading and interpreting engineering specifications; - organising information, and; - prioritising. Students will also be expected to demonstrate the following knowledge: - production processes found within the organisation; - tooling and/or equipment requirements for workplace processes; - quality assurance requirements, and; - safe workplace practices and procedures.

MEM14004A Plan to undertake a routine task

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers a person planning their own work where tasks involve one or more steps or functions and are carried out routinely on a regular basis. It includes the concepts of following routine instructions, specifications and requirements.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining instructions for tasks from correct source of information (job card, supervisor, work colleagues and others); - clarifying tasks and required outcomes with appropriate personnel where necessary; - identifying relevant specifications from documentation, job cards, or other information source; - preparing plans for tasks; - sequencing activities; - comparing planned steps against specifications and task requirements, and; - communicating and interpreting information appropriate to the scope of this unit. Students will also be expected to demonstrate the following knowledge: - correct sources of information for a particular task; - procedures for obtaining instructions and clarification; - specifications for the task; - hazards and established control measures associated with the routine task, including housekeeping, and; - safe work practices and procedures.

MEM14005A Plan a complete activity

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers planning activities which, whilst following established procedures, may require a response and modification of procedures or choice of different procedures to deal with unforeseen developments.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining, reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawing and other applicable reference documents; - preparing a plan including sequential steps that will enable the activity to be completed; - modifying the plan where appropriate, to take account of difficulties or developments that occur while following the prepared plan; - planning and sequencing activities; - checking and clarifying task-related information; - checking for conformance to specifications; - using numerical operations, geometry and calculations/formulae within the scope of this unit, and; - using planning techniques such as scheduling, time management, brainstorming, setting of goals and defined outcomes, prioritising, review and evaluation strategies. Students will also be expected to demonstrate the following knowledge: - tasks to be performed; - person/s who can clarify the objectives, requirements and specifications; - specifications relevant to the tasks to be performed; - outcomes to be achieved; - timeframe for activity completion; - quality requirements of the product or service; - priority of each step in the plan; - reasons for the relative priority of each step; - modifications to the plan to overcome a range of unforeseen situations; - hazards and control measures associated with planning the complete activity, including housekeeping, and; - safe work practices and procedures.

MEM14006 Plan work activities

Locations: Sunshine.

Prerequisites: MEM13015 - Work safely and effectively in manufacturing and engineering
MEM16006 - Organise and communicate information

Description: This unit of competency covers the skills and knowledge required to plan familiar work activities, whilst following established procedures and work health and safety (WHS) policies and procedures of the organisation. Planning is undertaken by the individual performing the work. Individual plan components may require modification and prioritising to meet job requirements or to respond to unforeseen circumstances. Where computations are required to be performed unit MEM12024 Perform computations should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - planning a work activity using appropriate planning tools and techniques whilst following established procedures, including work health and safety (WHS) requirements; - checking the plan to ensure accuracy and conformance and modifying the plan components, as necessary, to overcome any unforeseen difficulties or developments; - identifying hazards and implementing appropriate risk control measures and procedures; - selecting, using and maintaining relevant personal protective equipment (PPE); - evaluating the effectiveness of risk controls measures, and; - providing proforma

WHS reports in accordance with SOPs, as required. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of PPE; - relevant specifications; - sources of advice relating to the objectives, requirements and specifications; - timeframe for activity completion; - quality requirements of the product or service; - techniques and reasons for prioritising of each step in a plan; - modifications that can be made to the plan to respond to unforeseen developments; - risk control measures, and; - reporting requirements for accidents, incidents and other non-conformances with WHS procedures.

MEM15001B Perform basic statistical quality control

Locations: Industry.

Prerequisites: Nil.

Description: This unit covers taking samples and applying a statistical process to monitor production.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, standard operating procedures, charts, lists, drawings and other applicable reference documents; - applying statistical process control procedures in accordance with instructions to a given production process; - obtaining data from samples including average, range and random or assignable causes; - producing tally, run or control charts from sampling data; - reporting information from sampling data; - checking and clarifying task-related information, and; - completing proformas and standard workplace forms. Students will also be expected to demonstrate the following knowledge: - the difference between population and sample, and the concept of variation in terms of average and range, random and assignable causes; - numerical operations and statistical calculations/formulae within the scope of this unit; - statistical process control procedures, which may include Six Sigma etc. and the sampling procedures to be followed; - the types of charts that can be produced to assist monitoring of products including run charts, tally charts, histograms, control charts; - procedures for reporting sample data information; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM15002A Apply quality systems

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers working within a quality improvement system, either individually or in a team situation.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job sheets, instructions, standard operating

procedures and drawings; - checking and clarifying task-related information; - entering information onto workplace documents; - checking for conformance to specifications; - identifying duties of the individual within the quality improvement system; - identifying customers' requirements with respect to the operation or quality of the product or service; - reporting where appropriate, defects detected; - carrying out work in accordance with the process improvement procedures; - carrying out work in a manner consistent with the improvement of customer/supplier relationships, and; - performing numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - quality system terminology and concepts; - commonly accepted meaning/s of the terms quality and quality system; - the reasons for following the requirements of the quality improvement system; - strategies and approaches for working within a quality system; - procedures to be followed in undertaking the work; - specifications to which the individual's work is to comply; - reasons for ensuring work conforms to specification; - benefits of good quality; - costs and consequences of poor quality; - procedures for reporting defects; - examples of common defects; - quality improvement procedures; - four steps of the quality cycle: plan, do, check, act; - reasons for following process improvement procedures; - examples of ways in which customer/supplier relationships can be improved; - benefits of good customer/supplier relationship; - hazards and control measures associated with applying quality procedures, including housekeeping, and; - safe work practices and procedures.

MEM15003B Use improvement processes in team activities

Locations: Industry, Sunshine.

Prerequisites: MEM16007A - Work with others in a manufacturing, engineering or related environment

Description: This unit covers identifying improvements and/or solving problems, implementing/monitoring the implementation of an improvement strategy, and evaluating the improvement.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - participating and communicating in a team setting; - identifying improvements and/or solving problems in a team setting; - implementing improvement strategies in a team setting; - recommending further action in accordance with standard operating procedures; - collecting and collating feedback data; - evaluating the improvement strategy implemented; - reading, interpreting information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents; - planning and sequencing tasks; - checking and clarifying information; - entering information onto workplace documents; - following verbal instructions, and; - orally reporting routine information. Students will also be expected to demonstrate the following knowledge: - roles and functions of self and team members; - team discussion and problem solving processes; - improvement tools and methods and their application; - procedures for using process improvement tools in the team environment; - improvement strategies; - procedures for implementing the improvement strategies; - the individual's role in implementing improvement strategies; - procedures for initiating further action; - the procedures for collecting and

collating improvement feedback data; - the analytical tools and processes to evaluate the improvement strategy, and; - safe workplace practices.

MEM15004B Perform inspection

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers inspecting products, keeping records and providing feedback on the conformance of product to specifications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, standard operating procedures and other applicable reference documents; - testing products for conformance to specifications in accordance with job instructions; - testing reworked/repared products for conformance to specification, in accordance with job instructions, and; - entering routine and familiar information onto proformas and standard workplace forms. Students will also be expected to demonstrate the following knowledge: - the procedures as defined by job instructions to be used to check conformance to specifications; - the data to be recorded and the frequency of recording required; - the consequences of not keeping accurate records; - non-conformances of given products that can be removed by rework/repair in accordance with job instructions; - hazards and control measures associated with performing basic inspection activities; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM15005B Select and control inspection processes and procedures

Locations: Industry, Sunshine.

Prerequisites: MEM15004B - Perform inspection

Description: This unit covers selecting inspection and test procedures, and controlling the inspection/test environment and equipment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on standard operating procedures and other applicable reference documents; - checking and clarifying task-related information; - entering and maintaining information onto proformas and standard workplace forms and records; - checking for conformance to specifications; - using measurement equipment within the scope of this unit; - measuring components to specified tolerances; - implementing inspection method for the product/process; - monitoring inspection/test procedures to ensure desired outcomes are achieved; - monitoring environmental conditions; - checking calibration of measuring equipment; - initiating calibration of measuring equipment; - calibrating measuring equipment against the appropriate reference standard; - detecting and reporting out of calibration

550

equipment, and; - applying units of measurement and numerical operations/calculations within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - a range of inspection methods and their application; - the appropriate inspection method for the process/product; - procedures for implementing inspection methods; - the desired/target outcomes of the inspection/test procedures; - reasons for discrepancies/trends; - procedures for monitoring inspection/test procedures; - the effects of environmental conditions on test equipment and the results; - procedures for monitoring environmental conditions; - the acceptable range of variations to environmental conditions; - the correct operation of the measuring equipment; - the specifications of the measuring equipment; - procedures for checking the calibration of the measuring equipment; - appropriate techniques, tools and equipment to measure components; - units of measurement and numerical operations/calculations within the scope of this unit; - codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration; - procedures for initiating the calibration of measuring equipment; - the physical reference standard against which the measuring equipment is to be calibrated; - procedures for calibrating measuring instruments; - tools and equipment required to calibrate measuring equipment; - procedures for recording calibration details; - the reasons for keeping calibration records; - the procedures to be followed when measuring equipment is found to be out of calibration; - the reasons for checking results from out of calibration measuring equipment; - procedures for reporting out of calibration measuring equipment; - hazards and control measures associated with inspection, including housekeeping; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM15024A Apply quality procedures

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers applying established quality procedures to an employee's own work within a manufacturing, engineering or related environment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying and communicating instances of non-compliance to work specifications; - following quality procedures including work instructions; - conforming to product and process specifications, and; - checking and clarifying task-related information. Students will also be expected to demonstrate the following knowledge: - concepts of quality and the benefits of using specifications and standard operating procedures; - quality procedures applying to own work; - standard operating procedures, and; - safe work practices and procedures.

MEM16004B Perform internal/external customer service

Locations: Sunshine.

Prerequisites: Nil.

Description: The unit covers the competency required to investigate consumer complaints in relation to measurement.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information; - entering routine and familiar information onto proformas and standard workplace forms; - checking and clarifying information; - following verbal instructions; - orally reporting routine information; - communicating and questioning; - proposing alternative products and/or services; - taking action to implement customer requirements, and; - recording and following up customer requirements not able to be met. Students will also be expected to demonstrate the following knowledge: - the cost of the required product or service; - the quantities of the available product; - the quality of the available product; - the delivery date of the product or service; - the reasons for informing the customer promptly of the ability/inability to meet the customer requirements; - alternative products and/or services that may meet the customer's requirements; - the procedures for actioning customer orders; - the procedures for recording and actioning customer complaints; - the procedure for recording customer requirements which are not met; - the procedures for following up on customer requirements that are not met, and; - safe workplace practices.

MEM16005A Operate as a team member to conduct manufacturing, engineering or related activities

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit covers operating as a member of a team, where operations and outcomes are dependent on the performance of the entire team.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - contributing to achievement of team goals; - communicating and cooperating with team members; - coordinating work effort with others; - applying effective interpersonal skills; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents, and; - solving problems. Students will also be expected to demonstrate the following knowledge: - effective interpersonal strategies and skills; - relationships and roles within team and with others; - reporting relationships and procedures; - own responsibilities with respect to products/services to be provided by team; - skills and competencies of the individual and other employees performing interdependent activities; - team goals, objectives and task requirements; - sources of technical expertise/assistance; - appropriate forms of communication; - hazards and control measures associated with team activities, including housekeeping, and; - safe work practices and procedures.

MEM16006 Organise and communicate information

Locations: Sunshine.

Prerequisites: MEM13015 - Work safely and effectively in manufacturing and

551

engineering

Description: This unit of competency covers the skills and knowledge required to access, organise and communicate information related to production, maintenance or associated processes or tasks that apply in manufacturing, engineering or related environments. For accessing and recording of data requiring system knowledge and judgement, Unit MEM16008 Interact with computing technology should be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - accessing and recording relevant information from a range of sources; - recognising and using workplace appropriate terminology; - reading, interpreting and following information in workplace documentation; - checking and clarifying information; - organising, categorising and sequencing information, and; - communicating using appropriate methods and procedures for a variety of situations. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures; - types of information relevant to the workplace and required tasks; - terminology used in the workplace relevant to own work; - available sources of information; - information analysis techniques appropriate to tasks and position; - methods of categorising and organising information including correct sequencing of information, and; - methods of recording and communicating information.

MEM16006A Organise and communicate information

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers accessing, organising and communicating information related to processes or tasks.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - accessing relevant information from a range of sources; - recording, where appropriate, the accessed information; - recognising and using workplace terms; - reading, interpreting and following information in workplace documentation; - checking and clarifying information, and; - organising, categorising and sequencing information. Students will also be expected to demonstrate the following knowledge: - available sources of information; - information analysis techniques; - methods of categorising and organising information, and; - methods of recording and communicating information.

MEM16007A Work with others in a manufacturing, engineering or related environment

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers operating in an interactive work environment. It covers contribution to a group effort in order to plan and carry out work. This includes identification of work roles, communication and cooperation with others.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - contributing to planning and allocation of work; - performing assigned tasks; - coordinating work effort with others; - following agreed reporting lines; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents, and; - applying effective interpersonal skills. Students will also be expected to demonstrate the following knowledge: - effective interpersonal strategies and skills; - relationships and roles within immediate group and with interdependent others; - reporting relationships and procedures; - own responsibilities with respect to products/services to be provided; - skills and competencies of the individual and other employees performing interdependent activities; - common goals, objectives and task requirements; - sources of technical expertise/assistance; - appropriate forms of communication; - hazards and control measures associated with workplace activities, including housekeeping, and; - safe work practices and procedures.

MEM16008 Interact with computing technology

Locations: Sunshine.

Prerequisites: MEM13015 - Work safely and effectively in manufacturing and engineering
MEM16006 - Organise and communicate information

Description: This unit of competency defines the skills and knowledge required to use a range of computing technology typically used in manufacturing, engineering or related environments to access, input and store information. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - accessing, inputting, manipulating and storing information using workplace computing technology whilst following standard procedures, and; - accessing assistance, where required. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures; - functions and capabilities of computing technology used in the workplace; - functions of software applications, and; - use and features of data outputs.

MEM16008A Interact with computing technology

Locations: Industry, Sunshine.

Prerequisites: Nil.

552

Description: This unit covers accessing, inputting and storing information used in manufacturing, engineering or related environments, using computing technology.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - ability to enter or retrieve data using appropriate software applications; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task-related information, and; - using numerical operations within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - functions and capabilities of various types of computing technology used in the workplace; - functions of software applications; - hazards and control measures associated with using computing technology, including housekeeping, and; - safe work practices and procedures.

MEM16009A Research and analyse engineering information

Locations: Sunshine.

Prerequisites: MEM16006A - Organise and communicate information
MEM16012A - Interpret technical specifications and manuals

Description: This unit covers researching and analysing information and preparing the information for dissemination.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - questioning; - applying research techniques; - checking and clarifying information; - note-taking; - analysing information and data; - sorting and identifying relevant information/data; - establishing findings and conclusions based on analysis; - summarising and organising information and technical data; - preparing materials for dissemination to others, and; - planning and sequencing operations. Students will also be expected to demonstrate the following knowledge: - basic principles and methods of research and analysis; - effective communication principles with respect to research, analysis and organisation of technical data; - sources of research data/information; - use of internal/external databases; - relevant personnel for consultation; - relevant information/data; - effect of variations in the information/data on the conclusions reached, and; - safe work practices and procedures.

MEM16010A Write reports

Locations: Industry, Sunshine.

Prerequisites: MEM14005A - Plan a complete activity

Description: This unit covers writing technical or non-technical reports that include

some level of analysis and/or research.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - following instructions; - checking and clarifying information; - sorting information/data; - assessing information/data for relevance; - using terminology and language appropriate to the target audience; - structuring and writing reports; - applying principles of report writing; - presenting findings and conclusions based on factual analysis; - making recommendations; - managing own time; - planning and sequencing information, and; - reviewing and editing. Students will also be expected to demonstrate the following knowledge: - principles of report writing; - report types and purposes; - structure, style and parts of a report; - use of language and expression in reports; - common pitfalls, such as ambiguity, truisms, tautology, verbosity, circumlocution etc.; - report numbering systems; - techniques for reviewing and editing; - importance and benefits of preparing reports appropriate for the intended audience; - referencing and the importance of acknowledging sources, and; - safe work practices and procedures.

MEM16011A Communicate with individuals and small groups

Locations:Sunshine.

Prerequisites:MEM16006A - Organise and communicate information

Description:This unit covers communicating effectively across a range of communication networks in the workplace. Communication levels include interpersonal (one-to-one), person-to-group, and mediated (e.g. telephone, letter, memo).

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - selecting and using various communication channels; - coding and decoding verbal and non-verbal messages; - giving and receiving feedback; - identifying blockages, barriers and breakdowns in communication; - applying principles of effective communication; - applying speaking and listening skills to interpersonal and group situations; - using writing skills to communicate technical and non-technical information using common verbal written channels, and; - undertaking reading and comprehension of written workplace communications. Students will also be expected to demonstrate the following knowledge: - communication process, stages and roles; - communication types and networks; - verbal and non-verbal channels - advantages and disadvantages; - verbal and non-verbal codes - advantages and disadvantages; - principles, strategies and conventions for interpersonal, mediated and group communication; - communication skills for sender and receiver; - communication blockages, barriers and breakdowns and strategies for overcoming them; - individual differences between communicators

and strategies for effective communication, and; - establishing communication climate.

MEM16012A Interpret technical specifications and manuals

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers identifying, accessing, interpreting and analysing technical information in an enterprise, including quality documentation, equipment manufacturer specifications, engineering data sheets and national standards. It also covers explaining and using the information, and identifying implications of changes to technical information.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - accessing, reading and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning, sequencing operations; - following oral/written instructions; - checking and clarifying task-related information; - checking for conformance to specifications; - undertaking numerical operations and calculations/formulae within the scope of this unit; - entering information onto workplace documents; - accessing and using technical documentation; - identifying and using correct specifications for process and/or systems; - using components of system, where appropriate; - completing formal documentation and reporting as required; - adopting appropriate communication strategy, including confirmation of received information and distribution of instructions; - communicating information in ways appropriate for the audience; - maintaining appropriate records, and; - identifying and analysing implications of changes to information systems. Students will also be expected to demonstrate the following knowledge: - available industry information resources; - uses and applications of information resources; - range of formats that information can be presented; - safe work practices and procedures; - location and retrieval requirements of system information; - correct process used to identify relevant specifications; - quality improvement processes for information systems; - interpretation of technical data and information; - appropriate communication strategies; - dissemination of information regarding information systems; - a range of instructional techniques; - implications of changes to technical information; - procedures for responding to information changes; - hazards and control measures associated with changes to technical information, including housekeeping, and; - safe workplace practices and procedures.

MEM16014A Report technical information

Locations:Sunshine.

Prerequisites:MEM16006A - Organise and communicate information

Description:This unit covers preparing reports of a technical nature on tasks or assignments within the employee's skill and competence.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - following instructions; - checking and clarifying information; - accessing and sorting information/data; - assessing information/data for relevance; - using terminology and language appropriate to the target audience; - structuring and formatting technical information; - presenting findings and conclusions based on factual analysis; - making recommendations; - managing own time; - planning and sequencing information, and; - reviewing and editing. Students will also be expected to demonstrate the following knowledge: - reporting methods and purposes; - structure, style and parts of a short report; - correct use of language and expression; - techniques for checking and editing; - importance and benefits of preparing reports appropriate for the intended audience; - referencing and the importance of acknowledging sources, and; - safe work practices and procedures.

MEM17001B Assist in development and deliver training in the workplace

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers planning for and delivering on the job training, and reviewing the training program. Training, which may be structured or informal, is delivered in a one-to-one or small group situation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - communicating effectively with the trainee; - applying training techniques appropriate to the trainee and training requirements; - giving feedback; - monitoring and recording trainee progress; - evaluating training program; - recording training data; - completing reports on training completed and training required, and; - promoting training within the workplace. Students will also be expected to demonstrate the following knowledge: - competencies to be achieved through the training; - role of the trainer in the provision of training; - training techniques to be used in delivering the training; - reasons for selecting the chosen training techniques; - procedures for recording trainee progress; - reasons for providing positive feedback; - procedures for evaluating training programs; - reasons for evaluating training programs; - training records to be kept; - procedures for recording training data; - procedures for preparing training reports; - procedures for promoting training in the workplace, and; - reasons for promoting training in the workplace.

MEM17002B Conduct workplace assessment

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit covers identifying, planning and carrying out assessment; recording the results; and reviewing the procedure. Methods of assessment may include observation, documentation, demonstration, projects, oral tests, computer based assessment, written tests, etc.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining and interpreting relevant competency standards and assessment guides; - discussing and confirming evidence required and the assessment arrangements; - performing assessments; - gathering and documenting evidence; - evaluating evidence and making assessment decisions; - providing clear and appropriate feedback; - advising on training needs and/or the appeals procedures; - recording assessment results; - storing records, and; - reviewing and revising the assessment procedure. Students will also be expected to demonstrate the following knowledge: - area and purpose of the assessment; - persons to be consulted when determining the assessments to be carried out; - relevant competencies; - evidence required to establish competency; - reasons for identifying the evidence to be obtained; - industry assessment procedure; - reasons for discussing and confirming the assessment arrangements with the assessment candidate; - time and location of the assessment; - reasons for selecting the time/location for the assessment; - methods of gathering the evidence; - reasons for using the selected methods of obtaining evidence; - procedures for documenting the assessment; - procedures for evaluating the gathered evidence; - need to provide clear and positive feedback to the assessment candidate; - appeals procedure; - any further training required by the assessment candidate; - procedures for recording assessment results; - need to keep records securely stored; - procedures for storing assessment records; - procedures for reviewing assessments undertaken; - reasons for evaluating assessment methods/procedures, and; - procedures for revising assessment procedures.

MEM17003 Assist in the provision of on-the-job training

Locations:Sunshine.

Prerequisites:MEM13015 - Work safely and effectively in manufacturing and engineering/MEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to assist in the provision of on-the-job training to others while undertaking normal duties and it may involve the replacement of normal duties with training duties for limited periods of time. The individual would not be expected to be solely responsible for the assessment or reporting of a trainee's progress. Typical applications could include the provision of on-the-job training by a tradesperson to apprentices/trainees or by a production worker to other production workers/trainees. Where the development of training programs is required unit MEM17001 Assist in development and deliver training in the workplace should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - determining through consultation the objectives of training and the role of on-the-job training; - planning

training delivery; - conducting appropriate training in a safe and effective manner, including the appropriate use of personal protective equipment (PPE); - using appropriate training methods; - monitoring trainee's progress and providing feedback, and; - reporting trainee's progress through appropriate channels. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of PPE; - requirements for planning occasional on-the-job training; - features of training with relevant personnel, including identification of person(s) to be trained, the individual's role in the provision of training, skills and knowledge to be learned, procedures to be followed, training location(s), tools, equipment, materials and resources required, appropriate delivery method/s, the role of feedback in the provision of on-the-job training, the reasons for monitoring trainee's progress, and; - reporting procedures.

MEM17003A Assist in the provision of on the job training

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit covers assisting in the provision of on the job training to others while undertaking normal duties.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining all relevant information with respect to the training to be provided; - applying suitable training methods; - providing feedback to the trainee throughout the training process; - reporting on the trainee's progress; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations, and; - checking and clarifying task-related information. Students will also be expected to demonstrate the following knowledge: - training to be delivered; - personnel to be consulted with respect to the training to be provided; - the individual's role in the provision of training; - objectives of the training; - the person(s) to be trained; - procedures to be followed when training individuals; - training location(s); - tools, equipment, procedures, materials and resources; - training delivery methods, their applications, advantages and disadvantages; - feedback techniques; - reasons for monitoring trainee progress; - reporting procedures; - hazards and control measures associated with assisting in the provision of on the job training, including housekeeping, and; - safe work practices and procedures.

MEM18001 Use hand tools

Locations: Sunshine.

Prerequisites: MEM11011 - Undertake manual handling MEM13015 - Work safely and effectively in manufacturing and engineering MEM16006 - Organise and communicate information

Description: This unit of competency defines the skills and knowledge required to use a range of hand tools for a variety of general engineering applications. This unit should not be selected if the hand tool is dedicated to a single operation or machine or when a machine-specific/customised tool is used. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where the selection and use of engineering measuring equipment is

required unit MEM12023 Perform engineering measurements should also be selected. Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - selecting and using hand tools to produce the desired outcome to job specifications; - following designated procedures for dealing with unsafe or faulty tools, and; - undertaking routine maintenance and cleaning of hand tools, including storage. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - features and applications of different hand tools used in a general engineering context, including hacksaws, hammers, punches, screwdrivers, sockets, wrenches, scrapers, chisels, gouges, wood planes and files of all cross-sectional shapes and sizes; - common faults and/or defects in hand tools; - procedures for marking unsafe or faulty tools for repair; - routine maintenance requirements for a range of hand tools, including lubricating, tightening, simple tool repairs and adjustments using engineering principles and relevant equipment, and; - storage location and procedures for a range of hand tools.

MEM18001C Use hand tools

Locations: Sunshine.

Prerequisites: Nil.

Description: This unit covers using a range of hand tools for a variety of general engineering applications.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and following information on standard operating procedures; - following verbal instructions; - selecting hand tools appropriate to the task; - using hand tools safely; - identifying hand tool defects and marking for repair; - maintaining/sharpening hand tools using appropriate techniques, and; - storing hand tools in accordance with manufacturers'/standard operating procedures. Students will also be expected to demonstrate the following knowledge: - applications of different hand tools in a general engineering context; - common faults and/or defects in hand tools; - procedures for marking unsafe or faulty tools for repair; - routine maintenance requirements for a range of hand tools; - storage location and procedures for a range of hand tools; - hazards and control measures associated with using hand tools; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM18002 Use power tools/hand held operations

Locations:Sunshine.

Prerequisites:MEM11011 - Undertake manual handlingMEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to use a range of hand held power tools and fixed power tools for hand held operations used in a variety of general engineering applications. This unit should not be selected if the power tools used are dedicated to an operation or machine, e.g. nut-runner, air drill and power driver. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected. Where the selection and use of hand tools is required unit MEM18001 Use hand tools should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - selecting and using a range of hand held and fixed power tools for a variety of general engineering applications; - following designated procedures for dealing with unsafe or faulty power tools, and; - undertaking routine maintenance and cleaning of power tools, including storage. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - features and application of different power tools; - clamping/securing methods; - adjustments/alignments to a range of power tools; - common faults and/or defects in power tools; - procedures for marking unsafe or faulty power tools for repair; - routine maintenance requirements and cleaning of a range of power tools, and; - storage location and procedures of a range of power tools.

MEM18002B Use power tools/hand held operations

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers using a range of hand held power tools and fixed power tools for hand held operations for a variety of general engineering applications.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading and following information on standard operating procedures; - following verbal instructions; - selecting power tools appropriate to the task; - using power tools safely; - using

clamping/securing devices; - identifying power tool defects; - maintaining power tools using appropriate techniques; - sharpening tools/tool bits within the scope of this unit, and; - storing power tools according to manufacturers' / standard operating procedures. Students will also be expected to demonstrate the following knowledge: - application of different power tools; - clamping/securing methods; - adjustments/alignments to a range of power tools; - common faults and/or defects in power tools; - procedures for marking unsafe or faulty power tools for repair; - routine maintenance requirements of a range of power tools; - tool sharpening techniques for a range of power tools; - storage location and procedures of a range of power tools; - hazards/control measures associated with power tools; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM18003 Use tools for precision work

Locations:Sunshine.

Prerequisites:MEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency defines the skills and knowledge required to use tools to manually produce work to precise dimensions and/or finishes. It covers performing precision tasks on a range of metallic and non-metallic materials using a variety of tools, instruments and power equipment. Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where precision measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected. Where precision marking out is required unit MEM12006 Mark off/out (general engineering) should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - preparing tools for precision outcomes, including selecting processes and engineering techniques, methods and procedures appropriate to the task; - determining and making tool adjustments to produce required outcome, where applicable; - selecting and using precision tools and equipment to produce the desired outcome to meet job specifications; - following designated procedures for dealing with unsafe or faulty tools, and; - undertaking routine repair/operational maintenance of tools and equipment and storing in accordance with procedures. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - work to be undertaken and specifications to be achieved; - appropriate tools, processes and equipment required to carry out the work to the required specifications and reasons and procedures for using the selected tools; - engineering principles to be applied during the use of the tools; - manufacturers' specifications of the tools and equipment selected; - procedures for checking tools and equipment for correct and safe operation; - common faults and/or defects in tools and equipment used/selected; - procedures

for marking unsafe or faulty tools and equipment for repair; - repairs/operational maintenance that can be made to the tools and equipment used/selected; - procedures for repairing/maintaining the tools and equipment used/selected, and; - procedures for checking/storing tools and equipment used/selected prior to storage and storage location.

MEM18003C Use tools for precision work

Locations: Industry, Sunshine.

Prerequisites: MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations

Description: This unit covers using tools to manually produce work to precise dimensions and or finishes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining and interpreting relevant drawings, specifications, instructions etc.; - preparing and making safe the work area(s) prior to the work being carried out; - using appropriate tools to produce the specified outcomes; - checking tools and equipment for safe and proper working order before, during and after use; - where appropriate, marking unsafe or faulty tools and equipment for repair; - where appropriate, repairing/maintaining unsafe or faulty tools; - checking condition of all tools and equipment for conformance to specifications and safe and proper operation prior to storage, and; - safely storing all tools and equipment in the appropriate location. Students will also be expected to demonstrate the following knowledge: - work to be undertaken; - specifications to be achieved; - appropriate tools, processes and equipment required to carry out the work to the required specifications; - reasons for selecting the chosen tools, processes and equipment; - hazards and control measures associated with using the selected tools, processes and equipment, including housekeeping; - safety procedures to be followed to ensure the safety of the individual and other personnel; - procedures for using the selected tools; - engineering principles to be applied during the use of the tools; - manufacturers' specifications of the tools and equipment selected; - safe and proper function of tools and equipment selected; - procedures for checking tools and equipment for correct and safe operation; - common faults and/or defects in tools and equipment used/selected; - procedures for marking unsafe or faulty tools and equipment for repair; - repairs/operational maintenance that can be made to the tools and equipment used/selected; - procedures for repairing/maintaining the tools and equipment used/selected; - procedures for checking tools and equipment prior to storage; - storage location of the tools and equipment used/selected, and; - procedures for storing tools and equipment used/selected. .

MEM18004 Maintain and overhaul mechanical equipment

Locations: Sunshine.

Prerequisites: MEM09002 - Interpret technical drawing MEM11011 - Undertake manual handling MEM12023 - Perform engineering measurements MEM12024 - Perform computations MEM13015 - Work safely and effectively in manufacturing and engineering MEM14006 - Plan work activities MEM16006 - Organise and communicate information MEM18001 - Use hand tools MEM18002 - Use power tools/hand held operations MEM18003 - Use tools for precision work MEM18005 - Perform fault diagnosis, installation and removal of bearings MEM18006 - Perform

precision fitting of engineering components MEM18007 - Maintain and repair mechanical drives and mechanical transmission assemblies MEM18009 - Perform precision levelling and alignment of machines and engineering components MEM18011 - Shut down and isolate machines/equipment MEM18055 - Dismantle, replace and assemble engineering components

Description: This unit of competency defines the skills and knowledge required to diagnose, locate faults, repair, overhaul, fit and adjust mechanical systems and equipment. It integrates the application of prerequisite diagnostic, maintenance and overhaul competencies and applies to situations where an integrated level of skills in maintenance and overhaul of mechanical systems and equipment is required. Where gland packing is required, unit MEM18013 Perform gland packing should also be selected. Where additional specialist skills are required select appropriate units. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications, charts, lists and drawings to maintain and overhaul mechanical equipment; - performing maintenance tasks on mechanical equipment, components or sub-assemblies in accordance with procedures; - assessing mechanical equipment, components and sub-assemblies visually and with appropriate test equipment to ensure correct function or determine malfunction and make adjustments according to procedures; - diagnosing and locating faults using appropriate diagnostic techniques, including visual inspection and use of test equipment, and localising fault condition to component level; - repairing or overhauling faulty equipment using appropriate fitting techniques and principles, tools, equipment and procedures and to manufacturers' or site specifications; - fitting and adjusting mechanical systems and equipment by applying sound fitting principles and techniques to specifications, and; - performing final adjustments and testing mechanical equipment for accuracy and correct function to align with operational specifications and return to service in accordance with work site procedures. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - preventative maintenance procedures; - functions of system/equipment and their operational requirements; - causes and symptoms of faults and failures; - system and equipment hazard identification and isolation procedures; - options for sourcing replacement parts; - consequences of incorrect adjustments; - procedures for testing the mechanical systems and equipment, and; - procedures for returning mechanical systems and equipment to service.

MEM18004B Maintain and overhaul mechanical equipment

Locations: Sunshine.

Prerequisites: MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations MEM18003C - Use tools for precision work MEM18005B - Perform fault diagnosis, installation and removal of bearings MEM18006C - Repair and fit engineering components MEM18007B - Maintain and repair mechanical drives and mechanical transmission assemblies MEM18009B - Perform levelling and

alignment of machines and engineering components MEM18055B - Dismantle, replace and assemble engineering components

Description: This unit covers diagnosing, locating faults, repairing, overhauling, fitting and adjusting mechanical systems and equipment.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning and sequencing of multiple tasks; - sourcing resources; - using diagnostic skills to check and test mechanical systems/equipment; - using communication skills to consult with operators and other relevant plant personnel to assist in locating faults; - making systematic operational adjustments; - checking system; - using language and literacy skills to enable all reporting requirements to be met including checking maintenance reports; documenting faults etc. and; - reading and interpreting engineering drawings, technical manuals equipment component function. Students will also be expected to demonstrate the following knowledge: - preventative maintenance procedures; - functions of system/equipment and their operational requirements; - causes and symptoms of faults and failures; - system and equipment hazard identification and isolation procedures; - options for sourcing replacement parts; - consequences of incorrect adjustments; - procedures for testing the mechanical systems and equipment; - procedures for returning mechanical systems and equipment to service; - use and application of personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with maintaining and overhauling mechanical equipment.

MEM18005 Perform fault diagnosis, installation and removal of bearings

Locations: Sunshine.

Prerequisites: MEM09002 - Interpret technical drawing MEM11011 - Undertake manual handling MEM12023 - Perform engineering measurements MEM12024 - Perform computations MEM13015 - Work safely and effectively in manufacturing and engineering MEM14006 - Plan work activities MEM16006 - Organise and communicate information MEM18001 - Use hand tools MEM18002 - Use power tools/hand held operations MEM18003 - Use tools for precision work MEM18006 - Perform precision fitting of engineering components MEM18055 - Dismantle, replace and assemble engineering components

Description: This unit of competency defines the skills and knowledge required to perform fault diagnosis, installation and removal of bearings. It covers performing routine bearing checks during operation and non-operation, diagnosing bearing faults, identifying bearing requirements for replacement or installation, and removing and installing bearings to industry and enterprise standards of quality and safety. Where diagnostic skills are not required and where straightforward removal and replacement of pre-manufactured bearings is undertaken, unit MEM18055 Dismantle, replace and assemble engineering components should be regarded as sufficient. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting

of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications, charts, lists and drawings to perform fault diagnosis, installation and removal of bearings; - performing routine bearing checks during operation and non-operation by observing, listening, feeling and the use of appropriate test equipment; - performing fault diagnosis of bearings using diagnostic techniques and equipment and testing bearings for correct function/malfunction according to manufacturers' specifications; - identifying faulty bearings and causes of failure and taking remedial action to avoid recurrences; - removing bearings from shafts and bearing housings using appropriate fitting techniques and principles, tools, equipment and procedures; and inspecting condition, including measuring bearings and components to specified tolerances and repairing, where appropriate; - installing rotational plain bearings by sizing for correct clearances, lubricating, fitting, tensioning down and running according to specifications and procedures; - installing anti-friction bearings, including ball and roller by determining bearing inside/outside diameters, checking shafts and housings size for correct fit and clearances using appropriate fitting techniques and principles, tools and equipment and seal and cap bearings to specifications, and; - undertaking numerical operations, calculations and formulae for diagnosing, installing and removal of bearings. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE) procedures for checking bearings and seals, checking bearing lubrication/lubrication devices, determining the appropriate clearances for a range of plain bearings and 'sizing' plain bearings; - manufacturer specifications; - engineering principles relating to fault diagnosis, installation and removal of bearings; - reasons for deciding to replace/not replace given bearings; - common causes of bearing failure and their indicators, and; - lubricants and lubrication requirements.

MEM18005B Perform fault diagnosis, installation and removal of bearings

Locations: Sunshine.

Prerequisites: MEM09002B - Interpret technical drawing MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations MEM18003C - Use tools for precision work MEM18006C - Repair and fit engineering components MEM18055B - Dismantle, replace and assemble engineering components MEM12023A - Perform engineering measurements

Description: This unit covers performing routine bearing checks during operations and non-operation, diagnosing bearing faults, identifying bearing requirements for replacement or installation, and removing and installing bearings.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on standard operating procedures, manufacturer specifications, and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task-related information; - measuring bearings and components to specified tolerances; - numerical operations and calculations/formulae within the scope of this unit; - performing routine bearing checks including of seals, lubrication and lubrication devices; - diagnosing bearing faults; - identifying bearing

requirements for replacement or installation; - removing bearings; - installing bearings, and; - checking for conformance to specifications. Students will also be expected to demonstrate the following knowledge: - procedures for checking bearings and seals; - procedures for checking bearing lubrication/lubrication devices; - manufacturer specifications; - engineering principles relating to fault diagnosis, installation and removal of bearings; - reasons for deciding to replace/not replace given bearings; - common causes of bearing failure and their indicators; - procedures for determining the appropriate clearances for a range of plain bearings; - procedures for 'sizing' plain bearings; - lubricants and lubrication requirements within the scope of this unit; - hazards and control measures associated with fault diagnosis, installation and removal of bearings; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM18006 Perform precision fitting of engineering components

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operationsMEM18003 - Use tools for precision workMEM18055 - Dismantle, replace and assemble engineering components

Description:This unit of competency has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade-level skills in precision fitting and mechanical repair. It defines the trade-level fitting skills and knowledge associated with manufacturing of new parts/components and fitting mechanical engineering components into assemblies or sub-assemblies to specifications and specified tolerances. The skills and knowledge described by this unit are applied in occupational and work situations associated with fitting, mechanical trade and maintenance work. Where the knowledge and skills associated with machining or welding are required, the appropriate units should also be selected. Where additional or higher marking out skills are required unit MEM12006 Mark off/out (general engineering) should also be selected. Where the knowledge and skills associated with the installation, removal, repair or replacement of mechanical seals is required unit MEM18012 Perform installation and removal of mechanical seals should also be selected. Where the knowledge and skills associated with high pressure fluid power seals is required unit MEM18020 Maintain hydraulic system components should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - assessing engineering components visually and dimensionally with appropriate testing and measuring equipment techniques for compliance to specifications; - repairing or replacing faulty components using appropriate tools, equipment and techniques; - assembling components using appropriate fitting techniques and principles; - recording approved modifications/alterations; - inspecting final assembly to check compliance to specifications, and; - returning the final assembly to service in

accordance with SOPs. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - tools and equipment used to dismantle, repair, assemble and fit engineering components; - consequences of having non-compliant components; - types of modifications/adjustments to components being repaired/fitted; - repair methods; - sources of replacement parts; - techniques for the production of engineering components; - assembly and fitting techniques; - machine backlash/recoil; - measuring equipment; - engineering components - shafts, single and multi-throw crankshafts, cams and journals, bearings and bearing surfaces, and keys; - squareness, roundness, concentricity, flatness, straightness, surface finish and angular correctness; - purpose, selection criteria and use of gland packing, jointing or gasket materials; - types and application of lubricants; - approval processes for documenting out-of-specification modifications, and; - commissioning and return to service procedures.

MEM18006C Repair and fit engineering components

Locations:Industry, Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers fault finding, repairing faulty components, manufacturing new parts/components, and fitting mechanical engineering components into assemblies or subassemblies.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining operational specifications for the components; - assessing operation against specification and identifying faults; - checking components visually and dimensionally against the operational specifications using work site procedures; - checking repaired components visually and dimensionally for conformance to specifications; - adjusting components to achieve conformance to specifications where appropriate; - selecting replacement parts which conform to specifications; - preparing and assembling components using appropriate fitting techniques and principles; - where appropriate, applying gland packing, jointing or gasket materials, using acceptable engineering practices; - applying appropriate lubricants to the assembly using acceptable engineering practices, where required; - checking components for conformance to specification; - where required, adjusting components to achieve conformance to specifications; - where required, recording any approved modifications/alterations to work site procedures; - inspecting the final assembly and checking conformance to operational specifications; - where appropriate, returning the final assembly to service in accordance with work site procedures; - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents, and; - undertaking numerical operations, geometry and calculations/formulae within the scope of this unit. Students will also be expected to demonstrate the following knowledge: - tools and equipment to be used to dismantle the components; - consequences of having components that do not comply with operational specifications; - types of adjustment applicable to the components being repaired/fitted; - appropriate methods of repair; -

features and/or dimensions upon which replacement parts are to be selected; - process of identifying replacement parts from third party suppliers' catalogues; - material properties required; - manufacturing operations to be used in the production of new components; - sequence of operations to be used in the production of new components; - fitting requirements for assembling components; - appropriate sequence of assembly tasks; - purpose of using gland packing, jointing or gasket materials; - reasons for selecting particular jointing or packing materials; - applications of different types of lubricants; - consequences of using inappropriate or no lubricant; - the need to have approval for out of specification modifications; - reasons for documenting out of specification modifications; - return to service procedures; - consequences of not following work site return to service procedures; - hazard and control measures associated with repairing and fitting engineering components, including housekeeping, and; - safe work practices and procedures.

MEM18007 Maintain and repair mechanical drives and mechanical transmission assemblies

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operationsMEM18003 - Use tools for precision workMEM18006 - Perform precision fitting of engineering componentsMEM18055 - Dismantle, replace and assemble engineering components

Description:This unit of competency defines the skills and knowledge required to undertake maintenance, diagnose faults and repair drives and transmission assemblies, and undertake final adjustment and commissioning on industrial machinery. Where levelling and alignment of machines and engineering components is required unit MEM18009 Perform precision levelling and alignment of machines and engineering components should also be selected. MEM27028 Diagnose and rectify manual transmissions, MEM27014 Diagnose and rectify automatic transmissions and MEM27015 Diagnose and rectify drive line and final drives define the skills and knowledge applicable to mobile plant. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications, charts, lists and drawings to maintain and repair mechanical drives and transmission assemblies; - undertaking diagnosis and testing of mechanical drives/transmissions components for wear, lubrication, faults and malfunctions using appropriate tools, equipment and techniques; - identifying assemblies requiring further diagnosis/repair or adjustment and document findings; - determining adjustment requirements of mechanical drives and transmission assemblies from manufacturers' specifications and manuals; - carrying out adjustments to specifications and confirming correct operation; - interpreting service reports and carrying out inspection of drive/transmission assembly visually, sensory

and use of diagnostic test equipment to localise faults down to component level and identify for repair or replacement; - dismantling mechanical drive/transmission using appropriate tools and equipment, repairing serviceable items and re-fitting component parts in accordance with manufacturers' /site specifications; - analysing fault causes and developing preventive measures to avoid re-occurrence, and; - making final adjustments and commissioning to specifications and completing service report. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - uses and characteristics of lubricants; - principles of operation of a range of mechanical drives and transmissions; - techniques, tools and equipment to measure components; - common malfunctions in mechanical drives, transmissions and their components; - procedures for checking and adjusting mechanical drives, transmissions and their components, and; - preventative measures that can be undertaken to avoid recurrence of the fault/failure.

MEM18007B Maintain and repair mechanical drives and mechanical transmission assemblies

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18009B - Perform levelling and alignment of machines and engineering componentsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers diagnosing faults and repairing drives and transmission assemblies, and undertaking final adjustment and commissioning.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system. .

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - locating, reading and interpreting information on written job instructions, specifications, manufacturers' instructions, standard workshop manuals/procedures, drawings, charts, lists and other reference documentation; - checking and clarifying task-related information; - interpreting manufacturers' catalogues or engineering specifications; - undertaking diagnostic and testing; - analysing operational performance; - planning and sequencing operations; - completing proformas, standard workplace forms and short reports using relevant terminology; - checking for conformance to specifications; - measuring components to specified tolerances; - undertaking calculations for determining cutting parameters and checking tolerances; - undertaking numerical operations and engineering calculations/formulae within the scope of this unit; - following verbal instructions, and; - orally reporting information. Students will also be expected to demonstrate the following knowledge: - uses and characteristics of lubricants; - principles of operation of a range of mechanical drives and transmissions; - techniques, tools and equipment to measure components; - common malfunctions in mechanical drives, transmissions and their components; - procedures for checking and adjusting mechanical drives, transmissions and their components; - preventative measures that can be undertaken to avoid recurrence of the fault/failure; - any applicable industry standards, national/Australian standards, NOHSC guidelines, State/Territory regulatory codes of practice/standards; - use and application of

personal protective equipment; - safe work practices and procedures, and; - hazards and control measures associated with maintaining and repairing mechanical drives and mechanical transmission assemblies.

MEM18009 Perform precision levelling and alignment of machines and engineering components

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operationsMEM18003 - Use tools for precision workMEM18006 - Perform precision fitting of engineering componentsMEM18055 - Dismantle, replace and assemble engineering components

Description:This unit of competency defines the skills and knowledge required to undertake levelling and alignment measurements/readings and perform levelling and/or alignment and adjustment tasks on machines and engineering components. It applies to the setting up and use of precision levelling and alignment devices and where all adjustments are performed according to designated procedures in conformance to specifications. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications, charts, lists and drawings to perform levelling and alignment of machines and engineering components; - selecting appropriate levelling and/or alignment procedure in accordance with task requirements; - selecting appropriate levelling and alignment devices/equipment appropriate to the task, and; - performing levelling/alignment tasks, including levelling or alignment calculations, using appropriate tools, equipment and techniques to specifications. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - principles of levelling and alignment; - numerical operations, geometry and calculations/formulae for levelling and alignment; - effects on equipment performance and life of non-level or out-of-alignment components; - techniques, tools, equipment and procedures to carry out the levelling and/or alignment, and; - reasons for selecting tools, techniques and equipment.

MEM18009B Perform levelling and alignment of machines and engineering components

Locations:Industry, Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers undertaking levelling and alignment measurements/readings and performing levelling and/or alignment tasks.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on standard operating procedures, manufacturer recommendations, drawings and other applicable reference documents; - taking levelling and alignment measurements/readings; - performing levelling/alignment calculations; - setting up levelling/aligning equipment, and; - completing levelling and/or alignment tasks. Students will also be expected to demonstrate the following knowledge: - principles of levelling and alignment; - numerical operations, geometry and calculations/formulae for levelling and alignment; - effects on equipment performance and life of non-level or out of alignment components; - techniques, tools, equipment and procedures to carry out the levelling and/or alignment; - reasons for selecting tools, techniques and equipment; - hazards and control measures associated with levelling and alignment; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM18010 Perform equipment condition monitoring and recording

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operationsMEM18055 - Dismantle, replace and assemble engineering components

Description:This unit of competency defines the skills and knowledge required to undertake condition monitoring of equipment, including recording the results. It applies where specialist monitoring activities are undertaken as part of a preventive maintenance or total productive maintenance plan or program and monitoring is undertaken in workshop, laboratory or in situ environment. Where only routine maintenance checking and diagnostic skills are applied see other appropriate units. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications, charts, lists and drawings to perform equipment condition monitoring and recording; - selecting appropriate condition monitoring device/equipment to achieve the required outcomes, and; - carrying out condition monitoring, plotting results and reporting deviation from specifications according to procedures. Students will also be expected to demonstrate the following knowledge:

- safe work practices and procedures and use of personal protective equipment (PPE); - application of principles and methods for a variety of situations, and; - appropriate records for a variety of situations.

MEM18010C Perform equipment condition monitoring and recording

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers undertaking condition monitoring.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task-related information; - applying correct principles for monitoring; - selecting appropriate technique for the situation; - following standard operating procedures, and; - recording results and preparing and submitting deviation reports. Students will also be expected to demonstrate the following knowledge: - the application of principles and methods for a variety of situations; - appropriate records for a variety of situations; - hazards and control measures associated with equipment monitoring, including housekeeping; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM18011 Shut down and isolate machines/equipment

Locations:Sunshine.

Prerequisites:MEM11011 - Undertake manual handlingMEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate information

Description:This unit of competency defines the skills and knowledge required to isolate and shut down machines and equipment and applies to situations that require extensive system knowledge that exclude the straightforward starting/stopping of machinery/equipment through the use of simple switching, including use of emergency switches. All shutdown and isolation must comply with relevant regulations, Australian Standards and legislative requirements governing isolation and shutdown. Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected. Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected. Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations should also be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each

unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications, charts, lists and other applicable reference documents to shut down and isolate machines and equipment; - shutting down machines/equipment ensuring machine/equipment is depressurised/emptied/de-energised/bled according to procedures; - isolating machines/equipment safely in accordance with SOPs, relevant regulations, Australian Standards and legislative requirements governing isolation and shutdown and verifying safe isolation, and; - installing safety/security lock-off devices and signage. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - operational function of the machine/equipment; - shutdown sequence; - procedures and safety precautions for shutting down and isolating the machine/equipment; - procedures for purging/de-energising the machine/equipment and reasons for doing so; - procedures for verifying machine/equipment shutdown and isolation and reasons for verifying; - relevant regulations, Australian Standards and legislative requirements governing isolation and shutdown safety/security lock-off devices and signage to be installed; - reasons and procedures for installing lock-off devices and signage, and; - reasons for ensuring the machine/equipment is left in a clean safe state.

MEM18011C Shut down and isolate machines/equipment

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit covers isolating and shutting down machines and equipment.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications and other applicable reference documents; - checking and clarifying task-related information; - entering information onto proformas and standard workplace forms; - shutting down machine/equipment; - purging/de-energising equipment, and; - installing safety/security lock-off devices and signage. Students will also be expected to demonstrate the following knowledge: - the operational function of the machine/equipment; - the shutdown sequence; - the procedures for shutting down and isolating the machine/equipment; - safety precautions for shutting down and isolating the machine/equipment; - procedures for purging/de-energising the machine/equipment and reasons for doing so; - procedures for verifying machine/equipment shut-down and isolation and reasons for verifying; - the safety/security lock-off devices and signage to be installed; - the reasons and procedures for installing lock-off devices and signage; - the reasons for ensuring the machine/equipment is left in a clean, safe state; - hazards and control measures; - use and application of personal protective equipment, and; - safe work practices and procedures. .

MEM18012B Perform installation and removal of mechanical seals

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers dismantling, selecting, reassembling and installing mechanical seals.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on standard operating procedures, written job instructions, specifications, charts, lists, drawings and other applicable reference documents; - determining mechanical seal requirements; - dismantling mechanical seal installations; - selecting replaceable items; - reassembling/repairing mechanical seal installations; - adjusting mechanical seal tensions; - testing mechanical seal assembly; - checking for conformance to specifications, and; - measuring components to specified tolerances. Students will also be expected to demonstrate the following knowledge: - components and function of a range of mechanical seal designs; - installation specifications and procedures; - failure patterns/wear limits of mechanical seal components; - techniques/tools for removing primary sealing elements and secondary seals from the mechanical seals; - units of measurement, numerical operations and calculations/formulae within the scope of this unit; - reasons for selection of the mechanical seal; - specified mechanical seal tension; - testing mechanical seals; - techniques, tools and equipment to measure components; - hazards and control measures associated with installing/removal of mechanical seals, including housekeeping; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM18013B Perform gland packing

Locations:Sunshine.

Prerequisites:MEM18001C - Use hand toolsMEM12023A - Perform engineering measurements

Description:This unit covers inspecting glands and gland packing, and removing and replacing or topping up gland packing.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - checking and clarifying task-related information; - inspecting glands and gland packing; - removing gland packing; - cutting gland packing to size and shape; - replacing or topping up gland packing; - reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings; - following oral instructions, and; - entering routine and familiar information onto proformas and standard workplace forms. Students will also be expected to demonstrate the

following knowledge: - principles of gland packing; - tools, techniques and equipment required to remove gland packing; - various types of gland packing; - reasons for selecting gland packing; - methods of cutting gland packing to size and shape; - reassembling procedures; - hazards and control measures associated with gland packing, including housekeeping, and; - safe work practices.

MEM18014B Manufacture press tools and gauges

Locations:Sunshine.

Prerequisites:MEM06007B - Perform basic incidental heat/quenching, tempering and annealingMEM07005C - Perform general machiningMEM07006C - Perform lathe operationsMEM07007C - Perform milling operationsMEM07008D - Perform grinding operationsMEM09002B - Interpret technical drawingMEM12003B - Perform precision mechanical measurementMEM12006C - Mark off/out (general engineering)MEM12023A - Perform engineering measurementsMEM12024A - Perform computationsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18015B - Maintain tools and diesMEM18055B - Dismantle, replace and assemble engineering componentsMEM30012A - Apply mathematical techniques in a manufacturing engineering or related environment

Description:This unit covers preparing to manufacture and manufacture tooling (press tools and gauges) including matching use of hand and hand held power tools, assembly of the tooling components and trialling the tooling.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining and interpreting relevant drawings, prints and/or sample components, specifications and instructions; - sketching or drawing the tool design; - incorporating mounting requirements into the tooling design; - testing tooling materials for hardness; - preparing sequential plan for the manufacture of the required tooling; - shaping/producing tooling components to specifications using appropriate machines and machining processes; - using hand and hand held power tools to fashion/ manufacture tooling components to specification; - assembling and fitting tooling components using acceptable tool making techniques and procedures; - producing first-off component/product; - checking first-off component/product for conformance to specification; - modifying tooling using appropriate tool making techniques and procedures; - checking conformance of the component/product to specifications, and; - recording/reporting modifications or alterations to original tooling design. Students will also be expected to demonstrate the following knowledge: - customers' tooling requirements; - the type of tooling to be manufactured; - the machine(s) in which the tooling is to be used; - the tooling design concept in terms of customer specifications and proposed production machine(s); - the performance requirements of the tooling; - the method of mounting the tooling in the production machine into which it is to be installed; - the physical properties of a range of tool steels; - the appropriate materials for each component of the tooling to be produced; - the reasons for selecting the chosen materials in terms of strength, durability, component finish, heat treatment requirements, and availability; - the procedures for hardness testing materials; - the effect of material hardness on machinability of the material; - the appropriate machinery and tools to be used to fashion or shape tooling components; - the reasons for selecting the

chosen machinery and tooling; - the reasons for establishing a sequential plan for the manufacture of tooling; - the procedures for documenting plans for the manufacture of tooling; - the hand and hand held power tools to be used to fashion/manufacture the required tooling components; - the reasons for selecting the chosen hand and hand held power tools; - procedures for fitting/assembling the tooling components; - the precautions to be taken when fitting/assembling tooling components; - the appropriate precision instruments for checking the components produced; - the specifications of the finished product; - causes of any non-conformance to specification; - the tool making techniques/procedures to be applied to return the tooling to specification; - procedures for reporting/recording the conformance of the component/product produced by the tooling to specifications, and; - procedures for recording/reporting modifications and/or alterations to tooling design. .

MEM18015B Maintain tools and dies

Locations:Sunshine.

Prerequisites:MEM06007B - Perform basic incidental heat/quenching, tempering and annealingMEM07005C - Perform general machiningMEM07006C - Perform lathe operationsMEM07007C - Perform milling operationsMEM07008D - Perform grinding operationsMEM09002B - Interpret technical drawingMEM12003B - Perform precision mechanical measurementMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers identifying and analysing defects in tooling, disassembling and assessing tooling components, manufacturing or repairing tooling components to conform to specifications, and assembling tooling components.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining all relevant information with respect to defective tooling; - examining the defective tooling for breakage, wear, etc.; - preparing a sequential plan for the repair/maintenance of the defective tooling and documenting the plan; - disassembling the defective tooling in accordance with acceptable tool making techniques and procedures; - obtaining all relevant drawings, specifications and sample products/components; - marking worn/damaged components for repair or replacement; - testing tooling components for hardness; - obtaining the appropriate materials for manufacture of replacement tooling components; - using the appropriate hand and hand held power tools to fashion/manufacture tooling components to specification; - utilise sample components or sections to test the tooling components being manufactured; - shaping and producing the tooling components to specifications using appropriate machines and machining processes; - assembling and fitting all tooling components to specification using acceptable tool making techniques and procedures; - checking the first-off component/product using appropriate precision instruments for conformance to specification; - recording the conditions that lead to the failure of the given set of tooling, and; - initiating design modifications/alterations to rectify recurring faults or failure. Students will also be expected to demonstrate the following knowledge: - common tooling defects from a range of sample products/components; - the probable causes of tooling failure; - the reasons for

selecting the probable causes of tooling failure; - the reasons for establishing a sequential plan for the repair/maintenance of defective tooling; - the procedures for documented plans for the repair/ maintenance of defective tooling; - the procedures for disassembling defective tooling; - the specifications of all tooling components; - the precision instruments to be used to check tooling components for conformance to specification; - the reasons for selecting the chosen precision instruments; - the procedures for identifying worn/damaged tooling; - components for repair or replacement; - the reasons for deciding to repair or replace worn/damaged components; - the appropriate materials for each component of the tooling to be replaced; - the required physical properties of the tooling to be replaced; - the reasons for selecting the chosen materials in terms of: strength, durability, component finish, heat treatment requirement, and availability; - the procedures for hardness testing materials; - the procedures for obtaining tooling materials - the hand and hand held power tools to be used to fashion/manufacture the required tooling components; - the reasons for selecting the chosen hand and hand held power tools; - the appropriate machines and machining processes to shape/produce the required tooling components; - the reasons for selecting the chosen machines and machining processes; - the effect of machining parameters on the surface finish and tolerances achievable from machining processes; - the machining parameters appropriate to given machining tasks and specifications, and; - the reasons for selecting the chosen machining parameters.

MEM18016B Analyse plant and equipment condition monitoring results

Locations:Industry, Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12003B - Perform precision mechanical measurementMEM12023A - Perform engineering measurementsMEM12024A - Perform computationsMEM12025A - Use graphical techniques and perform simple statistical computationsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18010C - Perform equipment condition monitoring and recordingMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers analysing condition monitoring results and developing recommendations based on the analysis. The data analysed is generated by a continuous plant and equipment condition monitoring program.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining results of condition monitoring of plant/equipment; - performing calculations to analyse condition monitoring data; - preparing reports based on the analysis of the condition monitoring data; - reporting recommendations to the appropriate authority, and; - orally reporting routine information. Students will also be expected to demonstrate the following knowledge: - the operational specifications of the plant/equipment being monitored; - any trends and/or deviations from operational specifications; - numerical operations and calculations/formulae for data analysis within the scope of this unit; - the reasons for undertaking the identified calculations; - the procedures for reporting the analysis of condition monitoring data; - the previous history of the plant/equipment being monitored; - any relevant legislative requirements; - the operational specifications of the plant/equipment; - the recommendations with

respect to action to be taken; - the reasons for the recommendations made; - the expected effect of the recommendations on the operational performance of the plant/equipment; - the procedures for reporting recommendations. and; - the authority/person to whom the recommendations are to be made.

MEM18018 Maintain pneumatic system components

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operationsMEM18003 - Use tools for precision workMEM18006 - Perform precision fitting of engineering componentsMEM18055 - Dismantle, replace and assemble engineering components

Description:This unit of competency defines the skills and knowledge required to check pneumatic system components, identify and repair or replace faulty components. Pneumatic system components are identified and inspected and assessed using fluid power principles to predetermined specifications interpreted from data sheets and circuits diagrams. Where straightforward removal/replacement of components from a pneumatic system is required unit MEM18055 Dismantle, replace and assemble engineering components and unit MEM18071 Connect and disconnect fluid conveying system components, should be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to maintain pneumatic system components; - inspecting and testing pneumatic system components to predetermined specifications using fluid power principles; - checking component parts visually and dimensionally for compliance to specification and, where appropriate, marking faulty parts for repair, replacement or adjustment; - dismantling and repairing faulty system components, including selecting replacement parts from manufacturers'/suppliers' catalogues to site or manufacturers' specifications; - assembling and testing pneumatic components for correct operation and compliance to specifications; - checking the operation of the pneumatic system for compliance to specifications, and; - completing service reports in accordance with SOPs. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - full range of pneumatic system components and characteristics/operational function of each component; - procedures and equipment for inspecting and testing pneumatic system components; - specifications of each pneumatic system component; - faulty system components and causes of faulty components, and; - individual components within the pneumatic system; - procedures for repairing pneumatic system components; - procedures for checking pneumatic system operation; - follow-up procedures with respect to repaired/replaced pneumatic system components, and; - reporting/recording procedures.

MEM18018C Maintain pneumatic system components

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers checking pneumatic system components, and identifying and repairing or replacing faulty components.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - inspecting and testing pneumatic system components; - obtaining, interpreting and following written job instructions, specifications, standard operating procedures, charts, lists, drawings, relevant data sheets and other applicable reference documents; - planning and sequencing operations; - checking and clarifying task-related information; - checking individual components within the pneumatic system for correct operation; - dismantling and repairing faulty system components; - selecting replacement parts from manufacturers'/suppliers' catalogues; - assembling pneumatic system components; - testing pneumatic components for correct operation and conformance to specifications; - checking the operation of the pneumatic system for conformance to specification; - checking repaired/replaced pneumatic system components for correct operation, and; - completing service reports. Students will also be expected to demonstrate the following knowledge: - the full range of pneumatic system components; - characteristics/operational function of each component; - procedures for inspecting and testing pneumatic system components; - equipment to test pneumatic system components; - the specifications of each pneumatic system component; - faulty system components; - causes of faulty pneumatic components; - individual components within the pneumatic system; - the safety procedures for working on pneumatic components; - the procedure for repairing pneumatic system components; - procedures for checking pneumatic system operation; - follow-up procedures with respect to repaired/replaced pneumatic system components; - reporting/recording procedures; - hazard and control measures associated with maintaining pneumatic system components, including housekeeping, and; - safe work practices and procedures.

MEM18019 Maintain pneumatic systems

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operationsMEM18003 - Use tools for precision workMEM18006 - Perform precision fitting of engineering componentsMEM18018 - Maintain pneumatic system componentsMEM18055 - Dismantle, replace and assemble engineering components

Description:This unit of competency defines the skills and knowledge required to

undertake preventive maintenance checks/adjustments on pneumatic systems, and fault-find, replace, repair or overhaul and recommission pneumatic systems. It applies to pneumatic systems in industrial and mobile plant and equipment used in manufacturing, agricultural, forestry, mining and transport industries. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - obtaining and interpreting maintenance reports and preventative maintenance schedules inspecting and testing pneumatic system components, assemblies or sub-assemblies and carrying out; - preventative maintenance tasks to predetermined specifications using fluid power principles, tools and equipment; - checking component parts visually and dimensionally for compliance to specification and, where appropriate, marking faulty parts for repair, replacement or adjustment; - consulting with system operator and carrying out visual inspection of pneumatic system and components with respect to the fault being investigated and other anomalies; - undertaking faultfinding and verifying and confirming faults/malfunctions; - isolating and depressurising system or sub-assembly, confirming and using appropriate tagging system according to SOPs; - removing, dismantling and repairing/overhauling faulty system components or sub-assembly, including selecting replacement parts from manufacturers' /suppliers' catalogues, to site or manufacturers' specifications assembling pneumatic components or sub-assembly for compliance to specifications, refitting items to equipment and testing for correct operation; - recommissioning pneumatic system/sub-assembly to specifications and verifying correct operation and initiating any follow-up procedures, and; - updating and completing maintenance records and/or service reports. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - pneumatic principles; - manufacturers' specifications and structure of common pneumatic system components and their constituent parts; - pneumatic system/component faults that can be determined by visual inspection; - application of common pneumatic system/component test equipment; - scheduled preventative maintenance tasks; - common pneumatic system and component faults and any previous faults; - any previous maintenance carried out on the pneumatic system/components; - typical checks/tests that can be carried out on pneumatic systems/components and their application; - pneumatic system/component tests and testing techniques; - apparent faults/malfunctions; - documentation/reporting requirements with respect to verified faults/malfunctions; - procedures for initiating repair and/or overhaul of the pneumatic system; - procedures for isolating and depressurising pneumatic systems; - tagging requirements for isolated systems; - appropriate repair/overhaul procedures of pneumatic components; - pneumatic system operational specifications and system recommissioning procedures; - any appropriate follow-up maintenance or operational checks, and; - maintenance recording/reporting requirements and consequences of inaccurate or incomplete recording/reporting of maintenance/service activities.

MEM18019B Maintain pneumatic systems

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform
566

engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18018C - Maintain pneumatic system componentsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers undertaking preventive maintenance checks/adjustments on pneumatic systems, and fault finding, replacing, repairing or overhauling, and recommissioning pneumatic systems.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing pneumatic system components for inspection/preventative maintenance; - inspecting and testing pneumatic system and components; - performing scheduled preventative maintenance tasks; - performing repairs on the pneumatic system/components as required; - visually inspecting pneumatic system and its components; - consulting system operator with respect to the fault being investigated; - obtaining and interpreting maintenance reports; - checking/testing pneumatic system/component operation; - verifying/confirming apparent faults/malfunctions; - documenting or reporting verified faults/malfunctions; - initiating repair/overhaul of the pneumatic system; - isolating and depressurising pneumatic system; - checking pneumatic system to ensure isolation and depressurisation; - tagging isolated pneumatic system; - removing pneumatic components/sub-assembly from the system; - dismantling pneumatic components/sub-assemblies; - examining pneumatic components/sub-assemblies and their parts; - selecting replacement parts selected from manufacturers' catalogues; - overhauling faulty items; - refitting pneumatic component/sub-assembly into the system; - testing pneumatic component/sub-assembly for correct operation; - recommissioning pneumatic system/sub-assembly to specification; - checking/testing pneumatic system/sub-assembly for correct operation; - initiating follow-up procedures, and; - updating and completing maintenance records/reports. Students will also be expected to demonstrate the following knowledge: - common pneumatic system components; - pneumatic system/component faults that can be determined by visual inspection; - the application of common pneumatic system/component test equipment; - scheduled preventative maintenance tasks; - manufacturers' specifications; - common pneumatic system and component faults; - any previous faults in the pneumatic system/components; - any previous maintenance carried out on the pneumatic system/components; - typical checks/tests that can be carried out on pneumatic systems/components and their application; - pneumatic system/component tests and testing techniques; - apparent faults/malfunctions; - documentation/reporting requirements with respect to verified faults/malfunctions; - procedures for initiating repair and/or overhaul of the pneumatic system; - hazards associated with working on pneumatic systems/components, including housekeeping; - the procedures for isolating and depressurising pneumatic systems; - the tagging requirements for isolated systems; - the structure of typical pneumatic components; - specifications of pneumatic components and their constituent parts; - reasons for deciding to repair, replace or overhaul pneumatic components; - system recommissioning procedures; - the pneumatic system operational specifications; - any appropriate follow-up maintenance or operational checks; - maintenance recording/reporting requirements;

- consequences of inaccurate or incomplete recording/reporting of maintenance/service activities; - pneumatic principles, and; - safe work practices and procedures.

MEM18020 Maintain hydraulic system components

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operationsMEM18003 - Use tools for precision workMEM18006 - Perform precision fitting of engineering componentsMEM18055 - Dismantle, replace and assemble engineering components

Description:This unit of competency defines the skills and knowledge required to check hydraulic system components, identify, and repair or replace faulty components. Hydraulic system components are identified and inspected and assessed using fluid power principles to predetermined specifications interpreted from data sheets and circuits diagrams. Where straightforward removals/replacement of components from a hydraulic system is required unit MEM18055 Dismantle, replace and assemble engineering components and unit MEM18071 Connect and disconnect fluid conveying system components, should be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to maintain hydraulic system components; - inspecting and testing hydraulic system components to predetermined specifications using fluid power principles - checking component parts visually and dimensionally for compliance to specification and, where appropriate, marking faulty parts for repair, replacement or adjustment; - dismantling and repairing faulty system components, including selecting replacement parts from manufacturers'/suppliers' catalogues, to site or manufacturers' specifications; - assembling and testing hydraulic components for correct operation and compliance to specifications; - checking the operation of the hydraulic system for compliance to specifications, and; - completing service reports in accordance with SOPs. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - full range of hydraulic system components characteristics/operational function of each component; - procedures and equipment for inspecting and testing hydraulic system components; - specifications of each hydraulic system component; - faulty system components and causes of faulty components; - individual components within the hydraulic system; - procedure for repairing hydraulic system components; - procedures for checking hydraulic system operation; - follow-up procedures with respect to repaired/replaced hydraulic system components, and; - reporting/recording procedures.

MEM18020B Maintain hydraulic system components

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers checking hydraulic system components, and identifying and repairing or replacing faulty components.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - inspecting a range of hydraulic system components in accordance with standard operating procedures; - reading, interpreting and following relevant data sheets, specifications, hydraulic circuits, drawings, instructions and manuals; - checking the individual components within the hydraulic system for correct operation; - dismantling and rectifying faulty system components to manufacturers'/site specifications in accordance with standard operating procedures; - where appropriate, selecting replacement parts from the manufacturers'/suppliers' catalogues; - reassembling and testing the hydraulic system components; - checking the operation of the hydraulic system for conformance to specification; - checking repaired/replaced hydraulic system components for correct operation, and; - completing service reports where appropriate. Students will also be expected to demonstrate the following knowledge: - the full range of hydraulic system components; - characteristics and operational function of each hydraulic system component; - procedures for inspecting and testing hydraulic system components; - equipment required to test hydraulic system components; - specifications of each hydraulic system component; - hydraulic components not operating in accordance with specifications; - reasons for hydraulic components not operating in accordance with specification; - individual components within the hydraulic system; - safety procedures to be followed when working on hydraulic components; - where appropriate, faulty system components; - procedure for repairing hydraulic system components; - parts to be replaced; - reasons for replacing the parts identified; - the correct operation of the hydraulic system; - procedures for checking hydraulic system operation; - where appropriate, the follow-up procedures with respect to repaired/replaced hydraulic system components; - reporting/recording procedures; - reasons for completing service reports for hydraulic system components repaired/replaced; - hazards associated with maintaining hydraulic system components, including housekeeping, and; - safe work practices and procedures.

MEM18021 Maintain hydraulic systems

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operationsMEM18003 - Use tools for precision workMEM18006 -

Perform precision fitting of engineering components MEM18020 - Maintain hydraulic system components MEM18055 - Dismantle, replace and assemble engineering components

Description: This unit of competency defines the skills and knowledge required to undertake preventive maintenance checks/adjustments on hydraulic systems, and fault-find, replace, repair or overhaul and recommission hydraulic systems. Where the skills and knowledge required relate to mobile plant in agriculture, forestry, rail, marine and other transport operations unit MEM27017 Maintain, fault find and rectify hydraulic systems for mobile plant should be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - obtaining and interpreting maintenance reports and preventative maintenance schedules; - inspecting and testing hydraulic system components, assemblies or sub-assemblies and carrying out preventative; - maintenance tasks to predetermined specifications using fluid power principles, tools and equipment; - consulting with system operator and carrying out visual inspection of hydraulic system and components with respect to the fault being investigated and other anomalies; - undertaking fault-finding and verifying and confirming faults/malfunctions; - checking component parts visually and dimensionally for compliance to specification and, where appropriate, marking faulty parts for repair, replacement or adjustment; - isolating and depressurising system or sub-assembly, confirming and using appropriate tagging system according to SOPs; - removing, dismantling and repairing/overhauling faulty system components or sub-assembly, including selecting replacement parts from manufacturers'/suppliers' catalogues, to site or manufacturers' specifications; - assembling hydraulic components or sub-assembly for compliance to specifications, refitting items to equipment and testing for correct operation; - recommissioning hydraulic system/sub-assembly to specifications and verifying correct operation and initiating any follow-up procedures, and; - updating and completing maintenance records and/or service reports. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - hydraulic principles; - manufacturers' specifications and structure of common hydraulic system components and their constituent parts; - hydraulic system/component faults that can be determined by visual inspection; - application of common hydraulic system/component test equipment; - scheduled preventative maintenance tasks; - common hydraulic system and component faults and any previous faults; - any previous maintenance carried out on the hydraulic system/components; - typical checks/tests that can be carried out on hydraulic systems/components and their application; - hydraulic system/component tests and testing techniques; - apparent faults/malfunctions; - documentation/reporting requirements with respect to verified faults/malfunctions; - procedures for initiating repair and/or overhaul of the hydraulic system; - procedures for isolating and depressurising hydraulic systems; - tagging requirements for isolated systems; - appropriate repair/overhaul procedures of hydraulic components; - hydraulic system operational specifications and system recommissioning procedures; - any appropriate follow-up maintenance or operational checks, and; - maintenance recording/reporting

requirements and consequences of inaccurate or incomplete recording/reporting of maintenance/service activities.

MEM18021B Maintain hydraulic system

Locations: Sunshine.

Prerequisites: MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations MEM18003C - Use tools for precision work MEM18006C - Repair and fit engineering components MEM18020B - Maintain hydraulic system components MEM18055B - Dismantle, replace and assemble engineering components

Description: This unit covers undertaking preventive maintenance checks/adjustments on hydraulic systems, and fault finding, repairing, rectifying or overhauling, and recommissioning hydraulic systems.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - preparing hydraulic system components; - inspecting and testing the hydraulic system/components; - performing scheduled preventative maintenance tasks; - performing obvious repairs on the hydraulic system/components; - visually inspect the hydraulic system and its components; - consulting with the system operator; - obtaining and interpreting maintenance reports; - using appropriate test equipment and techniques; - verifying apparent faults/malfunctions; - documenting or reporting all verified faults/malfunctions; - initiating the repair/overhaul of the hydraulic system; - isolating and depressurising the hydraulic system; - tagging the isolated hydraulic system; - removing the hydraulic components/sub-assembly from the system; - dismantling the hydraulic components/sub-assemblies; - examining the hydraulic components/sub-assemblies; - selecting replacement parts from manufacturers' catalogues; - repairing/replacing/overhauling faulty items; - refitting the hydraulic component/sub-assembly into the system; - testing the hydraulic component/sub-assembly; - recommissioning the hydraulic system/sub-assembly; - checking/testing the hydraulic system/sub-assembly; - where appropriate, initiating follow-up procedures, and; - updating and completing all maintenance records/reports. Students will also be expected to demonstrate the following knowledge: - common hydraulic system components; - hydraulic system/component faults that can be determined by visual inspection; - the application of common hydraulic system/component test equipment; - schedule of preventative maintenance tasks; - the manufacturers' specifications; - common hydraulic system and component faults; - any previous faults in the hydraulic system/components; - any previous maintenance carried out on the hydraulic system/components; - typical checks/tests that can be carried out on hydraulic systems/components and their application; - hydraulic system/component test and testing techniques; - apparent faults/malfunctions; - the documentation/reporting requirements with respect to verified faults/malfunctions; - the procedures for initiating repair/replacement and/or overhaul of the hydraulic system; - the hazards and control measures associated with working on hydraulic systems/components; - the procedures for isolating and depressurising hydraulic systems; - tagging requirements for isolated systems; - the structure of typical hydraulic components; - the specifications of hydraulic components and their constituent parts; - the appropriate repair/overhaul

procedures; - system recommissioning procedures; - the hydraulic system operational specifications; - any appropriate follow-up maintenance or operational checks; - the maintenance recording/reporting requirements; - the consequences of inaccurate or incomplete recording/reporting of maintenance/service activities, and; - safe work practices and procedures.

MEM18022 Maintain fluid power controls

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM12024 - Perform computationsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM14006 - Plan work activitiesMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operationsMEM18003 - Use tools for precision workMEM18006 - Perform precision fitting of engineering componentsMEM18055 - Dismantle, replace and assemble engineering components andMEM18019 - Maintain pneumatic systems orMEM18021 - Maintain hydraulic systems

Description:This unit of competency defines the skills and knowledge required to install and repair and/or rectify fluid power controls, and adjust fluid power system control sequence and operation. It covers fault-finding of fluid power systems control circuits, maintaining and repairing or replacing system control components, and checking and adjusting the sequence of fluid power system controls. System circuit/components are identified, traced, inspected and operational function is assessed and verified using fluid power principles to predetermined specifications interpreted from data sheets and circuit diagrams. Where skills beyond the sequencing of programmable logic controllers (PLCs) are required unit MEM10004 Enter and change programmable controller operational parameters and unit MEM10005 Commission programmable controller programs, should be selected as appropriate. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - obtaining and interpreting specifications system/circuit diagrams, system operation data sheets and control data and identifying and inspecting system components for compliance with specifications; - planning and undertaking sequential installation of fluid power systems and controls in accordance with manufacturers' specifications and procedures; - checking and adjusting control and system operation using appropriate test equipment ensuring that the sequence of operations conforms to specifications and operational requirements; - recording/reporting any modifications/alterations to the system in accordance with standard operating procedures; - fault-finding fluid power systems control circuit using fault-finding techniques and appropriate test equipment and identifying and localising components not conforming to operational specifications for repair/replacement; - repairing/replacing faulty items after testing for compliance to specifications using appropriate tools, equipment and techniques; - reassembling control components to meet specifications; - verifying correct operation of system power control circuit and commissioning the fluid power system controls to specifications, and; - initiating maintenance and/or service follow-up procedures and

completing maintenance and/or service reports according to standard operating procedures. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - system operational and control requirements and specifications; - application of common fluid power system components and controllers; - system/circuit components; - special installation requirements; - fluid power and common test equipment and their application; - correct operational sequence of the system; - typical adjustments to correct sequencing variations from specification; - procedures for recording/reporting modifications/alterations and consequences of not recording/reporting; - fluid power system commissioning procedures; - component(s) not complying with operational specification and typical causes of component failure; - cause of the faulty condition in the component(s) and appropriate procedures for rectifying the faulty condition; - appropriate maintenance schedule and procedures; - appropriate control component repair procedures; - typical test equipment and applications; - circuit sensors and controllers; - common adjustments that can be made to control systems and their effect; - any maintenance/service follow-up procedures, and; - maintenance/service recording/reporting requirements.

MEM18022B Maintain fluid power controls

Locations:Sunshine.

Prerequisites:Path 1 - Pneumatic MEM09002B Interpret Technical Drawing; MEM12023A Perform Engineering Measurements; MEM18001C Use Hand Tools; MEM18002B Use Power Tools/Hand Held Operations; MEM18003C Use Tools for Precision Work; MEM18006C Repair and Fit Engineering Components; MEM18018C Maintain Pneumatic System Components; MEM18019B Maintain Pneumatic Systems; MEM18055B Dismantle, Replace and Assemble Engineering Components. Path 2 - Hydraulic MEM09002B Interpret Technical Drawing; MEM12023A Perform Engineering Measurements; MEM18001C Use Hand Tools; MEM18002B Use Power Tools/Hand Held Operations; MEM18003C Use Tools for Precision Work; MEM18006C Repair and Fit Engineering Components; MEM18020B Maintain Hydraulic System Components; MEM18021B Maintain Hydraulic Systems; MEM18055B Dismantle, Replace and Assemble Engineering Components.

Description:This unit covers installing and repairing and/or rectifying fluid power controls, and adjusting fluid power system control sequence and operation.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining and interpreting system/circuit diagrams, system operation data sheets and control data planning and sequencing operations; - checking/inspecting system/circuit components for compliance with specifications; - undertaking installation of the fluid power system and controls in accordance with manufacturers' specifications and work site procedures; - using test equipment to check control and system operation against specification; - adjusting the system where appropriate, to ensure that the sequence of operations conforms to operational requirements; - recording/reporting any modifications/alterations to the system; - checking the operation of the controls and system for conformance to specification; - commissioning the system in accordance with work site procedures; - identifying and localising components not conforming to operational specification; - conducting appropriate maintenance in accordance with work site procedures; - repairing control components where appropriate; - testing

faulty items for conformance to specification; - installing repaired/replaced components; - selecting replacement items from manufacturers' catalogues; - reassembling control components; - initiating maintenance and/or service follow-up procedures, and; - completing maintenance and/or service reports. Students will also be expected to demonstrate the following knowledge: - system operational and control requirements and specifications; - the application of common fluid power system components and controllers; - the system/circuit components; - any special installation requirements; - fluid power test equipment and application; - the correct operational sequence of the system; - typical adjustments to correct sequencing variations from specification; - the consequences of not recording/reporting modifications to systems; - the procedures for recording/reporting modifications/alterations; - the fluid power system commissioning procedures; - common test equipment and its application; - the component(s) not complying with operational specification; - typical causes of component failure; - the cause of the faulty condition in the component(s); - appropriate procedures for rectifying the faulty condition; - the appropriate maintenance schedule and procedures; - appropriate control component repair procedures; - typical test equipment and its application; - circuit sensors and controllers; - common adjustments that can be made to control systems and their effect; - any maintenance/service follow-up procedures; - the maintenance/service recording/reporting requirements; - hazards and control measures associated with maintaining and rectifying fluid power controls, including housekeeping, and; - safe work practices and procedures.

MEM18023B Modify fluid power system operation

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM12024A - Perform computationsMEM12025A - Use graphical techniques and perform simple statistical computationsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18010C - Perform equipment condition monitoring and recordingMEM18016B - Analyse plant and equipment condition monitoring resultsMEM18018C - Maintain pneumatic system componentsMEM18019B - Maintain pneumatic systemsMEM18020B - Maintain hydraulic system componentsMEM18021B - Maintain hydraulic systemMEM18022B - Maintain fluid power controlsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers determining the requirements of the modification, undertaking the modification and evaluating the modified or repaired fluid power system.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining, interpreting and analysing service/maintenance reports and system output information; - planning and sequencing operations; - checking and testing components/sub-assemblies for conformance to specification; - confirming design faults; - obtaining relevant information with respect to the modification requirements; - developing an appropriate action plan to overcome system problems; - undertaking modifications to fluid power systems where appropriate; - delegating work to appropriate personnel

where appropriate and supervising work; - recording/reporting modifications to the fluid power system; - checking the operation of the modified/repaired fluid power system for compliance with operational specifications; - initiating and monitoring further corrective action, where applicable; - confirming that desired outcomes are achieved, and; - preparing evaluation reports on the modifications/repairs. Students will also be expected to demonstrate the following knowledge: - fluid power system performance, faults history and variations from operational specification; - faults attributable to poor design; - defective components/sub-assemblies; - appropriate test equipment and applications; - techniques for verifying design faults; - personnel to be consulted during the modification process; - sources of information relevant to the modification requirements; - the specifications pertaining to the selected modification/design option; - the modification/design options available to overcome system faults; - the cost and benefits associated with the available options; - the most appropriate modification/design option; - the procedures for undertaking the selected modification/design option; - replacement components conforming to predetermined specifications from manufacturer's catalogues; - the modifications to be undertaken; - the requirements for recording/reporting modifications to fluid power systems; - the revised operational specification of the fluid power system; - the frequency of checks for compliance against operational specifications; - the effectiveness and efficiency of the modifications/repairs; - any variations from operational specifications; - any further modifications/repairs that could improve the effectiveness and efficiency of the fluid power system; - personnel to whom recommendations are to be made; - the appropriate reporting requirements; - hazards and control measures associated with modifying fluid power system operation, including housekeeping, and; - safe work practices and procedures.

MEM18025B Service combustion engines

Locations:Sunshine.

Prerequisites:MEM18001C - Use hand tools

Description:This unit covers checking and assessing engine consumable fluids and components for serviceability, performing the servicing procedures and reporting what has been done.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - checking items removed from the engine for serviceability and conformance to specifications; - planning and sequencing operations; - checking task-related information; - identifying and reporting on fluids and items which have abnormal appearance; - flushing engine fluids from the engine and cleaning the engine of any residual fluids; - replacing engine fluids with the correct fluids to the correct levels; - removing and replacing engine consumable fluids and components; - checking the engine for lubricant, water and air leaks after servicing; - securing wires, hoses and ducts after servicing; - making minor running adjustments; - obtaining test samples; - undertaking calculations and numerical operations within the scope of this unit, and; - recording and reporting service activities. Students will also be expected to demonstrate the following knowledge: - common defects that can be identified from the appearance of fluids and items; - the procedures for reporting items/fluids with

abnormal appearance; - the principles of operation of the lubrication and cooling systems; - the function of filters; - the purpose of a range of additives; - the procedures for draining and flushing fluids from the engine including the reasons for ensuring any residual/spilt fluids are removed from the engine; - the appropriate grade and type of replacement fluid; - the procedures for replacing engine fluids; - the correct proportions of additive to be used; - the procedures for removing/replacing engine consumable fluids and components; - the procedures for checking serviced engines for leaks; - the methods of fastening/securing wires, hoses, ducts, etc.; - the procedures for undertaking minor running adjustments; - the specifications pertaining to those adjustments; - the procedures for taking test samples; - the procedures for reporting service activities; - hazards and control measures associated with servicing combustion engines, and; - safe work practices and procedures.

MEM18030B Diagnose and rectify low voltage electrical systems

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers using test instruments, testing the battery, and assessing and rectify wiring faults.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking task-related information; - checking for conformance to specification; - selecting and using the correct test instrument for a variety of electrical circuits; - applying Ohm's law to determine the required values of voltage, current and resistance for a range of electrical circuits; - determining the resistance of series and parallel circuits; - connecting electrical test instruments into given circuits; - connecting and adjusting a general purpose oscilloscope to a given electrical circuit; - determining the specific gravity of the electrolyte for temperature variations; - preparing dry batteries for charging and recharging; - performing discharge testing of batteries; - testing given electrical circuits and, where appropriate, identifying wiring faults; - using supplier catalogues; - making up wiring looms; - terminating wiring; - removing and/or neutralising corrosion from terminals and connections, and applying appropriate protective coatings, and; - testing a range of circuit components for correct operation and identifying and repairing faulty circuit components. Students will also be expected to demonstrate the following knowledge: - the principles of electron theory; - definitions of current, voltage and resistance in terms of electrical circuits; - the relationships between current, voltage and resistance for a variety of given electrical circuits; - the instruments and procedures to be used to measure current, voltage and resistance; - the procedures for maintaining electrical test equipment; - the function of a variety of electrical circuits identified from given electrical drawings/diagrams; - the symbols used in electrical drawings/diagrams; - the components of a variety of electrical circuits identified by given electrical drawings/diagrams; - the differences between series and parallel electrical circuits; - the function of a general purpose oscilloscope and

procedures for connecting a general purpose oscilloscope into given electrical circuits; - the use of wave forms in the testing of electrical circuits; - the accuracy to which a range of electrical test equipment can be read; - the procedures for using multipliers and shunts in the measurement of electrical circuits; - the operation of a chemical battery; - the function of the electrolyte in batteries; - the procedures for measuring the specific gravity of the electrolyte; - the effect of temperature on the specific gravity of the electrolyte; - the procedures for preparing dry batteries for charging; - the procedures for recharging batteries; - hazards and control measures associated with charging/recharging of batteries and discharge testing, including housekeeping; - the purpose and procedures for discharge testing of batteries; - the specifications applied to batteries; - examples and causes of common faults in electrical wiring; - the test procedures for isolating wiring faults; - the specifications of cables and wires used in given electrical circuits, and; - the specification of the insulation materials.

MEM18037B Diagnose and rectify low voltage charging systems

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18030B - Diagnose and rectify low voltage electrical systemsMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers assessing generator/alternator operation, and testing and repairing and/or replacing generators and alternators.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking task-related information; - checking for conformance to specification; - testing the charging system for correct operation; - recording variations from system specifications; - dismantling and reassembling given generators/alternators; - identifying charging faults in given generator/alternator systems; - conducting short circuit and winding continuity tests; - testing the given alternator/generator output for conformance to specification; - testing given voltage and current regulators, cut-outs and relays for correct operation and conformance to specifications; - determining the condition of given power/exciter diodes; - replacing faulty components; - checking the given generator/alternator charging system for excessive voltage drops; - undertaking calculations and numerical operations within the scope of this unit, and; - recording and reporting service activities. Students will also be expected to demonstrate the following knowledge: - the concepts of magnetism, electromagnetism and induced voltage; - the construction of generators; - the principles of operation of generators and alternators; - the methods of generating alternating and direct current for low voltage systems; - the methods of regulating voltage and current generated; - the function of diode and condenser types of regulator; - the tests that can be used to check the performance of the charging system; - the test procedures; - the hazards associated with testing the performance of the charging system, including housekeeping; - the charging system specifications; - the test equipment to be used in checking low voltage charging systems; - the procedures for recording charging system performance/variations from specifications; - the procedures for dismantling and reassembling generators/alternators; - the tools

and equipment to be used in dismantling and reassembling generators/alternators; - the safety precautions and work procedures to be followed when working with generators/alternators; - the procedures and test equipment for identifying charging faults; - the procedures and test equipment for testing short circuits and winding continuity; - the specifications of generator/alternator output; - the test equipment and procedures to be used to determine alternator/generator output; - the procedures for testing voltage and current regulators, cut-outs and relays; - the methods of adjusting voltage and current regulators, cut-outs and relays; - the operational specifications of voltage and current regulators, cut-outs and relays; - the test equipment to be used to check the operation of voltage and current regulators, cut-outs and relays; - the procedures for testing diodes and the test equipment to be used; - the precautions to be taken when testing diodes, and; - the components of generators/alternators that can be replaced.

MEM18051B Fault find and repair/rectify complex electrical circuits

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawing MEM10002B - Terminate and connect electrical wiring MEM10003B - Install and test electrical wiring and circuits up to 1000 volts A.C. and 1500 volts d.c. MEM12002B - Perform electrical/electronic measurement MEM12004B - Perform precision electrical/electronic measurement MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations MEM18048B - Fault find and repair/rectify basic electrical circuits MEM18049C - Disconnect/reconnect fixed wired equipment which use up to 1000 volts a.c./1500 volts d.c.

Description:This unit covers locating and repairing and rectifying faults in interconnected electrical circuits.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - using diagnostic skills to identify and correct faulty operation; - managing multiple processes; - interpreting and using relevant circuit diagrams, specifications, schematics; - locating reading/recording built-in fault indicators; - interpreting error code documents; - isolating electrical circuits from the power supply; - tagging isolated circuits; - verifying circuit isolation; - confirming/localising circuit faults using appropriate test equipment, work techniques and tools; - recording/reporting faults in electrical circuits; - repairing/adjusting electric circuits; - confirming circuit/s against specification, and; - recording rectification of the circuit(s). Students will also be expected to demonstrate the following knowledge: - circuit characteristics; - hazards associated with the electrical circuit(s); - relevant regulatory requirements; - errors indicated by built-in devices; - circuit isolation procedures; - common electrical test instruments and their application; - common techniques for testing electrical circuits; - recording/reporting requirements for electrical circuit faults; - appropriate techniques/procedures for returning the circuit/s to specification; - site/manufacturers' circuit specifications; - requirements for recording circuit rectifications; - any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards; - use and application of personal protective equipment, and; - safe work practices and procedures.

MEM18052B Maintain fluid power systems for mobile plant

Locations:Industry, Sunshine.

Prerequisites:MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations MEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers testing, fault finding and rectifying basic fluid power systems used in the earthmoving, agricultural and transport industries.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents; - planning and sequencing operations; - checking task-related information; - checking for conformance to specification; - identifying sources of stored energy on mobile plant; - identifying hazardous situations/conditions and applying appropriate safety measures; - bleeding accumulators down and positioning actuators correctly; - tracing faulty components and localising using fluid power principles, procedures and safety requirements; - using equipment for testing hydraulic system component; - inspecting and testing components including hoses, pipes, actuators, pumps, valves, cylinders and rams according to procedure and using fluid power; - removing components from system; - identifying replacement pipes and hoses using catalogues or electronic media; - obtaining replacement parts using appropriate procedures; - selecting appropriate conductors and fittings from manufacturer catalogues and charts; - cutting conductors to length using appropriate tooling/machine; - assembling conductors using correct techniques; - replacing component parts correctly in system using appropriate tools and techniques; - testing and adjusting replacement components for correct operation and conformance to specifications, and; - conducting conductor assemblies using machine circuits. Students will also be expected to demonstrate the following knowledge: - different sources of stored energy and their applications; - hazards and control measures associated with maintenance and rectification of fluid power systems, including housekeeping; - the reasons for bleeding accumulators and actuators and the hazards associated with working on pressurised systems; - the full range of hydraulic system components in a mobile plant application; - information on circuit diagram or manufacturer instructions; - the characteristics and operational function of each system component; - methods and techniques for tracing and localising faults; - the procedures and equipment for inspecting and testing hydraulic system components; - problems relating to faulty hydraulic system components/operation; - the specifications of each hydraulic system component; - the reasons for hydraulic components not operating in accordance with specifications; - all safety procedures and precautions; - common faults in hydraulic components; - removal methods for various components; - information in catalogues or electronic media; - procedures to obtain replacement parts; - typical conductor types and fittings their applications; - methods for cutting/assembling hoses/tubes/pipework; - tools and techniques for fitting replacement components and conductors; - the correct operation of hydraulic components and conductors; - the procedures for checking and adjusting the system; - safety measures for dismantling linear actuators; - the methods of inspection and

measurement; - guides and specifications for reusable parts; - the correct procedures for fitting bearings and seals; - the sequence and procedure for reassembly of cylinder/ram; - assembly and fitting instructions; - the procedures for refitting rams, and; - the procedures for testing and verifying repairs using machine circuits and/or test rigs.

MEM18053B Modify fluid power control systems

Locations:Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM12024A - Perform computationsMEM12025A - Use graphical techniques and perform simple statistical computationsMEM14005A - Plan a complete activityMEM16010A - Write reportsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operationsMEM18003C - Use tools for precision workMEM18006C - Repair and fit engineering componentsMEM18010C - Perform equipment condition monitoring and recordingMEM18016B - Analyse plant and equipment condition monitoring resultsMEM18018C - Maintain pneumatic system componentsMEM18019B - Maintain pneumatic systemsMEM18020B - Maintain hydraulic system componentsMEM18021B - Maintain hydraulic systemMEM18022B - Maintain fluid power controlsMEM18023B - Modify fluid power system operationMEM18055B - Dismantle, replace and assemble engineering components

Description:This unit covers checking and testing software programs, controlling system inputs and outputs, repairing faulty system inputs and outputs, and preparing a service report.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings, circuit and ladder diagrams and other applicable documents; - planning and sequencing operations; - checking and clarifying task-related information; - identifying, recording and correcting deviations of control software program from specification; - modifying control system software/program and recording modifications; - backing up the modified control system program; - checking the input and output signals for conformance to specification using appropriate tools, equipment and techniques in accordance with standard operating procedures; - identifying, recording and correcting faulty signals; - marking the source of the faulty signal for repair or replacement; - obtaining and using supplier catalogues; - testing repaired/replaced signal source for correct operation in accordance with specifications and standard operating procedures; - commissioning the repaired/replaced signal source, and; - documenting all required service details. Students will also be expected to demonstrate the following knowledge: - the operational specifications of the control system; - the program steps and their function; - the procedures for recording deviations of the control software program from specification; - the procedures for correcting deviations of the control system software from specification; - the modifications to be made to the control system software and reasons for modifying the control system software; - the procedures for recording control system software modifications; - the procedures for backing up modifications to control system programs; - the tools, equipment and techniques to be used to check input and output signals for conformance to specification; - the

procedures for recording/reporting faulty input/output signals; - the procedures for marking items for repair or replacement; - the tools, equipment and techniques necessary to repair the signal source; - the disassembly/assembly procedures to be followed when repairing signal sources; - the specifications of the signal source; - the procedures for testing signal sources; - the procedures for commissioning signal sources into operation; - the procedures for reporting service undertaken on control systems; - any trends and probable causes, evident in the data collected and collated; - reasons for recommended improvements; - safe work practices and procedures, and; - hazards and controls associated with modifying fluid power controls, including housekeeping.

MEM18054B Fault find, test and calibrate instrumentation systems and equipment

Locations:Sunshine.

Prerequisites:Path 1 MEM05001B Perform manual soldering/desoldering - electrical/electronic components MEM09002B Interpret technical drawing MEM12004B Perform precision electrical/electronic measurement MEM12023A Perform engineering measurements MEM18001C Use hand tools MEM18002B Use power tools/hand held operations MEM18055B Dismantle, replace and assemble engineering components MEM18057B Maintain/service analog/digital electronic equipment Path 2 MEM09002B Interpret technical drawing MEM12002B Perform electrical/electronic measurement MEM12023A Perform engineering measurements MEM18001C Use hand tools MEM18002B Use power tools/hand held operations MEM18055B Dismantle, replace and assemble engineering components MEM18064B Maintain instrumentation system components

Description:This unit covers the testing of instrumentation systems and equipment; applying data collection techniques and localising fault conditions; analysing and reporting test results; and calibrating instrumentation systems and components

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining relevant data with respect to the operation of the instrumentation systems/equipment; - locating, inspecting and testing a range of instrumentation system components; - isolating instrumentation system/equipment; - interpreting all relevant instrumentation circuits, drawings, instructions, manuals and data sheets; - checking the individual components within the instrumentation system for correct operation; - dismantling, repairing and reassembling faulty components; - selecting correct replacement parts from the manufacturer/supplier catalogues; - checking repaired/replaced instrumentation system components for correct operation; - complete service reports, and language and literacy skills for recording/documenting test results; - checking and verifying the operational functions of the instrumentation system/equipment including reading/recording built-in indicators; - obtaining error code interpretation documents; - undertaking zero, span and range checks on instrumentation systems/equipment, and; - calibrating instrumentation system/equipment. Students will also be expected to demonstrate the following knowledge: - instrumentation principles such as controlling density, level, flow, temperature, composition of a range of materials; - effects of resistance, capacitance, inductance and impedance (R,L,C) upon electrical circuit; - interpretation requirements of schematic, wiring and

block diagrams and circuits; - principles of hydraulic, pneumatic and electrical flow; - calibration procedures of instrumentation systems and equipment/components; - purpose/operational function of instrumentation system; - procedures and equipment for inspecting and testing instrumentation system; - specifications of each instrumentation system and acceptable deviations from specifications; - procedures for repairing faulty instrumentation system; - dismantling, reassembly and testing techniques; - correct operation of the instrumentation system including the procedures for isolating instrumentation systems; - range of faults in instrumentation system/equipment components; - procedures for checking and verifying the operational function of the instrumentation system/equipment; - procedures for recording and completing service reports; - hazards associated with fault-finding, testing and calibrating instrumentation systems/equipment; - the operational specifications of the instrumentation system/equipment; - variations between test results and operational specifications; - probable causes of faults in instrumentation system/equipment components; - action to be taken to rectify the causes of faults in instrumentation systems/equipment; - the sequence of events to be undertaken to correct faults in the instrumentation system/equipment components; - errors indicated by built-in devices; - methods of determining procedures; - procedures for reporting faults; - the difference between real and potential faults, and; - procedures for recording/documenting test and calibration results.

MEM18055 Dismantle, replace and assemble engineering components

Locations:Sunshine.

Prerequisites:MEM09002 - Interpret technical drawingMEM11011 - Undertake manual handlingMEM12023 - Perform engineering measurementsMEM13015 - Work safely and effectively in manufacturing and engineeringMEM16006 - Organise and communicate informationMEM18001 - Use hand toolsMEM18002 - Use power tools/hand held operations

Description:This unit of competency defines the skills and knowledge required to dismantle, identify faulty components, select replacements and assemble engineering components into assemblies or sub-assemblies in accordance with standard operating procedures (SOPs). It also applies to the straightforward removal and replacement of pre-manufactured bearings and seals. Where precision mechanical measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected. Where fitting techniques and principles are required to assess component condition, and/or modify components to achieve precision fits unit MEM18006 Perform precision fitting of engineering components should also be selected. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - following work instructions, standard operating procedures (SOPs) and safe work practices; - identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to dismantle, replace and assemble engineering components; - dismantling components using appropriate techniques, tools and equipment and marking component parts for reassembly purposes; - checking component parts visually and dimensionally for compliance to specification and marking faulty parts for repair, replacement or adjustment; - selecting replacement parts using

manufacturers' catalogues and data; - assembling components using appropriate techniques and principles; - inspecting final assembly for compliance to specifications, and; - returning the final assembly to service in accordance with SOPs. Students will also be expected to demonstrate the following knowledge: - safe work practices and procedures and use of personal protective equipment (PPE); - tasks to be performed in accordance with SOPs; - tools and equipment associated with dismantling the components; - procedures for checking components for conformance to specification and equipment required, assembling components and requirements of the assembly in terms of specifications, operational performance, quality and safety, lubricating the assembly and returning components/assemblies into use and checks to be undertaken during inspection of the final assembly; - specifications of the components to be replaced, including features and/or dimensions; - process of identifying replacement parts from catalogues, and; - packing and sealing materials.

MEM18055B Dismantle, replace and assemble engineering components

Locations:Industry, Sunshine.

Prerequisites:MEM09002B - Interpret technical drawingMEM12023A - Perform engineering measurementsMEM18001C - Use hand toolsMEM18002B - Use power tools/hand held operations

Description:This unit covers dismantling and identifying faulty components, selecting replacements, and assembling engineering components into assemblies or sub-assemblies in accordance with standard operating procedures.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - obtaining and interpreting all relevant instructions, standard operating procedures, drawings and specifications; - preparing component for dismantling; - dismantling components using appropriate techniques, tools and equipment; - marking component parts appropriately for identification purposes; - checking components visually and dimensionally for conformance to specification; - where appropriate, marking faulty parts for repair, replacement or adjustment; - selecting and confirming replacement parts to specifications; - obtaining and using all relevant supplier catalogues; - preparing and assembling components using appropriate techniques in accordance with standard operating procedures; - where appropriate, applying lubricants correctly to the assembly in accordance with specifications and standard operating procedures; - where appropriate, applying packing and/or sealing materials in accordance with specifications and standard operating procedures; - inspecting and checking the final assembly for conformance to specification, and; - where appropriate, returning the final assembly to use. Students will also be expected to demonstrate the following knowledge: - tasks to be performed in accordance with standard operating procedures; - procedures for dismantling the assembly; - tools and equipment to be used to dismantle the components; - procedures and required equipment for checking components for conformance to specification; - specifications of the components to be replaced; - features and/or dimensions upon which replacement parts are to be selected; - process of identifying replacement parts from "third party" suppliers' catalogues; - procedures for assembling components; - requirements of the assembly in terms of specifications, operational performance, quality and safety; - procedures for lubricating the assembly; - materials; - checks to be undertaken during inspection of the final assembly; - procedures for returning components/assemblies into use; -

hazards and control measures associated with dismantling, replacing and assembling engineering components, including housekeeping, and; - safe work practices and procedures.

MEM18086B Test, recover, evacuate and charge refrigeration systems

Locations: Industry, Werribee, Sunshine.

Prerequisites: MEM09002B - Interpret technical drawing MEM12023A - Perform engineering measurements MEM18001C - Use hand tools MEM18002B - Use power tools/hand held operations MEM18055B - Dismantle, replace and assemble engineering components

Description: This unit covers testing, recovering, evacuating and charging refrigeration systems to achieve performance specification.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning and sequencing operations; - developing operating procedures for equipment as required; - selecting correct refrigerant for a given system; - obtaining and interpreting drawings, instructions, specifications, procedures, codes and regulations; - testing and checking refrigeration components and systems including electrical safety checks and tests; - checking for conformance to specifications; - undertaking numerical operations within the scope of this unit; - determining pressures and temperatures; - documenting test results and procedures undertaken; - using equipment and test techniques; - identifying faulty components and system contamination; - applying safety procedures, standard operating procedures and legislative requirements to all work undertaken, and; - selecting appropriate materials, equipment and solutions for specific refrigeration systems. Students will also be expected to demonstrate the following knowledge: - characteristics, properties and operating specifications of each type of refrigerant; - safety precautions and work practices to be undertaken when handling or working with refrigerants; - methods of identifying stored refrigerants; - methods of identifying the type of refrigerant used in refrigeration systems; - relevant codes and regulations applying to refrigeration systems; - procedures and safety precautions for testing/checking refrigeration systems; - corrective actions for system and component faults including appropriate basic electrical safety checks; - types of leak detection equipment/techniques and their applications; - causes of contamination in refrigeration systems and their effect on refrigeration system performance; - procedures, tools and equipment to be used to clean up contaminated systems; - care and use of vacuum pumps; - tools, techniques and equipment required to carry out recovery procedures; - procedures for storing/disposing of recovered refrigerant; - consequences of releasing quantities of refrigerant into the atmosphere; - procedures for charging refrigeration systems; - correct refrigerant for a range of given applications; - tools, techniques and equipment required to charge a refrigeration system with refrigerant; - precautions to be taken when charging by various methods, refrigeration systems with refrigerant; - procedures for checking level and adding lubricating oil; - properties and uses of refrigeration oil; - hazards and control measures associated with handling refrigerants, including housekeeping, and; - safe work practices and procedures.

MEM22001A Perform engineering activities

Locations: Sunshine.

575

Prerequisites: MEM16006A - Organise and communicate information

Description: This unit covers the performance of technical aspects of engineering work in accordance with established engineering principles and practices.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - research and evaluation; - review and maintenance of academic development, work experience, ethical practice, indemnity, negotiation, consultation and human relations with respect to the practice of engineering; - consultation with technical experts and specialists; - evaluation and ranking of engineering options for particular applications; - designing and planning documentation for particular applications; - documenting work instructions; - implementing occupational health and safety and environmental regulations, codes of practice and statutory requirements; - identifying and analysing hazards and risks; - monitoring and consultation with stakeholders and taskforce, and; - research and evaluation of engineering career options based on current engineering activities. Students will also be expected to demonstrate the following knowledge: - political, social and environmental context and possible range of particular engineering activities - the effect of government policy; - the significance, need for continual review; - the significance and applicability of strategic industrial management; - the application and affect of elements of engineering practice on particular engineering activities; - methods for evaluation and ranking of engineering options including the use of decision making and problem solving tools (eg. Kepler Trebor method); - the significance of documented processes and outcomes performance measures in the context of client requirements, industrial, social, political and economic environments; - documented work instructions in the context of the objectives of the engineering activity; - negotiating principles; - risk assessment tools such as "risk matrix" and "Monte Carlo" risk assessment; - the significance of statutory requirements disaster management strategies; - long term environmental and sustainability issues associated with the engineering activity; - documentation and conclusion procedures; - relevance of current engineering activities to future career options, and; - the value of a portfolio in contributing to future career options in engineering.

MEM22002A Manage self in the engineering environment

Locations: Sunshine.

Prerequisites: MEM16006A - Organise and communicate information

Description: This unit covers performing work ethically and competently, making judgements about work priorities and information requirements to achieve effective working relationships and engineering outcomes.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - setting personal goals and plans; - completing allocated within time limits; - seeking feedback from internal and

external sources; - providing clear and precise information to team members; - communicating in meetings; - using feedback to develop ways of improving performance; - accessing and using appropriate development opportunities; - mentoring; - obtaining all relevant legislation, statutory requirements and standards; - obtaining all relevant commercial documents; - documenting the processes and outcomes - processing and filing the masters and file copies of documents; - setting priorities; - using technology appropriately; - work plans, programs and/or budgets are prepared in accordance with organisational procedures; - monitoring, reviewing and modifying work plans, programs and/or budgets; - achieving targets by the effective and efficient use of resources; - introducing changes smoothly and with minimal disruption; - communicating changes to be implemented; - preparing plans for the implementation of authorised changes; - providing regular and complete progress reports to clients/stakeholders/suppliers/regulators, and; - procuring materials/supplies/services in accordance with organisational procedures. Students will also be expected to demonstrate the following knowledge: - techniques for ensuring that personal goals and plans reflect an organisation's plans; - performance acts as a role model for others; - ways in which personal goals are achieved and extended; - the value of cultural diversity; - internal and external sources of feedback on products, services and/or performance; - team members roles and responsibilities; - ways of gaining and using feedback; - options for suitable professional development opportunities; - the role of mentor in the engineering team; - sources of relevant codes, standards, legislation and regulations; - the need and relevance for commercial information; - the procedures for documenting processes and outcomes; - techniques for prioritising competing demands; - options for using various types of relevant technology; - the procedures for preparing work plans, programs and budgets; - the authority responsible for authorising work plans, programs and budgets; - the procedures for modifying work plans, programs and/or budgets; - human and physical resources; - techniques for optimising resource utilisation; - opportunities to introduce change; - the benefits of the proposed change; - the costs and risks associated with the proposed change; - those affected by change; - emerging challenges and opportunities; - opportunities to implement change and innovation; - reasons for implementing change and innovation; - strategies for implementing change and innovation; - customer needs; - clients/stakeholders/suppliers/regulators and their business relationships; - information required by clients/stakeholders/suppliers/regulators; - the suppliers of materials/services/components/equipment, etc.; - procurement procedures; - the authority responsible for authorising the procurement of materials/supplies/services, and; - commercial issues associated with the procurement process.

MEM22007A Manage environmental effects of engineering activities

Locations:Sunshine.

Prerequisites:MEM16006A - Organise and communicate information

Description:This unit covers examining environmental issues and determine environmental strategies associated with engineering work.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - undertaking debate on environmental values; - reporting on case studies involving examination of environmental values; - producing inventory of existing environmental conditions; -

documenting the findings of the initial environmental assessment; - identifying stakeholders' environmental expectations; - integrating environmental expectations with the overall outcomes of the operation/project; - communicating expected outcomes to stakeholders; - documenting variations between expected and current environmental status; - implementing strategies for improving the environmental outcomes of the project/operation; - evaluating available options; - implementing selected sustainable development options; - developing environmental management plans; - monitoring the implementation of the environmental management plan; - collecting environmental data, and; - reviewing and evaluating implementation strategies. Students will also be expected to demonstrate the following knowledge: - environmental conditions of the workplace/process/ operation/procedure; - the procedures for documenting environmental conditions; - applicable environmental legislation and regulations; - the legislative/regulatory reporting and recording requirements; - the tests and testing procedures required to establish environmental conditions; - stakeholders' views on specific options for environmental improvement; - opportunities for integrating project/operation outcomes with environmental improvement options; - variations between expected and current environmental status; - options for improving the environmental status of the project/operation; - the costs/benefits of the identified options; - the concept of sustainable development; - options for sustainable development; - criteria for assessing the feasibility of available options; - the risks and priorities associated with sustainable development; - strategies to implement sustainable development options; - the procedures for communicating sustainable development options to stakeholders; - strategies to implement environmental development plans; - the data necessary to evaluate the implementation of the environmental management plan; - procedures for collecting and documenting environmental data, and; - benchmarks against which implementation strategies can be evaluated.

MEM22013A Coordinate engineering projects

Locations:Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers the coordination of engineering projects within project plans and budgets. It includes monitoring and maintaining the project implementation plan, performance analysis and use of project management software.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: Students will also be expected to demonstrate the following knowledge:.

MEM22015A Source and estimate engineering materials requirements

Locations:Industry, Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers the skills and knowledge required to locate and approve a materials source and estimate materials requirements against a specification or bill of materials for engineering-related operations. This includes consideration of quantities, quality and capacity of suppliers to supply in accordance with a supply plan.

Required Reading:The qualified trainer and assessor will provide teaching and

learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning for materials resourcing; - estimating quantities, sourcing and evaluating materials suppliers against operations or project, specifications, drawings and bill of materials; - cooperating, communicating and negotiating effectively within team and functional groups, customers and suppliers; - monitoring and evaluating purchasing budget, expenditure and cash flow, sourcing of materials, sustainability implications, supply agreements and suppliers for quality, capacity and flexibility, conformance to regulatory requirements and test procedures; - using materials sourcing and planning software packages; - contributing to organisational management processes and materials supply chain management; - developing or using materials supply tender and contract documents; - interpreting materials requirement and purchasing schedule, purchasing budgets, and performance indices for materials supply chain; - coordinating responses to budget and delivery supply threats related to materials purchases; - participating in setting and implementing supplier payment policies; - implementing systems thinking, concurrent engineering, continuous improvement, contingency and constraint management, problem solving and decision making; - determining implications for materials sourcing of WHS, risk management, codes of practice, and sustainability policy and requirements, and; - reporting and documenting results of evaluations, tender analysis, and so on. Students will also be expected to demonstrate the following knowledge: - planning procedures for materials resourcing in the context of operations, project, strategic and business plans and budgets; - use of systems and software packages to assess materials requirements information, data processing, bill of materials, estimating, supplier database and purchasing budget control; - systems for cost estimation and planning, value engineering, feasibility studies, cost-benefit analysis, life cycle costing and valuation; - supply chain management and value analysis, performance indices or parameters, and monitoring processes; - tender and contract documents, supply agreements, quality and delivery parameters, and terms of payment; - supply chain communications, feedback on quality, supply chain efficiency and continuous improvement processes; - sustainability policy and procedures; - WHS, regulatory and risk management requirements with particular emphasis on handling and use of resources; - WHS and regulatory compliance requirements, material safety data sheets (MSDS), test results, and risk management related to handling and storage, and; - use of systems thinking, constraints and contingency management, problem solving and decision making, and continuous improvement techniques.

MEM22017A Coordinate continuous improvement and technical development

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to coordinate continuous improvement and ongoing technical development activities for engineering-related operations or projects. It includes feasibility studies, proposals for the introduction of technology or process change and development of implementation strategy, costing and budgets relating to proposals

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - identifying current objectives and performance measures; - identifying change and development opportunities; - evaluating technologies, plant and other assets, hardware and software used by current operations and projects; - identifying skills, knowledge and techniques for operations or projects; - completing feasibility analyses on options and developing of proposals; - maintaining relevant records of plans, priorities, schedules and progress, legislative compliance, personal and team skills development, and sources of technical information and resources; - setting and coordinating priorities, strategy and schedule for changes, including introduction of new technology and continuous improvement operational changes; - problem solving and decision making, systems thinking, constraints and contingency management, short-term planning adjustments, and rescheduling physical and financial resources and budget within delegation; - communicating and negotiating with stakeholders, team members, support function groups, expert technical and professional assistance, customers and suppliers; - monitoring change and technological development for compliance with regulatory requirements, and; - reporting and documenting progress and results, data and analysis in accordance with procedures. Students will also be expected to demonstrate the following knowledge: - project management techniques; - modern production management techniques; - context of operations, such as competitive pressures or markets, customer-supplier relationships, regulatory and industrial environment, environmental and sustainability, and resourcing and labour issues; - operations or project management structure, functional team relationships, responsibilities and delegations across the organisation, available technical and professional support services, communications and reporting lines; - procedures for audit of technologies, skills, knowledge and techniques, plant and other assets, including hardware and software used by current operations and projects; - feasibility analysis or 'trade-off' methods to assist selection from among options; - accountability and record keeping requirements in accordance with organisational procedures; - tendering and contract requirements and processes and their effect on continuous improvement, including agreement on design and specification, negotiations and optimisations, provisions for variations, delays and penalties; - change and technological development implications for WHS requirements, codes of practice, regulations, standards and regulatory requirements related to proposed changes and technologies; - sustainability issues related to continuous improvement of engineering-related projects and operations; - typical software for program management and budget control, use and validation options; - implementation plan, strategic and prioritised objectives and budgets; - procedures for reporting and recording of progress and records of legislative compliance in accordance with procedures for accountability against objectives, schedule and budget, and; - requirements for and functions of technical documentation, graphics and specifications and records of meetings, communications and agreements with stakeholders.

MEM22018A Coordinate sales and promotion of engineering-related products or services

Locations: Industry, Sunshine.

Prerequisites: Nil.

Description: This unit of competency covers the skills and knowledge required to

coordinate sales and promotion of engineering-related products or services requiring engineering knowledge. The unit covers ensuring appropriate technical advice is provided to clients, contribution and participation in strategic planning and sales budget setting, control of sales costs against budgets, and responsibility for meeting sales performance indices. It includes a requirement to provide feedback on customer satisfaction and seek out opportunities for improvements.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - planning, scheduling and budgeting to achieve promotional, sales and service objectives; - investigating and evaluating options for sales, promotions and marketing team development and training; - identifying technical and market advantage for products or services, regulatory and industrial relations environment; - establishing customer-supplier relationships, current markets and context, marketing and sales opportunities, and constraints; - coordinating implementation of objectives, sales and promotions, personal and team training, continuous improvement, problem solving and decision making; - monitoring marketing team performance; - identifying awards, enterprise agreements personnel entitlements and remuneration arrangements that may impact on technical sales and promotion team activities; - maintaining records; - systems thinking, constraints and contingency management, short-term planning adjustments and rescheduling, marketing team resources and budgeting; - communicating and negotiating with stakeholders; - monitoring products and services for change or change opportunities; - monitoring of team compliance with relevant regulations, including enterprise agreements or awards, WHS, codes of practice, trade practices and consumer law, other legislative requirements, social and economic obligations, and ethical practice, and; - reporting and documenting progress and results, data and analysis in accordance with procedures. Students will also be expected to demonstrate the following knowledge: - engineering knowledge relevant to operations and supplied products and services context of marketing and sales, such as competitive pressures or markets, customer-supplier relationships and consumer protection legislation; - organisational management structure, functional team relationships, available technical and professional support services, communications and reporting lines; - audit procedures for personnel current competence, competence gaps and training requirements within marketing team; - opportunities for technological and personnel competence improvement; - sustainability implications of products and services; - organisation mission and business strategy, operations and project plans and objectives; - opportunities and constraints related to sales and promotions; - techniques for analysis of organisational capability, current and future technological needs of customer base, and marketing opportunities; - software options for program management and budget control; - WHS, codes of practice, and other legislative requirements, sustainability and ethical practice related to products and services, marketing team changes and developments; - risk management procedures; - procedures for reporting and recording of progress and records, and; - legal obligations of organisation and team related to employment conditions, consumer protection, trade practices, environmental and commercial legislation related to procedures.

MEM23003A Operate and program computers and/or controllers in engineering situations

Locations: Industry, Sunshine.

Prerequisites:MEM16008A - Interact with computing technology

Description:This unit covers operating computers and/or controllers in industrial situations and preparing and maintaining programs.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.

Assessment:Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - completing tasks using selected hardware in accordance with manufacturer's instructions and to workplace procedures; - using CPU, I/O, peripherals, interfaces, actuators and other computer/controller equipment; - accessing and using appropriate software in accordance with manufacturer's instructions to complete task requirements; - saving and storing documents and other computer/controller files in an appropriate directory in accordance with manufacturer's instructions and workplace procedures; - identifying and analysing difficulties using appropriate help sources; - preparing work plans for programming/customising task; - writing/altering/customising programs; - testing and amending programs, and; - maintaining records. Students will also be expected to demonstrate the following knowledge: - functions and operating procedures of CPU, I/O, peripherals, interfaces, actuators and other computer/controller equipment; - applications of available hardware and criteria for selecting the hardware for particular tasks; - procedures for operating hardware; - procedures for checking and replacing hardware consumables; - available software and their applications; - procedures and commands for the use of identified software; - procedures and related requirements for saving and storing documents and computer/controller files; - techniques for accessing, transferring, printing documents or other computer files or using computer files to control plant and equipment; - techniques for accessing and using manuals and training booklets to solve minor problems; - procedures for accessing sources of help; - techniques for accessing help with typical difficulties with selected applications; - typical programming/customising sequencing and related issues; - techniques and procedures for preparing a work plan for a programming/customising task; - techniques and procedures for writing/customising programs in specified formats and computer language; - techniques and procedures for testing and amending programs; - procedures for checking program alteration with users; - procedures for maintaining records and reports on program/system development or enhancement, and; - procedures for disseminating information on program/system development.

MEM23004A Apply technical mathematics

Locations: Industry, Sunshine.

Prerequisites:Nil.

Description:This unit of competency covers the application of mathematical analysis, graphical and software techniques to engineering problems. It includes exponential and logarithmic functions, trigonometric equations involving single and double angles, sequences and series, two dimensional vector analysis, complex numbers, determinants and matrices.

Required Reading:The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic

and/or via the Polytechnic e-learning system.

Assessment: Assessment tasks will be designed to reinforce and extend knowledge and skill competence within set and controlled parameters in accordance with each unit's learning outcomes and performance criteria requirements, including the setting of work based practical application tasks designed to provide evidence of competence outcomes, within periodic and scheduled timelines. Students will be expected to demonstrate the following required skills: - solving mathematical problems using standard engineering software packages, and validating software results of simple examples analytically and/or graphically; - manipulating values using decimal, binary and hexadecimal number systems; - graphing and analysing functions for solutions; - exponential and logarithmic functions; - trigonometric functions; - using the techniques of sequences and series to solve simple mathematical problems; - using the techniques of two dimensional vectors to solve mathematic and applied problems; - solving problems involving complex quantities using the properties, operations and theorems of complex numbers; - using determinant and matrix analysis to solve algebraic and vectorial problems, and; - using probability to assess likely occurrences. Students will also be expected to demonstrate the following knowledge: - software for mathematical analysis and graphical representations; - binomials and polynomials; - exponential and logarithmic functions; - trigonometric equations; - sequences and series; - two dimensional vectors; - complex numbers; - determinant and matrices; - probability, and; - stability analysis using plots.

MEM23006A Apply fluid and thermodynamics principles in engineering

Locations: Sunshine.

Prerequisites: MEM23004A - Apply technical mathematics

Description: This unit of competency covers the application of fluid and thermodynamic principles to engineering applications. It includes sustainability issues; fundamental scientific principles; fundamentals of vacuum technology; properties of gases and liquids; heat transfer due to conduction, convection and radiation heat and compression processes; closed and open systems; continuity, enthalpy and energy transfers related to compressors, boilers, turbine heat exchangers, heat engines, refrigerators and heat pump performance. It also includes fluid systems and components, forces on floating and submerged bodies, turbine and pumping systems, and jet forces on blades and plates.

Required Reading: The qualified trainer and assessor will provide teaching and learning materials as required in the form of workbooks produced by the Polytechnic and/or via the Polytechnic e-learning system.
